loid in Figure 1, made by rotation of the upper base of a cylinder.

Most important, Mr. Armstead discovered that students learn when they use the device. Shy of its apparent complexity at first, they quickly became adapt at its use, and made it valuable to themselves for learning new concepts, for drill, review, special clinics, and supplementary study, individually and in groups.

A patent has been applied for, and plans are being made to place it in production, if an interested organization can be found to carry on its promotion. Mr. Armstead would like to produce it himself, but he's too busy. He has another problem to solve. The darned thing won't show spheres!

Visual Tour of Oregon

Outlining a unique summer course in Oregon available to teachers.

OREGON State College offered a new type of summer school for teachers interested in visual education and science during the second session of the past summer term. This plan provided for approximately half of the work to be done on the campus and the other half during a tour of the State of Oregon.

The preliminary work on the campus developed the basic pattern for the courses; then the teachers studied practical applications of visual aids and science in the field.

Oregon State College is fortunate in the wide variety of scientific and visual resources it has to offer teachers on a tour of Oregon. The photographic opportunities are so great that several cities planned to send photographers with the tour in order to make a series of kodachrome sets as well as film strips of Oregon's natural resources and industries. Few states have the great range of climatic conditions found in Oregon. For example, teachers interested in nature study find that the tour passes through regions in which the rainfall varies from over 100 inches to less than 4. They visit areas from sea level to about 10,000 feet altitude. They can visit places where frost is practically unknown to sections where the temperature drops 10 to 20 degrees below zero each winter. They study regions where snow seldom falls to localities where the average winter depth of snow exceeds 25 feet. Even the soil has variety. The tour passes through regions of heavy black loam to sand dunes and scabrock.

Teachers of subjects other than nature study also find an abundance of material. Those interested in the agricultural resources of the state will observe irrigated orchards, irrigated row crops such as sugar beets, irrigated sand dunes, dry wheat farming, cattle ranching, and even get to spend one night on a "Dude Ranch." Historically minded teachers can follow the Old Oregon Trail to where the West began. They visit frontier forts, Indian battle fields, and see one of the greatest Indian burial grounds in the nation. Oregon is also rich in geological history. The class visits the Bridge

GEORGE EBY
Stockton Junior College
Stockton, California

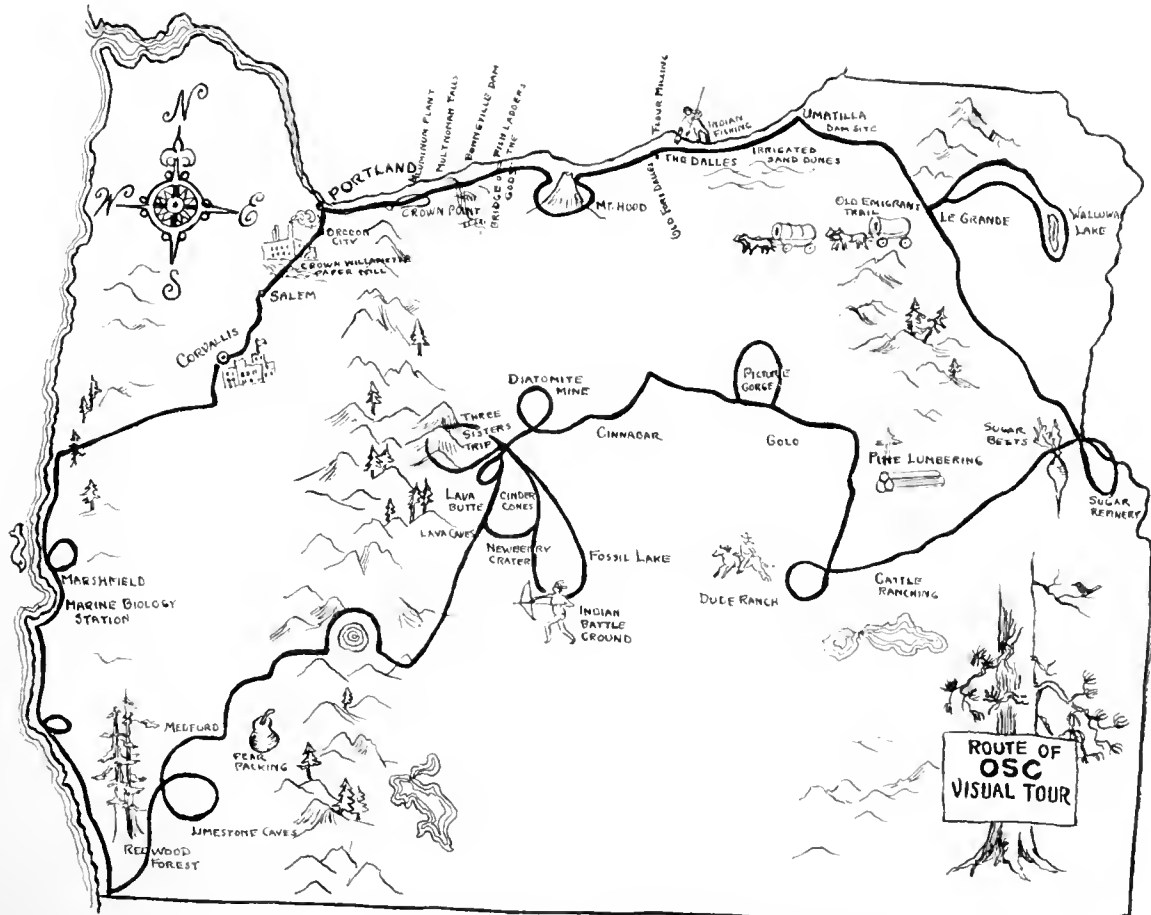

of the Gods, glaciers, fossil beds, lava caves, ice caves, one of the most recent lava flows in the nation, cinder cones, and Crater Lakes. If you did not know that Oregon has several beautiful Crater Lakes, then read the new book, "Paulina Preferred."

An excellent survey of the industrial west can be made on the tour. Some of the many industries to be visited are canneries, a gold mine, gold dredger, wartime aluminum plant, paper mill, fishing fleet, logging camp, saw mill, flour mill, cement plant, Bonneville Dam, and power plant. Last, and best of all for the photo fans, is the ever changing scenery along the way. This is a golden opportunity for teachers to obtain the help of experienced photographers in making collections of pictures for classroom use. A few of the photographic highlights along the tour are the Columbia River Gorge, Multnomah Falls, Willowa Mountains—the Switzerland of America—Crater Lakes, rockstrewn seashore, sage bush hills, and snow-capped mountains. All this and credits too!

It is possible for students to earn six to nine units of college credit on the tour. Teachers have the privilege of enrolling in any group of the following subjects: Oregon Geology, Seminar in Nature Study, individual science projects, Educational Cinematography, Seminar in Visual Education, and individual projects in visual aids. The instructors in charge of the tour last summer were professors W. D. Wilkinson of the School of Science and George Eby, summer visual instructor in the School of Education. The teachers enrolled in Cinematography, made a demonstration teaching film while on the trip.

The class work for the five-week session was divided into three phases.

A. The first week was spent on the campus for library work and outlining projects.

Outline of tour followed by teachers in the course.

B. The next three weeks on the tour.

The daily schedule ran somewhat as follows:

1. Eat breakfasts and dinners at restaurants, then take package lunches for most of the noon-day stops in the hills.
2. Directed field work throughout the day.
3. Make camp at 4:30 each afternoon. This gave teachers time to develop pictures and mount their daily collections of specimens.
4. The teachers had a choice of sleeping in hotels, auto camps, or their own sleeping bags.
5. Class meetings were held around the campfire at night. These campfire programs were enhanced by a portable P.A. system and visual projection equipment.

C. The last week was spent on the campus writing up reports and mounting nature study exhibits.

The cost of this tour is in easy reach of any school teacher. The essential expenses are:

1. Regular college tuition fees.
2. The cost of transportation is prorated among the members of the tour.
3. Each person pays for his own meals and lodging.

These living costs are not likely to be greater than in Corvallis for the same three weeks.

The tour was such a marked success that it will be

opened to a larger enrollment next summer. The itinerary will be expanded by adding Astoria and Northwestern Oregon, and Professor Stanley Williamson of the Science Education Department, Stockton Junior College, will be added to the staff.

Last season the Chambers of Commerce in each city did a bang-up job in handling arrangements for the tour. The Portland Chamber of Commerce supplied our cinematography class with 1000 feet of color film, which was used in making a movie of Oregon's industries, resources and history found along the tour. Such invaluable cooperation will doubtless be still greater under next summer's augmented program.

An unexpected high spot of the tour was the keen interest the teachers showed in visiting schools of the cities we passed through. We hardly realized that teachers are so busy teaching that they can rarely visit other schools to see how their departments are equipped and operated. The home economic teachers, for example, had so much fun preparing some of the meals in different home economics departments that we are considering the possibility of a cooperative arrangement with the city superintendents so that most of our meals can be prepared in the high school departments. In other words, the city schools will become our base of operations rather than auto courts and hotels. If the details can be worked out, teachers enrolling in the course will have a goodwill entree to the public schools that will be hard to equal, especially for teachers from other States than Oregon.

Educational Motion Pictures: A Cooperative Enterprise

This article, by one of our departmental editors, ably stresses a vital need in educational motion picture film production.

TODAY, with the record of war-time training impelling peacetime educators to a fuller realization of the effectiveness of visual instruction, a growing insistence on the part of the schools for more and better educational motion pictures is arising. And, in response to these demands—and to the general impression that here, indeed, is an area for lucrative post-war expansion—various interests are rushing plans for educational film production. The results of this stimulus to increased visual aids manufacture may well bode ill for education—rather than afford the rosy eventualities many of us conjecture—unless educators themselves assert a guiding hand into the designs of the entrepreneurs involved. Unfortunately, even in this task which education has unwittingly cut out for itself, its record of dilatory responsibility to date bespeaks a definite need for setting in order its own conception of what really is a Good Educational Film.

It is perhaps safe to assume that the first motion picture introduced into classroom surroundings was treated as no small novelty by the teacher, the students, and the school board. And, until he had repeated the procedure a number of times, it is not likely that the teacher himself realized the full import of this possibly whimsical activity. There is no doubt that the students were tremendously entertained and contemplated the further expansion of its use with a glee that discounted the possibility of barking up the wrong curriculum in the process. And, while pupils cheered the new classroom entertainment and the instructor dwelt lovingly on the educational possibilities of the new venture, the school board gave a cursory appraisal to the innovation and raised the inevitable dollar sign. Thus, as money began talking in its authoritative fashion, the teacher was forced—early in the game—into a more careful consideration of the amount of instruction per reel.

But there was more to reckon with than dollars and cents. As education in general viewed the possibilities of the new medium, some thought they saw a frightful monster leering from behind the projector—a monster of mechanization bent on welding into one mind their little charges. They envisioned marquees growing on the front of the little red school houses, while they themselves were turned out into the streets—victims of cinematic technology.

Well, the witch-hunt abated after a while, but some of education's personnel had been badly scared. This group formulated for its own protection the philosophy that the motion picture might remain in the classroom only as an instructional raw material. Henceforth the motion picture would concern itself exclusively with the delineation of facts without organization. The teacher would thus be allowed full reign over the in-

roduction, presentation, organization, and summarization of the raw material the motion picture might bring to the curriculum.

With this philosophy in mind, it logically followed that educators demanded films packed with facts—a dual delight that provided them peace of mind and afforded the budget a considerable stretch. The producers, it was thought, could now provide motion pictures for peanuts, since it would be no longer necessary to waste film footage with introductions and summaries nor require careful scripting to assure the logical presentation of the facts. The few educational producers bowed to the inevitable and began grinding out the uninspired celluloid which was required of them.

When sound came in the producers had a new talking point, they thought, and it seemed likely that the time had come when educational motion pictures might be marketed for a decent fee and thus divorce themselves from the subsidies that had thus far been required. However, when the shiny new product was first flashed on the screen, its progenitors heard the wearisome "How Much?". In desperation, no doubt, they pushed sound to the utmost; the more facts, the better. The results were quantities of films—telling one story photographically, while the narrator—watching the racing second hand and seldom the screen—told HIS version audibly. This, education decided, was the alpha and omega of the instructional motion picture and it has clung to the concept more or less for the past decade.

It was inevitable, though, that the producers would eventually feel some compulsion towards individualized expression, resulting in some attempt at organization of subject matter and possible bias. Education was consulted on this organization in some instances, but the reception was too often below 70 degrees, and the producers had to, of necessity, fall back upon their own resources with results not always to the best interests of all concerned. Such an attitude of educators toward the production of motion pictures for their use is almost unbelievable—yet, there it is.

Look back, if you will, through the literature on Visual Education for the past twenty years—and it will be easily discernible what the producers have been up against. The articles dealing with "what an educational motion picture should be" are few and far between. We assumed the role of critic almost entirely—awaiting the release of new product, examining it with eagle eyes, noting its discrepancies, and moaning

The Curriculum Clinic

With Emphasis on the "AUDIO"

PAUL C. REED, Editor

Director, Visual and Radio Education
Rochester Public Schools, New York

THE other day as I was walking down the long corridor of a high school, glancing through the open classroom doors as one is apt to do, a rash generalization came to mind. "The trouble with our high schools", I thought, "is that teachers place altogether too much dependence upon their talk, talk, talk." A few days later when I heard an English Department Head make practically the same statement, I began to think that maybe the generalization wasn't so rash, and that maybe there was some wisdom in it.

There's nothing wrong with talk as such, and teacher talk in classrooms is likely to be better organized and more purposeful than most talk, but when there's too much of it and when talking by teachers is almost the sole means of instruction, there *is* something wrong. Too many of the spoken words may be meaningless words—verbalisms—and they may be verbalisms merely because the listeners are bored rather than because of any lack of understanding of what the words actually mean. Providing more visual experiences is a good antidote for this kind of verbalism, but this problem can also be attacked "with emphasis on the audio" part of the term "audio-visual." A greater variety of audio experiences can be provided.

The basic elements of much of our school curriculum have to do with the hearing and production of sounds. Among the chief objectives of English instruction are the development of abilities to communicate thought through the spoken word and to learn through the spoken word and to learn through listening. Ability to comprehend a spoken foreign language and to be able to speak it are objectives of instruction in languages. Instruction in music is chiefly concerned with the hearing and production of sounds. Considering these basic facts about curriculum, much more consideration than has been given in the past should be given to the "audio" part of audio-visual materials and equipment for instruction. There are audio tools of communication.

English, foreign language, and music teachers especially need microphones, record players, and recording equipment, and the proper facilities for their use to attain their curriculum objectives most effectively. Such simple equipment as a microphone-amplifier-speaker combination offers instructional advantages that have scarcely been tried in the average high school. The challenge that a microphone brings to a student for the most careful selection of his words and for the best diction, make it a psychological tool of great importance. When microphones are combined with recording equipment so that students can sit with the listeners and hear themselves as others hear them, the teaching potentialities are multiplied.

These teachers need record playing equipment, too, equipment that will play both regular 78 r.p.m. phonograph records and $33\frac{1}{3}$ r.p.m. electrical transcriptions. In recent months there have been signs of a coming

abundance of recorded materials for instruction of greater variety and higher quality than have heretofore been available. Foreign language records that were used so successfully in army training can now be purchased for school use along with correlated textbooks. These records are revolutionizing the teaching of foreign languages in many colleges. Record companies are increasingly producing albums of records, other than music, that have direct correlation with teaching objectives. Some schools have accumulated a wealth of recorded materials by transcribing radio programs themselves, and supplementing these by electrical transcriptions from radio stations and from commercial sources.

Current models of portable record playing and recording equipment are much improved over pre-war models. Quality of recordings and of reproduction are superior. And the research now being carried on in the laboratories promises still better equipment for the future. Teachers who have had the opportunity to experiment with the new magnetic wire recorders are enthusiastic over the possibilities of this new tool. The ease with which sound can be recorded and reproduced on these recorders, the portability of the equipment, and its flexibility and adaptability to school needs, will cause this kind of equipment to be added to the list of minimum essential audio-visual equipment. New models of wire recorders going into production will provide still higher fidelity reproduction and mechanical improvements that will make them even more adaptable to school needs.

Microphones, amplifiers, loudspeakers, record players (78 and $33\frac{1}{3}$ r.p.m.), disc recorders, magnetic wire recorders—these are the kind of audio equipment that are needed in our schools to give learners a greater variety of audio experiences. These are the kind of tools that are sorely needed to implement the curriculum in those areas where hearing and producing sounds are most important. We probably should leave a more complete discussion of audio equipment to Bob Schreiber's "ABC's of Audio-Visual Equipment" department (adv.) in some later issues of this magazine, but there's one more point to be made here.

Something more is needed than the mere acquisition of these audio tools for instruction. Some cannot be used to best advantage in the average classroom, or even in the above average classroom that is equipped with electrical outlets and is acoustically treated. An up-to-date school needs an Audio Room, a room that can serve as a laboratory for use by English, music, and foreign language classes. Such a room is as essential to best instruction in those fields as the science laboratory is to the teaching of science.

A large classroom can be adapted to this purpose. One-third of the room can be partitioned off, and this third divided into two parts. Partitions should be sound proof and provide large glass areas for visibility.

The two smaller parts become a control room and a small studio. The larger part of the classroom would ordinarily be used for the group listening to "broadcasts" from the small studio, but this use could be reversed when the group using the microphone is large and the listening group is small.

Such an audio laboratory can readily become the very heart of a complete central sound system for the school. In fact, if a central sound system is to be an effective instructional tool in a school rather than a mere administrative device, such an Audio Room is an absolute necessity.

If a central sound system were to be an ultimate goal for a school, a plan could be developed so that it might be acquired in systematic steps over a period of several years. For instance:

First step: Provide an audio room, with large and small studios and control room, acoustically treated and adequately wired. Provide amplifier, microphones, and speakers so that studios may be used interchangeably.

Second: Add radio reception, recording, and record playing equipment so that radio programs may be heard by listening groups, recorded, and listened to as recordings, and so that original recordings may be made.

Third: Wire and equip selected classrooms in other parts of the building (such as all English classrooms) so that programs originating in the audio room can be heard in these classrooms.

Fourth: Wire and equip all classrooms in the building for reception of programs originating in audio room, and provide for originating sound programs from other points in the building, such as the principal's office, auditorium, and music room.

If some of my friends who specialize in the field of radio education were to read these suggestions, they might claim that it was being proposed that the "audio-visual educator" take over the work of the "radio educator." In those schools and school systems where specialization is carried out to such a fine point, jurisdictional disputes might well arise. But whether it be "audio-visual" with emphasis on the audio or whether it be "radio", it is being urged that greater attention be given to audio equipment and materials for instruction. Science has given us tools of communication that can help us do the teaching job we are trying to do. We should constantly be alert to their potentialities, and then use all of our imagination and ingenuity to adapt them to our jobs.

Educational Motion Pictures: A Cooperative Enterprise

(Concluded from page 510)

in anguish—rather than deciding among ourselves what a Good Educational Film should be and then approaching the producers with the idea. We have given the horse the reins on a strange road and then whipped him for having lost his way.

Fortunately, in this year 1946, we are throwing off some of our reluctance to assume the responsibility we have been shirking for the past twenty years; we are realizing—in the light of our war-impelled enthusiasm for the visual idiom—the necessity of accentuating the positive in our approach. Let us see what we really do want in educational motion pictures. A study of twenty authors discloses some agreement on the following desired characteristics of the Good Educational Film:

Objectives of the Good Educational Film:

1. Its purposes are clearcut and obvious to the intended audience.
2. The objectives are closely associated with those of the curriculum.
3. The objectives are those which may be adequately exploited by the medium.
4. The objectives are sufficiently limited to assure adequate treatment.

Contents of the Film:

1. The content fits the curriculum.
2. The content is compatible with the interests of the intended audience.
3. Every effort is made to tell the truth.
4. The content is up-to-date.

Organization and Presentation of Contents:

1. The organization of the content is designed for maximum comprehension and assimilation; difficult concepts are sufficiently detailed in presentation.
2. The presentation is designed to arouse and sustain interest.
3. The presentation implies desirable relationships with associated fields of interest.
4. The summary is adequate and acts as a springboard to further learning activities.
5. All authors are agreed that the technical aspects of the Good Educational Film shall be of the best.

The need, then, now and in the future is for education to assert itself positively on a code of what constitutes the Good Educational Motion Picture. This code will change as educational philosophies change, but it must be up to date with respect to whatever philosophy may be currently extant. This much is necessary to guide our thinking and provide a frame of reference for the educational film producer. But, our obligation to our students and to society requires more than a charter; it requires action! . . . action that involves suggesting needed films, suggesting content and methods of presentation, assisting on scenario, cooperating during actual production, editing, and evaluating through classroom utilization. This does not mean that every teacher should be a motion picture technician; nevertheless the educational motion picture is essentially the responsibility of the educator; the ideas, the content, and the methods of presentation should originate with him.

The alternative is obvious; multitudinous reels of curriculum-contrary film, militant producers, and continued consternation in the classroom.

The Film and International Understanding

Films in International Teaching for International Understanding

DR. JOHN E. DUGAN, Editor
Head, Department of Education
Beaver College, Jenkintown, Pa.

FILMS will play an important part in any comprehensive post-war program for the teaching of international understanding. This will be true whether the program is planned for local, state, national, or international groups. In order that such films may be intelligently planned, distributed, and utilized, it is important that attention be given to any outstanding plans proposed for the teaching of international understanding.

The recent World Conference of the Teaching Profession, held in Endicott, New York, was a most significant gathering of world educators. Representatives of teachers' organizations from thirty nations met to draw up a Draft Constitution for a World Organization of the Teaching Profession. In addition, the Conference adopted a comprehensive set of "Recommendations on the Teaching of International Understanding." These recommendations have interest and significance for all who are interested in the use of films in this field.

It is the purpose of this article to report and comment on certain phases of these recommendations which have a bearing on the use of films. Some of the recommendations deal directly with the use of films; others do not. But a number of the recommendations which do not deal directly with films are nevertheless important to us because they are concerned with the framework and background of education in which films may be used.

The first section of the recommendations is presented herewith in full because it establishes the broad foundations upon which all of the other recommendations are based:

"The teaching of international understanding rests upon the cultivation of ideals and the development of a sense of personal responsibility for cooperation with others in all matters affecting human welfare. It does not involve the sacrifice of national culture or national citizenship, or the subordination of one to another. It requires thorough study of world problems, including the knowledge of economic forces and historical backgrounds.

"This Conference, therefore, declares that teachers should instruct the youth of all lands to act upon the following principles and should strive alone or with others, to make these principles prevail in all areas of human relationship:

1. The fundamental needs of mankind for food, clothing, shelter, health, recreation, and security should be satisfied.
2. Every human being should enjoy, without any discrimination whatsoever, equal opportunity to develop physically, intellectually, and socially.
3. The pursuit of truth and the expression of opinion should be unrestricted, except when they interfere with the rights of others.

4. Respect for human life and for the religious convictions of other peoples should be fostered.
5. No nation should impose its culture upon any other nation, since no people possesses superiority by reason of divine gift, biological factors, or historical claims.
6. The natural resources of the earth should be developed by international planning and cooperation, and should be used for the general welfare of mankind.
7. The advances of science have now made all peoples neighbors, mutually interdependent and, therefore, morally responsible for each other's well-being.
8. The security of nations, their right to self-government, their cultural enrichment, and their economic prosperity can be realized only through international cooperation in an organization powerful enough to maintain peace and to facilitate world-wide economic cooperation."

Regarding education's broad responsibilities, the report says: "The responsibilities of education for the promotion of international understanding among the peoples of all nations is a responsibility which must be shared by every teacher whether he be a teacher of children or of young people or of adults. Likewise, the obligation devolves upon every teacher no matter what his subject is." Here, of course, are implications for the use of films for international understanding in these fields and levels and for the inclusion of these considerations in films made for these fields and levels.

Opportunity for the effective use of films is strongly suggested by the following excerpts from recommendations on the teaching of history: "History as a subject in the school curriculum provides unusually rich opportunities for acquainting students with the ways of living in lands other than his own, for helping them to understand the reasons for conditions that exist in the world today, and for helping them to recognize the interdependence of peoples . . . students should become familiar with the life and work of men and women of all nations who have contributed to human welfare, and should learn to appreciate the spiritual and cultural heritage which is theirs. . . . Contemporary events must be studied directly. . . . The teaching of current history must be objective and conducted in a constructive spirit, but controversial matters should not be ignored."

Suggestions in other fields have similar implications.

Recommendation 12 deals directly with the "Educational Uses of Modern Media of Mass Communication," and is presented below in its entirety: "The press, the radio, the cinema are instruments not only of amusement and recreation but also of education. The influence of the press is limited only by the extent of literacy; the radio leaps across national boundaries to inform and inspire all who have ears to hear; the cinema teaches its lessons, wholesome or detrimental, with a power and persuasiveness beyond those of the most

skilled teachers and the most highly organized educational systems. These, and other modern media of mass communication, have in the past and may in the future work either with teachers or against them in their efforts to develop international understanding.

"The Conference, therefore, recommends:

- (a) That teachers and teachers' organizations endeavor to enlist the public press, the radio, and the instruments of visual education as potent allies for the attainment of their purposes.
- (b) That the press, radio, film, recording, and television be used within the school to dramatize and invigorate the

processes of teaching and learning about the modern world and that schools be furnished with the equipment needed for this purpose.

- (c) That national and international radio and television broadcasts to schools be arranged and that such programs be used to celebrate events of international significance, to render tributes to great men and women of all nations, and to create a sense of human brotherhood.
- (d) That films and recordings which are truly representative of the life and culture of the various nations be produced, and that the films and recordings, with suitable adaptation in language or otherwise, be freely exchanged among schools of all nations."

An Audio-Visual Public School Program in Miniature*

A brief outline, tersely written, of how audio-visual teaching can be developed in public schools.

PAUL V. MULLIGAN
Director of Visual Aids
Revere (Mass.) Public Schools

THE Revere Public School Department created the Department of Visual Aids in February of 1945. The author was assigned as full time director with the mission of promoting and expanding the use of Visual Aids in the schools. This study is concerned with the original problems which confronted the Director in setting up a city wide department of Visual Aids.

The study was made in three steps:

Step One. A survey was made in the 16 school buildings to determine

1. What exists in the way of equipment?
2. What are the building facilities for using the equipment?
3. What alterations must be made in each building to allow for projection?

As a result of the survey the following equipment was discovered: (1) 9 Bausch & Lomb 3¼x4 slide projectors, 5 wall screens of auditorium size, a complete set of Keystone geography slides; (2) it was possible to equip at least one room per school with opaque curtains to be used as a building Visual Aids room; (3) in buildings where there was no wall electric outlet a 50-foot cord plugged into the light over the teacher's desk solved the problem temporarily.

Step Two. A central office and library was set up from which to service schools with equipment and material. Sound films are rented on a weekly basis and sent to the various schools from which they are circulated to the other schools in a particular district by messenger. Strip films, slides, etc. are sent out on a weekly basis to individual schools. The Central Office maintains a delivery service.

Equipment. There are 10 sound projectors in the

system. Three were purchased for the Central Office with funds received as a gift from the Salvage Committee. Seven machines owned by individual schools were purchased from funds raised by school plays. Parent Teacher Organizations, etc.

One 33½ rpm 78 rpm turntable is owned by the Central Office. Eight Tri-Purpose projectors are owned by the Central Office and loaned to the schools. One Bausch & Lomb 3¼x4 slide projector is kept in the Central Office for various school uses. The library owns \$300 worth of filmstrips, and four portable screens for circulation amongst the various schools. All material was bought from money raised independently of the school budget.

Step Three. It was necessary to train at least one projectionist in each building. Janitors proved to be the easiest to begin with. Teachers were trained in the use of material by the Director. A definite program was carried out in each building.

The Visual Aids Director must be a promoter as well as an educator. Research has given him the information to go forth and sell his program. Many extra-curricular duties are necessary in order for a new director to secure adequate financial support for his program.

Films are rented on a weekly basis. It was necessary to build a program coordinated with the course of study. Grades were broken into four groups of three: 1-2-3 Grades, 4-5-6 Grades, Junior High, and Senior High. A program for the first group is held the first week in each month. The second group has the second week, etc. This method keeps the equipment busy and allows for service in all buildings.

The department is now reasonably well equipped. A sound foundation has been laid, a careful teacher training program is planned and as the whole Visual Education movement develops rapidly this school department should be able to keep pace with it.

*From Master of Education Thesis in Visual Education, submitted at the Boston University Graduate School, Major Professor, Dr. Abraham Kraker.

The Church Department

A Monthly Service

WILLIAM S. HOCKMAN, Editor
2043 Mars Ave., Lakewood, Ohio

If the Spirit Is Lacking

IN the July-August 1946 issue of *Christian Screen* (British) Mr. Andrew Buchanan, leading British film authority and producer of documentaries, makes an observation on the production of religious films which is as significant for this country as for his. We quote:

"In the past, some religious films have been made in commercial studios under everyday conditions by technical staffs uninterested in religion. It is my belief that success cannot come that way. Indeed, and probably for the first time in a discourse on film making has the following statement been made—that *high technical standards do not come first*. The primary need is high spiritual quality. Naturally, only the finest technical results will satisfy us, but they are secondary to the need for spiritual inspiration in every member of the unit who is to undertake the work.

One cannot hope to make truly religious films if disinterested men and women mechanically supply technical facilities, unconcerned whether production is of a religious nature or a musical comedy."

When religious leaders lightly presume that "Hoily-wood" technical competence guarantees cinematic excellence in religious film, they would do well to ponder the sound sense of the above statement. In like manner, those who have ridden to the peaks on the theatrical film would do well to put on a light garment of humility and face the implications of this truth for themselves.

The spirit does count. It will be seen in the casting. It will be obvious in the acting. It will be revealed in the total story and in every episode. The religious quality of many religious films is not very impressive. Competence in one medium is not easily transferred to another, and the principal difference between the film for the theater and the church is in the area of *the spirit*. It is not how the lights shine *on* the characters as much as how the light shines *out* from them. Let it be remembered that the indifferent and irreverent cinematic hand can be as deadly to quality in religious film as the hand which lacks technical competence.

A Filmstrip Review and Evaluation

The Visiting Teacher is a 61-frame filmstrip in black and white and without script. It was produced for the Missouri Synod Lutheran Church by the Concordia Publishing House, St. Louis 18, Mo., from whom it is available for purchase. Rent it through your denominational book store.

Purpose: To show the Sunday School teacher the need for visiting the pupils of her class; to show her how to make a good visit, and to motivate her to make the calls.

Contents: The attendance problem; various reasons why children may be absent; not the job for the pastor

or superintendent; one of the jobs of the teacher; the importance of a personal visit; how to get ready to visit; how to make the visit; how to conclude and follow up the visit; how such calls increase the joy and effectiveness of teaching.

Evaluation: This filmstrip is a good example of the graphic, or educational-cartoon type. The drawings are interesting, and forceful. Each frame carries an unambiguous increment of meaning. The script is integrated, and pared down to the fewest possible words, and carried in the frames. This filmstrip is well conceived and executed. It has quality. It does what it sets out to do.

Utilization: Its ultimate consumer is the church school teacher and it can be used in school and departmental meetings of teachers to stimulate an interest in visiting and to show how it should be done. Discussion on the general problems of attendance should precede, rather than follow, its use. Close on the note of resolution and dedication.

Correspondence

"My dear Church Editor: You have asked me to clarify what I mean by 'preaching *from* the picture'. I will try. It is more difficult to explain it than to do it. Basically, I mean that the picture is not projected alongside a sermon simply to illustrate the sermon at various points. Instead, I choose a picture and text that are enough in harmony so that I can preach the truths of the text directly from the picture.

It involves a flight of imagination. For instance, in preaching on Hoffman's 'Christ in Gethsemane' I might begin by outlining briefly the events immediately preceding. Then the picture would be thrown on the screen simultaneously with some transitional statement like this: 'And here, arriving in the garden, we see Jesus'. Or, 'And now, you and I will silently and reverently enter the garden where Jesus is praying'. From this point on I talk to the people as though they were actually in the garden.

I try to get the people to feel that they are no longer sitting in the church pews but that they are transported into the world and setting of the picture and are actually walking and talking with the characters of the picture. I have never used more than one picture for a sermon and have always found more material in the picture than I could use in any 25-minute discourse."

PAUL L. BAUMGARTNER, Pastor
St. Paul's Lutheran Church, Massillon, Ohio

Editor: Any minister who will dust off that stereopticon, study the catalogue of art slides, set up a Lenten series, and follow the above pattern, will run a grave risk of having a better attendance this year than he had last.

Visual Aids for Lenten Worship

When a pastor used stereopticon slides of religious masterpieces as the basis for Lenten worship services his attendance doubled that of previous years and his people asked for a similar program the following year. In telling of his Lenten program, Rev. Paul L. Baumgartner, pastor of St. Paul's Lutheran Church, Massillon, Ohio, adds, "Many people were attracted who normally would not come to a typical formal morning worship service."

What was his program like? Here it is in his words: "The church was in semi-darkness with the picture on the screen to create atmosphere as the people entered the sanctuary. After the choir processional, which was sung from the screen, an informal opening service followed. It consisted of appropriate scripture, prayer, and three or four hymns from the screen. For each sermon only one picture was projected. It was "on" for the full length of the sermon, and, instead of using the picture to illustrate the sermon, the sermon was preached from the picture—a much more direct and effective use of the picture."

Here are the themes and the pictures used in the series on *Meeting Jesus*:

"Meeting Jesus In Your Childhood"

Picture: Christ and the Doctors, by Hoffman

"Meeting Jesus In Your Work"

Picture: Shadow of Death, by Hunt

"Meeting Jesus In Your Temptations"

Picture: Christ Tempted By Satan, by Cornicelius

"Meeting Jesus In Your Prayers"

Picture: Christ In Gethsemane, by Hoffman

"Meeting Jesus In Your Life's Decisions"

Picture: Arrest Of Jesus, by Van Dyck

"Meeting Jesus In Your Sinning"

Picture: Christ On Calvary, Munkacsy

"Meeting Jesus In The Lord's Supper"

Picture: The Last Supper, Da Vinci

Congregational Releases

The Color of a Man, a 20-minute 16mm sound and color film, was produced to commemorate the 100th anniversary of the American Missionary Association. It was taken on location in the South by the International Film Foundation and presents a few of the institutions founded by this pioneering board. In a later issue this film will be reviewed and evaluated.

They Came to Fessenden, 57 kodachrome slides and script, tells the story of a Negro boy and girl while attending Fessenden Academy. In *Your AMA* the accomplishments of the American Missionary Association through its 100 years are presented by 69 kodachrome slides and a script.

Of interest and use to all denominations is the filmstrip, *How One Family Planned To Budget Its Income*. Here, 35 frames and a recorded script tell how the Clard family followed the principles of Christian stewardship in budgeting its income. This, and the above materials, are available from the offices of the Congregational Missions Council in Chicago (19 S. La Salle Street), Boston (14 Beacon St.) and New York (287 Fourth Ave.).

British Filmstrips in Full Color

Filmstrips in full color for religious instruction have been announced by Visual Education Ltd., Upper Berkeley Street, Portman Square, London, W.1. England. The first six titles produced are: *Thy King Cometh*, *After Three Days*, *Simon Called Peter*, *St. Peter*, and *Paul The Fearless*, Part I and Part II.

Each filmstrip is composed of 68 colored frames produced from specially prepared paintings and photographed in the new British Tricolour process. Three filmstrips are now in production: *The Three Lost Things*, *The Christmas Story*, and *The Parables of Our Lord*. Chinese is to be the first language into which the first six filmstrips are to be translated.

The editor of this Department would be pleased to receive for publication critical reviews of these materials as soon as they reach this country.

A Film Review And Evaluation

Yesudas—The Outcaste, 30-minute black and white sound film, produced by Board of Missions and Church Extension, Methodist Church, 150 Fifth Ave., N.Y. 11, and available from the film distribution stations of the Methodist Church.

Contents: The story of an outcaste Indian boy who came under the influence of Christian missions and who finally chose in early manhood to serve his people by being a minister of the Gospel among them in their village. After a few general orienting sequences on India, the film takes us to a typical outcaste village—a baby boy is born—is called Yesudas—we see his mother doing the work of the home and the fields—the father dies and he is attached to the estate of a wealthy landowner, being cared for by his uncle—we are shown the activities of this farm—Yesudas is taken to a fair—we are shown the sights of an Indian fair—at 8 years old he is sold to a man of wealth—he runs away, and enters a mission school. We are shown the activities of this school. He gets to go to the high school, whose program we see. Here he meets youths from all castes—falls in love with Moya, an outcaste girl. We are shown some of the program of her school. They attend together a summer institute and hear a certain Indian Christian, Jacob, tell how he has helped his village. They are interested and participate in one of the "cleanup parties"—Yesudas feels called to devote his life to helping his village—After his marriage to Moya we see them in his village—Under his direction and help it gets a new well, children are vaccinated for smallpox, a church is built and dedicated, and the process of redeeming the village from ignorance, filth, and hopelessness is begun as the film comes to a close.

Appraisal: The story is true. There have been hundreds like it in every mission land. It is told effectively. The sequences are well integrated, and the film moves along. The photography is from fair to excellent, being satisfactory most of the way. The commentary interprets what is happen-

ing. It does not elucidate the obvious. Its pace is good. The condition of the print is good.

Utilization: It can be used with all ages, but is best suited for Juniors and up. It can be used to show *how* Christian education is carried on, and it can be used to *tell* the story of a certain boy. It can be used to *show* what life in India is like. It can be used to *challenge* adults to support more generously the outreach program of the church. The 45-minute silent version of this film is useful, also.

Indianapolis Visual Education Institute

Sponsored jointly by the Church Federation of Indianapolis and the Indiana Council of Churches, the third annual Visual Education Institute brought together over two hundred church leaders on October 3rd and 4th.

The program, planned by Mr. and Mrs. M. Brunson Motley, dealt with four large areas of concern for the church: Using the Visual Method (1) In Teaching, (2) In Christian Fellowship, (3) In Christian Service, (4) and In Worship.

Such new films as *Mary Louise, For All People* and *Go Forth* were either used, previewed, or discussed. The filmstrip, *Is Your Home Fun*, with studio recorded (33 $\frac{1}{3}$ r.p.m.) script, was presented at a fellowship dinner program.

The headline speakers were Rev. Alexander B. Ferguson, Chairman of the Visual Education Committee of the International Council of Religious Education, and Dr. Lawrence C. Larson of Indiana University. Dr. Larson discussed the school's use of the visual method and Rev. Ferguson spoke on the future of visual Christian education.

Questions

Q. What visual materials could I use at a father-and-son banquet? We will have about one hour for the program. It must be interesting and different.

A. Use a thriller first, such as *Daredevils On Ice*. It will interest all, weld your group together. Then use the filmstrip, *Is Your Home Fun?* (order through your book store) which contrasts pictorially and in its recorded script, two kinds of homes. For the closing you might use either of these two sound films, each about 10 minutes in length: *You and Your Friends, You and Your Family*. Either one will lead easily to ten or fifteen minutes of lively, good-natured, yet penetrating and profitable discussion if the leader of it has a reasonable amount of skill and wit.

Q. We have around fifty dollars to be used in starting a library of visual materials for use in the church school. What should we buy?

A. This question has been very satisfactorily answered by Mr. Paul R. Kidd in a leaflet, "Building a Visual Aids Library on a Limited Budget", which you can secure from the Christian Board of Publication, 2700 Pine Blvd., St. Louis 3, Mo. Follow this leaflet. You will find more use for the filmstrip, *Forward—All Together* (from Film Publishers, Inc., 12. E. 44th Street, N. Y. 17) than for *We Are All Brothers* which he lists. You would do well to add several of the 2x2 slide sets

which visualize the Thomas Nelson & Sons books for small children. They can be secured from Visual Education Service, 409 Prospect Street, New Haven 11, Conn. Add, also, several of the Dell illustrated hymn filmstrips such as "This Is My Father's World", and "For the Beauty of the Earth".

Q. Are there any films which show young people responding to the Christian challenge to give their lives in service to humanity? There ought to be. I need several such films for Sunday evening meetings of young people and for youth conferences.

A. Yes, I know of several such films. The new Cathedral film, *Go Forth* (20-minutes, sound and black and white) shows a veteran of this War returning to the Pacific area to do medical and rehabilitation work. *That They Might Have Life*, (20-minute, black and white film by the Methodists) shows how an institutional church in a metropolitan area served its community and guided a gifted young man into Christian service. In *Western Hands Are Strong* the United Church of Canada (514 Wesley Building, Toronto 2B) presents the story of a young doctor who went to work among a settlement of Russians in Northwest Canada.

Q. Would you recommend venetian blinds for blacking out assembly and class rooms in the church?

A. No. For colored slides they do not generally give a sufficient degree of darkness, especially on a sunny day. There is considerable leakage of sunlight through and around the best ones, and a little sunlight cuts down image brightness very greatly. Rather, consider black or green shades mounted to overlap the window casement, or use pull curtains of dark blue, brown or red material.

Q. Should several neighboring churches cooperatively purchase a film projector?

A. This question will not die! The answer is in the negative. It has not proven a satisfactory arrangement when tried. See the June issue for a fuller answer.

Proceedings of Methodist Seminar Available

Under the auspices of the Methodist General Board of Education and the Candler School of Theology, a three-week research seminar on the place of visualizations in religious education was held at Emory University, Georgia, last summer.

The enrollment was limited to fifty leaders chosen from all phases of the church's program. With the help of resource persons from the public school, industry, theater and church, they studied the following questions:

a) What has been discovered about the use of visual materials by the public school, the armed services, industry, theater, and the church? b) What are the fundamental and secondary problems the church faces in visualizing its curriculum? c) What parts of the present curriculum can and should be visualized?

The seminar did not arrive at final conclusions. The findings of this study are being printed and may be secured after the first of November from the Department of Audio-Visual Education, 810 Broadway, Nashville, Tenn., for one dollar per copy.

The Literature in Visual Instruction

A Monthly Digest

ETTA SCHNEIDER RESS, Editor

EQUIPMENT

- **School Building Planning and Related Problems: Basic Criteria of an Audio-Visual Education Program**—Lawrence C. Larson—*Bulletin of School of Education, Indiana University*, 22:7-20 July, 1946.

Mr. Larson led off a symposium on school building planning, by listing important standards: 1) that audio-visual materials be used in the school under normal classroom conditions in preference to special rooms for projection; 2) that teachers be given help in the selection, planning, scheduling, circulation and utilization of materials; 3) that each school system should have facilities, equipment and technical staff for local production; and 4) that community groups be permitted to use the school equipment, production facilities and personnel.

This was followed by Lowell Hopkins' "Translating the criteria into functional housing"; and then by an architect's consideration of the problem in terms of building design and facilities, as stated by Karl R. Schwarz. The symposium should be read in the original by those who want guidance in this very important problem.

TRENDS

- **Little Movies with a BIG Future**—Douglas Wood Gibson—*16mm. Reporter*, October 8, 16, 26, 1946 (Reprinted from *Pageant*)

In this popular evaluation of the potential of the 16mm. films, certain significant trends are noted: that the 16mm. film for entertainment is here to stay, an outgrowth of G1 showings; that 6,000 communities in the U.S. have no regular movie theaters and await 16 mm. shows; that already large distribution has been achieved in Latin America in 16mm.; and now the increased interest and production for clubs, schools and churches. These lead the author to conclude that "henceforth these mighty movies may win elections, sell soap, teach our children, make us laugh, set styles, etc."

UTILIZATION

- **Films—Their Use and Misuse**—Squadron-Leader N. H. Rosenthal—Robertson and Mullens, Melbourne, Australia, 1945. (Part I of "Films in Instruction").

A recapitulation of the benefits to be derived from the use of films in education. The author describes a controlled experiment in the armed forces where 275 trainees selected at random, were grouped to represent the average class size of 30. Three groups had instruction with no film; three had a film and no instructor; and three had both. The film had been especially prepared as a good training film. After a 2 weeks' interval, a written examination revealed that 76% of the first two groups passed; and 90% of the last (both instructor and film.) The results also revealed that the effectiveness was most pronounced in the lower-marked students. Those who had seen the film also showed its effect by drawing sketches on their papers to illustrate their replies.

The author proposes that the universities of Australia established a Department of Visual Aids: a) to distribute films; b) to service equipment; c) to provide leadership in research and educational film production; and d) to train teachers.

Interesting figures are cited from a report on the use of films in German schools under Hitler: in 1943 12 million German school children used the film as an integral part of their instruction. There was equipment in every large school, with 1,500 mobile units to supplement. Each current newsreel was circulated through 1,700 prints. . . .

This booklet has general value to visual educators in the U.S., and it is interesting to note the extent to which the author has drawn upon American sources for published information and for recommended films.

MOTION PICTURE COURSES

- **Motion Picture Instruction**—Report of the Committee on Motion Picture Instruction, Society of Motion Picture Engineers, Hotel Pennsylvania, N.Y.—*Journal of the SMPE*, 47:95 August, 1945 Reprint available from SMPE.

The purpose of the study was to find out which professional schools, colleges and universities give instruction in motion picture technique. A questionnaire was sent to 155 institutions of higher learning in the U.S. Returns from 102 institutions were received, and the results tabulated in this report. There is information on the title of the course, the semester hours and credits for courses in various aspects of cinematography, including general photography and cinematography courses, sound recording, motion picture projection, distribution, processing, and a few courses in visual education.

The committee concludes: "The survey . . . indicates very clearly that the technology of motion picture making has not been given serious consideration in institutions of this caliber. . . . It would certainly appear that it is high time for cinematography to be emerging from the strictly "craft" classification into that of a full-fledged profession."

SCIENCE

- **Specifications for Commercial Supplementary Teaching Materials for Science—Pre-College Level: Restricted to booklets, charts, exhibits, models, and pictures**—Prepared by National Science Teachers Assn. for the Consumer Education Study, N.E.A. 1946 61 p. mimeo.

Here is what producers of educational materials have always wanted: a pattern by educators of the kinds of aids that would apply to the curriculum on each level. These "specifications" were not made with such producers in mind, but rather for the advertisers who want to find their way into schools. It is to be hoped that creative producers of charts, exhibits, models and films will be guided by this analysis of the general course of study in science, and with far less in the way of financial backing will succeed in preparing significant educational tools.

HISTORICAL

- **Sound Motion Picture, 1926-46**—Weekly Publications, Inc., *Newsweek Magazine*, 152 W. 42nd St., N.Y. 18

An attractive brochure giving the highlights of the sound film and some of the future possibilities. Suitable for students of photoplay.

FLAT PICTURES

- **Photographic Section of the Library of Congress**—Elizabeth L. Adam, Librarian, Photo Library, Pictures Branch, Press and Publications, O. I. C., State Dept. and Marion Lamber, Chief, Photo Library—*Library Journal* 71:1081-86 September 1, 1946.

A much-needed description of the great collection of Americana in still pictures that has been inherited by the Library of Congress from the Farm Security Administration, and more recently, the O.W.I.

The Photo Section consists of a nucleus of 200,000 photos, unusual in terms of their technical excellence and as a record of the economic and social situation in the U. S. from 1935 to 1943. The program of the F.S.A., under the guiding light of Roy Stryker, stressed the rural population and their way of life; the O.W.I. expanded it to include urban living.

The article gives details on how the Library of Congress, (Concluded on page 520)

Delineascope

PROJECTOR OF DISTINCTION

Model MK for 2" x 2" Color Slides

Thousands of these Delineascopes are in use today in schools and homes. They project exceptionally clear, brilliant images and remain cool enough to handle at all times. The 300 watt model is shown. Instruments of 100, 150, and 200 watts are also available. Write dept. L12 for literature.

American  Optical
COMPANY
 Scientific Instrument Division
 Buffalo 15, New York

Manufacturers of the **SPENCER** *Scientific Instruments*

under Paul Vanderbilt, has organized the pictures for the use of the general public. The methods of accessioning, cataloging, captioning, classifying, etc., are described. Sets of catalog cards are on deposit in the University of Harvard, Museum of Modern Art, U. of California, U. of Chicago, and the U. of North Carolina.

SILENT FILMS

- **Silence is Golden**—Donald M. Hatfield, editorial director, Photo and Sound, San Francisco—*Sierra Educational News*, September, 1946 p.16

An analysis of the features of the silent film for classroom use which makes it still pertinent in an era of sound motion pictures. The silent film permits participation by the observer, it allows greater flexibility on the part of the teacher in applying the film to the group, it keeps the teacher in close contact with the group, and it is much less expensive.

PHOTOPLAY APPRECIATION

- **It Shouldn't Happen to the Movies**—Catherine C. Edwards, film editor—*Parents' Magazine*, October, 1946 p. 26.

An excellent, provocative article that should set local film groups into action. The order abolishing block booking has at last freed local theatre managers from being forced to show films that are unsuited to the audience. Local managers can now preview the films they book, and can select each film to meet special interests.

Now is the time for local better film councils to spring to action, serving as spearhead for raising the standard of films shown, and for raising the standard of taste in the community so that good films are assured of a good "box office."

If 50 councils were to express approval of the good films and disapproval of the poor ones, producers in Hollywood would be impressed. Moreover, the local councils should take in the young people because they are constant moviegoers, and they have had some training at school in judging films. A high school section of the film council would be very desirable, and would give the young people an outlet for their movie interest. Men's clubs, too, can support the movement for getting better films shown in the community.

Read the original article and be inspired.

RADIO

- **American Radio and Your Community**—*Platform*, September, 1946. Published by Newsweek Club Bureau, 152 W. 42nd St., N. Y. 18

A guide to study groups on the part radio plays in the life of the community. Types of programs are analyzed; then the pro and con of advertising as a method of financing radio, the N.A.B. Code, F.C.C. and similar aspects of administration; and finally what clubs, listening groups and individuals can do.

DISTRIBUTION

- **Education Through Films**—*Saskatchewan News*, July 8, 1946.

An interesting news account of the way in which the National Film Board and local film libraries are reorganizing their activities for the postwar use of documentary and educational films. In Saskatchewan the Saskatchewan Film Board, the Board of Education and the National Film Board are cooperating to provide a well-stocked library of films, slides and filmstrips; a travelling teacher in each of the 45 larger school units; the maintenance of equipment; summer circuits of films for rural audiences; and some local production. The province also includes 10 regional libraries, mainly in public libraries. Appears to be an expanding and forward-looking program.

SOURCES OF INFORMATION

TEACHING AIDS SERVICE of the Library, New Jersey State Teachers College, Upper Montclair, N. J., offers the following form publications for the audio-visual field.

- **Economic Geography**—(Products), 1946. 62 p. mimeo \$1.00.

The first in a series of volumes of teaching aids entitled "Adventures in Geography". Gives sources for charts, posters, films, filmstrips, pictures, publications, recordings, etc. Includes chapters on Communication and Transportation, Industries, Fruits of the Earth, The Forests, Animals and Animal Products, and Minerals and Mineral Products.

- **Russia—Adventures in Geography Series No. 2**, the Union of Soviet Socialist Republics. 1946. 9 p. mimeo. 25c.

A tentative list of teaching aids, including charts and maps, exhibits, films, slides and filmstrips, pictures, publications and recordings. Guides the teacher in the selection of material on Russia. Includes chapters on Geography and Travel, Language and Religion, Social Life and Customs, The Children, History and Government, and Art Music and Dance.

- **China—Adventure in Geography Series No. 3**. 1946 9 p. mimeo. 25c.

A guide to information about China. Sources for charts and maps, exhibits, films, slides and filmstrips, pictures, publications, and recordings. Contains chapters listing sources for specific or general information.

- **Free Teaching Aids—From A to Z**. 1946. 24 p. mimeo 50c.

Over 500 addresses from which may be obtained free teachers instructing any age group.

- **ABC'S of Visual Aids and Projectionist's Manual**—Philip Mannino, Penn. State College—Educational Film Library Assn., 1600 Broadway, N.Y. 19 1946 83p. \$1.00

A very useful guide to sound film projectionists. A brief section indicates some of the other types of projectors, but the handbook concentrates exclusively on the sound motion picture projector. It contains simple rules of procedure for selecting a projector, and a screen; it describes conditions of the classroom for best projection; and gives a most practical tabulation for "trouble shooting" when the projection does not go smoothly. Another interesting item in the handbook is the true-false quiz of 50 questions.

- **Making Films Work for Your Community**—Committee on Community Use of Film, Patricia O. Blair, chairman—Educational Film Library Assn., 1600 Broadway, N.Y. 19. 71p. 1946.

A symposium covering every angle of film use for community programs. Edgar Dale sets the stage, indicating the possibilities and pitfalls; Glen Burch describes efficient administration of film forums; Patricia Blair and Elizabeth Flory indicate standards and sources, respectively; and Joseph Dickman describes, with appropriate sketches, how to arrange a meeting room for best projection and comfort. There are articles by persons experienced in various aspects of community film programs: rural areas, public libraries, the Worcester Art Museum, church groups, and young people's groups. A practical guide to community leaders.

PERIODICALS

- **Visual Review, 1945**—Society for Visual Education, 100 East Ohio St., Chicago 11. Published in 1946.

Featured in this issue of "Visual Review" is a large section of reports from the visual field, which constitutes a kind of "who's who". The application of the filmstrip is described for industrial training (by Walter E. Johnson); for religious education (by T. Rupert Coleman); for armed forces education in its various aspects (by J. Raymond Hutchinson); for aviation education and training (by R. O. Mertes).

Government visual education activities are described for the U.S. Office of Education, the Office of Inter-American Affairs, and the Bureau of Mines.

Now... a new dual purpose projector

Amproslide
MODEL "30-D"
for 2x2 slides
and 35 mm.
strip film

This Dual Slide Projector offers a completely new conception of strip film projection, employing curved film guide-ways to guide film in exact position for clear, brilliant screen image. Features an Automatic Snap-action Self-centering Slide Carrier... positive, quick action up and down tilting... a two-tone Ampro design lift-off case that keeps projector always ready for instant use... and many other outstanding advantages. Compact, sturdy—precision built, with all controls and parts conveniently accessible—it is the product of rich experience in fine projector building. 5 Inch, F:3.5 Anastigmat Projection Lens—shows clear, brilliant blacks and whites, and brings out true, rich colors.

School Made Motion Pictures

Of Interest to Producers of School Made Films

DAVID SCHNEIDER, Editor
Evander Childs High School
New York City

1. The McGraw-Hill Book Company is going in for integrated films and texts. So far they have released several texts in engineering, botany, mechanical drawing, education, etc. These books include references to audio-visual material, without which learning becomes inadequate.

Teachers who have access to good films might profit from this experience. They should fine-comb texts and interpolate audio-visual aids wherever needed to enrich classroom teaching.

2. A few schools are now giving regular courses in motion picture production. The latest two to be added are the Greenwich High School in Greenwich, Conn., and the Herbert Hoover High School in San Diego, California. The instructors of the courses in both schools would like to hear from others who have given similar courses. An exchange of ideas should prove mutually beneficial.
3. The distinguished Photographic Society of America (the counterpart of the Royal Photographic Society of Britain—as if that made any difference) has just organized a new division, the Motion Picture Division under the inspiring leadership of Mr. Harris B. Tuttle. One of Mr. Tuttle's aims is to spread the services of this society among high school and college cinema groups. Assistance will be given with the organization of school clubs, courses, lectures, preparation of scripts, filming, etc. Individuals or schools clubs are eligible, providing they use either 8 or 16 millimeter film. For further details address Mr. Tuttle at 343 State Street, Rochester 4, N. Y.
4. Some of the recent school made films that came to the attention of this department are:
 - a) The Crippled Children's School at Work. This portrays how the physically handicapped children, regardless of race or creed, are trained to help themselves. This school is situated in Jamestown, North Dakota.

An extension of the same idea into summer camp activities is portrayed in the films made at The Pine Tree Camp for crippled Children, at North Pond, Maine.
 - b) The Motion Picture Production Unit of the Pennsylvania State College in cooperation with the Department of Internal Affairs has produced a two reel sound film "Pennsylvania Local Government in Action". This film portrays the operation of the various subdivisions of local government units in Pennsylvania. Animated charts show governmental structures, incomes and expendi-

tures. Various real life situations controlled by local government units, such as recreation, street repairing, municipal markets, welfare projects, council and other meetings, in-service training classes, housing, etc. are included.

Question Box on Film Production

QUESTION: In taking a close-up of a printed card against a mass of flowers I get either a washed effect or letters that are too dark to read. The more distant shot of the flowers come out quite colorful. I've been using two photoflood lamps to photograph these shots. How can I avoid such waste of color film?

ANSWER: There are several causes for such poor exposures. (1) The proper use of a lightmeter does not always guarantee good results. I have seen amateurs read their meters correctly, and absent-mindedly forgot to adjust the diaphragm opening for the indicated reading. (2) If no lightmeter was used, and you merely followed the printed directions on the instruction sheet that came with the film, you probably forgot to make proper allowances for the age of the lamps, i. e., the number of hours it already had used up of its allotted life span. Partly burned out lamps do not render true color values. (3) It is not entirely wrong to surmise that just as you snapped on your photoflood lamps there might have been a drop in potential, because some one else at the same time decided to use an ironer or other electrical equipment. Get a good light meter and check all your readings and diaphragm adjustments before you shoot. (4) Finally, if your film is outdated, its emulsion speed is slowed down. In that case you must use your next larger opening.

QUESTION: We are confronted by a problem of inadequate lighting. We would like to photograph the entire sequence showing pupils arriving for physiotherapeutic treatment, the treatment itself and the pupils departing. Since we are shooting in color how shall we tackle this problem?

ANSWER: The entire sequence can be filmed without use of artificial illumination. Select a day with plenty of sunlight. Focus your camera (long shot) showing pupils arriving at clinic. This should be followed by medium and close-up shots to bring out facial expressions and other details that merit attention. Your physiotherapeutic treatment can be given outdoors or on the roof. Be sure to shoot as close as possible (use wide opening and adjust for speed to eliminate as much outdoor background as possible). Get as many details about the treatment as you can, so that the audiences' attention will be drawn to these close-ups, rather than to the change of scene. Again for the final scene you will have to select that time of the day when you get the maximum amount of sunlight on the door of the building. This time you have your camera face the building and shoot the patients as they leave.

A NEW AUDIO-VISUAL TOOL FOR DEMOCRACY

The Man in the Cage

Approved By
AMERICAN COUNCIL
On Race Relations

COMPLETE SLIDE-SOUND FILM UNIT

Color-Cartoon Pictures, Brilliant Recording, and 'Look & Talk'... A Tested Discussion Guide.

Produced By
UNITED PRODUCTIONS OF AMERICA

THE MAN IN THE CAGE is a captivating presentation of a most critical subject of concern to all of us... the history, practices, and consequences for democracy of racial, religious, and national prejudices. In a fascinating combination of color cartoons accompanied by a fine commentary-and-music recording, this sound-slide unit stimulates intense attention to the key post-war problem of fair employment practices. It entertains, poses questions, stimulates discussion.

SLIDE FILM
56 single-frame creative color cartoons. Project on any 35mm filmstrip projector.

16-IN. RECORDING
15 minute carefully recorded dialog and music. Use on play-back, turntable or sound-slide projector unit at 33 1/3 RPM speed.

'LOOK & TALK' GUIDE
4-Page printed Discussion Guide prepared by the National Institute of Social Research Inc. includes a note to discussion leader, sample introduction to film, introduction to discussion, suggested questions, and factual guide material.

COMPLETE UNIT PRICE

SALE
\$17.50

RENTAL
\$2.50

Excellent for School, Church and Group Use.

Democracy

(Encyclopaedia Britannica Films Inc., 20 North Wacker Drive, Chicago, Illinois) 11 Minutes, 16 mm, sound. Price \$50 less ten percent discount to educational organizations. Discussion guide available.

Description of Contents:

The film presents a brief but practical definition of the meaning of democracy. After admitting that democracy is difficult to define, two signs and two conditions which characterize democracy are pointed out. The two signs of democracy are *shared respect* and *shared power*. Shared respect means the opportunity for each person to develop his skills and abilities to their greatest potentialities and the maintenance of respect for the beliefs and faiths of other members of the group. Shared power means that many people take part in making important decisions for the group. The making of decisions usually culminates in elections where people get out voluntarily and vote without pressure.

The two signs of democracy depend upon two conditions—*economic balance* and *public enlightenment*. To have economic balance, the country needs a large middle-income group. To be an enlightened country, people need to have access to many sources of information through printed, visual and audio materials. The channels for the mass media of communication—press, motion pictures and radio—must be uncontrolled. The point of view of the opposition needs to be heard and considered.

These items are presented by the commentator and illustrated with well-chosen scenes and animated diagrams thus making difficult abstract concepts more concrete.

Committee Appraisal:

The film presents a cool, objective definition of the meaning of democracy which will be accepted by most teachers. Highly recommended for use in senior high school social science classes and in college classes where a review of the definition of democracy is important. It can be well used with community groups who wish to sharpen their concepts about the meaning of democracy.

The film does not take time to make a warm, personal appeal to its audience, nor does it build up in dramatic form a feeling about some of the characteristics which make a democracy.

It does present a clear-cut, brief definition which members of an audience can take home with them and use as a measuring stick to determine whether practices lean toward or away from democratic principles. The content of the film is more about political democracy than about social and economic democracy although these areas

This page of reviews is conducted for the benefit of educational film producers and users alike. The comments and criticisms of both are cordially invited.

Producers wishing to have new films reviewed on this page should write L. C. Larson, Indiana University, Bloomington, Indiana, giving details as to length, content, date on which the film was issued, basis of availability, prices, producer and distributor. They will be informed of the first open date when the Teacher Committee will review the films. The only cost to the producer for the service is the cost of transporting the prints to and from Bloomington. *This Cost Must Be Borne By The Producers.*

are also given consideration. This film should be the forerunner for many other productions greatly needed in this area.

Nature of Color

(Coronet Productions, Glenview, Illinois) 10 minutes, 16 mm, sound, color \$75.

Description of Contents:

Sir Isaac Newton made the discovery that light passing through a prism will be separated into the colors of the spectrum. Animations illustrate how a prism separates the various wave lengths of light and hence produces the color of the spectrum.

The primary colors are blue, green and red, and combinations of these three produce the others. Blue plus green equal blue-green; blue plus red equal magenta and green plus red equal yellow. Complementary colors are those which, when combined, produce white light. Magenta and green, blue-green and red, and yellow and blue are complementary and produce white light when combined.

The complementaries of the three primary colors are sometimes called minus colors. White light minus red equals blue-green, minus green equals magenta and minus blue equals yellow. A combination of green, blue, and red filters will subtract all of the primary colors from white light, leaving black.

The latter part of the film illustrates the application of color to commercial work. The artist uses his knowledge of the nature of color in putting his ideas on canvas. The printer prepares plates of blue-green, yellow, magenta and black to produce color prints in magazines and books. The photographer uses his knowledge of color in producing color pictures and in filtering out certain rays of light to produce interesting black and white effects. These and other modern uses of color are made possible through an understanding of the nature of color which began when Isaac Newton separated light into its parts by a prism.

Committee Appraisal:

Recommended for use in high school and college classes in physics, photography, art, printing and home economics. College classes may find the film elementary but good as a review. The subject matter of this film relies heavily on the inherent qualities of color film to communicate its ideas to the audience. It is a severe test on the latitude of color film. Optimum projection conditions are very important when showing this film.

What Is Four?

(Young America Films, 18 East 41st Street, New York 17, New York) 15 minutes, 16 mm, sound, black and white or color, B&W \$45, color \$110. Teachers' guide available.

Description of Content:

The film illustrates the mathematical meaning and social application of the number four through a series of concrete, semi-concrete, and abstract situations. Four is treated in such concrete and social activities as the number of milk bottles delivered by the milkman, the number of glasses of milk served by Tommy to his classmates, and the number of blocks used by Tommy and Ruth in constructing block towers. The numberness of four and its relationship to one, two, three, five, and six are developed through the use of shifting circles, lines, squares, boxes into various number combinations and writing

(Continued on page 526)

KNOWLEDGE BUILDERS CLASSROOM FILMS

Wish to Bring to the Attention of Superintendents, Principals and Heads of Mathematic Departments, This New and Original Series of 16mm Sound Films Designed to Aid the Teacher in Teaching

"PLANE GEOMETRY"**HERE ARE THE FIRST TEN OF OUR "PRACTICAL GEOMETRY SERIES"****"LINES AND ANGLES"**

It is the purpose of this sound film to help the student visualize the mathematical applications of basic Geometry. Beginning with the erection of a perpendicular, the film illustrates the relationship of the perpendicular with the ordinary plumb bob, level and square. Shows how angles are formed and measured, the relationship of angles to each other and to the complete circle.

"ANGLES"

Helps the Geometry student to understand all the various types of angles and their relationship to each other. After the student has become familiar with the construction of angles by means of intersecting lines and to measure them with a protractor, this film can be very helpful in clarifying the maze of mystery surrounding ANGLES.

"CONGRUENT FIGURES"

A concise demonstration of the geometric principles for finding and proving that triangles with "equal sides," "equal angles" or the combinations of both are equal and congruent. The effective combination of actual photographic scenes, Animated drawings, lettered equations and recorded sound make this a convincing teaching tool.

"SIMILAR TRIANGLES"

Presents Similar Triangles in a graphic manner. Begins by showing practical uses. Shows properties of Similar Triangles, and demonstrates the "two angles equal" proposition. Gives an application in a new geometric situation. It will help the student to obtain a clear mental picture of this important element of basic Geometry.

"LOCUS"

The entire concept of Locus is clearly visualized and explained by this combination of animated drawings, regular photographic motion and the spoken word.

"QUADRILATERALS"

Illustrates and explains the chief properties of the important quadrilaterals, such as: parallelograms, rectangle, rhombus, square, trapezoid and trapezium. This visual method of presenting this important phase of geometry will prove very helpful to most students and will enable them to distinguish readily each type of quadrilateral.

"THE CIRCLE"

The circle is a rather simple geometric figure, yet it presents many problems to the geometry student. In this film such important phases as radii, diameters, chords, tangents, secants, arcs and central angles are presented and clarified. Theorems and proofs are introduced.

"CHORDS AND TANGENTS OF CIRCLES"

This is a further advanced phase of our film on "The Circle" and is intended to follow it as the next lesson. It deals with the theorem on a perpendicular to a chord within the circle. All types of tangents are dealt with in detail. An effective combination of animated diagrams and the recorded voice.

"ANGLES AND ARCS IN CIRCLES"

Deals with the measurement of central angles, arcs, inscribed angles and angles formed by two chords. Theorems and proofs are effectively introduced and demonstrated by means of animated drawings and sound.

"AREAS"

Presents the needs and uses for finding areas of various figures. Shows clear graphic demonstrations of recognized methods for the computing areas of Rectangles, Parallelograms, Triangles and Circles. Will help the student fix fundamental principles in his mind by showing how relations in the figures result in relationships in the formulas.

THESE SOUND FILMS, (ONE REEL IN LENGTH), ARE AVAILABLE ON AN OUT-RIGHT PURCHASE BASIS AT \$40.00 PER SUBJECT. RENTAL \$2.00 PER DAY.

For Rental Bookings — Write to Your Own State University or Nearest Film Library, or Direct to Us

KNOWLEDGE BUILDERS

625 MADISON AVENUE

NEW YORK 22, N. Y.

each combination in terms of numbers and words. The last half of the film illustrates and discusses some simple addition and subtraction facts. The symbols +, -, and = are introduced.

Committee Appraisal:

WHAT IS FOUR may be used as a curriculum film in the teaching of arithmetic in the primary grades or in professional teacher groups and methods classes suggesting a functional approach to the problem of developing number concepts. The film should be useful in indicating some of the uses of four in experiences of young children, to reveal relationships of four to other numbers, to provide meaningful basis for addition facts whose sum is four and for related subtraction facts, and to suggest activities leading to an understanding of other numbers up to ten. The effective use of animation, representative selection of concrete and abstract examples, commentary developed to capture pupil interest, and suggestions for further activity and application to the film, it seemed to the committee, presented a thorough and interesting treatment of the subject. The film represents an interesting innovation in the use of motion picture medium to develop a concept where ordinarily the idea of motion is not recognized. Young America Films is to be complimented on their willingness to experiment with the motion picture in the area of teaching mathematical concepts.

China

(March of Time, Forum Edition, 369 Lexington Avenue, New York 17, New York) 16 mm, sound, black and white, three-year lease \$35. Discussion guide available.

Description of Content:

The film follows China's struggle to evolve from a heterogeneous empire into a unified republic. Beginning with her differences in religion, in dialect and in geography, the film proceeds to show that here where one fifth of the World's population lives, agriculture is the chief industry and that a very primitive sort of agriculture is practiced. The Japanese aggression is pictured in some detail followed by scenes of the Burma Road and its importance to China's prosperity. The effect of the War upon industry, education, communication and transportation is pictured. The beginnings of democracy under Dr. Sun Yat Sen are shown by shots taken during his lifetime and then in China of today. The film closes with scenes of the Youth Corps, the Central Government and air transportation.

Committee Appraisal:

The film should be useful in forum and discussion groups in presenting such important factors in the Chinese situation as the role of China in an international economy, the conflicts in China and her attempts at developing a democracy. Recommended as a discussion film for use by senior high school, college and adult groups interested in Chinese problems.

Leather Work

(International Theatrical and Television Company, 25 West 45th Street, New York 19, New York) 19 min. 16 mm, sound, black and white, \$60.

Description of Content:

Filmed at the Walden School in New York City, the motion picture presents first a girl and secondly a boy in step-by-step demonstrations showing the making of a brown pigskin pouch-bag and a calf leather wallet. The girl locates her pattern on the right side of the leather and then uses a paper pattern to mark on the wrong side the pieces which she cuts out with a very sharp knife. A spacing wheel is used to mark the places to punch holes. She selects a tan leather lacing to lace together the different parts. When the pouch is finished, it is an exact facsimile of her pattern. The boy makes a wallet which

he decides should have his monogram and sections for pictures, cards, and money. He, too, after locating the paper parts on the right side of the leather, traces them on the wrong side. Having cut out the wallet, he uses a spacing wheel, punches the holes and laces the parts together. He then traces the monogram on to the front of the wallet and presses the outline down with a tracing tool. After the outline is completed he presses down the inside part of the leather. The boy immediately puts into the wallet his money, cards and pictures and places the wallet in his pocket.

Committee Appraisal:

The film is good for presenting step-by-step demonstrations of making leather articles. Both demonstrations are logically arranged, excellently photographed and complete. The film should prove effective in developing a favorable attitude toward saving scraps of leather and such good work habits as returning tools to their proper places, also in developing an appreciation for handmade leatherwork. The film is recommended for use by intermediate, junior high school, senior high school groups either on curricular or extra-curricular basis in connection with a study of leather work.

Teaching

(Vocational Guidance Films, Carl F. Mahnke Productions, 2718 Beaver Avenue, Des Moines, Iowa) 10 min. 16mm, sound, Price \$50.

Description of Content:

The teaching profession is introduced by showing a series of typical classroom situations in senior, junior high and elementary schools. The advantages of the teaching profession are illustrated: significant work, good social status for the teacher, long vacations, security through tenure laws and liberal retirement plans.

The requirements for teaching vary through the forty-eight states although all of them have licensing requirements which must be met through special preparation. Prospective teachers are invited to explore the various special fields, such as home economics, physical education, music, printing, counseling and guidance, journalism, education for the handicapped, adult education, work with teaching aids including motion pictures and radio, school administration and college and university teaching.

The work of the teacher is found to be satisfying to most of those who enter it. Teachers hope to make this a better world no matter where they work.

Committee Appraisal:

Recommended for use in orientation courses in schools of education and with high school groups who are interested in exploring the profession of teaching along with other professions. The film shows samples of classroom teaching situations as found in many present-day schools, but it makes little attempt to present a point of view in education. Hence, it would not be particularly stimulating to persons already in the teaching profession. Little is said about the disadvantages of the teaching profession, if there are any, and no reference is made to the problems which a young teacher will face.

The film should be useful in getting high school and lower division groups to give serious consideration to the profession of teaching as a life work.

Bill Garman, Twelve Year Old Business Man

(Frith Films, Box 5655, Hollywood 28, California) 10 minutes, 16 mm, sound, color, \$65. Coordinated filmstrip, black and white, \$3.50.

Description of Content:

The film follows Bill Garman as he performs the tasks which relate to the projects on the farm which are his responsibility. Bill owns and cares for one hundred and fifty rabbits. Assisted only by his small sister Patty

(Concluded on page 528)

16MM SOUND FILMS for Classroom Instruction

Social Studies

PEOPLE OF THE ARCTIC

Life in far northern Alaska, Labrador, Greenland, and northeastern Siberia.

HOW THE DESERT PEOPLE LIVE

Wandering tribes of the Sahara; people of the Turkestan and Gobi deserts.

HOW A HUNTING PEOPLE LIVE

Main features of the economy of the Mongols in the Tiages of Siberia.

HOW A FISHING PEOPLE LIVE

Primitive people of the North Pacific who depend on the sea for a livelihood.

A NATION'S SEARCH FOR GRASS

Homes and flocks of the herds people of Iran. Taken from the epic "GRASS."

Physiology

HOW THE EAR FUNCTIONS

Structure and mechanism of the ear; how sound waves are received and converted into nerve impulses.

HOW THE EYE FUNCTIONS

Anatomy of the eye and facts regarding "accommodation" or focal adjustment.

OUR TEETH

Growth and structure. Explains why oral hygiene is of prime importance.

Science

THE EARTH AND ITS SEASONS

Vernal and Autumnal equinoxes and Summer and Winter Solstices explained.

MYSTERIES OF WATER

Deals with water as man's friend, as a worker, a builder, and in turn as his enemy, a destroyer.

THE WORLD WE LIVE IN

Close-up study of the Earth as a planet; divisions into hemispheres, etc.

STORY OF ELECTRICITY

Deals with the early discovery of magnetism; and subsequent developments which produced Electricity.

STORY OF THE MICROSCOPE

History of its development and its contribution to man's knowledge.

STORY OF THE TELESCOPE

Touches upon ancient astronomical knowledge; invention of telescope and development of reflectors and refractors.

STORY OF COAL

Its discovery 150 years ago; how it is formed and mined; regions where found; uses in industry.

Practical Geometry Series

LINES AND ANGLES

How formed and measured; relationship to each other and to complete circle.

ANGLES

Clarifies the various types of angles and their relationship to each other.

CONGRUENT FIGURES

The "equal sides", "equal angles" principle demonstrated and proved.

SIMILAR TRIANGLES

Properties of similar triangles; illustrates the "two angles equal" principle.

QUADRILATERALS

Illustrates and explains chief properties of important quadrilaterals.

LOCUS

The entire concept of Locus is clearly visualized and explained.

THE CIRCLE

Clarifies radii, diameters, chords, tangents, secants, arcs and central angles.

CHORDS AND TANGENTS OF CIRCLES

Deals with the theorem on a perpendicular to a chord within a circle.

ANGLES AND ARCS IN CIRCLES

Deals with central angles, inscribed angles, arcs, angles formed by chords.

AREAS

Needs and uses for finding areas of various figures; methods for computing.

*Each subject is 1 reel (400 feet) in length. Available for sale or rental.
Write to our nearest exchange.*

\$69.50

Craig Visual Aids Service Co.
 LOS ANGELES • SAN FRANCISCO • SEATTLE

whose help at times is very questionable, Bill scrubs the hutches, feeds the rabbits, changes the drinking water. The skins of the rabbits Bill sells for meat are carefully stretched and later sold for fur. Bill, himself, takes the furs to town to sell and deposits the money to his own account. Bill is likewise responsible for a hog project through the help of the 4-H Club leader. His joy and pride run high the day he sells three pigs for \$150. He deposits \$100 and with the balance buys five thoroughbred pigs. In addition to the two special projects Bill is responsible for certain routine duties on the farm for which he receives no direct monetary reward. His father, however, does pay him for special work. The film closes with a sequence showing Bill taking Pat and Shorty, two of his pals, to a ball game for which they lack the price of admission.

Committee Appraisal:

Presenting an intimate log of Bill's activities, projects, business accounting, and success, the film should stimulate boys' interest in comparable money-making projects. Recommended for use in intermediate grades in curricular or extra-curricular units dealing with family relationships or boys' interest. Might also be used by parents or child educators discussing development of a sense of responsibility in children, family relationships and attitudes, children's relationships with people outside their school and home, and development of desirable attitudes towards pets. Some members of the committee felt that the content of the film was presented in a rambling fashion, whereas others felt that it followed representative interests of youngsters. The excellent color photography and simple narrative add much to the value of the film.

Atlanta Film Council Meeting

(Continued from page 494)

Georgia Workers Education Service, Chairman; Glenn Rainey, Department of English, Georgia Tech; Dr. Allan Albert, Jr., Department of Sociology, Emory University; Mrs. Kitty Pittman, World Citizens Group; Mrs. Joseph Buffington, Pan-American League; Lester Persells, American Veterans Committee; and Mrs. Helen Douglas Mankin, Georgia's 5th District Congresswoman.

That the films provided material for a lively discussion is evidenced by the fact that the lights were turned out in the Druid Hills Baptist Church, where the meeting was held, before the last of the audience could be encouraged to terminate their debate for the evening.

The Atlanta meeting of October 7 featured a talk by Mr. Barnard M. Loden, of Instructo-Graphic Films, Atlanta, who selected as his topic, "Making a Motion Picture Sound Track". An actual sound track was made at the meeting.

On October 14 the Council heard Chaplain W. P. Allison, Fulton County Chaplain, who spoke on the use of films for conveying Christian principles in county-type institutions.

The program chairman for the October 21 meeting was Miss Erva Blackstock, Atlanta. Mr. Earl Waldrup, Secretary, Visual Education Service, Sunday School Board, Southern Baptist Convention, Nashville, Tennessee, was the guest speaker. Mr. Waldrup and Rev. S. L. Laird, member of the Atlanta Film Council, and Director of the Emory Christian Association at Emory University, gave a practical demonstration and discussion on the "Effective Use of 2"x2" Slides and Filmstrips". Two films were shown, "The Child of Bethlehem" and "Argentina".

Wesley Greene Chosen Chairman Of Chicago Chapter FCA

Two meetings were held in Chicago under Film Council of America auspices October 29. In the afternoon manufacturing, educational and other representatives gathered to discuss national issues confronting the FCA and organizational plans and projects. In the evening there was a general membership meeting out of which a new organizing committee emerged. Wesley Greene, of College Film Center, will replace the former chairman, Wm. F. Kruse, who is transferring to New York City, as vice president of United World Films, Inc. Other members of the committee include: Mr. Ralph Creer of the American Medical Association; Larry Goldberg of Pictorial Films, Inc.; Bertram Willoughby of Ideal Pictures Corporation; Mrs. John Hamilton, Chicago Film Workshop; Lee Robbins, Chicago Public Schools Film Council; Larry Strauss, YMCA; and Don White, NAVED. This committee met on November 5 to perfect plans for a larger gathering at which officers will be elected and purposes more clearly defined.

Two Meetings Held by Blue Grass Film Council

Guest speaker at the October 7 meeting of the Blue Grass Film Council of Lexington, Kentucky, was Mr. B. A. Aughinbaugh, Director of the Ohio Slide and Film Exchange of the State Department of Education, Columbus, Ohio. He gave an illustrated talk on "Recorded Communication".

The subject for the panel discussion at the November

7 meeting was "How to Select, Secure, and Use Instructional Motion Pictures". Austin Durham was chairman of the panel composed of Miss Mary Rees Land, John Harmon, and L. C. Carmichael.

Film Councils Urged to Exchange Information

Mr. Thurman White, Chairman of FCA's Committee on Local Organization asks that all local councils put all other councils on their permanent mailing lists, in order to facilitate the knowledge of what each unit is doing. Following is a list of active film councils:

Dr. Davis S. Ruhe
U. S. Public Health Service
291 Peachtree Street

CIRCLE 7-7100

**American Medical Association
Names Committee to Encourage
Wide Use of Medical Films**

The American Medical Association announces appointment of a new committee on medical motion pictures which will promote a more widespread use of medical films and stimulate research in this field.

The committee, which includes prominent medical men and laymen experienced in the field of medical photography, is headed by Mr. Ralph P. Creer, former director of the photographic division of Yale Medical School.

The purpose and scope of the medical motion picture committee, as outlined in *The Journal of the American Medical Association*, follow:

1. To promote a more widespread and effective utilization of medical motion pictures and to stimulate research in this field.

2. To expand the present library of medical and public health films now available on a loan basis through the American Medical Association. Motion pictures dealing with basic subjects that are not available through other sources will be selected.

3. To publish critical reviews of medical motion pictures in the *A.M.A. Journal* and in *Hygeia*, the health magazine of the A.M.A.

4. To expand the source file which has been started. Eventually this file will contain informative data on several thousand motion pictures dealing with all phases of medicine as well as health films for the public. Films not available for loan or purchase will not be listed. The purpose of this file is to provide on request authentic information relative to types of films available to the medical profession on any given subject.

From the information gathered, it will be possible to give some guidance to individual physicians and to commercial and other agencies interested in the production of timely films that are in demand by the medical profession. As far as facilities permit, it is planned to cooperate to the fullest with medical schools, state and county medical societies, government departments, foreign countries and other groups interested in the dissemination of knowledge and information on the subject of medical motion pictures.

**Washington Visual Workers Hear
Audio-Visual Specialists**

Dr. Walter A. Wittich, director of the Bureau of Visual Instruction of the University of Wisconsin, Walter S. Studdiford of the Division of Occupational Analysis and Industrial Services, and Haven Falconer of Loew's International, were speakers heard at recent meetings of the Washington Visual Workers.

Dr. Wittich, recently elected head of the Department of Visual Instruction of the National Education Association, outlined the Department's three-point program, with special cooperation with other organizations. Present plans of the university call for a close

Notes

liaison with the Motion Picture Association and exhibitor organizations.

Mr. Studdiford addressed a luncheon meeting of the group on the selection and evaluation of motion pictures to assist occupation analysts. A special film catalog in this area has been compiled.

Mr. Falconer sees the emergence of schools abroad as greater audience centers for 16mm feature films than commercial theaters. Loew's has already found this to be true in South Africa, says Mr. Falconer, and there are signs that the same pattern may develop in other countries.

Teachers College Makes Wide Use Of Visual Aids in Training

(Muncie, Ind.) Each prospective teacher graduated from Ball State Teachers College is instructed in the use of every modern method of visual education, having had at his disposal the central audio-visual aids library, an open workshop for constructing new non-book teaching aids, a museum of teaching materials integrated with the school curriculum, and methods courses in his major fields of study. Ninety per cent of the faculty members use audio-visual materials from Teaching Materials Service regularly in their own courses, according to a report issued by Miss Evelyn Hoke, director of the college's Teaching Materials Service.

The service has a film library of 319 different educational films and a wide variety of other non-book teaching aids which it makes available to Indiana schools to supplement regular text-book training and provide students with silent and sound motion pictures. The Teaching Materials Service has available for rental via extension service slides, film strips, recordings and transcription, exhibitions. This service also offers consultations and previews and conducts audio-visual clinics, conferences, and year-round courses in audio-visual education to assist teachers and administrators in making the most effective use of instructional films and other teaching aids.

Motion Pictures Seen as Help For Re-educating Nazis

The United States Education Mission to Germany has called for additional supplies of motion picture equipment and raw film stock. The mission, headed by Dr. William Zook, president of the American Council on Education, emphasized the fact that films can play an important part in the re-education of the former Nazi nation.

It was also recommended by the mission that a voluntary body which would serve as a clearing house for information and as a "recruiting agency" for teachers be created in this country.

War and its aftermath destroyed more than 50 per cent of the films and picture equipment in Germany, the mission reported. "In view of the present abnormal shortages of instructional materials, types of visual aids,

READY NOW!

"PUBLIC OPINION"

A New Encyclopaedia Britannica Classroom Film

Produced in Collaboration with
HAROLD D. LASSWELL, Ph.D.
Yale University

WHAT THE FILM DOES: Uses animated drawings and live-action photographs to illustrate public opinion in action. The public opinion process is traced through its various stages from a "state of tension," in which people realize that "something is wrong," through the stage of "diagnoses and prescriptions," through further debate, to final action. Methods of measuring public opinion are illustrated, as are various ways of analyzing the factors that influence public opinion. In a final sequence the film defines the nature of an enlightened public opinion in a Democracy.

SCOPE OF THE FILM'S USE: Junior and senior high school.

COURSES IN WHICH FILM MAY BE USED: Social studies and social science courses, including problems of democracy, sociology, civics and history.

LENGTH: One reel; safety stock; 16mm., sound.

PRICE: \$50. Discount 10%.

TERMS: Net 30 days. Transportation prepaid.

For further information, and a complete list of classroom films, write today to Encyclopaedia Britannica Films Inc., Dept. 21-L, 20 N. Wacker Drive., Chicago 6, Illinois.

NEW "SERIES ONE" RECORDINGS
LAUDED BY EDUCATIONAL LEADERS

Hailed As Outstanding **FIRST**
In Training Aids For Schools

Under the auspices of the School Guild Theatre, Elizabeth Goudy Noel and William Bower, nationally prominent in the audio-visual field, have collaborated on a remarkable new group of transcriptions. Specifically created for classroom use, the new "SERIES ONE", depicting the lives of great Americans, offers a new concept of transcriptions as teaching texts. Each is a complete teaching unit.

The unique feature of the recordings is **AUDIO-GUIDE**, a "built-in" teacher-student listening guide. Background material is included to save the teacher's valuable time on research. Pre-listening and follow-up activities are recorded for use by students. The transcriptions are extremely flexible, and have diversified application in the school. The dramatic episodes are of high level commercial radio standards.

Educational leaders, who previewed "SERIES ONE", have acclaimed these recordings an important step forward in training aids for our schools.

including films, assume more than their usual importance," the report stated. "The Germans are starved for information as to what has been going on in other parts of the world during their intellectual imprisonment. They are eager to learn."

Indiana Visual Education Meetings

Meetings were held in three Indiana cities October 24 by the visual education sections of the Indiana State Teachers Association. The Indianapolis meeting featured a symposium on "Responsibilities of the Director of Audio-Visual Materials" under the chairmanship of Mr. L. C. Larson, Director of the Audio-Visual Center at Indiana University. Other leaders in the field spoke, followed by a question period. At the noon luncheon, Mr. Floyd E. Brooker, Chief of the Visual Education Section, U. S. Office of Education, addressed a group of visual education directors on "Highlights of the London UNESCO Meeting". The evening session was devoted to exhibition of newly released films from the Indiana University Audio-Visual Center, a classroom demonstration, and a second address by Mr. Brooker.

At the South Bend meeting Mr. M. R. Taylor of the U. S. Rubber Company, discussed "Industrial Films As They Relate to Education".

A luncheon program in Gary featured addresses by two members of the staff of the Audio-Visual Center at Indiana University. Dr. Roy Wenger spoke on "Materials and Methods in Audio-Visual Education", and Miss Carolyn Guss chose as her topic, "What Constitutes a Well-Rounded Audio-Visual Program".

**More Than 3,000 Attend Conference
At Illinois Teachers College**

Western Illinois State Teachers College sponsored its first audio-visual conference recently. Held at Macomb, the three-day meeting attracted more than 3,000 audio-visual educators.

Dr. Edgar Dale, Ohio State University, spoke on the place of audio-visual aids in the education program. Numerous other speakers addressed panel discussion groups. These speakers represented state departments of education, public schools, and commercial firms. They included: Vernon L. Nickell, Illinois State Superintendent of Public Instruction; Dean E. Douglas, regional educational director, Radio Corporation of America; Paul Kinsel, National Education Association; L. V. Peterson, director, audio-visual library, University of Illinois; Miss Norma Barts, DeVry Visual Aids counselor; Albert Burgard, assistant Illinois state superintendent of schools; William F. Kruse, commercial representative, Bell & Howell company; Walter Renner, commercial representative, Encyclopaedia Britannica Films; and several city and county superintendents of schools.

Kansas Education Association Hears Dr. Corey

Dr. Stephen M. Corey, professor of educational psychology and director of the center for the study of audio-visual instructional materials at the University of Chicago, made three appearances on the program of a sectional meeting of the Kansas Education Association in Hays, Kansas, November 1. The subject, "Utilization of Motion Pictures in Instruction," was illustrated with the showing of a picture entitled "Using the Classroom Film" produced by Encyclopaedia Britannica Films, Inc., in cooperation with the University of Chicago Laboratory School.

Two-Day Conference on Audio-Visual Methods Held at Tacoma

A comprehensive two-day In-Service Teacher Training Conference on Audio Visual Instructional Materials and Curriculum Improvement was held at Tacoma, Washington October 17 and 18.

A number of specialists in the audio-visual teaching field spoke to the gathering. The topics presented at the dinner meeting October 17 were varied and brief, ranging from "Correlating Instructional Materials with the Curriculum Improvement Program" to "The Selection and Acquisition of Audio-Visual Equipment and Materials", followed by a general discussion. Alice H. Hayden, Director of Educational Research at the University of Washington's College of Education, presented "Overview of Conference". Continuing on the 18th the conference visited schools and heard further talks, including an illustrated discussion, "What is This Thing Called Audio-Visual Education", by Chester Ullin, Director of Audio-Visual Education Materials, Kitsap County, Washington.

Encyclopaedia Britannica Films To Award Scholarships

Mr. H. R. Lissack, vice president of Encyclopaedia Britannica Films, Inc., announces the third annual award of summer tuition scholarships by the firm. The scholarships will enable carefully selected educators to study and apply the most effective modern methods of using instructional motion pictures in the regular school curriculum.

Colleges and universities interested in receiving the scholarship grants in 1947 should make application before January 1, 1947 directly to Stephen M. Corey, director of the center for study of audio-visual instructional materials at the University of Chicago. Mr. Corey is chairman of a committee which will select two educational institutions in addition to the University of Chicago to receive the scholarship grants.

Four other educators will serve on Mr. Corey's com-

mittee. They are: W. A. Wittich, director of the bureau of visual instruction of the University of Wisconsin's extension division, Madison, Wisconsin; L. C. Larson, director of the audio-visual center of Indiana University, Bloomington, Indiana; Charles F. Hoban, Jr., special assistant in the Philadelphia, Pennsylvania, Board of Education; and Francis W. Noel, chief of the division of audio-visual education, California State Department of Education, Sacramento, California.

The educational institutions chosen by the committee will themselves select and award the Encyclopaedia Britannica Film Scholarships. Last year 34 educators in the United States and Canada received scholarships through the funds made available. They studied during the summer sessions at the Universities of Chicago, Wisconsin, and Indiana.

**Council Against Intolerance
To Assemble Visual Materials**

An exhibit at the Norlyst Gallery in New York, sponsored by the Council against Intolerance will feature posters, placards, maps, cartoons and graphs, tear sheets from books and magazines, etc. Entitled "Tolerance Can Be Taught" the exhibit is scheduled to be shown in January.

The assembly of visual materials will show the public what can be done to effect democratic attitudes with those materials. The Council is now asking for suitable displays. Schools, groups and churches are invited to send their contributions to Alexander Alland, Picture Service Director, Council Against Intolerance, 17 East 42 Street, New York, New York.

**Film to Be Produced on Function
Of Public Opinion Polls**

A film to inform foreign audiences of American social, political and economic thought will be the first of a series sponsored by the U. S. State Department. It will demonstrate how views of the American people on national and international affairs find expression and exert influence on industry and in Government legislation and policies. The film will be produced by United Productions of America.

**Motion Picture Engineers Hear
Papers on Television**

New developments in television as applied to the motion picture industry, as well as in sound recording, high speed photography, color films, 16mm equipment and techniques and new high-intensity illumination, were revealed at the 60th Semi-Annual Convention of the Society of Motion Picture Engineers, held in Hollywood, California, October 21 to 25.

**Robert F. Elliott Joins Staff Of
Georgia Division of General Education**

Mr. Robert Fletcher Elliott has been appointed Assistant to the Director in Audio Visual Aids of the Division of General Education, University System of Georgia. Mr. Elliott served in the Fleet Air Photographic Squadron while in the Navy, and he has a rich background of technical experience in the audio-visual field. He replaces Donald Knox White who held the position prior to entering the Army in 1941. Mr. White, upon his discharge, accepted the position of Executive Secretary of the National Association of Visual Education Dealers.

Film Prizes Awarded at AAACE Meeting

The New York State College of Agriculture at Cornell University won two first prizes in the recent motion picture contest sponsored by the American Association of Agricultural College Editors.

Cornell placed first in the color sound group with a film titled, "Freezing Fruits and Vegetables at Home", and first in the black and white silent group with, "Steps Take Time in Watering Hens". First place for silent color films was awarded the Agricultural Extension Service at Pennsylvania State college for, "Better Methods of Growing Corn". Cornell placed second in this group with, "Range Rearing and Brooding Chickens". Pennsylvania State College won another first prize in the competition for the best series of color slides. Cornell took second in this division, and the Extension Service at the University of Minnesota, third. Georgia's Agricultural Extension Service won second in the close competition in the color sound group with their film, "Living Rock". "Dairying in Tennessee", produced for the Agricultural Extension Service of that state, won third in the color sound division.

Film and Slides on Iowa

Churches, schools, clubs, or other interested groups in Iowa may now obtain bookings of the 16 mm film, "Our Iowa", and the 2"x2" slide set, "Historic and Scenic Iowa", by writing either the Bureau of Visual Instruction, Extension Division, State University of Iowa, Iowa City, or Visual Instruction Service, Iowa State College, Ames.

"Our Iowa" is a 16mm sound film in color produced by the Bureau of Visual Instruction of the State University of Iowa Extension Division for the observance

COMMON GROUND LTD
Sydney Place London, S. W. 7.

of the centennial of the founding of the State of Iowa, and to serve as an historical record of Iowa's achievements. The film runs thirty-two minutes. The service fee is \$.50.

The film introduces its subject with scenes showing the beauty and productivity of the Iowa land, the wealth of its other natural resources, its citizens, and the way of life of the state. Shown also are annual events which have become traditional in Iowa. Among these are the Annual Powwow of the Sac and Fox Indian tribes near Tama; the tulip festivals at Orange City and Pella; the Iowa State Fair; and the National Corn-husking Contest.

"Historic and Scenic Iowa" is a series of 137 color slides. Many of the views included were photographed at the same time and place as scenes appearing in the motion picture film described above. A lecture guide accompanies the series. The service fee is also \$.50.

Portland, Oregon Audio-Visual Aids Coordinators' Meeting

Fifty Audio-Visual Aids Coordinators from the Portland Public Schools held their first meeting of the year on October 25th in Portland. Problems relative to effective use of Audio-Visual Aids were discussed. The group voted to affiliate with the Department of Visual Instruction of the N.E.A. Miss Copenhagen of Lincoln High School, Mrs. Bozarth of Lane School, Mrs. Krupke of Woodstock School and Mr. Adams of Ockley Green School were elected members of the planning committee to make arrangements for future meetings.

Fourth Iowa-Nebraska Institute

Plans for the Fourth Iowa-Nebraska Educational Improvement Institute have just been announced by the Education Department of the University of Omaha. These conferences deal primarily with Audio-Visual and Air-Age education.

In past years the institutes have been held while colleges and public schools were in session. This made it impossible for hundreds of teachers to attend, and resulted in many requests to change to a date when out state teachers as well as Omaha-Council Bluffs teachers could attend—to a time when even Omaha schools would not be in session,—giving all teachers an opportunity to profit from the meeting.

The date has been set—January 2, 3, 4, 1947. This is the last week-end of vacation, and will, for the first time, give the institute complete and exclusive use of the campus with no interference from classes of regular university students.

President Haynes, in announcing this winter's institute, said, "The Air-Age is revolutionizing not only our methods of transportation but also our ideas of geography, foreign relations and the social sciences. Audio-Visual devices are destined to be as great a tool in teaching as laboratory methods have been in the last half century."

AUDIO-VISUAL TRADE REVIEW

Slidefilms Produced by Britannica Films

Encyclopaedia Britannica Films, Inc. has produced and released its first two series of instructional slidefilms, titled *Regional Geography—The United States* and *Children of Many Lands*, prepared from corresponding series of EB films.

These filmstrips were prepared, according to Dr. V. C. Arnsperger, executive vice president of the firm, in order to provide additional advantages of modern visual instructional materials for schools which have no motion picture projectors and to help increase the value of instructional sound films in schools. Although they are compact, self-contained teaching units, Dr. Arnsperger pointed out, they can also be used in conjunction with the sound motion pictures on which they are based. The new series provides a means for the teacher to preview subject matter before the film arrives, and for review purposes in the classroom after the motion picture has been returned to the film library.

Each slidefilm contains 70 separate scenes.

Radio Transcription Series Released for School Use By Training Aids, Inc.

A new series of radio transcriptions has been made available for educational use through Training Aids, Inc., 7414 Beverly Blvd., Los Angeles 36, Calif. Material covered includes:

Captains of Industry, 52 subjects dramatizing the lives of America's outstanding industrial pioneers; *Ports of Call*, 42 dramatizations of the historical highlights and personalities of various countries, with a background of the music of the country; *Frontier Fighters*, 39 stories of early American explorers and other historic figures of the time when America was being settled; *That Was the Year*, 39 stories covering outstanding events and incidents occurring in our country's history from the year 1896 to 1934; *Charles Frederick Lindsley*, a series of dramatic readings from the works of the world's greatest authors; *Leather Stocking Tales*, dramatic readings by Charles Frederick Lindsley from "The Deerslayer", "The Last of the Mohicans" and "The Pathfinder"; *The Story Behind the Song*, 39 dramatizations of incidents and experiences in the lives of authors or composers which brought forth many well-known and beloved songs; *Thrills from Great Operas* covers many famous arias from well-known operas sung in English, with music conducted by Dr. Frederick Stock. There is a series also on *Strange Adventures in Strange Lands* and one on *Origin of Common Superstitions*.

These 16-inch pressings are made of

vinylite and are for reproduction at 33-1/3 r.p.m.

A catalog is available listing the individual titles in each series.

RKO 16MM Releases to be Distributed Through Its Own Organization

RKO-Radio Pictures is now handling its 16 mm film distribution direct through its own exchanges throughout the country. Spokesmen of this major distributing organization stated that the arrangement was undertaken in order that the company might exercise better control over the circulation of its 16mm releases, and that there will be no change in RKO policy with respect to the types of locations it will serve. General supervision of the new set-up will be exercised by Harry J. Michelson, RKO's short subject manager, with his assistant, Sid Kramer, in direct charge.

United World Films, Inc. Organized

Negotiations between Universal Pictures Company and Bell and Howell have culminated in the transfer of the Bell and Howell Filmosound Library to United World Films, Inc., a new, wholly-owned subsidiary of Universal, with headquarters address at 1250 Avenue of the Americas, New York 20, N. Y. William F. Kruse, for many years past the head of the Filmosound Library, joins the organization as vice-president.

Mr. Kruse stated that the new company represents a major expansion of 16mm resources, which will include product released by Universal, J. Arthur Rank, G-B Instructional, Ltd., and Religious Films, Ltd., as well as independent product already handled by Filmosound Library. For the present, United World Films will continue the Filmosound Library name and operation as heretofore, maintaining its established customer and dealer relations.

Teach MORE students S-T-R-E-T-C-H your time

USE
SOUNDSCRIBER
Trade Mark
ELECTRONIC DISC RECORDER

MORE AND MORE students want language instruction, and there are all too few new language teachers. Some method of stretching the instructor's time is therefore imperative.

Language departments of many leading schools, colleges and universities are using the SoundScriber electronic recorder for language instruction, for lesson planning, drill and testing. Because of its flexibility, SoundScriber aids in teaching not only phonetics, but also usage and diction.

The SoundScriber electronic re-

order records every shade of inflection, every nuance of diction on paper-thin, unbreakable plastic discs. Thus the scope and effectiveness of live voice instruction is multiplied—and students' comprehension is increased by testing their own voice-recordings on inexpensive SoundScriber discs.

SoundScriber will instantly repeat a word, a phrase, a sentence or an entire speech. The SoundScriber is light in weight, is readily portable from one classroom to another, and easy to operate. It is low in first cost and low in operating cost.

Write for complete information on the ways in which the SoundScriber is being used by leading schools, colleges and universities.

CHURCH-CRAFT PICTURES, St. Louis 3, Mo.

New 16mm. Commercial Kodachrome for Release Prints

A new 16mm Kodachrome motion picture film, yielding release prints of improved color quality and offering greater exposure latitude than that of existing Kodachrome Films, has been announced by the Eastman Kodak Company.

Designated as Kodachrome Commercial Film, the new film is designed to produce a low contrast original from which release prints are made. Prints made from this original provide color contrast equal to that of good originals made on other types of Kodachrome. At the same time, the film's increased latitude assures proper gradation of highlights and shadows. Since previous types of Kodachrome were developed primarily for amateurs, who project originals, they were not designed to give quantity release prints of high color quality.

Originals on Kodachrome Commercial Film are not designed for projection. A Kodachrome print is recommended for projection, cutting, and editing. Such a print may be ordered at the time the original is processed, making a projection print available when the original is returned. After the editorial work has been done on this print, the original film can be cut to match it. To facilitate this, all Kodachrome Commercial Film is edge-numbered with latent image footage numbers at 40-frame intervals.

Sound may be recorded on a separate

film at the time the picture is made or may be recorded before or after, as circumstances require. It cannot be recorded directly on Kodachrome Commercial Film; the film is supplied only with perforations on both sides.

The new Kodachrome Commercial Film has the same speed as Type A Kodachrome, and is available only in the 16-mm. width in rolls of 100 and 200 feet.

New Movie Processing Machine

A new robot type motion picture machine, made famous during the war and since that time in the sports' world, is getting extensive usage at U. S. C.'s department of cinematography. The machine is portable and may be used one day in the cinematography department and the next in the athletic department, if desired. It can be operated in broad daylight without fear of film impairment. The equipment is especially valuable where speed is a factor. The entire 16mm developing process can be done in as short a time as 10 minutes. Hence, for example, pictures can be taken of the first half of a football game and shown to the squad at half time.

The equipment used during a recent football exhibition at U. S. C. was a model No. 11, developed and produced by the Houston Corp. of Los Angeles, Calif., similar to that used by the army during the war for reproducing recon-

naissance and combat pictures. Part of the film was shot from high up in the grandstand and part from the sidelines. It was rushed to the machine adjoining the players dressing room in "takes." The machine automatically processes and dries film which feeds onto a reel.

When squad members retired to their dressing room mid-way of the game, approximately 200 feet was ready for immediate showing to them and by the time it had been run another 100 feet was available. The last 50 to 75 feet were on hand in plenty of time to complete the showing. A total of 350-375 feet were shot during the regulation first half.

The machine has many uses sports-wise other than in actual contest. Whether in football, track, swimming, boxing or any other sport requiring specialized form or individual instruction, coaches will be able to show their proteges mistakes on the screen within a matter of minutes after they are committed.

First Post-War Filmo Duo-Master Slide Projector

Adjustable condenser-lens system, superior protection for slides, high-efficiency 300-watt illumination, color-free heat filter, and rock steadiness while slides are being changed, are outstanding features of the Filmo Duo-Master Projector for 2"x2" slides, recently announced by Bell & Howell Company, Chicago. Offered in a price range lower than that of the Filmo Slide Master, the new projector has been designed with the same engineering precision and skill that characterize the company's higher priced models.

Spiral-groove microfocusing, 8-degree vertical tilt, hinged lamphouse lid, functionally-positioned controls, and brown wrinkle finish are other Duo-Master

Filmo Duo-Master

features. Dimensions of the projector with 5" lens in position are 13" long, by 8 1/2" high, by 4 7/8" wide. Weight is 5 lbs. A specially-designed compartment case is available.

Further information can be obtained from Bell and Howell Company, 7100 McCormick Rd., Chicago 45, Illinois.

Brandon Filmstrip Releases

Three new filmstrip subjects are offered by Brandon Films, 1600 Broadway, New York 19. *X Marks the Spot*, presents a direct approach to the role of the individual citizen and of government in tackling the urgent problems of today. Told in story form, it highlights the national problems confronting GI Joe on his return to civilian life: housing, FEPC, OPA, public health, general welfare. Photographs and cartoons stress the responsibility of Congress, the responsibility of the citizen who elects Congress, and the importance of intelligent, informed voting. Consists of 60 frames, with speechnotes for silent use. Also available with 16 inch recording for use on 33 1/3 RPM playback.

Man in the Cage is a color cartoon satire, emphasizing the need for a permanent FEPC. Unusual music treatment serves to score the continued presence in our midst of caveman tactics. Grampa of 1,000,000 B. C., who has been at large among us through the centuries, is seen stirring fears and hatreds which undermine the foundation of our 20th Century civilization. The subject, designed to meet an urgent need in the postwar confusion, points a finger at the dangerous symptoms at home of that fascist intolerance which we have just fought abroad in World War II. 56 frames with speechnotes for silent use. Also available with 16 inch recording.

Healthy, Wealthy and Wise, in color cartoon form, illustrates the benefits of the group health insurance plan. It portrays the trials and tribulations of Bill who failed to have such an insurance and the experiences of Charlie, who did. Designed particularly for industrial education programs. 71 frames. Also available with 16 inch recording.

OPA Ends Price Control On Projection Equipment

On October 30th, OPA removed price ceilings on all photographic equipment, including 16mm sound and silent projectors, as well as still projection equipment. These items, OPA explained, were found to be unimportant in business or living costs, or supply was found to be in approximate balance with demand.

More Than 25% War Veterans On Bell & Howell Payroll

Having achieved the distinction of being the first company in the United States to win the "veterans flag" awarded by the National Association of Personnel Directors in conjunction with the Disabled Veterans of America, Bell & Howell Company recently announced that for several months it has had in excess of 25% of world war veterans in its employ.

Specializing in on-the-job training, the Chicago firm has found that significant numbers of returned service men and women acquired new skills while undergoing military and naval training.

YOUR PUPILS WILL WANT TO BE Good Citizens and Good Neighbors

when they **SING A SONG of FRIENDSHIP**

TEACH-O-FILMSTRIPS are particularly valuable for classroom use because they make learning and teaching easier. Each filmstrip was conceived, planned and written by experienced teachers.

Each is a self-contained teaching unit with motivation, concept teaching, problems and questions for discussion. Combined with unbreakable vinylite TEACH-O-DISCS they constitute an integrated sight and sound teaching device that produces splendid classroom results. The two kits described on this page are excellent examples. You may order them in coupon below.

And they'll Sing a Song of Safety too!

SAFETY KIT: Another group of audio-visual teaching aids based on the Irving Caesar book of 19 songs. These deal with safety habits and help develop an alert, safety-conscious attitude. *For Primary Grades.*

Kit is made up of (a) 5 black-and-white TEACH-O-FILMSTRIPS—\$3 each, (b) 2 unbreakable vinylite 12-inch double-face TEACH-O-DISCS in album \$6, (c) the book, "Sing a Song of Safety" containing words and music of the 19 songs fully illustrated, School Price, \$1.25. *Full Kit Price, \$22.25.* Use coupon at right to order.

TEACH-O-FILMSTRIPS READY SOON

- Primary Arithmetic (for use in Primary Grades), 6 filmstrips, black and white. \$18.00
- Community Helpers (for use in Primary Grades), 6 filmstrips, black and white. \$18.00
- American History (for use in Middle Grades), 8 filmstrips, black and white. \$24.00
- English Literature (for use in Junior and in Senior High Schools), 3 filmstrips, black and white. \$7.50
- Foods and Nutrition (for use in Junior High Schools), 5 filmstrips, color. \$25.00

FRIENDSHIP KIT: A group of audio-visual teaching aids based on Irving Caesar's sensational book "Sing a Song of Friendship." 19 delightful and easily-understood songs that stress the importance of World Friendship and Human Rights. For use in *Middle Grades.*

Kit is made up of 3 main elements: (a) 5 color TEACH-O-FILMSTRIPS—\$5 each, (b) 4 unbreakable vinylite 12-inch double-face TEACH-O-DISCS in album, \$12, (c) The book, "Sing a Song of Friendship" containing words and music of 19 songs fully illustrated, School Price, \$1.50. *Full Kit Price, only \$38.50.*

EXPLAINETTE "100" In Production

Operadio Manufacturing Co., St. Charles, Ill., producers of sound slide-film equipment has in production their new model EXPLAINETTE "100", a unit designed and engineered for small and medium-sized audiences. The company announces that it incorporates many new features to make it more compact, portable, and efficient in operation, and that utilization of advanced techniques in the field of electronics will guarantee fine performance.

NAVED Activities Planned At Board Meeting

Plans for additional activities on the part of the National Association of Visual Education Dealers were made by the Association's Board of Directors at a meeting in Chicago last month, it was announced by Bernard A. Cousino of Toledo, Ohio, President of the Association. Among the new activities are a *Newsletter* for members; an "article-of-the-month" reprint service, by which significant articles on visual education will be available in quantity reprints for distribution by members; and a nation-wide series of regional meetings for discussions of trade practices and similar problems, to begin in December.

Evidence of the Association's growth was presented in a report by Don White, NAVED Executive Secretary, which revealed that the Association has admitted 87 visual education dealer members within the past nine months, 53 of them at this meeting. The Association's rolls now list 220 voting members, 180 associate (non-commercial) members and 14 advisory (manufacturer-producer) members.

The Association plans to produce several important publications. The first, a membership directory and buyers' guide, will be off the press shortly. Following this will be a *Visual Education Industry Bluebook*, listing all models and makes of visual educa-

D. T. Davis (center) of Lexington, Kentucky, receives Certificate of Appreciation from Bernard A. Cousino, NAVED President. Witnessing the presentation, at right, is C. Scott Fletcher, President of Encyclopaedia Britannica Films.

Explainette "100"

tion equipment with 1947 trade-in prices. A *NAVED Annual*, to serve as a yearly reference and information source, will be initiated during 1947.

The Board of Directors approved general plans for the 1947 NAVED Convention and Trade Show, which is to take place August 4-6 at the Sherman Hotel, in Chicago. The 1947 program will devote increased emphasis to the informal, open-forum discussions which proved so popular at the 1946 convention.

Special Luncheon

At a surprise luncheon held the same day as the Board meeting, D. T. Davis, of Lexington, Ky., received a "Certificate of Appreciation" from the Board of Directors of NAVED. The special certificate was awarded "in recognition of outstanding services to the visual education industry and to this Association by President Bernard A. Cousino. More than 20 audio-visual industry notables witnessed the presentation.

Davis is president of the D. T. Davis Company, with offices in Lexington and Cincinnati. He has been an active member of the National Association of Visual Education Dealers since its founding, and for the past six years has served in turn as its secretary-treasurer, vice-president, and president. During his term recently completed as president, the Association experienced a 50% gain in membership and an equal expansion of its services toward the advancement of visual education.

Commenting on the award, NAVED President Cousino said, "No award, and certainly no words of mine, can adequately express the debt owed to D. T. Davis by the visual education industry for his leadership and hard work in shepherding this Association through the difficult years of its growth. This certificate can only be a small gesture. D. T. Davis' real reward is the knowledge that his unselfish labors have resulted in the building of a great, nation-wide trade association—dedicated to better distribution and use of the powerful audio-visual teaching tools, to the end that your child and mine may have a better chance in life through better education."

Encyclopaedia Britannica Films Elects New President

C. Scott Fletcher executive director of the Committee for Economic Development, and former general sales manager of the Studebaker Corporation, has been elected president of Encyclopaedia Britannica Films Inc. Fletcher succeeds E. H. Powell, films company president since 1943 who is now chairman of its board of directors. Powell is also president of the Encyclopaedia Britannica, Inc. Other executives of the instructional films company will continue their present duties.

Under Fletcher's presidency Encyclopaedia Britannica Films plans a large-scale program of expansion and intensification of all its visual educational activities. While Encyclopaedia Britannica already has the largest library of instructional films in the world, it plans as the first point in its expanded program to increase its yearly rate of production of new teaching films from the present 24 films a year to between 42 and 52 annually, Fletcher announced.

In order to extend the advantages of instructional films to all groups outside of schools, E. B. Films are no longer restricted to sales to schools. All organizations which can use films for education of trainees or adults may now purchase them.

In the home, too, Encyclopaedia Britannica Films will expand its program of utilization, Fletcher announced, to encourage parents to show their children films which are tied in with the school curriculum but which children do not see because of the shortages of visual education funds in schools.

E. B. Films is also planning expansion of its production of other visual aids, such as film strips and Kodachrome slides.

Fletcher entered the automobile business in Australia, his native country, in 1921 after graduation from Newington College, Sydney. He served as special representative for the Studebaker Corporation in Australia, New Zealand and Tasmania until 1929 when he came to the United States. At that time he was named sales promotion manager for the Studebaker Export Corporation, and for the next six years spent most of his time travelling about the world in the interests of the company. In 1933 he became general sales manager of the Studebaker Corporation of Canada, and shortly afterwards came back to the head office in South Bend, Indiana. In 1937 Fletcher became general sales manager.

In 1942 Fletcher was named director of the Field Development Division of the Committee for Economic Development. Fletcher relied heavily on sound education slide films in a drive to organize 3,000 communities so that businessmen in them would make plans for peacetime expansion of production and employment. In 1944 he became executive director of the CED.

Simplified Controls For Student Operation

Distinguish The DP 300

The DP 300 will make your visual education program a simple school day routine, because *anyone* can operate it. Sensational refinements in design by precision craftsmen have eliminated mechanisms which have heretofore complicated the use of a slide and slidefilm projector. It is the easiest of all units to operate, for only the DP 300 has Simplified Controls. See your Visual Education dealer or write for descriptive circular 112.

- Focus-Finder automatically centers slides.
- Micro-Focus knob focuses with micrometer exactness.
- Gear-driven wheel tilts unit up and down.
- Control knob reverses slidefilm safely.

Prices: With 5" Anastigmat Lens

Chicago, Ill.

"PROJECTORS WITH SIMPLIFIED CONTROLS"

Upon his resignation from the executive director's post, Fletcher was appointed a member of the board of trustees of CED and also a member of its National Research and Policy Committee.

Slidefilms on Basic Bird Study

A new series of six discussional slidefilms, *Basic Bird Studies*, has been produced and made available by The Jam Handy Organization. This series, a

signed to tie in with reading materials, experiments and field trips where programs permit. Subjects are: "Structure of Birds," "Adaptation of Birds," "Birds' Nests," "Migration of Birds," "How Birds Serve Man," "Helping the Birds." For details, write to The Jam Handy Organization, 2821 E. Grand Blvd., Detroit 11, Michigan.

"Telefilm" for Television

A new motion picture film which greatly facilitates the telecasting of public events within a few hours of their occurrence and produces improved television images has been introduced to the New York television audience in a joint Du Pont-NBC demonstration over station WNBT.

News cameramen from the National Broadcasting Company used the new "Telefilm" to make pictures of a full dress parade and presidential color ceremony in Washington. Immediately after the ceremony the exposed stock was developed, flown to New York, and used in negative form with the WNBT television film camera reversing the image electrically to its positive form. Pictures of the event were broadcast just a few hours after coverage had been completed. This film carries a special emulsion to pick up detail in both highlights and shadows of outdoor scenes, according to Du Pont film technicians. This emulsion

was developed as a result of intensive research at the Du Pont laboratories in Parlin, New Jersey.

The new film is now available for immediate use in the television industry.

DeVry Record Turntable

A new record turntable, powered by a heavy duty "Green Flyer" motor, and operating at both 33-1/3 r.p.m. is announced by DeVry Corporation, 1111 Armitage Ave., Chicago 14, as available for immediate delivery. Pick-up and tone arm are said to embody the latest in design and engineering principles. For 105-120 volts, 60 cycle A. C. operation.

unit of the Science Adventures group, provides the teacher or lecturer with a comprehensive, carefully planned foundation for the study of bird life and may be used as a part of the general science course. This series is more than a mere group of bird photographs—it is a time-saving teaching and study "tool" complete in itself and yet de-

DeVry Record Player

SVE Filmstrip Releases

Latest filmstrip subjects offered by the Society for Visual Education, 100 E. Ohio St., Chicago 11, include a series of four on *Conditioning Exercises*, incorporating calisthenics widely used in the United States Army. Exercises presented are "Bend and Reach", "Squat Thrust", "Rowing", "Bottoms Up", "Squat Bender", "Pushups", "Side Bender", "Body Twist", "Turn and Bounce", "Squat Jumper", "Trunk Twister", "Stationary Run" and "8-Count Pushup." In *An Introduction to 19th Century American Literature* carefully selected

From "Hunting Waterfowl with A Camera"

scenes present background material for study of the lives and works of the outstanding American authors of that period. *Hunting Waterfowl With a Camera* include hard to get shots of wary waterfowl. Methods of refining and processing iron and steel are shown in *Iron and Steel Processes*, one of SVE's Applied Science Series. Another subject in this same series is *Plastics* which depicts the various steps in the manufacture of plastic products.

RCA Victor Presses Its One Billionth Record

An achievement in American industry as well as in the musical history of this country was chalked up on October 9 when RCA Victor pressed its one billionth phonograph record at the company's plant in Camden, New Jersey.

The historic record is a performance of "Semper Fidelis" and "Stars and Stripes Forever" by the Boston Symphony Orchestra, Serge Koussevitzky conducting.

In accepting the record, Frank M. Folsom, Executive Vice President in charge of the RCA Victor Division, told employees gathered to witness the event that phonograph records "have brought pleasure and enjoyment to people of all ages and all creeds in all nations."

Pointing out that as far back as 1911 Victor had pioneered in instituting music appreciation classes in schools, he declared that today these courses are standard in most of the school systems of America.

Mr. Folsom took the occasion to announce that RCA Victor this year planned to introduce a complete basic record library for elementary schools. This will comprise 21 albums of newly recorded music which provides teachers with a

modern tool to carry on well-rounded musical activities in their classes, he said.

To signalize the event, RCA Victor, it was announced, will issue the recording of "Semper Fidelis" and "Stars and Stripes Forever" on non-breakable, plastic material, the first single Red Seal De-Luxe record issued by the company.

The first Victor records were made in 1898 when the late Eldridge Johnson converted his small tool shop to the manufacture of talking machines. Unable to convince the musical artists of that era to consider the talking machine and records as more than toys, Johnson nevertheless persisted and was finally rewarded when Enrico Caruso in 1906 agreed to record regularly. Other artists soon followed. Today, RCA Victor's roster of famous classical and popular recording artists totals more than 60.

New AMPRO Equipment

Two new projectors are currently announced by the Ampro Corporation, 2835 North Western Ave., Chicago 18. One is the Amprosound "Century 10" 16 mm sound film projector. Operating at sound speed only, it is described as "light and compact" with simplified design to ensure the utmost in 16 mm sound projection where features such as still pictures, reverse operation, and the combination of silent and sound speeds are not considered essential. Features automatic rewind, easy threading system, quick centering tilting knob, and centralized panel control. Uses standard pre-focused lamps up to and including 1000 watts; micrometric lamp adjustment aligns lamp filament with optical system both laterally and vertically. Equipped with super 2-inch F 1.6 coated lens. Rotating type of sound

Ampro Century 16mm Projector

drum avoids sliding action between drum and film, thus prolonging film life and maintaining quality of sound. Curved film guides are employed before and after sound drum to eliminate weaving and "belt action". Has 12 inch permanent magnet dynamic speaker. Operates on 60 cycles AC only, 105 to 125 volts, although it can be used with a converter or inverter on DC. Complete equipment housed in two cases.

Dual-Purpose Amproslide Model

The other is a dual-purpose slide projector designated as Amproslide Model 30-D, which accommodates both 2 x 2 slides and 35 mm strip films. Features emphasized in the announcement are newly designed curved film guideways, which permit easy threading of filmstrips; automatic snap-action self-centering slide carrier, which operates conveniently with one hand, and is designed to permit convenient removal and insertion of slides without fingers touching slide surface; fast action up and down tilting; a lift-off case which leaves projector mounted on base ready for immediate use. Equipped with 5-inch F:3.5 anastigmat lens. Coated lens also available; 300-watt lamp. Operates on 105 to 125 volts AC or DC.

Brandon Returns from Abroad

Thomas J. Brandon has returned after a three-month survey of the film industry in England, France, Poland, Czechoslovakia and Germany. Mr. Brandon is Chairman of the Government Relations Committee of the Film Council of America, Chairman of the New York Film Council, First Vice-President of the National Association of Visual Education Dealers, and Executive Director of the recently organized Film Alliance of America.

Radiant Moves

The general offices and factory of Radiant Manufacturing Corp. of Chicago, makers of projection screens for every purpose, are now located at 2627 W. Roosevelt Road, Chicago. The move represents an expansion of facilities to meet the growing demand for the firm's product.

Castle Plugs Government Films

Visual education dealers are reminded, by Eugene W. Castle, of the continued availability and importance of the government produced industrial training films. As schools are reopening many inquiries and orders are reported, partly as a result of the distribution of 32,000 special government film catalogues.

Film Advisory Service

Offering a film advisory service to manufacturers, advertising agencies and public relations firms, Film Counselors, consultants on films for industry, has opened offices at 366 Madison Avenue, New York 17, New York. The new organization offers three major services: surveys to study the possible application of films to an advertising or training problem; supervision of film production; and film distribution and utilization planning.

Film Counselors is headed by two veterans who were associated, before the war, with *The March of Time*, producers of entertainment and commercial films. Will A. Parker served in the U. S. Army Pictorial Service where he was actively engaged in making all types of films. Gordon L. Hough supervised the production of films in the U. S. Navy Photographic Service.

Filmstrip for History Teachers

A new filmstrip visualizing *The New Jersey Campaigns* has been produced by Fact Films, 29 West 46th Street, New York City. This is one in a series on American history which is planned for release during the school year. The filmstrip vitalizes the role of George Washington in this critical phase of the War for Independence. It will be of special interest to history teachers in New Jersey schools and is intended primarily for their use.

Dr. Louis S. Goodman is serving as educational consultant for the producers.

TWA Appoints Films Manager

Frank H. Hargrove, formerly associate producer of Films for Industry, Inc., has been appointed motion picture manager of TWA, Trans World Airline, it was announced recently by J. C. DeLong, TWA director of advertising.

Mr. Hargrove is to make a survey of business groups, educational and fraternal organizations to determine what airline subjects are of most interest to their members. He will then coordinate production of TWA educational films along those lines.

Consulting Firm Formed

Visual Educational Consultants, Inc., described as an organization of specialists in the field of teaching aids, has established offices at 245 West 55th St., New York 19. It offers guidance on the problems of planning, production, distribution and utilization of visual aids. Dr. E. DeAlton Partridge, formerly of the New Jersey State Teachers College at Montclair, has been appointed executive director. Dr. Partridge has been active in the field of visual education for more than a decade. He was instrumental in initiating and developing the visual education program of the Boy Scouts of America, has acted as

consultant on visual education to youth organizations, schools and industries, and has taught courses in visual education to teachers. During the war he was attached to the Bureau of Medicine and Surgery of the U.S. Navy as a research psychologist and was also active in the training program for Naval Air Gunners.

Normer L. Gill Mississippi Representative for E.B.F.

Normer L. Gill has been appointed director of the newly-established audio-visual department of the Mississippi School Supply Company, 116 East Fourth St., Jackson, Mississippi, recently named state representative for Encyclopaedia Britannica Films.

Gill, for the past year, has been state director of audio-visual education. In his new position he will assist schools, administrators and teachers in the establishment, maintenance and expansion of their audio-visual instruction programs.

Encyclopaedia Britannica Films, now has approximately 500 motion pictures covering nearly every subject taught in schools from kindergarten through high school. These films have been translated into 11 foreign languages and distributed in most of the countries of the world.

Pictorial Opens Chicago Office

Harold Baumstone, vice-president of Pictorial Films, Inc., RKO Building, Radio City, N. Y., announces the opening of Pictorial's first branch office—as of October 1, 1946—in the Kimball Bldg., 25 East Jackson Blvd., Chicago, Ill.

This new office will be the Midwest sales office for Pictorial's home and educational 8 and 16mm movies, with Lawrence Goldberg in charge as Sales Manager.

Veteran Unit Starts Production

Four filmstrips on current affairs head the list of general releases in production by Current History Films, New York, a veteran-staffed production unit organized by men who did film work for fraternal and public affairs groups before the war, and produced visual aids while in the armed forces. Their first production, *United Nations Charter*, was completed while one staff member was still an overseas GI. Others are:

- (a) *Road to Freedom*—a documented treatment of American Negro history with script by Earl Conrad, featured columnist for the Chicago Defender.
- (b) *Health and Security for America*—presentation of social security proposals embodied in the Wagner-Murray-Dingell Bills.
- (c) *Big Business Is Your Business*—effect of trusts and monopolies on American life, based on latest U. S. government reports and surveys.
- (d) *Medical Insurance—Pathway to Health*—filmstrip story which outlines this program of health protection for all the people and methods proposed to achieve it.

Current Film News

■ **BELL & HOWELL COMPANY**, 1801 Larchmont Ave., Chicago 13, has added the following GB Instructional, Ltd. releases to its Filmosound Library:

French "U"—10 min. Shows a class of boys taught the action of the mouth, lips and tongue for correction pronunciation of the French vowel "U".

La Gare—10 min. Expressions practiced in actual use at a French railway station, together with words and phrases commonly used by travelers. Demonstrations in these films are by Monsieur E. M. Stephan, Lecturer in French at University College, London.

Association Football—a series of seven single reels on soccer football. British stars of the sport demonstrate in detail the art and sequence of "Kicking", "Ball Control", "Goal-keeping and Throwing-in", "Defense", "Attack", "Tactics", "Training and Practical Hints".

■ **BRANDON FILMS**, 1600 Broadway, New York, reports release of new subjects:

Spotlight on the Balkans—1 reel. Once called the powder keg of Europe, the Balkans are shown in their own national development and in their strategic importance in the game of power politics. Animated maps depict the imperialist struggle from the days of the Ottoman and Austrian empires through the British bid for sea power and the Suez, the German *drang nach dem Osten*, the threat of Czarist Russia.

Guilty Men—1 reel. Showing the Nurnberg trials in session, interspersed with scenes of the actual crimes committed. Presents a record of procedure unique in international law and justice—the trial of international war criminals in orderly, rational manner. Suited for lecture forums and discussion groups.

Both of these films are from The World in Action Series, produced by the National Film Board of Canada, and distributed by Brandon Films through a national network of service points.

■ **UNION FILMS**, Room 800, 1507 M Street, N.W., Washington, D. C. is handling the distribution of a political action film released by the United Electrical Workers, CIO, entitled:

Deadline for Action (40 min.)—pointing out the role labor can play in building a better Congress. It tells the story of Bill Turner, a union man facing the first postwar year, his share in labor's progress, and the threats to that progress represented by a reactionary Congress.

■ **ENCYCLOPAEDIA BRITANNICA FILMS INC.**, 20 N. Wacker Drive, Chicago 6, reports new releases:

Eggs—1-reel. The story of egg production. Emphasizes use of technological methods in modern large-scale egg farming. Shots made inside laying houses show care and feeding of large flocks, and the camera was trained on open nests and trap nests to show how eggs are gathered, cooled immediately, then candled, graded, cleaned and packed for market.

Making Cotton Clothing—1 reel. Story of a child's cotton print dress from the designing of the original to the pressing and packing of large quantities of garments in a modern garment factory. Emphasizes the close relationship between workers and machines. A sequel to the film "Cotton" which shows the making of cloth.

Paper—1 reel. Making of paper from start to finish. Scenes show paper being made into items familiar to children. Entire picture is a pictorial exposition of modern technology at a child's level of interest and understanding.

Meeting the World—1 reel. Shows how the human infant, entering the world as a helpless, dependent organism, is transformed into a member of society by the way he is treated and cared for. Shows effects on infant's personality of feeding, care and love.

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20, includes among new productions:

Man—One Family—2 reels. For 2,000 years the cross has been the symbol of human brotherhood, but Fascism created a new symbol—the crooked cross—and with it the doctrine of the master race. This film is a convincing refutation of the belief that there is such a thing as racial distinction. That the so-called superiority of one group of peoples has no scientific basis is ably proved by the film's two advisers, Dr. Julian Huxley and Prof. J. B. S. Haldane.

Children's Charter—2 reels. Outlines the effects of the Education Act of 1944 on the future education of children in Great Britain. Its object is to give every child an equal chance and an opportunity to choose that branch of training which is most suited to his capabilities—to encourage him in the things he can do, rather than penalize him for the things he cannot do.

It Began on the Clyde—2 reels. During the war thousands of workers had to stand up the strain of harder work and more difficult conditions than ever before. The strongest became tired. The doctors, too, worked under difficulties. In Scotland, the Emer-

gency Service Hospitals, set up for war casualties, were able to supply space and staff to look after the workers and to check disease in its early stages. In this film, a harassed family doctor and his patient, a rundown shipyard worker, provide the story of this new project.

The Story of Money—2 reels. Traces the history of present day monetary systems from the earliest days of barter up to the complexities of modern banking.

■ **CASTLE FILMS, INC.**, 30 Rockefeller Plaza, New York 20, is currently releasing 1946 editions of:

News Parade of the Year. In this tenth annual edition of the review of world events, are pictured important developments incident to the aftermath of war as well as the spectacular atomic bomb tests at Bikini.

Football Parade of the Year covers highlights of the most important college games.

The Night Before Christmas, a visual interpretation of the famous poem. On the silent version the verses are superimposed on the scenes.

All three of these subjects come in 8 mm, 16mm silent and 16mm sound.

■ **HOFFBERG PRODUCTIONS**, 620 Ninth Ave., New York 18, report the following new releases:

Animal Oddities—10 min. Portrays little-known facts about animals from the Jurassic period.

The Enchanted Valley—10 min. Picturesque hills and dales which reveal the beauty and rustic splendor of the Bavarian Alps.

Land of Eternal Silence—10 min. The glittering grandeur of the "white giants" of Greenland.

Story of the Violin—16 min. Construction of the violin by the delicate hands of a master craftsman, ending with renditions by the world-renowned violinist, Jacques Thibault.

Otchi-Tchorniye (Dark Eyes)—16 min. Visual interpretation of the story told in the popular gypsy song. Portrayed by gypsy people.

Some of these subjects are also available in Spanish and German editions.

■ **SWIFT AND COMPANY**, Chicago 9, have edited their feature length picture on the life of Gustavus Franklin Swift and the development of the meat industry into a 45-minute 16mm sound version for public showings, retaining the same title:

Red Wagon—a historical romance portraying the period of industrial expansion in the East and the opening of the west in the 19th Century. Film sequences include cattle roaming the Western plains, early railroads spanning the continent, the early telegraph, cowboys singing around the campfire, the financial panic of 1893. Produced in Hollywood with a cast from major studios.

ONCE you see and hear this magnificent 16mm film, we think you will quickly agree that no organization can afford to miss it. It is a powerful emotional appeal for racial and democratic tolerance. The members of your audience will be just as enthusiastic over the lesson it teaches as they are about Frank Sinatra. The famous song of democratic thought which gives the film its title—and its force—is beautifully sung by Sinatra to a group of youngsters. Produced by Frank Ross, directed by Mervin LeRoy, and released by RKO, this picture is not only outstanding entertainment, but an extraordinary force for good. Rental price for this ten-minute film is only \$1.50.

Frank Sinatra

Starring in RKO's film on racial tolerance

"The House I Live In"

■ **UNITED STATES PUBLIC HEALTH SERVICE** has released three new sound films on milk pasteurization. Prints are available from the district offices of the U. S. Public Health Service, and from Castle Films, 30 Rockefeller Plaza, New York 20. Titles are:

Milk Processing—24 min. Covers the handling and pasteurization of milk by the holding process, the construction and operation of a vat-type pasteurizer, and the importance of guaranteeing safe milk.

Cleaning Equipment and Containers—28 min. Demonstrates methods for the cleaning and bactericidal treatment of cans, bottles and other equipment, following the routine of flush, scrub, rinse, and sterilize.

You and Your Job—10 min. Emphasizes and illustrates the concept that well-trained, responsible men are essential in the production of safe pasteurized milk.

■ **AMERICAN FILM SERVICES, INC.**, 1010 Vermont Ave., NW, Washington 5, D. C. is distributing:

Trigger Happy Harry, a National Rifle Association release on safety in the use of firearms. Produced in Kodachrome, the film emphasizes five major precepts of gun safety.

■ **OFFICIAL FILMS**, 25 West 25th St., New York 19, reports current releases:

Undersea Life—The wonder and terror that lie in the depths of the ocean.

Giants of the Sea—A Visit to the Bay of Magdalena, off the coast of Mexico, showing man's battle to capture monsters of the deep.

A series of Hymns with the words superimposed on pictorial backgrounds is also in production by Official Films. Latest subjects completed are "In the Garden," "I Love to Tell the Story", and "Shall We Gather at the River". They are sung by a professional choral group of eight voices, directed by Bob Bowman. Available also in color.

A new Christmas Carol series, sung by a professional choristers, and filmed against pictorial settings matching the mood of the music, includes "Come All Ye Faithful", "It Came Upon a Midnight Clear" "Hark the Herald Angels Sing", and "Silent Night."

■ **PRINCETON FILM CENTER**, Princeton, N. J. will distribute:

Treasure from the Sea, a Walt Disney Technicolor film produced for the Dow Chemical Company. The film will outline the many future possibilities of magnesium for consumer and industrial use.

■ **U. S. MARITIME COMMISSION**, Washington 25, D. C., reports release of:

Hannibal Victory—60 min. A documentary story, produced in color, of the voyage of the SS Hannibal Victory from San Francisco across the Pacific to Eniwetok, Lingayen Gulf, and Manila.

■ **NATIONAL FEDERATION OF AMERICAN SHIPPING, INC.**, 1809 G St., N. W., Washington, D. C., announces availability of:

America Sails the Seas—30 min. The first all-color motion picture to be produced about the American Merchant Marine. It is described as complete with dramatic characterizations, narration and thematic music.

■ **AETNA LIFE AFFILIATED COMPANIES**, Hartford, Conn., have made five new films which are available for booking through agents of the company. Comprising an outdoor recreational safety series, three subjects, in full color, 16mm sound, deal respectively with fishing, boating and hunting, as indicated by the titles:

Hook, Line—and Safety—emphasizes to fishing enthusiasts the importance of observing the common-sense rules of safety.

Safety Ahoy—offers helpful sug-

gestions for the handling of small craft and rules for avoiding collisions.

Aim for Safety—suggests safety procedures for all who engage in hunting.

Partners in Production—a color subject dealing with industrial safety—is directed at the human element, stressing the importance of employee cooperation.

Friend or Foe—on fire prevention—illustrates ways in which the average householder can take action against home fires and safeguard themselves.

Entertainment Films

■ **OFFICIAL FILMS**, 25 West 45th St., New York 19, includes among latest short-subject releases, three subjects in its "Tiny Tot" cartoon series of imaginative stories combining real-life boy and girl actors with animated animal characters:

Along Came a Duck—Freddy Frog tells a little boy of his adventures and friendship with a runaway duck.

Grandfather's Clock—Old Grandfather Clock is alarmed when he

Child Actors in "Tiny Tot" Series

catches a little boy and girl breaking a clock, and chimes out a story in which they learn about all clocks and what makes them tick.

A Little Bird Told Me—Little sister finds brother in the jam—because a

little bird told her. They find out the secret of how little birds always know everything.

New straight cartoon subjects are:

Uncle Tom and Little Eva—Hilarious satire of Uncle Tom's cabin.

Gay Gaucho—South of the border, Gaucho Brownie Bear rides the range

to see his seniorita and gets tangled up with a bandit.

All subjects are available in 16 mm sound and silent, and in 8 mm.

■ **BELL & HOWELL COMPANY**, 1801 Larchmont Ave., Chicago 13, reports the following new Universal features available for approved non-theatrical audiences:

Patrick the Great—9 reels—a musical comedy starring Donald O'Conner.

Destiny—7-reel story of a blind girl able to see good in hard-driven victim

of circumstances about to take the criminal path. Gloria Jean plays the girl.

Swing Out, Sister—6 reels—with Rod Cameron, Frances Raeburn and Billie Burke. Breezy story about young heroine who sings in a night club when she is supposed to be studying opera.

I'll Remember April—6 reels—with Gloria Jean and Kirby Grant. Combination of music, romance and drama.

Sing a Jingle—6 reels—in which hero, a radio crooner (Allan Jones), drops out of sight when army "physical" rejects him and is re-discovered putting on morale show in war plant where he is employed.

Catalogue

British Information Services, 30 Rockefeller Plaza, New York 20, lists 83 subjects in its new catalog. Brief synopsis given on each. A new classified index assists readers to locate subject matter quickly. Covers a wide variety of subjects including international affairs, British domestic policy, colonial development, education, science, etc. Available from B. I. S. office and also from British Consulates throughout the United States.

U.S. Treasury to Release Film "America the Beautiful"

The U. S. Treasury Department has announced the availability of its first peacetime 16mm motion picture, "America the Beautiful" to responsible groups and organizations, rental free. The film has been turned over to the Treasury Department by Warner Brothers Pictures, Inc.

Hollywood Film Enterprises To Release Instructional Films in Kodachrome

The first subject in its new series of some 15 instructional sound films produced in color has been released by Hollywood Film Enterprises, 6060 Sunset Blvd., Hollywood 28, Calif.

Titled *Chilean Nitrate—Gift of a Desert*, it is the story of Chile's Nitrate industry. Introduces the subject by portraying the legendary story of the discovery of nitrate of soda by Indians, then proceeds with a factual visualization of the mining, refining and transportation of this world-wide important product. Makes a contribution to the understanding of Chile's economy and her relationship with the rest of the world.

A booklet describing this and additional subjects to follow is available on request.

Vice-president of Hollywood Film Enterprises and head of its Educational Division is Harry C. Grubbs, widely-known in the visual field through his former longtime executive connection with Erpi Classroom Films where he served as vice-president and director of distribution.

Pictorial Films to Produce Government Documentaries

Milton J. Salzburg, president of Pictorial Films, Inc., RKO Bldg., Radio City, New York, announces that his company has concluded arrangements with Postmaster General Robert E. Hannegan to begin the production of a short subject educational documentary film which will visualize the history and functions of the United States Postal Department. This picture will be the first of series to be produced by Pictorial Films, Inc. on each of the Presidential Cabinet Offices.

This new series will be released by Pictorial Films, Inc. through its regular non-theatrical channels.

LEADS THE WAY IN MODERN PEDAGOGY

YESTERDAY'S (300 B. C.)
Παδδαγωγοί

... OR TODAY'S
 MODERN TEACHER

FOR THOUSANDS OF YEARS teaching had changed but little . . . always the class at the feet of the teacher, hearing, and thus learning. For thousands of years, earnest teachers have given their all to carry learning to students, with little or no aid other than voice and ear.

But today, modern science has given us the sound picture, and with it, a dramatic, compelling aid to pedagogy heretofore unknown. Today, with the flick of a switch, history, geography, science and a thousand other subjects leap to life before the students' eyes. What a marvel it is! And educational, instructive films, shown with the VICTOR Animatophone, are clearer, more brilliant, more faithful to original sound.

Is your school using this modern pedagogical development? Is your school VICTOR equipped?

Visual Aids Promote Intercultural Education in Rural America

How Agricultural Extension work can bring education for peace to a third of the nation.

GERALD R. McKAY

Department of Agriculture
University of Minnesota

A TEACHING technique which has tremendous possibilities in creating good will and perhaps ultimate world peace, is beginning to attract wide attention—namely, the use of visual aids in promoting intercultural education. For the purposes of the present discussion we shall consider only its application to agricultural extension work carried on in rural areas of the United States. The term "visual aids" in its broadest sense suggests anything that can be seen and will facilitate the transfer of ideas. From the practical standpoint of promoting inter-group education, probably the three most important "aids" are movie films, colored slides and filmstrips. We shall consider only these here.

In the last hundred years the world has become smaller partly because of the rapid development of communications. We may expect a continuation of this trend. Since nothing could be more erroneous than the assumption that being close necessarily means being friendly, it is becoming increasingly imperative that hatred, prejudice, jealousy and misunderstanding between groups be reduced to a minimum or eliminated if possible. The film has been listed, along with press and radio, by Lazarsfeld and Knupfer in Linton's book "The Science of Man in the World Crisis," as a factor in bringing the world closer together. Now perhaps the film, and these other media, can teach the people how to live without race riots, Jim Crowism, economic discrimination, social favoritism and other minority group problems. Public education is beginning to recognize these problems in a limited way, and in some parts of the country schools are taking steps to teach the facts necessary to an understanding of the questions involved. Other institutions like the church are also contributing to a solution of the minority group problems.

But intergroup education, to be effective, must reach a large percentage of the people of a nation; this is especially true in a democracy. And here is where

agricultural extension can function widely. The agricultural extension service, with headquarters in the U. S. Department of Agriculture at Washington, D. C., has workers in every state serving as county agents, 4-H club leaders and home demonstration agents who spend their time and efforts in bringing better living to farm families. *At least a third of the United States citizens* are included in the groups with which these 12,000 agricultural extension employees work. Many of the rural inhabitants are beyond the reach of schools,

churches or other groups which might be carrying on a program of intercultural education.

From 3,035 extension offices, in virtually every county in the nation, 4-H club agents go out to work with two million rural boys and girls who make up the 160,000 clubs of the country. These club members have a definite program of self and community improvement through education and cooperation. That the 4-H boys and girls are interested in promoting better relations between groups is indicated by the ninth and tenth "guide posts" in their current program of work—"Improving community life and serving as citizens in maintaining world

peace." During the past eight years an older group of young people, also sponsored by the agricultural extension service, has become prominent in many counties. The organization, known as Rural Youth, carries on a threefold program which includes education, recreation and community service. Its members are rural young men and women over 19 years of age. County agents work with these folks who are just beginning to establish families and take their places in community life. Home demonstration work brings the extension service in contact with thousands of farm women through cooking, sewing and other homemaking classes.

WITH this issue (Volume XXV, Number 10) Educational Screen completes its first twenty-five years of continuous publication. We feel the urge to celebrate—despite these troublous times in an ailing world.

We hereby emit, therefore, the joyous announcement that—barring acts of God, printing troubles, paper shortages, staff vacancies, etc.—a very special issue is planned for January, 1947, to be known as the

SILVER JUBILEE NUMBER

It will be the first issue of Educational Screen's second quarter-century. It will be nonchalantly optimistic if not exuberant, in the full conviction that the present palaverings of the world's political charlatans and industrial egotists are but transient tribulations in the irresistible forward march of the American nation and its education.

The audio-visual achievement of the past twenty-five years may prove pallid and paltry beside that of the next twenty-five. The Jubilee Number will be offered merely as a milepost of transition from the dim past, through the dark present, to the bright future of this nation and the world.

N. L. G.

The county agent, himself, who supervises all of this work in each county, is often called upon to act as adviser to many farm organizations and local groups such as Farm Bureaus, Granges, Cooperative buying and selling agencies and agricultural improvement clubs. Frequently he works quite closely with the programs carried on locally by other government agricultural agencies such as the Production and Marketing Administration and the Farm Security Administration. Because of all of these contacts with rural people, both young and old, the agricultural extension workers have a highly strategic position for carrying on intercultural education. Almost all of these workers are college trained and their tenure is long enough so that they have not only the education and ability but also the experience needed to do a good job of promoting better group relations. Some have recognized the need in this direction already and are doing something about it.

The use of projected visual aids in intercultural education is relatively new, however. Of the three projected aids mentioned, 16 mm. movies probably offer the greatest possibilities in the field. Motion pictures for mass education have perhaps two potential advantages. First, they enable the audience to visualize relationships, causes and effects, and social problems more quickly and efficiently than is possible by any other means. Second, a well executed movie can make the audience identify or associate themselves with the problems. The audience participates emotionally with the actors in the picture. A single film has been known to change the hair-do of a large proportion of the girls of our country. Rulon, Vickery and Cole and others have found that movies have a profound effect on peoples' emotional reactions. Movies tend to make situations real. For example, a film showing a mob or lynching party in action will change an abstraction to a real life situation demanding social action. Pictures such as *Fury*, *One Tenth of a Nation*, and *Black Legion*, shown in commercial theaters, have had an immeasurable effect on racial attitude and feeling toward crime.

The war gave great impetus to the use of films in promoting international understanding. One hundred million people in foreign countries have been regularly seeing the films put out by our office of War Information. Five of the largest news reel companies in the country pooled their resources to accomplish this feat. Undoubtedly, the finest example of the films produced was the *Why We Fight* series.

This field was also exploited by the Nazis during the war. According to Sington and Weidenfeld, "In conquered territories, the Reich Film Chamber organized armies of mobile cinemas, sending them far and wide, for example, through Poland and occupied Russia. The Film Chamber did not regard it as beneath its dignity to arrange performances even for tiny audiences consisting of two or three settler families." The British government, not slow to recognize the possibilities of this communications medium, maintains an office of its Ministry of Information in the principal countries of the world. The offices distribute films to promote better international understanding.

While the United States Government recognized the

A movie showing this Pipestone Indian 4-H Club in action would be revealing to white 4-H Clubs. These children are members of the Flying Arrows Club.

value of movies both at home and abroad in influencing the thinking of people during the war, it apparently has forgotten that they may be equally valuable in peace. Even without any production of new films, there is a wealth of 16 mm. films on the subject already available from university libraries, state departments of education and the Interim International Information Service of the State Department in Washington. New film groups formed to establish better understanding between peoples will have new movies ready before long. Agricultural extension workers can find many suitable and very effective films from this partial list. *Now the Peace* (Brandon)—*Man, One Family* (BIS)—*High Stakes in the East* (FOTN)—*John Bull's Own Island* (NFB)—*Schools South of the Border* (OIAA)—*Children of Holland* (EBF)—*Negro Soldier* (OWI)—*The World We Want to Live In* (NCCJ)—*South of the Border with Disney* (OIAA)—*Men of Africa* (BIS)—*The Dutch Tradition* (FOTN)—*Fury* (CFC)—*One Tenth of a Nation* (CFC)—*Black Legion* (CFC)—*Americans All* (OIAA)—*Roads South* (OIAA)—*Eskimo Children* (EBF)—*People of the Congo* (EBF)—*Mary Visits Poland* (IFF)—*How Russians Play* (IFF)—*Our Enemy, the Japanese* (OWI)—*Peoples of the Soviet Union* (IFF). These films are available in 16 mm. size and most of them can be obtained free of charge or for a very nominal fee from the sources indicated.*

While movies are important, they are by no means the only visual aids which agricultural extension workers may use. Actually, more county agents are equipped to show kodachrome slides than are equipped to show movies. According to a survey conducted by the writer a year ago, about 65 per cent of the extension offices in the country have 2"x2" slide projectors while only 45 per cent are equipped with movie projectors. Since the war those percentages have undoubtedly increased, although the proportion may be about the same. In Minnesota, for example, the number of movie projectors in the county offices has doubled during the past year.

These kodachrome slides come in sets of 30 to 60 telling some phase of the intercultural problem and each set is accompanied by a complete lecture describing the individual slides. Two such sets recently announced are *Jimmy, An Uprooted American* and *Together We March*. These are available from the Methodist Depositories located at 150 Fifth Avenue, New

The Red Lake Indian secretary writes minutes of the meeting. Many white boys and girls do not realize that another race does the same thing.

York 11. Cathedral Pictures, Inc. of St. Louis has a large number of kodachrome slides on subjects of interest also. Most of the churches of America are building up slide sets to use in teaching the brotherhood of man.

Kodachrome slides have certain advantages no other visual aids possess. They are usually cheaper—a set long enough for one lecture can be purchased for \$15 to \$20 while a movie on the same material might cost \$50 to \$75. Slide sets are more flexible, too. Individual slides can be added or taken out to make the set fit the needs of the particular group. Then there are occasions when extension workers are traveling in places where pictures can be taken to show the causes and results of minority group problems. The cost of taking pictures and having them made up into slides is low, usually not over 25 cents apiece.

The filmstrip is the third common type of visual aid mentioned which can be used to advantage in bringing about improved group relations. Filmstrips, like slides, are relatively inexpensive. A strip containing 50 to 60 pictures may cost from \$1 to \$3. The strips

are usually finished in black and white instead of color and as a result are perhaps less attractive than the natural color kodachromes. They are less flexible than the slide sets in that the sequence of pictures is fixed. In some ways, this inflexibility may be an advantage. Two persons using a filmstrip in a lecture are more likely to leave the same impressions than if they were using a group of slides which could be changed at will. Such filmstrips as *How to Conquer War* available for \$3.00 from Federalist Films at 391 Bleeker St., New York 14, and *USSR, The Land and The People* for sale by Brandon Films, Inc., at 1600 Broadway, New York 17, are excellent materials for 4-H Club or Rural Youth meetings. Typical of other filmstrips suitable for any audience are *Forward All Together*, *American Counterpoint*, and *The United Nations Charter* which are for sale at \$2.50 each by Film Publishers, Inc. of 12 E. 44th St., New York 17. Probably one of the best filmstrips available today is the new one prepared by Dr. Gene Weltfish of Columbia University entitled *We Are All Brothers*. This strip teaches that all peoples of the world are fundamentally alike, spring from the same parent stock, and are what the Bible says they are—brothers. It is especially suitable for 4-H club meetings.

Any visual aid, if it is to do much good, must be used effectively. This may require special training for some agricultural extension workers who finished college before courses in visual education were offered. However, in most cases it may be possible to get on-the-job training. Many states employ full time extension visual aids specialists who work with the county personnel in that particular field. Obviously, the county extension offices must be equipped with movie and slide projectors or be able to borrow them when needed. This situation will probably take care of itself if the number of projectors purchased during the past year is any indication of the future trend.

No extension leader should ever use a visual aid at a meeting without having seen it first himself. The audience must be prepared for the pictures and must understand their significance if maximum efficiency is to be achieved. There are pictures which might give wrong impressions in groups which have out-of-

"Home Making Assistance" projects are popular with Indian as well as white 4-H Club members.

the-ordinary backgrounds of experience. Immediately following the showing of a movie, slide or filmstrip, group discussion should be encouraged and the important points of the pictures reviewed.

Ignorance is at the root of most group differences; at least it is responsible for prejudice, bigotry and hatred. In some cases where prejudice is known to exist in a group, the approach to intercultural education may have to be indirect. Some minority groups (not racial) bring their problems on themselves because of ignorance and an agricultural extension worker who attempts to correct some misinformation in one of these groups might meet with failure unless he uses an indirect attack. He might approach the subject by discussing trade relations with other regions or other countries and gradually work into reasons for group conflict. Visual aids lend themselves very well to such an indirect approach. They are better than the press or radio in this respect. People will turn off their radio and throw the paper away, but the chances are less likely that they will walk out of a meeting in the middle of a movie or series of stripfilm pictures.

Financing the production of movies, slides and stripfilms for use in a widespread intercultural education program is not a simple matter. Slides and filmstrips could, for the most part, be purchased from county or state agricultural extension budgets, but movies present greater difficulty. A limited amount of local and state money might be spent for these films also if administrators of agricultural extension programs on state levels are encouraged to see the direct connection between peaceful intergroup relations and success in farming. Continual requests from extension workers in the field will undoubtedly help to increase local and state appropriations for the purpose of purchasing visual aids. In the main, however, most of the financial support for the production of movies may eventually have to come from the federal government if the program is to be a success. Virgil Rogers, Superintendent of Schools in Battle Creek, Michigan, a man who is a firm believer in using visual aids in education and who has contributed much to the field of intercultural relations, has heartily endorsed the use of the government produced OWI films in this field.

Private film producers aren't showing much interest in making this type of film at present and it is hardly fair to expect that they should. There are no box office receipts to look forward to and no assurance of what the distribution will be. The themes of pictures for this purpose will often be of controversial nature. Most commercial producers shy away from controversial issues. If a film doesn't have popular appeal because of its reference to romance, crime or some other emotion, most producers aren't interested. This situation has created false impressions in the minds of many people of foreign countries who see American pictures. Hamilton, British film officer in United States, has emphasized this repeatedly in his work here. The government of Great Britain apparently has done much to control and direct the production of films which will be seen by people of other countries as well as by its own citizens. Any national government, and particularly one in a democracy where its people are

the stockholders, owes its citizenry a knowledge of what is going on. It is obligated to provide its public workers with media for disseminating information. Some may argue that films produced by a government agency will reflect the attitude of the leading political party at the time the pictures are made. While this charge cannot be denied, it would seem far better that films which are to influence the thinking of our people be produced by those over whom the ballot box gives us some control rather than by private interests who do about as they please.

The initial cost of films like those mentioned earlier probably would be in the range of \$8000 to \$12000. Reprints from these, assuming a fairly large distribution, shouldn't run much over a dollar per minute of film length. In other words, a 25 minute picture might cost \$25. Figures like these would be very insignificant indeed, in a federal budget such as the United States has had for the past few years.

To summarize, these observations might be made:

1. As the world shrinks in size because of modern science, its people must be more rapidly taught to understand the cultures of various groups living upon it.

2. If we believe in the democratic way of life, we must believe in its media of communication, one of which is the film. This includes movies, slides and filmstrips.

3. The agricultural extension workers throughout the United States are in a strategic position to promote intercultural education.

4. The public acceptance of movies as shown by the success of the OWI during the war, by the use of film in the training program of the armed forces, and also by the huge weekly commercial theater attendance, indicates the effectiveness of this communication medium in influencing the attitudes of people.

5. There has already been produced a large number of excellent 16 mm. films, kodachrome slides, and filmstrips dealing with intercultural problems. These are available at low rental rates from university and state department of education libraries and from private booking agencies.

6. Prospective agricultural extension workers should be given college training in the use of visual aids. An in-service training program should be planned for those now in the field.

7. If agricultural extension workers continually request help in getting these visual aids from their state offices, the administrators of extension programs will undoubtedly respond.

8. Some means of financing the production of movies other than on a local or state basis will have to be found. It would seem that the federal government has a definite obligation directly in the line of producing such films. Pressure brought to bear on congressmen may bring about the desired result. Public spirited organizations working on intercultural problems also may help to influence Congress.

10. The contribution of visual aids in promoting intercultural education through agricultural extension work will only be effective if we think of it frankly in terms of a public relations program and use these aids with all the knowledge we have acquired of popularization efforts in private and public enterprises.

Experimental Filmstrips in English Fundamentals

JOSEPH JONES
Assistant Professor of English
The University of Texas, Austin

(Concluded from November)

IN November we discussed the question, "Will the filmstrip work in college English classes?" and reached the answer, "It will." There remains the second question.

"How well will it work?" has been answered only tentatively: fairly well, for a first trial. Many improvements over first models are inevitable; it remains for the profession to discover what it can finally do with this new tool.

B. Scores on Departmental Uniform Examination

The Uniform Examination on Mechanics, briefly described under Part II, was given as scheduled. On this examination, every student in English I-a is placed in competition with all other students in the subject—at this particular time, a few more than one thousand. The examination is rigidly timed, and enough questions are included under each section so that some students do not finish the entire section in the time allotted.

The Uniform Examination, besides marking the official terminus of the experimental period, provided an objective check on performance—a "court of appeal"—entirely outside the framework of the experiment. It likewise afforded a means of testing the validity of the uniform tests, two of which had already been given the experimental sections: if the sections were fairly close together on the second uniform test, it would be reasonable to assume that they should be fairly close together on the Uniform Examination—provided that the uniform tests were a fair measure of ability. This was found to be true. The following table shows the results.

Table III

Type of Section	Average Score	Number Passed	Number Failed
Visual	144.02	20	3
"	123.28	10	4
"	123.88	14	4
"	138.76	25	1
Totals	529.94	69	12
Averages	132.48	17.25	3
Non-Visual	122.00	13	3
"	119.80	12	3
"	134.17	13	3
"	159.19	20	1
Totals	535.16	58	10
Averages	133.79	14.5	2.5

On the basis of these figures, failures in the visual sections averaged 14.8 per cent; in the non-visual sections, 14.7 per cent.

Interpretation. Departmental norms were not calculated on this particular examination. However, since failures for the entire department customarily run twenty per cent or more, it may be assumed that both the visual and non-visual sections were well below the

general average. This is scarcely surprising, inasmuch as the two uniform tests already given afforded students in the experimental sections considerable practice in handling this type of examination. Working against time, they were able to answer more questions because they were familiar with the method.

The principal conclusion to be drawn from these figures is the same as that under VIII-A: that at the end of the experimental period, the visual and non-visual sections were on a par with each other. The Uniform Examination confirmed the experimental uniform tests; and in another sense, the experiment provided a slight check on the validity of the Uniform Examination itself.

C. Ultimate Performance of Students: Final Term Grades

One other source of quantitative information remains to be examined. The foregoing interpretations of data collected all leave unanswered the one question that never fails to interest students and teachers alike: what were the final grades? Our study would be incomplete, assuredly, without information under this head. Some will feel, perhaps, that this is the real proof of the pudding. Considerable caution is needed, however, to avoid unwarranted conclusions about the "happy ending" to this story. Statistics based on too few examples are notoriously untrustworthy; at the same time, a department as large as that at Texas (upwards of a hundred teachers) is in a favorable position to furnish estimates based on large masses of students. With this in mind, we may turn to the grade sheets.

Through statistics circulated periodically by the Department of English, it is possible after each term to check the averages of final grades (A to F) in all sections of English I and thus to determine relative standings. Grade percentages for the eight experimental sections follow:

Grade:	A	B	C	D	F	Drops, Incompletes, etc.
VISUAL	5.3	10.5	47.4	5.3	21.0	10.5
"	22.7	40.9	13.6	18.2	00.0	4.6
"	00.0	23.8	33.3	14.3	23.8	4.8
"	00.0	13.8	37.9	27.6	6.9	13.8
Totals	28.0	89.0	132.2	65.4	51.7	33.7
Averages	7.0	22.25	33.05	16.35	12.92	8.42
NON-VISUAL	9.2	18.1	22.8	22.8	9.1	18.0
"	4.6	9.1	40.9	13.6	13.6	18.2
"	0.0	15.8	36.9	10.5	31.6	5.2
"	4.0	36.0	24.0	8.0	28.0	0.0
Totals	17.8	79.0	124.6	54.9	82.3	41.4
Averages	4.45	19.75	31.15	13.72	20.57	10.35
<i>Summary of Averages:</i>						
VISUAL	7.0	22.25	33.05	16.35	12.92	8.42
NON-VISUAL	4.45	19.75	31.15	13.72	20.57	10.35
ENTIRE ENGLISH STAFF	4.82	21.47	28.90	15.72	13.66	15.43

Interpretation. It is immediately apparent that one of the visual sections is considerably above average, both from the standpoint of more A's and that of fewer F's and drops. This fact tends towards inflating the average for all the visual sections, despite the contrary condition of no A's at all in two of the others. Similarly, two of the non-visual sections show percentages of failure well above the departmental norm, though not necessarily excessive. Drops in both of these latter sections were correspondingly small, suggesting that the students chose to stay in and fail rather than drop out.

These statistics are by no means conclusive; much more evidence would be needed to prove whether or not sections using filmstrips make consistently better final grades. Here we can only note the fact that on this experiment, the visual sections were ahead of the non-visual sections taught by the same instructors, and likewise ahead of the general departmental average. There were larger percentages of A's, B's, and C's in the visual sections, and a considerably smaller percentage of F's. On the other hand, there was a larger percentage of D's, offsetting the lack of F's. Stated in broadest terms, the results are as follows:

	Percentage Passed	Percentage Failed, Dropped, or Incomplete
Visual Sections	78.65	21.35
Non-Visual Sections	69.08	30.92
Staff Average	70.91	29.09

Over-all averages on the first uniform test indicate that the visual sections were slightly better in fundamental ability than the non-visual sections; but there is not enough difference to account for the variation shown above.

Experimentation to develop this point more adequately is needed. Meanwhile, results based on this restricted study lend some support to a tentative hypothesis that the stimulus of visual instruction in college English may significantly raise standards of final achievement. As yet, however, this can be stated only in broadly hypothetical terms.

Qualitative Results

A. Response of Teachers

All four instructors reported successful use of the strips, judging upon the basis of the general classroom situation. The chief complaint was lack of time to make entirely adequate use of the material the strips provided.

The four instructors likewise agreed that at least some of the strips were of sufficient value to be released for general staff use. Daily use, they felt, was too frequent; they would prefer to use strips according to the needs of the class, and at intervals generally no oftener than once a week. Considerable personal interest was expressed by the instructors at all stages of the work.

Representative comments from instructors are: "Most of the filmstrips on usage I found particularly useful"; "I would not care to show films daily because too little time is left for discussion and drill"; "They should be used only occasionally, as supplementary material."

B. Response of Students

At the end of the experimental period each student in the visual sections filled out an unsigned questionnaire.

A completely frank response was encouraged. In general, the students were favorably disposed towards the filmstrips, although some were emphatically against them. Forty-nine replied that they believed filmstrips have advantages over regular classroom procedure; nineteen said they believed they have none. A majority would favor the use of filmstrips about once a week. Only a few believed they would be useful daily, while others thought that no regular interval should be specified.

Most of the students felt that the instructors' explanations were adequate, though eighteen replied that they thought the teacher talked too little. Questions from the class during the showing of the strips appeared to interfere very little. About one-fourth replied that they felt reluctant to ask questions during the presentation; the rest did not.

Some detailed report on opinions about frequency of showing may be worth considering. A majority (fifty-seven as against fifteen) felt that a second showing of some strips would be profitable. Opinion on the frequency with which strips should be used divided as follows:

Once a week	33
At no regular interval	23
Every day	11
Not at all	10
Once every 2-3 weeks	4

This would appear to indicate that so far as the students are concerned, they would like to see filmstrips used about once a week; not oftener, perhaps not quite so frequently at times. The minority of enthusiasts who wished to see them every day were almost exactly counterbalanced by another minority who did not like them at all.

Asked about the content of the strips, one out of every six students believed that the strips were too elementary; only four individuals out of all the sections thought they were too advanced. Opinion on certain strips was rather sharply divided. The most successful strips, with the number of affirmative and negative votes each, are as follows:

	Affirmative	Negative	Rating
Principal Uses of the Comma.....	35	10	78%
Verbs: Agreement	34	8	81%
Restrictives and Non-Restrictives...	33	6	85%
Parallel Structure	31	6	84%
Diagrams	28	11	72%
Parts of Speech	28	9	76%
Sentence Fragments	26	6	81%
Phrases and Clauses	24	5	83%
Verbs: Tenses and Principal Parts..	21	5	81%

The students agreed in almost identical numbers that the specific features which appealed to them were: (1) examples of student work (49 replies); (2) diagrams (48 replies); and (3) cartoons (48 replies). They believed that the strips were most helpful in the study of sentence-structure (55 replies), grammar (42 replies), and punctuation (34 replies).

Possible Improvements

The most obvious improvement to be desired is technical improvement in the filmstrips themselves. With limited funds and untrained assistance, only the simplest

(Concluded on page 568)

Another School Starts from Scratch

Showing real accomplishments by an elementary school despite very limited resources.

WARS are always destructive and the last war was even worse than the preceding ones but from each war man does derive some knowledge that enables him to live and work better. Although visual education was used prior to this war, its use by the armed forces greatly stimulated the program. Boards of Education became interested and in many cases appropriated more money for the development of or the continuation of such a program.

In most cases, however, a definitely planned program was tried only in high schools because the opinion that elementary pupils were too young to operate such a program was almost universally accepted as fact. After experimenting for three years, our program at the Maxson School proves conclusively that elementary students can function in a well-developed program of audio-visual education and do it well.

Our program didn't grow overnight or without the usual difficulties. In the beginning we had little interest on the part of the teachers, less money, and a lack of equipment with which to operate a program properly. The one thing we did have was a principal who was thoroughly "sold" on the idea of having a well-organized program of visual education. Because of this interest, some equipment had been purchased but it was rarely used.

Our teachers were not unusual in their lack of interest. First of all they were women and women, as a group, shun things mechanical. Little money was available to rent films and it seemed impossible to secure the free films at the proper time for classroom use. Few rooms were equipped with dark shades and the showing of either films, filmstrips, or slides was not satisfactory. Before we could expect a program to operate successfully, it was necessary to solve the above problems.

First of all boys of the seventh or eighth grades were selected and trained to set up and operate all of our machines. Having someone to take over this part of the job made our teachers more ready to use our equipment.

Money was not available to purchase dark shades for all rooms. It was decided to utilize an empty room and use it exclusively as a projection room. Dark shades were installed, an old desk was found and was pressed into service as a projection table, chairs were secured and the Board of Education was persuaded to provide a beaded wall screen. Classes were then brought to this room for all projections. It is readily admitted that there are disadvantages to this type of arrangement but we feel that the advantages outweigh the disadvantages. The machine can be set up and threaded in advance so that the showing is ready to begin as soon as the classes arrive; the class can file back to their own classroom for a discussion of the film without being distracted by the rewinding of the film; and the projector can be made ready for the next show-

WILLIAM H. KING
Director, Audio-Visual Education
Maxson School, Plainfield, N. J.

ing without diverting the attention of the pupils.

During the winter months our projection room worked like a charm but with the coming of spring and warmer weather our ventilating system was found to be inadequate and it was necessary to open the windows behind the dark shades. Every little breeze sent shafts of light streaming into the room and the effect of the material being projected was vitiated, especially if a color film was being shown. The shop teacher was called into consultation and he built a framework around each window. This allowed the window to be raised behind the shades and yet light was prevented from entering the room. In order to aid the light situation further, the boys painted our shades with our own concoction and they became almost 100% light proof.

No money was available for film rental although our Board of Education did agree to pay the express charges incurred. This meant that we had to rely on free materials and these materials were so closely booked that it was almost impossible to secure them on the dates desired. Our teachers were asked to go over their plans for next year and to select the units for which audio-visual aids were desired. Meanwhile our own mimeographed catalogue of carefully selected material was being prepared for distribution. The catalogue saved our teachers hours of time which they would have had to use to go over the many individual catalogues on file. From our catalogue, they selected the material that they would like to use and our order was sent in April for next year.

It soon became apparent that the amount of clerical work was increasing so rapidly that something would have to be done. To meet this need, a "Projection Club" was organized. This club consisted of seventh and eighth grade boys and girls who were selected by the director on the basis of interest and ability. The boys were taught to operate and to care for a 16 mm. sound projector, a balopticon, a stereopticon, a film-strip projector, a 2 x 2 slide projector, record players, a portable amplifier, plus other equipment. They were taught how to splice film. The girls filed catalogues, unpacked films and slides and recorded them as they arrived, contacted teachers to schedule the showing of materials at a time convenient to them, prepared a schedule for the use of the projection room so that conflicts could be avoided, prepared a schedule of the operators for each showing, and took care of wrapping and shipping material on time.

This program was a success and plans for expanding it were considered. The problem of money reared its head, as it has a way of doing. It was decided to do two things to finance the program; the Board was

asked for additional funds and after-school movies were to be shown, the profits from these movies to be used to further the audio-visual program.

Our after-school movie program has been well received by our pupils. Season tickets are sold and the attendance has been good. A large movie screen was purchased for the auditorium and the rest of the profit was put toward the purchase of a new 16 mm. sound projector. Incidentally, the purchase of this projector illustrates the cooperation that we have received from our Board of Education. Owing to the present demands of their budget, the Board was not able to purchase the projector for us, but they did lend us the additional money needed to purchase the machine with the understanding that we would repay the money from future movie profits. This cooperation enables us to have the use of another projector a whole year sooner than would be possible otherwise.

The Board of Education, just this year, purchased a two-speed record player. This record player, which was government surplus material, has opened another new field for us in our program. The government has many transcriptions available for school use in the fields of English, social studies and science and trans-

criptions may be purchased from many sources for the price of a supplementary text or a library book. Most of the transcriptions are very well done and present the subject matter in a new and interesting manner.

Our after-school movies, which once were put on rather crudely, are now becoming more professional. We have a regular projection booth which eliminates the noise of the projector, we use two machines so that the program can continue without interruption and the Board of Education has installed a 35 watt amplifier with four 12 inch speakers so that our sound is now very good. The entire program of after-school movies—the selling of tickets, the collecting of the tickets at the door, the ushering, the operating of the projectors—is all done by members of the Projection Club.

We are proud of our audio-visual program in Maxson, proud of it not because it is a perfect program but because of the progress made. It shows what can be done when students, teachers, administrators and the Board of Education all work together. Our teachers have proved to themselves and to the public that a sound program of audio-visual education will improve their teaching; and our pupils have proved themselves capable of doing a big job and doing it well.

Real Cooperation Brings Results!

MRS. Mary M. Smith, chairman of Visual Education for the Ohio Congress of Parents and Teachers has placed in my hands a copy of a letter which the Lima, Ohio, Council received from J. McLean Reed, Superintendent of Schools in Lima. This letter shows in such a clear and emphatic way what one school system can do with intelligent leadership that I would like to call it to the attention of Educational Screen readers:

Mrs. Raymond P. Smith
323 Elmwood Place
Lima, Ohio

Dear Mrs. Smith:

I am indeed happy and proud to report that the Lima Public Schools have taken a forward step in educational facilities and procedures by initiating a visual educational program for the school year 1946-47.

Early in December, 1945, the superintendent of schools recommended the purchase of motion picture machines for all the elementary and high schools. The Lima City Board of Education immediately approved, and the order was placed for fifteen machines.

A visual education committee was next appointed by the superintendent of schools. This committee immediately invited the cooperation of the Lima Council of Parent-Teacher Associations to assist in the building of a film library for all our schools. The Lima Council promptly responded to the request and very quickly agreed to furnish one-half of the funds for the beginning of a film library. To date the various P. T. A. units have contributed more than \$2,500.00. This means this sum will be matched by the Board of Education for a film library.

Our visual education committee, under the capable direction of our chairman, Miss Helen G. Hawkins, included elementary and high school teachers, supervisors and principals. This committee immediately began a long series of committee meetings in January to evaluate and appraise visual education and judge the curriculum value of \$5,000.00-worth of visual educational film on all educational levels. Every recommended film has been seen by some committee members or teachers in the special

area covered by the picture. Five questions were kept in mind as the films were previewed.

- (1) Is the content of the picture related obviously and definitely to what is to be taught?
- (2) Is the picture authentic? Is it true to the facts?
- (3) Are the level of difficulty and the pedagogy of the picture appropriate for the maturity level of the pupils with whom it will be used?
- (4) Is the picture technically and aesthetically satisfactory?
- (5) Does the picture represent adequate exploitation of the medium? Could equally good lessons be taught with less expensive instructional materials?

At the last regular meeting of the Lima City Board of Education, Bernard Roush, elementary principal and member of the visual educational committee, was assigned by the superintendent of schools and approved by the Lima City Board of Education, for the position of visual education and safety director for the Lima Public Schools. Mr. Roush's duties will begin July 1. He will immediately begin plans for an effective and instructive program of visual education for the Lima Public schools.

We are indeed grateful for the helpful assistance of our Lima Council, board of education, and all others responsible for this progressive step in our educational program.

Respectfully,
J. McLEAN REED
Superintendent of Schools.

There is a sequel to this story. It wasn't enough merely to buy new materials. Teachers need to learn how to use them. So on September 28, the Lima Public Schools held an audio-visual institute . . . planned by their own committee. Miss Catharine Williams of the Teaching Aids Laboratory of the Ohio State University and I were there as speakers. But talented local people had prepared exhibits, displayed new teaching tools, demonstrated what could be done in this field. It was all a heartening experience of what can be done when the P.T.A. and a local school system get their heads and hearts together to do a good job for the boys and girls of America.

EDGAR DALE

Pupil-Made Slides to Integrate Activities in Elementary Education

More emphasis on the multiple values of slide-making for pupils in the elementary grades.

EDNA MOORE SKELLY
Principal, Stanard School
Cleveland, Ohio

THE crudest drawing, clay model, poem, or story created by a child is more genuine and interesting to him than adult creations by world famous artists, sculptors, or writers. Of all things a child may make, perhaps a lantern slide stimulates him most to painstaking workmanship. For he knows his work will be enlarged many times on the projection screen and will be shown to a large number of people at the same time. Participation in making lantern slides is often a potent encouragement to participation in other subject matter areas.

Far-sighted teachers use a child's interest in making lantern slides to arouse his curiosity in other subjects. A child who draws exceptionally well and takes little or no interest in other things may become so engrossed with a story that he is helping to illustrate that he attains a new reading interest. Frequently the real value of illustrative slides is not so much to develop the techniques of slide-making as to incorporate an activity to stimulate interest in some other field such as reading, language, social studies, science, health, safety, arithmetic, poetry, music, or good speech.

During the war, for example, after a long hard drive to sell War Stamps, the girls and boys in the upper elementary classes, who organized the activity for the school, were anxious to show the results to the entire school. Slides showing simple bar graphs, made with lantern slide ink, served this purpose perfectly. Various pupils officiated before the school audience, explaining the pupil-made bar graphs and demonstrating their purpose and use to the assembly.

An outstanding book with a significant message may be illustrated with slides, dramatized, and reviewed for the entire school. All the children may share the pleasure with one group or class. A group of fourth and fifth grade children made 54 lantern slides with special lantern slide crayons and clear lacquer to illustrate *The Secret of the Ancient Oak* by Wolo. The entire performance took about 40 minutes. On a later occasion nine children of the original 22 presented parts of the story in a four-minute demonstration. They did no more than introduce some of the characters from *The Secret of the Ancient Oak* and gave a brief résumé of the plot.

The project amply proved that the children's interest and the interest of the entire school was increased in a good story, that the entire group developed in poise, diction, fluency of speech, and dramatic ability. They derived sheer delight from creating something beautiful, and then took pride in sharing it with all the children in the school. All enjoyed a lovely story with a timely message. Best of all they learned the value of working together happily in a democratic situation where each one had the opportunity to accomplish according to his

particular abilities. Those who liked to draw developed 54 lantern slides, enough to tell the story. Those who sang well made up songs about the characters. Several, who enjoy dramatizing, decided upon dramatizations which would help tell the story effectively. The most outstanding pupil was chosen as narrator. She held the performance together by injecting colorful descriptions and narration between dramatizations and songs. There were plenty of volunteers to "run" the projector. (Please note that the care and manipulation of the projector create an activity which demands intense concentration and timing. There are boys in every class who find this part of the activity most interesting.) The relationship among the pupils developed into real democratic living. They lived and worked graciously, happily contributing their best, and developed a real appreciation for the other fellow's talents. Countless other stories can be treated in this same way.

The children at Stanard School find no other medium so successful as silhouettes against a colored cellophane background for creating the illusion of fairyland. The luminous glow of the cellophane seems to transport imaginative children into the witchery and charm of the land of fairies, elves, and gnomes. A song which suggests fanciful pictures may be enhanced in this same way. An activity involving fairy poetry and music was presented to the entire school by a group of 40 fourth and fifth grade children.

The entire activity developed an original story which tied together a number of fairy poems brought in by children who thought that they were "pretty." A number of fairy songs were suggested too, among them "The Fairies Dance" by Sherman and Woodman. Each slide was a child's interpretation of the fanciful and beautiful. Imaginations were stimulated. A new interest in poetry became apparent among groups who heard the children. Several children who participated in the activity attempted original poetry.

The familiar eight-sided traffic sign was used in a safety broadcast to upper elementary children last semester. This slide was one of 14 made at Stanard School for the Division of Safety Education. Other slides in the series traced in picture form the development of traffic signs from the time of the American Indians to the present. Lantern slide crayons and clear lacquer were the media used.

When a fine civic enterprise such as Cleveland's War Chest was launched, groups of pupils strove to

(Concluded on page 580)

Planning a Good Community—In Hand-Made Lantern Slides

By ANN GALE

Roosevelt High School, Chicago

IN the intermediate grades when the community unit is studied slides may be used many times for current material.

1. Most large cities (300,000 or over) show five areas of growth—the business center, an obsolete area around it, a blighted area next, one in good condition, and an area where new building is going up.

2. The obsolete area consists of old houses which have been lost in an industrial and business area. This slum district often costs millions of dollars more than the taxes collected for essential public services.

3. The blighted area around this section is an area where the houses are still homes but industrial and business

buildings are decreasing property values.

4. The concentrated destruction possible with the atomic bomb has furnished a strong reason for planning decentralized cities.

5. Even before 1945 many city planners felt that the small city of about 30,000 surrounded by a green belt or park area, with a separate industrial and business district, without gridiron streets, but dead end streets and a few belt highways was the ideal community.

6. In a few areas small groups of people have improved their immediate community by moving their garages to the front and making out of their alleys a parkway for community use.

The simplest type of hand-made slide is made by drawing or tracing on finely finished etched glass with ordinary medium lead pencil. Color, by special crayons or inks, enhances the slides greatly. Fine effects are obtained by blending with crayons. About one-third inch margin should be left all around the slide. The slide is readily cleaned with soap or washing powder to receive a new picture.

The Curriculum Clinic

Editor's Introduction:

When Thurman White wrote about "the problem of visual education opportunists" in the September issue of *THE EDUCATIONAL SCREEN*, he provoked thought. And here's proof of it from George L. White, Jr. (It seems there should be a good pun here about things being either black or white, but I can't think of it.)

George White is not disagreeing basically with Thurman White; he believes that the basic contention is sound, that school authorities should seriously evaluate the educational integrity of new companies in the field. But he does raise a new problem:

"How is it that we haven't been able to develop within the school system such a critical awareness of visual aids that the teacher and educator possess sufficient knowledge to withstand the glib salesman peddling dubious visual materials and equipment?"

That is the question that George White has raised, and the one he so ably discusses in this article.

P. C. R.

Why Do We Fear the "Opportunists"?

GEORGE L. WHITE, JR., Ph.D.
Education Director, Films Incorporated

VISUAL education is not a new toy. It has years of research, effective use, and good production back of it. If, therefore, the teachers who are the main supports of any visual program are still insufficiently insulated by knowledge against the opportunists, then something must go wrong.

What is wrong? If we take a look at the field we see that one of the main reasons why the teacher and educator have not developed the critical "know how" to adapt the visual medium to the needs of the curriculum is because of the persistence of certain misunderstandings which completely obscure the truth about this field and confuse the teacher.

The first of these misunderstandings is the myth that visual education is a radical departure in education. That since it does not appear to follow the usual education pattern, it needs a new set of rules and regulations, a whole battery of experts and technicians, and a new vocabulary before it can be understood.

This is hocus-pocus. There is nothing mysterious about using visual materials as tools to learning. The good teacher has used them for years. She herself is a human visual aid. She herself daily presents to her class a visual reproduction of some of the very ideas she teaches. One of the vehicles of the visual field happens to be films. Films shouldn't present the

teacher with such a strange new world that she is made to feel that all her previous experience in education counts for naught. What is there about motion pictures which prevents the teacher from applying the common sense techniques she applies to the selection and use of text-books, charts, science equipment, or any other materials of the visual field? In her selection and use of text-books the teacher has developed critical judgment. This judgment has come from experience. She has evaluated her needs, asked herself what she wants to teach, to whom, and with what end in mind, examined the books available, and chosen those books which most fit her purpose. Why not apply the same critical technique to films and visual equipment?

To destroy this myth of confusion we must first make clear to the teacher and the educator the obvious fact that they have already sufficient experience to critically examine visual methods. What they need to do is to look at what's in the field, compare various films and different machines, test them out in classroom situations, and then apply the same tests they apply to other teaching materials and equipment.

There is one other myth that clouds our understanding of the true course of visual education. It is the ever present belief that there is a great future in visual education. Everyone gets the gold glint in his eye when he speaks of this field. He conjures up a dream of a beautifully worked out program just over the edge of the horizon waiting for all of us. This is a hard myth to destroy because salesmen, educators, visual experts, production company executives, ex-service men, and the man-on-the-street constantly speak of the great future that visual education has. Like the gold rush of '48 all we have to do is dig a little and the gold runs free.

The persistency of this myth presents, I am afraid, a smoke screen for all of us to hide behind. It makes us feel secure. If all any of us need to do to assist the golden day of visual education is wait and, presto, wrapped up on the schools' doorstep will appear the smartest little projector, the handiest bit of visual equipment, and the finest bunch of educational films we ever saw, we are apt to say: Why do anything?

Unfortunately none of this is true. The road to good visual education is paved *only* with understanding born of hard work, intelligent probing in the field, and the constant application of sharp, critical distinctions to the existing products in the field.

How do we get these myths destroyed and a critical philosophy constructed? First the schools need to examine (a) the contribution visual materials can make to the curriculum, (b) the real function of the visual education specialist, and (c) the schools' responsibility to producers, distributors, and equipment companies.

I would like to suggest a frame work in which the

school authorities should be examining the visual field.

1. The school's curriculum experts should be giving serious thought to the role films can play in implementing many of their new approaches to teaching. Curriculum people all over the country are conducting studies aimed at the problem of what is the function of the school in our society. They are asking themselves the basic question of what ideas and attitudes teachers should be teaching at each grade level; what new ways of approach should be made to the established disciplines. Shouldn't they examine ways and means of putting their studies into operation, of persuading teachers to throw out some of their useless routines? Perhaps the film can help to do this job. The school should find out for itself.
2. The school's administration should give serious thought to the role films can play in bringing the school and the community together. Administrators are now facing community problems, are forced to accept out-of-school responsibilities to a greater degree than ever before. They have adult education headaches, delinquency problems, health campaigns, etc. to cope with. Perhaps the visual field can become a powerful medium for helping them do these school-community jobs.
3. The school's staff should give serious thought to the role of the visual education specialist. It is high time a close integration of the curriculum experts and visual education specialist was brought about. At present the visual educator is many times cut off from the curriculum research group. He loses touch with what should be the main source of his information: namely, what is taught, where, to whom, and for what end. Unless he becomes such an important contributor to the intellectual program of the school that he can authoritatively relate visual materials to the job the school teachers wish to do he is not fulfilling his real function. The school has the right to insist that the visual educator be more than a film librarian, a rewinder, and a purveyor of study guides and pamphlets on how to run a projector. But the school must make it possible for the visual educator to become the competent critic it needs.

If the above approach is intelligently pursued, the school can then be in the enviable position of deciding what producers and equipment companies can do for it. It can then say: (1) give us such and such films that fit the curriculum at this and that point, (2) give us films that illustrate the learning process that children go through at each level of their experience, (3) give us films that make the child as excited about the learning when he is in school as he is when he is outside the school, (4) give us films and equipment that we can buy—bring them down to our pocketbooks, (5) give us enough material so that we can choose and choose wisely, (6) give us films and equipment that represent our best thinking, that combine the best skills all of us have, and that do the job we want done in the best possible way.

Let us, therefore, get to work on such a program, construct a competent critical philosophy to measure visual materials and equipment, and relate our already

accumulated critical experience to this field. We will then have no fear of the opportunists, no confusion about what the field is or what it can do, and perhaps we can make the dreams we all have for the visual field become realities.

Experimental Filmstrips in English Fundamentals

(Concluded from page 562)

kind of strip can be attempted. Much of the adverse response of the students noted above, comparatively small as it was, would likely be eliminated by the use of professionally prepared films. There is as yet no way of determining how much difference this might make in the actual performance of the students, but it is reasonable to think there would be at least a slight gain, perhaps more.

However, the larger area for improvement lies with teachers themselves, in two respects:

(1) In the increased efficiency which familiarity with filmstrips and projectors would inescapably bring; and

(2) In the practical experience gained, which would lead to improvements in later versions of the films. A preview jury of teachers to pass on filmstrips in preparation would serve somewhat the same function.

Conclusions

The results of this experiment, the writer feels, are quite encouraging to the future use of filmstrips in college English. In several significant respects the conditions under which it was conducted were severe: the dice were loaded against the strips, somewhat deliberately, yet the strips held their own very well. To begin with, the strips were home-made—composed and designed in a short period of time by a single individual, without professional assistance (other than occasional art work) or previews and critiques, with subsequent editing and re-editing. They were shown under physical conditions not precisely adverse, but at least not so devised as to work in their favor. They were used by teachers chosen at random who had an interest in trying new methods but no previous experience with the medium. They were used within a sharply restricted period of time, in a required course not generally regarded with high favor by the students taking it. Most of these limitations, however, are inherent in the present average college situation; and it was thought wise not to change this situation, if any "shakedown" test of a new method were to show realistic results. The skeptical approach, especially on the college level, is in the long run the soundest.

The filmstrip can do good work in Freshman English; this fact has now been demonstrated both statistically and subjectively. How much this work can be improved is yet unknown, but the writer is inclined to think that the results of this study lie nearer the base than the peak of possibilities. Given the painstaking (not to say elaborate and expensive) preparation and study now afforded similar visual aids in other branches, filmstrips should soon take their place as an indispensable adjunct to the study of English composition. Teachers and laymen alike will agree that anything we can do to improve English I is worth the effort.

The Film and International Understanding

Visual Materials Coordinated To a Specific End

DR. JOHN E. DUGAN, Editor
Head, Department of Education
Beaver College, Jenkintown, Pa.

THIS department has consistently emphasized the principle that the teaching of international understanding should be coordinated with all levels and phases of the school curriculum. It is not something which should be carried on in isolation. In accordance with the same principle, films used in the teaching of international understanding should not be viewed as isolated items, but should so far as possible be coordinated with each other and with other materials used in the teaching process. Opportunities to contemplate and coordinate ideas contained in the films are desirable.

Two excellent units of coordinated film materials in this field have been issued by Young America Films, Inc. One unit consists of a motion picture, *Our Shrinking World*, four related slidefilms, and teachers' guides to assist in correlation and utilization of these film materials. The other unit consists of a motion picture, *We, the Peoples*, two related slidefilms, and a comprehensive teacher's guide and source book for these materials.

Our Shrinking World is designed primarily for the junior-senior high school level, and presumes some prior study of the history of transportation and communication. Its function is to review this history very briefly, and then relate this progress to our problems of living today, to point out the impact of such progress on our contemporary civilization. The four related slidefilms, designed to supplement the material presented in the movie and to provide opportunities for

comprehensive suggestions for both teacher and student preparation for the showing of the film. These suggestions include hints for coordinating the film with the unit of work which the class is doing. The guide also suggests procedures to be followed after the showing of the film, as well as follow-up activities to be encouraged and related materials to be used, including the four supplementary slidefilms.

One of the introductory notes to the teacher's guide to these supplementary slidefilms is so pertinent to all work of this sort that it is quoted herewith in full: "It is recommended that you preview the slidefilms before showing them to the class, and that this preview

From the slidefilm "The Charter's Organization," one of two Young America slidefilms produced to accompany the motion picture "We, the Peoples."

be made a part of the overall planning of your lesson or unit of study. Then, before projecting each slidefilm, give the class a brief introduction to it, stating its purpose, its relation to the unit of study, and what you expect the students to get from it."

We, the Peoples is a motion picture designed for use as an introduction, overview, and motivation to the study of the United Nations. The two related slidefilms are designed to give opportunity for more detailed study of the film's content, especially that part of it dealing with the organizational charts. These supplementary slidefilms are: *The Needs and Purposes of the Charter*, and *The Charter's Organization*.

The teacher's guide and source book to *We, the Peoples* and the two related slidefilms is a comprehensive aid to coordination and use of these materials. It specifically suggests ways in which the materials may be used in art classes, English classes, language classes, music classes, physical training classes, science classes, and speech classes. The guide contains a well-organized outline of the basic facts covered in the motion picture. The note on *Our Responsibility in Making*

From the Young America Films slidefilm "History of Communication," one of a series to accompany the social studies teaching film "Our Shrinking World."

its more thorough consideration, are: *History of Land Transportation*, *History of Water Transportation*, *History of Air Transportation*, and *History of Communication*.

The teacher's guide for *Our Shrinking World* gives

the *Charter Work* is an interesting example of motivation: "As any other complicated machinery, the United Nations Charter and Organization needs the care and skill of understanding people. For the good of the world, this organization must function properly. It is the responsibility of the youth in America and of succeeding generations to oil the wheels and thus provide the motivation for a better world."

The source book phase of the teacher's guide consists of thirty-six pages of material on the San Francisco Conference. This includes the presentation of salient facts about the conference through reading material and a wealth of significant charts and pictorial material.

The part of the teacher's guide which is devoted to the two related slidefilms is just as well organized as that which is devoted to the motion picture. There is a well organized and comprehensive outline of the basic facts presented in the slidefilms. There are suggested methods of using the slidefilms, suggested follow-up activities, and a suggested achievement test on the motion picture and the slidefilms.

A Reader Speaks

THIS letter is concerning the article "A Three Directional High School Program" in the September issue of EDUCATIONAL SCREEN. I am particularly concerned with the statement, "pictures would correlate with the subject matter studied."

The writer stated that he used four films which would correlate with a given teaching unit or area. How is this possible without a great deal of repetition? How can a good teaching job be done with so much material? How are students going to keep in mind points to look for when such a vast amount of material is presented? How are students going to be shown the need or reason for doing so much at once? What opportunity is there for re-showing of a film or part of a film as is often mandatory as a result of a class discussion after showing?

It would seem to me that the practice suggested would do much to encourage the *show idea* in the use of films. I feel that the greatest need in the field of auditory-visual aids at the present time is not how to plug a cord into the wall but the proper utilization of the materials that we are trying to use.

R. H. SHREVE
Supervisor of Audio-Visual Aids
Appleton (Wis.) Public Schools

Film Council of America Works Out Plan For Rental of Government Films

In order to assure distribution of Government pictures, a plan is being worked out by the Film Council of America and various Government agencies whereby non-theatrical distributors will be able to charge rentals for these films.

The question of film rentals was first brought up by the FCA. During the war Government films were distributed free of charge. Non-theatrical distributors pointed out that with rising costs, rental fees will have to be charged if distribution is to continue.

The FCA appointed a committee which met with

Three basic purposes in the presentation of the materials are stated:

1. To show the need for and the purposes of the United Nations Charter.
2. To describe the organization formed to carry out the Charter.
3. To show what our responsibilities are in making the Charter work.

The inclusion of the last purpose is significant. For without it the accomplishment of the first two is vain. Yet this point is so often overlooked. Much of the responsibility for the development of an attitude of international understanding in youth and adults of today and tomorrow rests with the teacher, who must help students to become well aware of needs, problems, and responsibilities for joint action by nations, peoples, and individuals. In the accomplishment of this task, coordinated film materials such as those described in this article can be of inestimable value, and can make a valuable contribution not only to education and visual education, but also to the welfare of humanity and the destiny of the world.

Department of Agriculture picture officials. The Department was asked to draw up a plan on which a uniform policy for all Government agencies could be based. The plan has been approved, and meetings are scheduled with the Treasury and the Library of Congress. The Library will soon become a central clearing agency for all Government films.

New York Film Council Hears Film Specialists

"A few years ago the problem of the non-theatrical field was that of finding distribution for the films produced. Today our problem is exactly the reverse—we need more and better non-theatrical films to fill the steadily swelling demand created by the war," said Frank Arlinghaus of Modern Talking Picture Service, Inc. at the November meeting of the New York Film Council.

The meeting was addressed by a panel of speakers who discussed the subject of non-theatrical film distribution. Other speakers were Mr. Harlan Hobbs, producer and distributor for the Owens Illinois Glass Company and member of the Audio-Visual Committee of the Association of National Advertisers; Mr. A. L. Fredricks of the Y.M.C.A. Motion Picture Bureau; and Mr. Dave Strom, director of visual education for the University of Connecticut.

Mr. Hobbs told the group that he considers the opening of new distribution outlets is still the main problem of the field. He endorsed John Grierson's plan to have public libraries serve as centers of visual education material in each community. He also suggested that hotels be induced to install projection equipment for groups which meet there.

Mr. Fredrick described the gradual development of the Y.M.C.A. Motion Picture Bureau, now known as Association Films, since its foundation in 1911. The Bureau's library has increased from a dozen or so films in 1916 to more than 18,000 at present. Mr. Fredrick

The Literature in Visual Instruction

A Monthly Digest

ETTA SCHNEIDER RESS, Editor

UTILIZATION

- **Program Enrichment for Elementary Pupils**—Anna Curtis Chandler, Hunter College Elementary School—*Nation's Schools*, 38:58 October, 1946.

Describes a weekly "enrichment program" for 6-11 year olds, in a demonstration school, on the theme, "Understanding Among Nations." The programs have dealt with: understanding nations through handicraft; through dances, famous buildings, music, etc. A parents' audio-visual committee has helped to find appropriate materials by going to museums, bringing slides, etc., with them, and returning them after use. College students and the pupils themselves then help arrange displays and plan the programs.

- **Students Find Learning Is Fun as Motion Pictures Move into City Schools**—Syrilla Everson, Highland Park, Michigan—*American School Board Journal*, 113:31 Nov. 1946.

One of a series of articles written by a professional journalist for the local newspaper on various aspects of the school program. This is part of the public relations program of the superintendent. The program here described tells of a Visual Aids Committee, under Roy E. Robinson as chairman. A Handbook has been prepared for all teachers, listing some 200 films already owned.

Some of the ways in which films are used are described in this news account: as entertainment (which incidentally was found to motivate reading); for language expression, to teach scientific concepts, to dramatize important information, to prepare the senior class for their trip to Washington, to develop attitudes and stimulate discussion.

Each school has a visual education room, "at a cost no greater than providing pencils to students". The teachers have been trained to operate and use the films. The visual education committee consists of 12 teachers, which recommend films for purchase and also rental. The Board of Education offers the use of its film library, and projection (with operator) to any civic group.

ADMINISTRATION

- **Motion-Picture Distribution as a Function of College Libraries**—Robert E. Schreiber, Stephens College, Columbia, Mo.—*Film and Radio Guide*, 13:no.2 34 Nov. 1946.

Trends in college film distribution show that either the university extension division or some "Audio-Visual Center" has been designated to circulate films and projectors within the college. The author has found by experience that working directly with the General Library of the college has been very effective. Librarians have had good training in instructional materials, instructional methods, and, of course, circulation of materials. Additional training in the handling and servicing of equipment is necessary. The library would need an adequate staff, including a Coordinator, film bookers, inspectors, and a competent corps of projectionists.

Regardless of the system used, the best one is that which is most efficient, giving the films needed, when needed, and where needed.

- **Vast Expansion of Audio-Visual Education Urged in N. Y. C.**—*Film and Radio Guide*, 13:34 Nov. 1946.

An elaboration on a New York Times article, in which Rita Hochheimer, assistant director (in charge) of audio-visual instruction for the schools of New York City, requested that seven million dollars be allocated to modernize teaching methods with audio-visual aids, instead of the present \$50,000 per year. This would permit appointing 800 competent workers in the visual education field (one in each elementary and secondary school). New York is at the bottom of a list of 15 cities in the U. S. In terms of

per pupil expenditure of the total budget, New York spends 7 cents, as compared with \$1.17 for St. Louis; \$1.13, Providence; 60 cents, Portland; 85 cents, Rochester; etc.

CHARTS

- **Developing Visual Materials for Classroom Use**—Ruth McCafferty, Chattanooga, Tenn.—*N. E. A. Journal*, 35: 521 Nov. 1946.

Describes school-made charts that provide opportunity for group planning, oral and written language expression, arithmetic problems based on the children's own needs, and art experiences. Illustrations show the nature and breadth of charts made, on all educational levels.

- **Visual Teaching Aids: Fact and Fancy**—Wm. S. Miller (Denoyer-Geppert)—*Social Studies*, 37:271 Oct. 1946.

Reminds us that many visual aids do not need projection equipment: maps, globes, charts, models, and the like.

TEACHER TRAINING

- **Teacher Training—1945.** Constance Perrin, teacher, John B. Cary School, Richmond, Va.—*Va. Journal of Education*, 40:13 Sept. 1946.

Describes the workshop in Audio-Visual Methods and Materials given for two weeks in June, 1946. The course was under the direction of Mrs. Margaret W. Hudson, 2 teachers, and 3 outside consultants. Among the opportunities provided in the course were: space for audio-visual experiences, a manual, proper equipment, literature, assistants, variety, and the chance to learn by doing.

- **New York Center Has the Answers**—Irene F. Cypher, American Museum of Natural History—*Nation's Schools*, 38:58 Nov. 1946.

The Museum's Audio-Visual Information Center serves teachers throughout the N. Y. C. area. It has files of catalogs of films and equipment, samples of various types of equipment, helps on utilization, conferences and some evaluation.

RADIO

- **Colleges Take Up FM Radio Licenses**—Franklin Dunham, Chief, Educational Uses of Radio, U. S. Office of Education—*Higher Education*, 3:no.7 Dec. 1, 1946.

A succinct history of FM and its possibilities for educational broadcasting. Lists the educational stations already operating, those that are already under construction, and those waiting for assignment of wave lengths.

The U. S. Office of Education and its working partner, the Federal Radio Education Committee, are ready to help every new station in solving the many problems that are bound to arise. The booklet, "FM in Education" is being revised to assist the staff of new stations.

- **School Sound Systems**—Joint Committee on Standards for School Audio-Equipment, Radio Section, U. S. Office of Education, Washington 25, D. C. 1946. Free.

Prepared by a committee representing the Office of Education, the Radio Manufacturers' Assn., the N. E. A., the Assn. for Education by Radio, and the Cleveland Schools.

PHOTOPLAY APPRECIATION

- **The Movies' Young Audience**—Bettina Guzcy, Council Secretary—*New Movies*, 21:20 October, 1946.

An excellent and up-to-date account of the trends in young people's film programs. The National Board of Review

recently sent out a questionnaire to the various communities of the U. S., requesting information about individual experiences with children's shows, and asking for opinions on the two recommendations that: a) a series of shorts be made to teach good manners by children in theaters; and b) more good family pictures be made. The article describes some of the good, and some of the discouraging trends as revealed in the answers.

This summary should be very useful to parents, teachers and community workers engaged in improving the film fare of young people. The article concludes with a list of pamphlets available through the National Board of Review, including the list of children's films recently announced by the Motion Picture Association as available to local theaters for Saturday morning shows.

BOOKS

- **The Audio-Visual Projectionist's Handbook**—Amo De Bernardis, supervisor, Audio-Visual Education, Portland (Ore.) Public Schools—Business Screen, Chicago, Ill. 1946. \$1.00.

A pictorial manual for the guidance of the student operator in schools, industry and the community. The steps in the threading of the various motion picture projectors, and hints on their care are illustrated either by photographs or by cartoon-illustrations. Useful for every school or organization owning motion picture equipment.

- **The American Cinematographer Handbook and Reference Guide**—Jackson J. Rose, A.S.C.—1165 N. Berendo St., Hollywood 27, Calif. 5th ed. 1946. \$5.00.

A source book for users of miniature cameras and the 8mm., 16mm. and 35mm. movie cameras. Endorsed by leading photographic magazines.

UNITED NATIONS

- **Jean Benoit-Levy—Richard Griffith—New Movies**; National Board of Review Magazine, 21:10 October, 1946.

An appraisal of the French film director (LA MATERNELLE, BALLERINA) who is now Director of Films and Visual Information for the United Nations. His background of experience as producer of educational films in France, and as an energetic worker in the League of Nations make him particularly suitable for the great responsibility that lies before him. The program of the United Nations Department under Mr. Benoit-Levy's direction includes filming all United Nations meetings, including those of the related agencies and encouraging the production by individual film workers in each nation, of information films that will spread mutual understanding among peoples. (*The Art of the Motion Picture*, by Jean Benoit-Levy, is reviewed by Mr. Griffith on page 28 of the same magazine.)

SOURCES OF INFORMATION

- **American Sources of Realia for French Classes**—American Assn. of Teachers of French, Information Bureau, Teachers College, Columbia University, N. Y. 27—Rev. ed. 1946. (See also *Teaching Aids Bulletin*, 5 times a year.)

Some sources of exhibits, pictures, slides, motion pictures, maps, newspapers and magazines, radio programs, recordings, songs and international correspondence.

- **Aids to Teaching About the United Nations**—National Education Assn., 1201 16th St., N. W., Washington, D. C. 23p. mimeo. 10c. 1946.
- **Some Sources of French Educational Films**—"Theatre, Film and Radio Notes", by Renee Jeanne Fulton—*French Review*, 20:82 October, 1946.

The names and addresses of film distributors. Titles of films to appear in subsequent issues.

- **Audio-Visual Aids: Guides to Better Learning**—John C. Bollens, research director, Municipal League of Seattle—*Washington Education Journal*, 36:40 October, 1946. Describes some advantages and trends.

U. N. O. Film Plans

AT a Press Conference at the United Nations Information Offices, 610 Fifth Avenue, New York, November 14, Mr. Benoit-Levy, Director of the Film and Visual Information Division of the United Nations, Department of Information, issued the following statement on the film plans of the United Nations Organization.

"I have long been convinced that we must mobilize all the forces of the cinema and visual media to build the peace just as we mobilized them during the war to achieve victory. The motion picture industry, as you know, cooperated magnificently during the war. I have been gratified to find that the industry has shown itself most cooperative in this regard. To affect the mobilization of forces that I have in mind, I have been working with representatives of the other international agencies. I am very happy to announce that a temporary provisional Film and Visual Information Committee has been set up by the United Nations; International Labor Organization; United Nations Educational, Scientific and Cultural Organization; Food and Agricultural Organization, and the other Specialized Agencies to coordinate the film and visual media activities of the member organizations.

"The members of the Committee have honored me by making me the first chairman. Needless to say, we are in full accord in our desire to coordinate our efforts that our various programs aimed at the mutual objective of maintaining and implementing the peace and well-being of the world can be realized efficiently and adequately through film and other visual media.

"The principal task of this Provisional Committee was to study the formation of a proposed United Nations Film Board and to draw up a draft agreement for that purpose. I am happy to say that the draft agreement to establish this Board has been approved by the United Nations Department of Public Information, the Secretariat of the Preparatory Commission for the United Nations Educational, Scientific and Cultural Organization, and other Specialized Agencies for submission to the Secretary General of the United Nations, to the Director General of UNESCO when the latter is appointed and to the administrative heads of the other Specialized Agencies. I shall be glad to give you further details when the United Nations Film Board is established.

"As you may know, the Film and Visual Information Division consists of two sections—the Film Section under Miss Marion Dix and the Visual Information Section under Mr. Jan Juta. Together, with the aid of a capable staff, we are developing information services on the United Nations through film, still photographs, posters, charts, and other means.

"I am very glad to say that in my Division and the Department as well as the Secretariat as a whole, I have found a spirit of enthusiasm and cooperation which is indispensable to the very life of an organization dedicated to the great mission which we have set ourselves."

The U.N. Information Department's Film and Visual Information Division will produce a periodical

(Concluded on page 590)

The Church Department

WILLIAM S. HOCKMAN, Editor
2043 Mars Ave., Lakewood, Ohio

The Primaries See a Movie-- And Are More Thankful

—By DOROTHY CARL, Primary Superintendent
First Plymouth Congregational Church, Lincoln, Neb.

THE Thanksgiving theme was launched in the Primary "little church" the first Sunday in November when the children quietly gathered around their worship table. It stood under a bas relief of "The Landing of the Pilgrims". On it were autumn "mums", lighted candles, and the open Bible. Moments of quiet appreciation were followed by comments about the Pilgrims, and a spontaneous "let's sing America". Then a story of the first Thanksgiving (1) which stressed the pilgrims' closeness to God in daily living and their feeling of thankfulness.

We planned to show a movie, *Colonial Children*,² the following Sunday. The Junior superintendent had previewed it, also, and her department was to see it at the beginning of the church school hour and the Primary children at the close, their regular time for worship. A member of our Board of Religious Education was to use his new projector.

I hoped that the film would merge the last unit on The Book of Books with the current lessons on Helping and Sharing. Our thoughts on "thanks" and "giving", the two parts of Thanksgiving, would climax in an offering for the milk fund for the world's hungry children.

In our advanced preparation the screen is usually placed behind the worship table and the worship-picture is set on a portable table easel. Just before the movie is shown no change is necessary except the removal of this picture and easel. This time we placed the screen by the table, with an aisle running back to the projector.

During the first part of the hour the first grade children learned a new song in one of their class rooms, heard a story about being helpful, and made a pictured song chart to share with the other two grades. The second grade children thought about helpers in our church and at home, and sang the song, "Helpful In The Family". The third graders had brought harvest produce such as the Pilgrims raised and arranged a Thanksgiving centerpiece under the bas relief.

In their worship together in their "little church" the children joined in singing from the pictured chart "We Thank You, O God".³

The children offered thoughts about being a helper at home to show God's love. We spoke of our Bible as a source for learning God's way, and several chil-

dren read previously selected Bible verses. Together we sang a favorite song⁴:

"Teach us thy way, O Lord,
Teach us thy way, O Lord.
In all we do and all we say,
Teach us thy way, Lord."

Then we looked at the bas relief at the worship center. We recalled the Pilgrim's closeness to God in their daily living as told in the story of the previous Sunday. We pretended to visit the home of a little colonial boy and girl. Eyes brightened in anticipation. We wondered about the kinds of toys we would see. Would the children be helpful with the daily work in the home? Perhaps they, too, asked God to teach them his way. Did they ask a blessing before meals? We wondered if they knew and liked to hear the stories in the Bible.

Then we were seated and the movie began. It depicted, in an authentic setting, the self-sufficient home life of colonial times, showing also the furnishings, clothing, and the sharing of home responsibilities. It presented interesting events in a colonial family's day, from the asking of the blessing at breakfast to the reading of the Scriptures by the fireside in the evening. The reproduced conversations lent charm to the presentation, especially to the reading lesson studied by the children. Utensils, ordinarily seen only in the museum, took on a reality when used by members of the family.

The children were interested. They readily offered answers to the 'wondering questions'. We concluded that the Pilgrims lived very close to God in their homes and had, no doubt, often asked "Teach us thy way, O Lord". This song was repeated softly several times during the dismissal.

The incident of the boy shooting the fox and the father's conversation about the bounty for the pelt is not in harmony with our nature units for the primary church school. It is advisable to order this film in time to screen it carefully before use, both for timing and the elimination of this undesirable portion. The light can be turned off at the projector for the duration of this sequence.

Although listed as a Primary film, we leaders felt that its greatest educational value would be in use with Juniors, or early Junior High. Their broader base of information would make the film more meaningful to them. However, mothers reported that their Primary children talked about the film at home and were greatly interested in the Thanksgiving project which started in the public school on Monday following the movie at the church.

It was a new experience to show a movie in two departments in the same church school hour. The leaders agreed that it was difficult to manage and lessened the effectiveness of the second presentation. Subsequent movies will be shown in one location in a given hour. Inter-departmental relations will be enhanced as we exchange invitations to see the movies.

Sunday Evening Motion Pictures

Is your church dark on Sunday evening? Thousands are. Here and there the lights are going on again as pastors who are alert to the possibilities of motion picture services experiment with the religious feature film.

Church School Pictures, Inc., Cleveland, Ohio, reports that pastors are asking it for long religious films for Sunday night congregations. One pastor asked for the *St. Paul* series on large reels, with hymnalogues spliced in between the reels for congregational singing. Another pastor used the *Life In The Times of Luther* (series) and reported excellent audience reaction.

A certain layman is putting on 2½ hour programs for his church, using two projectors so that showing is continuous. He uses one long film such as, *Power of God*, or a combination of shorter compatible films.

It is the conviction of these churchmen that it is better to do this than have dark churches. If the church can reach the family group with films, and attract the non-churched of the community, and pay expenses, there will be many in the ranks of the clergy to give it a try.

A list of feature films which might be used Sunday nights would certainly include these, in addition to those above; *King of Kings*, *Journey To Jerusalem*, *Youth For The Kingdom*, *Forgotten Village*, *Mary Louise*, *Western Hands Are Sure*, *Where Love Is*, *Two Thousand Years Ago* (series), *The Kindled Flame*, and others.

Making the Most of Present Facilities

While future church structures should be planned with careful and far-sighted attention to the requirements of visual education, making the most of present facilities in the average church is a more immediate and pressing problem. Extensive remodeling is not possible in many churches, and pastors and others need experience-tested information on how to use to best advantage such rooms as the average church has for education, visual and otherwise. Tell our readers how *you* have worked things out. Short articles, pictures and correspondence will be welcomed.

State Committee Holds Preview

The Sub-Committee on Visual Aids of the Ohio Council of churches met at the Wartburg Press in Columbus on November 19th for an all-day preview and evaluation of new visual materials of all kinds. In this preview conference key leaders across the state become acquainted with new releases and arrive at evaluations through group discussion.

New Baptist Release

A film version of the life and work of the great Baptist leader, Dr. George H. Truett, has been released under the title, *The Great Achievement*. This 20-minute color film was produced by Rev. W. O. Vaught, Pastor, Immanuel Baptist Church, Little Rock, Arkansas.

The story is developed by still and motion pictures taken during the lifetime of Dr. Truett, by selections from his sermons which set forth the principles and ideals for which he labored, and by appropriate background music to support the narrative commentary.

Recordings of Scripture

For the following information this department is indebted to Mr. Kurtz Myers of the Audio-Visual Division of the Detroit Public Library:

Bible readings by J. Hutchison Cockburn and Charles Townsend Copeland are available from the Harvard Film Service, 4 Lawrence Hall, Cambridge 38, Mass.

Hymns and Bible stories for children can be secured from the Campus Christian Recording Corporation, 1226 E. Eighth Street, Los Angeles 21, Calif.

Hymns, readings from the Bible, and Bible stories for children, are available from Bibletone Records, 354 Fourth Ave., New York 18, N. Y.

Ach-Stinson Records, 27 Union Square, West, New York 3, has the Old Testament story of creation arranged for children, in one album.

Catholic sermons can be secured from Angelus Recording, 6404 Hollywood Blvd., Hollywood 28, Calif.; and Catholic hymns and liturgy on records can be secured from the McLaughlin and Reilly Co., 45 Franklin Street, Boston, Mass.

An extensive list of speech recordings from the Bible can be secured from Linguaphone Institute, RCA Building, Rockefeller Plaza, New York.

A series of recordings of Jewish liturgical music can be secured from Union of Hebrew Congregations, Merchants' Building, Cincinnati 2, Ohio.

The Church Department editor would be pleased to have a critical evaluation of any of the foregoing materials and invites the contribution of such an article.

A Masterful Use of Slides

I think I have never seen slides more effectively used than last summer in a course on inter-cultural education at Union Theological Seminary, N. Y., under the leadership of Mrs. Mildred Moody Eakin, of Drew Seminary. I refer to a 15-minute program* which demonstrated to the class a teaching unit on Jewish symbols in week day church school.

As I recall the pictures now, it is hard to realize that slides were used; that it was not a motion picture. The photographs were good and the arrangement of the sequence was perfect. All the pictures were in color.

The slides were shown rapidly, and all the while Mrs. Eakin was talking a steady stream—not lecturing or talking *to* us, but telling a story which blended perfectly with the sequence of slides. Frequently, she quoted the youngster whose picture might be on the screen at that moment.

The class so completely lost itself in the story that although the man running the machine had difficulties a few times we were hardly conscious of it. Mrs. Eakin kept right on with her narrative as though the blank spots were a part of the performance. There were about six or eight slides which were not clear. We had been warned about these pictures before the program started so we did not need an explanation in the middle of things.

As a conclusion, after the pictures had been stopped, Mrs. Eakin remained in character and offered the prayer she would have given for the children, and our class of adults prayed with her—spellbound.

—VIRGINIA GARRETSON

* *Getting Acquainted With Jewish Neighbors*, available from any office of the National Conference of Christians and Jews, 281 Fourth Ave., N. Y.

Paragraphs from a Parson's Notebook

Recently, I have had the pleasure of reading some as yet unpublished reflections on visual education by a Congregational pastor, The Reverend Kendrick Strong, of Minneapolis. A few of many fine thoughts I share with you:

"Visual education occurs, therefore, when by means of something seen, impressions are received, ideas implanted or revised, or attitudes inculcated. It takes place whenever we gain an experience through the sense of vision. But actually we look at many things that we do not 'see' for the eye takes many negatives that the brain never develops."

Mr. B. A. Aughinbaugh has remarked that he "thought visual aids were optical devices for improving or aiding sight", and, humanly enough does not think that he is wrong, saying "The motion picture is not a visual aid but a mental aid". Strong puts it this way, and we like it:

"Visual aids are tools by which the mental and emotional stimuli are either revised or produced."

Commenting upon the upsurge of interest in the church in things visual, he says:

"Many churches over the nation have made at least two discoveries: 1) that there is an enormous wealth of techniques and materials now available to the visually-minded churches; and, 2) that this wealth, created largely by secular agencies, may be baptised into the Christian faith, and serve definite religious purposes".

The lead article this month presents us with a clear and interesting description of how one film was *baptised* into the faith.

A Film Review

In the filming of Bruce Barton's book, "The Man Nobody Knows", is demonstrated one way films for the church should not be made. The titles on this venerable silent 16mm. film are by Mr. Barton and the photography was done in Palestine. There are four reels and the running time is approximately sixty-one minutes.

In the first reel, which covers the time from the birth of Jesus to the sojourn in Egypt, one becomes aware that there are too many titles and too few pictures. In the second reel the story is carried up to the beginning of His public ministry and the proportion of literary sequences increases and the picture material diminishes. The remaining reels compete for the unhappy distinction of being the poorest of the series.

The liberal minded churchman will not find very much to criticize in the religious and theological content and implications of the film. Conservative church leaders may consider the film too humanistic. However, the greatest weakness of the film is its weakness on the technical side.

There are too many titles. They grow longer as the film continues. There are too few pictures, and too many of them are still pictures. The burden of learning is carried in the titles. The picture sequences feebly illustrate these literary frames. This is reversing the filmic art.

If the text material of books must be projected on the screen, and such practice is always questionable, let the filmstrip be the medium used. It is more eco-

nomical and better suited to still pictures. Why bother to show book content and still pictures on motion picture film?

If Mr. Barton's text must be filmed, let it be the soundtrack on a film that gives us a cinematically worthy presentation of modern Palestine. Let it cover the places of historic interest and let it be well balanced between closeup and panorama.

Studios cannot dust off old Palestine photography and wed it clumsily to the text of books, however popular they were in their day, and expect the church to consume this cinematic hash and like it. Our taste is none too good, but it is improving. One can almost hear the silent film cry out for vindication for such misuse as it receives in "The Man Nobody Knows".

Churches Lead in Use of Films

The Public Library of Dallas, Texas, checked its records for May of 1946 to see who was its heaviest borrower of films. It found that the church and its affiliated organizations was its best customer. This situation exists also in Akron, Ohio, and in Cleveland and indicates that churches are alert to the opportunities which these film libraries present for the enrichment of the educational and recreational program of the local parish.

Comments on a Recent Filmstrip

How One Family Planned To Share Its Income is a 34-frame filmstrip in color with a standard recorded commentary which was written and narrated by Richard Stark, with Wm. H. Meeder doing the musical background. It was produced by the Missions Council of the Congregational Christian Churches, 287 Fourth Avenue, N.Y. 10.

The general subject treated is stewardship. The picture sequence is life photographs of a family group around the table in the home, and the recorded commentary tells what this group is thinking, doing and saying.

While the ideas in this material are excellent, there are some questions about the general structure of this particular visual aid.

Why the color? It is not of essence here. The pictures are dark and lacking in details. Good black and white pictures would have had just as much eye appeal and would have cost less.

Why life photography? It is expensive. It is hard to get a group in life-like and dynamic poses. Would not a stronger visual aid have resulted if the basic ideas had been elaborated in the pictorial? Cartoon drawings and charts could have been plentifully used, and the burden of the "message" could have been put into the visual sequence.

If this had been done, the recorded commentary could have been the dialogue and conversation of the family. Skillful writing and careful rehearsal would have made it interesting and effective. As it is, the basic ideas are verbally elaborated in a narrative type of commentary, with the pictures playing the secondary role of illustrations. In a visual aid the *visual* should be foremost. Otherwise, why not just record well-written script for folks to listen to while they look—at the cracks in the plaster or out the window?

If these same fundamental ideas on stewardship had been worked out in a filmstrip of cartoon drawings in black and white with intra-frame captions, and inter-frame summaries and transitional statements, it is quite probable that a more interesting and effective visual aid would have been secured for less money.

This self-contained and integrated type of filmstrip can be used more easily and effectively by more churches. There is no problem of rehearsal and timing as there is with printed script, or when the recorded commentary is used.

And, these observations are made in the spirit of objective inquiry rather than in the mood of unappreciative criticism.

Correspondence

Miss Marilyn Fasnacht, of the Massillon (Ohio) High School writes:

"Dear Mr. Hockman: The Hi-Y and the Friendship Club jointly sponsored the chapel on November the 11th which was in recognition of 'World Friendship and Prayer Week'.

The film was excellent and enjoyed by the entire student body. The one chosen from your list was *Go Forth*, and it was undoubtedly one of the best ever shown in our school.

Thank you for your very kind assistance."

This letter prompts the editor of this department to observe that more films of this character can be used in the public schools if they are given the proper setting and if the sponsorship is right. In many ways they would be an improvement over quite a few of the films now screened in junior and senior high schools across the nation.

* *

Mr. Paul G. Kiehl of Church-Craft Pictures writes that he read with considerable interest the article in the September issue on the question, "How Verbal Should A Visual Aid Be?", and finds himself in disagreement with it. We quote:

"Upon reading the article carefully, we found a seeming disregard of educational principles applying to the use of visual aids in the contention that a visual aid, in order to be visual, must have as few words as possible. A study of the Philosophy of Education and its application to the use of visual aids will indicate that the thesis proposed in the article is doubtful when compared with the requirements of the learning process."

When is a visual aid a *visual* aid to learning or understanding? Material which is $\frac{3}{4}$ words can hardly be called *visual*. If Mr. Kiehl will re-read the article he will find that I do not propose to reduce the word content to zero. What these visual aids need is *more* pictures, and *fewer* words. Some of the meaning of the whole should be in the picture sequence. After all, in a soundly constructed visual aid the pictures should have a more fundamental function than mere psychological punctuation.

It is still a good question. How Verbal Should A Visual Aid Be? My correspondent has been asked to discuss the question in a "reply" article in this department.

Is Your Question Here?

Q. We expect to mount a large screen in an assembly hall which has a stage and curtains. Should the screen be placed at the front of the stage, or at the back?

A. If you place the screen at the front of the stage, even with or just back of the curtains, you will diminish the seating capacity of your room. Why? The nearest row of seats should be back from the screen a distance equal to two widths of the screen. If you place the screen at the back of the stage you will be able to bring the first row of seats up closer to the stage platform and increase seating capacity. If your room is long and narrow this consideration is not as important as when the room is wide and shallow.

Q. As a layman and educator I would like to see my church more interested in using visual materials in the church school. Can you give me a tip as to the best way to interest the pastor and the official board?

A. Do your interesting visually. Show materials to those you want to interest. Point out that other churches are enriching their educational programs by the use of such materials. Ask for a committee to study your situation to see if you could make a start. Show materials in the various media to this committee. It has been established that seeing materials produces interest faster than talk about materials. Keep your promotion material-centered, and don't hurry.

Preview for All Faiths

A special preview conference of new visual aids for the workers in the church schools of all faith was held in the Audio-Visual Information Center of the American Museum of Natural History, New York, on the 6th of December.

Motion pictures, filmstrips, and slides were previewed and discussed at this conference and two short demonstrations, using groups of children, were given of teaching procedures and methods.

The Curator of School Relations for the Museum, Grace Fisher Ramsey, and Irene F. Cypher of the Division of Communications of N. Y. University, were in charge of the program.

When You Build

The July-August issue of the "Audio Visual Aids", bulletin of the Visual Education Service of the Baptist Sunday School Board, Nashville 3, Tenn., is devoted principally to an illustrated article, "Planning For Visual Aids In The Church," by Mr. W. A. Harrell and Mr. T. Lee Anderton.

This article helpfully discusses such items as: the audio-visual room, projector mountings, loudspeaker mountings, electrical wiring, sockets and cables, screen size and location, room blackouts, acoustical treatment, projection booths, libraries, storage, and stages.

Visually minded churchmen all over the country will be looking over the shoulder of the Baptists to see how they plan to build for the visual age.

Inspiring Instruction

...IN A SUBJECT THAT CAN'T BE TAUGHT!

OUR FLAG... *an inspiring and moving story of our Country's flag and its meaning. The customs and traditions surrounding the flag are explained in a direct, meaningful manner that will motivate a never-to-be-forgotten respect for our national emblem. Elementary and Secondary Schools...Black and White...Color...Sound...11 minutes. Also available in film strips.*

STORY OF A CITY: NEW YORK... *a comprehensive educational study of our largest city. Presented factually, rather than in travelogue form, the film is designed to integrate with courses in history, geography, civics, economics and sociology. Elementary, Secondary, High School and College...Black and White...Color...Sound...20 minutes...complete with Study Guide.*

CITIZENSHIP is more than the subject heading of a course in good government.

It is a way of life...an inherent part of our make-up. It stems from the sincere belief that ours is the finest, the most productive country in the world. It is reflected in the immense feeling of pride we experience at the sight of our flag.

These are not lessons to be learned by rote. They must be inspired, for to learn them well one must feel them. They must be *voluntarily* impressed on the minds of our citizens of tomorrow.

These two Simmel-Meservey releases have been produced with just that philosophy in mind. They are designed to transcend the limitations of existing educational films on this subject.

They will aid in motivating that type of thinking which has made this the greatest nation on earth.

Order them for preview today.

SIMMEL-MESERVEY BIC SIX

The following six educational films were most in demand during the month of November. If you do not have them—order them for preview today.

LET'S GIVE A TEA... *a comprehensive treatment of accepted procedures of dress, invitations, guest lists, etc., and proper conduct at tea-time.*

YOSEMITE—END OF THE RAINBOW... *one of the most outstanding pictorial tours of Yosemite National Park ever filmed.*

PALOMINO—THE GOLDEN HORSE... *depicts the fundamentals of horsemanship, history of the horse.*

THE INCAS OF PERU... *explanation of archeological importance of Incan lore; pictorial study of the great Inca empire.*

SKI THRILLS... *depicts the exhilarating movement, charm and rhythm of this popular and healthful sport, amidst the inspiring High Sierras.*

DEATH VALLEY NATIONAL MONUMENT... *an educational tour through the scientific wonders of this ancient natural phenomenon*

School Made Motion Pictures

Question Box on Film Production

DAVID SCHNEIDER, Editor
Evander Childs High School
New York City

QUESTION: I'm only a novice in the use of motion picture materials. I read very carefully all the information and directions on the use of various kinds of films. One thing I cannot figure out is this: Why is it that black and white film used in artificial light calls for a larger diaphragm opening compared with the F stop used in daylight, whereas color film demands just the reverse adaptations to these light changes?

ANSWER: If I may reword your question for greater clarity, didn't you imply that the emulsion speed of black and white film is lower in tungsten light, whereas color film—type A Kodachrome or Tungsten type Ansco Color is faster than their daylight forms?

Let's begin by reviewing, very briefly, our knowledge of light. Surely you can recall the simple experiment* performed in your high school physics course, in which a beam of light was projected through a prism. The rays that came out of the opposite end of the prism represented the visible spectrum ranging from red near the apex to violet near the base. We thus saw that white light was composed of the three primary colors, red, green and blue. Basically these are the colors found in daylight, properly proportioned for normal human vision.

By examining a tungsten lamp (with the aid of a spectroscope) we find that the three primary colors are there, but not in the same proportion as in sunlight. In fact tungsten light contains enough of yellow, orange and red, but only slight amounts of blue and green.

All black and white films are very sensitive to blue and green. Their spectrograms to tungsten light reveal an even higher degree of sensitivity to these colors. (Consult specifications of negative materials of various manufacturers for more details.) It therefore stands to reason that the same type of black and white film would have a lower emulsion speed, i. e., would require a wider opening of diaphragm when exposed to artificial light to compensate for the reduced values of the blue and green components of white light.

Color film, as previously mentioned, originally was designed for outdoor daylight use exclusively. If that same film were to be used with photoflood lamps the color rendition of the processed pictures would be weighted toward the yellows and reds—colors chiefly found in artificial light. If a light blue filter were to be used the emulsion speed of the film would be cut down from Weston 8 to 3, thus showing as in the case of black and white film, that diaphragm openings have to be increased in artificial illumination. In this particular film the addition of the blue filter cuts the proportion of the red down almost to the levels of the blue and green components of tungsten light.

A low emulsion speed requires a tremendous number of lamps for which most amateurs are not equipped. The film manufacturers did the next best thing—by pulling up the green and the blue speeds of their colored film emulsions—and thus created the Kodachrome A or Tungsten type Ansco Color films. In fact this radical change produced a faster indoor color film. The emulsion speed is really about 50% faster than that of the daylight kind—Weston 12, instead of 8.

QUESTION: A member of our Church feels that he would like to tackle the job of capturing the message of some of the hymns in our Presbyterian Hymnal in color photography—kodachrome slides. A technical problem has us baffled—How to place the words of the hymn on the colored slide. Do you know the answer to this problem? Any suggestions you may have to offer will be very much appreciated.

ANSWER: There are a number of ways, with many variations of each, in which to photograph your hymns for projection. The simplest of all is to photograph your words printed against a colored background. Any good 35 mm. camera can do the job, providing it has a prefocusing device so that the image will appear sharp and in the center of each frame. Use enough light so that the picture can be taken with a very small opening. If you prefer a colored picture as a background, you may have to double expose, once for the picture and again for the lines of the hymn. Such method may call for a bit of experimentation, that is, if you wish to place certain words in such a position so as not to block out an important part of the image. A better method would be to have the words printed at the bottom of the picture. This is much easier on the eye and does not distort the picture.

If you have access to two projectors I would suggest that you photograph the pictures separately on Kodachrome or Ansco Color film. You can then print your hymns with black ink on white cardboard and photograph your lines on microfilm. Your developed negative will then project white letters against a black background. It will then become an easy task of synchronizing the projection of the right picture with its companion verses.

Be sure to mount each of your finished frames in glass mounts. This will prevent dust, fingermarks or other unwanted agents of destruction from accumulating on your slides.

Whatever method of titling you use be sure to avoid Old English. In spite of all the reverence attached to that form of printing, too much of Old English has definitely been proved to bring about eye strain. Please refer to the September column of the EDUCATIONAL SCREEN for additional information about form and size of types suitable for projection purposes.

D. S.

You're Always Sure

to find the latest and best in audio-visual teaching materials at IDEAL. In addition to our vast library of motion pictures we carry filmstrips, 2 x 2 slides and recordings, including:

FILMSTRIPS

Popular Science Publishing Co's TEACH - O - FILMSTRIPS in color for the primary grades.

HEIDI—the adventures of Heidi and her friend Peter. The film develops various social concepts, such as how people live in a foreign land, the kind of clothes they wear, houses they live in and the food they eat. 44 frames, \$5.00.

FUN WITH MITZIE—the story of little Betty and her kitten. Teaches the concepts of kindness to and care of pets. 41 frames, \$5.00.

THE LOST DOG—the story of little Tommy and his dog, Inky, who gets lost and is found by Jimmie. Poses the provocative problem of whether Inky should stay with Jimmie or go back to Tommy. 40 frames, \$5.00.

LET'S MAKE A POST OFFICE—teaches how our postal system works, why stamps are needed, the role of the postman, where and how different types of mail pieces can be mailed, etc. Suggests student activities, and teacher cooperation by showing children working together in a project. 38 frames, \$5.00.

LITERARY CLASSICS IN COLOR—Ivanhoe, Three Musketeers, Treasure Island, Robinson Crusoe, Rip Van Winkle, Alice in Wonderland, Christmas Carol, King Arthur's Round Table, Lamb's Tales from Shakespeare, Hiawatha, The Gold Bug, David Copperfield.

120 frames per subject. \$9.75 each.

2 x 2 Slide Sets—in color, are also available covering many of the above-listed stories, as well as Robin Hood, Moby Dick, Ali Babo and the Forty Thieves.

120 slides per subject. \$15.75 each.

HISTORY OF WORLD WAR II—2 x 2 Slides (black-and-white). Set of 96 slides \$8.50; Set of 58 slides \$4.50.

RECORDINGS

Simmel - Meservey's TUNEFUL TALES series of six double-face records:

Three Little Pigs—The Little Engine That Could—Johnny Cake—the Shoemaker and the Elves—White Easter Rabbit—Laughing Jack O'Lantern. **Each Record \$2.00**

NUTCRACKER and KING MOUSE—single double-face recording of Tchaikowsky's Nutcracker Suite backgrounds narration of folk-tale on which the famous composer based this music. **\$2.25.**

CLASSICAL DANCE RHYTHMS—set of two double-face records presenting simple explanations, with music, of the dance rhythms of the world:

(a) Minuet, Waltz, Polka, Jig, Mazurka.

(b) Schottische Country Dance, Bolero, Moroccan.

\$3.00 the set.

POETRY—series of 6 double-face records on classics of poetry, read by Lowell Cartwright against appropriate musical settings:

(1) Annabelle Lee—Dover Beach.

(2) Evelyn Hope—Sonnets from the Portuguese.

(3) The Day is Done—a Denial.

(4) The Perfect Woman—Bridge of Sighs.

(5) Barbara Frietsche—Charge of the Light Brigade.

(6) Out of the Old House, Nancy.

Each Record \$2.00

Popular Science Company's TEACH-O-DISCS ENGLISH LITERATURE—series of recordings for upper elementary, Junior and Senior High School grades covering poetry and prose by the world's finest authors. **Over 100 subjects available. \$2.50 each**

UNITED STATES HISTORY Series—prepared by Marquis James, Pulitzer prize biographer. Dramatizations of little known but vital incidents in the lives of leading American patriots and their part in laying the foundation of American democracy. **\$2.50 per subject**

JUST ISSUED! New catalog covering these and many more filmstrip subjects, 2x2 slide sets and recordings—educational and religious. Also includes titles and complete description of more than 200 Encyclopaedia Britannica Classroom films now available for rental through IDEAL. Send for your copy today from our nearest exchange.

Report on Findings in Educational Film Production

Reported by JAMES BROWN
Audio-Visual Center
The University of Chicago

AN important meeting of the Commission on Motion Pictures of the American Council on Education was held at the Quadrangle Club in Chicago on November 12, 1946. Present at the meeting were Dr. Mark May and Gardner Hart (Yale University, Commission on Motion Pictures), Tom Ayres (Florez, Inc., Detroit), Stanley McIntosh, (Encyclopaedia Britannica Films, Chicago), Frank Grover (Coronet Films, Chicago), Joe Marsman (U. S. Navy, Bureau of Aeronautics, Training Film Branch), Henry Nathan (Atlas, Chicago), Jerome Diebold (Wilding Pictures, Chicago), Burton Depue, Robert Casterline, and Walter Hardy (Burton Holmes Films, Chicago), and James Brown (Virginia).

The dinner meeting, called at 6 o'clock, featured Dr. May's explanation of some of the research projects now being carried on in the area of motion pictures (particularly techniques of presentation of material in film form) by the Commission on Motion Pictures of the American Council on Education, now housed in the Institute for Human Relations, Yale University. Dr. May, in response to questions from those at the meeting, first explained the purposes and functions of the so-called "Mayer Committee" of the Teaching Film Custodians. He outlined the manner in which this committee is going about the job of producing a series of experimental educational motion pictures and mentioned, in particular, the status of the ones on the following subjects: 1) Roger Williams—The Story of Religious Freedom, 2) What Causes Seasons?, 3) How a Law Is Made—The Responsibilities of Congress to the Citizen, The Responsibilities of the Citizen to Congress, and 4) Osmosis.

Dr. May then outlined the work of the Commission on Motion Pictures and used as an example the research his unit had just completed on five different versions of a film dealing with the general topic of "Heart Circulation". The film was a hybrid made up from Erpi's of the same title and Eastman's silent film—also of the same title. The five versions were explained as follows:

- 1) Straight film presentation, with introductory and concluding sequences.
- 2) Film presentation in which were contained some "motivation" devices for purpose of obtaining and holding interest of students.
- 3) Film presentation in which participation devices were used—students required to answer questions inserted in the film at various points and covering material just shown in the film—students responding on a worksheet.
- 4) Film presentation with both motivation and participation devices included.
- 5) Version 1 (above) run as follows: one introduction, straight film content run twice, one conclusion sequence.

Results: Dr. May passed around a sample of the test used in the study and explained how it was constructed and why straight "factual" questions were used. Given as a pre-test, students were shown to have been able to answer correctly 39% of the test (average). Given as a post-test, students had an average of 47.2% answered correctly. Gain (over the 39%) for the Version 1 students was 8.2%; for Version 2 it was 10.6%; for Version 3 it was 12.2%; and for Version 4 it was 14%. No figures were given for Version 5.

Dr. May concluded that the study showed that film efficiency could be improved by changes in film technique. This led to further discussions of some of the problems facing film producers in this area. The possibility of a "film production manual" was discussed (such a manual might contain tried and tested film techniques, production short-cuts, information on the psychological basis of film production, and other items) and generally approved by those in attendance. Dr. May invited producers to submit problems they faced to his office whenever it was believed research would help to solve them. The meeting adjourned on the note that other similar meetings in the future would be beneficial to all.

Pupil-Made Slides to Integrate Activities in Elementary Education

(Concluded from page 565)

develop an activity which would give an understanding and arouse wholesome enthusiasm among all children in the school. A group of upper elementary children ranging in age from 9 to 12 engaged in the project. This activity was developed when our school was asked to prepare a ten minute program to be presented to representatives from all Greater Cleveland schools. I requested the girls and boys in the fifth and sixth grades to plan and present the program. After much thought and discussion, the children decided to write a short story around the slogan of the War Chest, "More Will Live, The More You Give." Most of the children wanted to make slides about the story. An original story evolved was based on facts about the War Chest's origin, history, and its present work and need. The story was made entertaining by the use of narration, dramatization, whistling, singing and colored lantern slides.

Materials such as ground glass, cover glass, lantern slide crayons, mounting mats, and binding tape needed for making slides are furnished by the Division of Visual Aids of the Cleveland Public School System. Other supplies such as lantern slide colored ink, transparent pencils, or other media must be purchased from commercial houses. Our teachers choose pupil-made slides because they stimulate interest, develop essential techniques, afford an incentive for developing good diction and better speech, develop dramatic ability, impart essential knowledge and direct children's energies to high standards of accomplishment.

A New Opaque Projector that projects
FULL PAGE MATERIAL
BESELER MODEL OA3

*There's nothing
 like it
 on the Market!*

HERE at last is an opaque projector with a copy opening of 7½" x 10"—big enough to fully cover the printing on an 8½" x 11" sheet. Now full pages in magazines and books, maps, and other large size material can be clearly and completely projected.

Beseler Model OA3 gives you amazing intensity of screen illumination . . . *outstanding* in an opaque projector. Equipped with an 18" focal length lens, the projector will fill a screen of from 5½ to 15 feet for projected distances of from 13½ to 27 feet. Uses two 500-watt lamps—AC or DC. Air cooled.

Special features of the Beseler Model OA3 are a unique locking device (Pat. Pend.) which enables the copy platen to be locked open in various positions for easy insertion of copy, and self-contained elevating legs.

Report Non-Theatrical Groups Left Out of International Film Program

Floyde Brooker U.S. Office of Education film head, disclosed recently that the State Department last summer specifically disavowed a report calling for widespread participation by non-theatrical groups in the UNESCO film program.

This report was made by delegates to a meeting called last June by the Film Council of America and the American Council on Education. The meeting was attended by State Department representatives and recommendations were turned over to Brooker, who was a member of the U.S. delegation at the preliminary UNESCO meeting in London last July.

The State Department, it was pointed out, offered no substitute for the recommendations made at the June meeting. The only official picture recommendations carried to the full UNESCO meeting in Paris recently is the so-called Barrett report, which is said to exclude non-theatrical or non-commercial participation in this country's international film program.

Thomas J. Brandon, head of Brandon Films, recently returned from a European trip, reported widespread interest and participation in UNESCO advisory groups by educational and non-commercial groups in many European countries. Mr. Brandon said it was "ironic" to see this growth in interest abroad while similar groups in this country apparently are being left out of the UNESCO film program.

Four Illinois Audio-Visual Conferences

A series of four one day audio-visual regional meetings in Illinois were conducted by the city school superintendents of Champaign, Quincy, LaSalle and Skokie. The Visual Aids Service of the University of Illinois cooperated with the local schools in planning, securing visiting faculty and supplying needed materials. These four meetings registered over four-hundred teachers and school board members.

At each one of the four cities the meetings had the same pattern. The first session consisted of classroom demonstrations. Arrangements were made so the demonstrations covered primary, intermediate, junior high and senior high school subjects. The second session had three parts, one on radio in education, another on using slidefilms and still pictures and a third on problems of projection and maintenance. This last section was technical and to it were invited projection club members, teacher projectionists and supervisors of school projection service. The evening sessions were general in nature.

One of the reasons for the influence of these meetings is that all classroom demonstrations are conducted by local teachers using their own pupils. A good demonstration made by a local instructor carries much more impact than an outstanding demonstration made by a visitor. At each one of the centers arrangements were made for at least four demonstrations by local teachers.

Notes

After the classroom demonstrations, visiting experts gave lecture demonstrations. This traveling faculty included Roger Albright, new director of Education Services of MPAA; Ralph Bates and R. H. Hunt, RCA; Eldon Inhoff and Walter Vance, Victor Animatograph Corporation; Dennis Williams, Encyclopaedia Britannica Films, Inc.; and W. Roger Zinn, Jam Handy Organization. Also appearing on the program was Illinois' newly appointed head of the State Department of Audio-Visual Education, E. C. Waggoner. Traveling with the group to assist administratively were Neil Garvey, former acting head of Visual Aids Service and Lewis V. Peterson, Chief of Visual Aids Service of the University of Illinois.

Dr. George D. Stoddard, new President of the University of Illinois, demonstrated his interest and concern with audio-visual materials and methods when he appeared on the program at LaSalle to talk on "Functions of Motion Pictures in Education."

An interesting item about the use of local teachers as demonstrators is the help these people get from the Visual Aids Service. Each school superintendent in September selected the teachers who were to conduct the demonstrations. At the expense of the Visual Aids Service they were brought to the University as a group about four weeks before the regional meetings. There they watched Joe Dickman, Chairman of Science Department and Assistant Director of Film Service, Chicago Public Schools, put on a class demonstration after which a discussion on methods, techniques and problems was held. The meeting, demonstration and opportunity of using any available audio-visual material at the expense of the Visual Aids Service gave each teacher confidence and time to prepare for a good presentation in his home school.

Senate Sub-Committee Investigates Clearance Delay on War-Made Films

According to *The Film Daily* a Senate sub-committee is investigating charges that the MPAA and the SIMPP are "delaying" copyright clearance of hundreds of war-made films.

The publication reports that it has learned from an authoritative source that the surplus property sub-committee of the Senate Military Affairs Committee was looking into reports that the two organizations were delaying clearance of the pictures until their member companies "cashed in" on the growing interest in educational films.

Educational institutions and groups have been seeking release of the more than 5,000 pictures made during the war, but so far only a handful have been cleared.

Luther H. Evans, Librarian of Congress, has proposed formation in "the near future" of an advisory committee to facilitate clearance of copyright-bound Government films, in a letter to Senator Joseph C. O'Mahoney (D), Wyoming.

The advisory committee will be made up of representatives from Government agencies and "outside or-

MOTION PICTURES and VISUAL EDUCATION

Fine entertainment has a high educational value in that it brings to many an understanding of other persons and peoples as well as interesting interpretation of historical and topical events translated in terms of vibrant drama. Motion pictures contribute importantly in bringing to great masses ideas as well as ideals along with relaxing entertainment.

Universal-International provides for educational and enjoyable entertainment in both feature-length and short subject films, bringing to the screen great books and fine stories presented by the world's greatest artists. Listed are attractions, either released or about to be, that you will not want to miss:—

Ernest Hemingway's
"THE KILLERS"

Quaker Hill, Pawling, N. Y.

organizations interested in assuring the widest possible distribution of the films".

The five-point program for utilization of the Library of Congress as a central clearing agency for Government films and clearing pictures of copyright restrictions proposed by Dr. Evans includes the suggestion that the films be transferred to one central place in order that economies might be realized in the cataloging, listing, and otherwise evaluating the material, and that the Library would be able to establish a central distribution service.

British Government Begins Documentary Film Drive

The story of Britain's rehabilitation and reconstruction is to be shown to the world in a series of some 169 documentary films. These will be sponsored by the Films Division of the Government's Central Office of information at an annual cost of \$3,000,000. The most important subjects to be treated by these documentaries now planned cover British hydro electric achievements, developments in radio and television, ship-building, civil aircraft, and scientific instrument making. A monthly film magazine, *This is Britain*, is also issued.

The films are distributed through two channels—non-commercially through the British Government's various overseas information services and commercially through the best available trade channels.

Navy Combat Film Available to Public

The Navy's vast library of combat film is being made available to the public through educational institutions, research organizations, and the motion picture industry, it was reported in a paper written by Commander E. Nell and delivered at the 60th semi-annual convention of the Society of Motion Picture Engineers held recently.

Adult Education Institute Announces New Film Research

An expanded program of research in film selection, evaluation and utilization for adult groups by the Institute of Adult Education of Teachers College, Columbia University, is announced by Morse A. Cartwright, Director of the Institute. For the past year the Institute has published the *Film Forum Review*, devoted to the use of motion pictures in adult education.

The aim of the new program is to determine methods for evaluating films as aids to adult discussion and as tools used without discussion, and to find means of reporting adult audience response to educational films. Evaluation sheets, leaders' and audience guides to discussion of specific films will be issued, and an annotated catalog of films suitable for discussion in various fields will be published.

A laboratory for viewing and evaluating films has been set up at the headquarters of the Institute, and the staff has begun work on a series of publications. At present the staff is viewing and evaluating films in three fields, international relations, intergroup problems and family life problems, preparatory to issuing an annotated guide to films and filmstrips in these areas.

Your pictures **POP OUT** clearly — brilliantly with the New **1947 RADIANT SCREENS**

The amazing "Hy-Flect" glass beaded surface of the new 1947 Radiant screens gives your pictures greater realism, more depth than ever before. Thousands of tiny glass beads firmly embedded in the pure white plastic surface *reflect* more light...reproduce your pictures with a sharpness and clarity that seems to "pop" the pictures right out. Black and white pictures have greater contrast...colors are reproduced more vividly. You get all this in the New 1947 Radiant Screens...

Chicago Public Schools Use 877 Different Films

Six hundred and fifty thousand dollars worth of instructional films—prints of 877 different motion pictures—are devoted to providing audio-visual education for the pupils of the Chicago Public Schools, according to a report issued by Gerald N. Bench, director of visual instruction.

The Chicago Board of Education has made it possible for almost every school in the city to own at least one projector by paying one-half of the cost of each machine. This arrangement serves the double purpose of encouraging schools to take advantage of audio-visual materials by lightening their financial load and at the same time giving each school a sense of direct, responsible ownership resulting from the combined efforts of parents, teachers, and pupils in raising money for the other half of the cost.

Metro-Goldwyn-Mayer Distributes School Films in England

Distribution of 16 mm. educational programs in England by Metro-Goldwyn-Mayer, Ltd. has begun, according to Morton A. Spring, first vice-president of Loew's International Corporation.

In addition to programs made up of features of cultural and educational content such as "Madame Curie" and "David Copperfield", technical training and classroom films will be made available subject to the needs and requirements of British educational authorities.

International Assembly of Women Views Documentary Films

Members of the International Assembly of Women attended a recent screening of documentary films produced by the International Film Foundation of New York City. Over one hundred fifty guests representing 54 countries were present to review a program of four films depicting the people of the world.

Of interest were the results of a questionnaire giving the women of this assembly the opportunity to suggest what type films they would like to have seen in their countries about America, and what films we should bring to America about their countries. The majority vote would have less skyscrapers and less Hollywood men and women, more country life and simple people, and less emphasis on divorce and family maladjustments.

Judge Richard S. Hartshorne of East Orange, New Jersey, trustee of the Davella Mills Foundation and representative of the International Film foundation, was master of ceremonies.

Two films, "The School" and "The Doctor", have been translated into twenty different languages by the United States State Department.

At present one foreign expedition of the International Film Foundation is in the Orient and one is in Europe making pictures for later release. A series of films on American education and rural life is being made to present and interpret the American way of life to other peoples of the world.

Second Michigan Audio-Visual Conference in February

February 19, 20, and 21 have been selected as dates for the second Michigan Audio-Visual Conference which will be held at the Rackham Memorial Building in Detroit. Again, the sponsors will be the State Department of Public Instruction and the teacher training institutions of the State. The Conference this year promises to be even more successful than that of last spring which was attended by approximately a thousand persons from 97 localities in 11 states and Canada. The Conference will probably be unique in providing for open discussion of problems in which educators, manufacturers, producers, and distributors have a close, common interest. Details of the program will be announced at a later date.

\$400,000 for Bureau of Mines Films

More than \$400,000 worth of educational motion pictures—made possible through the cooperation of private American mineral industries—are being added to the free loan library of the Bureau of Mines this year, announces Secretary of the Interior J. A. Krug.

A total of 15 new sound pictures dealing with mining, minerals and petroleum has been authorized for 1945, the Secretary said, with three films already completed and 12 others in various stages of production.

The new Bureau pictures will be distributed free, along with others produced in past years, to schools, colleges, vocational training classes, the armed forces, scientific societies, and business and civic organizations.

For more than a quarter of a century, the Bureau of Mines has been distributing free of charge thousands of reels of educational motion pictures with funds provided by private cooperating industries. Believed to be the largest of its kind in the world, the Bureau's film library now has about 11,000 reels and 8,000 regular borrowers. Many of the films are booked from several months to a year in advance of showing dates.

Although no charge is made for the use of any of the films, borrowers are required to pay transportation costs and to pay for any damage to the film. The main distributing center is at the Bureau's Central Experiment station, 4800 Forbes St., Pittsburgh, and all applications for loans should be sent there. Sub-distributing centers are maintained at several universities and other places throughout the country.

American Humane Association Announces 1947 Film Contest

Cash awards totaling \$300 are offered by the American Humane Association for the best moving picture films on pets, domestic animals, birds, and wildlife. All films must be on original 16 mm. stock and not less than 200 feet in length or more than 800 feet. Further information can be obtained from the Association at 135 Washington Avenue, Albany 6, New York. All entries must be at the above address before March 31, 1947.

no substitute can take the place of a good book. But a fine motion picture can make the book much easier to understand and remember.

Take Johanna Spyri's *Heidi*, for example. For generations children have loved this book—but they often have difficulty in understanding certain words and expressions. Now they are able to see the book come to life on the screen. In the motion picture *Heidi* they can see all those details which would take many hours to explain.

The motion picture *Heidi* is distributed by Films Incorporated in 16 mm. for showing on school projectors. It is one of several hundred full-length features and dozens of short subjects and cartoons especially selected for school showing. To get the full story of the services which Films Incorporated offers to schools, ► just send a postcard request for the current School List catalog.

Audio-Visual Institutes Held In Virginia During Summer

A series of six two-day audio-visual institutes were conducted jointly during July by the Bureau of Teaching Materials, Division of School Libraries and Text-books, State Board of Education, Richmond, Virginia, and Virginia State College, College of William and Mary, Farmville State Teachers College, Madison College, the University of Virginia, and Radford College. Attended voluntarily by some 2,400 principals, teachers, supervisors, and superintendents, the meetings featured complete displays of new audio-visual instructional materials and equipment—motion pictures, projectors of various types, transcriptions and recordings, screens, wire and disc recorders, models, slides, and many other types.

The first day of each institute was devoted to a tour of the exhibits and to two general meetings which dealt with various aspects of the problems involved in using audio-visual materials of instruction in the classroom. Those who appeared on the general program at one or more of the six meetings included Dr. Vernon G. Dameron of the National Education Association; Mr. Robert Hudson of the Columbia Broadcasting System; Mr. Otto E. Geppert of Denoyer-Geppert Company, James W. Brown, W. Henry Durr, and Ollie B. Fuglaar of the State Bureau of Teaching Materials; J. Edward Oglesby of the State Department of Education's

Film Production Unit; Mr. Clark Elkins of the Janu Handy Company, Detroit; Dr. Edward P. Alexander of the Williamsburg Restoration, Williamsburg; Mr. Sam Carey and Mr. Jack Stone of Radio Station WRVA, Richmond; Mr. Nevile C. Gardner of the British Information Service, Washington, D. C., and Dr. A. G. Richardson, State Department of Education, Richmond.

Local chairmen for each meeting were as follows: Virginia State College, Mr. Samuel A. Madden; College of William and Mary, Miss Janie Shaver; Farmville State Teachers College, Dr. Edgar M. Johnson; Madison College, Miss Ferne Hoover; University of Virginia, Dr. J. Alex Rorer; and Radford College, Dr. I. R. Silverman.

The second day's program of each institute featured a number of interestingly arranged sectional meetings dealing with problems of adapting audio-visual instructional materials to use in specific areas of the curriculum and at specific grade levels. More than eighty different individuals—all active in school work in Virginia—participated in these sectional meetings by giving demonstrations, making talks, conducting discussions, or displaying and explaining materials developed by children and teachers.

The institutes served to carry forward the already considerable interest on the part of school people in Virginia in the adaptation of the use of audio-visual instructional materials in daily problems of the curriculum.

**Audio-Visual Section of Iowa State
 Educational Association Holds Meeting**

Superintendent Wm. N. Grimes of Gowrie, Iowa, Chairman of the Audio-Visual Section of the Iowa State Education Association, planned an outstanding program for administrators and teachers in Iowa at a meeting in Des Moines recently.

The meeting included demonstrations in the use of visual aids in the teaching of elementary school social studies and high school science, and an address by Vernon Dameron, of the Division of Audio-Visual Instruction, National Education Association. A panel discussion was held with the subject, "Local Problems in the use of Visual Aids", led by Lee W. Cochran, Executive Assistant, Extension Division, State University of Iowa.

**National Board to Review
 Non-Theatrical Motion Pictures**

The National Board of Review of Motion Pictures announces that in 1946 for the first time in its history the Board has begun regularly to review non-theatrical films of educational and informational purpose.

Since its foundation in 1909, the National Board of Review has principally concerned itself with the reviewing of theatrical entertainment features and shorts of which it reviews 99% of those released in the United States. Since 1916 when it abandoned censorship, the Board's purpose has principally been that of bringing the films selected for entertainment and artistic merit to the attention of community audiences with the aim of securing support for them at the box-office. From the beginning the Board has also taken an active interest in the educational and informational film but until recent years, due to the paucity of their production, there has been little that the Board could do to create audience support for them. During the war, however, the tremendous increase in production, quality, and audience interest enabled the Board to begin the preparation of lists of films in aid of the war effort for its community groups. Since February 1946 the Board has been regularly reviewing all non-theatrical films of any nature whatsoever which have been submitted to it.

Non-theatrical films are reviewed by the Board through committees consisting of members of the public, visual education experts, and experts on the subject of the film itself. The resulting reviews are not intended as technical evaluations from the classroom point of view but as common sense estimates of the usefulness of the film to adult and youth groups of all varieties. Reviews are published in *New Movies*, the National Board of Review Magazine, and the *Weekly Guide to Selected Pictures*. These publications are extensively used in program planning by the Board's 300 community Motion Picture Councils consisting of representatives of schools, churches, Parent-Teacher associations, adult education groups, women's clubs and business clubs.

Films may be submitted for review to the National Board of Review, 70 Fifth Avenue, New York 11, N. Y. The review fee of \$6.25 per negative reel is charged for the support of the work of the Board.

Teaching Of "Movie English" Urged

The National Council of Teachers of English, meeting in national conference at Atlantic City, were urged to make more extensive use of available motion pictures and other visual aids, and to include "radio and motion picture English" as integral parts of their course of study. The speaker was William F. Kruse, vice president of United World Films, Inc., Universal's new subsidiary. Speaking before the Visual Education Section in the course of the special three-day presentation of motion pictures and strip films submitted by eleven distributors, Mr. Kruse pointed out that film and radio were the two new channels of expression born in our generation, and that they had developed techniques of English expression all their own, quite distinct from, though related to, such older forms as the novel, short story, essay, sonnet, play or news article. The services of each of the more traditional forms are freely employed by the newer media, but in addition they have evolved and are still developing quite new and unique expression forms. In response to Mr. Kruse's question as to how many gave any special attention to "movie English" only three hands went up, while in the radio area the count was only five.

Four examples of types of motion pictures that might serve the English teacher were offered by United World. The first was a British-made "Gray's Elegy"—excerpts spoken against a documentary background of English scenes from the actual churchyard and its environs at Stokes Poges, the locale of the famed classic. Another was "Wordsworth and the Lakes," an effort to show geographical influence upon a poet's mood and works. The feature films "Nine Days a Queen" (Gaumont-British, 1936), and "House of Seven Gables" (Universal 1940) were also shown in part, as examples of authentic and conscientiously produced theatrical feature films useful for curriculum enrichment.

The visual aids program was organized by John J. Jenkins of the Bronxville, New York, public schools. Other firms showing motion pictures and strip films included Curriculum Films, British Information Services, Popular Science, Pictorial Films, Coronet Instructional Films, Teaching Film Custodians, Teen Age Book Club, Brandon Films and Nu Art Films.

Projector Stolen

Educational Screen

Chicago, Illinois

Dear Sir:

Last summer Mr. Loren Foster and myself operated the Fowler Movie Company in the vicinity of Fowler, Indiana. We gave outdoor movies in the various towns in that vicinity. One night after a show at Medaryville our operator returned to his home at Oxford, Indiana, and parked his car near his house. During the night his car was entered and our projector and speaker stolen. The serial of the projector was 1144717 and the speaker was 1244717. The outfit was a Natco machine. Please run the serials in your paper.

My address is at the LaPaz high school or my home address is 508 East Adams St., Plymouth, Indiana.

Yours truly,

Robert M. McConnell

16mm Sound Film for Young and Old

CALABOOSE

A Hal Roach comedy full of the loudest laughs that ever rolled out of the West. It is a story of the gay and screwy adventures of two happy-go-lucky cowboys who become involved in a gangster brawl in the great open spaces and finally emerge as dare-devil heroes.

5 reels. Running time—46 minutes.

THE DEVIL CHECKS UP

Another fast-moving Hal Roach comedy that lampoons the Axis partners and their attempts to liquidate each other.

5 reels. Running time—45 minutes.

ABOUT FACE

A riotous comedy in which the hilarious sergeants of "Tanks a Million" carry on their famous fun feud.

5 reels. Running time—45 minutes.

New York Film Council

(Concluded from page 570)

stressed the fact that the Y.M.C.A. is principally interested in motion pictures from the educational point of view.

Mr. Strom stated that the university film library should not consider itself in competition with commercial distributors but rather that it should function as a clearing house of information to transmit to producers the types of demands which it experiences in its contact with users.

Atlanta Film Council Holds Two Meetings

The active Atlanta Film Council held two more meetings recently. Sam Lynch, Chairman of the State Department's Committee on FM Radio, gave an address, "Radio in Education" at the first meeting. Atlanta pioneered in the field of radio education and the program is continuing.

Four films were shown at the second meeting to acquaint all teachers, producers and manufacturers, parents, etc., with the Atlanta program of "more learning in less time". Program chairmen were Kathleen Moon, Director of Audio-Visual Education, Fulton County Board of Education, and Walter S. Bell, Director of Audio-Visual Education, Atlanta Board of Education.

U. N. O. Film Plans

(Concluded from page 572)

newsreel on the activities of the U.N. members. Their production unit, taken from 3 foreign countries, will document all meetings of committees and large groups for the archives. The idea is to produce nothing that commercial companies anywhere in the world want to produce. The budget for production of information films will be used to help produce desired films.

Mr. G. L. Garnes of UNESCO told briefly what the plans of his agency were.

First, UNESCO hopes to provide guidance to the film makers all over the world. Theatrical producers will be urged to produce films to stimulate international understanding. Barriers for exchange of documentary and educational films will be opened up. A conference is planned where educational and scientific films from all over the world will be pooled. Production of UNESCO will also be limited, its purpose being to promote production by individuals.

Mr. Benoit-Levy then pointed out that similar plans, to suit the needs of the agency, were being worked out by the other independent agencies of the U.N., such as FAO, etc.

The United Nations Film Board announced at this meeting, will first undertake a complete catalog of all films in all countries. A film footage library will be maintained about the U.N. and its member nations.

A filmstrip on the organization of U.N. is already nearing completion, and exhibits, photographs and other devices are also planned.

The U.N. Film Board hopes to work in cooperation with national committees representing the film industry in each country. Such committees have already been named in France, England and all Latin American countries. The American committee has not yet been formed.

AUDIO-VISUAL TRADE REVIEW

McGraw-Hill Production Program

A new "package" of teaching tools for high schools and colleges, consisting of textbook, 16mm sound motion pictures, and silent filmstrips, has been announced by McGraw-Hill Book Company, Inc. Marking its entry into the educational film field, the Company has started production of several series of McGraw-Hill Text-Films. Each series of films will be specially prepared for direct correlation with a particular textbook, using the same basic approach to the subject and the same terminology as the textbook. The films will be ready for distribution next Spring.

Plans call for all units of the package—textbook, motion pictures, and filmstrips—to be subjectively related, but functionally different. Motion pictures will stimulate student interest and give a realistic explanation of theories, principles, techniques and applications, especially in those phases of the subject most difficult for the average student to understand. Filmstrips will amplify the presentation, will ask questions, and re-emphasize key points in both textbook and motion picture. Both motion pictures and filmstrips will provide extended coverage of the subject matter in the textbook which will remain as the basic source of information to be transferred to the student under the direction of the teacher.

The initial Text-Film program covers four popular textbooks: Schorling's *Student Teaching*, for normal schools, teachers colleges, and "in-service" teacher training programs; Diehl's *Textbook of Healthful Living* for College freshman hygiene courses; French's *Engineering Drawing*, for colleges and technical institutes; and French and Svensen's *Mechanical Drawing*, for high schools. Each of these books will be supplemented by a separate series of Text-Films, consisting of six or seven 16mm sound motion pictures, each of approximately 15 minutes running time, and a like number of coordinated silent filmstrips, each of approximately 50 frames. Instructors' manuals will also be provided.

These films are being produced under the direction of Albert J. Rosenberg, Manager of the recently created Text-Film Department of McGraw-Hill Book Company, Inc. Mr. Rosenberg has had considerable experience in film work and in education. During the war he had charge of the production of 75 motion pictures and accompanying filmstrips and coordinated instruction manuals at the U. S. Office of Education.

In describing the program, Mr. J. S. Thompson, President of McGraw-Hill, said that no attempt would be made to produce Text-Films on every phase of a particular subject, or on every chapter of a particular book. Instead, he indicated, selection of film subjects will be based on those parts of the course most difficult for the student to grasp, as

determined from replies to questionnaires sent to users of the texts, and on those parts of the book that can be more effectively presented by the visual medium than by lectures or the printed word.

New SVE Releases

Teachers of upper elementary and high school French courses may welcome the new SVE release *Beginning French Series*, prepared by Miss Francis H. Patterson, president of the Ohio Modern Language Teacher's Association. The series, which puts sharp emphasis on building a varied and useful vocabulary, includes the following 10 units: 1. Aids to Pronunciation—Telling Time; The Weather (43 frames). 2. Gender Agreement of Adjectives (42 frames). 3. Differences in the Use of Prepositions in French and English (40 frames). 4. The Partitive (41 frames). 5. Negatives (40

ROBERT E. SCHREIBER, Editor
Audio-Visual Center
The University of Chicago

frames). 6. Question Forms (40 frames). 7. Vocabulary Builder—The House (42 frames). 8. Parts of the Body: Reflexive Verbs (44 frames). 9. Clothing and Food (43 frames). 10. Le Jardin Potager, Le Jardin D'Agreement (36 frames).

Other releases include: a series of 23 strips on *Important Cities of the United States*; 54 frames on *Television* (from the series "Methods of Communication"); three subjects in the Primary Reading series—*Little Red Riding Hood*, *Chicken Little and Goldilocks* and *The Three Bears*, and *Metropolitan Library in Action*, consisting of 40 frames.

The Society is also releasing a series of Christmas color slides. Titles include: *Scenes from the Nativity*, *Madonna and Child*, *The Adoration of the Shepherds*, *The Story of Christmas*, *The Night before Christmas*, *Christmas in Many Lands*.

★ Make Language Instruction more effective with

SOUNDSCRIBER TRADE MARK **Electronic Disc Recorder**

EVERY shade of inflection, every nuance of diction can be recorded by the SoundScriber. You can multiply the effectiveness and scope of your live-voice instruction to larger groups of students — and increase their comprehension by testing them with their own recordings on SoundScriber discs. SoundScriber is also an effective aid in lesson planning, drill and testing.

SoundScriber will instantly repeat a word, a phrase, a sentence or an entire speech—hun-

dreds of times, if necessary. SoundScriber discs are made of thin, unbreakable plastic, and cost only a few cents each.

The SoundScriber is light in weight, is readily portable and easy to operate. It is low in first cost and low in operating cost.

Write for complete information on the ways in which SoundScriber is being used by leading educational institutions.

Calhoun Company Gets EBF Franchise for Georgia

Miss Hazel Calhoun, owner of the Calhoun Company, Atlanta, Georgia, announced that the EB franchise for Georgia had been given to her organization on September 1.

For complete coverage of the state on the EB's excellent line, Mr. D. B. Palmeto, former Kentucky school administrator, has been added to the Calhoun staff, as educational consultant on visual aid materials.

School Guild Theatre Transcriptions

Ready for release, or in process of preparation, is a new transcribed series of events in the lives of distinguished Americans. Available on sixteen-inch, 33 $\frac{1}{3}$ R.P.M., high-fidelity vinylite are: "Splendid Legend" (Mark Twain), "Outrageous Toy" (Alexander Graham Bell), "The Bird Man" (John James Audubon), "Dividing a Continent" (George Washington Goethals), "Vote for Anna" (Anna Howard Shaw), "Man Who Liked People" (Jacob Riis), "Insect Detective" (Charles Valentine Riley), "Doctor Elizabeth" (Blackwell), "Of Guppies and Glaciers" (Louis Agassiz), and "One-man Army" (Joseph Pulitzer).

Each unit of two transcription sides constitutes a complete teaching kit. In addition to a fifteen minute dramatization, teacher's introduction, pre-listening activities for students, and follow-up suggestions are included right on the transcription. School Guild transcriptions are master-minded by Elizabeth Goudy Noel and Wilson Bower. National distribution is handled by: Training Aids Inc., 7414 Beverly Blvd., Los Angeles 36.

Young America Slidefilms Teach Health

A series of six new teaching slidefilms on health, correlated with leading texts for the primary grade level, has been produced by Young America Films, Inc. Each slidefilm is done in original art work. Printed captions are graded to vocabulary level. Individual titles are *Keeping Clean, Straight and Tall, Strong Teeth, Foods for Health, Rest and Sleep* and *Keeping Well*.

Another "Good Health Series" consists of six slidefilms especially designed to fit into the middle-grade health program. Titles are *You and Your Clothes, Pesky—The Cold Bug, You and Your Food, Your Posture—Good or Bad?, Bacteria—Good and Bad* and *Insects and Disease*. Teacher's Guides are included with each.

From "Strong Teeth".

For further information, address Young America Films, Inc., 18 East 41st Street, New York City 17.

ANFA Directors Meeting

The Directors of Allied Non-Theatrical Film Association, meeting in Cleveland on November 1st, made final arrangements for the preparation of the coming ANFA year book. Mr. William Lewin will serve in an editorial capacity. Also discussed was the time and place of the next ANFA convention. It will be held in April or May, and Executive Secretary Knighton was asked to check upon convention facilities in New York, Atlantic City and Chicago. Officers of ANFA present at the meeting were Wm. F. Kruse, president; Horace O. Jones, past president; Harold Baumstone, secretary; Jack Carter, vice-president and Wilfred L. Knighton, executive secretary.

Pictorial Produces Industrial Film

Pictorial Films, Inc., RKO Building, Radio City, New York, long known for the production and distribution of 8 and 16mm home and educational movies, is now entering the industrial film field for the first time. The first production, at present almost completed, will be in 16mm Kodachrome, sound, and will take up about 2 reels. It will show the history of champagne making, going back as far as the acci-

dental discovery of champagne at the Abbey of Hautvilliers in the Province of Champagne, France in the 17th century; then will show the step by step progress of champagne at Dry Imperator's vineyards and wineries at Hammondsport, N. Y.—from the selection of proper grapes, their growth, culture and harvest in glowing fall colors in the rolling hills of Hammondsport, through the involved chemical processes, filtering, aging and bottling by Dry Imperator craftsmen. The film is said to be a "fascinating educational feature" for "free" distribution.

Bell & Howell-Universal Deal Completed

Formation of the new company, United World Films, Inc., announced last month, has been completed. United World, a wholly owned subsidiary of Universal Pictures Company, Inc., includes the entire Bell & Howell Film-sound Library comprising 6,000 subjects, the operating personnel, and the branch offices in Chicago, New York, Washington and Los Angeles together with the dealer and agency contacts of the Bell & Howell distributing system.

Universal Pictures Company, Inc., already closely affiliated with the J. Arthur Rank Company in the distribution of its general product in this country through the recent merger of Universal and International Pictures, will now become the prime distributor of the J. Arthur Rank sub-standard product in the United States.

Colonel James M. Franey

This marks the first time that a major distributor has undertaken to embrace all phases of the sub-standard film field, thus making United World Films pre-eminent in this sphere.

Chairman of the Board of United World Films, Inc., is Matthew Fox, who will occupy this post in addition to his duties as Executive Vice President of Universal Pictures Company, Inc. Colonel James M. Franey is President, and will devote himself to the coordination of all activities of the business.

Franey, a Colonel on General Eisenhower's staff during the war, was

William F. Kruse

Assistant Chief of Staff for Personnel and Administration in the European Theater of Operations. He supervised the distribution of entertainment and training films to the troops. Prior to his Army service, he specialized in business management and administration.

The key executives of the company are William F. Kruse, a member of Bell & Howell Company for the past seventeen years, and Edward L. McEvoy, present head of Universal Picture Company's Short Subjects Department, as Vice Presidents. Edmund L. Dorfmann is Vice President in charge of Production.

Dorfmann has been President of American Institute of Motion Pictures since 1938 and has produced many outstanding films.

The following statement was issued by N. J. Blumberg, President of Universal Pictures Company, Inc., and J. H. McNabb, President of Bell & Howell Company:

"The marked increase in the 16mm and 8mm market, stimulated by the ever growing desire on the part of the public to acquire information through motion pictures, inspired the transaction whereby Universal acquires the Bell & Howell library of 16mm and 8mm films."

Radiant Instruction Book

An instruction book, to assure the maximum in efficient operation, is now being attached to each of the new 1947 Radiant projection screens. The manuals supply information on the proper and correct usage of the various screen models. In addition the instruction book contains Radiant Mfg. Company's new, one year screen warranty against defective workmanship. This guarantee warrants the screens to be free from defects in materials and factory workmanship. In the event of failure, not due to accident, misuse, abuse or alteration, Radiant will repair or replace "through accredited Radiant distributor and dealer channels" any defective parts.

New RCA Mobile Television Unit Announced

Development of a lightweight, self-contained mobile television unit, virtually a "television studio on wheels," which will greatly facilitate news coverage and other remote pickup operations, has been announced by W. W. Watts, Vice President in charge of the RCA Engineering Products Department.

The new RCA Mobile Television Unit, mounted on a standard 1½ ton truck chassis, can be used to transport all the equipment required for picking up, monitoring, and relaying to the studio remote television events such as boxing and wrestling matches, football, hockey, and baseball games, horse races, and newsworthy events such as parades, public ceremonies, and floods, fires, and other disasters.

The new mobile unit made its public debut at the recent convention of the National Association of Broadcasters in Chicago. Mounted on top of the mobile unit were one of RCA's supersensitive Image Orthicon television cameras, which scanned the State Street crowd by the relatively dim light of the hotel marquee and nearby shop windows, and an RCA Victor table model television receiver, just off the production line, which permitted spectators to see themselves on the television screen. The same pictures appeared on 20 television receivers spotted throughout the convention quarters in the Palmer House.

Victor Prexy Tours

S. G. Rose, President of the Victor Animatograph Corporation of Davenport, Iowa, is making an extended business trip through Mexico and later will visit West Coast points. While in Mexico Mr. Rose will meet with various distributors to iron out details of export-import matters relative to Victor projectors and cameras.

European Dealers for NATCO Projector

Mr. George M. Factor, executive assistant to Willard Gidwitz, Vice-President in charge of sales for Natco, Inc., is now en route to Europe to complete several deals which will result in wider distribution of the Natco 16mm sound projector. Sales agencies are to be set up in England, France, Belgium, Sweden, Switzerland and the Netherlands.

Already many representatives of firms in these countries have visited the Chicago plant of Natco, Inc. Even though original plans of the company did not include continental distribution just now because of the present unsettled conditions, arrangements are to be made for shipments to begin as soon as production increases sufficiently.

GRISWOLD
FILM
SPLICERS

GRISWOLD Splicers have long been first choice of makers and exhibitors of motion pictures in the entertainment world because their exclusive design features make splicing easy, fast and foolproof. Also because they're built for a lifetime of service. These same reasons make GRISWOLD Splicers the best buy for makers and users of business and industrial films.

Good splicing is important to effective film presentation and film preservation. Make sure of it with GRISWOLD Splicers.

GRISWOLD Splicers come in models for all film sizes. All models splice both sound and silent film. Order from your Photo Supply Dealer or direct from us if he doesn't have them. Descriptive folder mailed on request.

"A Christmas Carol" On Slidefilm

The world-famous classic, Dickens' *A Christmas Carol*, is currently being released by Pictorial Films, Inc., in their series of full-color 35mm classic slidefilms.

The interpretation of this film, created by Fletcher Smith Studios for Pictorial Films, overcomes the static feeling so

From Dickens' "Christmas Carol"

often present in slidfilms. Each of the 100 frames which make up this story gives a feeling of motion to the audience and carries the legend of Scrooge to its happy ending. The costumes and architecture of the period in which the story takes place are historically authentic, and as a Christmasy touch, the Yuletide colors, achieved with the Americolor process, are woven into the color pattern to impart the underlying warmth of this story.

This slidefilm, of approximately 100 frames, is available at photographic stores and at visual educational dealers. For additional information write direct to Pictorial Films, Inc., RKO Building, Radio City, New York 20, N. Y.

Sun Dial Moves to New Pathe Industries Building

Sun Dial Films, Inc., has moved its production and executive offices to the new Pathe Industries Building at Park Avenue and 106th Street. The new structure will house complete producing and laboratory facilities.

Coincident with the announcement of the move to larger quarters, S. A. Datlowe, President, announced the appointment of William E. Prendergast, former White House liaison officer, as director of research and sales.

Victor Projector Accessories

The Victor Animatograph Corporation of Davenport, Iowa, offering a new Voltage Regulator with which the power supply for 16mm projectors can be held to the correct, and uniform level. This Regulator is said to eliminate difficulties many times confronting 16mm projector operators in rural or outlying urban districts where power is often inadequate or irregular. Use of the Regulator increases lamp life, decreases replacement costs, while improving both picture and sound.

Victor has also developed new reel arm extensions which make it possible to employ 2,000-foot reels on its 16mm sound motion picture projector. The

extensions are easily installed in the front arm socket and may be carried in projector or speaker case when not in use.

Meridian Pictures Appoints Scofield Vice-President

Edward Scofield, former director of public relations and advertising for J. Arthur Rank, has been appointed executive vice-president in charge of production and public relations for Meridian Pictures, 16mm producing and distributing organization, it was announced by President Sam Nathanson at a recent meeting of the Board of Directors in their offices at 5545 Sunset Blvd.

Meridian plans to produce 24 features, 24 cartoons and 24 short subjects for the 1946-47 season. President Sam Nathanson further revealed that 33 distribution centers have been set up in the United States and the rest of the world to handle their product.

Lektra Splicemaster 16

The new Lektra Splicemaster "16" butt-welds all sound or silent 16mm film within 15 seconds or less. First, a built-in trimmer lines up and simultaneously trims both ends of the film. Second, the film is clamped into position for the butt splice, a button is pushed and the light indicator dims as the weld starts. The current cuts off automatically when the indicator brightens and the splice is finished. Third, the built-in trimmer is used to even up the slight protrusions created on each side of the film by the electrical splice process. The Splicemaster makes a true, flat weld that passes all precision-perfect film gates because no

Lektra Splicemaster

overlapping of the film is necessary. The film butts are pushed together and welded. An extra handy feature of the Lektra invention is the built-in editing and viewing light, which can be blacked out with tape when splicing unexposed film. It has a Hammertone finish aluminum base with steel fittings. It weighs five pounds and measures 9" x 5½" x 4". Available in limited quantities from Lektra Laboratories, 30 E. 10th St., New York.

New Opaque Projector Takes Full Page Material

Charles Beseler Company, New York, have released their new Model OA3 Projector which has a 7½" x 10" copy opening. This opening more than covers the average amount of printing on an 8½" x 11" sheet. Thus full pages in most magazines and books, maps, and other large size material can be clearly and fully projected with an 18" focal length lens. The Beseler Model OA3 uses two 500-watt T20 medium prefocused base lamps, and is air cooled. One of the special features of this new projector is a self-locking device (Pat. Pending) which enables the copy platen to be locked open in various positions for easy insertion of the copy to be

Beseler Model OA3 Projector

projected for holding single sheets of copy to facilitate insertion in the projector. The Projector weighs 43½ pounds.

Simmel-Meservey Moves

Mr. Louis C. Simmel, General Manager of Simmel-Meservey, has announced the moving of the firm's general offices to a new modern building at 321 South Beverly Drive, Beverly Hills, California. The move, Mr. Simmel stated, was necessitated by a substantial increase in volume on both educational films and records and by a considerable increase in personnel to handle the increased volume.

The new quarters will provide an increased capacity of approximately 400% in the firm's educational film division and approximately 200% increased capacity in the record division. Immediately after formally opening the new quarters, Mr. Simmel left on a month's business trip for a series of conferences with leading educators in the East, Middle West and the South.

New Photographic Center Opens in Honolulu

Motion Picture Enterprises, under the ownership and management of Mr. E. J. Young, has opened a new store in Honolulu, T. H. The new photographic center will feature the latest equipment. A film rental department is also provided, along with complete facilities for photofinishing.

Current Film News

■ NATIONAL FILM BOARD OF CANADA, Ottawa, announces that the following films may be obtained from the International Film Bureau, 84 E. Randolph St., Chicago 1:

Canada—World Trader (8 min.)—showing how Canada has attained the position of fourth largest among the world's industrial powers.

Land for Pioneers (14 min.)—a summary of the exploration and development of the Canadian North. How the Alaska highway has opened up new farm areas, and the importance of air routes to Europe.

Trees That Reach the Sky (8 min.)—the story of a Sitka spruce that became a Mosquito bomber. Lumbering, milling, and manufacturing operations are shown.

Early Start (20 min.)—a description of Boys' and Girls' Farm Club Work, a flourishing activity in all parts of Canada.

■ YOUNG AMERICA FILMS, INC., 18 E. 41st St., New York 17, announces the completion of four 16 mm subjects for the elementary level, namely:

Tommy's Day (15 min.)—designed to teach the young child a few simple health facts and to provide him with an orientation to a simple pattern of every day life. The film follows a typical six-year-old boy through a day's activities.

Magnets (13 min.)—Betty and Bob, two typical elementary school students,

learn the scientific principles involved in a lode-stone and a bar magnet. Specifically correlated with the science program for Grades 4-5-6.

The Flow of Electricity (10 min.)—a science film for the same school level, explaining electrons, how electricity is produced, what a closed circuit is, and the applications of such a circuit to home electricity.

What Makes Rain (10 min.)—designed to introduce the child to the concept of the water cycle and the related concepts of evaporation and condensation. For Grades 2-3-4.

■ ASSOCIATION FILMS (Y.M.C.A. Motion Picture Bureau), 347 Madison Ave., New York 17, has released another sports film, titled:

Play Championship Basketball—a series of six films on the fundamentals of basketball, as demonstrated by the Oklahoma A & M team, national basketball champions of 1945 and 1946. Analysis of the game is voiced by Bill Slater, well-known sports narrator. Titles of the subjects are: Individual Offense; Individual Defense; Team

Styles of Play; Iba's Famous Offensive Plays and Variations; Defensive Styles; Drills.

This film was produced in cooperation with the American Institute of Motion Pictures. Designed specifically for use by coaches, it is also well adapted to enhance spectator understanding and enjoyment of the game.

■ INTERNATIONAL FILM BUREAU, 84 E. Randolph St., Chicago 1, has acquired from the British Information Services the exclusive United States distribution rights to a series of films on the technique of anaesthesia. These eleven films were produced by Realist Film Unit under the super-

Films from Britain

Behind barriers of desert and jungle, guarded by the deadly tsetse fly and the malaria mosquito, Africa was almost isolated from the white man's world for centuries. Then, only forty or fifty years ago, the barriers began to break down in earnest. Superstitious, primitive, and largely savage Africa came face to face with the modern age of machines and science. The British Administration had to protect the African way

of life from being completely crushed by the sudden impact of the white man; and to help Africans use the white man's knowledge to improve the African way of life, so that their countries could hold their own in the modern world. These films offer a quick glance at some of the rather astonishing strides which Africans and Britons, in partnership together, have made in these few years.

vision of Dr. I. W. McGill and the anaesthetics staff of Westminster Hospital, London. Loan prints may also be borrowed from British Information Services. Titles are:

- The Signs and Stages of Anaesthesia (23 min.)
- Open Drop Ether (31 min.)
- Nitrous Oxide-Oxygen-Ether Anaesthesia (27 min.)
- The Carbon Dioxide Absorption Technique (22 min.)
- Endotracheal Anaesthesia (26 min.)
- Intravenous Anaesthesia: Part I (20 min.); Part II (25 min.)
- Spinal Anaesthesia (34 min.)
- Respiratory and Cardiac Arrest (15 min.)
- Operative Shock (16 min.)
- Handling and Care of the Patient (26 min.)

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20, includes among its most recent releases:

Education for the Deaf (5 reels)—a factual record, using school case studies, of the work of special schools in Britain which teach children from two to twenty years old to lip-read without effort and speak fluently.

Near Home (3 reels)—an appraisal of study projects and their value to the children who participate in them. The pupils of the Bishop Auckland school study their own district from the viewpoint of history, geography, administration, etc., and as they progress with their research they enlist the help and interest of adult inhabitants.

Fight for Life (2 reels)—highlights the government's agricultural campaign in the Southern Gold Coast which is part of the long term scheme to raise the African standard of living to the modern level.

■ **CORONET INSTRUCTIONAL FILMS**, 919 N. Michigan Ave., Chicago 11, has produced the following four new 16 mm one-reel films, prints of which can be supplied promptly:

The Secretary Takes Dictation (color or black and white)—illustrates proce-

dures and practices in taking dictation in a business office, and duties of a secretary.

The Secretary Transcribes (color or black and white)—follows a secretary through the transcription of a typical day's notes. An understanding of additional office habits besides shorthand and typing that make a good secretary

is one of the objectives of this film.

Fred Meets a Bank (color or black

and white)—in which the services of a bank are portrayed in story form.

Birds in Winter (color only)—presents for the first time a seasonal aspect of bird life as compared with study by nesting habit or life cycle. It is designed as an introduction to bird study for all ages, and particularly directed toward stimulating young children to project activities and to encourage conservation of bird life. Feeding habits and adaptations of ten common birds are compared.

■ **ASSOCIATION FILMS**, 347 Madison Ave., New York 17, is distributing two films produced for The Athletic Institute:

Playtown—U. S. A., a 25-minute sound-color film illustrates how a community can organize to promote community-wide, all-age, year-round recreation. It presents factual pictorial evidence of what can be done when all local public and voluntary agencies pool resources to achieve a common objective.

\$1000 for Recreation, a 12-minute sound film in color which features V. K. Brown, Chicago's director of recreation, who offers sound advice on how service clubs and other community organizations can invest wisely in a complete recreation program for their communities.

■ **BUREAU OF MINES**, Graphic Services Section, 4800 Forbes Street, Pittsburgh 13, Pa., offers for free distribution:

The Drama of Steel, a 34-minute sound film, produced in cooperation with a large steel manufacturer and photographed in the company's mines and plants, shows the complex processes for modern steel making.

■ **PENNSYLVANIA RAILROAD**, G. E. Payne, System Publicity Representative, Room 1587, Broad Street Station Bldg., Philadelphia 4, Pa., offers for distribution anywhere in the United States, free of charge:

Clear Track Ahead, a 25-minute film which tells the story of railroad transportation from the days of the "John Bull" locomotive of a century ago to the gigantic streamlined steam, electric, and diesel engines of the present time.

■ **COOPERATIVE LEAGUE**, 167 W. 12th St., New York 11, is producing three films illustrative of the cooperative movement:

The Power of Neighbors, 30 minutes, color and sound, depicts the expansion of the Indiana Farm Bureau into the petroleum industry.

Faster Milking uses considerable animation to describe the advantages derived from machine milking. In sound and color.

There Were Three Men, in sound and color, describes the economic benefits which the farmer or laborer can derive by cooperation.

■ **AWARD FILMS**, 381 Fourth Ave., New York 16, has released:

Whoever You Are, a 20-minute soundfilm on what one New York City community did about intolerance. The participation of such community groups as the YMCA, the Parent-Teachers Association, B'nai B'rith, Holy Name Society, The American Jewish Congress, and other elements of the neighborhood are documented. Produced by VFT, a group of ex-OWI personnel.

■ **CARL DUDLEY PRODUCTIONS**, 9724 Santa Monica Blvd., Beverly Hills, Calif., reports that 11 additional subjects in its series of 16 mm sound and color films titled "This Land of Ours" are now in the editing stage, with releases starting on November 25th. They cover the states of Vermont, Massachusetts, New Hampshire, Maine, Connecticut, Rhode Island, New Mexico, Wyoming, Montana, Oregon and Washington. A film on New York City has also been added to the series.

New F.O.N. Catalog

An attractive forty-page catalog of the offerings of **FILMS OF THE NATIONS, INC.**, has just come off the press. Copies may be obtained from this organization at 18 West 55th Street, New York 19, New York. Distribution is handled through Ideal Pictures Corporation in the United States, and through the National Film Society of Canada in the Dominion.

News Reel Laboratory Furnishes Football Films for Schools and Colleges

Having long since proven its value in the systematic coaching of football teams, visual education may claim as one of its earliest practitioners in that field the News Reel Laboratory of Philadelphia.

An example of how intensively the football films are used occurred recently when a Bell & Howell projector was set up in the cabin of a TWA plane flying to the west coast. Films of previous games were projected en route, and plays were analyzed by way of preparation for the next encounter.

1922 AS WE WERE 1922

TO OUR READERS OF 1947

If this Jubilee Number of Educational Screen seems to be using an egregious amount of its limited space in obvious self-glorification, please bear in mind that we do it only once in 25 years. There is a further and better reason. We want to give you a personal, intimate, visual introduction to the enlarged personnel that aims to make you a far better magazine for the next 25 years.

1922 WHAT WE SAID 1922

Verbatim Excerpts

From Editorials

"The purpose of the Educational Screen is single and emphatic . . . to get at the truth about visual education in all its phases and broadest aspects . . . to supply the best in theory, opinion, and experience . . . to present a monthly survey of really significant visual activities . . . to become the impartial and authoritative source of information for all interested in the progress of the new, nation-wide movement which seeks to broaden and deepen, by the use of visual aids, our national education in school, church, club and community center."

From "Better Times Ahead",

by William R. Duffey

"It is with considerable satisfaction that we, who are constantly dealing with schools and communities, note a decided reaction on the part of school authorities against the poorer class of non-theatrical films. Not so long ago they were prone to accept any sort of motion picture that did not offend with vulgarities. This state of things has changed, or at least is changing rapidly. Many school and community leaders are learning to have nothing to do with such material . . . though there are still many who could read the life of Barnum with considerable benefit.

"The time is surely here when all who desire films for school instruction should insist upon motion pictures that are the equal of theatrical films. . . . Educators can demand films that bear some logical relation to textbooks. . . . The future of the non-theatrical field depends on the ability of the producers to apply every known art to the finished product, with a selected optience clearly in mind. . . . The purely instructional film will be made—and for that matter is now made in some instances—by talented directors in conjunction with educators who will watch the literary and scientific aspects. . . . The advertising reel, still too commonly seen in school gatherings, will soon be a thing of the past. In its place will be the industrial reel that will show, as its primary purpose, all phases of a certain industry. . . . Less sentimental effusion and more rational enthusiasm will develop this field of endeavor to a point where visual instruction can begin to realize its vast possibilities."

From "What the University of Kausus is Doing and Planning in Visual Instruction",

by Joseph J. Weber

"Last fall (1921) we offered a course in visual instruction to a class of 26 students, mostly seniors and graduates, who are now helping to make history in this pioneer field. The general plan embodies the following main topics: (1) History and Growth of Visual Education, (2) Types and Sources of Visual Aids, (3) Principles of Visual Instruction, (4) Special Methods, (5) Supervision, (6) Administrative Problems, (7) Picture Projection Technique, (8) Research in Visual Instruction. These topics were subdivided into various phases and elements affording a detailed basic Outline for the course.

"The work was done by projects. At every class period, projects were suggested, discussed, evaluated, and undertaken definitely by one student or a committee of two or three. Some of the projects so far are: A Selected Annotated Bibliography . . . The History of Visual Aids . . . The Use of Hygiene Films . . . A Study on Projector Costs . . . Making Habitat Groups . . . Mounting and Coloring Slides . . . Visualizing the Invisible . . . Emotional Effects of Moving Pictures . . . University Campus Inventory of Visual Aids . . . The Work of Extension Divisions. In addition, each student is working on an individual project consisting of a limited elaboration of some special visual method in the field which happens to be the student's College Major—English, History, Chemistry, Biology, or any other subject." (Dr. Weber repeated this course the following summer with an enrollment nearly three times greater.)

"No teacher should be considered adequately trained who cannot adeptly visualize with chalk on the blackboard, the handiest and most economical visual aid to instruction. . . . The model of a canal lock may save hours of futile explanation and years of vagueness. . . . The habitat group ranks in effectiveness probably next to actual reality. . . . The Tellurian will clear up the notion of day and night, and seasonal changes, in a fraction of time needed by verbal explanations. . . . The moving picture has the unique advantage of depicting action and behavior, with its irresistible illusion of life and reality. . . . For schoolroom use the 1000-foot film will probably never be in vogue. . . . 200 to 500 foot lengths are already taking its place. . . . In its present form the film, rather than the teacher, is relentlessly master of the situation. . . . The teaching film of the future will be short, and its place in the classroom is absolutely assured. . . . Seeing is merely a fraction of the learning process. Learning is the effect of thinking, feeling, doing. . . . Unless the visual impression is seized upon vigorously by discussion, questioning, pupil expression, it has little or no value. . . . The biggest task in the field of visual instruction now is the actual elaboration of a specific methodology. . . . Every teacher must know how to secure, systematize, and utilize most economically the various aids and to guide the pupils in their most effective use."

From "The School Department",

edited by Marie E. Goodenough

"Visual Instruction is more than a theory. . . . It is a practice in hundreds of schools today, wherever maps, graphs, charts, diagrams, pictures, slides, films are chosen to convey or elucidate an idea more clearly than could be done by any other means. . . . Even its most enthusiastic and earnest advocates, however, do not presume to assert that its practices are fixed, its present claims proven, nor its ultimate possibilities and limitations accurately guessed.

"Much of the success of a visual lesson lies in the attitude of the class toward what they are to see. A few moments of preliminary discussion should result in an anticipatory attitude. . . . If rightly done, this preparation gives not only eager interest but a definite purpose and the class will come to the picture with a whetted attention that insures results. . . . With a pictorial background, how much more enthusiastically will the child approach the printed page! . . . How clear-cut his conclusions when he finds the text tallies with his own observations!

"Visual education is in the experimental stage. It is merely a teaching tool of positive value that has long been lying within reach of all but used by very few. . . . It will devolve upon the minority to perform the tedious experimental work, endure the failures, steadily increase the successes. . . . This Department purposes to be of the utmost service to teachers who are on the fring line of the new movement's advance. For by its results in the classroom must this new force ultimately be judged and its measure for good or evil taken."

(The 16 "educational films" listed and reviewed in the School Department for January 1922, were from the following sources: Burton Holmes (4), Educational Films Corp. (3), U. S. Department of Agriculture (3), George Kleine (2), U. S. Bureau of Mines (2), Society for Visual Education (1), Famous Players-Lasky (1).

From the "Theatrical Film Critique",

edited by Marion Lanphier

(Among the 12 "current" films reviewed, the following were recommended—stars named in parentheses—Little Lord Fauntleroy (Mary Pickford), The Sign of the Rose (George Beban), Tolerable David (Richard Barthelmess), The Little Minister (Betty Compson), The Sheik (Rudolph Valentino and Aynes Ayres), Camille (Rudolph Valentino and Nazimiro), The Three Musketeers (Douglas Fairbanks).

Miss Lanphier states the departmental policy as follows:

"To analyse with fearless sincerity the current films representative of present production . . . pointing out clearly the good and bad in films as they come from the studios . . . remembering two facts: First, that we are theoretically concerned with an art, because it is a composite of time-tried arts, and Second, that the movie public, like any public, is

Russian prisoners, throughout France and the Rhineland, USING SLIDES AND MOTION PICTURES. This revelation of the power of the picture for educational purposes brought decision to leave teaching and work "to promote visual education if there was such a thing". Joined Society for Visual Education at its founding in 1919, as first editor of its new magazine "Visual Education", first issue January 1920. Charter member National Academy of Visual Instruction (1920). Left Society to start independent magazine "Educational Screen" in January 1922, with the invaluable collaboration of Herbert E. Slaught, Professor of Mathematics, The University of Chicago. During next few years Educational Screen took over Moving picture Age, Visual Instruction News, and Visual Education, to become only magazine in the field for nearly two decades. Board Member various organizations in the visual field. President of Department of Visual Instruction of the National Education Association 1935-37, and Executive Committee member 1941-45. Various writings and addresses before educational conventions, club and community meetings, both on visual education and on the theatrical "movies". Miscellaneous articles in Bankers' Monthly, American Banker, Annals of the Academy of Political Science, Visual Review, and elsewhere.

tional Educational Association (1940-41) and on Executive Committee (1941-45); on Editorial Board of "Building America" (1941-45); on Advisory Board, Institute of Oral and Visual Education (1940-45); on Board of Directors, Educational Film Library Association (1946). Author of numerous articles on visual and radio education published in educational journals, yearbooks, and elsewhere.

Congregational Church in Topeka, Calvary Methodist in Washington, and Lakewood Presbyterian Church in Lakewood, his present position. Has been Chairman, Department of Christian Education of Cleveland Church Federation for six years, and of Directors Section, International Council of Religious Education for three. For some twenty summers, has taught courses in the Leadership Training Schools of different denominations, and is on faculty of the International Workshops in Visual Education, sponsored by the International Council. His numerous writings, booklets and articles, are widely known and have appeared in International Journal of Religious Education, in Church Management, in Religious Education, and elsewhere. His leaflet written for the Methodists, "The Use of Visual Aids in the Church", and his booklet, "Projected Visual Aids in the Church", have been widely distributed in all denominations.

JOSEPHINE HOFFMAN
 Office Manager and
 Departmental Editor
 Educational Screen

■ B.A. University of Illinois (1923). Miss Hoffman came with Educational Screen soon after graduation, is still with it, and will be, we hope, indefinitely. Her total value to the magazine can hardly be over-estimated. With fine educational background, clear vision of the possibilities in the visual idea, and immense capacity for hard work, "Jo" learned the Educational Screen job from the ground up. As Office Manager and Departmental Editor, her mastery of every detail of production, record keeping and office routine, her devotion to and interest in every phase of the magazine job, have made her a staff-member of outstanding importance in the growth and development of Educational Screen. N L G

■ A.B. Park College, A.M. and Ph.D. The University of Chicago. Started teaching High School, Fredonia, Kansas, World War I, served overseas, 85th Aero Squadron and 7th Photo Section. On faculty, College of Education, University of Illinois, four years. Director, Division of Educational Reference, Purdue University, two years. Assistant Director and Director, Scarborough School; Scarborough-on-Hudson, N. Y., eighteen years. Lecturer in Education, University of Michigan (1945-46). Taught Summer Courses at The University of Chicago, University of Illinois, Emory University, University of Michigan, and University of California at Los Angeles over a period of 23 years, at least one course in each session being on visual education, the first at University of Illinois in 1922. Has done research in visual education for Commonwealth Fund, National Education Association, Sloan Foundation, Rockefeller Foundation, Committee on Scientific Aids to Learning. One time consultant on visual education, Training and Education Department, Ford Motor Co. Associate Editor, "Education", Editor, Visual Aids Column, "The Instructor". Has spoken and written extensively. Author of "Visual Instruction, Its Value and Its Needs"

ROBERT E. SCHREIBER
 School of Education
 University of Chicago

EVELYN J. BAKER
 Advertising Manager
 1931 through 1946

■ Miss Baker came with Educational Screen in 1931 as Advertising Manager, after years of handling, with marked success, non-theatrical film distribution for the Pathe Exchange in Chicago. Known as "Jerrie" to practically the whole visual field, often called the "spark-plug of Educational Screen", her unlimited energy, tact, and devotion to the work, her artistry at making and holding "contacts", built the magazine revenues steadily from the "red ink" days of the early thirties to the gratifying volume of 1946. On January 1st, 1947, Jerrie became the Indianapolis Branch Manager for Ideal Pictures Corporation, enabling her to live in her old Indianapolis home. Our regrets and best wishes go with her. N L G

F. DEAN MCCLUSKY

 at Los Angeles

Mencall Publishing Corporation) and numerous articles appearing in Education, Educational Screen, Elementary School Journal, The Instructor, Junior-Senior High School Clearing House, Moving Picture Age, School Review, and elsewhere. Present connection: Head, Department of Audio-Visual Instruction in Extension and Lecturer in Education, University of California at Los Angeles, and Editor of Supplementary Publications and member of Editorial Advisory Board, Educational Screen.

■ B.S. Northwestern University (1941). M.S. University of Illinois. Now in residence for Doctorate at The University of Chicago. Principal, High School, New Franklin, Mo. (1943). Supervisor of Audio-Visual Aids and Instructor in Radio, Stephens College (Mo.) (1943-45) and Consultant on Visual Education (1945-47). Research Assistant, Department of Education, The University of Chicago (1945-47). Departmental Editor of "A B C's of Audio-Visual Equipment", Educational Screen (1945-46). Author of "Building an Audio-Visual Program", Science Research Associates (1946), and various articles on Instructional Materials in Educational Screen, English Journal, Film and Radio Guide, School Science and Mathematics.

■ B.S. The University of Chicago (1938), majoring in Science and Educational Techniques for teaching career. Graduate study at Northwestern University and Illinois Institute of Technology. During the War, edited training manuals for the Signal Corps, the Air Force, and the Navy. Has served as editor of technical publications for a large manufacturer of electrical equipment for eight years. For several years has acted as Alumni Adviser to the Documentary Film Group at the University of Chicago. Has produced independently a documentary film, called "Pedestrian Patterns", which was selected by the Library of Congress (1945) for permanent preservation. Beside his interest in education, has long done free lance writing of articles on motion pictures, communications

EDWARD T. MYERS
Assistant Editor
Educational Screen

and transportation appearing in various magazines here and abroad.

The Staff Speaks As It Pleases

THE "Silver Jubilee" is a great occasion. I know that hundreds of others interested in the visual field are joined in their feelings of gratitude for what you have contributed to education in these first twenty five years of Educational Screen.

For the last seventeen of those twenty five years I have been a regular cover-to-cover reader (ads and all) and from the first issue I read, I have kept every one, bound and guarded jealously. I pay tribute to Educational Screen as my most respected instructor in this field. It's no wonder that I feel so proud of my closer associations with the Screen during the past several months.

REED

I Have in my files Volume I, Number I, of the Educational Screen. One comparative look at the January issue of 1922 and this twenty fifth anniversary issue of January, 1947, tells a story of solid growth in the audio-visual field over a quarter of a century which is indeed gratifying. I see ahead similar substantial progress in the next quarter of a century. The Educational Screen's contribution to progress in visualized teaching in America has been great. It is destined to be even greater in the years which lie ahead.

McCLUSKY

THE effect of the use of audio-visual instructional materials upon the schools of the nation is like that of a two-edged sword . . . clearing the way toward more concrete perceptual experiences for our students on the one hand . . . and for us, as teachers, leveling the verbalism of conservative instruction to provide new vistas of curricular reform.

SCHREIBER

STARTING with minimum resources but maximum idealism Educational Screen has established and maintained itself as a leader in the visual education field for twenty five years. The integrity and success of that record is due to the pioneering and persevering leadership of its founder-editor and those inspired to work with him in building up both the magazine and the field it serves. American education owes much to those efforts and the inspiration which made them successful. Previewing the future, as a projection of the present in the light of the past, Educational Screen on its Silver Jubilee has every reason to look forward to even wider and more brilliant service and success.

DUGAN

I am delighted to be a member of the editorial staff of Educational Screen when it celebrates its twenty-fifth anniversary. It is the one magazine that stuck with the visual field through its most trying periods. It has been a bulwark in the field and has served to tie together the many loose ends and different factions existing in this field. Congratulations on the splendid job you have done! After twenty five years Educational Screen is still the outstanding journal in the audio-visual field of education.

GOODMAN

(Continued on next page)

DAVID E. CAESAR
Advertising Manager
Educational Screen

■ David E. Caesar succeeds Evelyn J. Baker, as Advertising Manager, as of January 1st, 1947. He brings to Educational Screen some twenty years experience in jour-

nalism, advertising, promotion, business administration, and all phases of selling and merchandising. Ten years as Advertising Agent for the Southern Pacific Railroad, and National Sales Manager of the Accredited Group of Chicago Newspapers. Ten years as Travel Editor of the Chicago Herald-American, and as production manager, director of media, copywriter, and account executive of the Charles F. W. Nichols Advertising Agency. Western Chairman, Press Committee, National Association of Travel Officials, and Chairman, Press Committee, Association of American Railway Advertising Agents. Numerous speaking tours and special article writing in promotion of national travel, transportation and recreation have given him a wealth of human contact and understanding in the field of advertising and publication. His policy is to foster the closest possible unity of purpose and ideals between advertiser, agency, and publisher.

■ After his formal schooling at McKinley High School, Marshfield, Wis., at University of Wisconsin, and Eau Claire State Teachers College, became member of Federal Writers, compiling History of Wisconsin and completing ethnic studies of Wisconsin's peoples. (1938-39). Advertising copy and sales with two travel magazines and free lancing (1940) Chief bookkeeper Citizen's National Bank, Marshfield (1941). Joined U.S. Army (1942). Founder and Editor-in-Chief of "Saltwater Syndicate", chain of 18 newspapers published on U.S. Hospital Ships (1942-44) and edited Charleston Port of Embarkation newspaper. Wrote fiction for service publications, Yank Magazine, G I Galley, Transportation Corps Journal, and others. After leaving Army, served on staff of Ironwood

(Mich.) Daily Globe (1945) as copywriter and space salesman.

1922 What We Said 1922

(Concluded from page 13)

a composite of varying human capacities and understandings, requiring legitimately a wide range in screen production. . . . This Department addresses itself to those thinking individuals who are logical enough to be patient with the meagre material at hand from which generalizations about a future art must be drawn, and reasonable enough to recognize occasional excellence even though it be but relative.

From the Department, "From Hollywood", edited by Marguerite Ornlorf

"This Department will be written from a distinctly optimistic standpoint, treating certain aspects of commercial production methods which seem significant of real progress. . . . Adverse criticism of the movies can be found anywhere. . . . It is worth while to point out also the signs which promise better things, the possibilities of the future rather than the serious shortcomings of the present and the past."

Departmental Editors

JOSEPHINE HOFFMAN and ROBERT E. SCHREIBER (Pictures and histories above)

JOHN B. DUGAN
Department of Education
Beaver College (Pa.)

■ A.B. and A.M. Princeton University. Ed.D. Rutgers University. Graduate study at University

■ Ph.B. and A.M. degrees taken at The University of Chicago. Extensive study at The Art Institute of Chicago. Taught at Joliet Township High School, Joliet, Illinois; at Miami University in Ohio; now at Roosevelt High School in Chicago. Is author of the monograph, "Children's Preferences for Color, Color Combinations and Arrangements". Co-author with Jessie Todd "The Enjoyment and Use of Art in the Elementary School", and the series of "The Doing Art Books" for elementary Grades.

DAVID J. GOODMAN
Popular Science Publishing
Co.
New York City

■ B.A. (1935), M.A. (1937), Ph.D. (1942) New York University. Co-founder of Audio Visual Associates,

■ A.B. University of Nebraska. Graduate work at University of Minnesota, University of Nebraska, and Columbia University. Five years, Science teacher and principal in Iowa schools. Two years, instructor in Science and Adult Education with the Tennessee Valley Authority. Director of Motion Picture Project at University of Minnesota sponsored by American Council on Education (1938). Since 1940 at Indiana University developing an integrated audio-visual aid program for both University and the entire State. Founded Educational Film Library Association (1942), first Chairman and present Board Member. Associate Director, American Film Center (1943-44). Has held office in Department of Visual Instruction of the National Education Association, in Audio-Visual Aids Committee of the National University Extension Association, and in the Governing Council of the Film Council of America. Chairman of Office of War Information 16mm Advisory Committee (1943-45). Member of National 16mm Committee in the 5th, 6th, 7th, and

of Wisconsin and Oxford University, England. Traveled extensively in Europe and the United States, writing and lecturing both here and abroad. Teaching experience includes work as high school teacher, high school principal, and college supervisor of student teaching. Has done college teaching at Montclair State Teachers College, Pennsylvania State College, and at Beaver College where he is now Professor and Head of the Department of Education. Has served as member of the Executive Committee of the New Jersey Visual Education Association, and as President of the Section on Visual Education of the World Federation of Education Associations. Has been an officer in various educational groups, and is the present President of the Department of Secondary Teachers of the National Education Association.

The Staff Speaks (continued)

THERE is little doubt that teaching methods are going through a period of great change—and we hope it is for the better. One of the most significant changes is undoubtedly that of doing something about what we already know about the strengths and weaknesses of the many different types of instructional materials. By now it should be fairly well established when and how we should use printed, photographic, projected, recorded, diagrammatic, or three-dimensional teaching materials to make it possible for the student to learn and to understand in a way which is meaningful and real to him. The sooner we can show the taxpayer that we are spending his money for different types of instructional materials because each contributes something which the others cannot, the better our chances of obtaining money needed to buy them in the right amounts for our schools. BROWN

IN Educational Screen's quarter of a century we have seen Audio-Visual Aids grow from an infant barely able to crawl, into a sturdy youngster all spirit, stamina, adventure. Where we go from here is the problem. That youngster will need a lot of guidance and inspiration to become the mature competent person our complex and apparently unmanageable civilization needs. It is in some ways easier to build a rudimentary audio-visual aids department into a well staffed, well-stocked department than to make that fairly mature department achieve full utilization in the classroom. After all, the test of educational progress is the same as the test of civilization

itself, namely, the changes that take place in the minds and hearts of men. The task before us is to develop the world citizen, capable of living in peace and happiness at home and abroad. That is the great challenge which Audio-Visual Aids and every other educational service must meet.

De BERNARDIS

In the past teaching has been more of a procession than a profession. However, now that teachers are beginning to receive a professional salary, we can expect to see a more professional teaching job. Professional teaching, of course, demands professional tools and equipment. These should include laboratories instead of reciting rooms. Instead of relying only on textbooks, we shall use models, mock-ups, motion pictures, films, filmstrips, slides, photographs, exhibits, recordings, radio, posters, charts, graphs, and the like.

Professional teaching will necessitate professional training. This will eventually make a marked change in our teachers colleges. We shall have to invent new ways of in-service teacher education. New teaching tools will make our job more interesting, more effective, more rewarding. Certainly it isn't very exciting to be teaching twentieth-century children with nineteenth-century tools.

One thing more: Progress in the next twenty five years will depend on the Educational Screen just as it has depended on it for the past twenty five years. The future looks very inviting.

■ Graduate of Carnegie Institute of Technology (1932). Graduate studies in aeronautical engineering and in education, at Guggenheim School of Aeronautics, at Johns Hopkins, at University of Maryland (1932-38), degree of Aeronautical Engineer (1933). Taught varied subjects in Baltimore Vocational School and Polytechnic High School (1934-38), aviation courses at University of Baltimore and teacher training courses at Johns Hopkins (1940-41). Aviation Consultant for Maryland Aviation Commission and U.S. Armed Forces Institute (1941-42). With U.S. Office of Education as Aviation Technical Specialist in production of over 60 training films, with filmstrips and teacher's manuals (1943-45).

California and at University of California at Los Angeles, High School teacher in Los Angeles City Schools (1927-28). Assistant Director of the Audio-Visual Department in San Diego City Schools (1928-29). Director of the Visual Department of Oakland City Schools (1929 to 1944). Instructor, Summer Sessions, Audio-Visual Instruction, University of California (1941-42). Officer in Charge, Training Film Branch, Educational Section, U.S. Navy, Washington, D.C. (1943-45). Has published articles on various aspects of the audio-visual field in California Journal of Secondary Education, Childhood Education, Educational Screen, Radio and Film Guide, Scholastic, Visual Review, and elsewhere. Now Director of the Commission on Motion Pictures of the American Council on Education, and doing research on motion pictures at Yale University.

A. J. ROSENBERG
Visual Aids Editor
McGraw-Hill Book Co.
New York City

It is estimated that sound projectors purchased by schools in the next two years will be twice the number purchased in the past ten years. A recent survey of twenty nine cities in the United States shows substantial increase over the preceding year in each budget for visual education. Because of increased sale of classroom films, producers are increasing production budgets. There are nearly 200 instructional films now in production. This far exceeds production at any time in the history of visual education, and does not include commercially sponsored or free films.

Recent research proves that the teaching quality of films in the future can be very greatly improved. More research is being done by colleges and educational institutions in this country than ever before. The production of filmstrips and other audio-visual materials has reached an all time record. New types of films are being devised to solve new educational problems. Teachers will have at hand material hitherto non-existent. Such facts surely indicate that we are on the verge of a new era in visual education.

HART

NINETEEN forty seven is here. The past five years of development in audio-visual education is not only greater quantitatively but also more significant qualitatively than it was during the previous quarter of a century. With 1947 come new opportunities and new responsibilities for audio-visual education leaders. These include programs for the intensive utilization of audio-visual materials in the instructional process as a major means of achieving the objectives of modern education. NOEL

AUDIO-VISUAL Education during the war finally grew out of short pants. But its present adolescent appearance calls for guidance by mature educators if it is to attain adulthood. In the next twenty five years let us try to make audio-visual methods in teaching a regular part of teaching method. Let us help teachers use these materials in such a natural way that they are not identifiable as something "special". Let us hope that teachers will soon have a large repertoire of methods.

Let us help the film producers to make better films in useful fields, so that teachers will have the specific materials needed for specific purposes and, incidentally, so that the film producers will have a profitable and stable business. Let us promote in every way possible the intelligent evaluation of films and the wide publicizing of these evaluations among teachers.

Let us help in any way we can in the establishment of good picture files in school libraries and in the creation of good school museums. Let us be ready for an intelligent use of television. Above all, educators in the audio-visual field should promote in the next twenty five years a full understanding among teachers of the values of audio-visual materials in the development of meaning and in the motivation of students. If we would keep these two objectives in mind, everything else would fall into place.

WENDT

WE need leaders. It is almost unbelievable that Audio-Visual Education could arrive at today's broad threshold without having more college trained leaders ready. Many state departments, colleges and school systems are looking desperately for men with good academic backgrounds, who have specialized in this field. Good men are hard to find. Such men must become available.

CORDIAL AND COMFORTING

WE are pardonably proud to print below some of the communications received from outstanding figures in the field anent our Silver Anniversary. They were addressed, by custom, to the Editor but they are, expressly and unmistakably, messages to the entire staff. We would naturally resent the accusation, even the implication, that the magazine is or ever was a "one man job". As such, Educational Screen would never have survived nor been long remembered. Most of the burden was

and is borne by the loyal, tireless personnel devoted to the ideal of an ever better Educational Screen.

On behalf, then, of this entire personnel, past and present, numbering by scores through the years, the Editor accepts with grateful appreciation these heartening words of approval and goodwill from our colleagues in the great and growing audio-visual field of American education.

N L G

In anticipation of the fact that the December issue will round out Volume XXV of The Educational Screen, allow me to offer sincere congratulations on the completion of a quarter century of solid achievement. To you as Editor-in-Chief the silver anniversary will represent a personal triumph of no mean proportions; to those whom the Screen has served the date will stand as a shining mile-post along the road of progress and improvement.

Amidst the ruck of educational journals, the Screen has managed to preserve its uniqueness of character. The service which it has rendered has not been duplicated by any other journal. In a specialized field, replete with fads and faddists, the Screen has held a straight course toward the one significant goal—the improvement of educational practices. To the Screen, its editors and staff, best wishes for a Happy New Twenty-Five Years!

WARD C. BOWEN, Chief
Bureau of Radio and Visual Aids
University of the State of New York

In honor of the Silver Jubilee of The Educational Screen we shall invite all teachers in our twelve secondary schools to share in a celebration during January. A bound volume of The Educational Screen, a recent issue, will be placed on display in the library of each school. It will also be the feature attraction of a set of travelling libraries. Each box contains samples of other periodicals in the field, other magazines giving space to our problems, and a variety of catalogues.

We shall invite teachers to observe the ever-broadening scope of visual education as shown historically by these publications. We shall urge our leaders in education to try to envision even greater contributions which are destined for the future if all of us continue our efforts to satisfy the needs of our children.

HENRY E. CHILDS, Supervisor
Nature Study and Visual Education
Providence Public Schools

In checking our back files of The Educational Screen I notice that with the December 1946 issue you have completed twenty five years of publication. Congratulations to the Staff of Educational Screen and to its editor-in-chief, Nelson L. Greene, for a great contribution to education. In the editorial section of Volume I, Number I, dated January 1922, is the following statement: "This magazine intends to get at the truth about visual education—in all its phases and in its broadest aspects—and serve it up in a form palatable to thinking Americans". The staff of Educational Screen has kept its promise through its twenty-five years, and education has profited.

Throughout the golden twenties, the depressing thirties, and the early war-torn forties, the Educational Screen has given us leadership. We know that it will continue to give leadership through the late reconstruction forties and into what we all hope will be the peaceful fifties. Thanks, for the years of devotion and leadership in the field of visual education. It has been a job well done.

LEE W. COCHRANE, Executive Assistant
Extension Division
The State University of Iowa

DURING the first twenty-five years of its life The Educational Screen has made a pioneer contribution to the whole field of instructional materials. I feel confident that the influence of the journal during the next twenty-five years will be even greater. Please accept my personal congratulations on your excellent work as Editor, and my best wishes for the future.

STEPHEN M. COREY
Department of Education
The University of Chicago

ON behalf of the members of the National Association of Visual Education Dealers, I want to extend our sincere congratulations and best wishes on the occasion of your 25th Anniversary. Your span of leadership in visual education has seen its growth from little more than an idea to its present acceptance as a standard tool for education and information.

The visual education dealers of the United States are proud to call you our friend. We look to you and the magazine for many more years of leadership.

BERNARD A. COUSINO
President of NAVED
Toledo, Ohio

JANUARY marks completion of a quarter-century of meritorious service in the audio-visual field by Educational Screen. This, therefore, is an occasion for expressions of appreciation for work well done—for pioneering and leading the way, not just reflecting the **Status Quo**. Educational Screen is to be commended for its very constructive influence during the crucial formative stages in the development of audio-visual instruction and for its contributions in elevating audio-visual materials a big step further toward recognition as an integral part of formal instructional materials. Best wishes for continued success.

VERNON G. DAMERON, Director
Division of Audio-Visual Instructional Service
National Education Association

AS a diligent reader of Educational Screen I note that the December 1946 issue completes the twenty-fifth year. This is an accomplishment of which you can be justly proud, and a service which deserves the highest praise. My congratulations to you personally, to the staff, and to Educational Screen in its own right, for unquestioned leadership in the field, charting the visual education movement to numerous progressively worthwhile goals.

While the Screen has been of untold value for years past to me and my classes—each student has his own copy—it has been your intimate personal assistance which has been most appreciated. The same holds for staff members. Should I write—"I have a problem, Miss Baker", or "Miss Hoffman, here is a situation"—there has always been a ready response with possible solutions. I look with confidence for continued assistance and guidance from Educational Screen. Together with my congratulations go my best wishes for continued success in the years ahead.

WILBER EMMERT, Director
Audio-Visual Instruction
Indiana (Pa.) State Teachers College

MAY I congratulate you and the members of your staff as you enter a new quarter-century at the helm of Educational Screen. You have contributed more than any other single voice to the sound growth and development of the audio-visual field. May I wish you continued success in the years to come!

R. BOYD GUNNING, Director
Extension Division
University of Oklahoma

WHEN an employee has labored diligently and faithfully for twenty-five years for one employer, it is customary to present him with a token of appreciation. Educational Screen has given its readers full measure, pressed down and running over. For a quarter of a century it has served the audio-visual teaching field in a most laudable manner. The reward is more satisfying than the usual bauble given to the employee, for yours has been the joy of seeing to maturity a movement which has helped to vitalize American education. Furthermore, the future is yours, the greatest joys lie ahead. May your Golden Anniversary find Educational Screen still vigorous and full of life, still fighting the good fight in a worthy cause.

WILLIAM H. HARTLEY, Chairman
Audio-Visual Aids Committee
National Council for Social Studies
State Teachers College, Towson, Maryland

CONGRATULATIONS on the successful completion of the first quarter-century of service to the Audio-Visual Education field. Others may come and go, but we, who have been in the "Cause" since the early twenties, know that The Educational Screen will continued to bring us the top news in Audio-Visual Education month after month.

The field is expanding so rapidly now that we shall continue to need your sane leadership, even more than in the past, to help keep us moving forward on a well balanced program on all fronts. May we express our belief that your Silver Jubilee means continuance of a Sterling Silver Service for the next twenty-five years.

HARRY H. HAWORTH, Head Supervisor
Audio-Visual and Library Service
Pasadena City Schools

SINCE this month marks the Silver Jubilee of Educational Screen it is a pleasure to send congratulations. From 1922 to 1947 is a long span of epoch-making years. It is hard to realize what the problems of 1922 were, they seem so far away. Audio-Visual Education was truly a pioneer activity at that time. From then until now, Educational Screen, under your fine editorial leadership, has shared the vicissitudes through depression, war, and prosperity. During the twenty-five years, quite naturally, other magazines have appeared in the field, but the "Screen" is still the leader. Today we stand on the threshold of a new era. "Visual education is the modern way to educate", in the words of Eric Johnston, "it is fascinating to watch its progress unfold". I offer best wishes to Educational Screen and to Nelson L. Greene for increased success and achievement down the years.

JAMES S. KINDER, Director
PCW Film Service
Pittsburgh

PLEASE accept my sincere best wishes as you begin the twenty-sixth year in the life of The Educational Screen. It has been my privilege to work in this field for many years. As I look back now, it has been a great experience. Paralleling my own activities have been the development of your publication and your contribution to the progress of audio-visual aids. Your first issue, January 1922, is beside me as I write. Going through it again, one realizes how far the field has developed in this quarter-century. If and when I finish my first twenty-five years in audio-visual aids, I sincerely hope I may look back with the same satisfaction that I feel you should experience in knowing that yours has been a job well done.

HAROLD L. KOOSER, Director
Visual Instruction Service
Iowa State College

FROM 1922 to 1947—a lifetime lies between! I congratulate you as one of your oldest friends, and as one of your oldest contributors dating back to the days when the magazine was hardly more than a 6" by 9" pamphlet without a single illustration. The story of the growth of Educational Screen is the story of the growth of realism in education. We older men, with you as the old stand-by and loyal supporter, can be proud to pass along to the younger generation the hard-won results of pioneering experimentation and persistence. They—the new generation of post-war America—are the inheritors of our unfulfilled renown.

I have tried to make Film and Radio Guide a concomitant to Educational Screen and, as you know, have always tried to be helpful rather than competitive, covering angles and groups not reached by any other publication. More power to you and to Educational Screen at the threshold of your second quarter-century.

WILLIAM LEWIN, Publisher & Editor
Film and Radio Guide
172 Renner Ave., Newark, N. J.

I am delighted to send greetings to Educational Screen on the occasion of its Silver Jubilee Birthday Anniversary. As life and training for life become more complicated, the need for good visual materials and their proper use becomes more necessary. Motion pictures, for example, can cut through to essentials, speed the learning processes, and help the new generation find the high road for mankind.

I have noted through this last quarter-century the undeniable influence which the editors of Educational Screen have exercised in speeding up these learning processes. By aiming constantly at a goal of dual service—to industry and to education—they also have achieved for the magazine an enviable position of leadership. May your good work continue with ever increasing success!

CHESTER A. LINDSTROM, Chief
Motion Picture Service
U. S. Department of Agriculture
Washington, D. C.

CONGRATULATIONS to Educational Screen upon a quarter-century of progress and service to the teaching profession in the United States. I congratulate you and your staff upon your constantly improving publication. The Screen asserts real leadership in this very important field of education.

FRED S. MONTGOMERY, Director
Bureau of Visual Instruction
University of Kansas

CONGRATULATIONS to The Educational Screen as you round out your first quarter of a century! The Educational Screen has grown in acceptance and usefulness through the years. You have faithfully and effectively sponsored every worthwhile leader and every worthwhile movement in this field. We know that your sustained efforts have played a great part in the remarkable advance during these twenty-five years in the use of the audio and the visual. We bespeak for The Educational Screen a great future in a great cause.

C. R. REAGAN, President
The Film Council of America
12th at Lamar, Austin, Texas

ACROSS the years which saw the growth of Audio-Visual Aids, from playthings in the hands of a few to necessary teaching tools in the hands of many, Educational Screen has been a strong and sober influence. Those were difficult years, when support was feeble and scattered, when only the perseverance of a handful of zealots brought about the general acceptance and use of these teaching tools. The Educational Screen was outstanding to these few in its assistance in carrying their cause to educators everywhere. It has long been accepted as the professional journal for the field, reflecting the best in thinking and practice of educators in the use of teaching aids.

Now, looking into the future of wiser employment of the audio-visual tool, we still look to the Screen as our professional journal. Please accept my heartiest congratulations on its twenty-fifth birthday and my sincere wishes that the next twenty-five years may give you as much satisfaction of accomplishment as you have surely had in the past.

CURTIS REID, Head
Department of Visual Instruction
Oregon State System of Education
Corvallis, Oregon

MY sincere congratulations on the occasion of the Silver Jubilee of Educational Screen. This publication has documented the progress of visual methods in teaching in a valuable, consistent way over the years. Accept my best wishes and my hope that you will keep up the good work.

DAVID E. STROM, Director
Audio-Visual Aids Center
The University of Connecticut

SO you are starting Volume XXVI of the Screen! As one who has watched the growth of this whole movement in the United States and the growth of the magazine through almost the entire period of the last quarter-century. I want to offer my sincere congratulations, to you individually and to the magazine, on your great contribution to the growth of interest in this field.

For years The Educational Screen was the only magazine devoted exclusively to audio-visual instruction, and it furnished an inspiration to all of us who were struggling to promote the spread of information and better utilization of visual aids. It has continued to grow along with the tide of increasing interest—I know, for I have read it straight through the years. Now it is better than ever before and to you and your devoted staff goes the credit. You have every reason to be proud of the magazine and your accomplishment in making it what it is. All good wishes for continued success!

LELIA TROLINGER, Director
Bureau of Visual Instruction
University of Colorado

HEARTIEST felicitations to The Educational Screen for twenty-five years of efficiency and excellence in promoting work in the field of audio-visual education. As a distributor, this Division has received great benefit from your publication with its timely news and reports of activities in the field to which it is devoted. We are wishing you continued great success throughout the years to come.

J. C. WARDLAW, Director
University System of Georgia
Atlanta

AND THREE TELEGRAMS ARRIVING JUST AHEAD OF DEADLINE

CONGRATULATIONS to Educational Screen on twenty-five years of service to audio-visual education. The contribution which Educational Screen has made and is making to the field is of inestimable value.

BRUCE A. FINDLAY
Assistant Superintendent
Los Angeles City Schools

CONGRATULATIONS to the entire staff of Educational Screen on this your twenty-fifth anniversary. You have contributed richly through your magazine to the advancement of audio-visual techniques in the field of education. You have provided an invaluable record of their growth during a quarter of a century. As you have struggled for this cause during infancy, greater challenges and opportunities will be offered for your continued leadership in maturity.

CHARLES F. MILNER
Associate Director
Extension Division
University of North Carolina

CONGRATULATIONS to Educational Screen for twenty-five years of splendid leadership in the field of audio-visual education. The Screen has been consistent in its high educational policy and character. It has encouraged new movements in its field, has been open to pioneers, has helped teachers and administrators, and has been a dependable source of information. Best wishes to the Screen for another century of leadership, from one who has received it from its first issue.

E. WINIFRED CRAWFORD, Director
Audio-Visual Education
Montclair Public Schools

Horizon Unlimited

Vigorous comments on the proven values of films in teaching, on improvements needed, and on future potentialities.

ALTHOUGH still unappreciated in some quarters, a vast new avenue to learning has been opened to the generations of today through screen projection. Today the visual program is becoming more and more universal; even the most isolated communities of the present can see and hear the wonders of all the world, including scientific experiments performed with unflinching accuracy, imaginary journeys into distant lands, sporadic acquaintance with their peoples, stratospheric ascensions for weather data, the findings of astronomy,—an unlimited horizon of activities of the entire universe.

Roman history is vitalized in the British Information Services film production, "Julius Caesar."

The recent war has yielded many lessons in this new science, lessons of inestimable value, first to the Armed Forces and now to the educators of the rising generation. Experiences gained in the training of Army and Navy personnel forecast a vastly widened use of films for educational purposes in the post-war period. Expanded use of films, however, is not peculiar to America, as Vice-President Rose of Victor Animatograph has pointed out. He says:

"To understand the power of films, properly used, you need only to picture what Russia was like before Hitler invaded it. It was a loosely knit group of peoples and tribes, ranging from the White Russians on the west to the Tartars and Mongolians on the east. Some were merely wandering nomads. They spoke more than forty distinct languages; and there were countless dialects. When the crisis came, there was only one universal language—pictures. Sound films were made; local and tribal languages were dubbed in. They were used to put over the story, to build solidity and morale, and to show how to build and use war equipment. It was the most startling mass education of a vast and scattered people that is known in the history of the world.

KENNETH W. YOUNG
Director, Visual Education
High School, Brookville, Ind.

"While this was going on in Russia, the United States was taking youth from hills and farms, hundreds of thousands of them, and making soldiers, sailors, and technicians out of them with whirlwind swiftness—through the use of films. In a large measure there is sheer magic in it; and what the Army and Navy can do, industry can do. Visual education has advanced in recent years, but wartime services have speeded it up and made its potentialities realized almost overnight. It is one of the biggest things that has come out of this war and a mighty factor in the success of our Arms."

It has been said, and probably there is truth in it, that Germany and her allies were ahead of us in the use of the film for visual education and propaganda prior to the war. Before 1939, Germany had been a big user of projecting equipment; while we in America, in the van of mechanical development of picture machinery, were occupied with other things. Our professional motion picture industry, meaning Hollywood, was tops. Our money was spent on theatrical pictures with abandon. Our market for these show films was the entire world.

We had developed and standardized industrial films and were using them; but our use of them was far different from that employed by our rival nations. Our program did not include the use of propaganda, because we were little interested in developing a global

Official U. S. Army Signal Corps

The "Army Nurse" administering treatment.

propaganda. However, all this was changed with the onset of the War. It was not long until we realized that we had to tell the story of our republican form of government to the world if we wished to keep it and have it survive. As a result of this, the film soon became a sort of public utility. If propaganda were necessary, then why not mass propaganda? Hence, the industrial film has been used to tell the story of the Nation's danger, its ability to unite and cooperate, to 130,000,000 people. It has been used to sell Bonds in War Bond Drives; shown to groups in clubs, schools and factories, where certain specific attitudes have been molded and directed.

As a personal illustration to prove the value of films, might I describe the experience in my own community. During the War Bond Drives just past, we were a part of a county wide organization. We had a County Finance Committee and a County Chairman, whose job it was to provide stimulation for the purchasing of War Bonds. The County Chairman took it upon himself to keep each of the communities informed as to their record of purchases.

There were times when these purchases, especially of Series E Bonds, lagged to such an extent that it was feared that we would fall far below our quota. Partly as an experiment, and partly in desperation, it was decided to instigate a sort of rally in each community on various dates. We secured three government films entitled *It's Your America*, *The Fleet That Came To Stay*, and *Army Nurse*.

Thus equipped with these films and our school projector, the County Chairman and I began our journeys to attend each of these rallies, where we showed these films and gave "pep talks." We were certain that there were a great many individuals who heard our words and statistics, but who understood little of what we said; we were just as certain, however, that there was no individual in our many audiences who did not get much from the pictures that we showed

Films like the USOE subjects on Machine Shop Work (released by Castle Films) adeptly teach skills.

on the screen. When the last rally was over, the last statistic given, and the last film shown for the last time, the day of reckoning was at hand. After a careful checkup, it was found that our county had far exceeded its quota in the purchases of all series. We have no way of proving just how much influence our films had in the final analysis, but we do feel confident that they played a great role.

For ten years prior to the outbreak of World War II, I had tried to teach the horrors and realism of war to boys and girls in my classes in the study of history, and yet all of my words were as naught, when compared to the results obtained from one reel of film displaying the invasion of Okinawa in all its reality. The students lived the battle in each of its terrible stages; they breathed the smoke-laden air, and squirmed beneath the heat of the tropical sun. Theirs were not the experiences gleaned from the printed page; the words "heat," "stench," "danger," "pain," and "death" were not just so many black symbols on a white page of a book. In their adolescent minds, they lived and breathed at the side of the Yank when he left behind the comparative safety of the Landing Barge; they splashed with him when he waded the waters to the shore; they climbed with him up the bullet-ridden banks and into the mouths of the enemy cannon. They felt the sting and pain of the machine-gun bullet that ripped the arm from the shoulder of that New England farmer boy; they mourned with that Texas cowboy whose buddy stepped on a land mine. For eleven minutes those students were a part of that battle, completely absorbed in the drama portrayed before them. This was realism to them—realistic, untouched, and unbiased—this was a lesson. This was visual education through the use of films.

Visual education is now becoming an important and integral factor in the general curriculum of modern educational institutions. Its true worth is now widely recognized by eminent educators. Those who know the full success of effective teaching aids in our schools are foremost among its proponents. Thousands of excellent teaching films are making possible this new branch of pedagogy; and with their use a new interest is being kindled in the often reluctant minds of students. Their learning materials are coming to them

Official U. S. Navy photo

A scene from "The Fleet That Came to Stay."

in a way that they can understand and interpret to their own comprehension. For example, it has been found that basic essentials of languages can be taught in a matter of weeks, that knowledge of subjects far beyond the textbook comprehension of the student can be imparted with the aid of sound pictures; that material and courses which formerly took up hours of ordinary teaching time can be covered even more thoroughly, and in less time, with proper animated visual assistance.

The motion picture can create. It is itself a cooperative creation. Through the imaginations of cooperating producers we can glimpse the world of the future, of the inanimate, even of the invisible. It revives the Past in the Present in a true and living atmosphere. It arouses George Washington from the photograph on the printed page, and allows him to walk through the fields of the Mt. Vernon plantation and into the halls of the Constitutional Convention. It brings to life the bust of Julius Caesar and lets him tremble again in fear of the Ides of March. Through the magic of the film, the mysteries of the oceans' depths are no longer mysteries, nor are the heavens only a source of wonder to us.

The motion picture is an adept, accurate and speedy method of teaching many skills. The firm which can develop and produce acceptable consumer goods will outstrip competition. The old system of "keep on trying until you get it" builds production slowly. Combined with short daily sessions of on-the-job experience, movies provide the ideal "running start" for new workers in developing skills. People do better work when they know why it must be done. Motion pictures can explain that to employees better than any other medium.

Then, too, films, themselves, often become invaluable salesmen for the manufactured product. Films which show the complete story of the assembly of a product turn employees into enthusiastic salesmen for their product, by instilling in them a sense of pride and superiority. Consider for a moment a motion picture presentation of a product. Would it be absurd to assume that the public would be more interested than in the inanimate object shown at exhibits or in dealers' windows?

There can be no doubt that films do help in shaping attitudes of individuals. In our particular school our shop teacher is an ardent enthusiast in the use of films in his instruction. We have used a great many films in his department, dealing with the use and care of tools. The results have indeed been satisfactory and gratifying. We have noticed that the students perform their operations as they saw them performed on the screen; and more especially, in the care of their tools after a job is completed, we notice that they follow pretty much the same pattern as laid down by the film. It seems highly probable there will be a carry-over into other fields in this respect.

In vocational education, too, I have witnessed the forming of attitudes. There is a film *This Is America*, dealing with the story of Annapolis, which is admittedly partially propaganda for the Navy Department, which can instil in the mind of almost any individual a respect for, and a desire to participate in the work of that

particular branch of the Armed Forces. There are a great many films that could be mentioned that possess such merit in vocational guidance.

If we are agreed on the power of the film, we must be equally concerned in its presentation. The activities of a well-rounded audio-visual program, at the least, include:

(1) Well trained directors who are familiar with each type of audio-device, with the ability of selection and presentation. (2) A varied selection of materials, and available sources for further selection. (3) Suitable projection space and equipment. (4) Organization and cooperation among administration and teaching personnel, so as to provide for the maximum integration with the current curriculum. (5) Storage provision for all audio-visual materials, so as to insure immediate availability when needed.

All of these activities have their focus in the department or center for audio-visual materials. The center should not be merely a collection of shelves and film cabinets, but a place of stimulation and activity, and of varied resources for enriching the learning experiences of students. This suggests that the center be equipped both as a storage depot and a curriculum workshop.

Not only should storage space be provided for the films, but also, an adequate method of classification. There is no universal method of cataloging films, but any method will do, so long as it serves the purpose. My own choice is the familiar Dewey Decimal System of cataloging books in our libraries. It is utterly elastic and comprehensive, we can correlate and classify our films by using the letters from A through J, plus a number. Every film that has ever been produced can be placed in one of these groups. (The remaining letters of the alphabet may be held in reserve, in the event that the future might or could produce something beyond these groups.) This Dewey catalog number assures quick recognition of the subject of the film. After the subject classification of the films, two alphabetic card catalogs are most desirable. Make 2 cards for each film, one for Producers, one for Film Title, thus:

J-20	20th Century Fox <i>The Story of Alexander Graham Bell.</i> Starring Don Ameche and Henry Fonda Length—90 minutes—Black and white Area—Unrestricted

How to operate a co-operative school film library

MARK FLANDERS

East High School
Waterloo, Iowa

WE'VE always heard that it couldn't be done, but members of co-operative libraries of educational films arrive at a reasonably accurate facsimile of that situation.

In the first four years of our co-op's operation, all the members paid a total of about \$6,000, received over 6,300 reels of film service (worth a lot more than \$6,000 at customary rates), and still had a 103-reel film library. Now in its fifth year, it will include about 150 reels when all films now on order are received. And the two-reel subject, *Using the Classroom Film*, has been purchased and is being circulated among our members without charge.

The following information about our library is given with the thought that it may answer a few questions for school men interested in starting such a group and assist them in getting their plan into effective operation quickly. It is hoped, too, that information may be forthcoming concerning the methods and experiences of other co-operative groups, and that such published accounts may serve as an exchange of ideas, for the benefit of many.

In the beginning, our co-operative was practically thrust upon us. Prompted by a dealer in projectors and films, representatives of twenty school systems of northeastern Iowa met at East High School, Waterloo, in the fall of 1942, and adopted the following plan. Each school contracted to buy three one-reel film subjects, at \$50 each, to be paid for at \$50 per year for three years. The 60 reels, selected by vote of the 20 schools, were to be delivered at once. The superintendents of three of the schools were elected as an executive committee of the organization, with one of them as president; a manager was chosen; and East High School was designated as the central depository.

The film company returned to the library \$5 out of each school's first \$50 payment, and \$2.50 out of each second annual \$50, to help buy shipping cases, rewinding equipment, and supplies. In addition, each member school paid a small annual fee to the library to apply on outgoing postage, insurance, cost of management and other incidental expenses.

With a late start, the library operated only 22 weeks the first year, and each school was entitled to use two films per week, or a total of 44. The "season" was increased to 30 weeks the second year, then to 32 weeks, or 64 reels per year to each school. The basic service allowance per member per year is still 64 reels, although this service is spread over a calendar period of about 38 weeks.

Our second year was the most difficult and probably the least satisfactory, with only 60 films available for scheduling and each school entitled to the use of 60 reels! During that year, however, five additional schools joined us, each providing three new films, bringing our total up to 75 reels.

At the expiration of the original three-year contracts a re-organization meeting was held. Four schools that did not wish to continue were allowed to drop out and either withdraw their films or sell them to the library. By majority vote, the remaining members then agreed to change the basis of membership so that members would no longer be permitted to withdraw films. Under the new plan, any school desiring to drop out permanently is permitted to sell its membership, if it can, to some other school; or if it desires to drop only temporarily, it may declare itself "inactive," for one, two or three consecutive years, paying nothing and receiving no service through such period, and may then resume active standing with the other members. "Active" membership, after the first three years, involves payment of \$50 per year directly to the library, for the 64 reels of film service. Of this fee, \$40 is used for purchase of new films.

Membership now stands at 27 schools, two of them "inactive" for this year. Three have joined us since September 1, and interest is increasing. Unfortunately, we have about reached the limit of our ability to care for additional members. From now on it seems that a new school can join us only by buying out some "inactive" or other member. It is hoped that some organization, such as our state Department of Public Instruction, will soon act as a "clearing house" for schools over the entire state desiring membership in co-operatives. Within the next year or two numerous groups of about 25 schools each can in all probability be formed if a bit of assistance as suggested above is given.

Fig. 2. Schedule card for all films, showing for what weeks and by what school each film has been booked.

Members recently added make all their payments directly to the library instead of entering into three-year contracts with the film company. We still purchase some of the \$50 films each year, but we also find many valuable subjects at lower prices, some even in the \$17.50 groups. We do not yet know how long our films will last, but our most-used film has been in service about 120 weeks up to now, and is still in good condition. Several reels have passed their 100th bookings. Only two reels have as yet been damaged so that complete replacement was required. Replacement footage from a few feet to around 100 feet has been required for perhaps a dozen films.

Extra films, over the basic 64 reels, may be booked by any member in any number, at 50 cents per reel extra charge. Apparently several of our members will use more than 100 reels of service this school year. With 134 reels listed when this year's schedules were made out it was possible to book a large majority of all the requests on the exact dates desired, and nearly all of the remaining requests only one week earlier or later than suggested. Because of this effective booking advantage, it is strongly recommended that schools contemplating organization of a co-operative find means to secure at least 85 to 100 reels in the beginning.

Plan of Operation

The basic plan of operation of our library is quite simple, but there are many complicating incidental

Fig. 3. Avoid confusing labels. Postal clerks sent these back to sender.

factors. Operation may be summarized in five points:

1. Each spring, member schools send in their requests for the following year's bookings.
2. During the summer, film schedules based on these requests are made out.
3. In late August, a list of films and dates as booked for the entire school year is sent to each school.
4. During the school year, films are mailed to member schools on Saturdays, according to the schedules.
5. Members receive the films Mondays, and may use them as desired, mailing them back in time to reach the library each Saturday morning for inspection, repair and re-shipping.

The complicating incidentals include such items as a multitude of excuses why films are not returned on time, changes in superintendents of member schools, and difficulties in getting supplies,—but these are not overwhelming. On an average, about four films fail to return each week. The other difficulties increase the time required to care for the library, but do not as a rule greatly affect the service.

Some amplification of the "five point plan" may be in order, beginning with the booking request lists. Members receive these blanks in the spring, along with a list of the films which are expected to be available the following September. On the 1946-47 lists, members were asked to indicate their "booking desires" by checking one of the following three choices:

1. List about 70 or 75 subjects in the weeks you'd like them, and 64 will be scheduled on or very close to the desired dates, but not necessarily exactly two reels every week.
2. List as many films as desired up to 100, on the dates desired. As many of them as possible will be scheduled within two weeks of the dates given. You may cancel any of the bookings which do not meet with your approval. You may also book as many additional subjects as you like, in the open weeks, after September 10. Service over 64 reels will be billed to you later at 50c per reel.
3. If you want exactly two reels per week for 32 weeks, so indicate and try to give at least three choices for each week. Include as many different subjects as possible in your selections.

Most members checked the first plan, several the second, and a few the third. Most of the booking lists were back in Waterloo by the end of June, and during

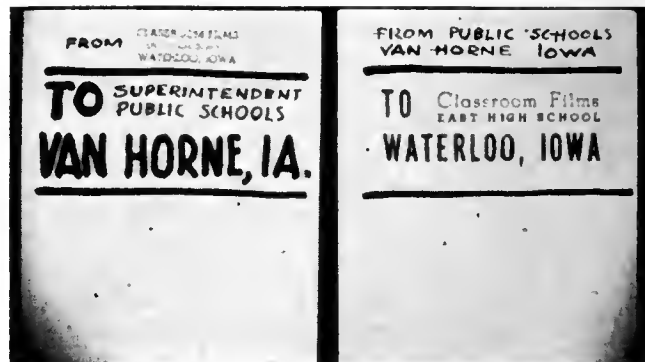

Fig. 4. Good labels. Postal clerks can see destination at a glance.

the summer all the requests from all the schools were assembled on a single 28 x 44 inch card, or work chart, ruled as shown in Figure 1. Each vertical column represents one week's requests, and can be cleared of conflicts (surprisingly few in number) by moving an occasional film forward or backward a week, or, where a school gives extra choices, by selecting the non-conflicting numbers. After all the weeks are thus cleared, each school's annual schedule is found in the horizontal space opposite the school's name.

Each school's schedule for the year is then copied on a mimeographed form, and mailed to the school in late August. Members may at any time during the year cancel any bookings which do not "fit in" when the times comes, and select others in their places. Another small but important point learned by experience: These lists mailed in August should be sent to "Superintendent of Schools" in each case, and not to the individual (by name) who was superintendent there in May or June. This avoids risk of having the lists forwarded to men who have moved to other schools, thus leaving the member schools without schedules for a time.

Cards measuring 14 x 28 inches are next ruled up as shown in Figure 2, and 35 numbered film titles are copied on each card, until the entire library is thus listed. Films scheduled in each vertical column of the work chart (Figure 1) are then designated on the 14 x 28 inch cards under the corresponding week, by the names (usually abbreviated) of the schools which are to receive them. When all the weeks' sched-

ules have been thus recorded, the year's shipping dates and open weeks for any one film are evident at a glance. Completing this series of cards is a considerable chore, but it is done but once a year, and in the summer. Through the school year these schedule cards, made into a convenient "book" by means of notebook rings, make it easy to add bookings or change those already made.

When member schools outside of Waterloo change their bookings in any way, the changes are noted both on the book of schedule cards and on the carbon copies of the annual schedules for the schools involved. On Friday of each week a "shipping list" for the coming Saturday is made out from the carbon copies mentioned and, for films wanted locally, directly from the big schedule book.

Saturday's work usually begins on Friday after school, when films are returned from Waterloo schools. These films, along with perhaps a half dozen shipments which have returned from outside schools in Thursday's and Friday's mails, are inspected and returned to the storage cabinet. On Saturday morning the remaining films are picked up at the post office, unpacked and checked off the list for the previous Saturday, inspected, and re-boxed according to the new shipping schedule. Cards are written to members whose films do not return, and to members whose schedules must be changed in any way because of the late films. Contents of each box are again checked with the shipping list just before it is "tied up." Labels are turned, stamps are applied, and the boxes are taken to the post office and piled on a truck on the loading platform.

Textbook Illustrations: *A Visual Aid*

Increased scientific analysis applied to illustrations

ALEXANDER B. HOWARD, JR.
University of Chicago
Chicago, Ill.

FOR many years educators have been interested in audio-visual aids to instruction. The educational motion picture has received particular attention. So have the potentialities of radio and television. Teachers have increased the use of other instructional materials familiar to them—such as filmstrips, slides, models, flat pictures, and recordings.

Enthusiasm for audio-visual instructional materials was heightened during the recent war. Now, the post-war flurry is passing. Educators are still enthusiastic about audio-visual aids, but their enthusiasm is taking a more constructive turn. At various colleges and universities, students of research are investigating audio-visual problems. Producers of equipment and materials are expanding their operations. Contributions to the trade magazines and other periodicals include studies made by teachers in the actual teacher-learner situation. There seems to be an enlarging concept of the field and a movement to apply increased scientific analysis to its problems.

This trend is a good one. But there is a tendency to obscure some aspects of the area in the light of the more glamorous motion picture, the radio program, and television phases. The scope of audio-visual aids

includes a wide range of materials and techniques, each of which has an important contribution to the teaching process.

In a desire to make a useful study of one of the less prominent aids in the field, the writer has studied the use of flat pictures and textbook illustrations as visual aids and surveyed the literature in these areas.

The Nature and Purpose of Textbook Illustrations

According to an article by Good,¹ the first illustrated schoolbooks appeared about 1460 shortly after printing came into general use. Many kinds of books were printed at that time, including geography, travel, and nature books. These needed explanatory pictures to make the text clear and vivid. Pictures had a functional purpose.

Early illustrations were copied from old manuscripts. These pictures were transferred to woodcuts which could be used in the simple printing process of that era. But down through the tradition of hand-copying these manuscripts, the pictures had become less representative of the original meaning. So, by the year 1500, artists began drawing directly from nature for the woodcuts used.

Early popular books included many illustrations, and many kinds of illustrations. *Der Edelstein*, 1461, was a collection of fables with 101 woodcuts. A few years later *Aesop* appeared with 200 pictures. In 1478 Ptolemy's *Cosmographia* had maps. The same year Braydenbach's *Pilgrimage*, a famous travel book, included many pictures to illustrate foreign lands. In 1488 John Widman printed the *Algorithmus Linealis*, showing illustrations of commercial customs and exchange, geometric diagrams, various tables, and examples of arithmetic operations. Three years later, *Pictagoris Arithmetrice Introductor* was published in Florence, Italy, which included thirty-nine illustrated problems. About the same time *Summa* was printed as the first work to illustrate finger symbolism of numbers, with thirty-six positions of the fingers and hands shown. The first printed *Euclid* had 420 diagrams in the margins. Music books of the time included both music scores and pictures. Even Latin grammars were illustrated, and in 1545 Henry VIII authorized the *Primer* with religious pictures. Hence, Comenius' *Orbis Pictus*, which appeared later, was not the first illustrated school book, as is sometimes supposed.²

With these early beginnings, illustrations have apparently always been an integral part of most schoolbooks. Today, an examination of textbooks reveals a profusion of pictures and other illustrations. Charts, graphs, diagrams, tables, line drawings, photographs, decorative paintings, and sketches abound.

And illustrative techniques have been vastly improved. Even the texts of only three decades ago appear dull in comparison with those of today. Changes in format, typography, and illustration have made the textbook more attractive and interesting. Woodcuts are still used, but modern lithography and photography provide a medium which would amaze the old artists. Color processes in photography and printing make it possible to reproduce exact and lifelike pictures which vividly portray their purpose. The artistic possibilities are well exploited.

The original idea of illustrations in schoolbooks seems to have been that pictures had the functional purpose of clarifying and supplementing the text. That the pictures were also works of art was incidental to the main purpose. However, in the evolution of books and printing techniques, emphasis on the artistic aspect of illustrations has increased.

Eventually, both art and function became the criteria for choosing illustrations for textbooks. With the advent of color processes and other improvements, art took the fore and pictures became less related to the text material. Observations by teachers that children were paying little or no attention to the illustrations during study periods led to a growing conviction that they were of no value in texts. In 1939 two representative publishers admitted that they had no criteria for selecting illustrations other than the intuitive judgment of the authors or editors.³ But more recently there has developed a trend in the other direction. In 1945 Lloyd W. King stated: "It is interesting to note the discrimination with which modern textbook makers select pictures. They are definitely a part of the text

itself and are used as teaching devices. There possibly will be wider and an even more discriminating use of photographs and other illustrative material."⁴

It is reasonable to assume that both art and aid to clarification are important criteria for textbook illustration. Learning ought to be pleasant to be effective, and concrete whenever possible. Text illustrations can serve to do both. The two major attributes of any textbook are its content and its appearance. The successful textbook must have high quality content and an attractive format. Today, books are to be studied and appreciated.⁵

Two purposes of textbook illustration should be to give (1) visual satisfaction, and (2) visual aid to understanding. Zisman has remarked that illustrations should be functional in content and functional in visual arrangement. "Illustrations should be the means of making more concrete whatever may be difficult or elusive in comprehension because of abstraction or vagueness."⁶

Orth points out that texts have led to an emphasis on memory; that in order to get more observation and comparison, books need illustrations.⁷ Modley states that most people are literate, but that the ability to read and the ability to understand are two different things. Pictures help the reader to understand books.⁸ Grossnickle suggests that the function of the pictures in textbooks is principally to enable the pupil to form concepts and acquire information through visual aids rather than the printed page.⁹

Nearly all of the research studies in the area state a conclusion to the effect that if pictures are to aid the understanding materials, the attention of children must be directed to important items in the picture and to the interpretation of these items. Studies by Cropper¹⁰, Halbert¹¹, and Kambly¹² give evidence to show that pictures do aid comprehension. They also point out that with instruction children relate pictures to reading materials, but without it they see the picture in terms of facts only.

The Curriculum Clinic

We've Come a Long Way! Or Have We?

PAUL C. REED, Editor
Director, Visual and Radio Education
Rochester Public Schools, New York

“ARRANGEMENTS had been made to close the program with a demonstration of some new instructional talking pictures but the operators had the misfortune to burn out a tube, thus rendering the apparatus temporarily *hors de combat*. In spite of this disappointment, the session was a pronounced success and the Visual Instruction Association of America is to be congratulated on its ten years of notable service.”

Well, that was the way those meetings went in those days. Equipment was undependable, and operators were sufficiently inexperienced not to be able to cope with the frequent emergency situations. As for the “Visual Instruction Association of America,” what in the world was that? I couldn't help but think as I reread the report of that meeting, held seventeen years ago by an Association which if memory serves me well was later merged into the Department of Visual Instruction of the N. E. A., that we've come a long way since then.

You see, the reason I happened to reread that account was because NLG had set me off in a reminiscent mood with his rather startling announcement that EDUCATIONAL SCREEN was completing its first quarter century, and that this January 1947 issue was to be a Silver Jubilee Number. The issue that reported the visual meeting where the talking motion pictures weren't shown was Volume IX, Number 1, January 1930. That's where I came in and began my association with the SCREEN—only as a reader, then, of course—and that is the oldest copy of the SCREEN I have.

Here's another quote from the report of that same meeting: “The main speaker of the evening was Professor Daniel C. Knowlton of Yale University. He stressed the need of taking stock of progress at this time. He said, ‘People are sold on the value of visual instruction and want us to bring on the goods. Teachers want and will use good visual materials. It is up to us to supply their needs and to tell them how to develop a technique of using visual aids.’” I stopped to think. Have we really come so far as we think? Those words of Professor Knowlton don't seem like 1930 words; they're 1947 words. They're the same as might be spoken with truth today by a Professor Larson of Indiana University, or Dr. Dale of Ohio State, or Noel of California. Have we or have we not come a long way in the past seventeen years?

Right there in that question and the answer that needed to be written, I had a thought provoking article. But instead of trying to think through the answer, I spent the next hour or so browsing through Volume IX, Number 1. And anyway, a Jubilee is an occasion for joy and exultation, not one for ponderous thought. So let me tell you some of the other things I read.

In those days the SCREEN regularly published “The Film Estimates—Being the Combined Judgments

of a National Committee on Current Theatrical Films.” There was a note at the foot of the tabulated columns which read, “The Film Estimates will hereafter omit the notation ‘talking’ and ‘silent’ unless required in particular cases. Practically all films are made available in both versions and the ‘sound’ version will generally be shown wherever the theater equipment permits.” Of the thirty-four films estimated that month only Greta Garbo's “The Kiss” remained “silent only.”

Yet there wasn't a single sound projector advertised for use in schools, and none was mentioned on the “Among the Producers” page. In fact, Acme was still advertising its 35mm Portable Projector as the machine needed for successful visual education, and International Harvester's full page ad for their free educational motion pictures stated that “the films are printed on standard 35mm non-inflammable stock.”

Part II of a series of seven articles on “Visual Education in Europe” was printed in this issue. The author was W. M. Gregory, well known and respected for the pioneering Educational Museum and visual service he developed for the Cleveland Public Schools.

There was a report, too, from the Seattle Public Schools titled “A Science Department and Motion Pictures.” Today's experienced users of instructional motion pictures would wince and regard disdainfully some of the utilization practices reported in that article. For instance, “At the beginning of each semester a scientific movie program is put on, and all science classes invited to attend. . . . One day each month is movie day. On this day all the science classes go to the movie room instead of their regular recitation room. Each science teacher is held responsible for one program each semester, and the programs are arranged so that each science subject has its day. . . . In September the chemistry teacher. . . . In October the botany teacher. . . . In November the teacher of General Science. . . . In December the zoology teacher. . . . and in January comes Physics day.” That was the main visual program in that school in 1930, and I certainly *hope* that we've come a long way from that kind of utilization of visual materials.

“Using Movies to Train Army” was the caption on an interesting item in the News and Notes section, and here it is, in full: “The moving picture is being put to use by the army in keeping up with the advancement of military science in other countries. A policy, under which films are exchanged with the armies of foreign nations, has been instituted to enable the various arms of the service to study progress and practice abroad and to build up an historical motion picture library. Pictures of the French, Finnish, German and Italian Armies have been received and will be exhibited at the army service schools.”

On the very next page was this comment in a review of the “International Review of Educational Cinematography.” (Remember that worthwhile League of

Nations publication?) "From the German we find 'Conditions and Labor Contracts in the German Cinematograph Industry' discussed in detail and in stirring terms. One feels constantly, in the pages of this paper, the imaginative lift and the emotional stretch of international mindedness." Well, I don't know what was in that article, but if there was any "international mindedness," it must have been "imaginative" and "stretched!"

The article that challenged me most when I first read it in 1930 (it was the only one with passages carefully underlined), and the one that seemed most interesting upon rereading in 1946 was "Where Does Progress Lie in the Development of Educational Talking Pictures?" by William Lewin, the same Bill Lewin who edits and publishes *Film and Radio Guide*. Remember, he was writing at the very beginnings of the development of the instructional sound motion picture, and he said, "We are at the threshold of a new era that will add both sound and color to classroom films. Vitalizing rays are already brightening our educational horizons." In the light of today's perspective that may not seem a particularly striking prophecy, but such clear vision into the future was as rare then as it is today.

We are well into that "new era" of sound and color films now, but Lewin's vision extended even beyond. In the same article he wrote, "With the coming of the talkies, textbooks are destined to be radically modified, and the old style, traditional classroom procedures will disappear. Textbooks will become thinner and some may disappear entirely. They will be replaced by study guides, outlines, and exercises, which, after all, constitute the best part of any textbook today. Boards of education will, in the future, spend less money on textbooks and more money on textfilms." I wonder if that isn't one of today's thresholds for a new era? I wonder if Bill wasn't seventeen years ahead of his time in that prediction.

He also wrote, "By adding language as a concomitant to the presentation of concrete ideas, the talking picture, I believe, becomes at once so vastly superior to the silent film as to render the silent film obsolete in many important fields of instruction." I like that statement as an analysis of the function of the verbal commentary—"language as a concomitant to the presentation of concrete ideas." Perhaps one of the reasons for the lag in the production of excellent classroom sound pictures has been the failure to grasp the deeper significance of that simple concept, and the full meaning of the word "concomitant." "Concomitant" means "conjoined," and "conjoined" means "to unite with." Too many sound film commentaries have been written and used that do not *unite the language with the concrete ideas* being presented. Too frequently words are used on a sound track merely to accompany the picture.

But let's be jubilant! We *have* come a long way in the seventeen years that I have been actively watching development in the use of audio-visual materials for instructional purposes. Going back eight years previous, to the first issue of the EDUCATIONAL SCREEN, the way has been even longer. Impatiently, we may have wished that we had come further, and

Indiana, Pa. Film Library Expands Service

THE Indiana Film Library (Indiana, Pa.) has greatly expanded its services by adding the entire list of Coronet Instructional Films to the long list of classroom films it has been serving to the schools for a number of years. These are 16mm sound motion picture films.

The Indiana Film Library has had approximately 200 reels of classroom films which have been circulating to the schools. The Coronet list will add approximately 80 new subjects to the Library. Many of the new films are in color.

It has been the purpose of the Indiana Film Library to build up a collection of high quality classroom teaching films to cover the entire range of school subjects from the primary grades through the high school and college. With the addition of several Literature films last year, along with such titles as *Fundamentals of Football*, *Fundamentals of Basketball* and *Automobile Driver Education*, the subject matter fields were pretty well covered.

The Coronet Films will round out the curriculum offerings with such films as: *Attitudes and Occupations* and *I Want To Be a Secretary* in the field of Vocational Guidance; *The Work of the Stock Exchange* and *Parliamentary Procedures in Action* for Civics and Finance. Another group under the heading of Work-Study Skills will be very helpful. This list includes—*How to Study*; *We Discover the Dictionary*; *Know Your Library*; *Spelling is Easy* and *Maps Are Fun*.

All the films in the Indiana Film Library are available to schools and other groups on a rental basis. The Library uses the "Weekly Booking Plan", with films leaving Indiana on Saturday and for use by the schools through Thursday. The films are then placed in the mails for return to Indiana not later than Thursday evening. This plan allows for effective use of the films. The teacher has time to study the films before use in class, use the films in class, and a second showing, if this is thought necessary.

The Library has continued its cooperation with the national Government and has recently added a number of Government films to its list. The new Treasury Department film—*America The Beautiful* (in color)—is an excellent film for class use or for community groups.

Schools and organizations wishing to use the films in the Indiana Film Library may secure complete lists of films, rental rates and booking arrangement information by writing to: Mr. Wilber Emmert, Director, Indiana Film Library, State Teachers College, Indiana, Pennsylvania.

we might have, had we ever been able to put to effective use all the knowledge we had.

Now if we visual educationists really want cause for jubilation, let's sit back and ponder where we're going in the next twenty-five years. Just think what the audio-visual field will be when the EDUCATIONAL SCREEN publishes Volume L, Number 1—its Golden Jubilee Number—in January 1972!

School Made Motion Pictures

The Status of the School Made Motion Picture

DAVID SCHNEIDER, Editor
Evander Childs High School
New York City

THE School Made Motion Pictures Department takes just pride in being a member of the family of the Educational Screen. At the beginning of this, the second quarter century of the magazine, let us pause to take stock of our growth, and perhaps prognosticate the path for which we are heading.

In looking over the returns of the Questionnaires (are yours in?) we find that schools began filming their own around 1930. According to the last count made by Dr. Hardy Finch in 1940, there were more than two hundred schools (recorded) engaged in amateur film production. By this time it would be a fair guess to say that there must be at least five to ten times that number. Why don't we hear from them? There are many reasons. They do not have steady access to a good picture camera. They use their cameras to record only such events as class reunions, school picnics, parades, or football games. Inertia of readers of EDUCATIONAL SCREEN in getting others to join with us, is another cause.

It's true that almost every amateur cinematographer took to this hobby in order to see first how well he could record all his beaming friends and relatives and all their antics. The case history of many school cinematographers is no different from the home bred type. They cut their "photographic eye teeth" by grinding out reel after reel of film portraying, to the best of their abilities, the "life" of the school and all its activities to the great delight of the most receptive audiences of these films—the very people whom the pictures portrayed.

The more foresighted of these pioneer school cinematographers soon realized that this type of aimless and haphazard film shooting wasn't getting them anywhere. In fact, their pictures became passe as soon as a new set of students replaced those who had just graduated. Out of this "family album" type of motion pictures there developed the Public Relations film—a first step into real educational cinematography. These newer movies at least had a definite purpose—to acquaint the taxpayers of the community with the school, its policies, its problems and its achievements. Through a film of this kind these taxpayers could have the school visit them at their Rotarian, Kiwanis or other club meeting. A typical reaction to such film came from the Rotary Club of Elgin, Ohio after having witnessed the screening of the movie produced by Mr. Waggoner, "Elgin High In Action".

Now ordinarily this group of hard boiled conservative and reactionary 'old Gentlemen' do not respond too enthusiastically to a motion picture program unless that picture has all that it takes to hold attention. This picture of Elgin High In Action must be tops in every respect, because Rotary Club of Elgin not only received genuine entertainment from

its showing, but were enthusiastic about it and voted it the best program of the year . . . The picture certainly carries its own good message of a splendid job being accomplished in education in our home town of Elgin."

Thumbing through the returned Questionnaires we find titles such as "Glendale School in Action", "A Day in Oak Ridge Elementary School", "A Day in a Nursery School", "Life at Pekin High", "Our Classes in Action", "Life at Jackson", "Activities at Commercial", etc. etc. All these, of course, are Public Relations films, and it is the contention of this department that every school is entitled to produce one or two and keep them up to date.

However the School Made Motion Picture has a much more important role to play in the scheme of educational practices. Just as the alert teacher is always on the lookout for good illustrative materials to enrich and make more meaningful his daily lessons, so does the amateur school cinematographer try to fill the gaps that any normal course of study, textbook, or even static visual aid, will leave in the mind of the pupil. Turning over some more Questionnaires we note a marked trend in that direction. The titles are of recent vintage—a healthy sign of growth. "We Make A Movie", "Learning by Doing", "Typewriting Techniques", "Chick Embryology", "Chemistry at East Technical", "Dissection of Animals", "Safety", "Driver Education Training", "A Strand of Silk", "Rheumatic Fever Strikes Our Children", "Physical Education" are just a few of the films that are being put to use in the classrooms of the schools that produced them. Some of them have even crossed their county and state lines and are helping other teachers plan better lessons.

What of the future? In some school systems motion picture raw films, cameras, lighting and editing equipment are already on the official supply list. Regular courses in motion picture photography are being given in a school here and there. Others are scheduled to be offered as soon as remodeling of certain classrooms can be completed. Some are just awaiting the release of newly manufactured equipment. This does not include the large number of colleges offering a whole series of courses in various phases of motion picture production.

Long before the second twenty-five years will have run its course, it may be safe to predict that every large school or system will have its own production unit ready to help each department or individual teacher turn out teaching aids not only in the form of motion pictures, film strips and slides, but also with any phase of sound reproduction. The fact that a few schools already have embarked on such program augurs well for the future.

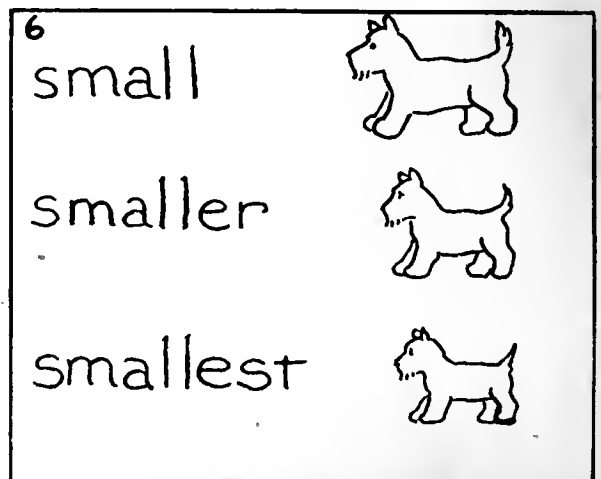

First Grade Mathematics—In Hand-Made Lantern Slides

By ANN GALE

Roosevelt High School, Chicago

FIRST GRADE slides offer a fine way of teaching children the right word concepts. The early development of clear concepts of words involving size, shape, position and number is essential. By presenting these

ideas on slides, the teacher can be certain that every child will see the picture and word well when the teacher explains them. A number of different slides to present each concept may be made in addition to the ones shown below.

The simplest type of hand-made slide is made by drawing or tracing on finely finished etched glass with ordinary medium lead pencil. Color, by special crayons or inks, enhances the slides greatly. Fine effects are obtained by blending with crayons. About one-third inch margin should be left all around the slide. The slide is readily cleaned with soap or washing powder to receive a new picture.

The Church Department

A Monthly Service

WILLIAM S. HOCKMAN, Editor
2043 Mars Ave., Lakewood, Ohio

How Visual Should the Use of A Visual Aid Be?

PAUL G. KIEHL
Church Craft Pictures

(This article is in reply to the editor's observations on "How Verbal Should A Visual Aid Be?" which appeared in the September 1946 issue of EDUCATIONAL SCREEN.—The Editor of the Church Department.)

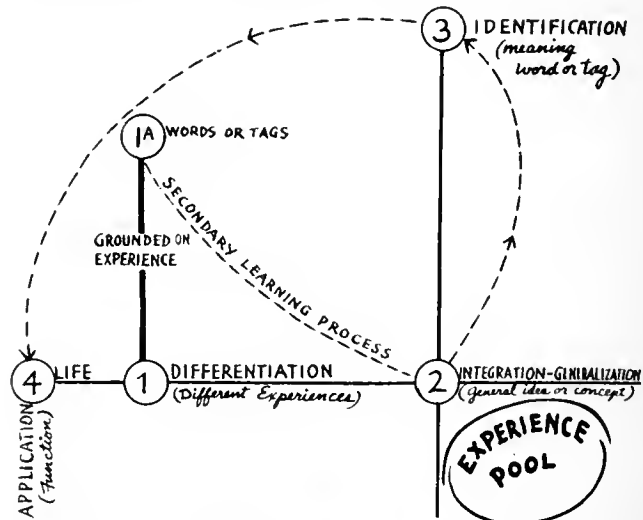

FEW of us will be willing to admit that the "visual quotient" of the use of a visual aid can be determined by the rote addition of words in a given study manual and division by the number of individual pictures in the filmstrip or slide set. Nor will we, in the light of educational psychology and its practical application in the use of visual teaching tools, be willing to accept the thesis that "a visual aid, in order to be visual, must have as few words as possible."

We cannot deny that both of the above propositions are "catchy" and almost seem logical in their naiveness. Nor can we deny that because of their simplicity both have an appeal that is almost convincing. But neither the naiveness nor the simplicity of the two formulas provides the correct answer to the question. "How visual should the use of a visual aid be?" or, as an author put the question in the September issue of EDUCATIONAL SCREEN, "How Verbal Should a Visual Aid Be?"

Many of us often forget—even want to forget—that the proper use of visual aids is dependent upon a thorough understanding of educational psychology and its practical application to visual teaching methods. We overlook the fact that a correct understanding of the requirements of the learning process is basic to the proper use of any teaching tool, whether verbal or visual. The same basic laws and principles of learning

apply to the use of visual aids in the same manner in which they apply to the use of word teaching tools.

A slow motion breakdown of the learning process will show that learning consists of four chief functions,

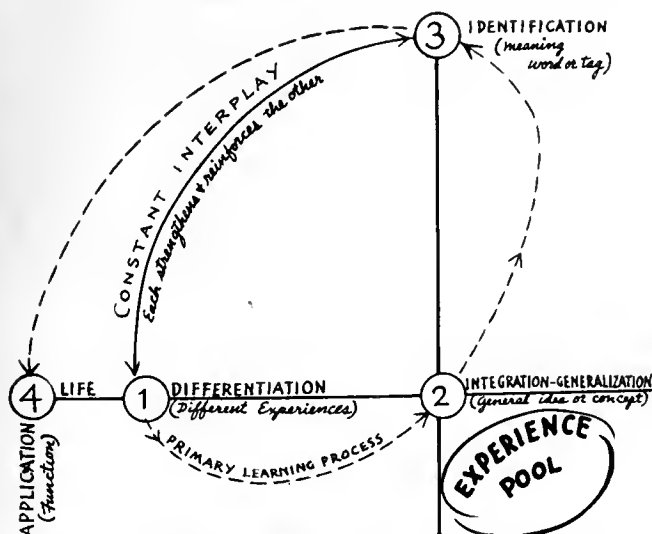

GRAPH 2. — SECONDARY LEARNING PROCESS

all of which are basic in the use of verbal and visual teaching tools. Differentiation, the first step (see Graph One) covers the different and various experiences which we have in life or in the classroom, all of which are (Step Two) integrated to form a general concept. The third step in the learning process is to tag or name the general concept with written or sound symbols—we call them spoken or written words—for easy reference. The fourth step is to apply the meaning to the life of the student so that knowledge will function in living.

If we stop the learning process after any of these four steps, the learning cycle is not complete. Integration-generalization may automatically follow differentiation, but we cannot assume that of itself identification follows integration-generalization and that application automatically follows identification, (see Graph One). Our teaching, whether we make use of verbal or of visual teaching tools, must not only supply different experiences basic for learning (step one), but it must also see to it that this experience is integrated (step two) and becomes meaningful (step three) and functional (step four).

As the learning process is speeded up, we will find that in many instances a secondary process is involved where tags or words (reference symbols) are used to recall experiences which are to serve as a basis for new meanings and functions (see Graph Two). But the use of reference symbols is educationally sound only when the tags or words are grounded on previous experience common to both teacher and pupil.

The learning process is often short-circuited in what we like to call verbal teaching, where words or tags are used which are not grounded on previous exper-

GRAPH 1. — PRIMARY LEARNING PROCESS

ience common to both teacher and pupil (see Graph Three). If we keep in mind that words are actually tags to identify and recall past experiences, we will be conscious of the difficulty involved in teaching "tags with tags" or words with words. Only when both teacher and pupil have had the same or similar experiences to back up the same word or tag can we expect to make progress in our teaching.

The learning process is further short-circuited when we go to the other extreme and make our teaching truly "visual" by showing a lot of pictures with the barest minimum of words (see article "How Verbal Should a Visual Aid Be?"—September issue). If we keep in mind that the chief function of visual aids is to provide experiences (step one of the learning process) which are basic for knowledge and living, we will realize the importance of tagging these experiences with written or spoken symbols (words). We must tie down the experiences provided by visual teaching tools so that these experiences become meaningful and functional in the life of the pupil affected. The proper use of visual aids requires the application of all four steps of the learning process—differentiation (visual), integration-generalization, identification (verbal) and application.

VISUAL AIDS GRAPH

individually have to determine how many words will be needed to drive home the points of the lesson presented through the experiences provided by the use of visual aids.

"How visual should the use of visual aid be?"—Every educator will use as many or as few words as necessary to drive home the meaning and the function of the experiences provided by the visual aids used by him as required by the needs of his individual class.

It seems to the writer that the approach in the article which appeared in the September issue of EDUCATIONAL SCREEN was from an entertainment rather than from a teaching point of view.—The Christian educator is of central importance in a teaching situation. It is the instructor, not rote formula, who will determine the number of words to be used with each picture on the basis of individual class needs. We should at all times keep in mind that visual aids are to serve as teaching tools in the Church. The Church—this applies to every pastor, teacher and superintendent—should base its use of visual aids on the requirements of the learning process in keeping with sound educational psychology and tested educational methods.

An Audio-Visual Seminar

The Christian Community Administration department of the College of The Pacific, Stockton, California, announces a seminar in audio-visual education for church leaders for the two weeks of July 14 to 28. According to Frank A. Lindhorst, Director, students will spend two hours each day in class and three hours each day in laboratory procedures.

The Montreat (N.C.) Leadership School of the Presbyterian Church in the U.S. to be held July 8-17, will offer the course 142.6b, The Use of Visual Aids In Christian Education. Mr. Patrick H. Carmichael says that an enrollment of seven hundred is expected, with upwards of a hundred taking the visual aids course.

GRAPH 3. "SHORT-CIRCUITED" LEARNING PROCESS

The visual aids graph below clearly indicates the importance of words in the use of visual aids. Verbal and visual aids supplement, do not supplant, each other. Verbal and visual constantly strengthen and reinforce each other. There is hardly a thinking educator who will want to restrict his teaching with visual aids to a "visual" presentation without bringing in adequate meaning and application by means of the word medium.

We cannot set hard and fast rules on the number of words to be used with each set of pictures. The "visual quotient" of the use of visual aid will vary with the requirement of each class. In one instance the pupils may require but a few words to give meaning and function to the experiences provided by the slide set or filmstrip or any other visual aid. In another class the same set of pictures may require more words to identify and apply the experiences. The teacher, and in the case of the Church, the Christian educator, will

Add Sound to Silent Pictures

Rev. Wm. M. Hunter
Tunkhannock, Pa.

ONE of the problems confronting church and school educators in the effective use of visual aids is the tendency of our youth to make invidious comparisons between amateur projection standards and those they are accustomed to find in commercial theatres. Those of us who know the old-time silent pictures are not likely to make such derogatory judgments of present-day 16mm programs, but we tend to forget that we now have almost a generation unaccustomed to silent films.

Recently some of my young people came to me with this comment concerning a program they had at school: "We are used to sound movies. We are irritated when they show us silent films in high school. The pictures alone without the sound annoy us. The noise of the machine distracts us. It is harder for us to concentrate on what the picture is supposed to teach us. Couldn't they have some suitable music while the film is running?"

I neither justify nor condemn this attitude on the part of our youth. They challenge me in the church to do something about it. What is practical?

If the church has a silent projector, (and many have) limiting it to the use of the silent pictures, and inexpensive public address system may be bought or borrowed. Automatic record players or radio combinations often permit a microphone attachment as well. In our work, we have a 16mm projector with a record player and a microphone.

When I used the film, *From Every Mountainside*, a truly splendid treatment of the work at Pine Mountain School, Kentucky, with a group of small children who could not read, I plugged in the mike and read the titles, adding personal comments on the locality pictured. My voice, coming from the speaker up front, seemed more acceptable. Some children thought it was a sound picture.

More recently our high school youth used the African mission film, *Ngono and Her People*. I knew I had to "dress it up" in some way. I selected Fred Waring's album of "Hymns of Devotion" and with it created a musical supplement that was practically as good as a deliberately cued-in soundtrack score. It was better background music than some I have heard. The film was very well received, and our critical youth were impressed. Some of them asked me how it was done. They had gotten the basic information provided by the picture and had been interested in the technique of presentation as well.

Now our group plans to work out its own "sound track" by using the mike and the player to "broadcast" their commentary, dialogue and music, synchronizing all with the progress of the film. Obviously, this will require patient study of the film's contents—just the thing we want in the first place. In similar ways we expect to add sound to filmstrips, slide and opaque projections.

After some experience along this line the group will be ready to undertake the production of a film or two on their own. Conferences can be "shot" in slides or film, edited and titled, and used to tell the church about this important youth activity.

Audio-visual aids in the church have often been criticized because they tend to stifle rather than stimulate creative activity. This need not be true. Youth can be challenged to make creative use of the silent film, and they can help make the use of slides and filmstrips more appealing and interesting. Our youth are critical of silent movies. They have grown up on Hollywood technical excellence. However, these same youth can take good silent films and work them up into polished presentations and in doing so experience the joy of creative activity.

Add sound to your silent pictures—and increase their interest and power!

Shadow On The Land

The 20-minute film, *The Color of A Man*, which the International Film Foundation made for and under the auspices of Missions Council of the Congregational Christian Churches (287 Fourth Ave., N. Y. 10), will be useful to all churches and groups seriously interested in challenging their members to press on in the spirit of the pioneers until all Americans—regardless of color—have equal citizenship. Until that day there is a shadow on the land.

This sound and color film tells interestingly the story of the missionary work of the great Congregational denomination in establishing schools in the post-Civil War Southland. After 100 years of magnificent achievement this denomination takes stock, re-appraises the situation, and in this film challenges all Christians to take up the work of helping the Thirteenth American (The Negro) attain first-class citizenship.

While this film will be keenly appreciated by church people of every denominational background, and should be used by them, it will do great good when shown to non-church groups who suffer from a profound ignorance concerning the strategic role of the Christian church in the true emancipation of the Negro. Even such worthy crusaders as Carey McWilliams have this blind spot, writing a commendable volume ("Brothers Under The Skin") without sixteen words on what the church has accomplished in race relations in the past or ought to do in the future.

Good in content, good technically, here is a film which can be used by all of us in removing a shadow from the land.

Notes on Two India Films*

India's Prize Cattle and *Life In A Punjab Village* are 10-minute sound films in black and white, recently available, and of use and interest to schools and churches seeking information on India.

They were produced by Ezra Mir. The photography is fair to good. Both films present the better side. Both have cut the footage on many shots to the very minimum, or less, in order to encompass too much in ten minutes.

The first covers the great Delhi fair, presenting handsome specimens of India's principal work and dairy breeds. One should not gather from this film that India has solved her "cow problem". Prize cattle can be found here and there, but scrub cattle wander everywhere, competing with undernourished humans for a scanty food supply.

Life in a Punjab village is not quite as idyllic as the second film indicates. It is village life from the high caste angle. The film begins with a country fair sequence, switches then to the domestic and agricultural activities of a Punjab village, and closes with some very good shots of a Hindu wedding procession. The commentary tends to glamorize and idealize. However, there are many excellent and informing sequences and the film will be useful to the church in giving its people a well-rounded view of life in North India.

* From Ideal Pictures Corp., Chicago 5, Ill.

Correspondence and Questions

From Mr. R. Jenkins, Industrial Division, Prentice-Hall, Inc., comes the following inquiry: "Do you know of any book or pamphlet that outlines an integrated V. A. program suitable for a large city church? I am interested in presenting proposals to several churches but lack concrete information."

Visual aid programs, Mr. Jenkins, must be tailor-made to get a good fit. There are no outlines of a program for a large church. If there were, I would be very skeptical about their value. Education in a church must stem from a close study of the church's individual needs, facilities, present curriculum, and leadership. It is a matter of adjusting the total methodology of the educational program. This presupposes a job-analysis, and "horseback" diagnosis may result in false emphases and throw the whole program out of kilter.

A visual aid program will result from the application of principles to a given situation. Rogers and Vieth have a book, "Visual Aids In The Church", which you will find helpful. The Methodists (150 Fifth Ave., N. Y.,) have a leaflet "The Use of Visual Aids In The Church School", containing practical suggestions. From the International Council of Religious Education, 203 N. Wabash Ave., Chicago 1, you can secure a 40c-booklet, "Visual Religious Education Today", a symposium, which many educators and laymen find helpful.

How would you readers answer the above question? It is frequently asked. What is your version of the general answer?

Dear Mr. Hockman:

Your editorial in the November SCREEN entitled "If The Spirit Is Lacking" puts the finger on the crux of our problem.

What makes the truth expressed so pertinent is the fact that we (Protestantism) are in danger of building an extensive program on a Hollywood foundation—and that is building on sand.

HOWARD E. TOWER
Nashville 3, Tenn.

Here is a question from Mrs. W. E. Edmunds of the Washington, Pa., Y.W.C.A. which our readers can help us answer: "Could you give me information on non-sectarian religious moving pictures which are available in 35mm?"

Is the Lutheran film, *Power of God*, available in 35 mm? How about Steinbeck's Mexican documentary *Forgotten Village*? It seems to me that *Journey To Jerusalem* was available in the theatrical width some years ago. The old classic, *King of Kings*, is probably available in 35mm from some distributor. *Your help is invited.*

Miss Muriel P. Carlson, Director of Religious Education, First Congregational Church, Norwood, Mass., writes that she combined the Junior and Junior High departments for a program on Christian Reconstruction, using the kodachrome slides of the Congregational-Christian Committee for War Victims. The program committee of two boys and two girls previewed the slides and planned with her the entire program. A slide of Sallman's "Head of Christ" was projected during the call to worship and the reading of the Scripture.

She writes: "These kodachromes show effectively the work of reconstruction in England, Italy, and China. Little needed to be said. The pictures told the story of want and tragedy: churches before and after the war; undernourished children; tattered shoes and barefeet. Through these pictures the children were learning the need for the sacrificial Christmas offering they were planning to make".

In asking children—and adults—for money, *show* them as well as tell them. More education and more funds will result.

Visual Aids in Alcohol Education

Mr. Harry E. Titus, executive secretary of Allied Forces, Inc., Rochester 4, N. Y., wants to be advised "if there are any educational films concerned with alcohol education which can be used in the public school program."

There are a number of "alcohol films". *Its The Brain That Counts*, a 20-minute sound film, is generally considered the best film on the subject. The latest film is, perhaps, *Where Does It Get You?* In the film, *That Boy Joe*, drinking is one of several reasons for Joe landing in juvenile court, and this picture is beamed at parents rather than young people. One of the first was *The Beneficent Reprobate*, presenting in two reels the story of alcohol and its uses in industry and its adverse effects upon human life and behavior. In *A Family Affair*, Dr. R. V. Seliger of Johns Hopkins, explains the destructive effects of alcohol in living things. In *Drunk Driving* the thesis, "If you drink, don't drive", is dramatized in a tragic accident. The emotional pitch is high and it ought not be used below Junior High. *The Pay-Off* focuses attention upon the social and economic side of the alcohol problem.

All the above have their uses. Preview and study your film before you use it. If any of our readers have had success in using any of these films in church or school, a brief descriptive report would be welcomed by this department.

*America's
Fastest-Growing
Film
Catalog*

HERE ARE 4 MORE IMPORTANT NEW FILMS FOR YOU

**BIRDS
IN WINTER**

This unique reel presents for the first time a seasonal aspect of bird life, as compared with study by nesting habits or life cycle. An introduction to bird study for all ages in elementary or junior high schools. Collaborator: Phillip A. DuMont, U. S. Fish and Wildlife Service.

**OUR ANIMAL
NEIGHBORS**

An introductory film on small, local mammals that make their homes near, or even in, ours. The habits of 10 common species are treated in fascinating sequences. Particularly well suited for younger children. Collaborator: Robert Snedigar, Chicago Zoological Park (Brookfield Zoo).

**BOOKKEEPING
AND YOU**

An interesting three-purpose film to motivate study and provide both educational and vocational guidance. Important at junior and high school levels. Collaborators: Paul A. Carlson, Ph. D., Dir. of Commercial Education, Whitewater (Wis.) State Teachers Col.; Hamden L. Forkner, Ph. D., Prof. of Education, Columbia Univ.

**HOW TO READ
A BOOK**

Designed to aid in the development of reading skills necessary to careful understanding, this film is well adapted to use in junior and senior high schools. Collaborator: William G. Brink, Ph. D., Professor of Education, Northwestern University.

"Birds In Winter" available in color only; other subjects above available in color or black-and-white; all single reel 16 MM. sound motion pictures.

Yes, Coronet Instructional Films has America's fastest-growing catalog of 16 MM. sound motion pictures. And nearly every subject is available in full natural color. Many may be had in black-and-white, also. You'll want to keep your eye on Coronet Instructional Films throughout 1947. There will be important new releases each month! Nearly all educational film libraries offer CORONET Instructional Films on a rental basis. Preview prints for those interested in making selections for purchase are available from CORONET. Write for catalog.

CORONET'S 10th Anniversary Filmstrip Series and CORONET'S popular 2x2 Kodachrome Slides are used by thousands. Write for details.

WRITE TO: CORONET INSTRUCTIONAL FILMS—65 E. South Water St., Chicago 1, Illinois

The Film and International Understanding

Double Anniversary

DR. JOHN E. DUGAN, *Editor*
Head, Department of Education
Beaver College, Jenkintown, Pa.

FELICITATING and joining with EDUCATIONAL SCREEN in its celebration of the magazine's Silver Jubilee, this department at the same time is very happy to be celebrating its own fourth anniversary; for it was introduced in EDUCATIONAL SCREEN in December, 1942, and printed its first article by an outside author in January, 1943. This makes it a pioneer—the only publication that has consistently, comprehensively, and uninterruptedly covered this important new field from then until the present. This record is this department's Jubilee contribution to SCREEN.

It is significant that the first contribution, though brief, by an outside author was by Dr. Paul Monroe, eminent educator and educational historian, a man who had held distinguished educational posts in various parts of the world, and whose service had been so broad that he received honorary degrees from the universities of Peking, Dublin, and Brazil. Dr. Monroe's contribution of an article was a tribute to the educational standing and integrity of EDUCATIONAL SCREEN and to the potentialities of the new department on "The Film and International Understanding."

The potentialities of this new field of the film in international understanding have proved themselves beyond all expectations. Their impact has been felt in all phases of visual education and in the world at large, until today many publications, both lay and professional, frequently give consideration to them. This department sincerely believes, however, that it has been an effective instrument for reflecting and contributing to progress in this field during these vital years of its development. At the same time it has tried to keep these developments in line with the best educational thought and practice.

In covering the field the department has endeavored to be comprehensive rather than exclusive, to consider all phases, practices and opinions. Authorities whose views have been presented varied from college professors to Walt Disney, and included teachers, producers, distributors, promoters, etc. No one who had something worth while to say was denied a hearing. Characters in films considered ranged all the way from those of the animated cartoon to leaders in world affairs. Each had something to contribute to international understanding through films. All parts of the world were involved in film material considered. Various types of films and film problems of production and utilization were discussed. Even religious films with international implications were considered.

Viewing the field in this broad fashion, it was easier to see actual and potential developments with their implications and relationships, and to see the shadows of things to come.

At first those who were thinking in the field were

concerned that there should be available films suitable for promoting international understanding—not just films that were either merely amusing travelogues or blatant pieces of propaganda. In an amazingly short time such films were available; and much hard work had gone into their planning and production. Further planning, evaluation, and hard work promoted continuous improvement. The film for international understanding was emerging as a film form in its own right.

Comprehensive utilization of these films presented its own problems. These involved educators and community leaders, as well as various groups and organizations both governmental and non-governmental. There was the problem of efficiently utilizing projectors and projectionists, of coordinating the use of these films with other activities and media of mass communication. The film began to take its place in the schools, in group meetings, in theaters, in discussion forums, in film festivals and fiestas. Motion pictures and slide-films were coordinated in order to combine the advantages of each. Discussion guides were used with films.

All of these things have contributed mightily to the promotion of international understanding. At the same time they brought home the power of the film as a force for education and international understanding. Would its usefulness in this field expire with the end of the war?

With the coming of victory came the desire and determination that this same mighty force should be used for the promotion and preservation of the peace. Samuel Goldwyn proposed the use of films for the United Nations Conference in San Francisco, and films did play an important role there. Now the United Nations has its own film organization. UNESCO is concerned with films for international understanding as one of the instrumentalities for carrying out its program.

The film for international understanding has become a world force. It is destined to play a mighty role in the years ahead. This department is happy to have contributed something toward that development during the four years of its existence.

J E D

Brotherhood Week February 16-23

The National Conference of Christians and Jews announces the 14th annual observance of national Brotherhood Week to occur February 16-23, 1947. The theme is "Brotherhood-Pattern for Peace". Program aids for use in schools and colleges may be secured by writing to the National Conference of Christians and Jews, 381 Fourth Avenue, New York 16, New York. Materials are adapted to age levels in the schools. Plays, comics, posters, book lists and other types of literature, and visual aids are available.

ATOMIC ENERGY

60 Slides and an Excellent Manual

For High-School classes in Physics—or Junior High-School classes in General Science.

A vivid and scholarly presentation of this timely and highly motivated subject, prepared by Alfred D. Beck, Assistant Science Supervisor of the New York City Schools.

5 units—12 slides to each unit: Unit I—The idea of the Atom. Unit II—Atoms, Isotopes, and Radioactivity. Unit III—The Smashing of the Atom. Unit IV—Atoms, From Mass Analysis to Mass Production. Unit V—Alamogordo to Bikini and Things to Come.

An excellent manual—information and instructions for the teacher.

SINCE 1892—PRODUCERS OF SUPERIOR VISUAL AIDS

The Literature in Visual Instruction

A Monthly Digest

ETTA SCHNEIDER RESS, Editor

ADMINISTRATION

- **Planning the General Classroom for Audio-Visual Aids Use**—E. DeAlton Partridge, Visual Education Consultants, Inc., N. Y.—*School Executive*, 66:65 Nov. 1946.

The classroom that is well planned for teacher and pupil efficiency, would include such features as follows: lighting that would avoid glare; including the light that falls on bulletin boards, exhibits, sand tables, etc.; ventilation and darkening; flexible seating; good acoustics for hearing radio, sound films, etc.; each classroom should be equipped for projection, with outlets on all sides, screen, storage cabinets and movable tables.

To encourage the use of all kinds of teaching aids, the classroom should have large tack-up areas, drawers or files for a picture collection, maps and charts easily accessible, and some basic tools (hammer, cutting knives).

- **Transition to Visual Education**—William M. Dennis, *N. E. A. Journal*, 35:424 Oct., 1946.

The stages involved in a visual education project are: (1) as it is now, (2) as it will be during transition, and (3) as it will be when functioning routinely.

Many problems arise in the course of working out the program, such as: (1) procuring the machinery, (2) selecting appropriate materials, (3) training teachers (4) acclimatization of students and patrons to visual systems of teaching, and (5) classroom readjustment for projection purposes.

The author recommends a visual method of converting the schools to visual ways, by means of a periodical "newsreel" to show classroom techniques, operation of equipment, splicing, etc. Subsequent reels may include films on other aspects of administration, new types of films, training reels on sports, etc. This, in addition to the acquisition of proper equipment and classroom facilities, would pave the way for a functioning program in the long view.

- **How Is Your Audio-Visual Aids Department Developing?**—Walter A. Gaw, College of the City of N. Y.—*School Management*, Oct., 1946. p. 3.

A rather extended resume of the principles of proper use of audio-visual aids: need for careful selection, preview, coordination of the film and subject-matter of the class, and so on.

INTERNATIONAL FILM INSTITUTE

- **The Tasks of an International Film Institute**—Adolf Nichtenhauser—*Hollywood Quarterly*, vol. 2, no. 1, Oct., 1946.

An important article by one of the pioneers in the international educational film movement. The article describes briefly the abortive efforts in the 1920's to create an international film institute. The International Federation of Students set up a committee which attempted to influence the League of Nations to create an official Institute. At an International Film Congress, held in Paris in 1926, a fine program for an international film organization was formulated, but the program never was executed. In 1927 Mussolini, exploiting the unsettled situation and the planning and preparation done by other groups, created an International Institute for Educational Cinematograph in Rome, and this was accepted by the League Council as official. This, however, proved to be just a front for Mussolini's fascist activities and it was dissolved ingloriously in 1937.

Proposals for a new, dynamic International Film Institute are briefly sketched in the article, which should be read in the original (reprints available from the author, in care of the Motion Picture Section, State Department, Washington, D. C.)

Fundamental to an I. F. I. would be national film institutes to organize and supervise the program within each country, and to represent the country in the international body. Among the functions of the I.F.I. would be:

- a) initiate international legislation and cause participating countries to adopt supplementary measures
- b) compile a critical catalog of every film of any definite cultural value. Basic research, film selection and analysis would be done nationally, with additional work done in the I.F.I.
- c) work out a method of film circulation of the films contained in the catalogs, so that any film can be made readily accessible.

Other active steps toward promoting circulation by the I.F.I. would be:

- (1) Establishing an international and national film archives, with specialized archives in various countries
- (2) Organizing film exchange among archives
- (3) Assist in developing noncommercial and commercial distribution of culturally valuable films.

The scope of the I.F.I. is next viewed in terms of *film art* and *factual films*, with concrete suggestions for increasing audiences for each type, and greatly increasing distribution. There are additional suggestions for a functioning international film body, too numerous to include in this digest.

An important conclusion is drawn by the author in terms of the United States. "We have not yet begun to organize the cultural film field so that it can perform a unified job on a national basis. We have no recognized national cultural film body of high professional and intellectual standing that would represent us in an international film institute. Therefore, we need a National Film Institute to help give the film its place in the intellectual life of our nation."

(Note: The January, 1947 issue of *Hollywood Quarterly* will include editorial comments and letters from readers which resulted from the October article.)

INDUSTRIAL EDUCATION

- **Visual Aids for the School Shop**—Orville Connett, Peoria, Ill.—*Illinois Vocational Progress*, 1:60 Nov., 1946.

A summary of some of the types of materials demonstrated at a three-week Visual Aids Conference in New York City in April, 1946.

The conference was sponsored by the Industrial Teacher Training School of New York State, under the direction of Gilbert G. Weaver. Included in the visual aids were blackboard sketches and drawings, models, photographs, charts, motion pictures, stripfilms, filmstrips, handmade slides.

- **Industrial Films**—A Source of Occupational Information, compiled by the United States Employment Service, Occupational Analysis and Industrial Services Division. February, 1946. Available from Superintendent of Documents, Government Printing Office, Washington 25, 20c.

The know-how of operations in 18 industries is explained in a series of 51 private industrial films analyzed in this booklet which also evaluates the effectiveness of the films in presenting job and process information in these industries.

The Industrial Films booklet was planned to acquaint those persons whose line of work requires that they know facts about jobs and industries with the value of films in presenting those facts. Producers of industrial films too may recognize through this publication that the films they make for industry to use in sales promotion campaigns can have widespread educational use if the major jobs and processes in the industry are well presented.

DESIGNED FOR... good habits,
good health,
good fun...

WINKY THE WATCHMAN

... a new 16mm sound COLOR movie by

"Winky the Watchman" is a delightfully charming film which combines lessons in care of teeth with entertainment acceptable to 60 year olds as well as those only six. Although it is designed essentially to stimulate dental care, its general nature is such that it can be fitted into any health program, whether on teeth or general nutrition.

"Winky the Watchman" stresses only care and watchfulness. Boring, detailed particulars are avoided. Attention to the film is thereby assured, and the teacher may herself prescribe specific methods applicable in accordance with individual programs and needs. You really can't appreciate "Winky" until you meet him in person. In fact, he's so delightful that you can run him as a straight entertainment film.

Running Time: Approximately 8 Minutes

Purchase Price: \$100.00 - 16mm Sound Only - Technicolor

PICTORIAL FILMS, Inc.

RKO Building
Radio City 20, N. Y.

The major part of the publication is made up of the film descriptions and evaluations in which are included indications of the jobs most clearly shown and details on who distributes the films, rental and transportation charges, etc. The rating scale which was used in previewing the films and an audience response check list are shown in an appendix.

PERIODICALS

- **Documentary News Letter.**—Nov.-Dec. 1946 Film Centre, 34 Soho Sq., London W1. 1 shilling. (6s annually)

An enlarged and improved format of the stimulating little publication (6 issues yearly) published by the documentary film workers of England. With this issue the *News Letter* goes out to newsagents and booksellers, as well as to subscribers. The editorial board includes such documentary experts as Edgar Anstey, Geoffrey Bell, Arthur Elton, John Taylor and Basil Wright. Their philosophy on documentary film production is expressed as follows in the editorial:

"Commercial developments in the documentary field which have lately resulted in the production of . . . outstanding films may in some quarters be held to demonstrate that documentary has now been accepted by the film industry as a necessary and permanent part of its commercial activity, that the voice crying in the wilderness has made the wilderness blossom as the rose, and may well now remain silent and enjoy its achievement. We do not agree. The easier it becomes to make and distribute documentary films the more danger there is that they will become facile in manner and empty of ideas, and against such dangers, *Documentary News Letter* will be vigilant."

One of the significant contributions of the DNL is its mature and forthright reviews of new documentary films, by and for professional workers in the field. This issue contains a description and critique of "The Way We Live," documentary on postwar housing and 'town planning,' produced commercially by J. Arthur Rank (p. 50); and other films (p. 54). Then (p. 51) follows a good, resume of the British documentary film movement, concluding with some of the current needs, such as: (1) the continuous development of all types of informational film, from the most highly specialized to the most box-office; (2) renewed efforts in distribution; (3) increased cooperation between radio, television, press and films; and (4) wider cooperation on the international front.

"Society, Science and Movie", by a Psychiatrist (p. 55) describes briefly the part films have already played in psychiatry in wartime, and goes further to indicate how the motion picture can be used to describe social problems ('sociatry'), to increase public interest in critical problems of the community, and to illustrate culture patterns. The author (anonymous) describes a new organization comprised of psychiatrists who had helped in film production in the British Army, now known as the Tavistock Institute of Human Relations, eager to continue to cooperate with film makers in their field.

NEW BOOKS

- **Use of Audio-Visual Materials Toward International Understanding**—Helen Seaton Preston—American Council on Education, 744 Jackson Place, Washington, D. C. 168 p., Nov 1946 \$1.25.

Report of a conference sponsored jointly by the American Council on Education and the Film Council of America, June, 1946. The purpose of the conference was to implement those sections of the UNESCO (United National Educational, Scientific and Cultural Organization) constitution which relate to facilitating the free flow of ideas and knowledge through the newer media of communication.

Among the speakers were representatives of the State Department, James W. Brown, representing school users, Thomas J. Brandon, representing commercial distributors, Francis W. Noel, speaking for classroom utilization, Charles F. Hoban, Jr., L. C. Larson, Floyd E. Brooker, Norman Woelfel as well as Dr. George F. Zook and C. R. Reagan.

The brochure contains the proceedings of the conference, including remarks during the discussion. Appended are two

documents that were used as the basis for the conference, viz. the recommendations made by the American Council on Education to UNESCO's Preparatory Commission, and the report made by a Special Governmental Committee.

This volume is of great importance to serious workers in audio-visual education, as it presents the constructive ideas of some of the outstanding leaders in the field, and points the way to future possibilities on the international front. No digest of the conference can do justice to the speeches and reports themselves, as given in this book. I would therefore recommend it as basic reading.

- **Audio-Visual Materials in the High School**—Frances Norene Ahl—Christopher Publishing House, Boston, Mass. 159 p. 1946 \$2.50.

With special emphasis on the social studies, this book provides a quick summary of some of the films and other audio-visual aids that were available in the last few years. There is some consideration of the need for proper administration and physical facilities for using projected aids, and a statement on the need for preparation, preview and follow-up. The chapter on some films found (in the experience of the author) to be useful in assembly programs should be useful to teachers.

More than half of the book is then given to the enumeration of maps, charts, films, recordings, etc. that would enrich the teaching of World History, European History, U. S. History, Senior Problems and the like. The book does not summarize all available social studies teaching aids as, for example, did William Hartley in his 1940 volume (1946 supplement) "Selected Films for American History and Problems."

In the realm of classroom application and utilization, where it might have made a real contribution, it falls flat. The book represents a teacher's recapitulation of some of the materials that she has found useful, but the selection of titles is decidedly subjective and inadequate.

- **The Preparation and Use of Visual Aids**—Kenneth B. Haas and Harry Q. Packer—Prentice-Hall, 70 Fifth Ave., N. Y. 11 224 p. 1946 \$4.00.

Written for the training of sales and advertising personnel, this book surveys the various types of audio-visual aids and suggests ways of applying them to this particular field. There are some interesting new uses for the chart, blackboard, flashcard and poster. Sources of information are listed in a fashion that strongly resembles the listing in Ellsworth C. Dent's *Handbook*. The appeal of this book would be limited to advertising and sales training instructors; classroom teachers may get some general ideas, though the utilization techniques would differ greatly.

- **Subscription Books Bulletin**, October 1946. Chicago, American Library Assn. Single copy, 50c; 10 or more, 40c each.

School teachers and school librarians, seeking material to supplement their visual resources, will find a selective aid to visual materials in a special October, 1946 issue of this Bulletin, a quarterly publication of the American Library Association. Devoted to the library's picture collection, this special issue stresses flat pictures and charts, available to some degree even to the smallest schools and libraries.

Twenty-six specific chart, poster, and picture series are evaluated and an up-to-date list of 53 other sources offering worthwhile material is supplied. Among them are many travel agencies and industrial firms which prepare free or inexpensive posters and charts for advertising purposes.

NEW BOOKS REVIEWED NEXT MONTH

- **Audio-Visual Methods in Teaching**—Edgar Dale—Dryden Press 546 p. \$4.25 1946.
- **Movies that Teach**—Charles F. Hoban, Jr.—Dryden Press—December, 1946.

(These are probably the most important publications to appear since *Visualizing the Curriculum*, and will be reviewed at length next month, as they are just coming off the press.)

KEEP YOUR SCREEN ALIVE

An opaque projector can keep your screen as alive and up-to-date as the latest newspapers and magazines.

Just such a projector is the Spencer Model VA Delineascope. With it you can project printed pages, maps, photographs, stamps, coins, and other specimens not readily obtainable in slide form.

This versatile Delineascope also accommodates lantern slides and, with at-

tachments, 2" x 2" slides, slidefilms, and micro-slides.

More than 50,000 teachers have requested our free manual: "Opaque Projection—A New Frontier in Teaching." For your copy write to Dept. N12.

Teacher Committee Evaluation of New Films

L. C. LARSON, Editor
 Director, Audio-Visual Center
 Indiana University, Bloomington

Assisted by CAROLYN GUSS, Instructor
 ROY WENGER, Assistant Professor
 School of Education
 Indiana University, Bloomington

Know Your Library

(Coronet Instructional Films, Glenview, Illinois) 10 min. 16mm. sound, color, \$75; black and white, \$45. Apply to producer for rental source.

The film covers the more basic elements in learning to use the library. Betty at the suggestion of her teacher in working out a report on conservation of natural resources for civics, goes to the library in search of a book, but not knowing how to use the various library tools she leaves without finding one that she needs. On her way home she stops to visit her older cousin Jack, who tells her something about the card catalog, the vertical file, the *Reader's Guide to Periodical Literature*, and encyclopaedias. He also assures Betty that she should have no hesitation in asking the librarian for assistance.

Betty is then shown returning to the library and with confidence approaching Miss Nicholson, the librarian, whom she finds very eager to help her. First, Miss Nicholson explains to Betty the general reference books and the index volume to encyclopaedias. She explains also that such reference books give a general idea of the whole subject in a short time. Next, she explains the card catalog, in which Betty finds three references which promise to be useful. Miss Nicholson then shows Betty how the books are arranged and Betty selects two of the three located from the card catalog. In the *Reader's Guide* are listed three articles in current magazines dealing with the subject conservation of natural resources. The librarian tells Betty that the library has one of these magazines, and Betty selects the magazine for reference. By now, Betty has ample material to finish her report. She leaves the library and on her way home stops to thank Jack for his help and to tell him that she feels sure that she will find the library very useful.

The film ends by showing Betty on a return trip to the library in which she uses the card catalog and *Reader's Guide* very effectively.

Committee Appraisal

The committee felt that the film would be very useful in introducing a unit on library instruction, and that it provided in a very short time instruction on the more basic library tools. Through close-up photography, the card catalog, the index to encyclopaedias, and the *Reader's Guide* were clearly shown. Recommended for use by intermediate and junior high school groups studying library usage.

Magnets

(Young America Films, Inc. 18 East 41st Street, New York City 17) 13 minutes, 16mm. sound. Price \$48. Apply to producer for rental sources.

Depicts the nature and behavior of magnets by means of a "magic show" in which Bob and Betty entertain their friends. The film opens with a group of Bob and Betty's friends watching in amazement as Bob moves a toy automobile across the table without touching it. They wonder how he can do it. The scene shifts to the day Bob and Betty asked their father for some tricks to use in their show. Mr. Brown picked up from his desk a lodestone, a natural magnet. He demonstrates to the children the power of this stone to pick up iron or steel objects, to magnetize other objects, and through temporary or induced magnetism to cause one object to pick up another. Through demonstration and explanation Mr. Brown also shows Bob and Betty that the north and south poles of magnets pull together while two like poles repel each other, and that magnets may be different shapes and all can attract iron or steel through glass. The last scene of the film returns

to the "magic show" where Betty is discovered under the table using a magnet to move the toy automobile across the table.

Committee Appraisal

The film should serve to explain elementary principles of magnetism and to show home leisure activities which may be of semi-educational nature. The pictorial presentation of scientific principles and the use of scientific terms in meaningful situations should contribute effectively to a development of the concept of magnetism setting. Recommended for use by intermediate science classes and clubs studying magnets.

Speeding Your Reading

(Teaching Aids Exchange, Post Office Box 1127, Modesto, California) 10 min., 16mm, sd. \$50. Apply to producer for rental sources.

Divided into three major portions, the film explains how people read, why they read slowly, and how their reading speed can be developed. Close-up photography of the eye shows that in reading the eye focuses on one spot and that in reading a line, quick, short eye movements occur. In order to increase reading speed, an optimum eye span should be developed and the habit of moving forward with rhythm also developed. The film suggests that 15 minutes per day for practice in increasing reading speed will prove effective. Such handicaps to reading as spelling out words, vocalizing, and looking back are pictured. It is suggested that only the eye and mind should be used when reading. In closing the film presents an opportunity for practice in reading lines of print.

Committee Appraisal

The film was rated as excellent for pointing out some handicaps to reading speed and suggesting ways of improvement. Should be useful to reading clinicians and teachers dealing with remedial guidance in reading. Recommended as an effective film for developing favorable attitudes toward analyzing reading defects and taking constructive steps to increase reading speed. Even though general in treatment, the film does imply specific procedures.

This Land of Ours—Washington, D. C.

(Carl Dudley Productions, 9724 Santa Monica Blvd., Beverly Hills, California) 9 min. 16mm, sound, color, price \$85 less 10%. Apply to producer for rental sources.

A lecturer takes his audience on a sight-seeing trip of Washington, D. C. The District is located on a map of the United States. An aerial view of the mall between the Whitehouse and Capitol introduces the city. A few street scenes appear. A page of the Constitution is thrown on the screen while the commentator talks about the branches of the Federal Government. The executive branch is introduced by pictures of the White House. Also illustrating this branch are large office buildings including the Navy Office, the Pentagon and State Department buildings and some residences of foreign representatives. The Supreme Court building is shown while the commentator talks about the judicial branch of the government. The legislative branch is illustrated by shots of the Capitol building. Following these scenes a series of interesting edifices, shrines and statues are shown illustrating the places along the route of a typical Washington sight-seer. Included are pictures of parks, the Japanese cherry trees, the Mellon Art Gallery, the Smithsonian Institute, Mount Vernon, Arlington Cemetery including the tomb of the unknown soldier,

(Concluded on page 46)

16MM SOUND FILMS for Classroom Instruction

Social Studies

PEOPLE OF THE ARCTIC

Life in far northern Alaska, Labrador, Greenland, and northeastern Siberia.

HOW THE DESERT PEOPLE LIVE

Wandering tribes of the Sahara; people of the Turkestan and Gobi deserts.

HOW A HUNTING PEOPLE LIVE

Main features of the economy of the Mongols in the Tiages of Siberia.

HOW A FISHING PEOPLE LIVE

Primitive people of the North Pacific who depend on the sea for a livelihood.

A NATION'S SEARCH FOR GRASS

Homes and flocks of the herds people of Iran. Taken from the epic of "GRASS."

Physiology

HOW THE EAR FUNCTIONS

Structure and mechanism of the ear; how sound waves are received and converted into nerve impulses.

HOW THE EYE FUNCTIONS

Anatomy of the eye and facts regarding "accommodation" or focal adjustment.

OUR TEETH

Growth and structure. Explains why oral hygiene is of prime importance.

Science

THE EARTH AND ITS SEASONS

Vernal and Autumnal equinoxes and Summer and Winter Solstices explained.

MYSTERIES OF WATER

Deals with water as man's friend, as a worker, a builder, and in turn as his enemy, a destroyer.

THE WORLD WE LIVE IN

Close-up study of the Earth as a planet; divisions into hemispheres, etc.

STORY OF ELECTRICITY

Deals with the early discovery of magnetism; and subsequent developments which produced Electricity.

STORY OF THE MICROSCOPE

History of its development and its contribution to men's knowledge.

STORY OF THE TELESCOPE

Touches upon ancient astronomical knowledge; invention of telescope and development of reflectors and refractors.

STORY OF COAL

Its discovery 150 years ago; how it is formed and mined; regions where found; uses in industry.

Practical Geometry Series

LINES AND ANGLES

How formed and measured; relationship to each other and to complete circle.

ANGLES

Clarifies the various types of angles and their relationship to each other.

CONGRUENT FIGURES

The "equal sides", "equal angles" principle demonstrated and proved.

SIMILAR TRIANGLES

Properties of similar triangles; illustrates the "two angles equal" principle.

QUADRILATERALS

Illustrates and explains chief properties of important quadrilaterals.

LOCUS

The entire concept of Locus is clearly visualized and explained.

THE CIRCLE

Clarifies radii, diameters, chords, tangents, secants, arcs and central angles.

CHORDS AND TANGENTS OF CIRCLES

Deals with the theorem on a perpendicular to a chord within a circle.

ANGLES AND ARCS IN CIRCLES

Deals with central angles, inscribed angles, arcs, angles formed by chords.

AREAS

Needs and uses for finding areas of various figures; methods for computing.

RENT FILMS FROM DENNIS

With our 16mm sound features we include enough short topics to make at least a nine-reel program. From our catalog:

The Famous

Hal Roach Streamliner Comedies . . . And Also

● ABOUT FACE starring William Tracy and Joe Sawyer. (Similar picture to TANKS A MILLION and HAYFOOT). ● THE DEVIL CHECKS UP starring Alan Mawbray and Bobby Clark. ● CALABOOSE starring Jimmy Rogers and Naah

Beery, Jr. (Similar to DUDES ARE PRETTY PEOPLE). "Hopalong Cassidy" Series: ● HILLS OF OLD WYOMING. ● HEART OF THE WEST. ● HOPALONG CASSIDY ENTERS. ● HOPALONG RIDES AGAIN.

DENNIS FILM BUREAU

● Wabash
Indiana

Ford's Theater and the house across the street where Lincoln died, the Lincoln Memorial and the Jefferson Memorial. An extended scene shows the inscription inside the Jefferson Memorial which quotes a passage from the Declaration of Independence beginning "We hold these truths to be self-evident—" This part of the trip closes with some views of the Washington Monument. A review of the trip is covered by short scenes of many of the buildings shown in the film up to this point. The commentary consists largely of information about the functions of the government and the history of our country.

Committee Appraisal

Perhaps the major purpose of the film is to acquaint its audience with Washington, D. C. by means of a quick sight-seeing tour. All buildings are viewed from the exterior. The photographic quality of the film is excellent and the color balance is beautiful and satisfying. The commentary is somewhat platitudinous and the film can best be used as an inspirational feature rather than as a penetrating analysis of the history or the function of our government. The film might well be presented at patriotic occasions and for occasions where travelogues are desirable. Elementary, Junior High, Senior High and adult groups will probably find the film both instructive and entertaining.

People of The Soviet Union

(International Film Foundation, 1600 Broadway, Suite 1000, New York City 19) 33 minutes, 16mm sound, \$1.00. Apply to producer for rental sources.

A rather long foreword in the form of a roll title states that the pictures were taken by American photographers in Russia between 1930 and 1937. It points out the film does not emphasize war or a political philosophy. "It is the people who get the emphasis; people in a timeless sense, working, playing, living." The opening scene shows people in the streets of a Russian city, crowds of them walking down the streets. Brief close-ups of many different Russian groups are shown and title identifying each group is superimposed upon the picture. Included are Lakhs, Avars, Turko-Tatars, Khevsurs, Buriat-Mongolians, Uzbeks, Finno-Ugrians, Tartars, Ukrainians and Great Russians. The boundaries of Russia are outlined on a globe of the earth. A close-up appears and superimposed is a map of the United States. Through animation the neighboring countries of Russia are located and named. The proximity of Russia and the United States is indicated. Also through animation are presented the names and locations of the various groups living within Russia. A diagrammatic map of Moscow is presented, followed by scenes showing the Kremlin buildings, street scenes, cultural institutions, a writer's conference, and the opera house. These scenes all help to point out that many differing groups of Russians intermingle with each other on a friendly basis. The idea is further emphasized by showing a Jewish theater group performing some dramatic classics and by showing a variety of people visiting the

museum dedicated to Leo Tolstoy. Brief scenes in a people's court in Moscow show a defendant being tried for racial intolerance. Industrial and agricultural scenes emphasize the mechanization of the new Russia. The life of an elderly Russian couple in an old Russian village is used to illustrate the mixture of old and new which is found in many parts of the country. Scenes in Leningrad point out the variety of people who live and work together in Baltic area of Russia. Brief scenes taken at a meeting of the International Physiological Congress include a picture of Pavlov lecturing about his experiments with dogs. Animated maps are used to introduce each republic or section of the large country of Russia. Typical scenes of people working, playing and living at home are shown to illustrate each of these areas. Closing scenes of the film comment on the fight made by the Russians against Nazi aggression. A comparison is drawn between victors over hate, greed, and intolerance. Emphasis is placed on the importance of gaining this victory in all countries.

Committee Appraisal

The chief purpose of the film is to acquaint the audience with the variety of groups living in Russia and with the friendly spirit among them. The film demonstrates that we already know much about Russia and the Russian people. As stated in its prologue, the film does consider the Russian people "in a timeless sense." It shows them working, playing and living in the ordinary pursuits of life. The closeups provide to the audience the feeling that it has become well acquainted with a variety of people living in Russia. The film presents many concepts about Russia and therefore a second or third showing may add classification without a loss of interest. Senior high school, college and adult groups interested in becoming better acquainted with the Russian people will find this an excellent film. It will help to promote the purposes of intercultural education and international understanding. For those who believe that in order to promote "One World" the United States must better understand Russia, this film will have much to offer.

Freezing Fruits and Vegetables

(U.S. Department of Agriculture, Washington, D. C.) 14 minutes, 16mm, sound, color. Apply to producer for rental sources or terms governing purchase.

The film presents the step-by-step process of preparing and freezing corn, broccoli, strawberries and peaches. In each demonstration emphasis is placed upon selection of the proper variety of fruit or vegetable, the necessity for speed after the fruit or vegetable has been picked, the need for following exactly the time specifications, the importance of using the correct container and sealing tightly, and finally rushing the produce to the freezer and storing it there with correct temperature. Beginning with shots of fresh fruits and vegetables which are appropriate for processing, the film proceeds to enumerate the various kinds and sizes of freezers and to point out the advantages of frozen fruits and vegetables. After the step-by-step demonstrations, the film ends by showing a family enjoying a meal which features several frozen fruits and vegetables, all of which add to the attractiveness and the nutritive value of the meal.

Committee Appraisal

The film was rated high for serving our purposes—showing how to prepare and freeze fruits and vegetables; showing various devices, both manufactured and homemade, and methods available to one interested in freezing fruits and vegetables; showing modern and convenient arrangement of kitchens; and lastly, good habits involving orderliness, efficiency, and imagination. The excellent organization of content and the remarkably fine color and photography increase greatly the value of the film. Recommended for use by junior high school, high school, college and general adult groups interested in freezing fruits and vegetables.

no substitute can take the place of a good book. But a fine motion picture can make the book much easier to understand and remember.

Take Johanna Spyri's *Heidi*, for example. For generations children have loved this book—but they often have difficulty in understanding certain words and expressions. Now they are able to see the book come to life on the screen. In the motion picture *Heidi* they can see all those details which would take many hours to explain.

The motion picture *Heidi* is distributed by Films Incorporated in 16 mm. for showing on school projectors. It is one of several hundred full-length features and dozens of short subjects and cartoons especially selected for school showing. To get the full story of the services which Films Incorporated offers to schools, ► just send a postcard request for the current School List catalog.

Audio-Visual Services Planned by A. L. A.

A limited number of public libraries widely scattered in the country are using films as an integral part of the library's collection of materials. They are reaching thousands of people with films each month, many of them people who have seldom or never used other library materials. However, the number of libraries with active film programs is still relatively small. Canadian libraries with the assistance of the National Film Board of Canada have moved ahead more rapidly with film services than have United States librarians.

The A.L.A. Council, at the 1946 meeting adopted a resolution recognizing the opportunity and responsibility of libraries in providing nontheatrical films and urging libraries to establish and extend film services. This will necessitate a national introductory program of assistance and advisory service during an establishment period. In the present year proposals for a library educational film specialist attached to A.L.A. Headquarters and programs of field service and advisory assistance have been discussed and resources to support them sought. Libraries are reminded frequently that unless they are ready to take on the responsibility of local film distribution very soon some existing or new agency will take over that job and the library's opportunity to coordinate films with other types of informational and educational materials will be lost.

Library selection of films like selection of printed

materials must be based on criteria determined by the library. Printed aids to selection are few. Selection of commercially sponsored films poses an especially difficult problem. The committee has decided that a special subcommittee is needed to analyze the problem and state a policy.

The Audio-Visual Committee has joined with other national educational film groups interested in efforts to maintain and extend the cooperation between non-profit and commercial film groups established during the war. Efforts are under way to work out plans and get action on a program for coordination of distribution of government films and films produced for war purposes which are also valuable for peacetime use. The Library of Congress Motion Picture Division has recently announced that it can now take the leadership in this distribution.

The committee took part in a June meeting called by the Film Council of America and the American Council on Education to prepare recommendations concerning educational films for presentation to the UNESCO Preparatory Commission. The increased necessity for understanding between the peoples of various countries and between individuals and groups within our own country make it important to use constructively and to its fullest the interpretive power of good films. Libraries have opportunity to take an important part in making known subjects on which films are needed, in initiating local distribution programs, and in providing leadership in film use, especially among adult groups.

Reports and '47 Aims Presented at FCA Year-End Meeting

A strong program of activities for 1947 is scheduled by the Film Council of America as a result of plans made at a year-end meeting held in Washington, November 22. Present at the meeting were representatives of seven national, a dozen Government, and several private agencies. FCA President, C. R. Reagan, Austin, Texas, was chairman of the meeting.

In planning activities for the new year, the Council heard progress reports from W. Gayle Starnes, Director of Acquisition and Distribution for the Library of Congress Motion Picture Project; Herbert Edwards, Assistant Chief, International Motion Picture Division, State Department; Chester L. Lindstrom, Chief, Motion Picture Service, Department of Agriculture; Miss Florence Reynolds, Food and Agriculture Organization of the United Nations; Chaplain Monroe Drew, Navy Department; Lester Binger, Army Pictorial Service.

During 1947 the Film Council, working as an overall organization as well as through its constituent member groups, will:

1. Continue to support strongly the use of films for international understanding both through the procedures developed by UNESCO and the United Nations.
2. Develop a program of publications and reports through the Council and with cooperating agencies. In this connection, a 168-page report, *Use of Audio Visual Materials Toward International Understanding*, was distributed to those attending. This publication is a report on the joint conference held in June 14-15, 1946, by the American Council on Education and the Film Council of America.
3. Recommend a thorough study by the Library of Congress Motion Picture Project of ways and means to effect better and more expeditious distribution of Government-made films and to recommend standardized charges.
4. Effect a close liaison relationship with local and state groups interested in the visual education and adult education fields.

In making his progress report on the Library of Congress project, Mr. Starnes said the functions of the project were three-fold: (1) to serve as a clearing-house of information on motion pictures, (2) to deposit negatives with private libraries in order that prints can be purchased, and (3) to distribute motion pictures on an inter-library loan basis for research purposes. The Library of Congress, said Mr. Starnes, will not interfere with present distribution plans of Government agencies, nor does the Library intend to produce films. Progress reports on the motion picture project will be issued from time to time, the Library representative stated.

Mr. Edwards, of the State Department, reported that the non-theatrical film field is being represented at the UNESCO organizational conference in Paris by Floyd Brooker of the U. S. Office of Education. Both

POST PICTURES CORP.

the Report on Mass Media prepared under the chairmanship of Edward Barrett, and the joint recommendations of the American Council of Education and the Film Council of America, were discussed. It was also reported that most of the overseas Office of War Information films have been cleared of copyright restrictions and that further steps for their release and distribution were matters under the jurisdiction of the Library of Congress.

Miss Reynolds reported briefly on the latest steps in the United Nations proposal to establish an international film board to service the specialized agencies. She also said that a Temporary Provisional Film Committee had been named and that further developments in the UN-UNESCO relationships would await the outcome of the UNESCO conference in Paris. A world catalog, and lavenders from which prints of UN pictures can be made, will be maintained, said Miss Reynolds.

Mr. Lindstrom reported that the USDA program is continuing with approximately 12,000 prints of departmental subjects now in circulation. He reported that the Film Council had been helpful in developing relationships with the entire non-theatrical field and that he hoped cooperation and assistance would continue.

Chaplain Drew outlined a film project under his immediate jurisdiction in the Office of the Chief Chaplains, Navy Department. A series of films will be made for use in the service on subjects designed to provide ethical and moral orientation. The project will be intersectorian and plans are being made to have the films produced outside the Navy by private producers using the best creative talent available.

In reporting on the present status of War Department films, Mr. Binger said that nearly 2500 films were restricted by copyright, with some films having a problem of multiple clearance before the films would be available. A total of 51 films are now cleared for showings. Inquiries should be addressed to the Commanding General of your Army Area, Attention: Signal Officer.

New York Film Council Hears Hochheimer and Bernard

The last monthly luncheon meeting of the New York City Film Council, held at Hotel Sheraton, had as its speakers, Rita Hochheimer, Assistant Director of the Department of Visual Instruction of the New York City Schools, and Edward G. Bernard, Acting Coordinator of Instructional Materials at the New York Board of Education. The veteran visual instructionist recounted the development of the department from the early days, when 35mm projectors, in booths in the school auditoriums, could be used only for adult groups at night. She recounted the struggle that had to be put up to give the younger school population access to the same equipment, a development exactly opposite that now occurring, when existing school equipment is being used "extra-curricularly" for adult education and re-

JUST OFF THE PRESS, this big new catalog describes the largest and most important group of visual aids for classroom and factory use yet produced. These low-cost training films are being widely used all over America in teaching thousands of workers and students in many fields.

They were produced by the U. S. Office of Education and other Government agencies with the complete cooperation of the foremost authorities in education and industry.

You, too, can make your teaching of difficult concepts and principles—your training of workers, easier and more effective by using these 16 mm sound motion pictures. Aid your students and trainees to *learn faster!*

creation purposes. Mr. Bernard described the application of audio-visual materials in the twenty-three pilot schools established among the 800 odd that comprise the system. Discussion brought out that popular demand for a million dollars as a visual aids budget had been pared to a mere \$50,000, but that this was an increase of \$20,000 above last year's budget.

Tom Brandon, as chairman, called on a number of visitors, among them Dr. Grace Fisher Ramsey, of the American Museum of Natural History, Winifred Crawford of the New Jersey State Teachers College, Wm. F. Kruse of United World Films, Inc. and Margaret Kirk of the Newark Public Library.

As a step toward improving teacher training facilities and increasing the use of educational aids and materials, the New York Board of Education has set aside part of Public School 69, centrally located in Manhattan, as an Instructional Material Center.

Supporting Miss Hochheimer's emphasis on the need for greater funds, Mr. Bernard urged an escape "from the pigeon-hole type of mentality" which frequently allocates the educational dollar to specific educational tools. "Education's dollar should be directed toward satisfying the greatest educational need. It should be a dollar for educational tools with the specific tools being selected on the basis of the type of material and use."

Chicago Council Elects Officers

The Chicago Film Council was formally organized in Chicago at a luncheon meeting on December 3. Seventy representatives of film and other audio-visual users, producers and manufacturers in the Chicago area, attended.

Officers elected for the first quarter of 1947 are President, Ralph P. Creer, in charge of Motion Picture Division, American Medical Association; Vice-President and Program Director, Wesley Greene, President, International Film Bureau, Inc.; and Secretary-Treasurer, June M. Hamilton, Director, Film Workshop of the Chicago Council on Foreign Relations.

Dallas Forum Meeting

The December 9th meeting of the Dallas Film Council featured a forum discussion of the question "Is World Peace Possible?" Two films—*Peace Comes to America* and *Now the Peace*—served to spark the exchange of opinions.

Officers of Fall Cities Council

The Fall Cities Film Council, Louisville, announces its officers to be: President, Frank Richterkessing, Cissell Manufacturing Company, 831 South First Street; Vice-President, H. Ellison Salley, Louisville Council of Churches; Secretary, Mrs. Sam Hickman, 2028 Bonnycastle Ave., Treasurer, C. M. Hadden, 423 W. Liberty St.

First State-Wide Meeting of New California Association

THE newly formed Audio-Visual Education Association of California held its first meeting on November 15, 1946 with the Southern Section playing host to members. The new organization represents the combined efforts of the three main Associations in California; namely, Northern California, Sacramento Valley, and Southern California. Audio-visual leaders in California have long worked for this goal: the unification of the Associations. Through such co-operative meetings as this first one, much stimulative thinking and interchange of ideas will result. The three Associations will now be able to exchange information and experience, resulting in great benefits to all members and to the cause of audio-visual education.

Previous to the meeting, the Presidents of the three Associations had selected a nominating committee to prepare a slate for the new organization. Ballots were sent by mail to members of each separate Association with the following persons finally elected as officers of the new organization: President, Mrs. Helen Rachford, Director of Audio-Visual Education, Los Angeles County; Vice-president, Carl Manner, Supervisor of Audio-Visual Education, Vallejo Schools; Secretary, Ray Denno, Director of Audio-Visual Education, San Diego County; Treasurer, Lloyd Sweetman, Supervisor of Audio-Visual Education, Sacramento.

The first meeting of the Audio-Visual Education Association of California was combined with the Fall Conference of the Southern Section. The Conference opened with a Banquet, officers of both the new Association and the individual sections being seated at the speakers' table. Dr. Mark May, Professor of Education, Yale University and Chairman of the Commission on Motion Pictures in Education was the first speaker with the general topic of "Trends in Film Production." Second speaker was Dr. Stephen Corey, Professor of Educational Psychology, University of Chicago, who spoke on "Six Important Trends." The toastmaster for the occasion was Bruce Findlay, Assistant Superintendent of Los Angeles City Schools.

The second day was divided in half. In the morning, Clinic Sections were held for teachers in the different education levels, ranging from the primary grades, through the secondary schools, trade and industrial education to audio-visual departmental administration. The two sections with the greatest attendance turned out to be the Audio-Visual Department Administration which was conducted by Francis Noel, Chief, Division of Audio-Visual Education, California State Department, and "Recent Research in the Audio-Visual Field," under the leadership of Gardner Hart, Director, Commission on Motion Pictures in Education.

In the afternoon, a preview of audio-visual materials was held. A total of 30 some films and slide series was shown on a definite time schedule. Each teacher attended the subjects which interested him and filled out an evaluation card covering each film which he previewed. Results of the evaluations were tabulated in the

Association's *NEWS LETTER*, a monthly publication of the Audio-Visual Education Association of California, Southern Section.

In his talk before the general session of the conference, Dr. Mark May pointed out that before long 500 classroom films will be produced each year. These films will provide constantly improved material for the 25,000 projectors now in school use and the additional 25,000 which will be in use before many months. Dr. May mentioned that there are three main ways in which film producers relate production to school needs and to the curriculum:

1. By following the courses of study, lesson content, syllabi, and similar material.
 2. By asking the teacher what is needed.
 3. By studying the strategic needs of the school.
- Thus, especial need was found in the fields of global geography and of political science.

Dr. May concluded with remarks concerning the analysis of films from the standpoint of the well-established and well-authenticated principle of learning: 1. Learning requires motivation and 2. the motion picture should have motivating power, should suggest activity, or should include participational devices. He recommended that teachers test the films which they are using to discover if they are actually teaching the children. This can be done by giving the same test both before and after showing a film.

Dr. Stephen Corey, in his talk, pointed out that there was an increasing amount of educational research being done in motion picture production. Furthermore, the people engaged in audio-visual activities are themselves becoming educated and are interesting themselves in such subjects as the psychology of learning, child development, and supervision and administration. He mentioned that the variety of instruction material was rapidly increasing. He stressed the point, however, that materials must be exceedingly accessible to the teacher if the teacher is to be expected to use them. Teachers themselves are becoming increasingly conscious of the necessity for thoughtful, psychologically sound, utilization techniques. Dr. Corey deplored the time wasted by heated debates over the relative values of films, slide films, and sound motion pictures.

"EQUIPMENT QUERY"

"In our class in motion picture appreciation, we have been using a number of films including old silent pictures. The characters in these films move about in a very jerky fashion, and I, frankly, do not recall that the older movies were that bad. Must special provision be made for running such films?"

Silent motion pictures were photographed at sixteen frames per second. When these are projected at sound speed (twenty-four frames per second), movement is speeded up 50%. Requirements of the sound track require this rate. If the films you are showing have music or commentary added to the original silent, there is nothing that can be done about slowing the action unless you turn off the sound and run the projector at silent speed.

MOTION PICTURES and VISUAL EDUCATION

Fine entertainment has a high educational value in that it brings to many an understanding of other persons and peoples as well as interesting interpretation of historical and topical events translated in terms of vibrant drama. Motion pictures contribute importantly in bringing to great masses ideas as well as ideals along with relaxing entertainment.

Universal-International provides for educational and enjoyable entertainment in both feature-length and short subject films, bringing to the screen great books and fine stories presented by the world's greatest artists. Listed are attractions, either released or about to be, that you will not want to miss:—

Ernest Hemingway's "THE KILLERS" with Burt Lancaster, Edmond O'Brien, Ava Gardner	"CANYON PASSAGE" from the Ernest Haycox novel In TECHNICOLOR Nunnally Johnson's "THE DARK MIRROR" starring Olivia de Havilland Law Ayres with Thomas Mitchell
The Rex Beach story "THE MICHIGAN KID" in CINECOLOR with Jon Hall, Rita Johnson Victor McLaglen	"MAGNIFICENT DOLL" starring Ginger Rogers, David Niven and Burgess Meredith
"NOTORIOUS GENTLEMAN" starring Rex Harrison and Lilli Palmer	"SONG OF SCHEHERAZADE" story of Rimsky-Korsakoff, featuring his best-loved music and starring Yvonne De Carlo, Brian Donlevy, Jean Pierre Aumont IN TECHNICOLOR
Mark Hellinger's "SWELL GUY" starring Sonny Tufts, Ann Blyth	

Also Excellent Short Subjects

JUVENILE JURY is a new single reel series taken from the popular radio show of the same name. THE ANSWER MAN, also based on the famous radio show of that name, answers pictorially questions asked by the public (a single-reel series). Songs that everyone loves are featured in the SING AND BE HAPPY (single reel) series.

TECHNICOLOR CARTUNES (single reels) entertain with fine music and clean, sparkling comedy.

Also two reel series, NAME-BAND MUSICALS, and these specials—HARNESSED LIGHTENING and FIGHT OF THE WILD STALLIONS. UNIVERSAL 'world-events' NEWSREEL is issued twice weekly.

Visual Education in the Northwest

THE first Annual Conference of Zone VI, Department of Visual Instruction of the National Education Association embracing Oregon and Washington, Idaho and Montana, was held in Portland, Oregon, on January 17th and 18th. The Conference arrangements were directed by Amo DeBernardis, Supervisor, Department of Audio-Visual Education, Portland Public Schools, with the help of Mabel Hodges, Vanport Schools; Delmar Harris, Vancouver Schools; Kingsley Trenholme, Portland Schools; Dr. Curtis Reid, Department of Visual Instructions, Oregon State College, and Merriman H. Holtz, Portland.

The Conference was opened Friday afternoon, January 17, with a general meeting of Directors and Supervisors of Visual Education and School Co-ordinators and Teachers who were addressed by several outstanding Educators. The Saturday morning and afternoon meeting was devoted to a Conference between Directors and Supervisors and Visual Dealers to discuss mutual problems relative to the manufacture of equipment and the production of materials used in the classroom.

The following prominent speakers appeared at the various sessions and a banquet which was held on Friday evening:

Dr. Willard Spalding, Superintendent of Portland Public Schools, Portland Oregon; Francis Noel, State Director of Department of Audio-Visual Education, Sacramento, California; Dr. Zeno Katterle, Professor of Education, Washington State College, Pullman, Washington; Ted R. Gamble, Chairman of the Board of American Theatres Association and former National Director of War Finance, Division of the U. S. Treasury, Washington, D. C.; Dr. Peter H. Odegard, President, Reed College, Portland, Oregon, and former Consultant to the Director of War Finance Division U. S. Treasury Department; Joseph Burke, Director, Educational Film Research Institute, Inc., Hollywood, California; Paul Pinckney, Director of Secondary Education, Portland Public Schools, Portland, Oregon; Amo DeBernardis, Supervisor, Department of Audio-Visual Education, Portland Public Schools, Portland, Oregon; Chet Ullin, President, Zone VI, D.V.I., Kitsap County Public Schools, Bremerton, Washington; Dr. Curtis Reid, Head, Department of Visual Instruction, Oregon State College, Corvallis, Oregon; William Reasoner, Sales Representative for Harper-Megee, Inc., Seattle, Washington; Dr. Lester Beck, Professor of Psychology, University of Oregon, Eugene, Oregon; William G. Gnaedinger, Head, Bureau of Visual Teaching, Washington State College, Pullman, Washington.

Some of the subjects covered were "The Integration of Instructional Aids"; "The Audio-Visual Co-ordinator"; "Instructional Materials and the Curriculum"; "Audio-Visual Aids in Education"; "The Motion Picture Industry Looks at Education"; and "Training of Teachers for Modern Education."

The meetings were held in the Portland Public Library. Several manufacturers from the Middle West and East attended, and the Conference attracted several hundred educators and dealers from Oregon, Washington, Idaho and Montana.

Massachusetts Teaching Aids Society

IN conjunction with the 26th annual meeting of the National Council for the Social Studies held in Boston last November, the Massachusetts Teaching Aids Society met for a discussion of "Films for Forums." Abraham Krasker, Boston University, made a few introductory remarks concerning Frank Sinatra's film, *The House I Live In*, which was then shown. This film handled the subject of racial tolerance in an interesting and entertaining manner, using a simple example of racial intolerance among American children in a typical city to show the broader aspects of the subject. Of course, Sinatra found an opportunity for two songs.

Robert LaFollette, Ball State Teachers College, Muncie, Indiana, spoke on "The Techniques of Film Forums," indicating the need for proper handling of discussions, conducted in connection with adult educational forums. Before the showing of discussional or informational films, a few introductory remarks may be made by the chairman who can easily plant several questions in the viewers' minds. Following the showing of the film, a discussion leader or a panel of experts may discuss the film, drawing the audience into active participation.

"Films for Intercultural Education" was the subject of a talk by William Van Til, Bureau of Intercultural Education, New York City. Margaret A. Norman,

Bloom Township High School, Chicago Heights, spoke on the use of "Discussion Films in the High School." Too few schools have availed themselves of this type of film.

At the first meeting of the season, held at Boston University, Miss Helen Piper, General Supervisor of the Lynn Public Schools, discussed the question of "What Administrators Expect of a Teaching Aids Program." She made the following suggestions regarding audio-visual aids in schools: (1) audio-visual aids should be given a more prominent place in the curriculum of the teachers colleges. The many types of teaching aids should be used as an every day technique; (2) teachers should begin their work in the fall with all equipment and aids available; (3) teachers should be more alert to the wonderful material around them and should use the native interest and abilities of children in utilizing these materials.

In the course of the meeting, reference was made to three items of interest: (1) "School Sound Systems," a booklet distributed by the U. S. Office of Education, Washington 25, D. C., single copies free; (2) "Rendezvous with Destiny," a set of records giving highlights of the late President Roosevelt's speeches, distribution of these being handled by George W. Slade, Educational Director, Station WBZ, Tremont Street, Boston, Massachusetts; (3) *New England Calling*, an excellent 30-minute sound film produced by the Colonial Beacon Oil Co., 378 Stuart Street, Boston, Massachusetts.

Three-Day Audio-Visual Meeting in Detroit

The Universities and colleges of Michigan again are sponsoring the second annual Michigan Audio-Visual Conference to be held February 19, 20 and 21 at the Rackham Building in Detroit. An interesting and extensive program has been arranged under the chairmanship of Mary Aceti.

Wednesday's program is planned to bring together producers and sponsors of films, equipment manufacturers, distributors, and educators to examine some of the primary problems in the field of visual education. Presiding at the opening morning session will be Arthur C. Steinius, Chairman, State Audio-Visual Aids Committee, and the first speaker, Floyd Brooker of the U. S. Office of Education. The subject of his talk is "The Nature and Needs of Visual Education." Two sectional meetings to discuss "Films That Meet Curriculum Needs" and "Audio-Visual Equipment Needs of the School" will occupy most of the first day. Floyd Brooker and Carl Horn will serve as chairman.

Edgar Dale, Ohio State University, opens the Thursday session with an address on "What Do We Mean—A Teaching Tool?" The balance of the morning will be devoted to six sectional meetings: "Making a School's Audio-Visual Program Work!" "Using the Motion Picture in the Classroom;" "Making Your Own Visuals;" "Using the Projected Still Picture;" "Using Auditory Aids to Learning;" "Instructional Tools, As I See Them." Speakers on the Thursday afternoon program are V. Clyde Arnsperger, Vice-President, Encyclopaedia Britannica Films, Inc., who will discuss "The Power of the Motion Picture in Communication;" and Walter Wittich, University of Wisconsin, who will conduct a demonstration of "Using the Motion Picture in the Classroom."

Floyd Brooker will report Friday morning on "The Program of UNESCO in the Field of Mass Communication." A demonstration with discussion on "Achieving Growth in Democratic Living Through Films," by Louis Rath, Ohio State University, will conclude the meeting Friday afternoon.

There will be previews of recently released motion pictures preceding the Thursday and Friday sessions, and a number of commercial and non-commercial exhibits to be visited in the Banquet Hall throughout the conference.

The 1947 Conference promises to be even more successful than that of last spring which was attended by approximately a thousand persons from 97 localities in 11 states and Canada.

Dorothy Allard, Visual Pioneer, Dies

Miss Dorothy Allard of Reading, Massachusetts died on October 19, 1946. Miss Allard was a prominent figure in the New England Section of the Department of Visual Instruction of the N.E.A.

Miss Allard was Director of the Audio-Visual Education Department in her school system. New England has lost a pioneer enthusiast.

Notes

Film Board Formed by United Nations

The establishment of a United Nations Film Board was approved by UNESCO at its meeting in Paris last month. The Board will be the co-ordinating agency for the film activities of the United Nations' various departments, and will direct production and distribution of UN 16mm films.

According to *The Film Daily*, Jean Benoit-Levy, former director of the Film and Visual Information Division of UN, is slated to head the Executive Committee of the Film Board, which will be made up of two delegates each, from UN and UNESCO, and one each from other international specialized agencies. This Committee will have far-reaching powers in selecting countries and producers for the gigantic film project.

Georgia State Board of Education To Have Film Library

One of the highlights of the GEA-AV State Conferences in Georgia was the announcement made by Garland C. Bagley, head of the State's new Audio-Visual Education Department, that the State will soon offer the best in instructional 16mm films, filmstrips, and some slides to schools. The new program plans to go beyond the services of most of the present lending libraries, by prepaying postage on films to and from the user. Just as soon as cataloging has been completed, lists will be sent to all superintendents and principals throughout the State. Officials urge that no requests be made until the formal announcement has gone out, since a heavy volume of correspondence would only delay the start of the program.

The State Conferences included nine district meetings—from November 4 through 14. Principal speakers were Dennis Williams, who pointed out the simplicity of using visual materials, and C. R. Crakes, who told of trends in use of the visual teaching tools. Demonstrating the use of sound motion pictures, Miss Norma Barts conducted a regular class with the help of a local fifth or sixth grade class at each meeting.

Attorney General's Conference Shows Juvenile Delinquency Film

The British Government film, *Children On Trial*, was shown at the Attorney General's Conference on Juvenile Delinquency in Washington on Thursday, November 21st. The new feature length documentary served as a pictorial analysis of the problem and was very enthusiastically received by the delegates.

The purpose of the film is to explain the facts behind juvenile delinquency and to show what Britain is doing to combat them. The work of the Approved Schools to which the children are sent is presented in detail. *Children On Trial* will be distributed throughout the United States by British Information Services.

University of Kentucky Appointment

Gordon C. Godbey has been appointed Assistant Director, Department of University Extension, University of Kentucky it was announced today. Godbey, who terminated his duties as Manager of the D. T. Davis Company in Cincinnati November 30, reverses the trend of audio-visual aids specialists from the schools to industry. Prior to his association with the Davis organization, Godbey was Principal of the Lee County High School, Beattyville, Kentucky; and earlier served with the Training Aids Section, Lexington Signal Depot, Lexington, Kentucky. While his duties at the Extension Department will cover more than the audio-visual field, Godbey intends to give a great deal of time to this work. An extensive film library is operated by the Extension Department.

**New York Society for the Experimental
Study of Education**

A special audio-visual section of the society reviewed a program arranged by Mrs. Esther L. Berg, in the main auditorium of the Washington-Irving High School. Dr. John F. Conroy, Assistant Superintendent of Schools, served as chairman. Mr. Leo Shapiro, Director of the Department of Education at the Anti-Defamation League, spoke on his motion picture, *One People*, an animated color film telling a panoramic story of the settling of America by groups of every national origin. Several classroom teachers discussed the evaluation of this film and similar materials in classroom situations dealing with the improvement of intergroup and interracial relations. Mr. Irving Caesar discussed and sang a number of his own compositions, in conjunction with a demonstration of song, records and filmstrips. William F. Kruse of United World Films, Inc., spoke briefly on the influence of theatrical films in shaping the reaction of school children to visual aids used in the classroom, as brought out by the teachers' evaluation reports. Edward G. Bernard, Acting Coordinator of Instructional Materials, summarized the meeting.

**Educators Serve On Television
Academy Committee**

Formation of the Academy of Television Arts and sciences moved nearer completion last month with the naming of the program, membership and publicity committees at the third organizational meeting at 5620 Sunset Boulevard.

Membership on the program committee has been assigned to two members of the staff of University of California Extension in Los Angeles, namely, F. Dean McClusky, head of the department of Audio-Visual Education in University Extension and Dr. James McPherson, Visual education specialist and head of Visual Instruction for University Extension in the southland.

Other members of this committee are: Gale Gitterman, MGM producer; Ronald Oxford, NBC; R. A. Monfort and Joe Conn, Los Angeles Times; Charles Brown, KFI; Albert B. Ulrich, NBC; Patrick Michael Cuning, Bergen-Cuning Production; Foster May, ABC News and Special Events; Jack Strauss, consulting Engineer.

First Postwar Convention Of School Administrators

March 1 to 6 will be busy days in Atlantic City where the American Association of School Administrators will hold its first peacetime convention following World War II. Registration will begin on Saturday morning, March 1, at the Atlantic City auditorium. A great exhibition of the latest tools of teaching will be open every day. Featured speakers will include Governor Ellis G. Arnall of Georgia, J. A. Krug, Secretary of the Interior, President James Bryant Conant of Harvard University, and many other important personages.

Henry H. Hill, AASA president, states that many discussion groups, devoted to practical problems of administration, will be held under capable leadership. Major educational issues will be analysed by the featured speakers. Hotel reservations may be obtained by addressing Floyd A. Potter, chairman of the Convention Housing Bureau, 16 Central Pier, Atlantic City, New Jersey.

Only Atlantic City with its newly renovated hotels and auditoriums was capable of handling this large convention. This will be the first national meeting since February of 1942.

YMHA Films Forums

For the first time in the history of the 92nd Street YMHA, (Young Men's Hebrew Association), New York, a Film Forum technique is being employed as a means of motivating discussion on the vital issues of our day.

The first monthly meeting on October 28, 1946 showed the film *People of the U.S.S.R.* which was well-related to the topic under discussion "How Can We Live in Peace with the Soviet Union?" The invited guest and featured speaker of the evening was the Rev. William H. Melish, Chairman of the National Council for American-Soviet Friendship.

The second meeting on November 25, was on the subject "Is it Juvenile Delinquency or Adult?" The film shown was *Children of the City* and the moderator for the panel of parents and Children was Judge Anna M. Kross of the Home Term Court.

Future Forums are planned on subjects like Labor Management Relations, Educating for a Better Tomorrow, etc. Prominent speakers like William Gialmor (WHN Commentator) have already indicated their willingness to appear at these forums.

Officiating at these programs are Charles C. Spiegler, Leader, and Esther Berg, Consultant.

Chicago Scientific Film Society Held First Meeting, January 22

The formation of the Chicago Scientific Film Society has been announced by Wesley Greene, International Film Bureau and Louis A. Wagner, Science Instructor at Crane Technical High School, Chicago. The first meeting of the new organization was held on January 22 at 84 East Randolph Street, and a series of science films was shown. The aim of the group is to give teachers, research workers, film workers, and others interested an opportunity to become acquainted with the films available in the fields of physics, biology, chemistry, medicine, health, astronomy, and manufacturing.

Similar societies have proved of value in England, and this organization should fill a definite need in Chicago.

Five films were shown at the first meeting. (1) *Spelunking*, produced in France and distributed in this country by the International Film Bureau and A.F. Films. *Spelunking* is the science of cave exploration. (2) *Your Children's Eyes*, a British Information Services film, contains some excellent animated diagrams depicting the physiology of the human eye. Defects, diseases, and care of the eyes are subjects covered in the film. (3) *Vegetable Insects*, National Film Board of Canada, is a color film using macrophotography to show insects. (4) *Hydraulics*, Shell, demonstrates certain physical principles and applications. (5) *Sulfur and Its Compounds*, Coronet Instructional Films, is a color film in the field of chemistry, giving the highlights in the history of sulfur.

Organizing members in addition to Louis A. Wagner and Wesley Greene are June M. Hamilton of the Chicago Film Workshop, Robert E. Lewis of the Armour Research Foundation, and John R. Millar of the Chicago Natural History Museum. The February meeting will be held Wednesday, February 26 at 8:00 p. m., 84 East Randolph Street, Chicago.

Horizon Unlimited

(Concluded from page 23)

Of course, the ideal place for film presentation is right in the classroom. This helps to maintain the "educational climate", that is, a feeling that the film is an integral part of the course of study pursued in that room. Where this is found to be impractical, it is better to equip one room satisfactorily and move classes to it. Complete darkness is not required with the brilliance of modern projectors, but opaque window shades are still a necessary attribute. Naturally, proper ventilation is required and a pleasant environment. If at all possible, a room with a low ceiling should be chosen to provide proper acoustics.

There are certain obstacles still to be overcome. We are tragically aware of the lack of funds, lack of trained personnel, and still too meagre a supply of properly produced films. Above all, every teacher-training institution in the country must include in its basic training, not only the mechanical ability to run a film, but the professional philosophy of its use and skill in its presentation. The teachers who are at present using films have developed some of this through on-the-job training, but many of them, because of this lack in their original preparation for their profession, are unable to add this new tool to the familiar techniques in which they are grounded.

The motion picture in education is here to stay. It must be used effectively by every teacher in every class-room in every educational institution of every kind. No matter how much the film can do, it cannot do it effectively unless used by a teacher who can evaluate its possibilities in terms of her class, and develop from it the maximum of its potential contribution to education. We need more and more films, made more intelligently through the cooperative effort of all groups concerned, and used by well trained, sympathetic, intelligent teachers for the good of this generation and the generations to come.

AUDIO-VISUAL TRADE REVIEW

NAVED Regional Meeting

The first Southwestern Regional Meeting of NAVED will take place at the Biltmore Hotel, Atlanta, Ga., on January 31 and February 1, it has been announced by E. E. "Jack" Carter, NAVED Regional Director, who is president of the National School Supply Company of Raleigh, North Carolina. The meeting, planned by NAVED officers as the first in a series, is expected to attract visual education dealers, film library operators and salesmen from nine Southeastern states from Maryland to Louisiana. In addition, representatives of 20 or more manufacturers, film producers and distributors will be on hand.

A "get acquainted" party and special dinner will open the meeting Friday evening, January 31. At 8:30 A. M. Saturday, February 1, there will be an "Around the Breakfast Table" discussion, under the leadership of W. Dan Browning, manager of Ideal Pictures' Richmond, Va., office. Formal sessions will begin at 9:30 A. M. with a talk on "1947—Your Year of Opportunity," by NAVED President Bernard A. Cousino of Toledo, Ohio. This will be followed by a series of nine three-minute reports on the status and future prospects of the visual education movement in each of the nine states of the region. A talk on "The Balance Between Salesmanship and Management" will conclude the morning's session.

After a "fellowship" luncheon, the afternoon discussions will center around an effort to forecast the future place

of the visual education dealer in the light of present trends. Final event on the program will be "The Question Box," at which time questions which have been placed in a box throughout the meeting will be discussed by a panel of dealers and others.

There will be no formal trade show at this or any of the 1947 NAVED regional meetings. However, the manufacturers, producers and distributors who exhibited at NAVED's 1946 convention, or who are advisory members of the Association, are being invited to attend free of charge. Those interested in attending should write NAVED, 431 South Dearborn St., Chicago 5, Illinois.

ANFA Plans Convention

The Allied Non-Theatrical Film Association met in New York on December 16 to plan its coming convention and to act on progress reports from various divisions and committees. Similar regional membership meetings have been held in Cleveland and Chicago.

Among the By-Law changes discussed provisions for a clarification of the distinction between active and associate members, a proposal to limit the voting powers of past presidents and the Board of Directors, to provide for nominations and possibly election of officers by mail ballot, and a proposal to alter the method of changing By-Laws to provide for either convention or mail action. The report of the By-Laws Committee, delivered by Harold Baumstone, as deputy

for Stan Atkinson of Regina, Sask., unable to attend, was referred back for further action to be taken at the next ANFA meeting in February. The Committee is also to integrate into the By-Laws the prevailing provisions for divisional organization that would provide partial autonomy for the producer, distributor, library, dealer, manufacturer, and projection service divisions in which ANFA now functions.

The next convention is to be held in late April or early May. Favorable facilities have been offered by Atlantic City and by New York City, but no decision will be made until after facilities in Cleveland, Chicago and Buffalo are investigated by Executive Secretary Wilfred L. Knighton.

William F. Kruse (United World Films, Inc.) presided, and Orton H. Hicks (Loew's International) was guest speaker.

Photographic Export Committee Meets

Mr. L. V. Burrows, general sales manager for the Victor Animatograph Corporation, Davenport, Iowa, attended a meeting of the export committee of the National Association of Photographic Manufacturers at Rockefeller Plaza, New York, Thursday, December 12. Mr. Burrows is chairman of the six-man committee.

The New York meeting was held in order to make recommendations to the government on foreign concessions for photographic products in the reciprocal trade agreements now being made with 18 foreign countries.

Briefs of the committee's recommendations were filed in Washington, December 21.

George Bonwick Elected Pictorial President

The Board of Directors of Pictorial Films, Inc., Pathe Industries Inc. subsidiary, RKO Building, Radio City, New York, producers and distributors of home movies and educational films, announces the election of Mr. George J. Bonwick as vice president and general manager.

Prior to his election Mr. Bonwick had held executive positions in the film industry as vice president, treasurer, and director of Pathe Laboratories, Inc., and as vice president and director of PRC.

Recognizing the importance of the "hold-the-line" policy essential for a stable economy in the years to come, Bonwick has announced an immediate price reduction of 20% on all *Pictorecls*, returning to prices prevailing before Pictorial's September 1, 1946, price increase. Educational subjects are not affected since they were not included in this increase.

Stoepelworth \$1800 Gift to Indiana University for Film Study

A gift of \$1800 has been made to Indiana University by the Indiana Visual Aids Company of Indianapolis, through its president, M. L. Stoepelwerth, for the purpose of employing graduate assistants to undertake studies on the correlation of films with the more widely taught subjects in Indiana schools. Professor L. C. Larson, director of the audio-visual center at Indiana University, will supervise the work.

The objective of the studies will be to give to teachers assistance in the selection and use of film that contribute directly to the achievement of teaching objectives of the more important units of work.

Applications for assistantships, fellowships and part-time positions in selection, circulation, utilization or production on the staff of the audio-visual center available to graduate students should be submitted to Professor L. C. Larson, Director, Audio-Visual Center, Indiana University, Bloomington, Indiana.

Left to right: Mr. M. L. Stoepelwerth; Prof. L. C. Larson; Dr. W. W. Wright, Dean, School of Education; Prof. Hugh W. Norman, Assistant Dean, Division of Adult Education; Prof. W. S. Bittner, Associate Dean, Division of Adult Education; Prof. Ford P. Hall, Dean, Division of Adult Education.

Castle Becomes Division Of United World Films

United World Films, Inc., a recently organized affiliate of Universal Pictures Inc., has succeeded to the business of Castle Films, pioneer producer and distributor of home and non-theatrical films, according to a joint announcement made lately by Eugene W. Castle, head of Castle Films, and Matthew Fox, Chairman of the Board of United World Films, Inc.

Castle Films Division, it was further announced, will continue under the management of Mr. Castle, maintaining all of its present functions with plans being formulated for augmenting its organization throughout the world.

This marks the first development since the formation of United World Films, Inc. substantiating the original announcements that this company will enlarge its scope in the home and non-theatrical fields.

Castle Films Division retains its present functions, organization and present personnel, and all present Castle Films dealers and sales outlets throughout the world will be maintained, it was explained.

Mr. Castle becomes a Vice-President and a member of the Board of Directors of United World Films, Inc. Harry J. Spiess, formerly Treasurer of Castle Films, will also become a Vice-President and a member of the Board of United World Films, Inc. Murray Goodman, Sales Manager of Castle Films, remains in that capacity and Don Hancock will continue as Production Manager.

Julien Bryan Abroad

Julien Bryan, well known New York documentary motion picture director, and Executive Director of the International Film Foundation, is now in Russia making a series of new motion pictures for release by the International Film Foundation, according to a cable received by Edward E. Watts, Jr., President of the Foundation.

According to Bryan's cable, he has for the past three weeks been in Minsk in Byelorussia, making pictures of the rebuilding of hospitals, schools, orphanages, and factories from the "utter devastation" of Minsk. He and his crew will go from Minsk to Kiev where he expects to remain until mid-January.

In his cable, the photographer praised the cooperation being received at the hands of the Russian authorities, "Cooperation from Byelorussian authorities splendid, extending us every facility", he states. "We photographed freely on the streets and bridges and had no police interference, no civilian questioning, and no hostility; only friendliness".

Mr. Bryan left New York September 22 to join the crew of the International Film Foundation, a non-profit organization established late in 1945, to aid in international understanding through the production and distribution of documentary films. He plans to return to New York January 20th.

"Sum" Check

Ever see a check for \$1,600,000.00? That's what was being signed by J. H. McNabb, president of Bell & Howell

J. H. McNabb, B & H President

Company, when this picture was taken recently, the payee being Uncle Sam himself. The sizeable sum represents a substantial payment on account by Bell & Howell on the purchase of the modern Lincolnwood plant built by the Chicago concern for the War Department in 1942. Since initiating negotiations for buying the building from the government, Bell & Howell has constructed two similarly modern and spacious buildings adjacent to it on its Lincolnwood site.

Aids to Employment Study

To accompany the filmstrip, *The Man in the Cage*, produced for the Fair Employment Practices Commission of California, United Productions of America, Hollywood, have prepared a booklet for distribution among audiences viewing the film. The pamphlet carries the same title as the picture and includes fourteen stills by Lew Keller, who designed the film. Both the booklet and the film are distributed by the Film Alliance of America, Inc., 1600 Broadway, New York City. Local California groups interested in either the booklet or the film should consult Augustus Hawkins, State Assemblyman and Director of the California FEPC campaign, at FEPC Headquarters, Spring Arcade Building, Los Angeles.

RCA Mobile Unit for 16mm Location

The first complete mobile recording unit to be developed especially for 16mm sound film recording has been designed and custom built by the RCA Film Recording Department in Hollywood for the Coronet Instructional Film Company, of Glenview, Illinois.

The unit consists of a complete film and disc recording channel installed in a custom built body which is mounted on a 1-1/2 ton truck chassis. The recording channel is of the Hollywood studio type and has all the features

normally found necessary for the operations of major studios.

The optical system and film path of the standard RCA Model PR-23 Film Recorder installed in the mobile unit was specially modified to permit recording of direct positive as well as negative variable area sound track. The film recorder also includes a photographic slater and a synchronization marking system. For "location" recording, the channel can be operated entirely by batteries.

Filmstrips from England

A catalog from the British firm, Common Ground Limited, lists over 500 filmstrips together with rather complete descriptions of each. Common Ground is quite new to the field of visual education, having been founded by Lt. Commander Conrad Rawnsley who was invalided out of the Navy in 1940. Most of the films have been slanted toward the secondary school and include much semi-technical and industrial material. One series of six filmstrips covers "A History of the English Theatre." A series of nine strips is entitled "Introduction to the Industrial Revolution in England," prepared by G. D. H. Cole. Additional strips penetrate more deeply into the industrial revolution and the history of British industry of 100 years ago. "The Evolution of the English Home" is the title of another series of three strips. One filmstrip of 70 pictures is devoted to "The Development of Visual Education," by Charles R. Beard. A series of 15 strips has been devoted to "The History of the Cinema in Europe and America," edited by Roger Manvell. From the titles of the individual films in this series, it appears to be the most complete survey of its kind yet made. For example; separate strips are devoted to the sound film in America, Russia, France, Britain, and Scandinavia-Czechoslovakia-Germany. Plans are apparently underway to market the films in this country.

Copies of the preliminary Visual Education catalog of this company may be obtained from Common Ground Ltd., Sydney Place, London, S.W.7, England.

RCA Mobile Recording Unit.

Britannica Films Sets Up Regional Offices

Encyclopaedia Britannica Films Inc. has established four new regional offices in the four major geographic sections of the country as part of a program to serve more efficiently the audio-visual needs of schools and other educational institutions, it was announced by H. R. Lissack, vice-president of the films company.

To supervise the four new offices, Dennis R. Williams, who has been field representative for Encyclopaedia Britannica Films assumed the position of Director of Distribution for the films company January 1, 1947.

Williams will continue to have headquarters in Chicago, the home office of the films company, and will have the responsibility of directing all educational and sales representatives and all sales distribution for Encyclopaedia Britannica Films.

William B. Sinclair was at the same time named sales office manager of the films company and as Lissack's assistant will be in charge of the central offices of the company at 20 North Wacker Drive, Chicago.

Lissack said that three of the four new managers of the regional offices have also been appointed.

Joseph E. Dickman, assistant director of the Bureau of Visual Instruction of the Chicago Public Schools, will be assigned to the Central States region with his headquarters in Chicago.

J. M. Stackhouse, educational representative for Encyclopaedia Britannica Films, will direct the regional office in Richmond, Virginia, supervising the distribution of films in the 17 states of the Eastern Seaboard from Maine to Florida.

Paul Cox, educational representative for Encyclopaedia Britannica Films in Pasadena, now is manager of the Western area. His office will be in Pasadena.

Working under Williams' direction, the regional managers will assist schools and other educational institutions in setting up audio-visual instructional programs and will help to arrange school conferences and clinics in visual aids. Each will establish his own regional office, will direct the work of all films company personnel in his region and operate a preview library of educational films from his office.

Capitol Records Signs Deal With RKO Pathe

Capitol Records, Inc. now has exclusive use for disc-recording purposes of new, specially-designed recording facilities in the RKO Pathe Studios at Park Avenue and 106th Street in New York City. Announcement of the agreement was made in Hollywood by Glenn E. Wallich, Capitol's vice-president and general manager. The recording studios, laid out specifically for high-

fidelity recording of film soundtracks, commercial phonograph records and radio transcriptions, were designed by the noted American conductor and composer, Nathaniel Shilkret, RKO Pathe music consultant.

Warren Birkenhead, chief electronic engineer for Capitol, is in New York preparing the new studios for first recording sessions. Walter Rivers, New York recording studio manager for Capitol, will be in charge of operations.

Academic Film Activities Resumed

Milton J. Salzbarg and Harold Baumstone, for the past 12 years president and vice-president, respectively, of Pictorial Films, Inc., have recently severed their connection with Pictorial, and will from now on devote their full time to their own company, Academic Film Company, Inc. Mr. Salzbarg and Mr. Baumstone founded Pictorial in 1935. In 1945 they

a powerful stimulus
TO LEARNING

Five new series of Teach-O-Filmstrips, now ready, will reinforce your instructional methods by vitalizing the learning experience.

Primary Grades Social Studies Series—COMMUNITY HELPERS

This series shows the activities of firemen, policemen, communication workers, transportation workers (2 Teach-O-Filmstrips), and storekeepers. Each of the six, bl. & wh., 35 mm. Filmstrips in this series is approx. 40 frames in length. Price of the Series, \$18.00. Each Teach-O-Filmstrip, \$3.00.

Primary Grades Arithmetic Series—PRIMARY ARITHMETIC

This series teaches a basic understanding of numbers and their use. It presents a partial coverage of the material studied in the first three grades. Each of the six, bl. & wh., 35 mm. Filmstrips in this series is approx. 40 frames in length. Price of the Series, \$18.00. Each Teach-O-Filmstrip, \$3.00.

Middle Grades American History Series

—THE DISCOVERY AND EXPLORATION OF AMERICA

This series teaches the history of: (1) The Introduction—The Age of Discovery; (2) The Story of the Vikings; (3) How Columbus Discovered America; (4) Cortez Conquers Mexico; (5) The Golden Age of Spanish Discovery; (6) The English Sea Dogs; (7) The Founders of New France; (8) How Our Country Was Discovered and Explored—Summary and Review. Each of the eight, bl. & wh., 35 mm. Filmstrips is approx. 40 frames in length. Price of the Series, \$24.00. Each Teach-O-Filmstrip, \$3.00.

Junior High School Health Education Series—FOODS AND NUTRITION

A series for classes in Health Education, General Science, Consumer Education, and Home Economics. This series teaches a basic understanding of selection of foods, balanced diets, consumer problems in purchasing foods, and other food aspects. Each of the five 35 mm. Filmstrips, in color is approx. 40 frames in length. Price of the series, \$25.00. Each Teach-O-Filmstrip, \$5.00.

Junior and Senior High School English Literature Series

—A TALE OF TWO CITIES

The three, bl. & wh., 35 mm. Filmstrips in this series contain the most important stills from the M-G-M picture, "A Tale of Two Cities"—Part I, "Plot Study," a summary of the story; Part II, "Character Study"; and Part III, "Historical Background." Price of the Series \$7.50. Each Teach-O-Filmstrip \$2.50.

A FREE functional Teaching Guide is now being prepared for each of these series of Filmstrips.

- I wish to order the Teach-O-Filmstrips on the list which I have attached.
- SEND BILL PAYMENT ENCLOSED
- Send me your colorful, NEW brochure about:
 - TEACH-O-FILMSTRIPS (illustrated)
 - TEACH-O-DISC Classroom Recordings
- Send me folder on: Tri-Purpose Projector E.S.-1

GRISWOLD FILM SPLICERS

A few dollars invested in a GRISWOLD film splicer will safeguard valuable motion picture films against the damage and the presentation difficulties caused by poor splices. For the GRISWOLD, with its exclusive design features and precision-built quality, makes precision splicing a simple, easy, fool-proof operation. It's the splicer preferred by the motion picture industry and extensively used by Army and Navy picture services. Specify the GRISWOLD by name when you buy—and accept only the genuine as distinguished by the GRISWOLD name plate.

GRISWOLD Splicers come in models for all film sizes. All models splice both sound and silent film. Order from your Photo Supply Dealer or direct from us if he doesn't have them. Descriptive folder mailed on request.

GRISWOLD MACHINEWORKS
DEPT. B—412 MAIN ST.
PORT JEFFERSON, N. Y.

sold their interests to Pathe Industries, Inc., continuing as executive officers in the company.

Academic Film Company was formed in 1940 for the production and distribution of a series of two-reel American History short subjects on 16mm. Five subjects were produced—*Our Constitution, Our Monroe Doctrine, Our Bill of Rights, Our Declaration of Independence and Our Louisiana Purchase.*

Following the outbreak of war, Academic had to suspend production, but will now resume a comprehensive program of activities in all phases of the 16mm industry. Academic plans to expand its operations beyond purely educational material, to include features and short subjects in the entertainment fields. It will, in addition, produce industrial films and serve as consultants in the production and distribution of films in the educational, entertainment, and industrial fields.

The Academic Film Company's temporary offices will be at 1450 Broadway, Room 2200, New York City.

Britannica Films Create Catholic Department

Rutherford K. Clarke of Yonkers, New York, has been appointed director of the newly-established Catholic department of Encyclopaedia Britannica Films Inc., it was announced by H. R. Lisack, vice-president.

The new department was established to serve Catholic schools and colleges, by providing assistance with problems relating to audio-visual instruction in the classroom.

The director of the new department has sold Encyclopaedia Britannica films in several eastern states including New Jersey, New York and North and South Carolina and he has had sales and editorial experience in the textbook publishing field. He will have his headquarters in the home office of Encyclopaedia Britannica Films, 20 North Wacker Drive, Chicago.

Automatic Miniature Slide Projector

Picture Recording Company of Chicago announces its now PRC 300 Automatic Slide Projector for release sometime this month. The projector has the usual refinements of 300 watt illumination, five inch lens (coated additional), seven inch lens available. The main innovation of the PRC projector is its automatic slide-changing device. Miniature slides, either 100 ready-mounts or 45 glass or mixed, may be stacked in a metal feed rack container. A control button at the end of a ten foot cord activates the slide changer. Following exposure, slides are stacked in another metal container rack in proper sequence and position to be shown again. Slides pass through a warming chamber before projection, preventing buckling or out of focus condition of projected image. For usual type operation, a manual control lever is provided. Further infor-

PRC Automatic Slide Projector

mation may be secured through regular photographic dealers or the Picture Recording Co., 1240 Lawrence Ave., Chicago 40.

Single Lens Trivision Photographic Process

Lenses of virtually every description have been produced at Bausch & Lomb Optical Company to meet specific requirements of photographic engineers, scientists, the armed services, Hollywood cameramen, and the like.

One of the latest and most interesting jobs undertaken is the production of a large, fast, Balcoted lens for a three-dimensional photographic process invented by Douglas F. Winnek, University of Rochester-trained optics engineer. Winnek's picture-taking method, known as Trivision, was developed after several years' experimental work. Photographs are taken with a single lens and do not require the aid of viewing glasses to bring out their unusual depth or relief.

The lens is a 1 1/2-inch, f:2.2 portrait-type lens. In size, it closely resembles the headlight on a locomotive, measuring eight inches in diameter when mounted. One factor in the success of the process is the lens' large diameter. Winnek maintains that a camera lens, like human vision, can see partly around any object. Thus, the wider the lens, the better the depth perception.

Trivision's inventor points out that this property of a lens is wasted in an ordinary camera because all the light reflections focus on a flat surface. This is actually the remainder of Winnek's secret for he devised a method of embossing any standard film, black and white or color, on the side opposite the emulsion, with microscopically small ridges or lenticulations.

These ridges take the shape of simple plano convex cylindrical lenses numbering about 200 per linear inch. Each tiny ridge acts as a separate miniature lens and divides its portion of the image into two parts. In other words, the film is converted into an optical surface which supplements the action of the large Bausch & Lomb lens.

To obtain maximum depth or relief, the camera is designed so that it moves across or scans the subject laterally. The film, too, is moved during exposures. When viewing an ordinary portrait, it looks the same whether one stands directly in front of it or off to one side. Not so with Trivision pictures which provide a greater degree of depth. It is supposedly possible to see around and beyond objects as one changes one's position or angle of view.

The possibilities opened up by Trivision are great. Not only in portraiture, but in aerial reconnaissance, motion pictures, X-ray and clinical work will the effects be of great value.

Teach-O-Filmstrips Illustrated Brochure

A new three-fold brochure is available from the Audio-Visual Division of the Popular Science Publishing Co., 353 Fourth Avenue, New York 10. The brochure describes the various series of filmstrips produced by this organization, including the following series: *On the Farm with Tom and Susan*, *A Day with Bobby and Ellen*, *Living Together in the United States of America*, *All Aboard the Punctuation Express*, *A Tale of Two Cities*, *Sing a Song of Friendship*, *Sing a Song of Safety*. Single frame photos indicate the approximate subject matter of each strip. Forthcoming releases are also announced.

The "Wright" Way to Exhibit!

One of the most unusual exhibits at the gigantic National Aircraft Show held at Cleveland, Ohio, was the "home movie" display of the Victor Animatograph Corporation, Davenport, Iowa, division of Curtiss-Wright. Thousands of the 163,000 air-minded show-goers who attended were lured to this fascinating display where 16 mm sound movies were shown each day in a modern living room setting, complete with sectional divan, mahogany bookcases, and even a copy of Educational Screen placed invitingly on the glass-topped coffee table.

Screen Adette Named Western Distributor for VIZ Projector

The Screen Adette Equipment Corporation has been appointed exclusive distributor in the west for VIZ Projectors and VIZ Books. This new and revolutionary application for the reading of famous and popular books by projection for invalids and the bedfast has created great interest in hospitals and by doctors throughout the Nation. Entire books are now being micro-filmed and within a short time hundreds of the most popular books will be available to those confined to bed for projection on a miniature screen placed at the foot of the bed. By the simple process of pulling a cord each page can be turned forward or backward at the desire of the reader.

New SVE Filmstrips Offer Variety of Subject Matter

Three new filmstrips, prepared from new and original drawings, are being released as part of the SVE Elementary Physiology Series. *How We Hear*, 35 frames, represents the path of sound waves as they travel through the outer and middle ear into the inner chamber where the vibrations are picked up and transmitted to the hearing center of the brain. *How We See*, 43 frames, likens the physiological processes of the eye to those of the camera. The filmstrip also explains the common eye defects and their means of correction with various lenses. *How We Breathe*, 35 frames follows the course of oxygen and carbon dioxide as they are carried throughout the body.

Plastics is the newest addition to the SVE Applied Science Series for high school and college courses describing the application of scientific principles in industry. These filmstrips include both pictures and accompanying text frames. They show the methods of production and various uses of common thermo-

plastics and thermosetting plastics. *The Maya Cities Of Yucatan* is the first in a series of three filmstrips which are being prepared for SVE by Robert Stanton, noted author, lecturer and traveler. The manual accompanying the film contains a wealth of excellent background material on Mayan culture. This filmstrip records the remaining buildings, temples and pyramids of this civilization. Supplementing with the manual, it affords a fascinating study of the Mayan creative work—especially architectural design and frieze work.

Two new filmstrips, prepared by the Public Affairs Committee, Inc., are being distributed through the Society for Visual Education, Inc. Each filmstrip is accompanied by a manual and related Public Affairs pamphlet. *We Are All Brothers*, 54 frames, serves as a basis for discussions directed toward better international and inter-racial understanding. *Foreign Trade—Its Good Business* is designed to promote discussion and a fuller understanding of foreign trade. Why it is necessary, how it functions and the relationships of world commerce and tariff walls to prosperity are covered.

Spread Teaching Time with

SOUNDSCRIBER ELECTRONIC DISC RECORDER

WITH the SoundScriber electronic disc recorder teaching time can be multiplied because:

1. SoundScriber permits additional students to have individual instruction any time.
2. SoundScriber permits the student to record and check his own pronunciation, diction and usage.

By using SoundScriber in off hours both instructor and student gain additional time.

Because SoundScriber is an entirely electronic system, every word is recorded and played back crystal clear. The flat, unbreakable SoundScriber disc holds up to 30 minutes of recording, handles and files like a sheet of paper, can be played back hundreds of times. Electronic controls make possible instant repetition of a word, a phrase or an entire lesson.

Write today for complete information on how the SoundScriber is being used by leading schools, colleges and universities.

Current Film News

■ **ENCYCLOPAEDIA BRITANNICA FILMS INC.**, 20 N. Wacker Drive, Chicago 6, have released the following new 16mm sound classroom films:

Making Cotton Clothing—the story of the manufacture of a child's cotton print dress, from the designing of the original to the completion in a mass factory. Every step is clearly pictured. Hand methods are contrasted with quantity production techniques. Emphasis is placed on the close relationship between workers and machines. The film is a sequel to a previously produced film entitled "Cotton", on the weaving of cotton cloth.

Paper—a presentation of modern papermaking from the forest to finished sheets of paper, and items familiar to children. The entire picture is a pictorial exposition of modern technology at a child's level of interest and understanding.

Public Opinion—third in a series of films on democratic processes prepared in collaboration with Dr. Harold D. Lasswell of Yale University. "Democracy" and "Despotism" began the series. A realistic analysis of public opinion—what it is, how it is formed and what it can accomplish—is the subject of this latest film. The impact of public opinion on a typical community problem—an unsatisfactory water supply—is dramatized by animated drawings and live-action, tracing the public opinion process from recognition of the problem to its final solution.

Building America's Houses—produced in cooperation with the Twentieth Century Fund—based on a recent Fund study "American Housing: Problems and Prospects" by Miles L. Colean, who also collaborated in the production of the film. It pictures the actual construction of a house, and shows why construction costs are high. The problem presented is how to put housebuilding on a mass production basis so that more houses can be built at lower costs. The film then describes how prefabrication, large-scale building and site fabrication can help solve the problem, with vivid shots of these processes.

■ **SOCIAL DOCUMENTARY FILMS**, 7819 Eastern Ave., N.W., Washington 12, D. C., a new producing organization formed by Mary L. de Give and Margaret Cussler, who gave us "You Can't Eat Tobacco" and "Not By Books Alone", have completed another 16mm sound film in color on Indians, namely:

Hopi Horizons—a new interpretation of the new Indian. Filmed on the Hopi Reservation, with chant and speech recordings, it depicts the real-

ity of present-day Indian life; raising food with primitive tools, cattle-raising on restricted range, the struggle for water, handicrafts, trade, health, education, influence of missionaries, White transients and Government, opinions of older leaders and others on the future of the no-longer-vanishing American.

■ **YOUNG AMERICA FILMS, INC.**, 18 East 41st St., New York 17, have just released a new teaching film for junior and senior high school social studies classes:

Meet Your Federal Government—designed to motivate and review the study of the federal government. The film centers around the visit of Bill

Miller, a high school student, to Washington to see his Uncle Jim a Congressman. We see Bill and his Uncle visiting the three main branches of the government while Uncle Jim explains the principal functions of each, and the system of checks and balances between the three.

■ **FILM-OF-THE-MONTH CLUB**, 10 Beach St., Boston, Mass., a subsidiary of Cinecraft Company of New England, has introduced a unique plan for building up a film library. With the purchase of four films within twelve months, a new bonus film is given. This bonus film will be either a short or feature depending upon the class of membership ordered.

News Review of 1946—an official Films release—is the current film dividend which charter members will receive as their first bonus with the purchase of any of the following films: *Undersea Life*, *The Gay Gaucho* (a cartoon), *Sport Thrills*, *Christmas Night*.

Literature describing new productions from which to select will be mailed to members of the Club each month. Once every four months they will be advised of the new film dividend being offered. The Club's offerings will include news, travel, comedies, novelties, musicals, and educational features.

Photographic accessories and equipment may also be purchased at substantial savings.

HOFFBERG PRODUCTIONS, Inc.
Send for lists
620 Ninth Avenue
New York 18, N. Y.

■ NATIONAL EDUCATIONAL FILMS, INC., 165 West 46th St., New York 19, announces the production of a 16mm instructional film titled:

A Year Is a Long Time—a reading readiness film for first grade pupils. It is the first in a series of three to be made on the subject of "Time." The series has been planned with the cooperation of primary teachers to help the beginning reader develop concrete and abstract concepts of "time" as they relate to his everyday life in home, school and community. The first film will be followed by "How Long is a Day?" and "How Quick Is a Minute."

■ GENERAL MILLS, Film Library, 400 South Fourth St., Minneapolis, is distributing a new film, produced for them by the Calvin Company, to other companies, trade associations and schools requesting it. "A Case Study in Corporation Finance" might well be the subtitle of this 16mm kodachrome sound movie, called:

Operation '46—a pictorial financial report to the stockholders of General Mills. It shows what shares of stock

represent and what products the company makes; also the relationship of owners, management and employees. The company comptroller explains the asset and liability items on the balance sheet. The importance of research and of trained personnel is brought out.

■ A. F. FILMS, INC., 1600 Broadway, New York 19, have prepared two more French documentaries for U. S. distribution:

Aubusson Tapestries—1½ reels—dealing with the art of tapestry-making. Jean Lurcat, a well-known French painter, shows how the pattern for the tapestry is prepared at the new school formed at Aubusson. The film follows an actual tapestry through the various steps until it is completed. From the completed sketch of the artist, the weavers make up the final cloth.

Spelunking, A New Science—2 reels—is the adventure of exploring caverns deep in the earth for the purpose of scientific research. For the first time, a camera team has followed the investigations of this new science and reveals the tremendous eroding work of nature in all its enormity.

■ PAN AMERICAN WORLD AIRWAYS, 135 East 42nd St., New York 17, are offering another travel film for general showings through 42 film depositories and the facilities of Association Films. The title of the latest in a series of 16mm sound and color films on countries to which the Clippers fly, is:

Wings Over Ireland—3 reels—featuring the tourist attractions in Ireland, as seen by a typical American family. Irish lakes, mountains, hunting country, Dublin, Cork and other leading cities of Ireland are on the itinerary. The film contains authentic Irish music and Irish voices. Besides sporting events, recreational facilities, historical landmarks and scenic beauty, the film includes close-ups of the famous Book of Kells with its exquisite illuminated writing. Highlighting the film is a scene of the boy kissing the Blarney Stone.

■ U. S. DEPARTMENT OF AGRICULTURE, Motion Picture Service, Office of Information, Washington, includes these two Veterans Administration motion pictures among their latest releases:

Quiet Triumph—a powerfully dramatic film that drives home the lesson of how the spiritual in life can help overcome handicaps. The story of how a Chaplain helped a young veteran conquer his hatred of artificial limbs and achieve happiness is used to typify the work of the VA's Chaplaincy Service.

This Is Worth Working For—an orientation film for new VA employees.

Prints of these subjects will be distributed to cooperating libraries.

■ OFFICIAL FILMS, 25 West 45th St., New York 19, have issued several new Musicals, which include:

Stephen Foster Melodies—featuring an arrangement of Stephen Foster's immortal music filmed against lavish settings of the Old South. Colonial

mansions, hoop skirts and strumming banjos serve as a colorful background for the gay tunes.

Square Dance Medley—in which Tiny Clark, famous square dance caller of Village Barn fame, calls three popular sets for "The Barndancers," to the music of the "Cactus Cowboys."

DeLuxe Musical Classics—a series of popular classics, sung by fine vocalists. The following selections are offered: "Ave Maria," "Rosary," "Habanera," "Eli-Eli," and "The Lord's Prayer."

■ ASSOCIATION FILMS (YMCA Motion Picture Bureau), 347 Madison Ave., New York, are distributing two 16mm sound films recently released by Official Sports Film Service:

Football-Up-To-Date—demonstrating plays and fundamentals on which the game and its code are based. The Dundee, Illinois, high school football team staged the play situations.

Basketball-Up-To-Date—in which the basketball teams of Dundee and Proviso, Illinois, high schools and of DePaul and Northwestern universities served as cast. Officiating practices and correct interpretations of play situations are preceded by a brief historical background.

These two films were sponsored by General Mills, Inc. and Wilson Sporting Goods Co. and were produced by authority of the National Federation of High School Athletic Associations. Member state associations are also distributing the films.

■ O'CONLON FILMS, 622 Penfield Bldg., Philadelphia 7, has available for rental an Irish documentary short subject telling a historically accurate tale of:

Kilmainham Jail (The Bastille of Ireland)—produced by the Educational Film Company of Ireland. Pictorially the film consists of shots of the present day ruins and inserted historical prints of the 150-year-old jail and of the revolutionaries who were there imprisoned and executed.

Entertainment Films

■ UNITED WORLD FILMS, INC., Bell & Howell Filmosound Library, R. C. A. Building, New York 20, announce the addition of the following features to their library:

That's The Spirit—9 reels—the amusing tale of a happy-go-lucky gentleman from the ghost world who comes down to earth to re-adjust the lives and affairs of some former relatives. A bright musical drama with a fantastic twist that features Jack Oakie and Peggy Ryan.

I'll Tell the World—6 reels—a fast moving comedy of the radio world, featuring Lee Tracy back again as the talking speed demon of the microphone.

Penthouse Rhythm—6 reels—a musical comedy that deals with the efforts of a group of talented young people striving to attain professional recognition.

Dark Horse—6 reels—an amusing satire on small town machine politics in which, after numerous misunderstandings, justice and romance eventually win out.

On Stage, Everybody—6 reels—Jack Oakie and Peggy Ryan, a father-daughter vaudeville team are washed up by radio's inroad. Old man has a violent phobia against radio, attempts to push daughter into society

circles while he goes to home for retired actors. Eventually, they make a success, together, in big-time radio.

The Naughty Nineties—8 reels—in which Abbott and Costello foil a trio of bold bad gamblers who would rob the owner of a venerable Show Boat.

■ COMMONWEALTH PICTURES CORP., 729 Seventh Ave., New York 19, has recently acquired the 16mm distribution rights to a Hal Roach short subject released by a major company, entitled:

Call a Cop—2 reels—a hilarious comedy where the son of a Chief of Police tries to emulate Sherlock Holmes, when his girl friend thinks her home is invaded by a prowler. A riot ensues when this fellow and his buddies capture the entire Police Force including his own father, the Chief.

Catalogs

Photoart

Among the new film catalogs is the attractive and easy-to-use publication of Photoart Visual Service. Films are classified into groups such as educational, feature, cartoon, serial, musical, sports, animal, religious, free, and world news. As a further aid, certain of the groups such as educational films are further subdivided, permitting the teacher to locate films by subject. A complete title and subject index is provided, listing all films alphabetically. The catalog is well illustrated, and many a film distributor could take a tip from its arrangement.

Copies of this catalog may be obtained from Photoart Visual Service, 844 North Plankington Ave., Milwaukee 3, Wisconsin.

Vesco

A series of three catalogs covering films in the fields of "Social Studies," "Science," and "Occupational Studies" has been recently issued by the Vesco Film Library. The three sections are also available bound as one together with a list of films on music, literature, and art. The Occupational Section includes sections on transportation, food, personnel problems, office practices, shop work, plastics, electricity, and parliamentary procedures. The Science Section lists films on mathematics, physics, chemistry, astronomy, geology, climate and weather, the organic world, health, sports, and safety. The Social Studies covers "The World as a Whole," with films listed from many different lands.

The separate sections may be had by mailing ten cents for each section desired to the Vesco Film Library, Division of Audio-Visual Corp., 116 Newbury St., Boston, Massachusetts. The complete film catalog is priced at 25 cents.

Texas Company Completes First Movie on Commercial Kodachrome

A Texaco "convention-on-film" (titled "Where're You Goin', Mister?") presenting the Texaco 1947 sales program, has just been completed by the Texas Company for showings at meetings of managers and district managers, and local conventions throughout the U.S. Produced by RKO Pathe, the film is the first production to employ Eastman Kodak's new commercial Kodachrome—an entirely new film which makes possible quantity production of 16-mm. color prints of far higher quality than ever before. Previously, while a good Kodachrome original was possible, duplicate prints have not measured up to professional standards. RKO Pathe which had discouraged wide use of 16mm. color by commercial sponsors now plans use of the new Kodachrome on a major scale.

ASTOR 2-REEL 16MM. SOUND COMEDIES

- 1—"WAY UP THAR"—Joan Davis

VICTOR 16mm Equipment

WHEREVER children are taught, *16mm sound motion pictures* now bring a new world of learning into their lives.

The little red school house has the same advantages in visual education as does the modern city school—thanks to thousands of films and a VICTOR 16mm Sound Projector. To get the most out of today's many splendid films on every subject, depend on Victor for certainty of performance . . . ease of operation . . . film safety . . . picture brilliance and sound fidelity. There are many VICTOR exclusive features that make it the "finest in 16mm equipment."

Write for the new Victor booklet, showing these outstanding features in detail.

releases . . .

5 NEW 16MM. SOUND MOTION PICTURES IN COLOR

HOW TO READ A BOOK

Designed to aid in the development of reading skills necessary to careful understanding, this film is well adapted to use in junior and senior high schools. Collaborator: William G. Brink, Ph.D., Professor of Education, Northwestern University.

IMPROVE YOUR READING

As an aid to the correction of poor reading habits, this reel is ideal for use in intermediate and junior high school language arts classes. Collaborator: John J. De Boer, Ph.D., Chairman, Education Department, Roosevelt College.

HOW WE ELECT OUR REPRESENTATIVES

Explains the functional basis of our democracy—our election system. Vital for all civics, government and social studies classes in junior and senior high schools, teacher training and adult education. Collaborator: Jerome G. Kerwin, Ph.D., Professor of Political Science, Univ. of Chicago.

THE COLUMBIA RIVER

Captures the tremendous force and vitality of this mighty source of hydro-electric power. Excellently suited for geography and economics classes in elementary, junior and senior high schools. Collaborator: Clifford M. Zierer, Ph.D., Chairman, Department of Geography, University of California at Los Angeles.

AIR IN ACTION

Demonstrates basic principles of aerodynamics. Live-action sequences interspersed with animation. For general science and physics classes at elementary, junior and senior high school levels. Collaborator: Ira M. Freeman, Ph.D., Associate Professor Physics, Swarthmore College.

THESE SUBJECTS ARE 1-REEL SOUND 16 MM. MOTION PICTURES. PRINTS ARE AVAILABLE IN COLOR OR BLACK-AND-WHITE.

EDUCATORS everywhere are turning more and more to vibrant Coronet Instructional Films for classroom impact.

Glorious with full natural color, dramatically keyed to engage and hold student interest, they fit the requirements of standard curricula.

And—Coronet's catalog of nearly 100 sound and color subjects is the fastest-growing in America!

Nearly all educational film libraries offer CORONET Instructional Films on a rental basis. Preview prints for those interested in making selections for purchase are available from CORONET. Write for catalog.

CORONET'S 10th Anniversary Filmstrip Series and CORONET'S popular 2 x 2 Kodachrome Slides are used by thousands. Write for details.

The Annual Guessing Game: "Best Film of the Year"

From the first of each year until the Academy of Motion Picture Arts and Sciences announces its awards, the nation's film critics have a free-for-all in announcing lists of "best films." Always there is competition between the most popular films, the best money making stars, and the most artistic films. This year a greater number of foreign-made pictures appeared on the lists than ever before. Most of these were British pictures such as *Henry V*, *Brief Encounter*, *Caesar and Cleopatra*, *Seventh Veil* though at least one French film (*It Happened at the Inn*) and one Italian film (*Open City*) were mentioned. In the course of the year, *The Last Chance* (Swiss) was highly praised but forgotten by polling time. New York City critics voted William Wyler the best director and his *The Best Years of Our Lives* as the best picture. They granted acting honors to Laurence Olivier for his work in *Henry V* and to Celia Johnson for her work in *Brief Encounter*. The New York critics further announced that they considered *Open City* as the best foreign-language movie. This was acclaimed by the *New Republic* as the best of all films. The public, however, did not grant the same acclamation to foreign films as did the critics. This may be due in part to the fact that foreign films receive a far more limited circulation than do the domestic productions. In any event, a comparison between lists should be interesting.

Selections by the Committee on Exceptional Films, National Board of Review (The chairman and 12 members were especially interested in the importance and artistic merit of the films)

Henry V
Open City
The Best Years of Our Lives
Brief Encounter
A Walk in the Sun
It Happened at the Inn
My Darling Clementine
The Diary of a Chambermaid
The Killers
Anna and the King of Siam

Time Magazine listed its choices for 1946 as the following:

Open City
Henry V
Anna and the King of Siam
Brief Encounter
The Killers
The Jolson Story
Margie
My Darling Clementine
The Best Years of Our Lives
It's a Wonderful Life

Film Daily selections were chosen by a vote of 447 critics and radio commentators. Best ten directors included: Alfred Hitchcock, Billy Wilder, Leo McCarey, Sam Wood, Michael Curtiz, Victor Saville, John Cromwell, John Stahl, Ernst Lubitsch, and Robert Siodmak.
The Lost Weekend
The Green Years
Anna and the King of Siam
The Bells of St. Mary's
Spellbound
Saratoga Trunk
Henry V
Notorious
Leave Her to Heaven
Night and Day

Gallup-Photoplay poll represents movie-goers choices.

The Bells of St. Mary's
State Fair
The Green Years
Mildred Pierce
Leave Her to Heaven
Night and Day
Anna and the King of Siam
Spellbound
Rhapsody in Blue
Love Letters

(Concluded on page 74)

Natco's **2 MOTORS** ...lengthen projector life

Natco's famous dual motor system achieves a new peak in 16 mm. sound film projection efficiency. Unlike the single drive-rewind motor construction common among conventional projectors, the Natco has TWO motors . . . each designed to do one thing with maximum efficiency.

Mechanism Drive Motor

Operates the picture mechanism and sound sprockets . . . permitting simplification of design that results in increased efficiency.

Auxiliary Motor

operates take-up and blower fan and re-winds film without engaging film drive mechanism . . . thereby eliminating needless wear on gears, sprockets, chains, bearings and shafts.

- * Foremost in *sound quality*
- * Outstanding in *operational simplicity*

Natco

world's finest

Fletcher Urges Film Council Reorganization

Calling visual education one of the "most important, far-reaching and significant movements in this century," C. Scott Fletcher, president of Encyclopaedia Britannica Films urged the Film Council of America to reorganize and intensify its efforts to bring about a better world understanding through adult education by means of educational motion pictures. Fletcher spoke at a luncheon meeting of the Chicago Film Council in the Piccadilly Restaurant in one of the key speeches of the current meeting of the National Film Council here.

Capitalizing upon his experience as executive director of the Committee for Economic Development during the war, he encouraged the Council to reorganize on the widest possible national scale to bring to bear all of its influence for better educational films, wider distribution and use and higher professional standards in the industry. Fletcher suggested that a Board of Trustees of the Council be selected, composed of educators, businessmen, and other prominent citizens who have no direct interest in either the manufacture or distribution of audio-visual equipment.

"Each should be selected as a responsible citizen who has a genuine interest in improving the general welfare of all people through audio-visual education," he said. An advisory committee and a finance committee, to raise \$50,000 this year for organizing and establishing nation-wide community committees of the council, should also be formed, he said.

A field-service division to organize community councils, a research division to study and develop new methods of improving the techniques and manufacture of visual education materials, and an information division to disseminate new methods and experience to every branch, were the key subdivisions of the council.

"This program of yours," he told council members, "will flourish long beyond our own time. Eventually it can, and must, play a major role in reducing the

(Concluded on page 112)

The Annual Guessing Game . . .

(Concluded from page 72)

The Motion Picture Herald in its 15th annual "Fame" poll of theatrical exhibitors listed the following as "The Money-Making Stars of 1946":

Bing Crosby	Humphrey Bogart
Ingrid Bergman	Greer Garson
Van Johnson	Margaret O'Brien
Gary Cooper	Betty Grable
Bob Hope	Roy Rogers

The Gallup-Photoplay poll of the most popular stars agreed with the *Herald* "Money-Making" list in the cases of Bing Crosby and Ingrid Bergman. Gary Cooper, Bob Hope, and Van Johnson appeared among the first ten on both lists, but the polls differed considerably on woman stars. (Note that *Photoplay* is read mostly by women; *Herald* by men.) Greer Garson was on both lists. However, *Photoplay* included on its list Bette Davis, Judy Garland, Lana Turner, and Spencer Tracy. Since the *Photoplay* poll was on the basis of popularity while the *Herald* Poll was based on the best money makers, there would seem to be a difference.

NELSON L. GREENE

1881-1947

NELSON L. GREENE
Founder and Editor
Educational Screen

A Valued Past

NELSON L. Greene received his A.B. degree from Colgate University and his A.M. from Princeton University. His study for the doctorate was ended by World War I. Somewhere, he found time for a brief incursion into the industrial field, working for Western Electric Company, New York City for four years. Then he turned to the Keystone View Company for three years. From 1904 to 1918, he taught ancient and modern languages, literature, and history at the Peddie School, at Princeton University, and at Brown University. In attempting to visualize the study of literatures and languages, he authored a series of six HISTORICAL CHARTS OF THE LITERATURES and four VOCABULARY CHARTS OF THE LANGUAGES. These proved of such value that they have been revised and kept in print through the years.

In World War I, he served under the French Army as a Director of Foyer du Soldat and Lecturer on American life to the French Army, using slides and motion pictures. His illustrated

A Tribute

NELSON Greene edited and published twenty-five volumes of EDUCATIONAL SCREEN and then lived just long enough to edit one issue of the twenty-sixth volume—the January 1947, Silver Anniversary Number, the first issue of the SCREEN'S second quarter century. On January 30, 1947, a heart attack brought to an end the persistently determined and inspirational leadership that Nelson L. Greene had brought to all who believe that instruction can be improved through the use of audiovisual materials.

He had built his own monument. It is a monument built during twenty-five years of steadfast devotion to an ideal. It is a monument built of live ideas, some discovered full grown and most that he, himself, had created and nurtured. He could not have built it entirely alone, but alone he was the designer and the planner. Those who have helped, and there have been many, were attracted and held by the sincerity of his convictions and their own desire to emulate his devotion. They recognized the solid foundations of basic integrity.

THE EDUCATIONAL SCREEN is his monument—a work that is enduring, and more alive and growing today than ever before, because he built it that way.

Paul C. Reed

lectures proved to have real motivating power. The success of this work revealed the power of the picture for educational purposes and caused him to make an important decision; namely to leave teaching. Mr. Greene turned, therefore, towards his life work—the promotion of visual education. Upon his return to the United States, he forsook the East Coast for Chicago. There, he joined the Society for Visual Education at its founding in 1919 as the first editor of its new magazine, VISUAL EDUCATION, the first issue of which appeared in January of 1920. In the same year, he became a charter member of the National Academy of Visual Instruction.

Mr. Greene left the Society of Visual Education to start an independent magazine which he called EDUCATIONAL SCREEN. With the invaluable collaboration of Herbert E. Slaughter, Professor of Mathematics, the University of Chicago, he brought forth the first issue in January of 1922. During the next few years, EDUCATIONAL SCREEN prospered and took over MOVING PICTURE AGE, VISUAL INSTRUCTION NEWS,

Films Motivate English Activities

Survey proves that films stimulate thinking, increase class participation in discussions, motivate formal speaking, and encourage writing

ALEXANDER FRAZIER
Curriculum Co-ordinator
Los Angeles County

FOR the most part, teachers of English who have made use of films have chosen "photoplays" for their literary significance, whether to enliven the study of classics or to teach motion picture appreciation. Yet surely, the film in itself, as a primary means of conveying information and ideas and quite separate from its possible "literary" associations, deserves the respectful attention of teachers whose particular business it is to deal with the communication arts. Most English teachers will agree with Lennox Grey¹ that the four-centuries-long trend toward increasing "print-mindedness" and a way from "ear-mindedness" has now been reversed; teachers will agree, also, that they can hardly believe it. Will they agree, as well, that one of their chief tasks is: "to see how we may use our new understanding of communication, in a very practical way in our classrooms, schools, and communities"?²

If teachers wish to be cautious in their approach to the use of the newer media, records, radio, and films, then perhaps they may first of all test these media for equivalence with printed materials. An appropriate question to ask themselves, for example, is how film experience compares to reading as motivation for discussion, formal speaking, and writing.

It was to give English teachers an opportunity to answer this question for themselves that a project in testing the use of short films to motivate English activities, both oral and written, was conducted during the school year, 1945-46, in Los Angeles County secondary schools, with thirty-three teachers participating. Teachers taking part in the project were sent

a list of films for which pre-showing and post-showing questions and topics for speaking and writing had been prepared. In so far as possible, bookings were made for the films and the times specified by the teachers.

After using the films, teachers were asked to fill in an evaluation sheet, as well as to revise the teaching suggestions and add a sample book list.³ Forty-six evaluation sheets on the use of the films were returned. These sheets, summarized below by sections of the evaluation form, may indicate, however roughly, some of the values that the use of films as primary teaching materials may promise for the English classroom.

	1	Yes	No
<i>Were you able to use the pre-showing questions?</i>	38		7
<i>If so, did you consider that the discussion made the experience of seeing the film more meaningful? 28</i>			5

Teachers who conducted pre-showing discussions commented widely on the experience. "There would be no point in showing the film without some sort of discussion," one user pointed out. Others remarked on the success of the discussion:

"The pre-showing discussion was particularly worthwhile and enlightening with this film (*Magic in the Air*). . . . The discussion gave students a background for appreciation of certain details in the picture which they would have otherwise overlooked. . . . Yes, we found the discussion before showing the film made it more meaningful."

Other comments related to the appropriateness of the pre-showing questions. Several teachers considered questions for particular films too general to be useful. One teacher remarked that the questions "brought out many new ideas and questions of the students which were only partially answered by the film," pointing, perhaps, to the opportunity for further study through reading and research. Where poor discussions resulted in the pre-showing period, some teachers accounted for this by questioning the background of their students.

Altogether, in the 38 uses of the pre-showing questions, there was a seventy-four per cent agreement that the pre-showing discussion did make the seeing of the film more meaningful.

	2		
		Yes	No
<i>Did you have time to use the post-showing questions?</i>	44		x
<i>If so, was the discussion as lively as it would have been from having read similar materials?</i>	34		4

Of the twenty-seven written comments on these questions, thirteen expressed the opinion that the discussion was more lively than it would have been from having read similar material: "Students who do not ordinarily participate in discussion of literature," ran one comment, "took more interest in discussion of the film." "More reticent students entered into open forum discussion," said another. "The film brought more students into the discussion and proved lively and interesting," reported another.

Several teachers attributed this greater success to

Copyright, Walt Disney Productions

Walt Disney's "Defense Against Invasion" is a public health film on vaccination. Red corpuscles in the city's factory (human body) prepare to beat off invasion of black disease germs.

the appeal of films to the slow student or non-reader. "The film experience included nearly everyone," as one remarked, "whereas reading will always tax the comprehension of some." "A brief follow-up discussion proved that the slower students gained more information than from a like subject in reading," wrote another teacher of a film on safety. "This film was more stimulating than most printed matter available on the subject," commented a teacher on *Defense Against Invasion*, which deals with vaccination. "The discussion extended to international relations and was so lively that it had to be continued into the next day's work," said another of *Brazil*.

In summary, all but two of the forty-six evaluations of the films indicated use of the post-showing questions, with seventy-seven per cent of the users considering the discussion at least as lively as it would have been from having read similar material. A sizable number observed that the discussions were livelier, attributing this result either to the more complete response to films made by the slow student and slow reader or to the inadequacy of printed materials on the subjects covered by the films.

	3		
		Yes	No
<i>Did you use the film to motivate formal speaking?</i>	16		26
<i>If so, did the topics prove helpful?</i>	15		1

In sixteen uses, or thirty-five per cent of the forty-six uses, the films were employed to motivate formal speaking activities.

Comments indicated that the range in type of speech activity was wide, including debates, forum discussions, speeches, reports on pertinent reading, and round tables. In one instance, "Three students in each class, prior to the film, were excused to do research and explained the mechanics of television," for *Magic in the Air*. Several commentators regretted that they had not had time for formal speech assignments. All but one of the sixteen users of the speech topics provided by the study suggestions found them helpful.

	4		
		Yes	No
<i>Did you use the film to motivate writing?</i>	32		11
<i>If so, did the topics prove helpful?</i>	31		1

The experience that teachers had in using films to motivate writing evoked more comments (35) than any other phase of the project. Most of these remarks described the kinds of writing activities in which students engaged, such as the following:

"Topics were also suggested by world history teachers and writing was done in both classes. We have used a unit of world Culture which has included literature associated with the area pictured (*India*). . . . Outline work only (*China, First to Fight*). . . . Each student wrote a paragraph on one of the suggested topics or on one of his own choosing (*Angel of Mercy*). . . . Much discussion was stimulated for a written assignment on "What the Pacific Islands Need" (*West*

Indies). . . . Class wrote a paper on "Inventions in Our Lives Today" as a result of seeing the film and discussing the questions (*Story of Elias Howe*). . . . Wrote compositions after the second showing of the film (*People of Russia*). . . . I found the film stimulated people to do real thinking orally and on paper (*Something You Didn't Eat*). . . . Reference was made to interesting and picturesque sections of cities in preliminary discussion for themes, poems, paragraphs with possibility for the literary magazine (*Old and Modern New Orleans*)."

Among comments on other aspects of the writing experience there were several that indicated that the film was not considered sufficiently provocative to inspire written reactions. A few also felt the need for a greater number of suggested topics for writing. In summary, the teachers seemed to feel that the use of films to motivate writing was successful, and all but one found the suggested topics helpful.

Additional Comments

In addition to the four sections of the evaluation sheet as summarized above, there were a number of miscellaneous comments. These remarks were largely concerned with the problem that teachers had found in relating the subject matter of the films to the content of the English courses which were being taught.

Teachers had had the choice of films and times of showing, with booking limitations in both instances. Consequently, several of the comments indicated that

A scene from "The West Indies," Encyclopaedia Britannica Films, Inc.

the films had been appropriate to the course content. "This film was used in a sophomore unit on the scientific approach to everyday problems," wrote one user of *Something You Didn't Eat*, a film on nutrition. "This film really fitted into the unit of study," wrote another on the use of *India* in a study of world cultures, "and was invaluable." *Community Life in Williamsburg*, reported another, "fitted in nicely with a reading project based on American pioneer life."

However, there were other teachers who were perplexed about the place in the English classroom of

Copyright, Walt Disney Productions

The enemy invaders, black disease germs, are invading the human body in food entering the mouth. "Defense Against Invasion" treats the body as if it were a walled city.

films that were plainly non-literary in subject matter. "A good picture," was one comment on *Something You Didn't Eat*, "but with little correlation with English work." Other comments were:

"Simply used the film to stimulate interest in contemporary scene 200 years ago. Film did not "fit in" with work we were doing and therefore I eliminated time spent for formal writing and speaking activities (*Community Life in Williamsburg*). . . . This film would be of more value to a social living or orientation class than to a straight English group. I don't feel we made maximum use of it (*Old and Modern New Orleans*). . . . I feel there is need for more films which will correlate with the English field. These are largely films related to social studies (*India*)."

The alternatives that face the teacher in the choice of films to motivate English activities appear to be those either of finding films suitable to existing units of work or of selecting provocative films of general interest and justifying their use in terms of the resultant activities.

Finally there may be reported several summary comments on the project. "This experiment has proved," wrote one enthusiast, "that the motion picture is and can be of vital interest and aid in the English classroom." Two others said: "An excellent method of stimulating speech students to attack worthwhile problems," and "A most unusual and practical means of developing student interest and enthusiasm."

Putting "Participation" Into the Film

Intellectual participation is the only worthwhile participation that should be built into the teaching film

GODFREY ELLIOTT
Young America Films, New York

OF LATE we have heard much concerning the necessity of building into the teaching film a quality or factor called "student participation." Several experimental attempts have been made in this direction, none of which has led as yet to results satisfactory enough to be carried very far into actual practice. This writer believes that such attempts have been unsatisfactory because they have been made on the erroneous assumption that "participation" required physical activity on the part of the audience. A great many of the people who have tried to discuss and explain "student participation" have assumed it involved stopping the film for practice exercises of some sort. The thesis held here is that the only worthwhile participation that can or should be built into the teaching film is *intellectual participation*.

Let us look for a moment at the inherent qualities of the motion picture. When we seat a student in a darkened projection room, we are encouraging him to concentrate his attention upon the illuminated screen. When we project the motion picture upon that screen, we are striving deliberately to give him a sense of reality and continuity that is unique to the motion picture. His senses are being influenced: (1) by an especial environment which is conducive to his concentration, (2) by an especially selected stream of visual images designed to monopolize his attention, and (3) by the combination of screen and sound especially planned to capture his senses and pull him into the screen situation.

The viewing of a well constructed teaching film is a dynamic process. There is a feeling of adventure as it starts, a complete identity with film as it progresses, and a sense of dramatic satisfaction as it ends. It goes without saying, to those familiar with the motion picture in any of its forms, that one of the film's most important qualities is its ability to command the attention of the observer and, through a deliberately planned continuity of action and thought, to encourage him to project himself into the situation portrayed on the screen.

When we interrupt this continuity of thought and action on the screen, we automatically interrupt the continuity of thought in the student's mind. We place ourselves in the undesirable position of giving him in piece-meal fashion a mental and emotional experience which derives its very strength primarily from the continuity which we are breaking. It would seem, then, that to break this continuity of the motion picture is to take away from the film one of its chief powers and to make of it a teaching instrument of entirely different character. It is of no great significance that we are able to devise different ways of making such a break in the film, for the result is always the same. On

one hand, the break may amount to turning off the projector and turning on the room lights; on the other hand, it may be accomplished by inserting appropriate leader or other dead space footage in the film in order to give specific instructions for activity. In any case, we begin and end with the same desire to have the student leave the film momentarily in order to engage in physical activity, to solve a mental problem, to perform paper and pencil exercises, or to participate in group discussion. In either case, the net result is that we have stopped the flow of the film, and in doing so have destroyed one of its major powers. When we attempt to pick up this flow again, whether it is within a matter of seconds or minutes, we are in effect starting another film.

Let us assume, for example, that we are making a teaching film on the digestive system and that we plan to build paper and pencil "participation" into it. We divide the film into five sequences, each dealing with an important concept or with a major aspect of the same concept. Immediately following each sequence, we insert two or three questions which the student will answer by checking a response sheet handed to him at the beginning of the period. Our procedure does not call for physical interruption of the film, since the questions will remain on the screen long enough for him to check his answer. What have we accomplished? We have physically divided the film into five sections, each of which is followed by related questions. We are, thereby, concentrating the student's attention upon the five separate sequences. In doing so, we have split the subject into five distinct segments, and have lost the sense of orientation which is all-important to an understanding of the digestive system as a whole. We have extended the footage of the film, and thereby made it more expensive. It is open to question whether or not we have improved the ultimate teaching effectiveness of the film.

As another example, let us assume that we have a teaching film whose purpose is to teach the student how to use the try-square in the woodworking shop. It is essentially a skills film, for it includes specific directions in using the try-square and gives several demonstrations of its use. This film is planned so that it is stopped at three different points and the room lights turned on. At each such point, the observer is instructed to go through the demonstration shown him in the film. In other words, the film is stopped to permit practice of the skill just demonstrated. In this case, we have attempted to build participation into the film. What we have really done, is not make *one*

film on the try-square with participation exercises in it; we have made *three* separate films, each one designed to teach a specific thing. The fact that these three short films are physically tied together on the same reel does not necessarily make of them a film with continuity and effectiveness from beginning to end. Such procedure in building participation into the teaching film may apply in certain specialized instances, particularly in the skills film, but it is difficult to imagine it being applied usefully and economically to films designed to impart information or to mould attitudes.

This is not to say that under certain recognized conditions interruption of the film may serve learning to good advantage. It may well do so, but it is a special condition not generally obtaining to the teaching film as a motion picture form, and one which cannot be applied arbitrarily to all teaching films.

There is a form of participation that should be in every teaching film. It is *intellectual participation*. It is a quality or factor which compels the observer to *think* as the film progresses, a quality which encourages him to go through a predetermined pattern of mental exercises as he watches the film. It is the same quality which the classroom teacher strives constantly to put into every teaching situation. Intellectual participation in a teaching film is such an elusive quality that it is difficult to describe it, and it is no less difficult to be certain ahead of time that one has succeeded in putting it into the film. It involves the use of both screen and sound track to encourage and stimulate the mental processes of the audience. It is accomplished by the use of questions and challenges, especially put into the film to encourage the observer to participate intellectually and to make the film an active rather than a passive learning experience for him. Building intellectual participation into the film involves much more than the insertion of interrogatory sentences at scattered points throughout the film; it involves the interweaving of questions and challenges so that they produce a trend of thought which we want the student to follow; it involves the phrasing of narration so that he unconsciously accepts it as his own flow of thought; its ultimate effect is to make him a mental participant in the screen action.

Building intellectual participation into the teaching film is not as new as it may appear. If we look back upon the teaching films which we have rated as excellent

in the past, the chances are very great that we will recognize that we rated them thus because they had this quality of intellectual participation in them, even though we did not identify it at that precise moment. Intellectual participation is mandatory in any good teaching procedure, whether via lecture, book, demonstration, experimentation, or motion picture. It is a quality of teaching and learning which insures achievement on the part of the learner. Any other form of participation, save that of emotional and intellectual participation, tends to make of the motion picture an entirely different form from that in which it produces its greatest effect upon the observer. To expect, for example, the observer to pick up the flow of thought in a film after it has been broken for group or individual activity, is to expect the impossible of him. Such interruptions, instead of stimulating his mental activity, are more likely to be mental and emotional irritants which will act as serious deterrents to his learning what the film is attempting to teach him.

Most, if not all, of the pleas for putting participation into the teaching film have come from a recognition of the undesirable situation which exists when the film becomes a mere passive experience for the observer. The plea for such participation is a recognition of the fact that the film makes its greatest contribution when it becomes an active learning experience. It has been assumed, perhaps unfortunately, that active participation in the film comes about only through physical participation in some form. It should be appreciated that physical activity does not insure that the film will be an active learning experience; on the contrary, if not used judiciously, it may be the chief factor in defeating that purpose. If the teaching film is to be made a stimulant to the student's learning processes, then it appears that what we are talking about when we refer to participation is in reality *intellectual participation*; that what we prefer above all else is to maintain the film intact with all of its unique characteristics, and to imbue it with the added quality of intellectual stimulation which will compel the observer to keep his mind alert and working during the time the film is on the screen. If the educational field is to continue its search for better teaching films, as it certainly must, there is no more vitally important problem than that of investigating the design and uses of certain patterns of film construction which lead to intellectual participation on the part of the student.

A Valued Past

(Concluded from page 80)

and finally VISUAL EDUCATION, becoming the only magazine in the field. His faith in the fundamental soundness of visual education as a teaching tool remained unshaken through years which sometimes seemed dark for the cause of visual aids.

Nelson L. Greene served as a board member for various organizations in the visual field. He was president of the Department of Visual Instruction (DVI) of the National Education Association, 1935-37, and Executive Committee

member 1941-45. He delivered many addresses before educational conventions, clubs, and community meetings, both on visual education and on the theatrical "movie". In addition to the vast library of information which he left in past volumes of EDUCATIONAL SCREEN, many of his miscellaneous articles appeared in such publications as the BANKER'S MONTHLY, AMERICAN BANKER, ANNALS OF THE ACADEMY OF POLITICAL SCIENCE, VISUAL REVIEW.

He is survived by Marie Cote Greene, his widow, a daughter, Erminie Greene Huntress, and four brothers: Frank, John, Otto, and Stanley.

Great Circle is richly packed with information proving that air transport is revolutionizing travel routes and will consequently have a pronounced effect on international relations. The film stresses another point: that the old flat maps, such as Mercator's projection which distorts the polar regions, are no longer as useful as in the days when man did most of his global traveling by sea, near the equator. Today, trans-polar air routes are significant. Though these points are not especially new, they are extremely well presented in the film.

A comparison is made between ground and air travel. Two cyclists set off for a 40-mile outing. Simultaneously, two flyers start for Moscow 1,500 miles away.

Flying Makes New Neighbors

This film shows how great circle routes shorten distances and incidentally teaches some geography and map making.

Great Circle was produced by Edgar Anstey for the British Information Services, under the direction of Napier Bell. It is distributed by the International Film Bureau, Inc., 84 East Randolph St., Chicago.

Not only is the airplane shown as faster than other forms of transportation but also as able to take the shortest route between two places. On the globe, the shortest route is not a straight line, but rather the great circle through the two points: starting and destination. The equator is a great circle; however, it is only one of an infinite number of great circles which can be drawn. A great circle is a circumference, a circle whose plane passes through the center of the earth.

The airplane has overcome all the natural barriers—oceans and ice fields; deserts and mountains. The people who fly must see that it is used to overcome barriers of language, culture, and religion, for the airplane forces us to look at the world as a whole.

(Concluded on page 113).

The flyers take the shortest route to their destination, passing over obstacles while the cyclists follow a roundabout course because of hills and rivers.

The flyers reach Moscow at the same time that the cyclists complete their 40-mile trip.

Today, this flat map is standard, despite its distortion of the polar regions.

The sea route to India is long and tortuous. The direct route by air is 4,000 miles shorter.

On such a map, a straight line is not the shortest distance between two points.

The shortest route between two places is along the great circle joining them.

With four-fifths of the world's land in the N. Hemisphere, north polar regions become important.

This world map was satisfactory to the ancient Greeks, for their world centered about the Mediterranean Sea.

Yes, flying makes new neighbors, but new maps are needed. On a globe, it is clear that the shortest distance to western Asia is via Alaska and Siberia.

Visual Education Aids Historical Societies

Increase the value of museum trips by specific application to course, by pre-visitation discussion, and by a subsequent classroom forum.

MELVILLE J. BOYER, Secretary
Lehigh County Historical Society
Allentown, Pennsylvania

AS MORE teachers become familiar with state history and its local significance, they will want to turn to their county historical societies for museum and library aids. A further assumption follows that before teachers conduct pupil groups to these local county historical society buildings they should themselves be informed of the educational opportunities and limitations of the societies in question.

The recent experiment in two visual education classes taught by the writer at Muhlenberg College during the winter and summer terms (1946) may offer helpful suggestions both to our county societies and to instructors of visual aid college courses. It is an interesting coincidence in this connection that Pennsylvania teachers are expected to certify today in Pennsylvania History and also, for their state permanent teaching certificates, to present credits in Visual Education. Since the museum is regarded, next to the school journey, second in the scale of concreteness to abstractness, the two college classes (a total of 38 men and women) were each asked to meet for a three-hour equivalent lecture period at Trout Hall, home of The Lehigh County Historical Society, Allentown, Pa. Here a lecture was given on the functions of a local historical society as a depository for local county archives, manuscripts, pioneer artifacts, and similar items, which included an exhibit and explanation of a select range of historical objects which might be of aid in teaching a wide range of courses in elementary and secondary school curricula.

It was noted that not one of those who were employed teachers had ever formally set up for their pupil groups a plan of museum visitation, providing for class preparation preliminary to the visit, for a program while at the museum, nor for a follow-up class discussion and/or testing procedure. The writer of this paper admittedly served in this experiment in a doubly fortuitous role—as instructor of the two college classes mentioned and as curator of the Lehigh County Historical Society. In the latter role, he was aware of the fact that teachers too frequently, without any prior familiarity with the Society's holdings, conduct poorly organized pupil groups to the museum without any specific motivation whatever. No wonder custodians and curators are often relieved when such children leave. A palliative sometimes has been for teachers in charge to pair up, lock-step children, and afford them no individuality of interest.

The 38 college men and women were requested to draw up a formal-type lesson plan for a specific pupil visitation situation. They were to be guided by their particular subject matter taught or by their prospective teaching interest. After the museum session, a surprising range of subject-field plans were submitted.

Some lesson plans incorporated the following subjects which might be vitalized concretely by a school group visit: U.S. history, home economics, German, art, literature, shop courses (wood-working, printing, architecture, machine shop), geography, mathematics, and even botany. The general basic pattern of these lesson plans provided for:

- A. Specific application to standard elementary or secondary course content.
- B. Pre-visitation discussion of what the class might expect to view or examine, and significance to learning situation.
- C. Details of making the trip.
- D. Importance of decorum and respect for the objects studied, also importance of taking notes.
- E. Subsequent school classroom discussion.

School children thus conducted by a teacher herself already familiar with the museum are not deprived of a general visit to the museum while they have the scope of their visit narrowed to a specific area of observation. The home economics teacher in her lesson plan noted all the types of pioneer lighting devices from tallow candle molds, fat lamps, to lanterns used on early carriages and autos. Another such teacher centered her entire visit around early Pennsylvania-German kitchen utensils—waffle irons, sad irons, coffee roasters, griddles, bake oven utensils, etc. The mathematics teacher focused attention on early textbooks in arithmetic, noting the nature of the problems offered, while the printing teacher also consulted the library and manuscripts for early title page formats, Fraktur work, parchment deeds, and birth and baptismal certificates. The plan of visit of the botany teacher went farthest afield for he had his hypothetical class make a list of the types of trees in the park around the museum including ink-splatter leaf outlines, but at any rate there was a point of motivation to the trip to the society.

All the college students in Visual Education were enthusiastic for the opportunity to have this kind of introduction to the local county historical society and to discover a use for it. Many who came from other counties and a few from New Jersey stated they would explore their local society and use it for educational purposes. The writer is aware of the excellent services to school teachers of a few Pennsylvania county historical societies, but in this experiment, the responsibility was placed upon the teachers to find the rich possibilities in concrete learning situations in some fields. It may follow that where societies do not have the personnel to provide the service the teachers themselves should affiliate themselves as members and their help may be welcomed by society officers.

(Concluded on page 89)

Utica Schools Own a Film Library

EDUCATORS who are experimenting with a program of visual education as an aid to ordinary teaching methods will be interested in studying the growth and development of the visual aid program in the school system of Utica, New York.

Championed by Superintendent A. J. Burdick, this program gained impetus more than seven years ago when Burdick was instrumental in organizing the Utica Film Exchange, a film library owned and operated by Utica and neighboring schools. This exchange now owns 200 reels of sound film that circulate constantly among 10 member schools.

This exchange is managed by S. W. Gerrish, who recently was appointed full-time supervisor of visual education in the Utica school system. Before moving up to his present post, Gerrish had taught electricity in the Boys Trade School for 24 years. Gerrish remembers that it was a Disney educational film on electricity that first impressed upon him the possibilities of movies as a teaching tool. "Why, that film taught more electricity in 20 minutes than I could teach in six months," he recalls.

At that time, the Utica school system's visual aid equipment consisted of two old projectors, and 25 reels of silent film. Gerrish asked if he could take charge of them. Gradually with the cooperation and encouragement of Superintendent Burdick and some of the teachers who saw the possibilities of visual aids, Gerrish built up the system's stock of equipment to its present level; two sound projectors in each of the high schools, one sound projector in each of four elementary schools, three portable sound projectors and two portable silent projectors.

The system's film library, in addition to the films obtained from the Utica Film Exchange, U. S. Office of Education, State Department of Commerce, and various rental libraries, includes 15 reels of sound film, about 1000 slides and 121 reels of silent film. In this last category are "The Chronicles of America", a 47-reel set of social studies photoplays with accompanying

Victor Animatograph Corp.
As an aid to retention, Miss Martin instructs pupils for what to watch.

manuals, purchased from the Yale University Press Film Service by a group of anonymous donors.

The Board of Education proposes to place motion picture equipment in every school. "We aim to use visual aids in the Utica schools wherever they will aid instruction," explains Superintendent Burdick.

Mr. Gerrish instructs teachers in the operation of projectors, and advises them on just how to work film and slides into their teaching routines. Gerrish also trains students to become skilled projectionists.

Of all of the visual aids, Gerrish believes the motion picture offers the widest possibilities. "It can bring the past to the present, as in the case of photoplays or newsreels," he explains. "It can bring the future to the present by means of cartooning or animated photography. It can make the slow fast so that even the growth of a plant can be studied. It can make the fast slow. It can make the abstract idea concrete by animation, as in the instance of Disney making characters of watts and volts in his electricity film. And easiest of all it can bring the distant places of the earth to the classroom in full color and sound."

(Concluded from page 88)

Only as school children visit these valuable local historical depositories *with specific objectives* in mind, will there be cultivated an appreciation for them, their functions, and the culture they preserve. Teachers must be freely invited by local historical societies to make use of their facilities. State legislation allows generous appropriations by county commissioners, city councils, and school districts to county historical societies that they might render educational services. But teachers should not expect to conduct pupils on unorganized, unplanned, unmotivated visits. Where transportation problems are not too difficult, the dearth of local history source materials may be met by planned use of these institutions.

Victor Animatograph Corp.
School-film-exchange manager Gerrish and Principal Wallace Hixson load one of Utica's projectors into a station wagon.

School Made Motion Pictures

Of Interest to Producers of School Made Films

DAVID SCHNEIDER, Editor
Evander Childs High School
New York City

A supervisor, observing a class lesson, can tell with almost one hundred percent accuracy, how much planning went into the preparation of that lesson. Planning, to review very briefly, involves careful selection of suitable material to fit the particular needs of the pupils to be taught. In the act of selection, discarding the irrelevant, the non-essentials, which would mar an otherwise good lesson, is a time consuming, yet, very important step. Finally, there is the organization of materials for proper, timely, presentation to the audience.

What has all this to do with School Made Films? Simply this: that a film can be as good as the planning that preceded it. No class lesson can be properly taught without adequately prepared plans. The simile aptly applies to the production of films—and to carry the argument to its ultimate conclusion, it can not too strongly be reiterated, that just as the best text books are written by those who teach the subject, the better teaching films should be prepared by those who know best how to teach its contents.

"School Days," the interpretive film, describing the Madison, Wisconsin Public School System, is an example of a very carefully planned, purposeful, film. The production of this film required a great deal of cooperation, time, skill and labor; but all these efforts have been rewarded in the knowledge that a job has been "well done". To Miss Margaret Parham, Director of Public Interpretation, we are indebted for the following account.

Taking Interpretive School Movies

"SCHOOL Days", an interpretive movie of the Madison (Wisconsin) public elementary schools, has recently been completed and was screened for the first time for the Parent-Teacher Associations during the 1946 American Education Week. The motion pictures are in 16 mm. color, silent, and contain about 1200 feet of film.

The movie is a product of a cooperative project of the Madison Education Association and the Board of Education; the Association paying the production costs and the Board furnishing the equipment. Staff members planned and took the movie, edited it, prepared the titles and script, partly on school time and partly on their own.

Second in a series of three interpretive colored movies, the elementary school motion picture shows a cross section of activities in that division of the school system. Its primary purpose is to picture school activities for local groups of adults in order to increase their knowledge, understanding and appreciation of how children learn in schools today.

Several years old now, the Junior High School movie has been extensively shown before local groups and is still used for orientation programs for prospective junior high school pupils. Work on the Senior High School film has just begun.

Because of the cost and labor in the elementary motion picture, the movie committee believed that a second copy would be a wise investment. The Madison Education Association provided funds for this purpose at the request of the movie chairman.

The elementary movie committee was made up of the chairman, a man with amateur movie making experience, a junior high school teacher who assisted in taking the motion pictures, 16 elementary school teachers, the curriculum consultant, and the director of

"School Days" is an interpretive film, describing the Madison, Wisconsin Public School System.

public interpretation. Included on the committee were teachers who volunteered to help, who had amateur experience in cinematography, or who had especially interesting projects to portray.

In selecting the projects to be included in the movies, the committee chose approximately 20 activities, for the most part typical elementary activities in 11 schools. The committee decided to show each type of activity but once—good filming technique does not tolerate repetition—though it might occur at all grade levels.

Arranged in grade sequence, the film opens with a picture of kindergarten children removing their wraps, and closes with boys of the patrol squad helping a group of first grade pupils cross the streets and head for home.

The following is a complete list of all the activities, by grades pictured in the movie:

1. Kindergarten Activities.
2. First Grade—Reading lesson.
3. Second Grade—Excursion to the fire station; milk, lunch.
4. Third Grade—Social Studies unit on Wool.
5. Fourth Grade—Science unit on Birds, Rhythm in Music, Handwriting, Recess.
6. Fifth Grade—Spelling, Fire Drill, Library Methods, Arithmetic, Instrumental Music.
7. Sixth Grade—Speech, Art, Current Events, Physical Education, Safety.

The major problems of the committee were as follows: planning the movie to show the development of certain skills, understandings, and attitudes on the part of the children; coordinating the time of production staff workers with the time the project was available for filming.

Since the committee held rigidly to the use of the tripod, light meter and tape measure, production diffi-

Each type of activity was shown but once in "School Days."

culties were few, except for the burning of fuses, particularly in the older school buildings.

Producing a school movie is a difficult task requiring skill, patience, and physical labor, but its recompense is found in a good motion picture film that can hold both the lay and the educational audiences.

Audio-Visual Scholarships

Ten colleges and universities in addition to the University of Chicago have been awarded grants for the Encyclopaedia Britannica Films' third annual summer tuition scholarships, it was announced by Stephen M. Corey, chairman of a committee selecting schools to receive the grants. Funds made available by Encyclopaedia Britannica will enable 102 carefully selected teachers and administrators to enroll in summer courses in the utilization of audio-visual instructional materials in the classroom.

Corey, the director of the center for study of audio-visual materials at the University of Chicago, and his committee of four other educators active in the visual education field made the selection. Members of Corey's committee were Charles F. Hoban, Jr., of Philadelphia Board of Education; L. C. Larson of Indiana University; Francis W. Noel of the California State Department of Education, Sacramento; and W. A. Wittich of the University of Wisconsin.

Teachers who wish to apply for the scholarships should send applications directly to administrators of

the selected schools before May 1. The only requirement is that educators who apply must have special responsibility for audio-visual instruction in conjunction with their regular positions. The scholarships cover tuition for the summer-school sessions. Selected schools and the administrators of the program are University of California (Berkeley), Frank N. Freeman, Dean of the School of Education; University of Chicago, Stephen M. Corey; University of Texas (Austin), B. F. Holland, School of Education; University of Syracuse, Sandra George, Director Education Film Library; Central Michigan College of Education (Mt. Pleasant), Mr. J. W. Foust; University of Minnesota, Paul Wendt, Director of Visual Education; University of Nebraska, Frank E. Sorenson, Teachers College; Louisiana State (Baton Rouge), B. F. Mitchell, Department of Education; University of Southern California, Osman R. Hull, Dean of School of Education; Leland Stanford University, A. John Bartky, Dean of School of Education; and University of Kansas, (Lawrence), George B. Smith, Dean of School of Education.

Meet Your Federal Government

(Young America Films, 18 East 41st Street, New York City 17). 16mm sound, 15 minutes, black and white. Sale price \$45. Discussion guide available.

This film gives a detailed description of how our federal government operates and a brief discussion of the meaning of the government to the citizens of the United States. The story is told by Bill Miller to a group of his schoolmates. Bill has just returned from a trip to Washington where his Uncle, a Congressman, showed him the various governmental buildings and discussed the function of each branch of government housed there. Their tour of Washington begins with the Library of Congress where they see the original Constitution of the United States and Bill's Uncle explains the fundamental structure of our government as provided for by the Constitution. They next visit the Capitol Building where, as Congressman Miller explains to Bill the legislative branch of the government is housed. He also explains the steps involved in making a bill into a law. Animated drawings, here as upon other occasions, are used to outline the steps. Next they visit the White House which Bill learns is both the home and office of the President and represents the executive branch of the government. The Supreme Court Building next receives their consideration. Congressman Miller explains to Bill that the Supreme Court interprets the Constitution and passes on the constitutionality of the laws. A summary of the functions of the three main branches points out that these three work together under a system of checks and balances. In the final sequence Bill's Uncle shows him the memorials to Lincoln, Jefferson, and Washington and emphasizes the greatness of their contributions to our government and the constant challenge which a democratic form of government presents to its citizens.

Committee Appraisal

This film, recommended for use in junior and senior high school social studies, is a comprehensive but not too detailed treatment of the branches and operations of the Federal Government. Its somewhat general treatment of the subject makes the film useful either for introduction to or review of a unit on the federal government. The inspirational ending is well done and should be effective in impressing future citizens with

their inheritance from the past and their responsibilities to the future. Likewise the idea of teamwork among the various branches is well developed. A few such generalizations in the film, as the White House is the executive department, will need to be supplemented with further information by the leader.

British Information Services
"Children's Charter" stresses the increased opportunities for children, provided under the new English law.

Children's Charter

(British Information Service, 360 N. Michigan Ave., Chicago, Illinois) 17 min., 16mm, sound, black and white. Sale price \$37.50.

This film explains and illustrates the working of the new English law on education passed by Parliament in 1944 and known as The Children's Charter. Scenes show that opportunities for many children had, prior to 1944, been limited at the age of eleven by the inability to pass examinations. Under the new plan, at age eleven, children are given assistance in selecting one of three types of secondary education: (1) the technical schools which educate for the professions; (2) the grammar schools which prepare for the liberal arts colleges; and (3) general schools which give children an all-around education particularly in the practical arts. Appropriate guidance and classroom situations are pictured, showing the working of the new plan.

Some activities are shown in the continuation colleges which provide an opportunity for education one day out of the week from the ages of 16 to 18. Attendance at these continuation colleges is also mandatory.

Committee Appraisal

The film presents an interesting explanation of school organization in England. Appropriate scenes from within the classrooms illustrate the objectives of the various types of schools. College classes in comparative education will find this film a particularly useful one. Other classes in college, of education and teachers groups generally will find the film stimulating from the viewpoint of guidance, curriculum and adult education.

Young America Films
"Meet Your Federal Government"—the legislative branch.

Wings to Ireland

(Pan American World Airways, 135 E. 42nd Street, New York, N. Y.) 31 minutes, sound, color. Apply to producer for rental sources and terms governing purchase. Discussion guide available.

The opening scene shows a Pan-American Clipper in flight. In the cabin of the plane Dick Dillon is writing a letter to his travel agent back in the States. "We had planned to stay in Ireland a few days," writes Dick. "But we actually stayed two weeks. Why? I'll tell you." Then one hears Dick describe the adventures of the family—his wife Kay, his young son Mickey, and himself.

They land at the airport in Shannon, hire a little car and drive north to Cong and the Ashford Castle in County Mayo. They stop at this castle, which now has been made into a hotel. Farther on they watch village folk, spinning and weaving wool into brilliantly colored homespun. As they move on, they hear a mother crooning her baby to sleep with a Gaelic lullaby. The next stop is the Cliffs of Moher. They travel through the Valley of the Shannon. An old man explains how several of them go together and thatch a roof in a short time.

In Killarney, they see some of the friendly people and some beautiful gardens containing a great variety of blossoms. In the Kerry country, they take a horseback ride through the Gap of Dunloe. On the trip back, they take a boat through the three blue lakes of Killarney, and Mickey gets a thrill when they "shoot the rapids" between two of the lakes. Next they visit Cork where they hear a tiny Irish girl recite the poem, "Those Shandon Bells," in true dialect. Just outside of Cork, they visit Blarney Castle, and Mickey insists on kissing the Blarney Stone.

As they travel through the plains of Tipperary, they visit the Rock of Cashel, the ancient cathedral made famous by St. Patrick, and a famous racing-horse farm. Kay is permitted to make a special wish when she reaches around the Celtic Cross in the valley of Glendelough.

In Dublin they see the stately old mansions and Trinity College founded in 1591 by Queen Elizabeth. In the library is the beautiful Book of Kells, one of the best examples of illuminated manuscript writing in the world. They visit the Abbey Theatre, the dog and the horse races at Phoenix Park, an exciting hurley match at Croke Park, and a horse show. Their visit in Ireland is culminated by a fox hunt and an Irish festival.

Committee Appraisal

The excellent color photography is used to advantage in this travelogue film to show the natural beauty and the historically significant points of Ireland, as well as the lovable and cheerful disposition of the Irish people. The film should be useful and interesting to groups studying the geography, history, literature, music or art of Ireland. It is recommended for use on intermediate, junior high school, high school, and adult

Encyclopaedia Britannica Films
Paper-making from logs to paper products is shown in "Paper."

Encyclopaedia Britannica Films
Clean white pulp is run through rollers, ironed, and wound on a roll as "Paper."

levels. Also, because of its warmth and general interest, the film might well be used for program purposes in school or adult groups. The usefulness of the film for classroom purposes is somewhat decreased because only the beautiful and lovely side of life is shown.

Paper

(Encyclopaedia Britannica Films, Inc., 20 North Wacker Drive, Chicago, Illinois) 10 min., sound, black and white. Sale price \$50 less 10% educational discount. Discussion guide available.

The film traces the processes involved in making paper, from the marking of the tress to be cut to the cutting of sheets of paper into desired sizes. Beginning with shots of paper products, the film indicates that almost all kinds of paper come from trees. It then begins by showing woodsmen marking the trees, felling them, trimming the branches, and dragging them out to the edge of the forest. A gasoline-engine saw is used to cut the logs into short lengths.

In the winter, they are drawn on sleds to the main roads where trucks pick them up and carry them to the river. In the spring the river carries them downstream to the paper mill. A conveyor carries the logs to a machine which takes off the bark. They tumble out of this machine onto a conveyor which takes them to another machine where they are cut into chips. The chips are then washed and tossed on a sifter which lets those of the right size fall through and go on to the pulp mill. Here they are placed in an enormous tank like a pressure cooker and cooked in an acid.

Next they go to the bleaching tank where sprays of water wash the pulp. Samples of the pulp are sent to the laboratory for such tests as strength and reaction to the paper-making machine. The clean white pulp which passes the test goes into a tank of chemicals to make it smooth. Next the wet pulp goes into a paper-making machine and is formed into a thin layer which goes across a screen for the purpose of mixing the fiber and draining the water. The layer of moist fibers holds together while it is carried through a series of rollers.

Nearly a mile of paper is mounted on each roll and later unwound through knives which cut sheets of the required sizes. The film ends with commentary to the effect that this paper from trees will be made into many useful paper products.

Committee Appraisal:

The film relates in a very clear, concise, and well-organized fashion the story of the manufacture of paper. The close-up photography and moderate tempo of the film greatly aid an understanding of the processes. It is recommended for use by intermediate and junior high school classes in social studies and high school journalism classes interested in paper-making.

The Curriculum Clinic

Films That Meet Curriculum Needs

PAUL C. REED, Editor
Director, Visual and Radio Education
Rochester Public Schools, New York

ONE of the very first sessions at the Michigan Audio-Visual Conference, held in Detroit, February 19-21, was devoted to a discussion of "Films That Meet Curriculum Needs." I wish that I could now report on what was said at that meeting. But I cannot, because this is being written a few weeks prior to that meeting. I can, however, set down here a few things that I hope will be said, and in so doing will refer to what seems to me to be one of the most significant books that has been written in the audio-visual field.

Probably more time, talent, and money than ever before is now being spent in an effort to determine what films will meet curriculum needs. Motivated by the successful use of pictures in the war training program, and stimulated by the prospects of the coming visual era in our schools, dozens of new film producing companies have been organized and older companies have been lifting their sights with stepped-up production schedules. The one question for which all of these enterprises are seeking an answer is, "What films are needed?"

Every new educational picture announced is someone's specific answer to that question, and the production plans of these companies have been based upon some formula or rule of thumb for determining the curriculum needs. My guess is, that for the most part these needs are determined by gathering data, either statistically or through subjective judgments, on what subjects are being taught in what schools at what grade levels. Then on the basis of that information a film is planned that will relate to it, or at least one that will have a title that will match a "curriculum need."

But will this kind of thinking and planning produce the films that really meet curriculum needs? Will this kind of planning produce the kind of materials that will fulfill the promise of the audio-visual teaching era that so many of us believe lies just ahead?

Before stating a negative answer to those two questions, let me suggest one more factor for consideration. The greatest single obstacle to a full-throttled advance in the use of audio-visual materials is the persistence in the minds of most educators of the fallacious concept that motion pictures, filmstrips, and other visual materials are but "supplementary aids" to the curriculum. They conceive of these materials as having only that function; they preview films and evaluate them on that basis; and purchases are made in terms of illustrating a particular course or unit of study in the curriculum. The need for films to meet a curriculum is too generally considered as a need for illustrating, decorating, enriching materials.

Consequently there is set up a little production-distribution-utilization circle that so far is insignificant as compared to the great cycle of production and utili-

zation that should result when audio-visual materials are produced and used as *basic materials of instruction*.

So within this framework a film producer produces a "supplementary aid" for an existing market that is interested in acquiring a "supplementary aid." He makes, for instance, a film on communication for the third grade and two on water for junior high general science and a film on football for high school use. Films planned in this way, on such a piece-meal, spotty basis, can never go very far toward really meeting curriculum needs.

What the curriculum needs is new and better instructional materials that are planned in careful and continuous sequence; that are provided in sufficient quantity so that whole study units and whole courses may be based upon related visual materials; that are produced with a full understanding of the attitudes, skills, and knowledge outcomes that are expected from curriculum experience; and that are planned and produced using all that is known about how young people learn and also the technical know-how for producing excellent motion pictures.

There are some who look to Hollywood for the salvation of the educational motion picture. But those who will see the most, I believe, are those who look to the experience and methods of the textbook publishers. They have succeeded in making materials to fill curriculum needs; in fact they often make the curriculum. The domination of curriculum content and methods by textbook publishers can be clearly seen by anyone who takes the trouble to examine the reading or arithmetic or science program in most any school system. Publishers have built complete programs that absolutely govern what is taught and how it is taught in many school systems. Producers of audio-visual materials must also build *complete* programs if they are to produce the materials that meet curriculum needs. Potentially they can provide the *basic materials for instruction* that will enable teachers to do a far better teaching job than ever before.

But don't misunderstand. I like books. In fact, in the first paragraph I intimated I would even mention one by name. It is a book that stimulated much that has been written here. In my opinion it is perhaps the most significant book that has been written for producers of audio-visual materials and visual educationists. It is a book to be read and studied by these two groups, and one not to be passed over lightly by anyone who has any administrative responsibility for the use of films in schools.

Charlie Hoban's "Movies That Teach"* is a contribution that leads the thinking in the educational film field forward in great strides. In seven brief and readable chapters he has synthesized the total war

time experience in the use of educational motion pictures. With keen analytical ability he has isolated the significant aspects of this great program, and has then proceeded to distill this to fundamental principles applicable to the peacetime civilian educational program. This delicate operation has been executed with consummate skill.

School administrators and visual educationists will want to concentrate their attentions upon chapters 6 and 7, "Distribution and Film Library Service", and "Conditions of Good Use". But chapters 4 and 5, "Approaches to New Film Production" and "Teaching Techniques in Films" should be *must* reading for all concerned with evaluation and selection of educational motion pictures. For some it will be the ready reference to those ideas about what educational

films should be that they have always tried to put into words. For others it will represent the kind of sound thinking about educational pictures that they secretly wish was theirs. For many it will be the basis for new and much higher standards for judging and evaluating educational motion pictures.

Producers of educational motion pictures who have not yet found all the answers to the question of what films are needed to meet curriculum needs, may find some fresh viewpoints and some vitally stimulating thoughts in Hoban's book. They may find some definite guides to the production of more useful films. It may be that the films that will be most successful in meeting curriculum needs are movies that teach.

* Hoban, Charles F. Jr., "Movies That Teach". New York, Dryden Press, 1946.

Third Annual Museum Audio-Visual Aids Institute

IRENE F. CYPHER, Ph. D.
Ass't. Professor of Education,
Department of Communications,
New York University, and
GRACE F. RAMSEY, Ph. D.
Curator of School Relations,
Department of Education,
The American Museum of Natural History

JANUARY once again brought to New York City the Annual Audio-Visual Aids Institute. This yearly meeting was held for the third consecutive year at the American Museum of Natural History on January 10th and 11th, 1947. For this Institute the emphasis was on motion pictures, and the many ways in which they are used today as part of the school life of modern youth. The theme of the Institute was "Methods and Techniques for the Production of School-Made Motion Pictures."

Teaching Films Preview

On Friday afternoon, January 10th, the first session was devoted to a preview showing of new teaching films. The films shown were, *Wings to Ireland* (Pan-American Airways), *Building America's Houses* (Encyclopedia Britannica), *Flow of Electricity* (Young America Films), *Arranging the Tea Table* (Simmel-Meservey), *William Primrose* (Viking Films), and *Maps Are Fun* (Coronet). This preview session was exceptionally well attended, indicating that teachers realize the need of previewing films before using them in schools. A brief discussion period led by Dr. Irene F. Cypher followed. It was evident from the nature of remarks and comments that teachers are applying more critical standards in their selection of films and that the motion picture is receiving the consideration it warrants as an effective tool of instruction.

On Friday evening the session was given over to a preview of a new feature film *My Brother Talks To Horses*, shortly to be released by Metro-Goldwyn-Mayer. This is a fantasy dealing with a small boy's love for horses and his rather uncanny and short-lived ability to "talk" to them. "Butch" Jenkins, the popular young freckle-faced actor, has the leading role, and the film is one which could be recommended for audiences

of all ages. It is filled with laugh-provoking scenes, but in its role of fantasy deals cleverly with a number of near-serious situations. The entire presentation is quite refreshing, and the direction and photography excellent.

Saturday Panel Programs

The highlight of interest for the Saturday morning program was the competition for the museum "Oscar." At the 1946 Institute the following announcement was made: "The American Museum of Natural History is going to let school film makers compete for a special "Oscar" designed by artists at the Museum. The competition will be open to all schools. Your film must be 100 feet long or less. It must be planned and produced by pupils. To enter the competition a film must be sent to Dr. Grace F. Ramsey at the

Miss Esther Katz, George Washington High School receives "Oscar" award for best school-made motion picture.

Museum by December 15, 1946, and a selection of five will be made for the showing at the Institute meeting next January, 1947. The audience will make the choice of the winning film. The 'Oscar' will be presented to the winner."

This contest was proposed by Dr. Frank M. Wheat of George Washington High School, New York City. Inasmuch as the Museum was heartily in accord with the nature of the contest, letters announcing it were sent to high schools in all parts of the country. Students in many schools today are keenly interested in making motion pictures. Despite the difficulties still attendant upon securing film, hazards encountered in having film processed, and changing personnel in faculty supervision, a number of entries were received.

Five films were selected for showing at the January 11th session by a panel of judges consisting of Maurice U. Ames, Alfred D. Beck, and Rita Hochheimer, all of the New York City Board of Education, Thomas Brandon of Brandon Films, Irene F. Cypher of New York University, John J. Jenkins of Bronxville Public Schools, and Grace F. Ramsey of the American Museum of Natural History.

On Saturday morning the first program item was a demonstration of lighting techniques for amateur photography by Leo J. Heffernan. Mr. Heffernan is a Fellow of the Amateur Cinematographers League and maker of numerous amateur films. His demonstration was practical and valuable for the amateur photographer and particularly appropriate for the audience which had gathered to see what student amateur cinematographers could produce.

Then came the **Big Event!** The five films selected for the competition were shown, without comment, and the audience supplied with ballots on which to indicate their choice for winner. The films shown were

1. *The Pirates Come to Monroe*, from James Monroe H. S., Bronx, N. Y.
2. *Money Magic*, from Abr. Lincoln H. S., Brooklyn, N. Y.
3. *Introduction to Poetry*, from Geo. Washington H. S., N. Y. C.
4. *Life in Colonial New England*, from Everett Voc. H. S., Everett, Mass.
5. *Emphasis on Science*, from Geo. Washington H. S., N. Y. C.

Dr. Paul A. Kennedy, Assistant Superintendent of Schools of New York City, who served as Chairman of this session, read to the audience the letter outlining the competition and called attention to points which the judges wished to have kept in mind in voting, namely: 1. Photography (composition, lighting, focusing, titling or narration)—2. Story (central theme, continuity, imagination, direction)—3. Interest Value (to pupils of school making film, to pupils of any school, to non-school audience).

While the votes were being counted students and faculty advisors who participated in the competition told of some of the problems encountered while making the pictures. It was plainly apparent that all shared a common enthusiasm for film-making, and all believed

it a worthwhile activity to include as a part of life and training in school.

Then, at last *the* announcement! By an overwhelming majority, the award for first place was given to *Emphasis on Science* made by the Arista Film Committee of George Washington High School, New York City. This production, in color, showed students participating in various activities and experiments as part of their training in science classes. The photography was excellent, the study well planned and carried out and the final picture as a whole interesting to students and adults alike.

Mr. Wayne M. Faunce, Vice-Director of the Museum, then presented the "Oscar" to Miss Esther Katz, representative from George Washington High School. The award was in the form of a bronze plaque depicting an eagle on a rock and was prepared by Ludwig Ferraglio, sculptor of the staff of the Museum Department of Education.

To show what the student amateur producers might strive to imitate in the future, the prize winning film in the Amateur Cinematographers contest for 1946 was then shown. It was titled "Hail British Columbia" and was the work of Mr. Heffernan who had given the demonstration of lighting techniques.

General Session

An informal buffet luncheon was served in the Museum and then the afternoon session met under the Chairmanship of Dr. Charles Russell, Chairman of the Department of Education of the Museum. The first speaker, Mr. Roger Albright, Director of Educational Services for the Motion Picture Association of America, gave a talk on "The Motion Picture Industry Looks at Education." He recounted some of the experiences of the motion picture industry when pictures were first made for educational groups. He then told of new developments in this field today and the problems facing the modern producer of 16 mm motion pictures for educational use. The second speaker was Mr. Gardner Hart, Director, Commission on Motion Pictures for the American Council on Education. Mr. Hart gave a description of the experiments being conducted by his group. These experiments are being made to find out what should be included in training films and whether such films are to be used for introducing and stimulating new learning material, in presenting new matter or in summarizing it. Mr. Hart emphasized the importance to the instructor, when selecting films, of knowing which of these factors he wishes a film to accomplish.

The 1947 Institute was well attended and from audience comments and reactions overheard at the various sessions, was a worthwhile meeting. Interest is indeed great in audio-visual instruction today, and educational workers need to get together to discuss and consider their problems. What is needed is practical examples of how to use these materials in teaching situations. It is to be hoped that in 1948 the Institute will afford still further opportunity for such consideration and discussion.

The Church Department

A Monthly Service

WILLIAM S. HOCKMAN, Editor
2043 Mars Ave., Lakewood, Ohio

A Job for the P. F. C.

THE Protestant Film Commission can hit pay-dirt if it will help the churches in their study of China next year. While it talks of wonderful things to come, the P.F.C. ought to roll up its sleeves and pitch into a job which, if well done, will help it earn the support it wants for larger things.

What is this job? It has several angles. The first is the rounding up of the best films and other visual materials on China now in existence. These materials should be edited, duplicated, and gotten out to the distributors who will serve the local churches across the country.

The second angle is the production of new materials. The churches need a good film on China. Present films are not adequate. A new film is needed for the church-wide study of China. It need not be a sound film. It can be a silent film, well structured pictorially, and soundly titled. It should have a utilization guide, adjusted to several kinds of objectives and to several age levels. If a sound version could be afforded, it would increase the demand very greatly.

This film should be new. It should be shot in China. Its general contents, scope, angle, scenario should be thought out and developed in detail through cooperative thinking here. A carefully instructed crew of first-rate cameramen could be sent to do the shooting.

This film need not be in color. However, money for color will pay greater dividends in utilization than money for sound—if it is a case of one or the other of these.

The P.F.C. should ascertain the number of prints needed to supply the religious film libraries, denominational and independent distributors. These prints should be sold outright. The price should be just high enough to cover the cost of production with a little margin. Hundreds of these prints should be sold. Many local distributors will need to stock several prints, and will do so if the cost is kept to the point where a reasonable number of rentals will meet it.

If the denominations, the mission councils, the Missionary Education Movement, and all earnest Christians want China studied next year, they should turn *now* to their agency, The P.F.C., and commission it to do the job of organizing and producing the basic visual materials to undergird this study. A visually-minded church will want more than textbooks, and it will begin to ask why the P.F.C. does not get underway.

The third job for the P.F.C. (or the Religious Film Association) is the compiling and publishing of a comprehensive guide to the existing visual resources for the mission study themes for 1947-1948. This booklet should carry utilization suggestions on a few of the

visual aids of superior value to the study, and these suggestions should be practical and adjusted to several kinds of churches, groups, and purposes. This visual resource book should be made widely available through the distribution channels of the Protestant enterprise.

In visual education, church cooperation must move from the talk stage to action. The sooner the better. Here is just the job for the P.F.C. In doing it well, both it and the churches will be ready for larger things.

Why T.F.C. Films Are Not Available to the Churches

(An authoritative statement giving the basic facts on the negotiations between the International Council of Religious Education and Teaching Films Custodians.—**Editor**)

WHY are T.F.C. films not available to the churches? A rumor, in wide circulation, places the blame upon the International Council and I think that the truth should be stated. There is no better medium for this than the pages of EDUCATIONAL SCREEN.

The rumor seems to attach blame to the International Council for the fact that films controlled by T.F.C., including the Human Relations Series, are not now available for church use. This rumor grows out of a misinterpretation of the negotiations between the Council and what was at that time the "Hays Organization".

Two years or more ago, in my dual capacity of Director of the Council's Department of Visual Education and Executive Secretary of the Religious Film Association, I approached Mr. Roger Albright of T.F.C. with the proposal that they make their films available to the churches on the same basis as they were being distributed to the schools, and that we be permitted to list them in the R.F.A. catalogue.

Mr. Albright expressed interest in the possibility but stated quite positively that he did not think it would be possible because the major producers were dependent upon the theatrical exhibitors for their bread and butter and that to release their films for church use might easily arouse the hostility of the exhibitors to a point where it would be injurious to the producers. The basis for this antagonism seemed to be that the exhibitors would feel that the churches showing films free of charge would be offering unfair competition.

My own point of view was that such an arrangement could be used to forward a more understanding relationship between the churches and the theatrical industry, since the churches would be more inclined to support good films instead of merely damning the bad ones.

The net result of our discussion was that Mr. Albright suggested that, when Dr. Roy G. Ross of the International Council next came to New York, the three of us get together and discuss possibilities.

The meeting with Dr. Ross resulted in agreement that the Council would make a proposal to the Hays Organization requesting a selected group of films to be provided free of charge by T.F.C. and for use in an experiment to be conducted by the Council. The experiment was to cover a two year period with a limited number of churches, and was intended to indicate the value of these films in Christian education when carefully integrated with the curriculum. The experiment was predicated upon the Council's ability to secure the necessary funds and personnel to conduct and supervise it.

The Council made the proposal and the Hays Organization accepted it. During the succeeding months the experiment was discussed at considerable length by the staff of the Council. The big question was where to secure the funds and the personnel. The question was also raised as to whether at that late day the value of films for Christian education needed to be proved—if not, then the value of the experiment would be limited chiefly to determining the worth of these particular films.

In view of these facts, and the fact that the agency controlling the films would be the one to profit financially if they proved to be widely acceptable, Dr. Ross asked the Hays Organization if they would be willing to finance the experiment, as they had previously financed the experiment in the public schools with the Human Relations Series under Dr. Alice Kelleher. This request was turned down in no uncertain terms and word went out from the Hays office to the effect that the Council "had a nerve" to make such a request.

The Council then gave consideration to the possibility of conducting the experiment on a modified basis which would not require such rigorous supervision and which would at the same time make the films available to all churches willing to abide by the regulations set up by T.F.C. and willing to submit reports on their use to specified persons. It was thought that on such a basis, Dr. Mary Leigh Palmer, Associate Director of Visual Education, and Dr. Gerald Knoff, Associate General Secretary, might have sufficient time to supervise the experiment.

In July 1945 Dr. Knoff, Dr. Palmer, and I met with Mr. Albright to discuss this matter. Everything progressed favorably until this question was raised: "In view of the present restrictions on the films, what assurance have we that they will be made available to the churches even if the experiment proves favorable?" To this question, Mr. Albright responded that he could give us no such assurance.

This reply came as something of a shock to the three of us. In later discussion we faced these facts: we have no assurance that the films will be available to the churches; the experiment will be costly in both time and money; we already have plenty of evidence of the effectiveness of films in the church program; the T.F.C. films are getting older and older, a good many of them already being older than we want to use.

All things considered, it did not seem worth while to go through with the experiment. Unfortunately for the cause of good relations with the Hays Office, at this point a misunderstanding developed. Dr. Ross thought Dr. Knoff had written Mr. Albright of the

decision to drop the experiment and Dr. Knoff thought Dr. Ross had written. As a result it was nearly a year before Mr. Albright had been officially informed of the decision, although he had the information informally from me much earlier.

In any event, when you hear the rumor that the Council had an opportunity to make the T.F.C. films available to the churches but failed to do so, you can now see why.

WILLIAM L. ROGERS, Ex. Secy.
Religious Film Association

A Movie Situation Solved

By The Reverend WILLIAM F. EDGE
People's Congregational Christian Church
Dover, Delaware

OUR problem was an old one. We tried to find a new answer and one that would work. It concerned the Saturday movies in our little town (Dover, Delaware) of some 6,000 people.

The best movies were shown during the week. The local citizens attended then. But, Saturday was another story. It was the day when the country and cross-roads people came to town to do their shopping, discuss the condition of the markets, and go to the movies. Just being in town put people in a festive mood. The theaters were packed. The managers felt that this audience would not be very critical. They thought "ruff and rugged" necessary for this Saturday audience. *Lassie Come Home* would be good diet for the local sophisticates, but on Saturday it would have to be murder, rape, and crime. Furthermore, it was a lot cheaper to run this kind of show. After all, why waste money!

To make this situation more deplorable, Saturday was the day when children could and did attend the theaters. Parents could not let them go during the week because it would interfere with school work. They could allow them to go on Saturday afternoon, but many parents were unhappy about the type of film they were obliged to see.

The theater managers were approached. It was soon evident that they were unwilling to make any radical changes in their programs. They gave the old excuses about "bookings", "audience reactions", and the "added costs" of highly selected programs.

The Plan of Operation

Something had to be done. Parents were getting angry. A meeting of the department of visual aids of our church was called. I consulted the chairman prior to the meeting, presented to his committee the problems which faced us, and offered a plan which I considered workable. We agreed that it should be tried at once.

We chose sixteen of the best movies available in 16 mm sound—eight* were first choices and eight second choices. The chairman of the department was authorized to secure the pictures. We chose eight consecutive Saturday afternoons during the winter months as the time for our programs. We called the project "The People's Church Cinema Club".

Would it succeed financially? We had no way of knowing. We were anxious to render service to the

community and the churches, yet we did not have the funds, at that time, to underwrite the entire series. We felt reasonably sure that the initial programs would be well attended. What about the rest? Would attendance grow, or would it drop? Would the young people come to a "church theatre"?

In order to be financially secure, we decided that admission should be on a membership basis. For \$1.25, tax included, anyone could become a member of the "Cinema Club" and that membership would entitle them to eight complete Saturday matinees.

A list of all the members of the various Sunday schools in the town was secured from the ministers. A letter explaining the program in detail was sent to each parent. Included in the letter was a mimeographed brochure describing each picture to be shown, a "Cinema Club" membership application form, and an addressed return envelope. Parents were requested to return the application, together with the \$1.25 for each membership purchased.

In a few days the applications began to pour in. The membership tickets were mailed out immediately. By the first "show" enough memberships had been sold to finance the entire series.

Committee Takes Over

The department of visual aids of People's Church handled all the details of the program. It ordered the films, and took care of the small details. What were the programs like? Usually two cartoons, plus a short (comedy) and a full-length feature. The pictures were projected from a fire-proof booth in the balcony of a large and comfortable room in the parish house. The 10 x 14 electrically beaded screen was controlled from the projection room. Spot announcements over the public address system held the attention of the audience during reel changes. Young people often did the announcing. Everything possible was done to make the program as smooth and snappy as the average commercial theatre.

From the very first show the program "clicked". Our attendance grew. Those who held off the first week came the second. Every week additional membership tickets were sold—after the fourth show at half price. Guests were admitted on a straight 25 cent admission. One day a little boy brought his 15 birthday party guests to the "Cinema Club" as a part of his celebration.

Membership tickets were punched as the holder entered the theatre. This minimized crowding. We had no discipline problems, and no casualties of any kind. The age range of the audiences was very wide. Many parents came with their children. Grandparents, too, were there. Every one seemed delighted with the programs. In eight weeks the aggregate attendance was over 1500. A small profit was realized and set aside for the next series.

Parents wrote to the church expressing gratitude. One mother wrote: "I think your Club was a splendid means of entertainment. Jeanette's Saturday afternoons were looked forward to with enjoyment, and I know she will be glad when you start again in the fall." Another parent wrote: "I think the Cinema Club a wonderful thing."

Happy Ending

The ending is happy! The venture succeeded as a project, and it brought about the solution to our problem. The local theaters were aware of our success, and they quickly saw that we had the support of a large portion of the parents of the community. We had created a tremendous amount of good will for our project. We had made a positive and bold step, and the parents and the children had responded. The managers saw that they were open for criticism for not having done the thing themselves. After all, that was their business. Instead, the church took the initiative and provided good movies. The parents were willing to invest their money in our project. The managers knew that we could *continue* what we had so successfully started.

Now the theaters made a move. During the summer they organized a "Matinee Club". They invested time and money—a lot of money for people who had said that it would cost too much—and seriously undertook to build a Saturday matinee for youth. The results have been good. The managers asked for the cooperation of the clergy and the churches.

If for any reason the theaters slacken up, or revert to the old Saturday routine, we will put the Cinema Club into operation again. Obviously, the church should not be in the movie business, but it must be alert to meet the needs of its community.

* *Captain Fury, High School, Abraham Lincoln, Wee Willie Winkle, The Mark of Zorro, Stanley and Livingston, The Adventures of Chico, How Green Was My Valley.*

Audience Seating

It is the opinion of Mr. Harry Q. Packer, State Supervisor of Distributive Education for West Virginia, after visiting many churches, that "assistance is most needed in simple things such as projector and screen placement, proper lighting, ventilation, and above all, the follow-through or assimilation of the visual presentation."

We agree with him. His observation about the churches is correct. There are many reasons for this situation. It is found in the schools, too. Many children sit at their desks before beaded screens at far too wide an angle. There are many reasons for this condition. The textbook-teacher in both church and

The auditorium is ready for the audience.

school overlooks the need for the positive control of all physical factors in visual teaching. In other instances she does not know what to do.

Take the seating of the group: In auditory teaching (because of the nature of sound) little attention needs to be paid to the seating pattern. It can be scattered and haphazard, provided all are within ear-shot. Not so in seating for visual programs. Here, (because of the nature of light) the teacher must exercise a positive control over the seating pattern or too many of the group will be sitting in poor viewing areas.

This control can be exercised in several ways. In rooms having movable furniture, the usual situation in the church school, it can be placed in the proper pattern before the customers arrive (and re-arrangement by them can be resisted!). Where the furniture is fixed, as with church pews and school desks, the leader can mark off with chalk, tape, or string the areas outside the favorable viewing space. Some churches have placed an inconspicuous white tab on the top of pews to mark the outside limits. It is a great help to the usher. In departmental Sunday school rooms a thin white line can be painted on floors as a guide to janitors in setting up for visual aid programs.

A special problem is encountered when a dinner group is to re-assemble in the same room for a visual program after the tables have been removed. Here the best control is to mark on the floor with chalk the outside limits, not more than 35% from the axis of projection, asking the group to stay within the markings. Otherwise, the group will fan-out and $\frac{2}{3}$ of it will be too close and at too wide an angle for good seeing.

The accompanying picture shows a room set up on the "V" pattern. It keeps the maximum number in the "good" area. Here, there are six chairs in the first row, eight in the next, ten in the next and so on. All chairs are within an acceptable angle of vision for a beaded screen. Unless chairs are "trimmed off" in the front rows, the audience will gravitate to the front, sitting to the extreme right and left, (and a few isolationists will drag in other chairs and sit even beyond the edge of the crowd!)

Seating is only one of the physical factors which must be positively controlled in audio-visual programs in church and school. Teachers may shy at this role of chief usher, but they must either play it or delegate the job. It is too important to be ignored.

(Other factors will be similarly discussed in future issues.—The C.D. Editor.)

The Bible Society Films

Three 20-minute sound films in black and white, *The Nativity*, *The Woman of Samaria*, *The Parable of The Sower*, were produced by Anson Bond and The American Bible Society during the summer and fall of 1946, and are now available through the Religious Film Association and the regional offices of the A.B.S.

Public previews of these films for interested church workers are being held in some of the principal cities across the country. The Cleveland (Ohio) preview was held on December 12th with upward of 100 pastors, directors of religious education, and laymen present.

While these three films will be considered "good" by many users, an objective evaluation of them against almost any sound film criteria will give them a very low rating on all counts. In conception they are not clear-cut. (There is a grave question as to whether a truly good film can be made over the limited pattern adopted by the A.B.S. as being within the conditions of its charter.)

They have no technical excellence to commend them. In casting, in costuming, in staging, in pictorial continuity, in acting (pantomime with narration of the relevant biblical text) each one is weak. There is over-acting. Some sequences are unintelligible, like those explaining the meaning of the Parable of the Sower. There is staginess, as in the sequence showing Jesus entering and speaking from the boat (which was in the water but not floating on it.)

The musical content of the sound track is poor and uninspired in selection, and loud and inartistic in execution. (If the pictorial continuity is full of meaning, why not have a few stretches of silence between the Scripture passages?)

In a day when the church should be cooperatively developing rigid criteria of the highest order for the producers of its religious films to meet, it is very disappointing to see a church agency collaborate in the production of films which meet no filmic or artistic criteria. The church will not applaud mediocrity even if the scarcity of excellent films compels its acceptance for a time.

The foregoing is the sincere and considered judgment of the following previewers: Mildred Neumeister, Ardath Stumpfe, Julia Totten, The Reverend and Mrs. William Brown, and William S. Hockman.

South Georgia Workshop

According to Rev. Bird Yarbrough, Eastman, Georgia, the South Georgia Conference of the Methodist Church will hold a workshop in visual education on March 3 and 4. Mr. Yarbrough attended the First International Workshop in Visual Education in 1944 at North Park College, and is one of the leaders in his conference.

United Church of Canada To Make China Film

The committee on missionary education of the United Church of Canada is sending two of its executives, Rev. A. C. Moorhouse and Dr. K. J. Beaton, to China to shoot the material for several 16mm motion pictures. Having secured a great deal of technical know-how over the past few years, and having collaborated in the production of one excellent film, *Western Hands Are Sure*, this team should bring back highly useful materials.

Lent and Easter Preview

Under the joint auspices of the Cleveland Church Federation and Church School Pictures, Inc., an afternoon and evening preview of visual materials for use by the churches during Lent and at Easter was held in the First Methodist Church on February 4th, with more than 100 in attendance.

The Film and International Understanding

Evaluative Understanding Through Films

Dr. JOHN E. DUGAN, Editor
Head, Department of Education
Beaver College, Jenkintown, Pa.

THE use of films for international understanding is entering a new phase, a phase which we might describe as evaluative understanding through films. This evaluative factor involves both the film itself and the problem of people with which the film is concerned. It places greater responsibility on the producer, the distributor, and upon teachers and others who occupy positions of leadership in the use of the film for international understanding.

War-time problems and conditions gave great impetus to the development and use of the film for international understanding. Certain fundamental principles of objectives, structure, and utilization were developed. But the type of understanding which was aimed at was relatively simple. It sought to sort out our friends from our enemies among nations, to build up the unity and morale of those who were for us and to encourage the defeat of those who were against us. It emphasized the common principles for which we were fighting and the contribution which each nation or group was making to the common cause. It focused attention upon the common human attributes, regardless of race, color or creed, which made us brothers and co-workers in the great forward march of the brotherhood of men and nations in a common cause. Such fundamental understandings were basic to our cause and strengthened our success. They still are the objectives of many films currently being used to promote international understanding.

But we should not be unaware of the growing emergence of another type of film in the field of international affairs. On the surface, this type may seem to be dedicated to the simple principles of world understanding. But anything more than casual examination rapidly reveals that its aim is international promotion rather than international understanding. It is concerned with international competition more than it is with international cooperation. Even though its story may be couched in terms of international understanding, its aim is to promote the ambitions and interests—economic, political, or otherwise—of some particular group. International understanding is involved only in so far as it contributes to that purpose. There is no world outlook in the generally accepted sense of that term.

Certainly any group which so desires has a perfect right to make such a film. The danger lies in the fact that those who utilize the film may fail to discriminate between it and other types of films which they have come to associate with international understanding.

Does this mean that such films cannot be utilized? Not at all. As a matter of fact, their utilization sometimes may be most effective. Much depends upon the skill and discrimination of those who use them and the evaluative attitude which they can develop in those who see them.

This type of film places a much greater responsibility on the person who uses it. First of all, he must be able to see the film for what it is. He should not confuse it with other types. He should be able to evaluate its strength and weakness, its truth and fancy. In order to do this he must have a broad background of knowledge and understanding to guide him in his judgment.

This judgment involves not only the film itself but also the uses to which it can be put. If the film is biased, can recognition of that bias make unprejudiced truth stand out more clearly, or would straight presentation by another type of film be more desirable? When would critical discussion produce greater learning than placid acceptance? These questions are not easily answered, but they face the person who is considering the utilization of such a film.

A person who is using such a film should be able to exert intelligent leadership in group evaluative discussion of the film by those who have seen it. He should be able to direct them toward relevant questions. For whom was the film made? What are the economic needs, the political ambitions, and the ideological aims of those who made it? Do they represent a national or racial group, or only a faction of such a group? How do they tell their story? Is it based upon factual evidence? Are all the pertinent facts presented? How does the editing of the film affect the interpretation of the facts, their appeal to reason and to the emotions? Is the film slanted for some special audience? Does it cater to the beliefs and attitudes of that audience? What about the group that has just seen it?

Closely related to discussion is the coordination of the film with other films or materials. If the film is partial to one side of a problem, could understanding be improved by showing it in connection with another film which takes another point of view? Are there books, pamphlets, newspaper and magazine articles, etc., which will help to throw an evaluative light on such a film?

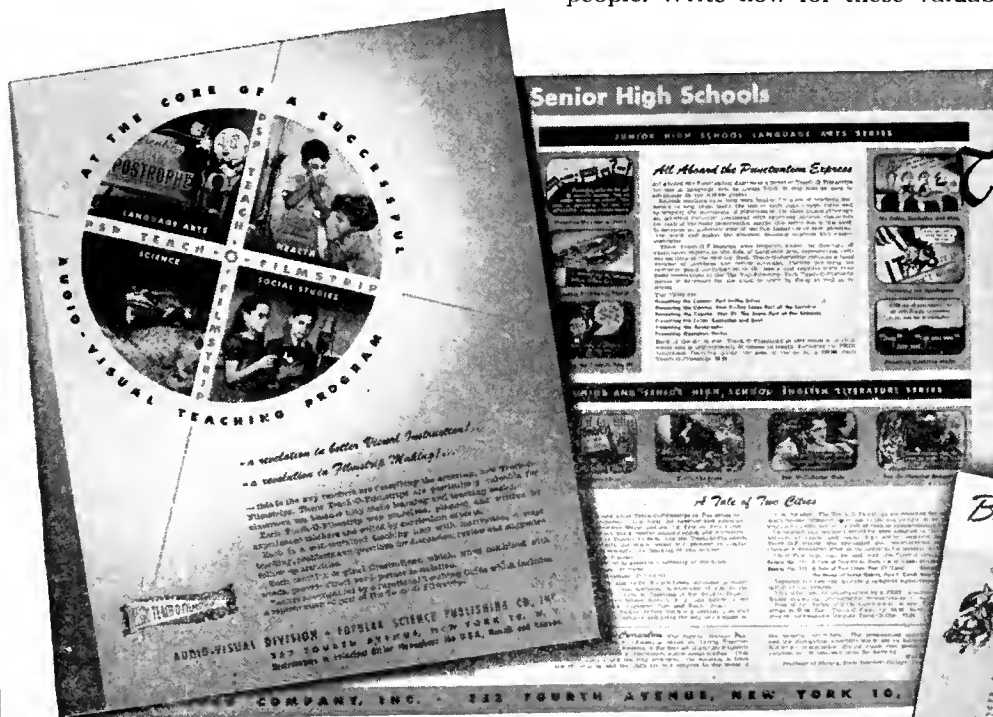

Of course the things which have been said should apply in some degree to all films which the teacher uses. But they are particularly necessary with this type of film. As a matter of fact, they can be used to make such a film useful rather than merely misleading or vicious.

There is another element involved. If films are used without evaluative discussion, if only films which can be accepted *in toto* are presented, those who see them may easily fall into the attitude that anything which can be shown to them in films is acceptable. If on the other hand, they see various types of films and have training in their evaluation, there is that much greater expectation that they will acquire the ability to sift facts from fiction and propagandistic interpretation of the facts, and that truer understanding will result.

Alert Teachers...

FREE
folders!

TEACH-O-FILMSTRIP folder shown above, presents a filmstrip library of subjects, in both color and black and white, ranging from Primary Science and Health Series, through a Middle Grades Social Studies Series, to Junior and Senior High School Language Arts and English Literature Series. All may be shown on any 35-mm. school projector. Exciting kits for teaching Primary Safety and Middle Grades World Friendship are also described, each kit consisting of filmstrips, recordings and a book.

TEACH-O-DISC folder shown at right, gives you a complete list of the 81 Teach-O-Disc classroom recordings (172 titles) now available for use in elementary, junior and senior high schools. High School classes in English Literature, U.S. History and the Social Studies, as well as Elementary grades teaching World Friendship and Safety Education, make effective use of these valuable teaching aids that create such an amazing response. Teach-O-Discs are made of Vinylite, a modern, miracle plastic that means no more broken records.

Teach-O-Filmstrips in Preparation

GENERAL SCIENCE (for use in Junior High Schools) a series of 6 filmstrips, 40 frames each, black and white..... \$18.00
 WORLD HISTORY (for use in Senior High Schools), a series of 6 filmstrips, 40 frames each, black and white..... \$18.00

Distributors in Principal Cities throughout the U.S.A., Hawaii and Canada

The Literature in Visual Instruction

A Monthly Digest

ETTA SCHNEIDER RESS, Editor

BOOK REVIEWS

Editorial Note: This month we are privileged to announce two important publications in the field. They represent a re-statement of purpose and direction which we all need in making plans for the post-war world. With guideposts such as these books, and the excellent pamphlets which are also appearing in rapid succession, there is hope for a greater efficiency on all fronts. E. S. R.

- **Audio-Visual Methods in Teaching**—Edgar Dale—Dryden Press, 386 Fourth Ave., N. Y. 546 p. \$4.25 (school discount) 1947.

Here at long last is the basic book in audio-visual instruction. It is no textbook in the traditional manner. It is in itself a course for all persons who want further knowledge of this field—the administrator and grass-roots teacher, the club-woman and forum leader, the undergraduate student, and the general layman.

This is the accumulation of data and experiences which Edgar Dale has been deliberately assembling over a period of years. He has been a teacher and school administrator, a teacher of teachers and faculty adviser to graduate students, a workshop leader, a researchist on various aspects of audio-visual aids (including the Hollywood product), a wartime counselor to the U.S. government, and currently an aide to the United Nations through UNESCO. This volume is full of anecdotes and personal observations which the author has saved for future use. We now have a reference book that is full of practical illustrations to implement psychological and philosophical principles.

Audio-Visual Methods in Teaching is a long book, covering every aspect of the field. Its format and generous use of illustrations add to the interest. In organization, it is perhaps a little complicated and requires some study to ascertain the pattern and sequence. But somewhere in the book will be found statements on practically every question that might arise in the field: What is meant by audio-visual materials? How should they be used on the various educational levels? How do they fit into the school program? How can we make our own teaching aids? Where can we purchase others?

Most important, however, is the fact that the book really achieves what its title promises. It gives innumerable instances of *methods* in teaching, methods applied to a variety of school subjects, such as arithmetic, geography, social studies, science, industrial and vocational education, English and so on.

The section on administration has been aptly directed, not alone to the principal, supervisor or superintendent, but to the classroom teacher. All too often it is an overburdened classroom teacher who is assigned the responsibility of ordering and circulating the teaching materials for the school. The details of administration are alien to this teacher and must be simply and carefully explained. For such a teacher, this book comes as a blessing.

It is probably unnecessary to enlarge upon the nature and content of the book for our readers, as it will no doubt be the basic reference work for the next few years and will become as familiar as the contents of *Visualizing the Curriculum*. We might just indicate, in conclusion, that Dale, like other authors on the subject, lists some of his impressions of "the shape of things to come." There are eight predictions, which briefly stated are:

1. We shall markedly improve the quality of audio-visual materials now available.

2. We shall develop more teaching materials locally and regionally.
3. We shall have a much more effective integration of all types of teaching materials.
4. Schools will be equipped to provide a 'cafeteria' of learning materials.
5. We shall increasingly supply a rich program of out-of-school education.
6. We shall use audio-visual materials to expand the range of adult education.
7. Textbooks will increasingly show the influence of the trend toward audio-visual materials.
8. The increased use of a richer variety of teaching materials will make the work of the teacher more exciting and more effective.

- **Movies That Teach**—Charles F. Hoban, Jr.—Dryden Press, 386 Fourth Avenue, N. Y. 16. 189 p. \$2.50.

Movies That Teach is a report by Major Hoban based on his experience as Chief of Film Distribution and Utilization for the Army Pictorial Service of the U.S. Signal Corps. Its chief purpose and one in which it succeeds admirably, is to indicate how the ideas gained in wartime might be applied to educational films in peace.

When Dr. Hoban entered the services, he already had had considerable experience as a researcher on the contributions and potentialities of the educational motion picture: first in connection with his doctoral dissertation (*Evaluation of Educational Research on Educational Motion Pictures, 1935*); and then (1937-41) as director of the Motion Picture Project, American Council on Education. But this previous experience paled before the tremendous responsibility assigned to him of distribution and utilization of thousands of Army films. This proved to be an excellent opportunity to learn the possibilities under special wartime conditions and to examine the applications of this experience to civilian education.

The volume is concise, unadorned by illustrations except for a few charts and tables. Dr. Hoban has kept his Army experiences at a minimum, devoting the first chapters to a very brief orientation of what kinds of films were used, how they were used, and with what results. He preferred rather to devote the book to what school administrators and educational film producers should understand to be their legacy from the Army's experiences.

The main theme of the book is summarized in this statement:

In the war-training program . . . motion pictures were conceived of and used as basic teaching materials—at least equal in importance to books, lectures, problems and other materials and procedures of teaching.

Producers of educational films must accept this as the pattern underlying the planning of films—that they must be conceived as educational experiences, not as 'supplementary aids.'

Chapters IV and V are of intense importance to film makers, because they suggest that new research has to be undertaken to determine a new pattern of films. Hoban lists five major principles for producers, and enlarges upon each according to his Army experience. He recommends, for example, that if we were to examine the trends in utilization, we would be able to ascertain the most important types and topics now in demand and plan films accordingly. Then, he urges that films be produced that would cover the basic subjects of the school curriculum. The Army found that a relatively small percentage of the films accounted for a large percentage of film showings. Thus, there would be a greater market (greater number of copies in use) for films on basic subjects, thereby assuring the producer a reasonable return on his cost.

Other suggestions for producers include: films should be made with specific purposes and specific audiences in mind;

**WHAT YOU GET:
16 FILMSTRIPS**
about 520 pictures
FOR ONLY \$12.00

released in units of one National Safety Council and one Coronet Picture Stories filmstrip through May, 1947, with those subscribing now receiving all back issues.

THE SCHOOL YEAR'S OUTSTANDING FILMSTRIP VALUE

THE COMBINED 1946-1947 National Safety Council and Coronet Magazine FILMSTRIP SERIES

By ordering now, you can still get the complete 1946-1947 National Safety Council and Coronet Picture Stories filmstrip series especially designed for intermediate and secondary schools. Timely, instructive, and authoritative, this series has won nationwide approval from educators and safety experts.

The offer consists of 16 filmstrips, eight films on Safety Education and eight on Coronet Picture Stories. All filmstrips already released will be sent you immediately; the remainder will be released in units of one Safety Education and one Coronet filmstrip each month through May, 1947. Ordinarily, these films would sell for \$2 each—a total of \$32. Now, because of the cooperation of S.V.E., the National Safety Council, and Coronet Magazine, the cost to you is only \$12 for the complete set of 16 filmstrips.

The filmstrips on Safety Education, prepared by the National Safety Council, present a comprehensive study of the damage and tragedy caused by disregarding fundamental safety rules. Each filmstrip contains from 40 to 50 pictures.

The Coronet filmstrips contain 25 pictures from a selected Picture Story from Coronet Magazine. There is a pamphlet with every film to serve as a teacher's guide. If reprints of the Coronet Picture Stories are desired, write to Coronet Magazine.

This offer good until August 31, 1947.

ORDER IMMEDIATELY

SOCIETY FOR VISUAL EDUCATION, Inc., Dept. 22-C 100 E. Ohio St., Chicago 11, Ill.

they should be produced to demonstrate and promulgate new doctrines and new techniques of instruction; and finally, skilled personnel should be used throughout in the planning and production of educational films.

As for the administration of films which would make for the best distribution and utilization, the Army has some excellent techniques to recommend. Unfortunately, the local nature of school administration limits the extent to which these recommendations can be adopted. But, Dr. Hoban, fully aware of the gap between civilian and Army education, has made suggestions for distribution on a 'network' basis, which has been tried out successfully in the schools of Ohio and Virginia. His use of visual education coordinators out in the field has also been applied in his own city of Philadelphia and elsewhere. By this method, a qualified person within each school building acts as liaison person to assure the continuous and effective use of the materials in circulation.

It is well that Charles Hoban has lost little time in making available this valuable information. It is to be hoped that those in charge of production and of distribution will be as prompt and as successful in directing a new pattern for the educational film of the future.

ADMINISTRATION

- **The School Division Film Library:** a Manual of Administrative Procedures—W. H. Durr, Acting Supervisor—Bureau of Teaching Materials, State Board of Education, Richmond 16, Virginia. 41 p., mimeo. Dec. 1946.

A practical manual made necessary by the fact that the Virginia plan of having five Regional Bureaus of Teaching Materials has been amplified to include, first 18 county and city school libraries and then over 50 additional division school libraries. There are now about 70 division school libraries serving 80% of the school children of the state.

Some concrete advice was needed to standardize library practice and to assure maximum efficiency in storing, cataloging, and servicing films and other aids. The bulletin indicates the qualities and duties of the supervisor, suitable location and space requirements, a minimum of library equipment, some of the sample forms and records of use.

With the aid of clever sketches and copies of the forms to be used, this manual is one of the most practical yet to appear. It will undoubtedly answer the many little questions that arise in the beginning stages of (a) using and (b) circulating teaching materials.

PERIODICALS

- **Film Forum Review**, vol. 1, no. 3 Fall, 1946. Published quarterly. Institute of Adult Education, Teachers College, Columbia University, N. Y. 27. \$1.00 year.

Each issue of this journal carries new and interesting articles on the use of films and filmstrips with discussion groups. It fills a definite need in our literature, and serves as a guidepost to group leaders and representatives of community organizations. The article on the experience of the Cleveland Motion Picture Council, by Patricia Blair, is noteworthy (p. 12-16) because it indicates the stages through which the community film forum had to pass before many of the problems were straightened out. The section devoted to film reviews is well worth reading, for the critical and constructive point of view which it brings to "discussable" films of the month.

SOURCES OF INFORMATION

- **Films for Group Guidance**—Charles F. Hoban, Jr. and Dorothea S. Paul, Philadelphia Schools—*N.E.A. Journal*, 36:47 January, 1947.

An evaluated list of films suitable for the various subjects included in vocational guidance; personality traits and job-getting, social skills and adjustments, and occupations. The article is preceded by a statement of criteria for selection and some general principles of use.

Atlantic City Program of DVI Conference

W. H. Durr, Program Chairman, has announced the conference program of the Department of Visual Instruction, the National Education Association to be held at Atlantic City, March 3, 4, 5. In addition to Mr. Durr, the following served on the program committee: Edgar Dale, Ohio; Lee Cochran, Iowa; Francis Noel, California; Amo de Bernardis, Portland, Oregon; W. G. Gnaedinger, Washington State; James Kinder, Pennsylvania. In addition to audio-visual personnel in both the commercial and school fields, superintendents will take part in the sessions.

Monday, March 3, 1947 at Haddon Hall

9:30 a.m. in Solarium—Planning Meeting of section chairmen, panel members, and records.

2:30 p.m. in Benjamin West Room—Opening General Session: "Introduction to the Conference," Walter Wittich, President, DVI.

3:10-4:30 p.m. in Tower Rooms—Group Sessions

I. **What is the Superintendent's Responsibility with Regard to the Audio-Visual Program?** (a) Selection of personnel? (b) Providing for in-service training of teachers? (c) Providing adequate funds?

II. **How Can Distribution of Materials over Large Areas Be Improved?**

III. **What Are Future Trends in Materials Production?** (a) With relation to meeting specific curriculum needs? (b) With reference to adult education? (c) Is close correlation with textbooks desirable? (d) What do producers want from school people? (e) What do school people want from producers?

Tuesday, March 4 at Haddon Hall

9:30-12:00 in Tower Rooms

IV. **What Is the Place of Audio-Visual Instruction in the Program of Adult Education?** (a) What is the present status of adult education? (b) What are future trends in this area? (c) What contributions can audio-visual materials make to this field?

V. **How Can We Attack This Problem of Materials Evaluations?** (a) What is the importance of evaluation? (b) Is a national evaluation program practical? (c) What should be done locally in regard to evaluation?

VI. **What Constitutes an Adequate Audio-Visual Budget and How Can It Be Achieved?** (a) What elements enter into the audio-visual budget? (b) Can a workable formula be derived for computing an audio-visual budget?

2:30-4:30 p.m. in Tower Rooms

VII. **What Is the Present Status of Existing and Proposed State-Wide Audio-Visual Programs?** (a) How should the State program be organized? (b) What are the functions of such a program at various levels—state, regional, county, or city? (c) How should such a program be financed?

VIII. **How Can Teacher Efficiency in the Use of Audio-Visual Materials Be Increased?**

IX. **How Can the Typical County or City Get Underway with an Audio-Visual Program?** (a) What are the first steps. (b) Setting up objectives. (c) What administrative materials and personnel are required? (d) Teacher-training needs?

Wednesday, March 5 at Haddon Hall

9:30-11:00 a.m. in Tower Rooms—Conclusions and Recommendations

11:00-12:00 noon in Tower Rooms—Business Session

12:00 noon—Luncheon—Speaker: Edgar Dale, Vice President, DVI, "Outlook for the Future."

Culture . . .

IS MANY THINGS

AFRICAN FAUNA... An interesting study of the wild beasts of Africa. Recipient of the star of excellence by Educational Film Guide. Elementary, high school and college... 12 minutes... color and sound. A Paul Hoefler production.

THE MODERN CHIPPEWA INDIAN... The story of the modern Indian—how he lives, works and contributes to our national welfare... 10 minutes... color and sound. Complete with study guide.

CULTURE is more than just the mastery of the social graces. It is also a broad, fundamental knowledge of the 3 R's... of history, science, economics and geography. It is, in effect, a well-founded understanding of the world we live in—its problems and its peoples.

Culture is the hall mark of every well-educated American.

To aid educators in presenting a well-rounded curriculum, the Simmel-Meservey organization has, since its inception, endeavored to specialize in the production of cultural educational films. "African Fauna" and "The Modern Chippewa Indian" are two excellent examples of the execution of this policy.

Order them for preview today.

SIMMEL-MESERVEY BIG SIX

The following six educational films were most in demand during the month of January. If you do not have them—order them for preview today.

ARRANGING THE TEA TABLE... Illustrates reasoning behind attractive and correct tea-table arranging. Brief, comprehensive approach to proper tea-time conduct.

ARRANGING THE BUFFET SUPPER... Instruction in problems of giving a buffet supper. Completes well-rounded coverage of necessary instruction in afternoon and early-evening entertaining.

HISTORIC NEW ENGLAND... Explanation of the history of the New England States and direct contributions of their peoples to the rest of the world.

BLOOMING DESERT... Interesting study of our western desert floral wonderlands.

WOODY GROWS UP... The life story of the woodpecker in thrilling detailed closeups.

DINNER PARTY... Training in table etiquette for teen-age level portrays proper table manners.

Simmel  Meservey

Education in an Air Age

USING as the theme, "Audio-visual Education in Our Air Age", the University of Omaha held its Fourth Annual Educational Improvement Institute January 2, 3, and 4. The national importance of this conference was emphasized by the fact that the meeting was chosen by Link Aviation Devices, Inc., of Binghamton, New York, to unveil and introduce to the world its new Link Trainer designed especially for elementary and high school use in air-age education.

In spite of a real Nebraska blizzard, 568 Nebraska, Iowa, and Kansas teachers attended the three-day conference to delve into new and practical methods of preparing their pupils for life in this air age. National leaders in audio-visual education featured the Institute. Mrs. Elsie Adams, Director of Air-Age Integration in the Denver Public Schools, was probably the most enthusiastically received participant on the program. Using an actual fifth grade class of youngsters, she demonstrated to the visitors how she has been able to use the aviation-interest of her pupils to motivate the study of geography, arithmetic, art, and all of the social sciences.

Dr. Frank E. Sorenson of the University of Nebraska, winner of the 1946 Brewer Trophy Award for having made the greatest national contribution to air age education, served as one of the leaders in the three-day conference.

Demonstrating the uses of charts and projected materials in the discussion of his plans for the development of the Missouri River Basin, Brigadier General Lewis A. Pick of the United States Engineers impressed upon the educators of this area the importance of keeping the pupils and the communities informed about the potentialities of this Missouri River Basin. This development is one of the greatest engineering projects in the world. General Pick was the builder of the famed Ledo Road in the India, Burma, China Theatre during the war.

The audio-visual equipment and materials industries were present with fine exhibits and with representatives who were available at all times to answer questions and help advise educators on their local programs.

Miss Marilyn Link, sister of inventor Link, gives Mary Ann Gatendy, a ride in a classroom Link Trainer.

In opening the conference, President Rowland Haynes of the University of Omaha said, "The Air Age is revolutionizing not only our methods of transportation, but also our ideas of geography, foreign relations and the social sciences. Audio-visual devices are destined to be as great a tool in teaching as laboratory methods have been in the last half century. The University of Omaha is trying constantly to help teachers of all levels to improve their methods and facilities for better teaching."

Chancellor R. G. Gustavson of the University of Nebraska gave the keynote address on the first day, "Gearing Education to Our Air Age." Mervyn W. Pritchard, Educational Attache of the British Embassy in Washington, D. C., aroused a great deal of interest with his discussion of "Modern Teaching Methods in British Schools." He used sound movies in all of his presentations.

How to "knock down the four walls of the classroom and make the whole community your field for study," was demonstrated by two University of Wisconsin experts in visual education. Dr. Walter A. Wittich and Harold Hailer of the University's Bureau of Visual Instruction used a brief classroom lecture, a tour through the Omaha World-Herald newspaper plant and lantern slides made from their own photographs of the trip to show teachers how modern visual-aid teaching can widen the pupil's horizon.

Dr. Roger Albright, Director of the Educational Services Department of the Motion Picture Association of America, informed educators that "visual education has made amazing progress, but movie schooling has a long way to go. Top men in the film industry are experimenting in hopes of improvement."

One of the most important factors contributing to the outstanding success of the Institute was the active support and participation by the Nebraska State Department of Public Instruction. Wayne O. Reed, Superintendent, together with many of his administrative staff members, sparked the panels and conferences and set a shining example for State Departments of Education throughout the United States in their acceptance and active support of education improvements in the public schools.

Philadelphia Museum of Art Presents Famous Book Films

On Saturdays and Sundays, the Philadelphia Museum of Art presents a series of films which have been adapted from well-known books. While admission is nominally free, a block of seats is permanently reserved for holders of subscription tickets and for Museum members. The fee for a single season subscription is \$2.50 for all showings except the first Saturday showing which is intended for school-age youngsters. A subscription rate of \$1.00 applies to this particular hour.

February and March showings include a group of films classed as "Irony and Pity": *The Four Horsemen of the Apocalypse* (1921), from the novel of misguided love and pacificism by Vicente Blasco Ibanez with Rudolph Valentino in the leading role; *All Quiet on the Western Front* (1930), the most famous film about World War I adapted from Erich Maria Remarque's book of the same name; *How Green Was My Valley* (1941), showing the joys and sorrows of a humble people, adapted from Richard Llewellyn's book about a family of Welsh coal miners; *Greed* (1924) a classic in realism, adapted by Erich von Stroheim from Frank Norris' *McTeague* which told in raw terms of life in California at the turn of the Century; *Harvest* (1939), an expressive French film about the goodness of nature, based on Jean Giono's novel *Regain*; and *The Good Earth* (1938), taken from Pearl Buck's sensitive story of Chinese peasant life.

The film showings will continue through April 27 with the last group titled, "The Human Comedy." Bosley Crowther, the distinguished film critic of the *New York Times*, is serving as advisor to the Museum in the selection of films, and is also preparing the program notes. He states that there will be objections from faithful readers who will say, "This character has been changed! That scene is omitted! It doesn't follow the book!" Such objections have and also will be hurled at the makers of films, but Crowther believes that they are valid only "when the book has been botched or altered out of all artistic shape. . . . If the spirit of the book has been preserved and if its contents have been made dramatic in screen terms, then it deserves respect."

Range of material shown has extended from Shakespeare to Betty Smith. Early winter showings included *The Prisoner of Zenda* (1937) from Anthony Hope's

1892 fable; *The Three Musketeers* (1921), Douglas Fairbank's interpretation of the Alexander Dumas tale; *As You Like It* (1936) with Elisabeth Bergner and Laurence Olivier; *La Dame Aux Camelias* (1912), a fragment with Sarah Bernhardt; *Camille* (1938) with Greta Garbo in the leading role of this Dumas drama. Future films in the series include *Becky Sharp* (1935), *The Adventures of Tom Sawyer* (1938), *State Fair* (1933) with Will Rogers, *Kitty Foyle* (1941) and *A Tree Grows in Brooklyn* (1945).

Since some of the films belong to the silent era, original piano scores or appropriate recorded music will be employed. The change in film interpretations through the years will be exceptionally important to the observer.

The Film Society

The Film Society is a newly-formed organization at the Philadelphia Museum of Art. It includes persons interested in the art of the motion picture who are anxious to come together for the purpose of seeing the finest films of our time, movies which have made and are making screen history. Membership in *The Film Society* is limited during the first year to 200 subscribers, meeting at the Museum on ten Mondays including Feb. 17, March 3, 17, and 31. On these days refreshments will be served from 5:00 to 5:30 p.m. before the film showings, which begin at 5:30. A membership fee of \$10 is charged. Officers of *The Film Society* are George Howe, Director; Charles Coiner, Associate Director; and E. M. Benson, Executive Secretary.

The Film Society confines itself largely to films of significance. Thus, the February 17 program included *Listen to Britain* (1942) directed by Humphrey Jennings and *The Fight for Life* (1940), written, directed, and produced by Pare Lorentz with a musical score by Louis Gruenberg. This latter film is a social documentary showing maternity problems in the slums of a large city. Careful orchestration adds emphasis to the throbs of life and the hollow emptiness of death. *Listen to Britain* was one of the finest and most sensitive films made during the war, showing life in the cities and countryside.

On March 3, the feature film will be *The Edge of the World* (1937), written and directed by Michael Powell, who is noted for his work on *Stairway to Heaven* and *Col. Blimp*. The setting for this film is in the remote and barren Shetland and Orkney Islands where man must wage a hard battle with nature to wrest a living from the land. Two short films will also be included: *Storm* (1944) a John Nesbitt (Metro) short, showing the majestic violence of weather disturbances, and *To Hear the Banjo Play* (1946), directed and produced by Willard Van Dyke and Irving Lerner, giving the vitality and spirit of the American folk dance.

Typical films shown include *L'Amitie Noire* (1944), *The Forgotten Village* (1941), *Sweeney Steps out* (1941), *The Adventures of Chico* (1938), *Main Street on the March* (1942), *A Child Went Forth* (1942), and *Children on Trial* (1946). Occasional fiction films such as *M* (1931), directed by Fritz Lang and *Million Dollar Legs* (1932), are shown.

PICTORIAL PUTS PRICES IN THEIR PLACE...

20% REDUCTION

ON ALL

Effective Immediately!

"There can be no flirtation with inflation . . . hold that line." These were the words that came from our executive offices . . . and with one sweep of the pen, prices on all PICTOREELS home movies have been reduced 20%. You'll find these reductions in effect at your favorite PICTOREELS store.

8mm Silent — Complete	Were \$6.50 . . . Now \$5.50
16mm Sound — 100 ft. Musicals	Were \$9.00 . . . Now \$7.50

Fletcher Urges Council Reorganization

(Concluded from page 74)

ignorance, prejudices and hates of all peoples so materially that they can work together constructively in the knowledge that their common goal of world peace and prosperity is realistically attainable."

The increasing life span of Americans and the growing complexity of the world will demand far more attention to adult education, the president of Encyclopaedia Britannica Films said, as he predicted that in thirty years the average American life expectancy will be 70 years and that every home will have a sound motion picture projector just as homes today have radios. Films will be used to educate adults in a common understanding with other races, he said, and in that lies a large share of the hope for world peace.

Film Council to Meet at Atlantic City

Plans for permanent organization of the Film Council of America were pushed a step nearer completion at a meeting held in Chicago, January 28 and 29. Three committees undertook the responsibility for preparing final drafts of a constitution for consideration at the Atlantic City meeting of the American Association of School Administrators, March 1 to 6.

Three committees will make their reports and recommendation, March 4 at the Senator Hotel, Atlantic City, 7:30 p.m.: (1) Trustees—Dr. George F. Zook, President, American Council on Education; Carl Milan, American Library Association; Maurice Chaffee, President, Rutgers University; Edgar Dale, Ohio State University; Willard E. Givens, National Education Association; and C. Scott Fletcher, Encyclopaedia Britannica Films; (2) Finance—C. Scott Fletcher and C. R. Reagan, Film Council of America; (3) Permanent Constitution—Paul Howard, American Library Association; I. C. Boerlin, Pennsylvania State College; Vernon Dameron, National Education Association; L. C. Larson, Indiana University; F. C. Lowry, National Education Extension Association; John Costley, Washington, D. C.; David E. Strom, University of Connecticut; Ott Coelln, *Business Screen*; and James W. Brown, University of Chicago.

The Film Council of America has as its main purpose: "to foster and promote the production, the widespread distribution, and the effective use of audio-visual materials, which increase the information and work toward the general welfare of all people." FCA will emphasize the establishment of local film councils throughout the country in an effort to implement this objective and to bring to representatives of community organizations information concerning films and other audio-visual materials. An attractive, well-written, 34-page booklet, "Speaking of Films," has been prepared by Thurman J. White, University of Oklahoma, to assist in the development of local film councils.

An interim budget has been provided to equip and operate the new national headquarters of the Film Council of America in Room 1228, Manhattan Building, 431 South Dearborn Street, Chicago 5, Illinois. James W. Brown, now on leave from his position of Supervisor of the State Bureau of Teaching Materials, Richmond, Virginia has been assisting the Council in

GREAT MOMENTS OF HISTORY COME TO LIFE IN FINE MOTION PICTURES

A—Guadalcanal Diary
C—Drums Along the Mahawk

B—Wilson
D—Buffalo Bill

Historical motion pictures produced in the studios of America's foremost film companies are distributed by Films Incorporated in 16-mm. for school use. These are some of the outstanding events in American history which have been recorded in full-length feature films:

Buffalo Bill • Daniel Boone • Drums Along the Mahawk • Frontier Marshal • Guadalcanal Diary • In Old Chicago • Last of the Mohicans • Little Old New York • Prisoner of Shark Island • The Sullivans • Western Union • Wilson

In addition to these historical films, Films Incorporated supplies several hundred full-length features and many short subjects especially selected for school showing. For complete descriptions of these films write to the exchange nearest you for the current issue of the School List catalog.

Film Council Survey on Atomic Energy Films

A short time ago, Vernon G. Dameron, Chairman, Committee on Atomic Information of the Film Council of America issued his report on the status of 16mm motion pictures covering that subject. According to his findings a number of producers had films either completed or in production. The March of Time is planning to update their regular theatrical issue of *Atomic Power* for 16mm release this spring. Philip Ragan Associates, Philadelphia has completed the film, *One World or None* (10 min.). Movie Newsreels released *Atomic Bomb* with shots of the second bomb test at Bikini. Sound tracks were recorded in English, French, Spanish, Italian, Russian, and Chinese. Castle Films included shots of the Bikini tests in its *News Parade* of 1946, and Official Films, Inc., included footage of the atomic bomb as used on Nagasaki in their *News Review* of 1945. The testing of the atomic bomb in New Mexico, prior to the Hiroshima bombing, was included in Official's *News Thrill No. N645*. The Army Signal Corps has produced a 20-minute film entitled *Tale of Two Cities*, dealing with Hiroshima and Nagasaki. Paramount's Newsreel No. 99 deals with the atomic subject. Both of these films are said to be available in 16mm. Bray Studios, Inc., Encyclopaedia Britannica Films, and Young America Films have atomic films in the process of preparation.

Great Circle

(Concluded from page 86)

Great Circle is one of the really significant films made in recent times and will take its place alongside the older documentary classics. The producers of this film have had long training in the British documentary tradition, which is so capable of producing fact films of interest and long-range significance. *Great Circle* is equally usable in adult discussion groups as in elementary school geography units. It is excellent material for film societies.

But a word more about maps, great circles, and the north polar regions! On a typical map, a great circle route will appear as a curve. Refer to one of the accompanying illustrations. This is because the conventional maps of the world distort the polar regions. Formerly this was not serious, because man did most of his traveling by sea somewhere near the equator, but now the polar regions have assumed new importance. About four-fifths of the world's land surface lies in the northern hemisphere. Looking directly down at the north pole, a person can see that great circle routes passing over the north polar region will provide the shortest routes between a great number of the commercial and industrial centers of the world.

"It is a picture that every American should see."—Wm. F. Kruse. . .
"An excellent film on a very difficult subject."—Jocelyn Moore, San Diego City Schools. . . "A worthy film, beautifully photographed."—John Alden, Assoc. Ed., Popular Photography.

EFLA to Meet with Radio Education Institute

The Educational Film Library Association will hold its annual conference on May 1-2, 1947, at Columbus, Ohio, concurrently with the 17th Annual Institute for Education by Radio, meeting on May 2-5. EFLA's conference program will include sessions on distribution, use, production, and evaluation of educational films and other audio-visual materials. The program will be of particular interest to representatives of public schools, colleges, public libraries and museums, state and federal agencies, manufacturers and producers interested in audio-visual education. One or more joint sessions will be devoted to the role of film and radio in increasing the flow of knowledge and ideas between and among nations. A trade show will include demonstrations of all types of audio-visual and radio equipment and materials. Details of the program will be announced at a later date.

Visual Aids for Business

"It was Thomas Edison himself who started the ball rolling by bringing movement onto a picture screen. The great man foresaw his inventions of the motion picture (1889) and phonograph (1887) as revolutionary changes in education. He did not foresee, however, a film library as extensive or as useful as the one now on hand at the City College," Dr. Louis Sanford Goodman, supervisor of the Audio-Visual Center of the City College of New York School of Business, stated shortly after the announcement of his appointment by Dr. Robert A. Love, Director of the Evening and Extension Division, City College School of Business, 17 Lexington Avenue, New York, N. Y.

Dr. Goodman is proud of the large collection of films amassed at the City College School of Business. "It is the best catalogued and one of the largest film libraries on business subjects in the entire country," he declared. "City College's Visual Aids Center is only four years old, and its rapid growth has been remarkable. The number of films, film strips, specimens, and recordings kept on file has doubled, trebled, and doubled again in succeeding years." Now City College has the largest school film library on business subjects in the United States.

"The services of the Center today are many, supplying various departments of City College with specialized films and other aids, obtaining and furnishing films for business and industrial organizations, as well as for other schools and clubs in all parts of the country. These services will be still further expanded with forthcoming additions in facilities; the Center will also produce in 1947 its own audio-visual aids, such as film strips and transcriptions," Dr. Goodman announced.

Another phase of the City College Center's operations is the offering of courses on the proper use of audio-visual aids, with one course designed primarily for instructors. This course, "Audio-Visual Aids to Learning", is taught by Dr. Goodman.

Notes

Second Annual Awards Dinner Held by Metropolitan Branch of D. V. I.

Dr. William Jansen, Superintendent of Schools, elect, of New York City and Dr. Ernest O. Melby, Dean of the School of Education, New York University, will be the principal speakers of the evening at the Second Annual Awards Dinner, of the Metropolitan Branch, Department of Visual Instruction of the National Education Association. The dinner will be held on Thursday, February 27, 1947, at 6:30 P.M., at the Commodore Hotel, New York City.

As a teacher, supervisor and administrator, Dr. Jansen has always promoted the cause of audio-visual instruction. He was, at one time, an executive officer of the Metropolitan Branch. Dr. Melby will deliver an address on "The Use of Training Tools by the Modern Teacher". An outstanding film will be previewed.

This affair, which last year attracted national attention when the award was presented to Miss Rita Hochheimer, in charge of the New York City Bureau of Visual Instruction, is the outstanding event in audio-visual instruction in the metropolitan area. This year the award will be presented to Dr. Grace Fisher Ramsey, Curator of School Relations, Department of Education, American Museum of Natural History, who has, for many years, performed distinguished service in the audio-visual field.

"Brotherhood of Man" and Re-orientation

The War Department, Civil Affairs Division has purchased the color cartoon, *Brotherhood of Man* for re-orientation purposes in enemy occupied countries, it was announced by Pare Lorentz, speaking at the premiere showing of the film at the Museum of Modern Art.

Joint Services for U.N. Film and Visual Activities

The United Nations Film Board held its first meeting at Lake Success on January 24 and established joint services for the film and visual activities of the United Nations and the Specialized Agencies. Charter members of this Board are: the United Nations, United Nations Educational, Scientific, and Cultural Organization, and the Food and Agriculture Organization. Also attending the meeting were representatives of the International Labor Organization, World Health Organization, United Nations Relief and Rehabilitation Administration, and the International Monetary Fund.

Director of the operations of the Board's Executive Office is M. Jean Benoit-Levy, Director of the Division of Films and Visual Information in the United Nations Department of Public Information. His Associate Director with Headquarters in Paris, is Mr. William Farr, Counsellor of the Mass Communication Division of the United Nations Educational, Scientific, and Cultural Organization.

MOTION PICTURES and VISUAL EDUCATION

Fine entertainment has a high educational value in that it brings to many an understanding of other persons and peoples as well as interesting interpretation of historical and topical events translated in terms of vibrant drama. Motion pictures contribute importantly in bringing to great masses ideas as well as ideals along with relaxing entertainment.

Universal-International provides for educational and enjoyable entertainment in both feature-length and short subject films, bringing to the screen great books and fine stories presented by the world's greatest artists. Listed are attractions, either released or about to be, that you will not want to miss:—

Ernest Hemingway's
"THE KILLERS"

with
Burt Lancaster, Edmond
O'Brien, Ava Gardner

The Rex Beach story
"THE MICHIGAN KID"
in CINECOLOR

with
Jon Hall, Rita Johnson
Victor McLaglen

"NOTORIOUS GENTLEMAN"

starring
Rex Harrison and

Mark Hellinger's
"SWELL GUY"

starring
Sonny Tufts, Ann Blyth

"CANYON PASSAGE"

from the Ernest Haycox novel
in TECHNICOLOR

Nunnally Johnson's
"THE DARK MIRROR"

starring
Olivia de Havilland
Lew Ayres
with Thomas Mitchell

"MAGNIFICENT DOLL"

starring
Ginger Rogers, David Niven
and Burgess Meredith

"SONG OF
SCHEHERAZADE"

story of Rimsky-Korsakoff,
featuring his best-loved
music and starring
Yvonne De Carlo, Brian
Donlevy, Jean Pierre Aumont
IN TECHNICOLOR

Also Excellent Short Subjects

JUVENILE JURY is a new single reel series taken from the popular radio show of the same name. THE ANSWER MAN, also based on the famous radio show of that name, answers pictorially questions asked by the public (a single-reel series). Songs that everyone loves are featured in the SING AND BE HAPPY (single reel) series.

TECHNICOLOR CARTUNES (single reels) entertain with fine music and clean, sparkling comedy.

Also two reel series, NAME-BAND MUSICALS, and these specials—HARNESSED LIGHTENING and FIGHT OF THE WILD STALLIONS.

UNIVERSAL 'world-events' NEWSREEL is issued twice weekly.

UNIVERSAL-INTERNATIONAL

Rockefeller Center

New York, N. Y.

CIRCLE 7-7100

The first eight from Gateway

Eight original 16mm. productions, prepared for use in the schools. Production by Alvin J. and Darley Gordon, sound by Wm. A. Palmer.

THE JUNIOR CITIZEN

An outstanding film on the role of the schools in training young Americans to be good citizens in our democracy. Supervised by Dr. J. Paul Leonard, President San Francisco State College. 2 reels, b-w, sound, \$90.00.

SPANISH INFLUENCE in MEXICAN CRAFTS

A beautiful film, made in the seldom-photographed Oaxaca Valley. Leather working, especially, is stressed. 1 reel, sound. Color, \$77.50. b-w, \$40.00.

MOVING WITH MOVIES

A "movie" appreciation primer, from the esthetic approach. "Movies" do not move, but create an illusion of movement, which in turn "moves" the audience. 1 reel, sound, b-w, \$40.00.

FUN IN FOOD

A dynamic presentation of the food constituents, their sources and their functions. Frances Stern, Chief, Dietetics Clinic, Boston Dispensary, assisted, and supplies a foreword. Excellent for dietetics classes. 1 reel, sound, color \$77.50, b-w, \$40.00.

SIENA AND SIMONE MARTINI

Ancient Siena, Italy, its 14th century atmosphere, its beautiful but never-finished cathedral. The art of a master, Simone Martini. Valuable in the study of Italian History, Religious Edifices, Fine Arts. 1 reel, sound, b-w, \$40.00.

THE "BABY RABBIT" SERIES

Lively puppet films, founded on an old North Carolina folk tale and exceptional in that they are slanted to appeal to the very young mind and in that each carries a simple moral we tots can understand. Three titles—CARROT PIE, I WANTED RED WINGS, I LOVE TO MAKE MUSIC. Each 1 reel, b-w, sound, \$33.00 if 1 or 2 are purchased, \$30 each if all 3 are ordered at once.

All films also available for rental, rental applying on purchase price if the film concerned is bought.

Oklahoma Radio Conference

Station managers, network executives, program directors, and announcers will participate in the University of Oklahoma's annual Radio Conference on Station Problems February 27, 28, March 1 and 2, Dr. Sherman P. Lawton, coordinator of radio, has announced.

Special emphasis will be placed on advertising this year, and taking part in panels and discussions will be a large group of radio advertising representatives.

A demonstration of television equipment by the Radio Corporation of America has been tentatively scheduled.

Tacoma-Pierce County Conference, Feb. 7-8

The Tacoma-Pierce Bureau of Visual Teaching and the State College of Washington sponsored a conference on February 7 and 8 at the Stadium High School in Tacoma, Washington. Chief topic on the morning of February 7 was "Sound in Education," with a discussion and demonstration lead by William Ladd, Director, Radio Workshop, Seattle Public Schools and William Reasoner, Educational Representative, Harper-Megee Co. The afternoon session was devoted to various demonstrations of audio-visual techniques. The morning session on February 8 consisted of a dealer equipment display to which civic groups are invited. This exhibit marked an opportunity for the schools to acquaint the public with new equipment and materials used in the audio-visual program.

Railroad Movies

The Chesapeake & Ohio Railroad became the nation's first railroad to institute regular nightly showings of 16mm films aboard its trains with the world premiere of Universal-International's "Swell Guy" on its Washington-to-Cincinnati train, the "George Washington."

At present, twin-unit dining cars are used to show the films. Continuous service is provided by two 16mm projectors, operated by union projectionists. The speaker system includes the standard RCA 16mm speaker in combination with a directional horn unit to insure complete distribution of sound throughout the length of the car. Dining car tables fold out of the way and disappear under drapes which are pulled across the windows. Seats are set up across the width of the car. A new train, "The Chessie," to be introduced in the Spring, will have specially designed "theatre cars."

The C & O has signed a one-year contract with Universal-International for the exhibition of the company's 16mm releases.

Arch Mercey to United Nations

Arch Mercey, well-known in government documentary circles, has resigned as chief of the motion picture division of the Office of Government Reports and is taking the position of information officer for the United Nations World Health Organization. It is reported that Mr. Mercey will hold this position only six months before entering private business.

Iowa Discusses Audio-Visual Teacher Training Methods

A Conference on Audio-Visual Teaching Methods for College and University teacher training faculty representatives was held at the State University of Iowa on Saturday, January 18, 1947.

This meeting was attended by 52 faculty members representing sixteen of the Iowa Colleges and Universities. The entire program of the conference was devoted to the need for teacher training in the use of audio-visual aids, and how this need could be met by the Iowa Colleges.

The conference was opened by an address of welcome by President Virgil M. Hancher, State University of Iowa, and followed by an outline of the problem of meeting the need of audio-visual teacher training in all Iowa Colleges and Universities by Dean E. T. Peterson, College of Education, State University of Iowa. Ford Lenler, Supervisor of the Bureau of Visual Education, University of Michigan, Ann Arbor, Michigan, gave an outstanding address on the subject "The Need for Teacher Training in the Use of Audio-Visual Aids", built around the three main subjects of:

1. *WHY* do we need a formal teacher training program in audio-visual methods?
2. *WHAT* knowledge, skills, and competencies should teachers acquire in this field?
3. *HOW* can these skills and competencies be acquired most efficiently?

The entire afternoon program was devoted to a panel discussion on the subject "What Training Should Teachers Receive in the Evaluation and Utilization of Audio-Visual Aids and How Should This Training be Offered in the Iowa Colleges and Universities?" Panel leader for this discussion was Prof. James B. Stroud, College of Education, State University of Iowa, with panel members speaking on the following topics: Prof. H. A. Riebe, Iowa State Teachers College, "Audio-Visual Teaching Methods an Integral Part of all Teaching"; Prof. J. E. Kirkpatrick, Morningside College, "The Importance of Teacher Training in the Use of Audio-Visual Aids in Regular College Classes"; Dean F. Glenn Macomber, Drake University, "Audio-Visual Training in Teacher Preparation."

Prof. T. Keith Goltry, Parsons College, "Values of a Teaching Materials Bureau in a Teacher Training Program"; Prof. H. L. Kooser, Iowa State College, "Minimum Equipment Requirements for a Teacher Training Program in Audio-Visual Instruction"; Prof. W. B. Zuker, Vice President, University of Dubuque, "Summary and Recommendations for Teacher Training Institutions in the State of Iowa."

Recommendations made at the conference pointed toward more extensive units of audio-visual teaching methods to be included in regular methods courses so that all teachers would have experience in this field. Special audio-visual courses were recommended for those teachers or administrators that intend to enter the field as directors or supervisors of audio-visual programs.

**It has been called the
DOCUMENTARY FILM OF THE YEAR!**

PEOPLES OF THE SOVIET UNION!

A JULIEN BRYAN PRODUCTION

This film, photographed by American cameramen, pictures the many racial groups which make up the Soviet Union . . . believed to be the first film offered American audiences which gives a truly over-all concept of this vast country with its many separate and distinct peoples.

This 33 minute, black and white, 16MM sound movie is now available for showing in your community. It may be rented from leading film rental libraries in all sections of the nation. A splendid film for community forums, clubs, churches, and schools. For rental at nominal fee consult your Film Rental Library. For purchase write us for a list of dealers in your area.

1600 Broadway, Suite 1000

NEW YORK, N. Y.

Wilber Emmert Heads Pennsylvania State Audio-Visual Group

At the annual meeting of the Audio-Visual Round Table section of the Pennsylvania Education Association held in Harrisburg, December 27, Wilber Emmert, Visual Education Instructor and Director of the Indiana Film Library, was elected President of the organization for 1947. Vice President is Robert Hall, Pittsburgh, and Sec.-Treas., Mary Ann Pesognelli, Monongahela.

The program for the meeting dealt with "Present Trends in Audio-Visual Education in Pennsylvania." Each speaker stressed that while some progress is being made, the present state situation is wholly unsatisfactory. In the discussion, following the presentations, some tentative plans were formulated for a "program of attack for 1947."

A planning committee was appointed, and this committee was to meet with Mr. Emmert at Indiana, Pa. on February 15 to map out the campaign of action for the year. It is hoped that this will lead to definite coordination of the audio-visual work in the state.

Film Restrictions

Release for educational uses of more than 5000 war-time training films has been prevented in large measure by copyright red tape with West Coast interests. It appears that much stock footage or other copyrighted material originating in Hollywood was included in films produced for or by the Army and Navy.

Army and Navy experts, determined that copyright mix-ups involving their plans to produce more than 1000 films per year in peacetime will not occur again, have placed an outright ban on the use of Hollywood material in future productions—so that immediate educational release may be effected when deemed expedient.

Chicago Scientific Film Society

The Chicago Scientific Film Society will hold its second meeting, Wednesday, February 26 at 8:00 p. m., 84 East Randolph Street. Featured on the program will be several films concerning atomic energy and power. In addition to these timely films, *Transfer of Power*, dealing with the lever and the wheel will be shown. *Transfer of Power* will trace the development of these fundamental mechanical principles from the dawn of history up to the present day and will serve to point up the strides made by modern science. The international aspect of the program will be increased by a presentation of the color film, *Life in the Western Marshes*, dealing with an international wild-life conservation scheme. This film, in addition, deals with bird migration in the Western Hemisphere. Program details may be obtained by writing Wesley Greene at the above address.

AUDIO-VISUAL TRADE REVIEW

Magnetic Sound for 16 and 8mm Films

Sound can now be added to motion pictures regardless of film width and of taking speed—sound or silent speeds—according to an announcement from the Armour Research Foundation. Furthermore, the sound may be readily erased and re-recorded. The Foundation has recently brought to light this new application of magnetic recording. Eventual acceptance of this form of recording is expected and should be of especial value to makers of school-made films and to instructors in the fields of motion pictures and radio.

The Armour Research Foundation has been engulfed in a program of research and development in the field of magnetic recording for sometime now, and of recent date special applications for the motion picture field have been brought to light. While actual development work has been commenced only very recently on this particular application, the results are already very encouraging and point to the eventual wide acceptance of this form of recording throughout the motion picture field.

Magnetic Recording on motion picture film is made possible by applying a thin strip of magnetic powdered material to the film in such a way that it will be permanently affixed. This strip is approximately $\frac{1}{8}$ " wide and can be located on the outside of a double sprocketed film or on the unsprocketed side of a single. When the former method is used, it is possible to record separate sound tracks, thereby yielding the flexibility of choosing between either a binaural system, a system whereby each sound track is actuated from a separate microphone or the placement of a commentary on one sound track with any desired musical background on the other. A single sound track may be employed if desired. While it is possible to place a blank layer of material on the sprocketed side of a single sprocket film, it has been our experience that this is unnecessary inasmuch as the single track does not cause difficulty in reeling.

First attempts at magnetic recording on motion picture show it is possible to achieve response up to 14,000 cycles at conventional 35 MM film speed, to 5,000 cycles at conventional 16 MM film speed, and to 2,500 cycles at conventional 8 MM film speed. It is possible to adapt magnetic recording equipment to any conventional projector and if a given projector is already equipped with optical recording means, it would not be unduly difficult to modify same for magnetic recording as well.

Essentially, the advantages which magnetic recording offers over other types of film recording are: (1) Simplicity of equipment; (2) Greatly reduced weight, for achieving the sound reproduction; (3) Greatly reduced cost as compared to

any other system; (4) Ease and simplicity of recording technique, making it possible for any amateur to obtain satisfactory results; (5) Ease in editing and magnetically erasing the sound track for re-recording, a desirable feature for school and practice use. (6) The possibility of adding sound to films that have already been made.

Experiments in magnetic recording have proven that should the magnetic medium be placed on the film before exposure and consequent subjugation to development processes, that the magnetic track is not altered in any way. Furthermore, that films that may have been taken over a period of years could have a magnetic sound track put on them for commentary regarding the subject matter of the film.

The writer believes that magnetic recording for motion picture work will find wide acceptance in the professional field, as well as in 16 and 8mm work. Already a number of manufacturers in this field have become interested, and it is not beyond a stretch of the imagination to state that sound recording for amateur and school motion picture use may be a reality in the not too distant future.

Magnetic Paper Tape Recorders

A new item of equipment which will shortly become available for sale through dealers is the magnetic paper tape recorder. This is somewhat similar to the wire recorder, but instead of wire it uses as a recording medium a paper tape 8mm wide, which has been coated with a special material to give it magnetic properties. Proponents of paper tape recorders claim that they offer several advantages, including ease of splicing, reduction of cross-talk due to insulating properties of paper, and lower costs of both recorders and tape.

According to best information available at the moment, the Brush Development Company, 3405 Perkins Avenue, Cleveland 14, Ohio is the only firm which is actually manufacturing and delivering paper tape recorders—though in extremely limited quantities—at this time.

The Indiana Steel Products Company, Valparaiso, Indiana, are manufacturers of the "Alnico" paper tape; they do not manufacture recording machines. Several companies are tooling to manufacture under their patents.

Lewis Film Service Expands

In order to increase its offerings in films and equipment, the Lewis Film Service has become a department of the Lawrence Camera Shop, 149 N. Broadway, Wichita 2. The Lewis Film Service name will be retained at the new address. This change will provide the best in service to schools and non-theatrical accounts.

IIC is the newest Leica camera and

New RCA Victor Offices and Studios

Removal of the RCA Victor Division's New York and Chicago regional offices to newer and larger quarters has been announced by Walter M. Norton, Director of Distribution of the Division.

The New York office, formerly located at 411 Fifth Avenue, is now at 36 W. 49th St., Radio City, while the Chicago office, formerly at 445 N. Lakeshore Drive, is now in the American Furniture Mart Building, 666 N. Lakeshore Drive. Managers of these regional offices are M. F. Blakeslee, in New York, and H. A. Renholm, in Chicago.

Enlarged and completely renovated scoring and recording studios at 411 Fifth Avenue house the RCA Film Recording Department. An important new activity to be accommodated in the added studio space is the dubbing of foreign language narrative and lip-synchronized dialogue on film originally recorded in English, for distribution abroad. At the same time, the new "411", as the studio is known in the trade, will accommodate a substantial increased schedule of English language narrative recording, sound effects recording, music scoring, and re-recording.

In addition to the large original studio at "411," which has been redecorated and air-conditioned, the RCA facilities now include a complete new air-conditioned studio of the "Commentator" type, built in space provided by streamlining office and storage accommodations, and a spacious and attractive new reception room. The new studio is equipped for both 35mm and 16mm recording. Together, the two studios virtually double the capacity of "411" for service to the major companies, independent producers, and others using these facilities.

New Leica Cameras Again Available

Mr. John W. Slacks, President of E. Leitz, Inc., has announced that his company is resuming the distribution of genuine Leica cameras. "These cameras", he said, "are the Leica camera IIC and are made in the original Leitz Works, in Wetzlar, Germany. They are not of domestic manufacture." "In fact," he said, "there is no such thing as a Leica camera made in the United States."

Mr. Slacks revealed that the genuine Leica cameras being imported and distributed by E. Leitz, Inc. are being brought into the U. S. by arrangement with OMGUS (Office of Military Government, U. S.) through the U. S. Commercial Company. The money derived from this resumption of importation of Leica cameras will be used to defray part of the cost of the occupation of Germany.

Mr. Slacks revealed that the Model

embodies many new engineering and design features which make more superior performance and ease of operation. There are many advancements in the construction of the shutter, which has imparted to it even greater efficiency.

Externally, one of the main differences of the Model IIIc compared to former models of the Leica camera is a different arrangement of shutter speeds on the two speed dials.

It is no longer necessary to remove the protection collar around the shutter release button to use a cable release. A new type of protection collar is now permanently attached to the camera and it permits the special Leica camera cable release to be used.

The Model IIIc cameras now being imported are equipped with either the Elmar 50mm $f/3.5$ or the Summarit $f/2$ lens. Both lenses are coated. In accordance with the policy of E. Leitz, Inc. the cameras will be offered for sale through franchised Leica Dealers.

Natco Moves to New Quarters

Offices of Natco, Inc. are now in new quarters at 505 N. Sacramento Blvd., Chicago. The building was formerly occupied by the Bendix Aviation Corporation. Manufacturing operations are being moved, and with the increased amount of space, production of 16mm projectors is expected to be doubled.

Master Editing Outfit

To meet the demands of school movie makers for an editing outfit which will take hard usage and offer the ease of operation and flexibility of professional editing units, the Eastman Kodak Company has just announced that it is now beginning distribution of a Cine-Kodak Master Editing Outfit for 16mm. movies.

Combining several editing aids which have heretofore been offered by Kodak only in separate form, the editing outfit now incorporates Cine-Kodak Master Editing Rewind, Senior Splicer, and Editing Viewer mounted on a 17-pound metal base which provides rock-steady support and 37-inch working space for professional quality editing. In addition, the Cine-Kodak Editing Bracket, which accepts up to four Cine-Kodak return reels, can be fastened with a wing nut between the viewer and the left rewind spindle. Both spindles of the rewind are geared for speedy film winding, and film can be wound in either direction. Spindles on the Cine-Kodak Master Editing

Outfit accept 16mm. reels up to 1,600 feet. With the Cine-Kodak Editing Viewer, which is an integral part of this outfit the worker can see every scene in action as the film is edited.

The Kardon—New 35mm Camera

Proving that it can be made here, Chick Kidner, Sales Manager of the Premier Instrument Corporation, 52 West Houston Street, New York 12, N. Y., has unveiled a new precision 35-mm. coupled range finder camera made entirely in America and comparable to a well-known foreign make. Called the Kardon, it has several new features of design and construction, and is fitted with a Kodak Ektar 47-mm. $f2$ coated lens.

As its predecessor, the camera has a super-imposed image type coupled range finder, and shutter operation coupled with film transport to insure against double exposure. With speeds from one second to one one-thousandth of a second, the focal plane shutter controls are divided into two sections. The knob on top of the camera controls speeds from a twentieth to a thousandth of a second, and the knob on the side of the camera next to the lens governs speeds from one second to one one-twentieth of a second. . . .

The use of a 47-mm. lens insures a wider angle of vision as well as a greater depth of field, all points which make for greater versatility, claims Mr. Kardon, the manufacturer. Available soon will be telephoto and wide angle lenses, as well as other accessories. . . ."

Cine Accessory

Accurate framing, which shows the exact field of view, and needle-sharp focusing at distances as short as 6 inches are offered to users of Filmo 8mm and 16mm motion picture cameras by means of the new Bell & Howell Close-up Attachment. Thus Filmo owners continue to "get what they see," even when working at extremely close subject range.

Consisting of a supplementary fixture, which is fastened easily to the camera lens, the new unit comes equipped with one auxiliary lens and a compensating viewfinder. Additional auxiliary lenses are available for use singly and in combination at various camera-to-subject distances up to and including 36 inches.

Useful in close-up cinematography of such subjects as insects, flowers, magazine and book pages, and table-top set-

Close-up Attachment for Filmo Cameras

ups, the attachment has unique applications in title-making as well. For further information concerning the Close-Up Attachment write to Bell & Howell Company, 7100 McCormick Road, Chicago 45, Illinois.

New Eastin Chattanooga Office

Eastin Pictures Inc., has opened an office at 608 Temple Court Building, Chattanooga, Tenn., and is now ready to serve old and new customers in the District of Columbia, Maryland, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Georgia, Alabama, Mississippi and Florida.

The Eastin concern, a twenty-year-old firm which also has long-established offices at Davenport, Iowa, and Colorado Springs, Colo., carries on a nation-wide business in the rental and sale of 16 mm. sound motion picture films. Edward H. Hieronymus, who will manage the Chattanooga office, emphasizes the fact that the company's new branch will maintain a stock of 16 mm. sound projectors and a large library of feature pictures and short subjects.

Young America Films Announces Replacement Footage Policy

A new and more liberal policy governing replacement of damaged footage has been announced by Young America Films, Inc., according to T. C. Morehouse, Director of Sales. This new policy will make it possible for any owner of Young America film to replace damaged 16mm footage at a unit cost of five dollars per one hundred feet, a price that is substantially below prevailing prices in the field for replacement service.

Young America Films will inspect the returned print and replace the necessary footage in unit lengths of one hundred feet. Replacement footage will be Vaporated and spliced into the print without additional charge.

New Cine-Kodak Master Editing Unit.

Radiant Screens

An attractive, new folder showing a complete line of projection screens has just been released by the manufacturers of Radiant Projection Screen with the famous "Hy-Flect", glass beaded fabric. Officials of the company state "that because full production of our product is now assured, we feel it our responsibility to provide the public with complete, up-to-date information on new screen developments".

A clever "Screen Selector" is a pre-dominating factor which distinguishes this folder from the mill-run of such productions. It is so designed that it gives complete screen sizes for various lenses and projector to screen distances, and is further amplified by a chart listing the numerous screen models with prices of all sizes from the smallest to the largest. Thus it is possible to see at a glance not only a photograph of the screen model desired but also a list of available sizes with their respective prices.

To obtain one of these new screen folders, write to Radiant, at their new factory and offices, 2607 W. Roosevelt Road, Chicago 8, Ill. Refer to folder No. 6002.

Another recent Radiant product is a small, inexpensive projection screen, called the "Little Theatre," which is a miniature reproduction of a real stage with drops. Lithographed in maroon, white, gray and black on sturdy cardboard, it is 27 inches high, 24 inches wide with a shadow box 11 inches deep housing a brilliant, light-reflecting "Hy-Flect" glass beaded screen 9 by 12 inches.

It is believed that the "Little Theatre" will hold strong appeal for children for use with their toy projectors and may find use in teacher previewing purposes. Not only is it very attractive but it is extremely portable, weighs but a few pounds, and is easily set up and knocked down.

South American Market

South America is virtually an untapped market for sound projector equipment, according to Robert Schasseur, who recently completed a five weeks' survey trip to Brazil, Uruguay and Argentina as sales representative in Central and South America of Natco, Inc., 505 N. Sacramento Boulevard, manufacturer of 16 mm. sound film projectors.

In the countries he visited to appoint distributors, Mr. Schasseur said a broad market for 16 mm. projectors remains to be developed. He found, for example, that neither school systems nor governments had taken up the use of training films. Current demand for projection equipment comes solely from amateurs, he said, and this type of business is expected to create a market during the present year for about 4,000 machines each in Brazil and Argentina. Mr. Schasseur reported that Natco distributors also will be established soon in many other Latin-American countries.

Wanted: 16mm Films

An interesting offer that should evoke a lively response in the ranks of 16mm producers comes from the Academic Film Company, Inc. of New York, whose heads, Milton J. Salzbarg and Harold Baumstone, are the former president and vice-president respectively of Pictorial Films, Inc.

Academic invites 16mm producers, both professional and amateur, to submit their productions to them for consideration of their commercial possibilities. If, in Academic's judgment, the film has market potentialities, the company will make an offer either on a cash or royalty basis.

Academic stresses the point that this is not a prize contest in any sense, but strictly a business proposition whereby its distribution channels are made available to producers of worthy 16mm films.

During their twelve years of association in the 16mm field, Mr. Salzbarg and Mr. Baumstone have become well known for their sympathetic interest in the work of new producers, amateurs included. Their purchase last Fall, when they headed Pictorial, of two out-standing amateur Kodachrome productions

aroused considerable comment in the industry. Both these films—Ralph E. Gray's *Arts and Crafts in Mexico* and Dan Billman's *The Inside Story*—were on *Movie Maker's* "ten best" list for 1946. Academic Film Company's address is 1450 Broadway, New York 18.

Col. Kalisch to Ganz

Colonel Bertram Kalisch of Forest Hills, N. Y. announced his resignation as Chief, Adaptation Section, Motion Picture Division of the State Department, to become associated with the William J. Ganz Company and the Institute of Visual Training, New York City, in the production and distribution of theatrical, industrial and educational shorts.

Colonel Kalisch, who served as a pictorial officer in both the European and Pacific War Theaters, is best known to the public for his feat of entering German-occupied territory with a news reel sound crew shortly after the liberation of Paris and persuading German Major-General Erich Elster to make a formal surrender for the cameras with 20,000 troops at Beaugency, France. Another achievement that added to his fame was making the first still and motion

Three ways to...multiply instructor's time ...increase teaching effectiveness

The SoundScriber method simplifies language instruction and makes it more effective because:

1. It permits additional students to have individual instruction.
2. It provides countless hours of self-instruction for the student.
3. It enables the instructor to do more corrective work with the individual student without requiring any more of the instructor's time.

Because SoundScriber is an entirely electronic device, every word is recorded with radio-like clarity. The flat, unbreakable SoundScriber disc holds up to 30 minutes of recording; costs only a few cents. Discs handle and file like a sheet of paper; can be played back a hundred or more times. For student drill purposes, electronic controls make possible instant and precise repetition of words or phrases; by this means the instructor drives home his point, and by the same means the

student records and checks his own pronunciation, diction and usage.

With SoundScriber both instructor and student work more effectively during drill periods. Actual use in schools, colleges and universities is a tribute to its effectiveness.

Ask for material telling how leading schools, colleges and universities use SoundScriber to meet the problem of increased enrollment in language classes.

Use **SOUNDSCRIBER** electronic disc recorder

pictures ever made of enemy troops drilling for U. S. Army cameramen in No Man's Land. For these historical pictures he talked the local German commander into lending him a squad of German paratroops for half an hour during a truce. Before entering military service Colonel Kalisch was a noted newspaper man and newsreel editor for RKO-Pathe Newsreel and MGM News of the Day Newsreel.

In June, 1945, Colonel Kalisch was assigned to General MacArthur's GHQ as Photo Officer. He directed all photo coverage on surrender negotiations, the landing in Japan and the surrender aboard the U.S.S. Missouri. He remained in the service six months after returning from Japan to reorganize the Morale Films Section and to put the Army-Navy Screen Magazine on a post-war basis. For this he was commended by General J. Lawton Collins, Chief of Army Information, and was awarded the Commendation Ribbon by the Secretary of War.

Hollis 555 Splicer

Being readied for early release is a new 8-16mm splicer boasting a dry-scraper unit. Splicing on the new product involves three operations, a single

Splicer for 8mm and 16mm Films

movement completing cutting and welding. The unit called "555" is of steel construction with plated finish and is mounted on a lacquered wood platform. It is being handled by Alan Benjamin, 254 West 54th St., New York 19.

New Price for Canadian Films

The National Film Board of Canada, film agency of the Canadian Government, has announced a new selling price on its 16 mm. documentary films which deal with subjects of national and international interest. Selling price on 16 mm. black and white subjects is \$25 for one reel and \$40 for two reels. On a rental basis, cost is \$1.25 per reel. Kodachrome subjects sell at \$75 per reel and rent at \$2.50 per reel. This price schedule represents a standardization of fees which formerly ranged from \$15 to \$50 per reel.

A group of dealers on a tour through Ampro's plant, stop to watch a "Bank" of projector heads being given a test run.

Dealer Day at Ampro

Before the war, "Dealer Day" gave Ampro's visual education dealers an unusual opportunity to get together and discuss new trends with executives at Ampro Corporation. Recently, the first postwar "Dealer Day at Ampro" attracted representatives from 33 states, who found more than usual pleasure in renewing acquaintances missed during the war years.

The first session was opened by Mr. E. N. Nelson, Ampro's Educational Director, who introduced Mr. Harry Monson, Ampro's Vice-President and Sales Director. He presided over the meeting in the absence of Mr. Axel Monson, Ampro's president.

After reviewing Ampro's growth from a tool and die shop, started in 1914, then known as the Universal Stamping and Manufacturing Company, Mr. Harry Monson described the company's present extensive facilities. He pointed out that Ampro is now a General Precision Equipment Corporation subsidiary, with vast technical and productive resources at its disposal for the development of new Cine products, as quickly as conditions permit.

A booming market for motion picture projectors is in the religious field. Mr. Monson prophesied that within the next few years, it would possibly be as large as the educational field. Citing Ampro's world-wide sales appeal, Mr. Monson announced that by the end of next year he expects to have distributors appointed in approximately fifty different foreign countries. Since the end of the war, Ampro has trained men from as far away as Bangkok, Siam and Helsinki, Finland.

Following the speeches, the dealers were taken on a complete tour through Ampro's modern plant and were given complete demonstrations of all Ampro projectors. At the conclusion of an informative and stimulating day, Ampro was host to its dealers and their representatives at a dinner party at the Edgewater Beach Hotel.

Electro-Voice Moves

After 19 years in South Bend, Indiana, ELECTRO-VOICE, INC., well known microphone manufacturer, moves to a new,

larger home in Buchanan, Michigan. Here in one modern factory nearly an acre in size, ELECTRO-VOICE combines all the facilities of its three South Bend plants. Complete development and manufacturing processes, from the raw materials to the finished products, are now centralized under one roof—including die-casting equipment and a unique anechoic sound room.

The new plant now makes possible further expansion of ELECTRO-VOICE research, engineering and productive capacities, and permits even greater emphasis on the E-V quality control plan.

Pre-Fabricated Portable Darkroom

Pre-fabrication hits the photographer. . . . A new darkroom, complete except for the purely photographic apparatus, is being distributed by Alco Photo Supply Corp., 15 West 47th Street, New York City.

This darkroom called the "BLAK-A-Zell", comes knockdown in five crates and may be assembled in 6 hours by one man, in 4 hours by two men. Instruction manual accompanies each unit. It is completely wired and fitted with plumbing, shelves, dry racks, an 8 ft. stainless steel sink with built-in print wash tank, "Filtair" air filter and space

Portable darkroom with side wall removed

for an exhaust fan. It occupies floor space of approximately 8 feet on each side and is 7'8" high.

The unit is ideal for use in the garage or basement of private homes, and for school, laboratory and factory use. All wiring terminates in one piece of BX cable, long enough to reach a convenience outlet, or permanent connection may be made to the house wiring. An electrician is needed only if a permanent connection is to be made.

The plumbing is arranged so that water may be supplied through a garden hose, or permanent connection may be made by a plumber. The drain pipe is 2-inch and a hose may be used to carry away the waste, or permanent connection to the sewer may be installed.

Slidefilms and Slides

The Macmillan Company Enters the Text-Slidefilm Field

Early in 1947 the Macmillan Company will make available a set of slidefilms for coordinated use with their textbook, "General Biology" by James W. Mavor. The five slidefilms, of approximately 50 frames each, have been designed to integrate closely with the text, not only complementing but supplementing the subject-matter of the book. Titles of the five slidefilms, with the portions of the text with which they correlate, are as follows:

- The Cell, (Part I, Chapter 4)
- Alternations of Generations in Plants (Part II, Chapters 15, 16)
- Plant Physiology (Part II, Chapters 15, 16)
- Animal Parasites (Part III, Chapters 18, 20, 21)
- Life Through the Ages (Part VI)

These filmstrips were carefully planned and produced under the joint direction of Dr. Mavor, the author, and Dr. C. J. Hylander, Visual Aids Editor, College Department, of the Macmillan Company. This announcement, coming from one of the outstanding textbook companies, has high significance. It is a first step toward the goal of the "teaching package—text and slidefilms" to be developed by the Macmillan Company.

Business Education Visual Aids

A new company by this name, with headquarters at 330 West 72nd St., New York 23, has been formed by Clifford Ettinger to rent, sell, and produce sound and silent motion pictures, filmstrips, and other visual aids. BEVA will specialize in providing visual helps to high school and college teachers of business, sales managers, and training directors. It will restrict its activities to the field of education for business.

Doctor Ettinger has been a business teacher for many years. Since 1939 he has been visual-education editor of the *Journal of Business Education*.

Journal of Business Education. First slidefilm productions include the following:

Introduction to Accounting, The Accounting Cycle—Direct Ledger Entry—Routine Each Month, The Accounting Cycle—Direct Ledger Entry—Year-end Closing, How to Balance Accounts, The Journal—First Lesson, Posting—One Journal, One Ledger, and Controlling Accounts.

The content of every filmstrip is outlined in an index frame. The aim of each filmstrip is clearly stated and is realized by means of photographs, cartoons, title frames, and illustrative entries with the significant elements spotlighted and pointed up by means of arrows and highlights. Orientation is constantly maintained by subtitles, legends, and a clearly printed explanation at the bottom of each frame. Provision is made for pupil participation by means of direct questions and by providing model accounts which the student may copy from the screen. Application is present in the form of problems to be worked by the students. The problems are followed by model solutions. These professional filmstrips, with their presentation of a variety of bookkeeping situations in great detail, are excellent supplements to accounting texts using the balance sheet approach or the equation approach to the teaching of bookkeeping. They provide the basis for lively discussion, interested classes, and motivated learning. Filmstrips may be purchased or rented. Preview with a view to purchase is free.

Slidefilm Series on Government

Young America Films, Inc., 18 East 41st St., New York 17, have produced a series of five new slidefilms especially designed to correlate with the junior and senior high school social studies program. Each slidefilm is designed as a teaching unit on one of the branches or departments of the federal government. Titles in the series are: *Our Congress, The Department of Interior, the Department of Agriculture, Post Office Department and Our Federal Government*. Teacher's Guide is included.

Magnets is a new teaching slidefilm for the elementary school science class, designed to demonstrate and teach a few of the fundamental principles about simple magnets. Content of the slidefilm parallels the film of the same title. Teacher's Guide included.

Civil Aeronautics Filmstrips

Five new sound filmstrips, produced by the Civil Aeronautics Administration, U. S. Department of Commerce, are now available for public use. While they are intended primarily for use by airlines personnel, some of them will be useful in the study of transportation and

aviation in schools. Four of the filmstrips are in color. Each one is accompanied by a single-face 16" recording playing at 33 $\frac{1}{3}$ r.p.m. Aviation subjects covered are: *Approach Control, Air Traffic Rules, CAA Communications System, Federal Airways Service and Planned Developments.*

Transcriptions and Recordings

■ POPULAR SCIENCE PUBLISHING CO., 353 Fourth Ave., N. Y. C. 10 has a total of 81 Teach-O-Discs (172 titles) now available on 12-inch, double-faced records of 78 r.p.m. The records are professionally re-enacted scenes from the immortal works of the masters of literature and create an amazing student response, greatly stimulating interest in English literature, U.S. History, and the Social studies. In addition, they offer vivid examples for classes in English, speech training, dramatics, and radio technique, it being possible for students to compare recordings of their work with the professional performers. A complete list may be had by writing to Popular Science. The first 25 Teach-O-Discs include:

The Man Without a CountryHale
Macbeth—Sleepwalking Scene;

Soliloquy; BanquetShakespeare
Merchant of Venice IV, 1; II, 7; II, 9;
III, 2; II, 2Shakespeare

For use with Teach-O-Discs as well as other standard 10- and 12-inch records (78 r.p.m.), Popular Science is offering the Rembrandt portable electric phonograph. It has a 5-inch permanent magnet speaker with 3-tube amplification, giving sufficient volume for classroom use. Other features are a built-in compartment holding 12 records and a cover which may be closed while a record is playing. The unit operates on 115 volts, 60 cycles only.

■ **HOLLYWOOD FILM ENTERPRISES**, 6060 Sunset Blvd., Hollywood 28, California announce a series of twelve color films covering the peoples of South America and their occupations. The first six are listed below:

People of Chile (2 reels)—overall concept of Chile in terms of her present day people. It is accurate and up-to-date. This history of the Chilean Republic and of the European immigrants who mingled with the original Indians provides a foundation for understanding the country.

The Andes—Chile's Barrier (1 reel)—the story of an unusual mountain range and how it is responsible for the climate, resources, and boundaries of a nation. Climatic peculiarities give Chile two important natural resources: the forest of the South and the nitrate beds of the North. Railways, industries, and hydro-electric plants are shown.

Chilean Nitrate (1 reel)—the history and development of the nitrate beds. This film is of great value because it explains in detail the modern methods of mining and refining nitrate, a subject on which there is little current written material. Furthermore, it reveals how nitrate exports give Chile its financial start.

Chile's Copper (1 reel)—the importance of copper and the story of the world's largest known reserves, located in the Atacama Desert. The importance of copper in Chile's economy is explained in simple terms.

Chilean Hacienda—A Traditional Farm Estate (1 reel)—a description of the Hacienda system under which much of Chile's farm land is administered, a system of tenant farming not found in the United States. The living and the working conditions of the owner and the workers are shown. Folk dancing and rodeos are shown, including the Chilean cowboy's costume and the odd manner of saddling his horse.

Southern Chile (1 reel)—a description of the tip of a continent. The southern third of Chile stretches in a maze of channels and islands down to Cape Horn. The lives of the primitive Indians in this region are shown, and some excellent shots of the Strait of Magellan are included. The effect of the Panama canal upon the traffic which once passed through the strait is indicated by means of animated diagrams.

■ **SINCLAIR REFINING CO.**, Merchandising Dept., 10 West 51st St., New York has recently released the following:

Over the Rainbow (40 min.)—farm planning for the future. It advises

the farmer to make up a plan for the future to combat the uncertainties of tomorrow. Looking ahead to greater soil and animal productivity, improved and adequate farm machinery, modern housing, and a more sympathetic outlook on farm living, the film puts across a message of great importance to the farmer. The film is available to film libraries and others.

■ **CASTLE FILMS**, 30 Rockefeller Plaza, New York 20 announces distribution of the following available for purchase:

Film Tactics (18 min.)—top-notch U.S. Navy film showing the principles of utilization of instructional films. This film is said to be one of the best available on the subject of teaching with films.

■ **INTERNATIONAL FILM BUREAU**, 84 E. Randolph St., Chicago 1 has acquired the exclusive United States sales right to three British Information Services films and to one National Film Board of Canada film:

The Great Circle (14 min.)—develops the theme that flying makes new neighbors. Animated globes are used to explain the meaning of great circle air routes. Refer to "Table of Contents" for picture story in this issue.

Near Home (25 min.)—a film about good teaching. To illustrate several principles that are basic to good teaching, a class and teacher study the community in which they live. Several students had complained that the community in which they lived was dull and uninteresting. To disprove this statement, the teacher takes the students on a day's outing for a closer look at the immediate surroundings. Stimulating bits of information spur the pupils to more and more investigation about the public library, the city hall, industrial centers, farms, and other places. The pupils, at last, have become interested in their environment. This is a film for teachers about pupils and the learning process.

The Story of Money (16 min.)—history of present day monetary systems from the days of barter up to the present. Originally prices of commodities were determined in terms of other commodities; then, in terms of precious metals or gems; and finally, in terms of coins. Ultimately, the check and credit system came into use. This film was made by Gryphon Films for the Bankers Information Committee, London and constitutes a fascinating presentation of this romantic story.

Certified for Seed (19 min., color)—story of potato growing from soil preparation and planting to harvesting and shipping. The scientific research program on the improvement of the potato is shown together with new va-

ieties produced by breeding. Cultivation, including the spraying and dusting of the plants, is explained. This is a National Film Board of Canada film of especial interest in the study of potato growing and scientific agriculture.

■ **UNITED WORLD FILMS, INC.**, Bell & Howell Filmosound Library, Rockefeller Center, New York 20 announces the following new 16mm sound pictures:

Logging in the Northwest (10 min., color or black and white)—logging crew and their work. Traditional labor and modern machinery are shown at work in the felling of large trees and their transportation by rail, truck, and river.

■ **CORONET INSTRUCTIONAL FILMS**, 919 N. Michigan Ave., Chicago 11 has released the following films:

Our Animal Neighbors (1 reel, color or black and white)—a film about the common mammals which live close to human society. Ten are shown: cotton tail rabbit, gray squirrel, fox squirrel, chipmunk, gopher (thirteen-lined ground squirrel), deer and meadow mice, shrew, mole, and bat. This film is intended for younger children.

Bookkeeping and You (1 reel, color or black and white)—how to keep a systematic record of cash income and outgo. This film is designed to aid the student in three ways: (1) motivate study; (2) aid to educational guidance, encouraging a careful selection of optional courses; and (3) vocational guidance, giving much job information. It is intended for use with groups in junior and senior high schools.

The Secretary's Day (1 reel, color or black and white)—comparison of the daily activities of a secretary as against those of a stenographer. The ability to organize and to plan ahead are shown as important qualities of an alert secretary. Designed for shorthand, typing, and secretarial office-practice courses, the film is also suited to vocational guidance and informational studies in the senior high school or business college.

How to Read a Book (1 reel, color or black and white)—methods of selecting the proper book and of using it correctly. Details which are emphasized include the following: information needed, what the book offers, author's attitude, key ideas and where to find them, the index, footnotes and references, when to read quickly, and when to read with greater care. Designed for junior and senior high school use, the film should be shown before book reports are assigned and as an aid to general study habits.

How We Elect Our Representatives (1 reel, color or black and white)—explanation of the functional basis of the American democracy: our election system. Basic contents include registration, primaries, electioneering, vot-

Film on
**JUVENILE
DELINQUENCY**
7 reels • 62 minutes
16mm Sound

One of our great problems today is Juvenile Delinquency. This film shows how Government social services are working to combat juvenile crime in Great Britain. It tells in dramatic fashion of how a boy who is caught house breaking and a girl who runs away from home and becomes a sex delinquent. Both are sent to approved schools where at first they fail to respond to their environment. Later they realize that they are being given a fresh start in life and decide to take advantage of the opportunities offered to them.

ing, methods of counting ballots, and the responsibility of voting intelligently.

■ **DE VRY CORP.**, 1111 Armitage Ave., Chicago 14, present a new series of 16mm films in color and black and white, edited for classroom use:

Carlsbad Caverns (10 min., color)—portrays the world's largest caverns located in southeastern New Mexico.

Navajo Land (10 min., color)—depicts the Navajo reservation embracing nearly four million acres of wide plateaus, massive canyons, and reflecting sand.

San Diego Zoo (12 min., color)—world's largest collection of wild ani-

mals, birds of amazing types and colors, and strange reptiles.

India (12 min.)—India's political dilemma with a brief review of the India National Congress, the Moslem League, and their leaders, as well as the people themselves, their costumes, primitive agricultural methods, their cities, building, and monuments including the Taj Mahal.

Other new film subjects now available on rental basis include the following *March of Time* films: *New South* (17 min.); *Palestine* (16 min.); *New England* (12 min.); *Americans All* (20 min.); *Music in America* (17 min.); and *Life with Baby* (18 min.).

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20 announce the availability of a new film:

Children on Trial (62 min.)—feature-length documentary on juvenile delinquency in England, comparable to *Children of the City*, which demonstrated the Scottish method of handling such delinquency. The results of efforts to combat juvenile delinquency in England has led to the development of the Approved Schools. Young offenders who appear frequently before the courts and who fail to respond to the guidance of a probation officer are committed to one of these schools. This film tells the story of two boys and a girl, all con-

stant offenders, who are sent to Approved Schools. Resentful and uncooperative at first, they finally realize that they are being given a fresh start in life and decide to take advantage of the opportunities offered to them. The government estimates that about 60% of the children who attend these schools become so firmly set on the path of good citizenship that when they leave the school, they never give any indication of backsliding.

■ **GATEWAY PRODUCTIONS, INC.**, 49 Main Street, San Francisco, Calif., a newly formed producing-distributing organization, announces its initial releases this month. Personnel of the new concern includes Alvin J. and Darley Gordon, well known producers of documentary films and co-authors of the recently published book, *Our Son, Pablo*, Dave Butler and Wm. A. Palmer of Palmer and Co., San Francisco, and James A. Wallace, one time vice president of Walter O. Gutlohn, Inc. Current releases, all 16 mm. sound films, are:

The Junior Citizen (2 reels)—the part our schools are playing in training pupils to be good citizens. The subject matter is divided into four parts: (1) sharing a common understanding, (2) fitting into our economic life, (3) conserving our natural resources, (4) conserving our human resources.

Siena and Simone Martini (1 reel)—the ancient Italian city of Siena, the beautiful but never-finished cathedral, and the work of the artist Simone Martini. The film is valuable to students of Italian history, religious edifices, and fine arts.

Moving With Movies (1 reel)—a movie-appreciation film, from the esthetic approach. Shows that movies do not really move, but create the illusion of movement.

Spanish Influence in Mexican Crafts (1 reel, color)—made in the seldom photographed Valley of Oaxaca, dealing with pottery and basket making, weaving and leather working.

Gateway Productions are now handling the following well-known productions of the Gordons:

Fun in Food (1 reel, color)—a dynamic presentation of the food constituents, their sources and their functions. It was prepared with the aid of Frances Stern, Chief, Dietetic Clinic, Boston Dispensary.

I Wanted Red Wings, Carrot Pie and I Love to Make Music—three puppet films, dealing with the activities of Baby Rabbit and his friends and founded on an old North Carolina folk tale. The films are interesting to all ages but slanted especially for the very young mind. They are excellent fare for tiny tots since each film contains a moral intelligible to the very young.

■ **GENERAL MILLS, INC.**, Dept. of Public Services, 400 S. Fourth St.,

Minneapolis 15, Minn. announces a new film on nutrition:

And so **They Learn** (13 min.)—methods of weaving nutrition into classroom studies as demonstrated during a nutrition workshop at Mankato State Teachers College. The film indicates such activities as children raising a garden, painting a mural about foods and family eating, planning a picnic around the basic 7 food groups. Furthermore, it shows how teachers, working with parents, school administrators, health workers, and similar groups interested in nutrition can raise the nutritional standard of a community. The film was designed for teacher-training schools and for public health workers.

■ **INSTITUTE OF VISUAL TRAINING**, 40 East 49th St., New York 17, is a source for many free loan films of an educational nature, the most recent of which include:

This Is New York—a 2-reel 16mm sound film tour of this city with spectacular views from the air and from the streets. A typical American family rides the double-decker bus down Fifth Avenue, visits Chinatown, the waterfront, Coney Island, the Statue of Liberty and other points of interest. The highlight of the tour is a trip to the top of the Empire State Building. "This Is New York" is a companion film to a similar subject showing views of Washington, called "Washington—Shrine of American Patriotism," available from the same distributor.

The Danger Line (18 min.)—an interesting film telling the importance of proper shoes for children. The school nurse shows the class how to make a "danger line" chart to protect their feet from tight shoes. She tells them how much to allow for foot growth before the shoes become dangerously tight. An eight-page teaching unit is sent with the film. Though sponsored by Thom McAn Shoe Stores, no advertising and no attempt to sell shoes appear in the film.

THE MAGAZINE DEVOTED TO AUDIO-VISUAL AIDS IN EDUCATION

MARCH, 1947
Volume XXVI
Number Three

THREE DOLLARS PER YEAR—35c A COPY

1947 Victor Teaching Triumph

AN INNOVATION in 16mm sound projector development . . . the new, sleek Victor "60" combines modern design and many new mechanical improvements. It is truly the finest teaching tool in audio-visual education.

As smart in appearance as today's airplane luggage — with its light-weight, aluminum case and matching speaker — the Model "60" further affirms Victor leadership in the 16mm

equipment field. As far ahead as its striking appearance are the new engineering refinements which provide simplicity of operation and peak performance for classroom or for auditorium.

Learn about this teaching triumph by writing today for booklet describing "The New Victor 60" — a booklet of good counsel in making the correct sound movie equipment selection.

COVER PICTURE: A scene from the film, WHAT MAKES DAY AND NIGHT, produced by Young America Films, Inc. Jane and Jim have just asked their father what makes day and night and where does the sun go at night. Using a globe and a flashlight, the father shows the children how the alternation of day and night is caused by the rotation of the earth about its axis and demonstrates that half the world is experiencing night while the other half has daylight.

MAGAZINES AND MEN

by
F. Dean McClusky

THE gleaming silver of the EDUCATIONAL SCREEN'S twenty-fifth anniversary highlights for us not only twenty-five years of accomplishment in the field of visual education but makes especially lustrous the single-hearted devotion of one man, the Screen's late founder and editor, Nelson L. Greene. Magazines as well as men, contributed much in the pioneering days, but one magazine survived the test of time. The EDUCATIONAL SCREEN and Nelson L. Greene have, during the past quarter of a century, given to this field those extra ingredients of cooperation and of understanding that enable visual education to celebrate, along with EDUCATIONAL SCREEN, a silver anniversary of accomplishment.

Some of you who read this will perhaps remember the magazine VISUAL EDUCATION, a pioneer in this field. It began publication in 1920, and its first editor was Nelson L. Greene. In an editorial which he wrote for the April 1920 issue (No. 2, p. 5), the following sentence appears, "Increased trouble is the pioneer's normal reward." This was a prophetic statement, for by 1922 he had launched out as an independent; he had founded THE EDUCATIONAL SCREEN and was in competition with his old friend, VISUAL EDUCATION, as well as THE SCREEN and MOVING PICTURE AGE. VISUAL EDUCATION and MOVING PICTURE AGE were later consolidated with THE EDUCATIONAL SCREEN. Nelson L. Greene, like many with the pioneering spirit, was a man of purpose and of courage. His attitude toward the cause he had elected to serve was clear; "Visual Education," he wrote, "aims to be nothing if not trustworthy." (Refer to op. cit. p. 5.)

I have copies of each of the four early magazines before me on my desk. Between their covers, one will find the names of men who mapped the early course of visual instruction. Although it was soon made clear that there was not enough elbow room for four professional magazines in the young field, nevertheless, these publications and the men connected with them, in five short years, set stakes and outlined policies which have influenced the development of visual education to the present. Let us review briefly the accomplishments of that period.

The enthusiasm for visual education was relatively as great during the post-war years of 1919-1924 as it is now in the years following World War II. Many men saw in the silver screen then, as they see now, a means of rapid, effective communication which would make a valuable contribution to teaching. To temper the enthusiasm, it was clear that balance was needed. This was furnished by research. The application of research to the problems of

visual education was one of the first milestones which was set during the pioneering days. Leadership for this research stemmed from the University of Chicago and Columbia University. And the men responsible, without exception, served one or more of the magazines in an official capacity. Following the publication of the two studies by Weber and by Freeman et al in 1922 and 1924 respectively, there has been a steady growth in research literature dealing with visual instruction.

In American education, if a specialized field of endeavor is to achieve status, it must have a professional literature. To MOVING PICTURE AGE, THE SCREEN, VISUAL EDUCATION, and THE EDUCATIONAL SCREEN should go the credit for establishing the professional literature of visual education. They served as an outlet for the writings and reports of the serious workers in the field. THE EDUCATIONAL SCREEN, in particular, set a milestone in 1922 when it published in book form, Weber's "Comparative Effectiveness of Some Visual Aids in Seventh Grade Instruction."

In addition to professional literature, a specialized field needs an organization which will bring people together for the discussion of common problems and the determination of policies. The National Academy of Visual Instruction was established in 1919 to serve this purpose. It held national conferences on visual instruction annually and made extensive plans for future developments. MOVING PICTURE AGE served as the official organ of the N.A.V.I. until 1923 and by so doing rendered a large service to the field. Following the merger of MOVING PICTURE AGE and THE EDUCATIONAL SCREEN in 1923, the latter served as the official mouthpiece of N.A.V.I.

In 1922 the president of the National Education Association appointed the first educational committee of national scope to study visual instruction. The chairman of the N.E.A. Committee on Visual Education and Co-operation with the Motion Picture Producers was the late Charles H. Judd of the University of Chicago. This committee planted two ideas which were to bear fruit. First, it made a survey of films in the vaults of the producers to discover if there were portions of these films which could be put to educational use. Second, it made a nation-wide study of the administration of visual education in school systems and museums. The committee recommended among other things that the N.E.A. arrange a "program on visual education" and that it establish an agency "to carry on studies of administrative and instructional methods which should be employed in the introduction of visual materials into the school curriculum." The Judd re-

(Concluded on Page 164)

Means---Not Ends

Audio-visual aids must be used to create a reasoning and a thinking populace.

IT would really be surprising if the current preoccupation with methods and materials, with organization and with equipment, didn't cast a smoke screen over the more fundamental questions: "Are these things actually educational in and of themselves or are they only the tools of education which depend for their value on how they are used? It is so easy to lose sight of the main goal in the busyness of trying to achieve it; so easy to become engrossed in new machinery, especially if it is interesting, and to forget the larger problem of its proper use. Running a motion picture film is fun. Extracting its full educational value is more than fun.

The French have a saying, "The more it changes, the more it's the same thing." That may apply to us, too. Are the new instructional aids, with their projectors, recorders and radios and the new progressive curricula with their units and integrations, mere changes in paraphernalia, or do they actually create greater power in our students to master themselves and to understand the disturbing problems of a world in transition? It would be well for those of us who are interested in audio-visual aids and who realize their tremendous possibilities, to stop a while and ask, "Are we really educating or merely introducing new kinds of textbooks?" Perhaps we are simply changing the tools of education without influencing the result.

This confusion between ends and means is not peculiar to education. It has been characteristic of our civilization since the beginning of the Industrial Revolution. We have adopted mechanical power to our use without worrying too much about its social consequences. We have introduced time-saving machines and shortened the work day, but we have planned no constructive use for the time we save. We have multiplied our production, but we still burn crops and fight surpluses, because we have paid little attention to the best distribution of that production. We have created machines that are more efficient than men, but we haven't yet decided whether the world belongs to the machine or to the man it displaces.

With audio-visual aids, the mechanization of our civilization has found its way into the schools. It has been welcomed with open arms. The invention of the electronic tube and its magical ability to translate electric pulsations into sound and images was a literally heaven-sent boon to the educator. Here is the long-sought device to break down the physical barrier between the school world and the real world and the semantic barrier between the word, which had formerly been almost the exclusive medium of education, and the object of which the word too often gave an inadequate, even a distorted idea. It was an exciting prospect. It still is. Through the medium of the radio, the greatest personages of politics, adventure

H. M. BARR,
Director of Research,
Portland (Oregon) Public Schools

and art might speak directly to all school children. Through the medium of the film and the televisior, a magic carpet could be spread in every classroom, far more wonderful than any in the Arabian nights. It seemed to the teacher with imagination that the educational millenium was at hand.

Unfortunately, the millenium has not yet appeared. It isn't even in sight, either in the schoolhouse or in society at large. Once more we have been mistaking the means for the end. The new instructional aid and the progressive method have brought us the means for a better education—but only the means. Let us hope we get further with them than our predecessors did with similar innovations in the past.

The history of education is full of new methods and new devices. Rousseau thought that mankind could be made very much better if the child was allowed to grow up naturally without too much regimentation. He sounds strangely modern. Herbart emphasized the principles of interest and evolved his five formal steps as a universal method of learning. Coming closer to our own day, Superintendent Wirt, with the work-study-play plan of the platoon school, was sure he had the proper answer. Now that departmentalization has run its course, we are going back to the homeroom teacher in the fond belief that if all the various subjects and activities are integrated in a single unit, the child will grow up, not a compartmentalized individual, but a truly integrated one.

The same process of change has gone on with instructional aids. Froebel in the kindergarten relied upon geometric symbols to inculcate general principles. Comenius, the father of visual aids, was the starting point of a long line of pictorial improvements in textbooks. The activity enthusiasts have always insisted upon experience with things as the foundation of learning.

What will help the growing child to understand the world he lives in and the problems that confront his generation? Is it, as President Hutchins would have us believe, a knowledge of the fundamental principles of life as they are expounded in the 100 best books? Is it the mastery of the three R's as so many of our well-meaning laymen insist? Is it a greater program of vocational education with a longer time spent in shops and typing rooms? Is it a better grounding in physics and chemistry in keeping with the scientific nature of the modern age? Is it a knowledge of the American Constitution and the facts of American history which our patrioteers assure us is the sine qua non of good American citizenship? It is all these

and much more. By themselves, they are not enough. Unless the teacher directs the application of these principles, skills, facts, and aids to the actual problems of society, the child will seldom make the necessary associations by himself.

Understanding Our Changing World

Today we realize that neither in temperament nor knowledge are very many of us prepared to understand our changing world or to get along with the people who now live in it. Misunderstanding and prejudice are the rule rather than the exception. There has been very little in our education which would give us much knowledge of what is wrong with the world and what it needs if these wrongs are to be corrected. We have had very little training in getting along with other people of different backgrounds, different races, different colors, different nationalities. The penalty for that lack in our education may yet be an atomic war in which all problems will disappear as Hiroshima and Nagasaki disappeared.

The audio-visual approach is the most promising of all educational techniques available to the classroom teachers. If properly directed, it does have the capacity to bring to our young people as they mature, a realistic and much more easily understood picture of all phases of our civilization—its geography, its population, its technology, its ecology, its racial differences, its achievements, and its failures. It can really bring before the physical eye and, in time, the mind's eye, the infinitely varied pattern of life in all its manifestations. If designed to that end, it can do more to socialize the individual than all the sermons and all the textbooks in the world. It can do this because the picture has a way of finding a welcome reception in the human mind and heart which the word does not.

First, however, the audio-visual program and the curriculum which it implements must be specifically designed to give the child an understanding of the realities of modern civilization. It isn't enough to be merely descriptive of the surface of things—such as scenes in national parks, the costumes and houses of Arabian villages, the process of making bread in automatic bakeries, or the monuments in the nation's capitol. These are interesting, even important, and the audio-visual method will certainly make them better understood. But the problems of the future will not be solved by this kind of superficial education. Nor will pupil behavior be modified in the direction of better citizenship. The Nazis and the communists have made many mistakes, and their type of civilization may be anathema to our people, but they have shown the world what education can be made to do if, given a goal which enlists the enthusiastic cooperation of youth. They gave their school boys a vision of a better life, and the school boys fought hard to achieve it. The fact that the vision was diabolic, doesn't invalidate the method. Fascist schools won their students' enthusiastic devotion to a case of social, economic, and political improvement—as *they* saw it. And their students responded. That has not been done in American schools, and it wasn't because America lacks goals towards which youthful enthusiasm can be directed.

The American ideal is certainly as noble a goal as mankind has ever been offered by a nation. It is a dream of legal and social equality among men, respect for the freedom and dignity of the individual, a superb productive machine that will spread the blessings of a high standard of living throughout the population, a social order without prejudice because of race, creed, or color, and an opportunity for the advancement of every individual according to his powers and his character. That is the American dream, and to the achievement of that dream, education might well set its creative hand. It will not be easy, for there are many obstacles which stand in the way—traditional thinking, special interests, and above all, the curious notion that education must concern itself only with the institutions and the mores of the past or with the science of abstract technology. Though the problems that threaten our civilization are mainly those of human relations and of economic forces, schools have been compelled to avoid discussing them as if they were social taboos, as indeed they have been so far as education is concerned.

Education in Low Repute

The results are obvious. Education itself is in low repute. Demagogues, both of the right and of the left, sway the public mind, and when national crises arise, the people have little idea either of causes or of possible solutions. If the trouble concerned our physical health and physicians had been as uneducated as our politicians, we would all recognize what was wrong. Doctors who know only the anatomy of the human body are of little use in times of illness. To understand what is wrong with the patient, they must also have a knowledge of pathology. And to effect a cure, they must have studied what remedies have been tried and found helpful. That is what education should attempt to do for those who would deal with the ailments of the body politic, and that means not only the politicians but everybody who casts a vote. In that attempt, audio-visual aids could play a vital part, if they were properly made and properly used.

Education and Indoctrination

Of course, it will be objected that such an education implies the dangers of indoctrination. That is a very specious objection. All education is indoctrination. Every textbook, every social custom, every respect paid to current stereotypes are forms of indoctrination. The real question is whether indoctrination shall be confined merely to the mores and taboos of the past or whether it shall be directed towards solving the problems of the future. In the solution of the problem, we are undoubtedly making progress. In junior and senior high schools, the social studies are beginning to touch upon the controversial issues of contemporary life. In elementary classes, children are being taught the virtues of cooperation and tolerance. In time, parents will recognize that the hope of a better world lies in such a new curriculum. Then they will insist upon stressing its purposes and implementing its techniques. That is the day when audio-visual aids of the proper kind will become the most valuable tools in the entire pedagogical job.

Visualizing and Vitalizing Government

We must improve the quality of our citizenship, and this can be done through better education.

FRANCES NORENE AHL,
Glendale (California) High School

NO subject in the entire high school curriculum is in greater need of visualization and vitalization than that of government. Certainly none offers such opportunities to report facts vividly and succinctly at each important step.

The study of government may well be introduced by a discussion of democracy as the highest type of political organization. One way to do this is through the use of the recent Encyclopaedia Britannica film, *Democracy* (11 min. sd., 16 mm.)

Evatt's statement—published in *Life* magazine, September 9, 1946—in answer to a question put to him by a Swiss correspondent, Leon Nemanoff, makes clear the basic conceptions of Australia's Foreign Minister as to what democracy really is.

Encyclopaedia Britannica Films

The film "Democracy" will serve as a basis for discussing democracy as the highest form of political organization.

Whatever the approach to the treatment of government, it should be so stimulating and so constructive that students will better understand not only their own nation but the newly contracted world in which we *must* all help to build a just and lasting peace or face the cruel reality of an atomic war and the end of most of our civilization. The problem of atomic control is treated in *One World or None* (9 min. sd., 16mm) available for rental from local film libraries, and for sale from Film Publishers, Inc., 25 Broad St., N. Y.

It is estimated that between one third and one half of the adult citizens of this nation do not read the daily press sufficiently to know about even the major, important issues in their own country and the most vital problems of foreign lands. How can such inadequately informed men and women possibly discharge their rights and their duties as voters in this great democracy? And yet, the very life blood of free government is the people themselves.

It is clearly evident that we *must* improve the quality of our citizenship. It is equally evident that we

must improve the education of our youth, for only through better education can we hope to preserve and strengthen our democratic institutions.

Every course in government should garner much from the study of the daily newspapers and the best current magazines. From the press and the radio, students can learn a surprisingly large amount about their local government, their State Legislature or their National Congress in action. They can follow legislative problems and procedures from day to day. They can watch the molding of public opinion on problems ranging all the way from the control of "smog" and the elimination of traffic accidents to the international control of atomic energy and our relations with Soviet Russia.

The Encyclopaedia Britannica classroom film, *Public Opinion* (1946, 10 min. sd., 16 mm.) is especially valuable for illustrating public opinion in action. It traces the process of public opinion from the initial stage of tension, in which the citizens of Centerville realize that something is wrong with their water system, through the stage of diagnosis and prescriptions, through additional debate to final action in the form of a bond election for a new water system. Methods of measuring public opinion through interviews or polls and election are explained. The different ways of analyzing the various factors that influence public opinion are illustrated. Finally, the film emphasizes that if a democracy is to have an enlightened public opinion, the press and the radio must be balanced, and the people must overcome their prejudices and think objectively.

Through skillful application and discussion, the students visualize, as never before, that public opinion is the backbone of any free nation. They understand

Museum of Modern Art

The documentary film, "The City," presents problems of the modern city.

The Centennial of Two Great Men: Alexander Graham Bell and Thomas A. Edison

The inventors of the telephone, the motion picture, the incandescent lamp, and the phonograph were born in 1847.

Alexander Graham Bell at the opening of the New York Chicago long-distance telephone line, 1892.

TWO men who laid the cornerstones for modern communication were Alexander Graham Bell and Thomas A. Edison, both of whom were born exactly 100 years ago. To these men and to their successors, the educator who uses motion pictures, recordings, and radio owes a profound debt. Bell was the first to patent a device for transmitting voice via undulating electric currents. Edison did further work on voice transmitters, invented the phonograph, the motion picture, and worked with sound films. Unlike the proverbial inventor, these men lived many years to see their inventions universally adopted.

Alexander Graham Bell (1847-1922) had become interested in the science of sound through his work with the deaf. Bell's father had been a corrective speech teacher. His mother had gradually lost her hearing. As a result, Bell began to take an interest in the science of sound. Graham tried to read the German writings of Helmholtz on *Sensations of Tone*. Not having great facility with the German language, Bell received the impression that Helmholtz could telegraph the vowel sounds. This put the idea of the telephone into Bell's head. He experimented with a device called the phonograph which traced the wave patterns of sound on smoked glass. (It was this same device which suggested the phonograph to Edison.) Bell's particular phonograph was made from the diaphragm and bones of a human ear. Together with Thomas A. Watson, he worked on the telephone through 1874 and 1875. His

first efforts produced a telephone which transmitted voice sounds though they were incomprehensible. He obtained a patent at this point. It was actually three days after the patent was issued (March 10, 1876) that his telephone carried the first complete sentence: "Mr. Watson, come here, I want you!"

From that time onward, the art of communication marched forward. Edison, Blake, Berliner, Hunnings, and many others contributed improvements to the transmitter, called "microphone" in radio parlance. Bell experimented with the transmission of sound over a beam of light. Lacking the aid of electronic amplifiers which have made possible recent success in this direction, Bell was able to hear articulate speech carried on a ray of sunlight. For his photo-electric cell, he used selenium. After Bell's death, the companies which he had founded did much to develop commercially practicable sound motion pictures—the Western Electric Recording of today.

The first commercial telephone was this wooden box, used in 1877. A person spoke and listened at the same opening.

Edison and Motion Pictures

What amounts to centuries of progress have been made as the result of inventions of Thomas A. Edison, although Edison was born just one century ago. Of all the history-making developments which sprang from Edison's genius, none has had more widespread appeal than motion pictures.

The inventor sired the first motion picture camera in 1889 at the age of 42. Within his own lifetime, Edison saw the movie industry grow so stupendously as to become the most expansive enterprise in the world of entertainment.

The seed of the industry was an idea of Edison's that motion could be captured photographically by a camera taking repeated "shots" at high speed. A new celluloid film, developed by George Eastman for still photography, fitted into the scheme, and Edison used it in the first motion picture camera.

Though the "talkies" are generally thought to be a refinement of the motion picture industry, the fertile brain of Edison conceived the idea for them even before the first motion picture camera was made. In 1887 the inventor first gave thought to "an instrument which

should do for the eye what the phonograph has done for the ear, and that by a combination of the two all sound and motion could be recorded and produced simultaneously."

Edison saw his first Hollywood produced "talkie" in 1928 as did millions of other persons. To him this must have brought back memories of his early experiments. His first motion pictures had synchronized sound, the sound being recorded on one of his cylindrical phonograph records. In the days before the radio amplifier, the recording and reproduction of sound was a difficult task. Therefore, his invention was released as the Kinetoscope, a peep-show device, showing silent films of only one or two minutes duration. The first model of the Kinetoscope appeared in 1889 and was patented in 1891. The Kinetoscope appeared in public in a "Kinetoscope parlor" in New York City on April 14, 1894. Other inventors took Edison's films and projected them on screens. The first Edison sponsored projector was Thomas Armat's which was commercially introduced at Koster & Bial's music hall in New York, April 23, 1896.

The demand for films was great, and Edison soon found himself in the motion picture production business. His early studio was called the "Black Maria." Visualize an average-sized barn covered with black roofing paper inside and out for a comparison of Edison's first motion picture studio with the California studios of today. Yet the transformation has taken place within the lifetime of many.

The Edison structure had two features which took it out of the category of a barn. There was an adjustable roof which could be raised to provide a "spotlight" of sunshine upon the actors inside, and circular tracks upon which the structure could pivot to capture the sun.

No temperamental Hollywood performer could provide a greater problem than did one of the first "actors" upon whom Edison called. A Negro fighter from nearby Newark was engaged to box before the camera, and unknown to him the services of Heavyweight Champion Jim Corbett, then in his prime, were also obtained. When the dusky Newarker, far from a Joe

Louis, beheld his opponent he was paralyzed momentarily, and upon recovering lit out in the general direction of his home city, boxing togs and all.

Many cinematic techniques were developed by Edison employees. Thus, Edwin S. Porter, an Edison cameraman, discovered many principles of film editing. He was the first to create a story film by splicing different camera shots together—*The Life of an American Fireman* (1903). This film included one of the first close-ups ever filmed—a hand pulling a fire alarm lever. The first story film is generally considered to be Porter's *The Great Train Robbery* (1903). In this, he employed cutting to effect time lapses and parallel action. From this point onward, the development of the motion picture was rapid.

The greatest action pictures ever recorded by movie cameras were taken under actual combat conditions during World War II. Yet even in his early development of motion pictures, Thomas A. Edison perceived in war conditions the drama that made for great movies.

Miscellaneous Films About the Atomic Bomb

A Tale of Two Cities (20 mins.) showing the destruction of Hiroshima and Nagasaki is available from Signal Corps Film Libraries, Governors Island, N. Y., Post Office Building, Baltimore, Md. and Atlanta, Ga.; Fort Sam Houston, San Antonio, Texas; Civic Opera Building, Chicago, and Presidio, San Francisco, Calif.

Operations Crossroads (27 mins., color) is a joint Army-Navy Task Force film on the Bikini experiments. It is available from Motion Picture Section, Office of Public Information, Navy Dept., Washington, D. C. It may be purchased from Byron Studios, 1712 Connecticut Ave., Washington, D. C.

Rocket-Sonde, a film about V-2 rocket tests, is available from the Navy.

Slidefilms

How to Live with the Atom (with or without 33 r.p.m. transcription) is available from the National Committee on Atomic Information, 1749 L Street, N.W. Washington 6, D. C.

World Control of Atomic Energy outlines in greater detail methods of international control of atomic energy. See above for source.

One World or None has been adapted from the film of the same name. It is available with or without a standard 12" 78 r.p.m. recording. Speech notes accompany silent version. Film Publishers Inc., 25 Broad St., New York 4.

Thomas A. Edison experimenting with an early motion picture projector.

Museum of Modern Art
"The Great Train Robbery," an early Edison film, was directed by Edwin S. Porter (1903).

Films on Atomic Energy

Educators must awaken youth and adults to the importance of atomic energy and its control before civilization obliterates itself.

Encyclopaedia Britannica Films

March of Time

Atomic Energy (10 mins.) describes by graphic animations how nuclear synthesis, nuclear fission, and the atomic bomb's chain reaction are accomplished. The film is extremely well done and makes very clear the principles shown. The film was designed primarily for use in general science, chemistry, and physics courses in junior and senior high schools; however, it is meaningful to general audiences as well.

One World or None (9 mins.) stresses the destructive power of the atomic bomb and urges social and political action to insure that atomic knowledge will not be used in the future for destructive purposes. The film was produced for the National Committee on Atomic Information by Philip Ragan Associates with the technical assistance of the Federation of American Scientists. Distribution will be to both theatrical and non-theatrical audiences and is being handled by Film Publishers, Inc.

Notes: A valuable discussion pamphlet, *The International Control of Atomic Energy*, may be obtained for 30 cents from the Supt. of Documents, U.S. Government Printing Office, Washington 25, D.C.

See page 145 for other atomic bomb films.

LEFT TOP: Complicated atoms have many electrons and protons, as shown in "Atomic Energy," Encyclopaedia Britannica Films.

LEFT BOTTOM: An atomic bomb explodes over New York City as depicted in "Atomic Power," The March of Time.

BELOW: One atomic bomb could spread death over New York City — "One World or None," National Committee on Atomic Information.

National Committee on Atomic Information

The Films

THREE important films have been added to the film literature on atomic energy and its destructive use: (1) March of Time's *Atomic Power*; (2) Encyclopaedia Britannica's *Atomic Energy*; and (3) the National Committee on Atomic Information's *One World or None*. These 16 mm films will be available from the customary distributors.

Atomic Power (17 mins.) tells the story of atomic power, tracing its early beginnings back in 1905 when Einstein proved that matter could be converted into energy and bringing the story down to date with the first atomic bombs (1945). The film includes re-enactments of the actual scientists performing the original experiments and concludes with the scientists' current campaign to tell the world the full meaning of atomic power.

One World or None is narrated by Raymond Swing. It stresses the following important points, fundamental to an understanding of the social implications of atomic power:

1. **There is no secret.** Scientists of many countries contributed to the development of the original bomb. Other groups of scientists will ultimately discover the same facts.
2. **Atomic energy** is sufficiently destructive to obliterate any city in the world.
3. **Destructive use of atomic energy must be stopped.** The nations of the world must together control atomic energy.
4. Atomic energy can be for all peoples the great fusing force. It is **one world or none.**

National Committee on Atomic Information

With present day air transport, every city in the world is vulnerable to the atomic bomb, and especially is this true of American cities.

National Committee on Atomic Information

The number of atomic bombs which a nation possesses is not important, for a very few atomic bombs could cripple the industrial centers of a country.

Do You Want This?

Recordings

The Atomic Bomb and Peace Time Uses of Atomic Energy are available for sale each in a set of two 12-inch records with 50 handbooks for students. School Broadcast Conference, 228 N. LaSalle St., Chicago 1, Illinois.

International control of atomic energy could prevent the destructive use of atomic power. Such control must be instituted before it is too late.

**How
Atomic
Energy
Is
Released**

Simplest atom of all the elements is the hydrogen atom. One negative charge, called an electron, circulates in an orbit around one positive charge, called a proton.

This uranium nucleus is being bombarded by a neutron. The uranium nucleus is very complicated and heavy.

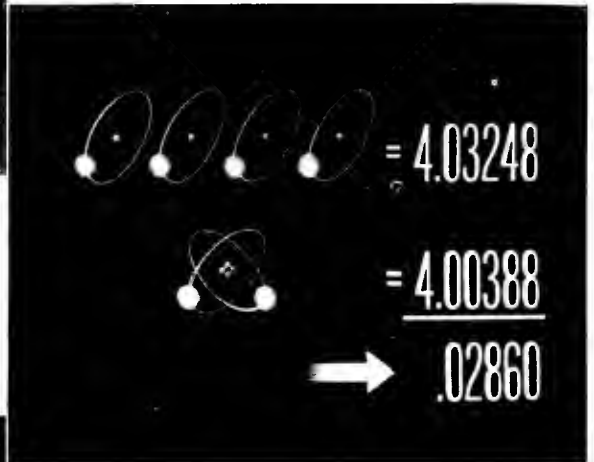

One uranium nucleus has been split by a free neutron. Now two resultant neutrons are on their way to bombard other nuclei. This is the beginning of the chain of reaction in nuclear fission.

Right: Each freed neutron releases more. Neutrons are splitting every uranium atom in the field, releasing quantities of atomic energy.

Nuclear Synthesis and Fission

These are not ordinary chemical changes or combinations but are fundamental atomic transformations; e.g., hydrogen is changed to helium. Such a step involves nuclear synthesis: two electrons combine with two protons to form two neutrons, becoming a part of the helium nucleus. The other two electrons circle about the nucleus.

Four hydrogen atoms combined to form a helium atom. All component particles of the hydrogen atoms are used; yet, there is a loss of weight. Matter has turned into radiant energy.

When a neutron hits a uranium nucleus, the nucleus splits in two, and other free neutrons are released. An entire chain of such reactions takes less than a millionth of a second.

Note: All photographs on this page are from "ATOMIC ENERGY," produced by Encyclopaedia Britannica Films, Inc.

Raising Our Sights

BILL Kruse gave the title to this joint report on the 1947 Michigan Audio-Visual Conference, held in Detroit, February 19-21. It was while we sat together at one of the closing sessions that Bill and I decided to write this cooperative report on some of the highlights. It was an excellent meeting and one that firmly establishes the annual "Michigan Conference" as one of the country's best and one worth attending.

My comment last month (*Curriculum Clinic*), "Films That Meet Curriculum Needs," became a part of one of the first sessions on that same topic. As one of five members of a panel, I attempted to underscore the necessity for a raising of sights to bring about a production of visual materials planned in careful sequence and in "sufficient quantity so that whole courses of study might be based upon related visual materials." Louis Stark of Westinghouse presented a frank and realistic point of view of how a sponsor can provide motion picture materials that will serve curriculum needs. Edward G. Bernard of the New York City school spoke specifically of their forward looking program in providing materials for the New York City schools. Thomas Baird of the British Information Services spoke particularly of the function of the medium to widen and expand the curriculum in bringing real and vital experiences to children. He spoke of the great need now for a pooling of national films by all countries for general education, as well as for the production of international films by international organizations. Dennis Williams, as the last speaker of this long morning session, used his rare Arkansas story telling ability most effectively, and his story about big bears and little bears reminded all of us that real progress in this field depended upon how well we took care of the little problems in our own part of the woods.

Meetings were ably chairmanned, and Floyd Brooker set an enviable pattern the first day in his skillful, good-humored way of bringing the audience into the discussion. Film producers, equipment manufacturers, dealers, teachers, and visual education specialists had the opportunity for exchanging views, and they used it to the advantage of all.

During the conference, there were six separate previewing sessions when the best and newest film productions were reviewed. At one of these sessions, listed on the program as "Looking Them Over," a panel of experts (Dale, Wittich, Brooker, Frye, and Bernard) evaluated "ad lib" five films they were seeing for the first time. It was a conference innovation and a technique to be copied. They and the films were on the spot; but their keen, sharply analytical, pointed comments about these new films gave film makers some-

thing to think about for future productions and gave film users clearer insights as to the components of excellent pictures.

These were just some of the high points of a practical and inspirational Conference and in the report below, one more is reviewed in some detail:

A Supplementary Report

by William F. Kruse

WHAT seemed to differentiate this meeting to some degree from many fine similar conferences in the past was a series of long-range addresses by Edgar Dale (to be published next month in the *Screen*), V. Clyde Aruspiger, Floyd Brooker, and a masterful demonstration of "Achieving Growth in Democratic Living" by Louis Rath of Ohio State University.

Brooker's talk on "The Program of UNESCO in the Field of Mass Communication Media" especially distinguished this phase of the Detroit program. Because he was the American consultant to the London and Paris UNESCO meetings, he might understandably have been expected to go into a recapitulation of the technical steps involved in implementing the general objectives of those meetings. Instead, he gave a broad-gauge picture of the condition and attitude of France, Britain, and other European areas with reference

ONE of the most significant things about the 1947 Michigan Audio-Visual Conference was that in addition to the usual and invaluable shop talk, utilization demonstration, and similar "practical" items on the program, there was a conscious, responsible, hopeful **RAISING OF SIGHTS** as to the function and future of audio-visual media of mass communication.—W. F. K.

to cultural rehabilitation and mutual aid. He pictured liberated Europe—and that includes its educators and film specialists in particular,—as cold, hungry, impoverished, battered, but fiercely proud of their cultural heritage and independent future. He outlined the causes of misgivings concerning a possible American trend toward "cultural imperialism," especially in the field of mass communication, where American dominance in mechanism is momentarily so strong. Under these conditions, Europeans are quite naturally hypersensitive of the slightest attempt, real or fancied, to our using this advantage as a means of exercising control over the content to be communicated through these mass media. The intensity of revival of self-expression in the various lands of Europe is illustrated in the plans for five separate "international" film conferences in Europe next summer on the Cannes pattern.

Out of the stark poverty of Europe's schools follows a natural primary insistence on relief and rehabilitation for their devastated school plant and decimated personnel. Their first interest is in a world survey to

Indiana University, Bloomington

Man—One Family

(British Information Services, 360 N. Michigan Ave. Chicago, Illinois) 17 min., 16 mm, sound, black and white. Sale price \$37.50.

Description of Contents:

OPENING scenes show the Apostle Paul of the New Testament preaching to a group of people and telling them that God has made all men of one blood. The Christian cross fades into the swastika, a crooked cross, and marching Nazis illustrate the perversion of the Christian idea and the substitution of the master race theory. Scenes of mass extermination are shown.

An "average citizen" in an English pub asks some questions. "Is there nothing in the race theory at all?" Animated maps show that many invasions of Great Britain have made it an island of mixed people. Likewise, each country of Europe is mixed. Additional animated maps show that while the members of each nation are mixed there may be a greater proportion of one characteristic in northern Europe and another in southern Europe, but that variations over the entire range can be found in each country.

A group of portraits are flashed on the screen and the audience is asked to identify the nationality of each person. This is impossible. Animated maps show that Germany, particularly, is composed of a mixed race.

The citizen in the pub asks whether one type of mixed citizen may on the average be better in intelligence than another type of mixed citizen. Illustrations are then given to show that in any present-day undertaking, we depend on the ideas contributed by the people from many countries. No group has an advantage over another in general intelligence.

Committee Appraisal:

The chief purpose of the film is to promote better relationships among various racial and cultural groups. The film is skillfully made to help further this purpose. While the film presents an approach which will be interesting and popular, its information is scholarly and accurate, and

British Information Services

"Man—One Family" shows the variations within races and nationalities. Thus, most Swedes are light-skinned, but some are dark. Most Spaniards are dark, but some are light.

it does credit to its distinguished educational advisers, Professor J. B. S. Haldane and Dr. Julian Huxley.

Many groups will welcome this production in the intercultural educational field. Church groups, clubs and other adult groups will find it worth their while to program this film.

What Makes Rain

(Young America Films, Inc., 18 East 41st Street, New York 17) 9 minutes, 16mm, sound, black and white, \$38.50. Teacher's guide available.

Description of Contents:

BOBBY'S letter to the weatherman, asking him to arrange for suitable picnic weather, launches the weatherman upon an explanation of where rain comes from, where it goes, and how it gets back up into the sky. He explains how rain does good work, filling streams and helping plants to grow.

He compares the rising of moisture from a puddle to steam rising from a boiling teakettle, but says that water vapor is invisible. He says that without evaporation, clothes on a line would never get dry. "Evaporation" contains the word "vapor." All rain that falls sooner or later goes back into the air. Human breath contains water vapor, and plants give it off. When steam touches a cool window or breath touches a mirror, the vapor turns into water, or condenses. Dew and fog are condensed vapor near the ground; while clouds are condensed vapor high in the air. If the air is cold enough, the clouds turn into snow instead of rain.

The earth and everything on it use the same water over and over again. An animated scene supposedly from Bobby's book about weather shows the water cycle but does not label it as such. In conclusion, the weatherman explains to Bobby that he has no control over the weather.

Committee Appraisal:

This film is an excellent presentation for intermediate grade science classes of the rather complicated water cycle. The narrator has a pleasant style, and the explanation is built slowly and well reinforced. The terms used are shown on the screen at the appropriate moment, and each is well illustrated. The explanation of the water cycle is greatly simplified, but the actual formation of drops of water and other details need not enter into an explanation on this level.

Vegetable Insects

(National Film Board of Canada, 84 East Randolph Street, Chicago, Illinois) 23 minutes, 16mm, sound, color. Produced by National Film Board of Canada, Ottawa, Canada. Price, \$1.50.

Description of Contents:

THIS film opens with startling close-up views of some common insect pests. The narrator points out that since insects are the most numerous of all living creatures, it is very important to keep the destructive ones under control. As the greatest natural enemy of the farmer, insects cause a great financial loss. The film shows Canadian government entomologists and scientists in laboratories studying the life history of insects and effective poisons.

The four stages of the Colorado potato beetle are shown as typical—the egg; the larva, which feeds on leaves for three or four weeks; the pupa, which is buried in the soil; and the adult. The squash bug lays eggs which hatch into a larval stage known as nymphs, which in turn become adults, omitting the pupal stage. All stages may be found on a plant at the same time.

Scientists study insects' eating habits to devise means of killing them. Biting insects, such as caterpillars and cabbage worms, devour plants and completely destroy whole fields. Their jaws have a powerful motion from side to side. This style can be killed by stomach poison which is sprayed on plants.

The sucking insects, such as the squash bug, have long beaks which they insert into succulent portions of plants to remove the juices, causing rusty spots and unusual growths. Aphids also belong to this type, which must be dusted with powdered poison.

The third type is the rasping insect, which lacerates plant fibers to get at the juices. The cabbage maggot tunnels into roots to feed this way. The fly which lays the eggs of the cabbage maggot can be kept away by placing tar paper disks at the base of the stems. Poison can be poured around the plant stems or mixed with the seed before planting.

Several types of poisons and the easiest ways of mixing them are shown next. Cutworms can be killed with poisoned bran, and tomato worms can be picked or cut off, in the small garden.

Nature fights harmful insects, also, by having some insects lay their eggs on others or feed directly on others. The insect victim carrying the eggs often lives, although handicapped, until the eggs reach the larval stage. The lacewing fly produces voracious larva which feed on aphids. The praying mantis eats almost any insect, but prefers grasshoppers.

Many destructive insects winter over in corn stubble, on fence posts, or in trash as larvae; while others cling to flat surfaces as pupae. Therefore, stubble and trash should be cleaned up and burned wherever possible, or at least plowed under.

Committee Appraisal:

This is an excellent film for biology classes, agriculture classes, farm groups, and gardening groups. The skillful and dramatic photography, with its rich, brilliant color, makes the insect world very real and exciting. The tugging of two hungry insects over a third, which they are devouring, takes on proportions of a major battle. Close-ups of many insects in their natural habitat show their structure and habits very effectively for biology classes. Agriculture classes, farm groups, and gardening groups will be interested in the insect pest control phases of the picture. The narration is informative and well presented at all times.

Hopi Horizons

(Social Documentary Films, 7819 Eastern Ave., N. W. Washington 12, D. C.) 22 min., 16mm, sound, kodachrome. Sale price, \$150 less 10% educational discount. Discussion guide available.

Description of Contents:

THIS picture presents a number of problems faced by the Hopi Indian people today. Interesting sequences picture the circumstances under which they live—the sandy desert land, the scarcity of water, the difficult problem of raising food and the struggle for an opportunity to enjoy the better things of life. The regulations of the United States Government seem to the Hopi Indians to be helpful in some instances but unduly restrictive in others. Scenes show the boundary restrictions, the limits on the number of sheep which may graze in an area and the limits on the water supply. Other scenes show the services in the field of public health and education.

Some well-educated Hopis have returned to live with their people and help their fellows. A white teacher is introduced who believes that white ways should be taught so thoroughly that the Hopis will fit easily into the American culture. A Hopi teacher is introduced who believes that the best of both cultures should be taught. Thus, it is pointed out that the educational philosophy is another problem for the group.

Committee Appraisal:

The film presents in a mature and realistic manner some of the major problems faced by the Hopi Indians. It presents these problems as the Hopi's own statement and allows the audience to draw the conclusions for solving the problems.

The film should be very useful in high school and college social studies classes, as well as for adult groups in-

terested in the welfare of this tribe of American Indians. Social workers and church groups who are concerned about the problems of the American Indian will find this film very informative.

The attempt to synchronize dialogue with action in the latter part of the film is not well done and the lack of synchronization is somewhat annoying but does not negate the film's usefulness. Members of the committee felt that the producers ought to be complimented on using the motion picture technique to show the interrelation of factors involved in this social problem.

Coronet

The children learn about maps by making a map of their neighborhood.

Maps Are Fun

(Coronet Productions, Glenview, Illinois) 10 minutes, 16mm, sound, color, \$75.00.

Description of Contents:

THE film treats the subject by showing the construction of a sandtable map and maps drawn to scale, as well as the use and value of atlases and other map tools. It begins by showing Ronnie and Dick, who come to Mr. Donaldson, a professional cartographer, to get his help in making a map of Ronnie's neighborhood paper route for Dick to use while Ronnie is on a vacation.

Mr. Donaldson suggests that they make a model of the neighborhood in his sandtable. They find that the space does not work out correctly unless they measure it and divide it systematically, using a suitable scale. After the streets, the railroad, and the river are located, it is a simple matter to arrange model houses and other buildings appropriately.

Since it is obviously impossible for Dick to carry the sandtable map with him, they decide to draw it on paper. Using the same scale, they easily lay out the streets, but they have to decide together what symbols to use for houses, a church, a school, a railroad, and a bridge. The boys then add the legend and compass points in order to make the map more meaningful to others. Since the large map is quite bulky, the boys decide to make it smaller; they divide the measurements carefully to reduce the scale accurately.

Mr. Donaldson explains how colors on maps can mean various things, as indicated in the legend—boundaries, elevation, rainfall, or any other desired information. He also points out that it is very important to notice the scale of a map, since the same size map can represent a very small area or the whole world. The boys thank Mr. Donaldson for his help and leave with the map.

Committee Appraisal:

This is an excellent functional approach to the study of maps for intermediate grades. The boys are very natural, and their problems should seem real to other youngsters. The sandtable model is a fairly concrete map with which to start, and the gradual addition of symbols, orientation, legends, reduction of scale, color, variation in scale, and cross lines with an index is well presented. The film should be very useful in motivating many map activities, especially in relation to everyday life.

The Film and International Understanding

Dr. JOHN E. DUGAN, Editor
Head, Department of Education
Beaver College, Jenkintown, Pa.

Brotherhood of Man and Re-orientation

THE War Department, Civil Affairs Division has purchased the color cartoon, *Brotherhood of Man* for re-orientation purposes in enemy occupied countries, it was announced by Pare Lorentz, speaking at the premiere showing of the film at the Museum of Modern Art.

Mr. Lorentz, pre-war documentary film producer and presently Chief of the Films and Theatre Section, Re-orientation Branch, War Department Civil Affairs Division, said, "The War Department has obtained the right to use this picture in Austria and Germany, from Brandon Films, Incorporated, who acted on behalf of the sponsors of the film, the UAW-CIO. *Brotherhood of Man* was selected as the best available film dealing with racial tolerance.

"It is my emphatic opinion," Lorentz told the audience of five hundred people, "that this important American trade union, the UAW-CIO, showed great vision in making a film so widely needed. They have gone beyond narrow objectives into a picture which will help not only the membership of the UAW, but also the whole American people at a time when films on the basic problems of our times are not flowing in adequate numbers or quality from any source.

"The United Automobile Workers, the authors of the pamphlet on which it is based, the producers and the distributors merit public thanks in my opinion," Lorentz added.

The film, which runs ten minutes, begins with the idea that the world has shrunk to the point wherein all nations and races live in each other's backyards. Consequently, it becomes more necessary than ever before that men develop a spirit of brotherhood based on the principle that each man accepts the other as being inherently his equal. The cartoon validates

this claim scientifically and at the same time in an entertaining manner.

United Nations representative, Mr. Edward Lawson, Chief of the Section on the Prevention of Discrimination and Protection of Minorities, told the assemblage, "There may be many differences of opinion among the United Nations, but they are all agreed that respect for human rights and for fundamental freedoms for all, without distinction as to race, sex, language or religion, must be promoted and encouraged. They are agreed, too, that racial and religious persecution and discrimination must end; that the wiping out of racial, religious or political groups must be punished as a crime against humanity, and that there must be an International Bill of Rights to prevent encroachment upon the rights of human beings. Education for democratic living, through the very democratic medium of the motion picture, may prove a valuable adjunct to the program of the United Nations in this field."

Dr. Ruth Benedict, Anthropology Department, Columbia University, and co-author of the pamphlet "Races of Mankind", on which the cartoon is based, declared that the film has taken certain facts and dramatized and generalized them as no written word could do.

The Museum premiere of *Brotherhood of Man* was sponsored by the United Parents Association, the National Association for the Advancement of the Colored People, The Urban League, the National Conference of Christians and Jews, Youthbuilders Inc., American Jewish Committee, Council Against Intolerance in America, Brooklyn Jewish Community Council, Bureau for Inter-cultural Education. In attendance were five hundred representatives of over two hundred national and regional community and social service organizations.

From "Brotherhood of Man," Brandon Films, Inc.

Children are not born with racial prejudices. They are taught prejudices by our society.

Everybody must receive all the schooling he can take.

Things like jobs, good housing, medical care, fun and play must be open to everyone.

The Church Department

WILLIAM S. HOCKMAN, Editor
2043 Mars Ave., Lakewood, Ohio

Residue of Participation

IN its enthusiasm for visual education, the church must maximize the participation of those whom it would teach. It will find that learning in proportion to participation and that education in a very real sense is the "residue of participation", to use a fine phrase from Dr. Edgar Dale's November 1946 "News Letter".

The experienced leader will begin the participation process when the learning unit is mapped out, inviting the children and youth concerned to participate in the selection of the experiences through which learning is to come.

This process of participation will be continued when the visual material to be used is previewed and studied and the specific learning outcomes are formulated. We should not shy away from telling students what we want them to learn. This cooperative definition of objectives motivates the student and conditions him to learn more and learn it better.

When the program is "coming off," pupils will be active. They will not be looking at something but will be vicariously and actually entering into an experience which will leave its residue of learning, because it has been real. What children are assigned to do should be within their powers, and their powers should not be underrated. Some of the best prayers ever uttered have come from the lips of children and youth. In the talk and the discussion of the immediate follow-up, give the children a chance to talk. Too much of this period is stolen by over-anxious teachers, eager to pack into the program all their thoughts. It is better to draw out the thoughts of the children, remembering that learning is in a very real sense a "residue of participation".

Follow-Up

In the later follow-up, are we giving the children a chance to participate by elaborating into other learning experiences interests and ideas which were aroused by the program—or learning unit? I fear that we are not. Visual education in the church is short on participation.

Let us not fool ourselves into thinking that we have taught when we have talked. If no one learns we have not taught. Teaching and learning are two ends of the same stick. To sell, some one must buy; to teach some one must learn.

On every hand the experienced observer can see visual aids being used in the church with too little regard for the principle of participation. We must have more than enthusiasm. We must have the wit to see that the processes of education cannot be short-circuited. Even in visual education, learning is related to the mental and emotional residue of participation.

Make It A Thinkshop, Too

IF the visual education leaders of the church take seriously some of the high-priority problems which confront them, the Fifth International Workshop, under the auspices of the ICRE, will be a *thinkshop* as well as a workshop. Thinking through some of the central problems of visual education in the church cannot be postponed any longer if the such is to exert strategic direction to the movement.

Five Problems

What are some of these thinking-jobs which the church must collectively tackle? Let us indicate four:

First. The church must speedily formulate the minimum criteria for its visual materials in the various media. Let the producers be given the minimum the church expects in the way of quality for its slides, filmstrip, silent, and sound films. Let the formulation of these criterion be undertaken interdenominationally and cooperatively at Green Lake in 1947.

Second. The church must eventually rate each of the visual media in relation to the general objectives of its program of teaching and preaching, and now is the time to begin. We talk of visualizing the curriculum. Before this can be done, we must know which media, by its inherent and essential character, is best suited for which specific jobs. Already churches are tending to solo in materials and methods. Let producers, utilizers, and educators think this one out.

Third. Distribution in the church field is far from satisfactory. The "theatrical pattern" was taken over without anyone thinking out the implications of this pattern for the church. The dominant assumption of this pattern is the recovery of production costs and the making of profit on the *rental* of a limited number of prints through a limited number of outlets, which, by the nature of things, must be considerably removed from the ultimate consumer—the local church in Middletown. The opposite of the "theatrical pattern" is the "educational pattern" of distribution. Here the principal assumption is that production costs and profits are to accrue from the outright *sale* of many prints to an unlimited number of organizations down close to the ultimate consumers and able to serve their needs directly. Here the local print owner will rent to the local user, recovering his print cost and making his profit from rentals. Let a dozen or so interested men and women tackle this problem at Green Lake this summer.

Fourth. Already church audiences are disturbed by the inclusion in film versions of biblical stories of apocryphal materials. It is inevitable that any adequate screening of biblical materials will mean the inclusion

of much non-biblical material. What is the principle to follow here? Is it that of "reasonable supposition"? The church must face this question. Closely related to it is the whole problem of authenticity in costumes and settings. We now have Palestinians garbed in "authentic" costumes, mounting American horses and riding off in the manner of Tom Mix. Let the church think this problem through to tentative and provisional conclusions, at least. Better do this than get indignant with futile wrath later on when some producer's imagination carries him too far afield.

Fifth. Closely related to the problem of apocryphal inclusion is that of the portrayal of Jesus in film versions of biblical stories. Does the church want the character of Jesus portrayed? Are good films possible without direct representation of this character? If Jesus is to be portrayed, what does the church expect? Producers have their ideas about this matter. What does the church think? Let some of the 1947 workshopers tackle this question and come up with provisional answers to be checked and reconsidered as we go along.

We hope the 1947 workshop will tackle these problems. The church needs the answers, and provisional answers will be of greater value to the movement now than final answers which come ten years too late.

Films Reach The Pocketbook!

MANY members of our church, like folks in most small town parishes, are strongly isolationist—opposed to foreign missions on general principle, and resenting the audacious projects which the Protestant churches are furthering to reconstruct the war-torn world.

In this parish some people expressed their opposition to the idea of sending funds abroad for either evangelism or medicine, although a few were more willing to share occidental medical, agricultural, or business methods than to share the Gospel.

Consequently, when I learned what our quota of the 27 million dollar Presbyterian (USA) Restoration Fund was to be, I was apprehensive about our prospects of raising it. However, since our actual cash and pledges amount to 135% of our quota, and since our paid-in cash at this date is nearly 110% of our quota, I feel that our methods have been effective.

When I first saw our Presbyterian Fund film, *He Restoreth My Soul*, I was inclined to be pessimistic, not because of criticism of the picture, which I liked, but because I had previously used *The Pale Horseman*, a similar film, with disastrous results.

I first learned of *The Pale Horseman* through a rave notice in *Time*. *Time* cooperated in our publicity, giving us permission to reprint the story in our local papers. We showed it at a noon meeting of Rotary and in our church the same night. The attendance was small, and the audience reaction was disappointing. Some of those who did attend said: "We don't want to see these horror pictures!" The reaction of those who did attend was negative because of comparatively poor film editing.

He Restoreth My Soul has a more positive approach than the government-made *Pale Horseman*. The church

film used about 50% of the same camera shots and covered much the same subject; however, it was better edited; the music was more fitting; and the commentary was more appealing.

Our local Restoration Fund Committee saw the film and decided to use it, trying a different approach. We did not mention that a movie was to be shown during the morning worship on Sunday as a part of the sermon.

We followed our regular order of service. I prepared the congregation with a brief talk on the claims of our Restoration Fund. "However," I concluded, "we cannot see in person the terrible things which have happened and which we are going to try to set aright. We will, through the magic of the film, bring you some of these scenes, not to upset you, but to show how you can help correct them."

We then ushered the folks into the Sunday School room where the machine was threaded and warmed up. Over our loudspeaker we played "Onward, Christian Soldiers", fading it out as the people were seated, and bringing on the picture with smoothness.

As the film ended, we dissolved—in a home-made slide of the hymn, "Christ For The World We Sing." Never have I heard more meaningful congregational singing. After the benedictions, the music of the first hymn provide the postlude.

Many people failed to give. We expected this. But, of those present to see *He Restoreth My Soul*, every giving-unit represented contributed something, in the aggregate accounting for fully 90% of the money raised.

Yes, films, when properly used, do reach the pocket-book.

WILLIAM M. HUNTER
Tunkhannock, Pa.

New Materials

A dramatic service of worship, *Please Pass The Bread*, approximately 20 minutes in length and using nine standard fully colored stereopticon (3¼ x 4) glass slides, is available for rental from the Film and Slide Library, Evangelical and Reformed Church, 1505 Race Street, Philadelphia 2, Pa.

This service is designed to create a real concern for hungry humanity across the earth and prevails upon the participants to do something on its behalf.

Five copies of the manuscript are included in the rental and are sent when the order is placed to be returned with the slides. Advance preparation is necessary, and the participants include a reader, a soloist, and several other voices.

New Film On India

Mr. Edmund C. Shaw, Visualization Division of the Northern Baptist Convention, 152 Madison Ave., New York 16, announces the release of a 16 mm black and white sound film, *India's Children*. This 20-minute film was edited from new footage and has a professionally written commentary. It has very few specific denominational references and will be useful, therefore, to all churches seeking useful films on India.

New Kodachrome Release

The Story of the English Bible, a 45-kodachrome slide presentation developed by Professor John Trevor for the Methodist Church, was released on February 11th. It has a comprehensive resource manuscript making it useful as a resource for study groups, adult classes, and training classes. The set, in glass-bound slides, sells for thirty dollars and rents for one dollar.

News Notes

ACCORDING to Miss Sydna White, Director of Federalist Films, their filmstrip, *How To Conquer War*, with 900 prints in circulation in this country, is to have an international edition this spring. It is to be re-shot and brought out with Dutch, French, German, Italian, and Swedish scripts.

Indiana Education Rallies

Under the auspices of the Conference Director for Indiana of the Evangelical United Brethren Church, Dr. Rockwell C. Smith, Professor of Rural Sociology in Garrett Biblical Institute, Evanston, Ill., and Mr. Brunson Motley, owner of the Indiana Visual Aids Company of Indianapolis, teamed up for a four-day series of conferences on religion and visual education. Afternoon and evening conferences and visual aid demonstrations were held on consecutive days in Elkhart, Fort Wayne, Indianapolis, and Mt. Carmel. Dr. Smith gave two addresses each day and Mr. Motley demonstrated the use of visual aids in the local church.

Easter Materials Previewed

The second annual preview of Lenten and Easter visual aids was held in First Methodist Church, Cleveland, Ohio, under the joint auspices of the Church Federation and Church School Pictures, Inc. on February 4th. *The Crucifixion*, and *Easter Witness* (filmstrips) were considered usable but not of exceptional worth. Selected slides from the Elsie Anna Wood and the Copping series were considered religiously and artistically satisfactory and very usable. *The Kindled Flame* (35 minutes) and *The First Easter* (35)

Birthday

WITH this issue, the Church Department is one year old, and its editor wishes to observe the occasion. I wish to express my personal debt to the late editor of this magazine, Mr. Nelson L. Greene. His deep interest, his sure insight, and his unstinted friendship have been reflected in every column of this Department. In his passing, the church loses a stalwart friend. Secondly, I wish to thank all those who have contributed directly or indirectly to these pages during the past year, and to solicit your faith and friendship in the coming year.—W. S. H.

were considered by this group of previewers as being excellent in content and technique. *My Beloved Son*, (30 minutes and in color) was considered very poor on all counts. The new film on India, *Heart of India*, just released by the Presbyterian Board of Foreign Missions, "brought the audience to its feet." They liked the introductory over-view of India: the color and the photography; the first person commentary in the closing half of the film, and they commented especially on slow pace of the commentary throughout and the subdued quality of the Indian background music.

Paul Kidd To Produce

On March 1st, Mr. Paul R. Kidd, severed his four-year connection with the Christian Board of Publication (Disciples) to set up in St. Louis a new company, Church Screen Productions, to produce visual materials in the filmstrip media.

His first year production plans call for two filmstrips per month with those for March being, *The Christian Family* and *Boy Meets Girl*. These are the first two in a series of four on Christian courtship and marriage. The output of Church Screen Productions will be wholesaled to denominational publishing houses and bookstores, who will handle retail sales.

Operations Holy Land

Early in February Church Craft Pictures sent to Egypt and Palestine an expedition whose purpose it is to bring back from the Holy Land color stills in both two and three dimensions. Mr. Rupert Leach, Portland, Oregon, professional photographer now in Egypt, will join the party and do most of the shooting.

China Film In Production

The first color film to come out of China under church auspices since the War is being worked up into a film, *Fair Wind*, by the laboratories for the Missions Council of the Congregational Christian Churches.

The basic photography of this film contains many shots and sequences of remarkable vividness, artistic merit, and dramatic power. When supplemented by a carefully balanced soundtrack of music and narration (and interludes of silence) this film will be exceedingly useful to the churches.

The dike-building sequences, vividly presenting the heroic struggle of the people to re-master the Yellow River, have all the drama and power of good documentary motion pictures. For heart-stirring beauty and pathos, the river-girl sequences will not be soon equalled.

Let us hope the owners of this beautiful China footage will work it up into films of varying lengths and purposes. Out of it could come a 10-minute short, *Man and Mighty River*. Give it some great music and a little poetic commentary; then it will speak eloquently of the heroic courage and labor of the Chinese. Another short might be called *China River Girl*. The basic photography is all there. It waits for the deft and skillful touches of editors and musical craftsmen.

P.F.C. Planning Seven Films

The first of seven films to be produced by the Protestant Film Commission, interdenominational motion picture agency of Protestant churches in this country, were announced by Paul F. Heard, executive secretary, following the second annual meeting of the Commission in New York the last of January.

The first of the seven films scheduled for 1947 production will be designed to stimulate the average churchgoer to more creative and aggressive Christian living. The second will be a film to promote Christian education by portraying the basic values of religion in an atomic era and emphasizing the moral values which play a part in family life. Another film will dramatize the importance of the church school teacher. A new approach to basic racial and religious tolerance will be made in another by showing the harmful effect on the individual and the spiritual dynamics which can help effect a cure. The fifth will show vocational opportunities in the modern missionary field, its spiritual rewards, and the qualifications needed for this service. The sixth will be on the subject of the Christian ministry, and the seventh will be on Christianity in China.

The Whittier California Workshop

The first workshop in visual religious education in Southern California brought together over 100 church workers and leaders for a three-day program at Whittier College. It was sponsored by the Visual Education Committee (Mr. Fred Hutslar, Jr., chairman) of the California Council of Protestant Churches.

The program was intensive. Materials were previewed the first hour each night. A general session followed with addresses by Mr. Robert Hall (The Adequacy of the Visual Method); by Dr. Arthur O. Rinden (Audio-Visual Techniques) on the second evening; and by Rev. Kenneth Holst (Wares and Bearings of Visual Education), the third.

The hour and a half work-groups were under the leadership of the following: Mrs. W. G. Frasher, Mrs. Ruth Alden, and Miss Lois Howard (children); Rev. Winthrop Mager (youth); Mr. Robert Hall (adults).

The reaction of all attending was enthusiastic and it was decided to hold a second workshop next year.

—Reported by Mr. Kenneth P. Warren, Fullerton, Calif.

British Film Tycoon Teaches Sunday School Class

Americans who are learning the story of Mr. J. Arthur Rank will probably not be surprised to learn that he weekly teaches a Sunday School class, and that he is chairman of the British Administrative Committee of the World's Sunday School Association.

The "Christian Education World", bulletin of the WSSA, has this to say of him:

"A deep-rooted Christian, Mr. Rank has a 60% monopoly of production and distribution of British films and a God-given grasp of the medium's redemptive potential. He sees in the film the world's most effective medium for reaching men for Christ.

Mr. Rank is currently producing *Mary Magdalene*, a three million dollar feature, and a number of 16mm

films for distribution through religious and educational channels. Also in production are a weekly series of inspirational shorts for showing in regular movie houses along with their regular short subjects."

Mr. Rank, an ardent Methodist, first became interested in motion pictures in 1935 as a means to promote religion, setting up at that time the Religious Films Society.

Correspondence

IN reporting the use of long film programs on Sunday night by certain pastors and laymen, an over-tone of approval was heard by an interested reader, Mr. W. L. Rogers, who writes:

"I was particularly bothered by the suggestion that the Life of St. Paul series be shown in its entirety in one evening. To my way of thinking, that is a good way to put an audience to sleep. . . . These films present a vast amount of material, much of which I feel would be lost if presented all in one evening."

The same holds for the Two Thousand Years Ago series, in the thinking of Mr. Rogers, and he is right. However, those reporting such a use of these films were convinced that their audiences did not sleep nor even nod. What is your opinion of the two-hour film program for churches on Sunday night?

Questions and Answers

Q. What is there for Easter in the old-fashioned stereopticon slides? We do not have our film projector yet and want to use something visual at Easter.

A. You can investigate the experience-tested programs and services such as: *Highlights of the First Holy Week*, a service of meditation and worship using art, scripture, music, and picture interpretation. Advance preparation is necessary, and you are aided in this by a complete manuscript. *The Way of The Cross*, an illustrated service emphasizing the cost involved in obeying the Master's call as illustrated by the closing incidents in His life. Manuscripts are available for the advanced preparation. *Passion Week*, by Nancy Longnecker, has 43 fully colored slides reproducing religious masterpieces, which, blended with scripture, song and poetry, tell the events of the last week. For further information on these programs and for lenten services of a similar character, write direct to Film and Slide Library, E and R Church, 1505 Race Street, Philadelphia 2.

Q. In the March 1946 issue of *Screen*, you referred to a slide program which interested young people. What was it?

A. It was a program entitled, *Christ In Recent Art*, 16 fully colored slides with the picture interpretations in pamphlet form. Young people can prepare the program and present it. The freshness and vitality in the art and message of these pictures by recent artists will appeal to them. Secure it from the Slide and Film Library, E. and R. Church, 1505 Race St., Philadelphia 2, Pa.

School-Made Motion Pictures

DAVID SCHNEIDER, Editor
Evander Childs High School
New York City

Y.C.C.A., What It Is, How It Works, Where to Start

THIS pamphlet, published by the Committee on Motion Pictures of the General Federation of Women's Clubs of America, expertly outlines the needs and the organization of Youth Cinema Clubs of America. In the foreword, Mrs. Burt, chairman of the Motion Picture Committee, states that through the motion pictures sponsored by these clubs, better guidance in youth behavior and attitudes can be achieved.

It is the hope of the General Federation of Women's Clubs that a Y.C.C.A. program can be organized in every community and their activities be housed in a theatre, school, church, or other meeting place. The Y.C.C.A. has already received the blessings of the Departments of State and Commerce, as well as the Office of Education of the United States.

Through a list of motion pictures which are available in 16mm. and 35mm. films (from the chairman, Mrs. Arretus Franklyn Burt, 444 S. Hanley Road, St. Louis, Mo. or from the national headquarters, Mrs. LaFell Dickinson, President, 1734 N Street, N.W., Washington, D.C.), the organization to demonstrate among other things that, "fitness is beauty, that strong bodies can be built, epidemics controlled, and first aid administered." With the aid of these films, they hope to teach the cultivation of better taste in art, that life

can be interesting and good on the farm, in the village, and in the city.

Another outstanding purpose is to "stimulate in youth constructive thinking about motion pictures and provide effective support of the best in entertainment."

Some of the activities suggested for the youthful members are to prepare reports on the selected motion picture and to discuss in detail the cast, story direction, sound, settings, costuming, music, photography, color, and other production phases. Starting personal scrapbooks to cover film reviews, actors and actresses, film editing, and technical devices are recommended. Other projects listed are: preparation of a scenario on a chapter of a book read in an English Class, screening in school of a film based on a book studied, discussions of films, theatre advertising, or articles from photographic journals.

It is the hope of this department to see Y.C.C.A. clubs established in every school, and although their aims and activities somewhat parallel those of the junior clubs of the National Board of Review of Motion Pictures, we would like to see both groups include actual production of motion pictures as one of their creative activities.

Netherland Educational Film

To paraphrase the Greeks, it may be said that "the Dutch have a film for it". Unlike most of our local or State Boards of Education, the Netherlands Educational Film is a division of their Ministry of Education, Arts, and Sciences. This division is composed of three carefully integrated departments. The Educational Section determines the needs which the films must fulfill, plans the organization and contents of each motion picture, and prepares the instruction booklets (teacher's guides) to accompany each film. The N. E. F. has its own filming department—(American schools, please copy—Ed.) The greatest advantage of this set-up is that their cameramen become specialists in the field of instructional films. The third department is the Distribution Section which is responsible for the introduction of the films into the various schools of the Netherlands. It also provides projectors for those schools that need them.

Under the heading, "Didactic Principles," the N. E. F. emphasizes three excellent educational practices from which many of us seem to be departing. (1) No

(Concluded on page 169)

ATTENTION! Makers of School Films

1. Send your questions and problems to Mr. Schneider at the address below. Tell him what your school has been doing so that this information may be reported as aids to other schools. Mr. Schneider stands ready to advise prospective makers of school-made films. In a forthcoming issue, he will write on "Selecting Motion Picture Cameras for School Use."

2. Send school-made films to Mr. Schneider at the address below for review and evaluation. These should be films of educational interest and not mere newsreels.

Address: Mr. David Schneider, Evander Childs High School, 800 East Gun Hill Road, The Bronx, New York.

The Literature in Visual Instruction

A Monthly Digest

ETTA SCHNEIDER RESS, Editor

UTILIZATION

- **Using the Opaque Projector in Teaching Composition**—Mary Margaret Robinson, Wyandotte, Michigan—*English Journal*, 35:442-5, Oct. 1946. Also in *Education Digest*, December, 1946.

A candid account of one English teacher's great enthusiasm for the possibilities of the opaque projector. She overcame major obstacles, such as limited size of the paper to be projected and the need to move classes for projection, but she found the educational gains worth all the effort.

Miss Robinson arrived at certain generalizations which are worth noting:

(a) Projection of written themes made students aware of the need to write for a reading public. All could read at once the themes of individuals in the class.

(b) The class time was best utilized when three or four themes were quickly and pointedly discussed than when too much time was given to a single paper or when all compositions were shown in the one class period.

The projector helped to make written expression a group activity, with a common experience, a pooling of ideas. There were lessons to illustrate outlining and note-taking, a series on the use of the library, and lessons to teach correct form in letter-writing.

ADMINISTRATION

- **A County Provides Visual Aids**—Elizabeth Wilton and Carl M. Bair, Ocean County, N. J.—*New Jersey Educational Review*, 20:144, Jan. 1947.

This county has allocated funds for the purchase of fifty films, a sound projector, a budget for supplies, and a salary for a traveling projectionist. During the year of its operation, films have been used at least once every three weeks in each school, and films were rented or borrowed to supplement the county film library. The community's support was enlisted from the outset, and programs are provided for P.T.A. groups and others, to demonstrate the service that films render to the schools.

PHOTOGRAPHY

- **Let Pictures Tell the Story**—Robert L. Andrus, Glen Rock, N. J.—*New Jersey Educational Review*, 20:148, Jan. 1947.

This camera hobbyist describes how he used his skill to promote the educational program throughout the community. Annual reports are illustrated by school activities, Kodachrome slides are used to exhibit the work of one elementary school, and photographs were used in a campaign to improve the buildings and grounds.

RESEARCH

- **Movies Enrich the Curriculum**—W. C. Meier-Henry, Asst. director, Extension Division, University of Nebraska, *Nebraska Educational Journal*, 27:6, Jan. 1947.

An interesting account of an important study being initiated throughout the state of Nebraska to answer the question: To what extent can the high school curriculum, particularly in smaller communities, be enriched by the use of motion pictures?

A grant of \$15,400 from the Carnegie Corporation is making this study possible, together with a \$5,000 grant from the Teaching Films Custodians and the opportunity of using any of their films, and an arrangement with Encyclopaedia Britannica Films to buy up to 600 prints of their subject on a cost basis.

The investigation is under the direction of a policy committee representing the state department of education and the teacher colleges. The author is program administrator.

There are six area directors in six teacher-training institutions. The study will be carried on in twenty-nine high schools, with as many control schools. Distribution will be decentralized, and the experiment will include pre-service and in-service teacher training.

Tests will be given to all students in the experimental and control schools. At the end of the year, tests will be given again. During the first year, the study will be limited to general science, biology, physics, world geography, world history, American history, and selected convocation (general interest) films.

RADIO

- **The Responsibility of Radio**—Charles A. Siepmann, Director, N. Y. University Film Library—*The News Letter*, vol. 12, no. 4, Jan. 1947.

The responsibility, according to the author, whose experience has been with the British as well as the American systems, is threefold:

- (1) To respect the integrity of *individual* listeners,
- (2) To provide service that is rich and varied,
- (3) To promote culture as well as entertainment.

- **Radio—Teacher's Aid**—Ruth Weir Miller, Philadelphia Public Schools.—*Progressive Education*, vol. 24, Jan. 1947, p. 92.

Describes the programs and educational purposes which are served by carefully planned radio listening. A practical and suggestive article, based on the experience of the Philadelphia schools.

- **Radio Drama Production**—Rome and Walter Krulévitch—Rinehart & Co., New York City. 1946, 329 pp.

A handbook for college radio workshops, containing materials used successfully by the authors at the University of Wisconsin. The volume includes, in simple and direct style, sections on directing, on production, and on scripts. A useful appendix, with studio sign language and sound effects is included. The book concludes with a bibliography. Highly recommended.

SOURCES OF INFORMATION

- **The 1947 Film Year Book**—*Film Daily*, 1501 Broadway, New York, N. Y.—29th ed. Facts and figures on the theatrical motion picture industry.
- **Movies—Your Own Guide to 16mm Movies**—Louise Condit, Junior Museum, Metropolitan Museum of Art, New York, N. Y.—*Child Life Magazine*, 26:60, Feb. 1947.

An unusual service has been initiated by a competent reviewer, namely reviews of educational films for the use of young readers. Miss Condit suggests that the young people clip the reviews and save them for future reference. "Your teacher would be glad to see them, too," she adds.

Film reviews are simple and informal. This issue includes *Wind From the West*, and *Play in the Snow*.

- **Teaching Aids Catalogue**—a new 14-page booklet describing free and inexpensive teaching aids, issued by School Service Department, Westinghouse Electric Corporation, 306 Fourth Avenue, Box 1017, Pittsburgh 30, Pennsylvania.

Designed primarily for grades 7 through 12, the new and revised educational materials listed in this catalogue include booklets, charts, motion pictures and slidefilms for a variety of classes. Some of the booklets may be obtained in quantities for distribution to students. Teachers will be interested in others as desk copies.

"We must begin now to devise ways of stimulating interest in science among secondary school students" —KARL T. COMPTON, President

Massachusetts Institute of Technology

Ten years from now our war-depleted, inadequate supply of scientific manpower may continue to handicap America's progress . . . *unless* we inspire thousands of scientifically-apt students in our high schools today to prepare for higher education in science. Each one of us can help to accomplish this goal.

We can discuss with young people and their parents the serious shortage of scientists, and the unlimited opportunities

offered by scientific careers. Thus, we can discover many of these potential scientists.

We can encourage them to study mathematical, biological, and physical sciences, paving the way for their advanced college work.

We can promote and organize science award programs for high school students among local industrial and civic groups.

We must make every effort to increase America's force of scientific personnel.

BAUSCH & LOMB

OPTICAL COMPANY

ROCHESTER 2, N. Y.

THE FUTURE OF AMERICA DEPENDS ON SCIENTIFIC LEADERSHIP

Libraries to Handle Films For Community Education

A FORWARD step in the distribution of educational films by public libraries has now been taken. At the December meeting of the American Library Association in Chicago, the Audio-Visual Committee, of which Mrs. Aubry Lee Graham is Chairman, met with Mr. Roger Albright, of the Motion Picture Association. As a result of the conferences, conditions were negotiated under which libraries may license films from Teaching Film Custodians. This is the agency which operates the non-profit educational film distribution of the Motion Picture Association.

This expansion in the wider use of the motion picture in community education implements the program recently announced by Mr. Eric Johnston, President of the Motion Picture Association.

Teaching Film Custodians began its distribution to schools eight years ago. At that time, groups of subject matter teachers appraised thousands of films which had been produced for theater use and selected those which would also be useful in the instructional programs of schools.

In making these films available in 16 mm. versions, the motion picture companies limited their use to schools. However, the value of these selected subjects for broader educational purposes was so clearly evident that many requests have been made to the companies to liberalize the restrictions which had been imposed. This liberalization has now been realized and the films are now available for use in informal programs which have educational purpose and intent.

The program expansion that is thus made possible opens the way for public libraries to render larger service within their local communities. Increasingly, community organizations have been looking to libraries as a source of educational films. Study groups of various kinds and under many local auspices find the values in their programs greatly increased if the materials under discussion can be presented in visualized form through the use of motion pictures. The individual organizations welcome the service which libraries can render in serving either as a clearing house of information or as an actual booking agency to secure films for local organization use.

In many cities the public libraries are acquiring informational films which can be loaned to organizations

for educational purposes. This service, by bringing film sources close to the local program, encourages community education. The success of film library activity suggests that many more public libraries will recognize the close relationship between films and books and will extend themselves into the film library field.

Although the circulation of books is serving a large reading public, it must be recognized that in all cities there is a large non-reading public. A considerable percentage of the people in America have not a book-reading aptitude. To these, the libraries owe an educational debt. It can well be that the motion picture, particularly in the non-fiction, non-entertainment field, may provide the library with the means of meeting a further educational obligation.

Films on travel, international relations, health, community planning, problems of democracy, and many other subjects whose material contributes to good citizenship, can be shown as interesting films to many who cannot be expected to read books on similar subjects. Film showings in library auditoriums or in neighborhood labor halls, churches, and school auditoriums, may bring about a program of community education under library auspices which will provide a greater measure of enlightenment to all our people.

The films which are being made available through Teaching Film Custodians have all been shown in the theater where the motive was entertainment. Many of these same pictures shown now with educational intent, and perhaps accompanied by forum discussions, will bring added values.

Libraries may acquire these Teaching Film Custodians' subjects only for educational use. Accordingly, these films may not be made available to individuals for family use which is usually for home entertainment. Many educational groups plan recreational occasions like alumni meetings, "Father and Son" dinners, or church parties. Libraries receiving bookings for these films will have to discriminate as to the intent of the meeting,—whether that purpose is actually educational or whether it is a meeting held for public relations, fellowship, or entertainment purpose. The producing companies are agreeing only to render an educational service which must not be misused by exhibiting these films in non-educational programs. It will be noted that these subjects may not be used on occasions when admission fees are charged.

Many new subjects have been added from year to year since the original selections were made. These are included in a new catalogue just published which contains titles and descriptions of approximately 600 films. The films are not for sale but are licensed under a long term lease of either one year or three years with provision for extending the license period beyond the term of the original contract. Libraries which license these subjects may determine their policies as to distribution charges to local organizations.

Libraries desiring to plan for a motion picture distribution program should write to the Director of Educational Services of the Motion Picture Association of America, Inc., 1600 Eye Street, Northwest, Washington 6, D. C.

If you haven't seen . . .

"Let's give a tea" . . . answers a long-felt need for cultural instruction in proper conduct at tea time. A comprehensive treatment of accepted procedures of dress, invitations, guest lists, etc., cleverly woven into story form. Emphasis is placed on important features by employing subtle contrasts. A valuable complement to every Social Science or Home Economics curriculum. High school and college level—color and sound—20 minutes. Study guide furnished with every print.

"Arranging the tea table" . . . brief but comprehensive approach to this all-important phase of proper tea time conduct. Illustrates step by step, with explanatory dialogue, the reasoning behind attractive and correct tea-table arranging. A logical and valuable sequel to "Let's give a tea." High school and college level—color and sound—5 minutes—complete with study guide.

"Arranging the buffet supper" . . . useful instruction in the problems of giving a buffet supper. Follows the step by step pattern used in "Arranging the tea table." The use of this film completes a well-rounded coverage of necessary instruction in afternoon and early-evening entertaining. High school and college level—color and sound—5 minutes—complete with study guide.

. . . you'll want to!

CITY _____ STATE _____

Illinois Also "Hep" to Audio-Visual Needs

Reported by Bob Schreiber

THE recent first meeting of the Illinois State Committee on Audio-Visual Education wrought significant plans for the future of needed audio-visual cooperation between public school systems, teacher training institutions, and the State Department of Public Instruction. Gathered together in the one day sessions at Champaign-Urbana at the call of E. C. Waggoner, State Audio-Visual Director, were A-V supervisors from ten city systems, together with representatives from Normal and DeKalb Teachers Colleges, the Universities of Illinois and Chicago.

Meeting in the dynamic, practical setting of the University Visual Aids Center, the participants laid mere philosophical considerations aside to come to grips with the pressing problems of teacher training and administration. Primary product of these discussions was the decision to prepare an audio-visual bulletin, covering pertinent items ranging from pre-service training to administrative detail, to be sent out from the State Department to all Superintendents in the State and other interested parties. Purposes of this bulletin are to acquaint administrators, and others in the State, with the problems and needs of audio-visual education and the personnel requirements necessary to maintain and enlarge the effective utilization of these new instructional materials.

The Committee also put itself on the record as favoring: audio-visual courses in all teacher-training institutions in the State, inclusion of audio-visual theory in general methods courses, graduate extension courses in the area, and a percentage matching of State funds to local budgets for audio-visual materials and equipment.

To further its sphere of influence and secure adequate cooperation throughout the State, the Committee agreed upon provisions for six sub-committees on finance, teacher training, distribution, utilization, evaluation, and permanent organization. These committees are to be staffed from the total committee—plus assistance from other concerned individuals in the audio-visual field. Opportunities for school service in the various areas provided by the sub-committees were discussed briefly, but the main concern of those in attendance seemed to be "Let's organize first for service now!"

Elected Chairman of the State Audio-Visual Education Committee was E. C. Waggoner; General Secretary, Lewis V. Peterson, Supervisor of the Illinois Visual Aids Service.

Between, before, and after sessions, delegates were enabled a first-hand view of an instructional materials library at work; how to splice our films better, what happens when "someone else" damages the film, and why the film comes in on Monday morning in response to our requests. These were the amusing, interesting sidelights on a meeting, which all those present hoped bodes well for the future development of audio-visual education in the State and the Nation.

Raising Our Sights

(Concluded from page 149)

determine the location and extent of the actual cultural deficiency areas. Their next insistence is for action to remedy them.

There is an urgent desire that young workers be trained in mass media techniques. International student exchange is being actively promoted. Both Great Britain and the Soviet Union have many exchange students studying under scholarship grants.

In this field also, there is an insistence upon a free flow of communication, though this formula is by no means interpreted identically in the various lands. There is keen interest in obtaining equal access to mass media and in the lifting of obstacles to free interchange of both data and thinking. There is interest also in the establishment of an international clearing house for free exchange of mass media materials. In this connection, it is well to note that of all the treaty and convention provisions for duty free import of educational materials, including films, the United States has yet to accept officially its first such provision.

If it is agreed that international peace is our fundamental and all important problem and that the battle for international community must be won first in the minds of the men of all nations, it follows that world citizenship on the cultural field at least is the goal of UNESCO's striving. To realize that goal, there is required a universal recognition of the dignity, quality, and right to mutual respect of and by all peoples. The mass media are, at once, the most potent expression of these goals and the most effective channels toward their attainment.

The Michigan Meetings have shown that it is possible, in a single conference, to give due attention both to ends and to means, to principles and to methodics, in a way that will be of interest and benefit to all who attend. It has shown also that it is possible to draw into a joint meeting representatives of education (on every level) and of industry, of film and equipment production, and of government agencies and public groups. Somewhat surprising was the relatively small attendance by classroom teachers from the immediate area in which the conference was held. Also, the absence of any apparent connection with the national professional organization of visual instruction workers gave to the Detroit meeting the aspect of a purely sectional conference which its program scope and large attendance contradicted. Sectional meetings are necessary and helpful. The Detroit, Omaha, Chicago, New England, West Coast, and similar gatherings might well be all the more productive if their objectives as well as their calendar could be co-ordinated on some national plan worked out through the Department of Visual Instruction of the National Educational Association, possibly in conjunction with other professional and trade groups such as the Film Council of America, Educational Film Library Association, Allied Non-Theatrical Film Association, National Association of Visual Education Dealers, etc. The community of interest among all audio-visual workers of this whole country—in fact, of the whole world—is undeniable. A community of effort in research and exposition should not be unobtainable.

NEW YORK, N. Y.

Resume of Detroit Symposium: "Instructional Tools As I See Them"

The chairman of the symposium held on "Instructional Tools as I See Them" at the Michigan Audio-Visual Conference, was Verne Stockman, who is a member of the State Audio-Visual Aids Committee, and also an instructor of visual education at the Central Michigan College of Education, Mount Pleasant, Michigan. The members of the panel represented the various interests in the audio-visual field, namely: two producers of materials; a high school principal, representing the administrative point of view, an audio-visual director, representing utilization and distribution aspects; and an assistant professor of education of a teacher-training institution.

Mr. Frank Grover of Coronet Instructional Films pointed out that Coronet Films Incorporated attempted to meet a social need in providing instructional films—that the primary purpose of the organization is to help teachers in their work and to make a social contribution to education.

David J. Goodman, Popular Science Publishing Company, spoke on the reasons why his company entered into audio-visual education, the criteria it has set up in the planning of production, and the utilization of filmstrips and recordings produced by this company. Mr. Goodman emphasized the need for more classroom teaching aids, to be developed by classroom teachers, their effectiveness to be determined under classroom situations.

Mr. Paul Briggs, principal of the Bay City High School, Bay City, Michigan, emphasized the need for close correlation of visual materials with the curriculum and the various administrative problems hampering the effective utilization of materials in the schools. These were concerned with equipment, the availability of materials, etc.

Mr. C. H. Tabler, Director of Audio-Visual Aids, Massillon, Ohio, discussed the philosophy underlying the use of audio-visual aids and the special qualities of the motion picture as a tool of instruction.

George Mills, Assistant Professor of Speech and in charge of visual aids at Western State College, deplored the lack of audio-visual materials available for the college instructor. Mr. Stockman concurred with Mr. Mills' comments and thought that there should be greater emphasis placed on developing audio-visual materials for teacher training institutions particularly and that more time should be spent in training prospective teachers.

Chicago Scientific Film Society

The next meeting of the Chicago Scientific Film Society will be held, Wednesday, March 26, 8:00 p.m. at 84 East Randolph Street. Tentative plans indicate that the following films will be shown: *Hermits of the Sky* (A. F. Films); *Malaria* (British Information); *Man One Family* (Brandon); and *Trappers of the Sea* (NFB of Canada) or *Science Goes Fishing* (NFB of Canada).

Spring Program of Natural History Museum

A comprehensive spring program of free courses, films and lectures, dealing with natural history, exploration, nature study, and general scientific research will be presented by The American Museum of Natural History, New York, it was announced today by Dr. Charles Russell, chairman of the Department of Education.

The regular museum program of free courses will be highlighted by a new series titled "Toward A Better World", designed to aid in developing true understanding of the people and countries of the United Nations. This series which has been arranged in cooperation with Dr. Elias Lieberman, associate superintendent of the New York City schools, is open to all junior high school students. Each program in this series consists of films on the United Nations countries and lectures and discussion conducted by leading authorities on each of the countries.

Every Wednesday afternoon at 4 o'clock the museum offers its popular program of free sound films on the theme of "This Changing World," in the Roosevelt Lecture Hall. This series includes some of the most outstanding color and black and white films ever produced in the field of education and nature study movies.

Another popular museum education series presents sound films in the fields of general science and biology in cooperation with a committee from the New York Biology Teacher's Association and the General Science Association of New York. Admission to this series is restricted to those holding tickets which may be obtained from teachers of general science and biology. These programs are held in the museum auditorium every Friday afternoon at 3:50 o'clock and every Saturday morning at 10:30 o'clock.

Annual List of Summer Courses in Audio-Visual Education

EDUCATIONAL SCREEN'S annual list of summer courses will appear in the April issue. Directors of audio-visual education should send complete information on courses offered at their schools to the Magazine at once. The name of the University or College offering the course, the title and number of the course, the number of semester or quarter credits, the dates, and the name of the instructor are needed.

This Changing World—Wednesdays at 4:00 P.M.

April 2—*A Study of Spring Wild Flowers* (color); *Flowers at Work*; *From Flower to Fruit*

April 9—*South to the Land of the Conquistadores* (color)

April 16—*What is Rain?*; *Ground Water*; *Conservation of Natural Resources*

April 23—*Watussi of Africa*; *People of the Congo*; *Life in the Sahara Desert*;

April 30—*The Coconut Tree*; *Coffee, from Brazil to You*

Free Motion Pictures—Saturdays at 2:00 P.M.

Mar. 29—*South America*

April 5—*Shelter and Transportation*

April 12—*Wings to Alaska*

April 19—*Bird Ways*

April 26—*Dr. Ehrlich's Magic Bullet*

Toward a Better World—Tuesdays at 3:15 P.M.

April 1—*By-ways of Egypt* with talk by Mr. Axix Saad-El-Din, Egyptian Engineer on a Government mission

April 15—*In and Around Capetown* with a talk by Mr. H. M. Moolman, Director of the South African Office of Information

April 22—*Fundo in Chile* with a discussion by Mrs. Mario Carreno

April 29—*Venezuela Moves Ahead* with Mr. Pedro Rinones.

Magazines and Men

(Concluded from page 140)

port was published in July 1923. One of the direct outcomes of the work of the committee was the establishment of a Department of Visual Instruction in the N.E.A. in 1923. In this manner, a second national organization for educators interested in visual instruction was established, and policies of far reaching influence were determined. A third national organization, The Visual Instruction Association of America, came into existence during this period. Later, the N.A.V.I. and V.I.A.A. were merged with the Department of Visual Instruction of the N.E.A., and THE EDUCATIONAL SCREEN has served, since that time, as the official publication of the Department.

The changes in equipment were rapid and had a disturbing influence on the educational market. The 35mm film was supplanted by 16mm film. Then sound came. The slidefilm appeared. Later the candid camera fad swept the country bringing in its wake the 2" x 2" slide. All these changes increased the number of pieces of projection equip-

ment which the school had to buy to keep pace, and each change was accompanied by ballyhoo which succeeded in adding to the confusion of many. The depression came, but visual instruction grew because of its basic soundness. When war broke out in 1941, the workers who had carried on and who had been joined by ever-increasing numbers were ready. Because of their knowledge and experience, the armed services were able to utilize this knowledge, launching into a vast training program. Speed was the essence of victory, and audio-visual techniques furnished the necessary speed in training.

Nelson L. Greene lived to see visual instruction prove its case in a national emergency.

Now teachers by the thousands are audio-visual conscious where before there were tens. Nelson L. Greene saw his machine grow to the point where additional staff members were needed. He employed them and supervised their beginning efforts. Then after putting the silver anniversary issue "to bed," the pen was taken from him. All who know Nelson L. Greene respected his courage and steadfastness of purpose. His was truly a work well done. It is for us to carry on.

Houston Hears Reagan and Baird

The Houston Film Council held a special meeting last month to hear Tom Baird, Director of the Film Division, British Information Services, New York City and C. R. Reagan, President, Film Council of America, Austin. At the meeting, a special preview of the new British film, *Children on Trial*, was held. Mr. Baird has recently been making a tour of the country, speaking before film councils and similar organizations.

Chicago Film Council

Thomas Baird, Director of the Film Division, British Information Services, New York, spoke before the February luncheon meeting of the Chicago Film Council. He was introduced by John Hamilton, British Film Officer, Chicago. Mr. Baird, in his talk, explained why the British government produces films and why some of its films are distributed in the United States. Keeping citizens informed was the underlying reason for such governmental film production, according to him. Ralph Creer, president, made the remark that medical films were the only truly international film. A discussion followed Mr. Baird's talk and centered about international restrictions placed on the distribution of films. Hope was expressed that the restrictions and legal red tape surrounding the importation and exportation of films could be reduced.

At one of the next luncheons, the program committee plans to screen several new films for the Council members.

April Forum of Chicago Film Workshop

The Chicago Film Workshop will devote its April meeting to China, showing two films: *March of Time—China* and National Film Board of Canada—*China's Need*. One of the speakers will be Kenneth Bunstead, British Consul in Chicago, who has spent 10 years in China and expects to return to a governmental post there. This meeting will be held April 2, 8 p.m., Woodrow Wilson Room, 84 East Randolph Street, Chicago.

The Film Workshop is a part of the Chicago Council on Foreign Relations and is sponsored by the Adult Education Council. It provides an excellent opportunity for teachers, program chairmen, and persons interested in adult education to see the latest available materials in the field. The discussions provide models after which other organizations may pattern theirs. Films shown are readily available through regular channels for parent-teacher groups, clubs, and schools.

Previous programs have included the subjects of race, the Soviet Union, and the atom bomb. For the first program, the films, *Man-One Family*, supervised by Dr. Julian Huxley and Professor J. B. S. Haldane, and *Don't Be a Sucker* with Paul Lukas as a refugee in the United States, were shown. In the Russian program, *Peoples of the Soviet Union*, the Julien Bryan film, was screened. For the discussion of atomic power, *One World or None* and the *March of Time—Atomic Power* were shown. Both these films are discussed at length elsewhere in this issue.

J. C. Wardlaw, Audio-Visual Pioneer, Passes

Mr. J. C. Wardlaw, Director of the Division of General Extension, University System of Georgia passed away on January 24. He had been director of this Division since 1928, and it was through his leadership that the scope and service of the Division grew so rapidly.

Mr. Wardlaw pioneered in the development of audio-visual education not only in the South but in the nation as well. As early as 1929, Mr. Wardlaw planned for the establishment of an audio-visual education service in this state. He personally surveyed the public schools of the state of Georgia to determine the possibilities in the field. It was not until 1936 that his dream was realized in the establishment of the Audio-Visual Aids Extension Service of this Division. The record of growth and development of this service speaks for itself.

Mr. Wardlaw is responsible for the organization of the Southern Conference on Audio-Visual Education and served as its president for several years. He was also a leader in the Department of Audio-Visual Education of the Georgia Education Association.

Beginning his long educational career as Professor of English and Latin at Andrew College, Cuthbert, Georgia, in 1896, Mr. Wardlaw served as superintendent of public schools in Dublin, Thomasville, and Albany. He joined the faculty of Georgia State College for Women as Professor of Latin and History in 1905. Continuing his service in the University System of Georgia he became Head of the Department of Education and Director of the Training Schools at State Teachers College, Athens, in 1912. He served as Dean of that institution in 1914-15. He became Assistant Superintendent of Atlanta Public Schools in 1915 and served as Superintendent in 1917-18. He discontinued his public school work to enter war work in 1918. He served as Chief of Vocational Rehabilitation, U. S. Veterans Bureau, 5th District, Atlanta, and 2nd District, New York, from 1918 to 1925. He became Supervisor of the New York Metropolitan District of Near East Relief in 1925, in which position he remained until he became Director of this Division in 1928.

He was a member of the National Education Association, National Council on Education, American Sociological Society, National Economic League (national council), The Source Research Council, Southern Education Council, Georgia Education Association (President, 1915), Treasurer of the Citizens' Fact Finding Movement of Georgia since 1938, a member of the American Arbitration Association, the National Conference of Christians and Jews, the Social Planning Council of Atlanta, Phi Beta Kappa, Phi Delta Theta, Pi Gamma Mu, Kappa Delta Pi, Scottish Rite Mason, K. T., Shriner, Odd Fellow, Kiwanian (President of the Atlanta Kiwanis Club, 1941).

Notes

St. Louis Teachers Study "Radio"

"Radio in Education" was the theme of the second in-service conference for teachers, sponsored last month by the St. Louis District of the Missouri State Teachers Association, according to Raymond R. Brisbin, president. Public schools were closed on the day of the conference so that more than 3,000 teachers could attend.

An address on "The Social Dimensions of Radio" by Robert B. Hudson, Director of Education, Columbia Broadcasting System and a discussion of "Radio in Education," headed by Philip J. Hickey, Superintendent of Schools in Los Angeles were the principal features of the morning session.

In the afternoon, five concurrent sessions were held. The first presented radio as "A Medium in International Understanding." The second treated radio as "A Challenge to High School Teachers." "Edward Jenner," a broadcast from *Men of Science*, written by Miss Elaine Debus of the Division of Audio-Visual Education was presented by the Southwest High School Radio Workshop. The use of radio and recording devices in high schools especially in regard to language teaching was demonstrated.

The third afternoon series treated radio as "A New Approach to Elementary Education." Dr. Leland Jacobs, Assistant Professor of Education, Ohio State University spoke on "Utilization of Radio in Teaching of Literature." "Creative Art by Radio," illustrated by recordings, was the topic of Harold B. McCarty, Director of Radio Station WHA, University of Wisconsin. Fourth session covered radio and television equipment, including a demonstration of television by St. Louis radio station KSD.

"Audio-Visual Aids, a Factor in Music Education" was the fifth general topic and was handled by a panel including Dr. Warren D. Allen, Director of Music, Stanford University; Russell Morgan, Director of Music, Cleveland Public Schools; Stanley Chapple, Conductor of the British Broadcasting Company's Children's Concerts; W. Otto Miessner, Director, Miessner Institute of Music, Chicago; Dr. Hans Rosenwald, Dean of Chicago Musical College; and Ernest Hares, Supervisor of Instrumental Music, St. Louis Public Schools.

The Story of Sponsored Films

The American Public Relations Association in Washington, D. C. presented Pat Powers in a series of six Wednesday evening forums covering the various phases of sponsored films. Topics included "Educational and Promotional Films," "Planning the Industrial Film," "Producing the Film," "Complex Problems of Production," "Film Distribution," and "Films for Television." A charge of \$7.50 was made for the six lectures. Many members of the Washington Film Council attended.

JUST OFF THE PRESS, this big new catalog describes the largest and most important group of visual aids for classroom and factory use yet produced. These low-cost training films are being widely used all over America in teaching thousands of workers and students in many fields.

They were produced by the U. S. Office of Education and other Government agencies with the complete cooperation of the foremost authorities in education and industry.

You, too, can make your teaching of difficult concepts and principles—your training of workers, easier and more effective by using these 16 mm sound motion pictures. Aid your students and trainees to *learn faster!*

**First Annual Portland Conference
On Audio-Visual Aids**

Over 200 teachers and Audio-Visual Directors attended the Portland Conference of Zone VI, D.V.I. early this year at Portland, Oregon.

The first day of the two-day meeting was devoted to a discussion of the "Place of Teaching Aids in the Curriculum." Dr. Willard B. Spalding gave a very stimulating talk on combining all aids into one "Instructional Materials Center." Francis Noel, State Director of California, spoke of the place and function of the Audio-Visual Coordinator promoting effectively the utilization of instructional materials. Professor Zeno Katterle challenged the audience to put the emphasis on the enriching experience for the children through Audio-Visual Aids.

The Friday evening Banquet included talks by Francis Noel on "Audio-Visual Aids," Ted Gamble on "The Motion Picture Industry Looks at Education." Mr. Gamble was very forceful in pointing out that the movie industry had much to offer in Visual Education, but so far, they had only scratched the surface. Dr. Peter Odegard, President of Reed College, spoke on "The Value of Visual Education."

**Beloit Audio-Visual Institute
For All Local Teachers**

An institute to "suggest methods of utilizing visual aids" in the local classrooms was held in Beloit, Wisconsin early this year. Superintendent V. F. Dawald named an institute committee headed by George H. Roseman, co-ordinator of audio-visual instruction, to arrange the program. Motion picture films, transcriptions, film strips, and radio were studied with a view toward increasing their utilization in the school system. Dr. Walter A. Wittich, director of the Bureau of Visual Instruction at the University of Wisconsin and Professor E. B. Gordon, for many years associated with the state university radio station, WHA were the principal speakers. The morning sessions were planned especially for junior and senior high school instructors while the afternoon was devoted to teaching problems in the grades.

California Audio-Visual Association Expands

The fourth section of the Audio-Visual Education Association of California was organized on January 15th at a dinner meeting in Fresno. Two hundred teachers and Audio-Visual Directors from five counties were present. Officers elected were: President, Frank F. Gorow, Audio-Visual Coordinator, Fresno County; Vice-President, Harry Skelly, Audio-Visual Director, Madera County; Secretary, Ehmer Peery, Audio-Visual Director, Kern County Union High School, Bakersfield; Treasurer, Vincent Alexander, Audio-Visual Director, Kings County. Seventy-seven persons became charter members of the new organization, which includes membership in the State Association.

Francis W. Noel, Chief, Division of Audio-Visual Education, California State Department, addressed the group on the subject "Where Are We Going in Audio-Visual Education?" He mentioned the increase in the number of county departments, improvement in utilization practices, availability of better materials and equipment, and the emphasis upon pre-service and in-service training of teachers throughout the state. The growth of the audio-visual movement in California was characterized as sound development rather than a "boom".

Mrs. Helen Rachford, President of the State Association and Los Angeles County Audio-Visual Director, explained the advantages of organizing a local section. She stressed the values of the spring and fall audio-visual conferences.

The presidents of each of the other sections of the state association were introduced and spoke briefly: Carl Manner, San Francisco Bay Section; Elizabeth Goudy Noel, Southern Section; Ben King, Sacramento Valley Section; and Lloyd Sweetman, past-president, Sacramento Valley Section. Local educational leaders who extended greetings were: Walter G. Martin, Fresno County Superintendent; Edwin C. Kratt, Fresno City Superintendent; and Dr. Frank W. Thomas, President, Fresno State College. Frank F. Gorow presided at the dinner.

The San Joaquin Valley Section presented its first Audio-Visual Conference at Fresno State College on March 14th and 15th.

Audio-Visual Survey in Toronto

A committee of five professors appointed by President Smith of the University of Toronto is making a survey of Visual Education Programs in colleges and universities in preparation for recommendations with regard to Visual Education at the University.

Members of the committee recently visited several universities in the eastern part of the United States and spent two active days in New York City under the guidance of Visual Education Consultants, Inc. of New York.

Farm Film Foundation

The Farm Film Foundation, 744 Jackson Place, N.W. Washington, D. C. reports that requests for films from the Foundation are far ahead of the supply yet available. The officials in charge of the Foundation work have not felt it advisable up to now to push the formation of film circuits beyond those already functioning or to make public a list of films available. They believe that with the current shortage of prints, such promotion would only tend to disappoint those who desire films for showings, as there necessarily would be some delays involved.

Up to the present, the Board of Consultants has reviewed three hundred and seven films of which only twenty-four were found to meet the high standards required for Foundation endorsement. Negotiations to have sponsors register accepted pictures with the Foundation have taken time.

The great difficulty has been shortage of prints available. Like other postwar shortages, indications are that this one is beginning to ease. As a result, the Foundation is hopeful that it will be able to issue a list of at least ten pictures available on a nation-wide basis within a reasonably short length of time. As soon as prints become available the Foundation will issue films being distributed by them and instructions on how they may be secured.

School-Made Motion Pictures

(Concluded from page 157)

film should last longer than fifteen minutes. This gives the teacher enough time to really complete the first phase of the lesson. (2) The film should be shown again during a second meeting of the class (Film renters, what about your rates? Ed.) to check and evaluate pupil understanding. Principle number 3 is a point this department has repeatedly argued with commercial producers that they are in too much of a hurry to rush into sound, where sound is not indicated. Listen to the N. E. F., "Dutch teachers desire to give their lessons in an atmosphere of quiet. . . . If, therefore, the silent films give sufficient insight into the coherence of a subject treated, then the loud-speaker is entirely superfluous and is just as undesirable as a detailed explanation from the teacher during the showing of a film." Lest some other producers be tempted to offer a rebuttal, may we quote from Jean Benoit-Levy's latest book, *The Art of the Motion Picture?* Speaking of films for primary and secondary instruction, the author states, "The experience I have had leads me to declare that in the vast majority of cases these films should be silent".

ECONOMICS GLAMORIZED!

U. S. ECONOMIC GEOGRAPHY MAP SLIDES—This just released set of 20 exquisitely colored 2 x 2 map slides shows the economic resources of the United States. Each slide shows a different economic resource and where it is found in greatest abundance. Government Agencies provided the statistics on which these map slides are based. Slides are titled: Wheat, Corn, Cotton, Sugar, Potatoes, Tobacco, Fruit, Forests, Dairy Products, Hogs, Beef Cattle, Sheep, Iron Ore, Coal, Petroleum, Mineral Deposits, Water Power, Navigable Waterways, Railways, Air Routes. A Teacher's Guide containing explanatory material is included. . . . \$7.50

RICHES IN THE LAND—A comprehensive unit of four films, produced by the National Film Board of Canada, and showing a graphic story of the natural wealth of our northern neighbor. This unit includes: Canadian Wheat Story; The Fur Trade; Story of Oil; Cattle Country. The entire unit can be run in 42 minutes; separate units 6 to 17 minutes.

Complete set of 4 films—Black and White. . \$110.00
(Units separately \$20 to \$40 each)

Visualizing and Vitalizing Government

(Concluded from page 143)

why legislators follow the opinions of the electorate back home in order to be reelected; how public opinion can prevent black markets or solve the housing shortage or reduce the number of airplane accidents by demanding adequate funds for safety aids.

Finally, they realize that the League of Nations failed, because public opinion was not strong enough. (The lack of power and support of the League is excellently presented in the March of Time documentary film, *The League of Nations*. The film clearly shows that the League had no power to enforce its decisions; that its funds were totally inadequate. The United States spends more in a day or two for defense than the League had to spend in its twenty-one years.) They realize that public opinion must assert itself; that

Classes may practise governmental procedures by forming a Senate or House or Assembly. Young America Films, "Meet Your Federal Government" is a help.

in the Assembly of the United Nations it must make itself felt.

Classes may be resolved into an Assembly or a Senate, introduce and enact their own bills and thus actually experience the process of lawmaking. Sample copies of bills, the Weekly History of the Senate and the Assembly, and charts on the process of law-making should be a regular part of the classroom equipment. If the State Legislature or Congress is in session at the time, a bulletin board of legislative procedures and activities should be kept from day to day. Radio programs should be utilized wherever feasible. The Young America Films production, *Meet Your Federal Government*, (15 min. sd., 16mm) explains the operation of the federal government.

Classes in government should visit their city and county offices. Occasionally officials may be induced to come to the school to talk to the students. Last semester, for instance, the Glendale City Council held one of its regular sessions in the high school auditorium before an assembly of more than 2000 students. The proceedings were broadcast over the radio.

There are a number of good films that should be utilized in the study of city problems. Foremost among these is the documentary film, *The City*, (30 min. sd., 16 mm) which contrasts the conditions of life in a modern industrial center with life in an eighteenth century village. The film presents model communities such as Radburn, New Jersey, and makes a strong plea for adequate planning and housing. The Encyclopaedia Britannica production, the *Growth of Cities*, explains the various factors that determine the location and development of cities. Various types of city plans are presented and trends in city planning are explained. The *City Water Supply* (Encyclopaedia Britannica, 12 min. sd., 16 mm.) presents the sources of water, the methods of water distribution and the need for safeguarding adequate water sources and distribution.

Today we must consider new problems. What, for example, are we going to do in the atomic era in the way of decentralization of our industrial population? How will the atomic era effect city planning and city growth?

Let us so visualize and vitalize our courses in government with the constant use of the press, the best motion pictures, radio programs, bulletin board exhibits, and field trips that youth will better understand and appreciate the responsibilities as well as the privileges of this great democracy and will go forth determined to serve the world in which they live.

AUDIO - VISUAL TRADE REVIEW

Production Activity

Teaching Films Inc., Is Born

A new producing and distributing organization, Teaching Films Inc. (not to be confused with Teaching Film Custodians), has appeared on the audio-visual materials scene during the past month. Master-minded by Louis N. Freedman, formerly with the MacMillan Co., and now president of the new firm, Teaching Films announces the noble aim of producing motion pictures and filmstrips based on fundamental curricular requirements, and that the content of its productions will be selected, organized, and presented in such a way as to make them an essential part of curriculum units. Each offering is to be directed to a specific subject problem; graded to the interest level, learning rate, and comprehension level of a specific age group. That's a big order, gentlemen, and we hope you hew to the line you have cut out for yourselves.

The Educational Director of Teaching Films Inc., and serving also as Vice-President, is Dr. Arthur Stenius, well-known in audio-visual circles as the former Coordinator of Visual, Safety, and Radio Education for the Detroit Schools and Associate Professor of Education at Wayne University.

Dr. Ned L. Reglein is Production Manager of the new organization, coming from Air Age Educational Research, where he was Associate Director. Dr. Reglein has, additionally, several years experience in motion picture production for the Army Air Forces behind him, as well as radio production responsibilities in midwestern stations.

First of a large corps of educational advisors to Teaching Films Inc. are William H. Hartley, Chairman of the Social Studies Committee of the National Education Association, and professor at Maryland State Teachers College, and Paul C. Reed, Director of Visual and Radio Education for the Rochester, N. Y., schools.

Mr. Louis N. Freedman, President, Teaching Films, Inc., announces that at the Board of Directors meeting held at the offices of Teaching Films, Inc., 88 Lexington Avenue, N.Y.C., Dr. Arthur Stenius was elected Vice-President of the organization.

Dr. Stenius, who also serves as Educational Director, has a comprehensive background of knowledge about audio-visual education in Europe, and has applied his observations to the American scene. Prior to his affiliation with Teaching Films, Inc., Dr. Stenius was associated with the Detroit Public Schools as Coordinator of Visual, Safety, and Radio education, and was Associate Professor of Education at Wayne University, where he was responsible for the training of teachers in the use of audio-visual materials. As chairman of the Michigan Audio-Visual Materials Committee, he was responsible for devising a planned visual education program which is recognized as a most comprehensive and far-sighted program.

Louis N. Freedman

British Ministry of Education Sponsors Own Teaching Films

While the British commercial theatre is winning honors at home and abroad, the Government's Ministry of Education, along with the local authorities and associations of teachers, are planning a broad program of educational filmmaking. The work will be carried out in co-operation with the Central Office of Information and British film producers.

The decision of the Ministry to sponsor its own films for showing to schools is important for two reasons: the Ministry will be able to offer films to the local educational authorities, who, until the present, have had to hire films produced by private companies; and the visual education done by local educational authorities and different cultural groups will be much better co-ordinated.

Two committees have been named to guide the production of films and other visual aids for educational purposes. The

ROBERT E. SCHREIBER, Editor
Audio-Visual Center
The University of Chicago

first, established by the associations of local education authorities and teachers, and known as the National Committee, is composed of teachers and educational experts as well as specialists in various subjects. This committee will draw up a production program and recommend educational advisors to be associated with the production of individual films. It will also be able to advise the users of such material.

The second committee, now called the Production Committee, appointed by the Ministry of Education, will be chiefly concerned with carrying out the program recommended by the first. It will arrange for and supervise the production of films, financed by the Exchequer and made through the Central Office of Information. The film industry in this group will be represented by such noted experts as Mr. Paul Rotha. If private producers wish, they will be given technical advice and guidance on the choice and treatment of subjects.

People

East Meets West

Traveling over 8,000 miles to make what he whimsically termed "a little business trip", Mr. A. J. Patel, Ampro's distributor for India and Ceylon, recently made a surprise visit at Ampro offices in Chicago.

Mr. Patel reported that India was entering into a new economic and industrial era which would accelerate the demand for products of the western world. He was particularly enthusiastic about flourishing prospects for photographic and 16 mm. movie projection business in all of India.

Radiant Sons

The Radiant Manufacturing Corporation announces that Mr. Geovil Nereim has been named their new Advertising Manager. Mr. Nereim comes into his new position well prepared to take over the reins of the Advertising Department. His background includes four years with the

Blackstone Manufacturing Company, as their Advertising Director, following which he was associated for two years with Lockheed Aircraft Corporation.

Radiant also welcomes John W. Fox, who takes his place as the new Southern District Manager. Mr. Fox is no stranger to the film world. As an Audio-Visual Aids Specialist for both the government and various educational institutions, and as a naval officer in charge of the distribution of naval training and entertainment films, John Fox comes to his new job with a sound background.

Rose Succeeds Victor In Reorganization

The election of Samuel G. Rose as President and Horace O. Jones as Vice-President of the Victor Animatograph Corporation, a Division of Curtiss-Wright Corporation, has been announced by G. W. Vaughan, President of Curtiss-Wright and Chairman of the Board of the Victor Corporation.

Mr. Alexander F. Victor, in presenting his resignation as President to the Board of Directors, asked that he be relieved of several duties the presidency involved, so that he may devote his entire time to directing the development of new products included in the recently-adopted expansion program.

Mr. Rose who formerly was Executive Vice-President has been continually associated with Mr. Victor and the Victor

Samuel G. Rose

Corporation since its formation in 1910. He has helped guide the company from its infancy until it is now recognized as the world's largest manufacturer devoted exclusively to the production of 16mm projectors and cameras. The Victor Corporation was purchased in July, 1946, by the Curtiss-Wright Corporation.

Mr. H. O. Jones, the new Vice-President, joined the Victor organization in 1932 as director of sales for the Eastern Division. Prior to that time he was branch manager for the National Theatre Supply Company. In 1944 he was elected head of the Allied Non-Theatrical Film Association and was re-elected in 1945.

George Mitchell Regional EBF Manager

George H. Mitchell of Dallas, Texas has been appointed a regional manager of Encyclopaedia Britannica Films Inc., effective March 1, it was announced by H. R. Lissack, vice-president of the classroom films company.

Mitchell as manager of the Southern region of the United States, will have headquarters at 712 North Haskell street, Dallas, supervising the distribution of Encyclopaedia Britannica Films and serving as educational representative for the films company in 11 states from Alabama to Texas and North to Kentucky and Kansas.

Mitchell's appointment completes the overall new distribution organization of the Encyclopaedia Britannica to further its educational films program both for schools and adults. The other three regional managers whose appointments were recently announced are Joseph E. Dickman, Midwest; James Stackhouse, Eastern States, and Paul Cox, Western states. Dennis R. Williams is director of distribution of the company to supervise the new regional operating organization.

Report from EBF

Recent staff changes at EBF include: the appointment of A. F. Frese, manager of the sales service department of Encyclopaedia Britannica, Inc., to the position of operating manager of Encyclopaedia Britannica Films Inc., as announced by C. Scott Fletcher, president. Frese's position in sales service will be filled by Marion N. Rusevic, who has been supervisor of the order handling activities of that department.

Laurin H. Healy has been named director of public relations of Encyclopaedia Britannica, Inc., and has been succeeded as publicity director of Encyclopaedia Britannica, Inc., by James Colvin. The change is occasioned by the expansion of Encyclopaedia Britannica Films, according to Dale O'Brien, director of advertising and public relations.

Robert E. Brubaker of Encyclopaedia Britannica Films sailed for Europe aboard the S. S. America on February 6 to establish Swiss offices of the classroom films company and serve as a consultant with educational administrators on the continent, it has been announced by Dr. Theodore M. Switz, vice-president in charge of overseas sales of the company.

As E.B. Films representative in Europe, Brubaker will consult with school officials

concerning the availability of instructional sound motion pictures and will help build up the war-damaged school systems of Europe, through the use of audio-visual aid materials.

During the next year Brubaker plans to visit government and school officials in Sweden, Norway, Spain, Portugal, Belgium, Holland, France, Switzerland, Czechoslovakia, Great Britain and Ireland. Brubaker's headquarters will be in Zurich, Switzerland, while he will also organize other representatives' offices in most of the major countries of Europe, Dr. Switz announced. Encyclopaedia Britannica Films has 158 of its 500 films translated into one or more of 13 foreign tongues.

NAVED Meet is "Solid" in the South

"One of the most interesting and helpful meetings I've ever attended," commented a leading Southern visual education dealer about the Southeastern NAVED meeting, which closed February 1 at the Biltmore Hotel, Atlanta. Original plans for the meeting, which was headed by Jack Carter of Raleigh, N. C., NAVED regional director, had called for a maximum of 50 persons; more than 100 attended. Dealers and salesmen were present from every Southeastern state. The suppliers—manufacturers, film producers and distributors—were also well represented.

The "serious" part of the meeting began on Saturday morning, February 1. Discussion centered around the growing market for audio-visual items in homes. During the morning session, following an address of welcome by Dr. M. D. Collins, Georgia State Superintendent of Schools, there were reports on the status and future prospects of audio-visual education from each of the Southeastern states. Bernie Cousino, NAVED President, presented a check list to aid each member in planning his business. Dennis Williams, sales manager for Encyclopaedia Britannica Films, spoke on the topic "The Balance Between Salesmanship and Management."

The afternoon session was a 2½-hour open forum, conducted by Wells Alexander of Atlanta, Ga. NAVED's well-known stop light was used to control the discussion which became heated in spots. The problems of both dealers and their suppliers were discussed, and each came away with a better understanding of the

NAVED Meeting in Atlanta.

other's problems and a new resolve to work together to give better service to the consumer.

This first regional NAVED meeting was originally planned as an experiment to determine the extend of need for regional meetings. The outstanding success of the "experiment" has prompted the NAVED officials to go ahead with the planning of other regional meetings, such as the Eastern regional meeting, held at the Senator Hotel, Atlantic City, N. Jersey, on March 3, 1947, during the annual meeting of the American Association of School Administrators. The Western regional meeting will also be arranged as soon as possible. Further details about any of these meetings may be obtained from NAVED, 431 S. Dearborn St., Chicago 5.

8mm, 16mm for Television at SMPE Chicago Meet

The latest developments in the filming and use of 8mm and 16mm motion pictures for television will be presented at the 61st Semi-annual Convention of the Society of Motion Picture Engineers, to be held at the Drake Hotel, in Chicago, April 21 to 25 inclusive.

Major emphasis will be placed on technical papers dealing with various aspects of narrow film motion pictures, including television and other applications, and all phases of studio and stage techniques applicable to both the narrow films and television, according to an announcement by Loren L. Ryder, President of SMPE.

The coming convention will be the first in several years to be held by the society in Chicago, a midway point between the West Coast and East Coast centers of the motion picture industry, it was pointed out by William C. Kunzmann, convention vice president, and a record-breaking attendance is expected. Past conventions of SMPE have been held either in New York or in Hollywood.

The convention will open with a "get-together" luncheon in the Gold Coast Room at the Drake on Monday, April 21, beginning at 12:30 P. M. The society's 61st semi-annual banquet will be held in the Gold Coast Room Wednesday night, April 23, beginning at 8 P. M. Technical sessions are tentatively scheduled Monday afternoon and evening, Tuesday morning and afternoon, Wednesday morning, Thursday afternoon and evening, and Friday morning and afternoon.

Two New Offices for Ideal Pictures

Bertram Willoughby, President of Ideal Pictures Corporation, announces several important personnel additions to the Ideal Pictures Corporation:

Miss Evelyn Baker, formerly with Educational Screen, will have charge of

Ideal's Indianapolis office, which is presently to be opened.

Mr. Scott B. Hillam, formerly of Ross Federal, will have charge of Ideal's new Salt Lake City office.

Mr. Paul Foght, formerly Regional Director of Young America Films, Inc., has been appointed National Educational Director. He will commence his duties March 1st.

Equipment

New Projector Stand

Victor Animatograph, Davenport, Iowa announces a new projector stand of a clean modern design finished in gray enamel. The top shelf accommodates the projector at a height affording over-head projection. Gone are the days of head-obstructed screens, hazardous makeshift tables, and laboriously raised projector stands. Top shelf accommodates the projector; second shelf holds the reels, record player, microphone, or film servicing equipment. The bottom shelf provides storage for the speaker when it is not in use.

Rocket Cameras

"Not in operating condition, but reasonably intact." Such was the U. S. Navy's official description of two Bell & Howell 16mm magazine-load motion picture cameras which recently soared 102 miles above the earth in the tail of a V-2 rocket. Having weathered the 3600-mile-per-hour trip into the ether, the cameras also survived their 102-mile drop to the New Mexico desert, and brought down with them pictures made from a height of 40 miles, or more than 200,000 feet!

Eight Bell & Howell cameras made the perilous ascent—and equally hazardous descent—with the huge missile, which covered a distance of over 200 miles in 10 minutes. The two cameras amidship, set to run for consecutive two-minute intervals at 16 frames per second, were not recovered. The remaining three pairs, timed similarly for consecutive operation, were mounted in the tail assembly of the rocket, and were set to operate at 16, 32, and 64 frames per second, respectively. Five of the latter six cameras were located subsequently where they had struck the earth with great force, and it was from these that the useable exposed film was removed.

when using SoundScriber—as often as necessary.

SoundScriber discs are made of thin, unbreakable plastic and cost only a few cents each. Units are light in weight, are readily portable and easy to operate. SoundScriber is low in first cost and low in operating cost.

Write for complete information on the ways in which SoundScriber is being used by leading educational institutions.

New Master Model Kodaslide Projector

A new slide projector for 2x2 transparencies was previewed recently by the Eastman Kodak Company at the 22nd Annual Photographic Trade Show of the National Photo Dealers and Finishers Association at Cleveland.

Known as the Kodaslide Projector, Master model, the new projector was introduced to the trade as a part of the Kodak exhibit although it will not be available commercially for a period of several weeks.

Suitable for uses ranging all the way from home to theatrical projection, the Master Model is supplied with a 1000-watt projection lamp and may be used with any of four other lamps of from 300 to 750 watts. Five projection lenses are available for use with it.

Interchangeable condenser lenses insure maximum efficiency with whatever type projection lens is used. Condenser and projection lenses are Lumenized—coated with a microscopically thin layer of magnesium fluoride to reduce internal reflection and increase light transmission. The most efficient type heat-absorbing glass available is employed in this optical system.

Kodaslide Projector

In addition to the heat-absorbing glass, pressurized air helps guard transparencies against excessive heat. The fan is designed to send three separate blasts of air past the lamp, the condenser system, and the slide itself. The slide carrier and film gate are so designed that the blast of air directed at the slide passes both sides of the transparency.

Made of die-cast aluminum and attractively finished in two shades of gray, the Master Model is extremely simple to operate. The lens focusing is controlled by turning the barrel and a single knob controls the tilting mechanism. A carrying case is provided with the projector.

Raising Cane for Good Pictures

A unique camera steadying device, the Ambol Kanepod, is now available to movie and still photographers. This accessory, a combination walking stick and camera support, was developed especially for photographers faced with the decision of taking a heavy tripod along on trips or setting it up in places where crowded conditions forbid the spreading of tripod legs, as at outdoor activities.

Kanepod

The Kanepod, made of light-weight, yet sturdy, aluminum alloy, can be carried by its strong buckskin loop or used as a walking cane. Its threaded screw top will fit all standard tripod sockets and, when not in use, it is covered with an aluminum crackle-finished cap, thus being converted back into a sturdy walking stick. The bottom of the unit is fitted with a solid rubber foot for firm stand. The Kanepod measures 36" when closed, 5 feet 8" when fully extended. It is available at all photo shops or can be obtained by writing to The American Bolex Company, Inc., 521 Fifth Avenue, New York 17, N. Y.

Bell & Howell Announces "Picture Master" 8mm Projector

Bell & Howell's brand new Picture Master 8mm projector embodies features never previously offered to movie amateurs. Tests have proven the new model to be unequalled in the 8mm field for picture brilliance, it is claimed. Appearing in the Picture Master for the first time in any movie projector is a base-up projection lamp. This design, it is claimed, results in maximum lasting brilliance. "A blackening deposit is formed during the operation of any tungsten lamp," explains B&H, "and in the base-up design, this substance is carried upward, out of the lens, before reaching the slide. Thus the

side walls remain clear for the life of the lamp, and the full power of Picture Master's illumination always reaches the screen." Further, B&H states, the base of the lamp remains even cooler during operation than that of the readily-replaceable lamp of present Filmo projectors.

The Filmo Picture Master comes complete with 10-ft. cord, 400-ft. reel, streamlined carrying case, and choice of 750-watt or 500-watt baseup lamp. For further information concerning this revolutionary home-movie projector, write to Bell & Howell Company, 7100 McCormick Rd., Chicago 45, Illinois.

"Premier-20" Is Ampro's Latest 16mm. Sound Projector

A new sound-on-film 16mm. projector, is announced by Ampro Corporation of Chicago, a subsidiary of General Precision Equipment Corporation of New York. It is the "Premier-20", heralded as the finest sound-on-film projector employing an incandescent lamp as a light source to come from Ampro.

One of the exclusive new features singled out for particular emphasis is the new *Swing-out Gate*. It permits easy inspection and cleaning of aperture plate and pressure shoe without disturbing the focus of the projection lens. Other convenient Ampro features incorporated in the extremely simplified design are: Long-wearing roller sprocket shoe assembly... opens and closes automatically

"Premier-20"

with the film gate for easy, quick threading... also can be operated individually without disturbing the film gate... quick-centering tilting control knob... fast automatic rewind.

Ampro "Premier-20" is equipped for both silent and sound film speeds, still picture and reverse operation, coated super 2-inch F1.6 lens, brilliant illumination with standard prefocused lamps, up to and including 1000 watts. Complete

unit includes projector, speaker, lens, lamps, 1600 ft. reel and standard accessories. New luggage type projector case and speaker case are also supplied. For other specifications, see your local Ampro dealer or write Ampro Corporation, 2835 N. Western Avenue, Chicago 18, Illinois.

Victor 16mm. Model "60"

Hailed as a great improvement in the design, performance and economy of 16mm sound motion picture projectors, the new Victor Model "60" has been announced by S. G. Rose, president of the Victor Animatograph Corporation, Davenport, Iowa.

"We are especially proud to announce this projector", commented Mr. Rose, "because we are able to offer greater value in a 16mm sound projector with many mechanical refinements at a price which is only a three per cent increase over prices prevailing at the time of federal decontrol of the photographic industry."

The new projector which Mr. Rose announced is housed in streamlined, aluminum cases and contains many mechanical improvements which are the result of 36 years of precision engineering by Victor. This machine is a multiple-purpose unit for use with either sound or silent film and includes jacks for use with a record player or as a public address system. It includes reverse operation and has the advantage of still picture projection.

Among the many new features is the Instantilt—a device which centers the picture on the screen at the touch of a finger. Replacing the outdated knurled knob, this unique improvement utilizes a counter-balance which causes the front of the projector to rise merely by "pinching" a conveniently-placed lever.

Another outstanding improvement is the new Duotrol. This provides separate controls for both bass and treble tones which permits emphasizing of high and low frequencies independently of each other. This produces full harmonic values of sound and is instantly noticeable in music of extremely high and low pitch.

Of interest to all users will be the new Clutch-Controlled Rewind. This feature permits fast, safe, convenient rewinding of film without the need for shifting belts or reels. Still another new feature is a leveling device which compensates for uneven projection surfaces.

Compact and portable as today's luggage, the Model "60" retains the many features of former Victor 16mm sound projectors: safety film trip, 180-degree swing-out lens mount, exclusive framing screw adjustment, spira-draft lamphouse and duo-flexo pawls. The use of either 750 or 1000 watt projection lamps is optional.

Bausch & Lomb Expands

Opening of a manufacturing plant at Wellsville, N. Y., and arrangements to purchase the modern, four-story Navy Building on Champney Terrace were

Victor Model "60"

announced today by Bausch & Lomb Optical Company as part of the firm's \$6,000,000 plant expansion and equipment modernization program.

"During the past several months," M. Herbert Eisenhart, president, said, "hundreds of thousands of dollars worth of new and improved optical machinery has been purchased. In addition, many new

manufacturing processes have been developed and installed by our research, engineering, and manufacturing divisions to help meet mounting demands for hundreds of ophthalmic products and optical instruments."

Much of the new manufacturing equipment has been installed in the firm's glass plant, lens division, and Navy Building.

Television

Television Launched in St. Louis

KSD-TV, operated by the St. Louis *Post-Dispatch*, is credited with being the first completely postwar television station to go into operation on a regular schedule, launching its first week's schedule with 21 hours of varied programs. To accomplish this feat, station officials flew much of the critical equipment including RCA Image Orthicon television cameras from the RCA Victor plant at Camden, N. J. to St. Louis by private plane. Skilled television veterans from Chicago were recruited to aid the station in setting up its program.

Public response to television in St. Louis was enthusiastic. Many thousands flocked to the stores which had placed television sets on sale. Daytime programs were presented throughout the first week, permitting dealers to demonstrate the sets to customers during business hours. Programs included sporting events, fashions, dramatic presentations, news, motion pictures, commercials, quizzes and other audience participation shows, and man-on-the-street interviews. Sponsors using KSD-TV during its first week on the air included the Union Electric Company of Missouri, the Southwestern Bell Telephone Co., Shell Oil Co., Monsanto Chemical Co., Bulova Watch Co., Dazey Mfg. Co., Bemis Bros. Bag Co., St. Louis Independent Packing Co., and a number of others.

Television images broadcast by KSD-TV were rated by experts as the best yet achieved. This was accomplished by the incorporation of many warborn and postwar television equipment developments. The Station operates two super-sensitive RCA Image Orthicon television cameras, making unnecessary the extremely brilliant lighting ordinarily required for television subjects.

Following the pattern of distribution worked out in St. Louis, Washington, and elsewhere, RCA Victor introduced its receivers to the Los Angeles area at a two-day dealers meeting at the Ambassador Hotel. To demonstrate the receivers, special broadcasts were made by Paramount Pictures television station KTLA.

Television Newsreel Pact

A television newsreel deal, the first of its kind, in Hollywood, has been worked out between Don Lee's experimental station, W6XAO and Ansco. The arrangement calls for the latter to process reels shot by a special Lee crew and time allowed runs from five to 48 hours, depending on circumstances and material.

A special crew is being set up by Don Lee which will cover public events and record them on silent 16-mm. film. Staff will then be rushed to Ansco for handling and on delivery telecasted on the station's regularly scheduled Monday night program.

Photovision Demonstrated

"A new invention, called photovision, whereby pictures and sound can be transmitted from one point to another over a light beam instead of radio waves was demonstrated in New York recently before the American Institute of Electrical Engineers by Dr. T. T. Goldsmith, director of research, Allen B. DuMont Laboratories, Inc."

Slidefilms and Slides

■ **POPULAR SCIENCE PUBLISHING CO.**, 353 Fourth Ave., N. Y. C. 10 has produced a *World Friendship Kit* for use in the middle grades. The kit is made up of five 35mm Teach-O-Filmstrips in color; four unbreakable Vinylite Teach-O-Disc recordings of the 19 songs, and Irving Caesar's widely praised book, *Sing A Song of Friendship*. The entire kit is based on songwriter Caesar's popular

book. This book, *Sing a Song of Friendship*, consists of 19 songs, inspired by the United Nations and based on the simple ideals of human rights. Included are such provocative titles as "Thomas Jefferski," "Let's Make the World of Tomorrow Today," "Song of the Good Neighbor," and "I Know a Friendly City." If desired, the units of the kit may be purchased separately.

■ **YOUNG AMERICA FILMS, INC.**, 18 East 41st St., New York 17 have released a set of 20 colored 2"x2" slides known as *U. S. Economic Geography Map Slides*. Each slide shows a different economic resource and indicates the main areas in the United States where that

particular resource is found in the greatest abundance. The maps are based on the latest statistical information supplied by government agencies. Titles of individual slides are *Wheat, Corn, Cotton, Sugar, Potatoes, Tobacco, Fruit, Forests, Dairy Products, Hogs, Beef Cattle, Sheep, Iron Ore, Coal, Petroleum, Mineral Deposits, Water Power, Navigable Waterways, Railways, and Air Routes*.

■ **VISUAL SCIENCES**, Suffern N. Y. offer a 35mm, 50 frame slidefilm, called *Microbiology*. This slidefilm will solve at least one of the perplexing problems in health and biology courses. Difficult and dangerous laboratory work in microbiology is shown as well as the methods used by the bacteriologist in his fight to control disease. This film is the next best thing to actual laboratory work with pathogenic organisms. Topics covered include: preparation of sterile media, isolating a single bacterium, growing organisms in quantity, methods of counting bacteria, utilization of growth characteristics in the identification of micro-organisms, special staining procedures, microscopic examinations, bacteriostatic potency of penicillin.

■ **THE SOCIETY FOR VISUAL EDUCATION, INC.** 100 East Ohio Street, Chicago has released a new kind of visual aid for teaching.

Geometry in Third Dimension

Three-dimensional *Descriptive Geometry 2"x2"* slide vectographs are designed to promote quicker learning and firmer, more permanent mastery of the fundamentals of descriptive geometry. The creation of such a three-dimensional slide set as this is a welcome step in the ready adoption of the latest scientific developments. Projected on a *metallic screen* with any standard 2"x2" slide projector and viewed through simple *Polaroid viewing spectacles*, the three-dimensional quality of the picture is so realistic that students feel they are looking directly at a precise wire model placed in front of the screen. Perpendicular planes, which in conventional diagrams are indicated confusingly by lines crossing at an angle all in one plane of the diagram, appear perpendicular and clearly separated in space. The arcs subtended by angles between planes are immediately apparent. Since all relationships of lines and angles are obvious, the understanding of the student is quickened and teaching time shortened. Each S.V.E. *Descriptive Geometry 2"x2"* slide vectograph is composed of the following: a title; a clear concise statement of the principle involved; a two dimensional view of the student's drawing paper placed beside a three-dimensional view of the projection planes involved grouped around the object in space. The device of placing the two- and three-dimensional views side by side on the slide enables the student to see plainly how the planes in the three-dimensional view unfold to produce the two-dimensional view shown. Thus he can follow on his drawing paper the exact relation to the space model.

The S.V.E. *Descriptive Geometry* slide vectographs were drawn by one of the foremost people in this art, John T. Rule, S.B., Associate Professor of Drawing and Descriptive Geometry, and Chairman of the Section of Graphics at Massachusetts Institute of Technology. The Slide Vectograph set is closely correlated with the authoritative new book, "Descriptive Geometry," (Prentice Hall, 1946) by Earl F. Watts, S.B. and John T. Rule, S.B., both of the Massachusetts Institute of Technology. Each of the figures included in the Vectograph set appears on a flat figure in this book. The Society for Visual Education, Inc. will forward a descriptive price list upon request.

Transcriptions and Recordings

■ **RCA VICTOR**, Camden, N. J. has released an album of red seal records devoted entirely to the musical score of the David O. Selznick Technicolor motion picture, *Duel in the Sun*. Very seldom has a company devoted a complete album to a film score. The concert version was recorded by the Boston Pops Orchestra under the direction of Arthur Fiedler. Those interested in the film and in the scoring of a motion picture will find this album very valuable.

Victor Basic Record Library

The Educational Department of RCA Victor has announced a new Basic Record Library for Elementary Schools. The new library consists of 21 albums, all but one of which contains four 10-inch records. These are all newly recorded, especially for school use. Each album includes extensive teaching notes, covering the selections contained within that album and suggested school activities. All the records are of non-breakable plastic. This particular material gives excellent reproduction with a very low surface noise. (In order to maintain this high quality of reproduction, this reviewer suggests that teachers play such records only on modern electric record players in good condition.)

The Educational Department of RCA Victor has pioneered in music appreciation in the schools since 1911. The present series represents a culmination of the experiences of the company in this field. These recordings were in production for two years and show very clearly the results of careful research and the expert performance of the musicians. The Library of Congress was consulted for original interpretations of many of the folk songs included in the collection.

The repertoire, which totals 370 compositions, and their recommended grade levels have been selected by two outstanding authorities in the field of music education—Miss Lilla Belle Pitts, Professor of Music at Teachers College, Columbia

University, and Miss Gladys Tipton, Assistant Professor of Music Education, Illinois State University, both of whom have spent many years in developing acceptable techniques for the use of recordings in the classroom.

Teaching needs are met in such activities as listening, rhythms, singing, toy bands, Christmas, singing games, Indians, and other such topics. Outstanding recording artists were engaged to make these albums. Instrumental music was performed by the RCA Victor Orchestra, which in actuality is composed of members of the NBC Symphony Orchestra and the New York Philharmonic.

The "Notes for Teachers" prepared by Misses Pitts and Tipton discuss such subjects as (1) the music; (2) listening

for orchestral instruments: strings, woodwinds, trumpets, bells; (3) listening for mood; (4) listening for tonal patterns; (5) listening for rhythmic patterns; (6) listening for form.

The contents of Volume VI in the "Basic Rhythms Program for the Upper Grades" includes the following selections:

(1) *Shepherd's Hey*—arr. Grainger; *Country Gardens*—arr. Grainger

(2) March—*Love for Three Oranges*—Prokofieff; March of Pilgrims from *Harold in Italy*—Berlioz; Processions of the Sardan, *Caucasian Sketches*—Ippolitov-Ivanoff.

(3) *La Czarine*, Mazurka—Ganne; *Spanish Serenade*—Bizet

(4) The Juba Dance, *In the Bottoms*—Dett; *From the Canebrake*—S. Gardner

Current Film News

■ **NATIONAL EDUCATIONAL FILMS, INC.**, 165 W. 46th St., New York 19, present the first of their "pre-planned" teaching films for the school curricula, dealing with:

The Duties of a Secretary (21 min.)—portraying the work day of a secretary and the importance of her job in a business organization. The "do's" and "don't's" of office procedure are illustrated as the film follows a recent secretarial course graduate through the first few days of her first job.

■ **ENCYCLOPAEDIA BRITANNICA FILMS INC.**, 20 North Wacker Drive, Chicago 6, include among their most recent productions:

The Mailman (1 reel and 10 min.)—aimed especially towards primary grade pupils to show them how the United States post office system operates. The film follows both a city and a rural mailman on their rounds, explaining how postmen sort mail and deliver it and emphasizing the social responsibilities of Uncle Sam's letter carriers. Aside from teaching such facts as the importance of mail in our lives, duties of the mailmen and variety of materials that come through the mail, the picture affords primary pupils rich lessons in increasing their vocabularies and is arranged to encourage special projects. It can be used also in elementary grades in the study of social living and the communication arts. Dr. Paul R. Hanna, Stanford University, collaborated on its production.

Atomic Energy (1 reel)—describing by graphic animation how nuclear synthesis, nuclear fission and the atomic bomb's chain reaction are accomplished. Designed primarily for high school science courses, the motion picture was also produced so that it will be meaningful to general audiences as well. Every effort was taken to make it absolutely authentic and accurate, and the knowledge of the nation's leading scientists concerning atomic structure and reaction was drawn upon.

■ **CORONET INSTRUCTIONAL FILMS**, 919 N. Michigan Ave., Chicago 11 announce three new films:

Air in Action (1 reel, color or black and white)—the fundamentals in aerodynamics presented in an interesting and logical way, for use with general science or physics classes. Simple experiments and animations explain the physical laws. A wind tunnel sequence, produced with the cooperation of the Army Air Forces, is shown.

The Mighty Columbia River (1 reel, color or black and white)—the importance and vitality of the largest river flowing into the Pacific from America's West Coast. The great Bonneville and Grand Coulee Dams are shown, and their importance in the production of hydro-electric power is indicated. Ocean-going vessels can navigate 90 miles up stream, and fishermen find the river an important source of fish for the world.

Improve Your Reading (1 reel, color or black and white)—suggestions for improving the rate and comprehension of reading. Topics treated include eye perception span, reading too rapidly for comprehension, reading with fingers, with lip movement, and similar problems. It is intended for use in the upper elementary and intermediate grade as well as for teacher training.

■ **YOUNG AMERICA FILMS, INC.**, 18 E. 41st St., New York 17, have made another teaching film for elementary school science classes on:

What Makes Day and Night (3/4 reel)—designed to demonstrate and teach the reasons for the alternation of day and night. It is specifically correlated with the science program for Grades 3 and 4. Using a globe and a flashlight, father shows his children where the sun goes at night, and why the sun can only shine on one-half of the earth at a time.

INTERNATIONAL FILM BUREAU, INC.

announces the release of

Purchase
Price

THE GREAT CIRCLE (14 min.)....\$37.50

An elementary film on global aviation. Recommended for all kinds of international programs. Rental \$2.00.

NEAR HOME (25 min.)\$56.25

On good teaching. Study of one's community. Importance of field trip activities. Rental \$3.00.

THE STORY OF MONEY (16 min.) \$37.50

A film for elementary economics and social studies classes. Rental \$2.00.

ENGLISH INNS (9 min.)\$22.00

Growth and development. Correlates with English literature and history. Rental \$1.00.

INTERNATIONAL FILM BUREAU, INC.

84 East Randolph St. Chicago, Ill.

■ **UNITED WORLD FILMS, INC.**, Bell & Howell Filmosound Library, Rockefeller Center, New York 20, announces the acquisition of the following two subjects:

Annapolis Salutes the Navy (9 min.)—a glimpse into the past by means of a tour through three historic shrines—the old State House, Carroll House, and Hammond-Harwood House—and a visit to the United States Naval Academy, where tribute is paid to some of its great heroes.

The Spirit of Democracy (9 min.)—a tour through historic Monticello, "Shrine of American Democracy" and home of Thomas Jefferson.

■ **U. S. DEPARTMENT OF AGRICULTURE** has distributed copies of the first film to cooperating film libraries; distribution of the second film is handled by Forest Service regional offices:

Feeding Farm Animals (16 min.)—a carefully prepared mixture of information and entertainment designed to give basic facts on feeding and to stimulate the desire of farmers to learn more from bulletins, magazines, and books. The six classes of nutrients are described by the old farmer: carbohydrates, fats, proteins, vitamins, minerals, and water.

Richer Range Rewards (33 min., color)—practical advice on the improvement of a run-down range. A western cattleman goes to the Jordana

Experimental Range near Las Cruces, New Mexico seeking help. The director tells him the importance of (1) grazing only when the range is ready for use, (2) stocking only the number of animals for which there is abundant grass, and (3) distributing the cattle so that the range is grazed uniformly.

■ **FILMS INCORPORATED**, 330 W. 42nd St., New York 18, have released three new motion pictures based on New Testament texts. The subjects of these films, the first of a series of religious films now in production, are "The Nativity," "The Parable of the Sower" and "The Woman of Samaria." Each runs approximately 20 minutes.

■ **CASTLE FILMS**, Division of United World Films, Inc., 30 Rockefeller Plaza, New York 20, provides a new and timely music reel with three well-known Easter carols sung by a mixed choir and accompanied by an organist. The carols are, "Welcome Happy Morning," "Jesus Christ Is Risen," and "Come Ye Faithful, Raise the Strain." The words of the carols are superimposed on the scenes so that audiences may sing with the choir. Available only in 16mm sound from photographic dealers.

Other new releases from Castle Films Division are:

Woody Woodpecker, Lantz's famous cartoon character, in a series of three cartoons: "The Screwdriver," "The Cracked Nut," and "Knock, Knock."

Sport Thrillers of the Year—covering such events as Golden Gloves tournament, championship motorcycle marathon, Hambletonian trotting race, Grand National Steeplechase, Indianapolis auto race, etc.

■ **ACADEMIC FILM COMPANY**, newly re-organized by Milton Salzberg and Harold Baumstone, former heads of Pictorial Films, with offices at 1450 Broadway, New York 18, has started its film distribution program with the release of "Strange As It Seems," a series of eight 16mm one reels in sound, based on John Hix's newspaper feature of the same name. The series offers eight dramatic excursions into the by-ways of recorded history, where strange oddities lure the researcher. Individual titles are:

50 Year Barter—concerning our negotiations with Denmark for the purchase of the Virgin Islands.

Lafayette, Champion of Liberty—presents new insight into celebrated story.

Mark Twain—how Halley's Comet signaled both his birth and death.

Silver Threads—story of the tragic life of the composer of "Silver Threads Among the Gold."

Gold and Man—man's quest of the king of metals.

Emperor Norton—story of the harmless San Francisco madman who "ruled" America for 23 years.

Little Jack Horner—the actual role in history of the nursery-rhyme character.

Star Gazers—story of Galileo, plus visits to observatories.

■ **UNITED SPECIALISTS, INC.**, Pawling, New York, have completed their series of three dog training films based on the book "Training You to Train Your Dog" by Blanche Saunders. This most recent film carries the engaging title:

Puppy Trouble (20 min.) color—a record of the expert training of a puppy between the ages of nine weeks and seven months. Lowell Thomas is the narrator and Helen Hayes' voice speaks for Jimmie, the star of the film, whose adolescent problems are solved through proper training.

According to the producer, Miss Louise Branch, a dog can be a teacher as well as man's best friend. By patiently handling an exuberant puppy, a person learns not only how to cope with the personality of the dog, but also learns fundamentals of human behavior. This theory carries over into the field of psychology.

Additional films of this type on the care and feeding of cats and a series on the judging standards of different breeds of dogs, are planned.

■ **A. F. FILMS, INC.**, 1600 Broadway, New York 19, have prepared for national distribution:

The Passing Hours—a film dealing with the invention of clocks and mankind's attempts to beat time. Explained are the various devices man has invented to keep track of time while at the same time attempting to keep time in check. The film will be available in 16mm with English and French narration.

■ **AIR AGE EDUCATION RESEARCH**, 80 E. 42 St., New York 17 lists for sale:

Geography from the Air—a color film produced in cooperation with the Air Transport Command of the United States, under the supervision of Ned L. Reglein, formerly of the Army Air Forces First Motion Picture Unit. The film shows the scope of postwar aviation and its effects on commerce and international relations. The change in geographical aspects also is emphasized.

■ **BUREAU OF MINES**, Graphic Services Section, 4800 Forbes St., Pittsburgh 13, Pa. offers for free distribution:

How to Braze Aluminum (7 min.)—process of joining thin aluminum sections.

How to Weld Aluminum—Torch Welding (17 min.)—the behavior of aluminum under the welder's torch, showing in detail the progressive steps necessary to make a good torch weld.

How to Weld Aluminum—Arc Welding (10 min.)—use of the metal arc, carbon arc, and atomic hydrogen processes.

How to Weld Aluminum—Resistance Welding (12 min.)—fabrication of aluminum parts under heat and pressure. Through animation, the principle of two types of spot-welding machines are explained. (1) alternating current and (2) condenser stored energy.

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20, have issued two new 16mm releases:

General Election (2 reels)—tracing the mechanics of an election in Britain from its inception to its final conclusion. The campaign, meetings and what actually happens on Polling Day—the methods of voting, precautions for secrecy, counting of votes and final declaration of the result—are all shown in detail. The film highlights various sections of the public being coaxed and cajoled into voting for the right man.

The Story of Omolo (1 reel)—follows a Bantu family on their trip to Bukura, Kenya, and their life at the Agricultural Center which the British government has set up to teach the rudiments of practical farming to these people. Entire families settle down on one of the small holdings which is allotted to them for the two year period. This free training benefits whole tribes for, when the new farmers return to their village they pass on their knowledge and thus raise the level of community life.

■ **INTERNATIONAL FILM BUREAU**, 84 E. Randolph St., Chicago 1 has exclusive sales rights on the French documentary film:

Letter from Paris (19 min., English or French)—changes in Paris since the days before the War. The sounds of the city are different with cars and busses somewhat displaced by bicycles and horse-drawn vehicles. The Metro or subway is more crowded. There are lines of people in front of food shops. The Latin Quarter still buzzes with intellectual life. Factories are working, turning out new cars, and the flea market, in which second hand treasures of all kinds can be found, flourishes. American soldiers, in from Germany on three-day passes, look up the renown night clubs of Place Pigalle. Produced by Les Actualites Francaises of Paris in 1946.

■ **ADMIRAL PICTURES INC.**, 11561 Ventura Blvd., North Hollywood, Cal., announce their recently completed film:

Christ Is Born—2 reels, 16mm color and sound—a non-denominational film telling the dramatic biblical story of the birth of Jesus, and His first three years in the Holy Land. Portrayed are the plotting of Herod, the Journey of the Three Wise Men, and Mary and Joseph's flight into Egypt. A musical score played by a 50-piece orchestra and sung by a choral group of 30 forms the background to the narration.

■ **VPI AGRICULTURAL EXTENSION SERVICE**, Blacksburg, Va. (for Virginia bookings) and **AGRICULTURAL RELATIONS DEPT.**, TVA, Knoxville, Tenn. are distributing the following:

Building a New Dominion (17 min., color)—produced jointly by the Virginia Agricultural Extension Service and the Tennessee Valley Authority.

■ **FILMS OF THE NATIONS, Inc.**, 18 W. 55th St., New York 19, have acquired the distribution of the 16mm non-theatrical sound version of the post-war documentary:

Seeds of Destiny—produced by the U. S. Army Signal Corps for the United States War Department upon the request of UNRRA. It is a graphic, stark and moving story of the famine, upheaval and disease which haunt children abroad following the war. The film asks how can those more fortunate stand by and let innocent children suffer and starve. It prophesies that if no relief and medical care for these men and women of the future are found, there can be a third world war.

Fiction Features

■ **UNITED WORLD FILMS, INC.**, Rockefeller Center, New York 20 has added to its Filmosound Library:

Lady on a Train (94 min.)—Deanna, an avid reader of mystery stories, sees a murder committed as she is arriving in New York on a train. When the police, believing the death was accidental, refuse to listen to her

story, she enlists the aid of a popular mystery story writer, and together they track down the murderer. (Deanna Durbin, Ralph Bellamy, Dan Duryc.)

The Strange Affair of Uncle Harry (80 min.)—a baffling murder mystery with an obscure but surprising ending. Middle-aged bachelor, who is a textile designer, finds his chance for normal life and belated romance frustrated by hyper-possessive and hypochondriac sister. Chilling suspense maintained to the very end. (Ella Raines and George Sanders.)

■ **COMMONWEALTH PICTURES CORPORATION**, 729 Seventh Ave., New York 19, have acquired 16mm distribution rights to:

You Bring the Ducks (2 reels)—a Hal Roach comedy, released by a major company, starring Irvin S. Cobb as a lover of outdoor life, especially duck hunting, and Benny Baker who does not share his taste for the outdoors. Benny accompanies Cobb on a duck hunting expedition and proceeds to make life miserable for him.

The Oregon Trail—a thrilling serial in 15 episodes, starring Johnny Mack Brown and Fuzzy Knight.

12 New HOPALONGS for 1947

**Starring — Wm. Boyd,
"Gabby" Hayes
Russell Hayden**

- * 1—The Frontiersmen
- * 2—In Old Mexico
- * 3—Law Of The Pampas
- 4—Stagecoach War
- 5—Pride Of The West

FIRST ON YOUR LIST OF NEW EDUCATIONAL FILMS:

THE FORUM EDITION RELEASE

This unique motion picture, made with the cooperation of the United States Government, brings to your screen the great atomic scientists of our time—Einstein, Meitner, Urey, Conant, and many others. It explains the nature of atomic energy, traces man's knowledge of it in dramatic scenes of the early laboratory experiments . . . the Bomb itself . . . the facts of atomic power, and its meaning now and for the future.

You can lease this March of Time Forum Edition Film now. And there are 28 other outstanding March of Time releases especially prepared in 16 mm. for forum and classroom study and discussion. Check below the titles not already included in your film library—and order them now from your local film library or write for free descriptive booklet. 3 NEW 16 MM SOUND MOTION PICTURES

IN COLOR

*to
enrich
the
school
curriculum*

CIRCUS PEOPLE

An interesting film for primary grades, depicting behind-the-scenes circus activity. Selection of scenes and narration are designed to develop proper attitudes of work and cooperation and offer stimulation for oral composition and foundation for reading readiness.

CIRCUS ANIMALS

A companion picture to Circus People, revealing, in natural color Kodachrome, fascinating circus animals—their care, training, habits, etc. Authentic in every respect, these films were produced under expert direction and keyed to fit the requirements of lower grade curricula.

WATER SUPPLY

Designed for upper grades and Junior High Science classes. Dramatically portrays, through natural scenes and animated diagrams, the source, storage and handling of water by nature and man. Collaborators: James M. Montgomery, B.S., and Richard Pomeroy, Ph.D., University of California at Los Angeles, consultants on water purification.

ACADEMY FILMS are produced by James A. Larsen, who has, for many years, been identified with the creation and production of high quality educational films.

Above subjects are 1-Reel 16 MM Sound, available in color or black-and-white. The same subject material is also offered in 35 MM color or black-and-white Filmstrip, as well as 35 MM 2 x 2 Slides in color only. Arrange for an early preview.

School for Screen Writers

by a London Film Correspondent

British Producers Launch Training Scheme

FOUR British film companies recently have inaugurated a new training scheme for young screenwriters to give them the chance of learning their art under expert supervision.

The selection of new talent in the case of film actors and actresses has been comparatively easy for the commercial film industry. The traditional way is still that of talent scouting throughout the theaters of England. In a similar way, the film industry all over the world has always been able to revert to stage designers, musicians, painters, and architects, for recruiting new blood into the ranks of directors, art directors, film musicians, and other technicians.

Most Important Problem

Things are altogether different in the realm of screenwriting. And yet, here lies what is probably the most important problem in the progress of the cinema as an art. After all, a film is as good, or as bad, as its scenario. For the scenario is nothing more than the score, which the director transforms into visual and aural reality. Thus, it seems all the more surprising that next to nothing has been done to explore methodically and to foster this specific talent among young writers.

Now however, the new training scheme appears as a turning point in the history of film writing. Now the potential Shakespeare of the cinema may find his chance of self-realization without dependence upon haphazard circumstance. It is, therefore, an invaluable advantage for the students, that the first year of their training, for example, at Pinewood Studios, will be devoted to intimate contact with the various technical departments of the studio. A film is not the work of one brain or one pair of hands but rather the collective effort of many brains and many pairs of hands, each highly skilled in their respective crafts: lighting, cutting, editing, camera work, sound recording, and similar factors which constitute the final materialization of his script into terms of cinema.

Teamed as Juniors

Once these basic points have been mastered, the trainees will for the rest of the course be teamed as juniors to experienced screen-writers. They will learn about the construction of the scenario from its initial phase as a synopsis to the final shooting script. They are fortunate in that the four production units concerned in the scheme rank among the finest in the world. They are the Archers, Cineguild, Wessex, and Individual Pictures.

Work With Masters of the Cinema

But the names of the personalities mean more than mere names of companies. The students will have as their tutors such well-known and accomplished masters as Michael Powell and Emeric Pressburger, responsible for films like *49th Parallel*, *The Life and Death of Colonel Blimp*, *One of Our Aircraft is Miss-*

(Concluded on page 232)

MODERN EDUCATION *Uses* MODERN METHODS

"Sound Teaching" by Recordio

T. M. Reg. U. S. Pat. Off.

• Alert educators are pleased by the manner in which audio-education has added impetus to student instruction. Sound teaching — by the RECORDIO Educator — is rapidly replacing older, slower forms of teaching. Portable and amazingly versatile, both of the RECORDIO Educator models clip hours from heavy schedules, permit fuller utilization of limited school time and add to the enjoyment of after-school sports and entertainment. Ruggedly built for daily knockabout service, either of the Educators can be carried from classroom to gym to auditorium and function as auxiliary Public Address Systems wherever needed. It will pay you to investigate this time-saving, teacher-saving educational aid at once. Send coupon for name of nearest distributor.

FCA Constitution Drafted at Atlantic City Meeting

MORE than 50 persons attended the March 4 meeting of the Film Council of America during the American Association of School Administrators conferences in Atlantic City to discuss its permanent constitution and to complete plans for its permanent establishment. Each of the seven constituent members of the Film Council of America was represented at the meeting: American Library Association, Visual Equipment Manufacturers' Council, National Association of Visual Education Dealers, Department of Visual Instruction of the National Education Association, National University Extension Association, Educational Film Library Association, Allied Non-Theatrical Film Association.

The major business of the evening involved the presentation by Paul Howard (American Library Association) of the proposed constitution for the Film Council of America. Extended free discussion and revisions of the document were made and followed by tentative unanimous approval by the voting members present. Howard, as Chairman of the Constitution Committee, has prepared a draft of the constitution as passed for submission to the membership of the seven constituent organizations for final ratification after which the constitution will be in effect.

Dr. George F. Zook, President of the American Council on Education, presented a list of suggested candidates for nomination as members of the FCA Board of Trustees, and a new Trustee-Nominating Committee was appointed by the Executive Committee of FCA. An effort will be made to name as trustees six individuals from among those who held active memberships in constituent organizations and nine individuals who are leaders in fields such as business, labor, industry, agriculture, and the professions. As members of the Board of Trustees they will represent themselves as individuals rather than the organizations with which they are associated.

In order for the program of FCA to work toward the general welfare of all people, it was written into the body of the constitution that no member of the Board of Trustees may have substantial financial interest in any audio-visual media. Under the new constitution, responsibility for administration of the affairs of FCA will be placed in the hands of the Board of Trustees thus selected.

In the interim, groups throughout the country are urged to form local film councils for affiliation with FCA under provisions of the Constituent Agreement.

A limited number of copies of the manual, "Speaking of Films," are still available for distribution to individuals prepared to assume responsibility for such organizational work. Requests for copies should be addressed to the national office of the Film Council of America, Room 1228, Manhattan Building, 431 South Dearborn Street, Chicago 5, Illinois.

TOWARD THE FUTURE

by

Paul C. Reed

EDUCATIONAL SCREEN is looking toward the future. We know that the future use of audio-visual materials in education will far exceed in quantity and effectiveness all that has been known up until now. We recognize the important part that this magazine has played in the development of this field and with this knowledge, we accept with a deep sense of responsibility the obligations that we have toward the future development of this field. So let's see where we stand.

First of all, we recognize that progress in the use of audio-visual materials is going to be made by you—our readers. It will be because of what you think about audio-visual materials and what you do about them that will make the great difference in the future. Our first and foremost responsibilities are to serve you, the readers of EDUCATIONAL SCREEN.

Who are you? Well, we know some things about you, and we are going to know more. You are a large and rapidly growing group, and although your interests are in some ways varied, you have one thing in common. You believe in the power of the motion picture, the record, the projected still picture, the radio program, and other audio-visual materials, and you want to know more about them and how to use them.

You are school administrators and school teachers. You are pastors and Sunday School teachers. You are students, club leaders, and community workers. You are *educators* in the broadest meaning of that word. You are the leaders and the future leaders of people, *not only in schools*, but in churches, club rooms, town halls, and wherever people meet for a serious purpose. And you believe that audio-visual materials can help you meet your responsibilities to your groups more effectively.

Some of you have but recently discovered the power of audio-visual means of communication; others are more experienced. No one has all the answers. In the sharing of thoughts and experience, all can grow. You need to know what others are thinking and doing.

What new materials are available and which ones are most likely to suit your needs? What are the new developments in Atlanta or Portland or Fort Worth? How can you get organized in your community so that people with common interests can get together to share experiences? What are the opinions of the recognized leaders in the field about teacher training problems, about the potential place of television as learning experience for a group, and about sponsored films? What are the others thinking and doing?

To bring you the best thinking, the most practical experience, and information of the most significant developments will continue to be the primary function of the EDUCATIONAL SCREEN. This we have done in the past, and this we will do in the future.

There is one more important point to make in stating our stand as we look confidently toward the future. We know that if we are to serve you well, we must serve you honestly and truthfully. We will strive constantly to sort out the sound from the unsound, to discriminate between the sincere and the insincere, between the deceitful and the honest. To find and bring you the truth will be our constant endeavor.

This is a stand that we take positively and confidently. It is simple, direct, and aimed toward you. It

is attuned to today's needs and is in complete harmony with the traditions of service that this magazine established twenty-five years ago and has steadfastly maintained. In fact, in the first editorial to appear on these pages, Nelson Greene wrote: "The purpose of the Educational Screen is single and emphatic . . . to get at the truth about visual education in all its phases and broadest aspects . . . to supply the best in theory, opinion, and experience . . . to present a survey of really significant visual activities."

In fundamental belief and purpose, we have not changed. Within this framework we shall be subject to constant change in whatever way will best serve your interests. We have new ideas; we have new personnel; we have new friends. We are ready not only to carry on, but to lead on toward the future.

An Announcement

BEGINNING with this issue, Paul C. Reed will serve as the Acting Editor of EDUCATIONAL SCREEN. For many years, he has been a member of the Editorial Advisory Board and more recently, its Chairman. He has made numerous contributions to the pages of the SCREEN and since last September has been the Associate Editor.

Paul Reed will bring to EDUCATIONAL SCREEN a rich and well-rounded background of experience in the visual and radio education field. He was Head of the Educational Division of the OWI Bureau of Motion Pictures and was Visual Aids Specialist in the U.S. Office of Education. He has taught courses in several universities and has been President of the DVI, contributing regularly to conference programs and to the periodic literature of the field. He is a member of the Board of Directors and Secretary of the Educational Film Library Association. While serving as Acting Editor of EDUCATIONAL SCREEN, he will maintain his close contact with the practical problems of using audio-visual materials and will continue as Director of Visual and Radio Education in the Rochester Public Schools.—Edward T. Myers, Associate Editor.

Keystone View Company

Words, phrases, and sentences are flashed onto the screen for very brief "exposures." Students attempt to recognize the meaning at a glance. They do not have time to linger over each word.

Improving Adult Reading Through Visual Aids

Motion pictures and short exposure apparatus are valuable tools for improving adult reading.

THE University of Michigan has offered a pre-term refresher course to aid the re-adjustment of veterans upon their return to school. In this four-week refresher program the veterans have been given an opportunity to review certain content subjects and to improve their reading and study habits. The work in reading has created considerable interest and recently provoked the following notice in the local paper:

"Veterans Attend Movies To Improve Reading Ability"

"The movies in this case, however, are a series of specially prepared "reading films" designed to increase reading speed and the ability to understand and retain what has been read. The reading film, when projected on a screen, flashes words and phrases in rapid-fire order forcing the reader to move his eyes quickly along a line in the same manner as though he were reading a book. Tests help the veteran to detect any weaknesses he may have in retaining what he has read.

"The reading instruction and practice is a part of the refresher course now being given to 514 veterans at the University. Also popular is a survey course which helps brush up study habits, techniques of preparing for examinations, and similar problems confronting the student returning to school after service in the armed forces."¹

IRVING H. ANDERSON,
Associate Professor of Education,
University of Michigan, Ann Arbor

The purpose of this article is to describe in more detail what was done to help these veterans improve their reading. In addition to the movies, the Keystone Overhead Tachistoscope² was used for the training. Be-

An Overhead projector converted to a Tachistoscope by means of a Flashmeter placed over the lens. The instructor may set the Flashmeter for the desired length of exposure. This is a valuable device for teaching quick recognition of form, being especially valuable in reading and spelling.

Keystone View Company

LIFE photography by Bernard Hoffman, Copyright TIME, Inc. The eye movements of this reader have been photographed by a special camera. He is a poor reader, stopping at each word and actually looking back several times at the longer words such as "medicine" and "sufferings." The white line is a tracing of his eye movements.

cause of the part that these visual methods played, it was felt that a description of the work might be of interest to readers of this magazine. The program is one that can readily be employed in any college and in the senior high-school.

The movies referred to are the *Harvard Films for the Improvement of Reading*.³ These films are an application of the differences which have been found in the eye-movements of good and poor readers. Good readers require fewer fixations to navigate a line than poor readers, they make fewer regressions, and their pauses are briefer. These differences immediately suggest the possibility of improving reading by training poor readers in the pattern of the eye-movements of the good reader. The Harvard Films were designed with that in mind. Briefly, what these films do is flash the material a phrase at a time across the line in accordance with the practice of a good reader.

The Keystone Tachistoscope is another application of the way the eyes work in reading. The eyes really constitute a small tachistoscope or flash apparatus. By flashing words, phrases, and sentences on the screen, the Keystone device simulates what the eyes might see in a single fixation. The veterans were keenly interested in this method, for the same technique was employed during the war to train men in recognizing aircraft, tanks, and ships.

Orientation Comes First

The first meeting was given over to orientation and the administration of a standardized reading achievement test. The test used was the *Michigan Speed of*

Reading Test,⁴ which requires only seven minutes to administer and is easily scored by the student himself. After the papers were scored, a table of norms was flashed on the screen by means of an opaque projector and each student had an opportunity to look up his score to see how he compared with other students of his classification. The idea behind this procedure was that, if a student discovered that his performance was low, he might be stimulated to do something about it.

Eye Movements in Reading

The second meeting was devoted to an analysis of the eye-movements in reading. The students first observed each other's eye-movements by means of the "peep-hole" method.⁵ The way in which the eye-movements of good and poor readers differ was then explained and illustrated. Plots of the location of the fixations of good and poor readers make excellent illustrative material. This material can be presented by means of an opaque projector. A good source of pictures is Buswell's monograph, *How Adults Read*.⁶

The demonstration and discussion of the eye-movements was followed by a showing of a sample of the Harvard Reading Films. The veterans were quick to see how the film was an application of what they had just learned about eye-movements. Proceeding in this fashion lends authority to the films as a training device and helps the students understand the theory behind the films.

The keeping of records and progress charts is indispensable in the conduct of remedial work in reading. What is needed for this purpose is a series of passages of equal length and difficulty. Strang's *Study Type of Reading Exercises*⁷ is a good source of such material. This little manual consists of twenty chapters dealing with different aspects of reading. Strang's idea is to interest the student in the reading process by reading about reading. The chapters in the book are all one thousand words in length and essentially of the same difficulty.

Near the close of the second meeting, the students read the first chapter in Strang's manual. They all read it together, and, as each student finished, he ascertained his reading rate by glancing quickly at the blackboard where rate was being recorded cumulatively in words per minute at ten-second intervals. After reading the chapter, the students answered ten multiple-choice questions on the content. The answer key was put on the blackboard and they scored their own papers. Each individual plotted his speed and accuracy scores on a graph and a start was thus made on a progress chart.

Remedial Work Begun at Third Meeting

The remedial work proper began with the third meeting. A standard agenda for every training session was as follows: (1) ten or fifteen minutes of quick recognition drill on the Keystone Tachistoscope; (2) viewing two of the Harvard Films; (3) reading the next chapter in Strang's manual; and (4) bringing all records up-to-date.

Comprehension checks consisting of ten multiple-choice questions accompany each film. One of these questions concerns the main idea, five deal with de-

tails, two with words defined in context, and two with the drawing of inferences from the material read. The students kept a record of the individual questions missed on each film test. From the type of questions which were consistently missed, the students were soon able to begin detecting individual weaknesses.

In addition to the standard agenda, something new was introduced at each meeting for interest and variety. Films were used for many of these exercises. These films were of the Harvard type but not of the regular series.

Digest Test

One innovation involved the use of films for exercises in precise reading. The students were told that they would be shown a film the content of which could be summarized or digested in twenty-five words or less without leaving anything essential out. Their job, after viewing the film, was to prepare this digest. Not more than twenty-five words were allowed and nothing essential must be left out. The instructor had

Keystone View Company

A teacher is using the Tachistoscope to increase the speed of word recognition.

already discovered that it could be done. He then read the digest he had previously prepared and called on students who had said the same thing in even fewer words to read their digests. Exercises of this type are useful in the case of students who are weak in reading for the main idea.

Exercises in Direct Reading

Another variation made use of films for exercises in directed reading. For these exercises, the following procedure was employed. The students were first given two questions and told that they could find the answers in the film. After the film was shown, the instructor invited someone to volunteer the correct answers to the questions. As each answer was supplied, he called for a show of hands of all those who had obtained the same answer. For questions asked in advance, it is typical for almost all of the hands to go up. The instructor then asked a surprise question, that is, one which had not been asked beforehand but which could also be answered from the film. Someone was again asked to provide the right answer. Here hardly any of the hands go up when the instructor asks how many obtained the same answer. The experiment never fails and is a neat demonstration of the

fact that it helps to have something definite in mind while reading or to know what one is reading for.

Still another way of introducing variation was to shut off the projector just before the denouement of the story. The students' task was to complete the story or supply the ending. Exercises of this sort encourage the students to anticipate meaning. It is not necessary to use films for these exercises. Any suitable material will do, although the films offer a quick way of getting material before the group.

Sometimes newspapers were brought to class for exercises in skimming, which was described to the students as the type of reading a hound-dog does. An exercise involving the theater guide or directory of the newspaper is typical of what was done here. The students were told that they were going "to read a race." The race consisted of listing the names of all the neighborhood theaters at which a certain movie was playing. When a student had found all the names, concerning the number of which he had been forewarned, he raised his hand. The instructor called the number of the hands raised from one to ten. After the tenth hand had been raised, the race was over,

The Metron-O-Scope with its three shutters attempts to pace the reading of students according to the speed at which it is set to operate. A line of type must be read with three fixations. Picture rolls and word picture rolls may be used for the primary child as an introduction to reading.

Each time a film is returned to the film library, it should be inspected on the rewind for damage; i.e., scratches, bad or torn sprocket holes, broken splices, and loss of leader. Replace leader with special leader stock.

DEPARTMENTS of Visual Instruction are being organized and reorganized in school systems all over the country. Thousands of new films have been purchased for these libraries. What kind of care are these new films receiving? A director of a department of visual aids always can look back and say, "If only I had known more about the proper care of films, our library would be in much better condition today."

There are a few points regarding this care and maintenance that should be passed on to those recently entrusted with the responsibility of a film library. "Care" begins with the receipt of the film from the producer or distributor. This new film should be inspected carefully on the rewind machine. Many films have been ruined on their initial run through the projector. All producers are anxious to replace defective film that happened to escape their inspection. However, no producer wants to be blamed for shipping faulty prints, when the film was damaged by the purchaser. Warped or wavy film should not be accepted.

Following the inspection on the rewind, the film should be projected under normal conditions. At this point, your interest should be directed to the sound reproduction. Your question should be, "Is this sound of the same quality as I heard on the preview print?"

It has been necessary in our experience to return a film because the print sent to us was pitched so low that it was impossible to understand much of the commentary. This fault occurs more often in the case of color film than with black and white. Another fault that occurs but rarely is to have the film jump out of frame at intervals—watch for this.

At least ninety percent of all film damage occurs within the first several feet and at the end of the film.

The Care and Maintenance of Motion Picture Films

ALBERT J. DOBIE,
Executive Assistant,
Worcester (Mass.) Public Schools

The damage can be eliminated to a large degree by attaching five feet of white customer's leader at the beginning of the film, and two feet at the end. This serves several purposes. It is stronger and heavier than film, and lends itself to easy and accurate threading which lessens damage. When the film has not been properly threaded through the projector, torn sprocket holes are the inevitable result. Ruined leader is no catastrophe, whereas, ruined film is not only an unnecessary expense, but results also in temporary loss of the title or opening scenes of the film, until replacement can be obtained.

When splicing on leader at the beginning and end of the film, it is good practice to match dull and shiny sides of the leader and film. The dull side makes a better surface on which to write in ink the title of the film, the word **START**, and the phrase, "This side out". On the tail strip, substitute the word **END** for the word **START**.

Neat splicing lengthens the life of the film. Yet most splicing is very poorly done. This is forcefully shown by inspecting almost any old film. Warping, humping and an excess of cement can be found at most splices. When making a splice be sure that all emulsion is removed from the lower film end. Most splicers have a scraping device for removing the emulsion. To remove it more easily and completely, apply water at that section of the film from which the emulsion is to be removed. Be careful to moisten merely

Reel and can, showing humidifying pad at the bottom. Eastman does not recommend continuous humidifying.

the narrow strip of the film. Excess water will run beyond the desired point and will cause the emulsion to flow and the film to warp. The best way to apply the water is with the finger tip which has just a trace of moisture on it. Rub the moistened finger tip across the exposed end, and scrape film clean of all emulsion. Applying the water with a brush usually deposits too

A film cleaner attachment such as this may be purchased for the projector or the re-wind; however, the user may run the film through a soft cloth held in the hand. In either case, the cloth is moistened with a film cleaner such as carbon tetrachloride.

Bell & Howell

much water. After every trace of emulsion has been removed, apply a thin coat of film cement to the cleaned end. Complete the splice. The brush applicator should be wiped off on the side of the cement bottle, otherwise an excess of cement will be applied. This excess cement will ooze out at the edges, warp the film, and result in a bulky, messy-appearing splice. It is a good practice to wipe off with a clean cloth the cement that does ooze out. Wipe off the top side while the film is still in the splicer. The under side may be cleaned after removing the film from the splicer. The cement has partially hardened but can be rubbed off easily with a cloth.

Do not use old cement. Throw it away as soon as it begins to thicken and becomes cloudy in appearance. Cement that resembles water makes a much better

splice than does cement that looks like glue. It is the exposure to air that causes the cement to thicken. To avoid wasting a large portion of every bottle, first purchase a small one ounce bottle. Pour off into another bottle at least two thirds of the cement, leaving just enough so that the applicator brush is partially immersed when the cover is screwed onto the bottle. Replenish to this level when necessary. When the cement in the bottle becomes cloudy and the viscosity high, empty and wipe out the bottle, refilling it to the level mentioned above. After using up the contents of the first bottle it is economical to purchase the larger size from which the level in the small "working" bottle is maintained.

Every film must be inspected each time it is returned to the library. The majority of projectionists seem possessed with the idea that they are helping you by rewinding film. Break them of this habit as soon as possible. Insist that all film be returned unwound. Films can be rewound and inspected in one operation. The most efficient method is to rewind the film allowing the sprocket holes to run between the thumb and forefinger. Place these fingers so that only the sprocket hole edge comes in contact, otherwise a piece of grit may scratch the film from end to beginning. With a little practice the fingers become sensitive to broken or enlarged sprocket holes. Do not allow even one torn hole to remain in the film; one soon becomes many.

Films get dirty. Finger marks, oil from the projectors, and just ordinary dirt will accumulate on the films with use. Do not make a fetish of this cleaning. However, it is a good practice to clean films after twenty showings, or at least once a year. There is no necessity for purchasing expensive trade name film cleaners. Run film through a clean, soft cloth moistened with carbon-tetrachloride. Re-run the film through a dry, clean, soft cloth to polish it. Avoid prolonged breathing of the fumes of carbon-tetrachloride as they are not only unpleasant, but harmful. Adequate ventilation is essential. The liquid is volatile, so keep the supply bottle tightly capped.

Several of our films have been projected at least two hundred times. With reasonably good care, your films will give clear, bright pictures for years to come.

Improving Adult Reading

(Concluded from page 197)

and the rest of the students lost. The want-ad section and stock-market quotations provided material for other exercises of the same sort.

Some of the other things which were done to round out the course were as follows: Vocabulary exercises based on Latin and Greek roots, prefixes and suffixes were distributed for use outside of class. If a student was observed vocalizing, while reading a chapter in Strang, for example, a few suggestions were given as to how this habit could be broken. No tricks were missed in the effort to motivate the veterans and keep their interest alive. They were interested, for example, in a report that Mr. William Benton, Assistant Secretary of State, had taken a similar reading course

at the University in Chicago. An article about remedial reading which appeared in *Life* magazine was brought to their attention.

How much do the students improve? We have been unable so far at the University of Michigan to carry out a controlled experiment to answer this question. The practical difficulty has been in finding a suitable control group of subjects. The reading course is open to all veterans who enroll for the refresher course, and most of them elect the course in reading. While there are some who do not take the reading course, the very fact that they do not take it introduces an uncontrolled element and makes them unfit for a control group. The ideal experiment would require dividing the veterans who elect the reading course into two matched groups and then letting one group take the course and denying it to the other group.

Educational Projects

The Motion Picture Association of America supports four major educational projects of importance to the school and to the citizen.

THE promotion of visual education was one of the five points on the initial program which Mr. Eric Johnston adopted when he was elected President of the Motion Picture Association in 1945. At that time the motion picture industry was already supporting two projects in this field: (1) Teaching Film Custodians and (2) the Commission on Motion Pictures of the American Council on Education. Since that time, two more have been added: the Motion Picture Research Project of the Institute of Human Relations, Yale University, and the Pilot Film Project. In many persons' minds there has been considerable confusion as to the function and interrelationship of these projects. This article has been written to clarify the picture by outlining briefly their nature and the relationship between them.

I. TEACHING FILM CUSTODIANS, INC.:

*A non-profit organization for making available to schools non-current theatrical films which, in the opinion of educators, have educational value.**

Teaching Film Custodians was organized on the recommendation of an educational advisory committee to the motion picture industry. Teaching Film Custodians is not merely a distributing agency; it edits full-length features (film classics, biographical, and historical films), reducing them to a length readily usable in the classroom. From the beginning, it has endeavored in many ways to promote visual education by consultation with directors of educational film libraries, directors of visual education, teachers, and teacher-training institutions.

None of the funds accruing from rental charges are returned either to the producers of the film or to the motion picture industry. These funds, aside from operating expenses, are used to support activities in the field of visual education. Teaching Film Custodians is now supporting a state-wide project sponsored by the State Department of Public Instruction in Nebraska, designed to enrich the curriculum of rural high schools through the use of films. This organization is also contributing to an ex-

perimental research program at Yale University, described later in this article.

The service rendered by Teaching Film Custodians to schools and to education generally has been quite successful and greatly appreciated. By December 31, 1945 over 10,300 reels of 16-mm. film were in active use through 423 film libraries across the nation, serving thousands of schools located in every state. The officers of Teaching Film Custodians are Mark A. May, Chairman and Director of Research; Carl E. Milliken, General Business and Financial Manager; and Roger Albright, Director of Educational Services.

II. COMMISSION ON MOTION PICTURES,

The American Council on Education: organized to study the needs of schools for motion pictures which would help meet the postwar challenge to education and to prepare educational specifications and treatments for such films.

The Commission on Motion Pictures was organized early in 1944 under a grant of \$25,000 a year for five years from the Motion Picture Association. The Commission is quite independent of Teaching Film Custodians in function, although three of its members are also members of the Board of Directors of TFC.

In locating areas in which films are most needed and in developing educa-

tional specifications or film treatments in these areas, the Commission adopted two major points of policy: (1) In determining the areas of need, the Commission was guided neither by the analysis of existing texts nor by questionnaires circulated to teachers, but rather by a general philosophy of education, the central feature of which being the training for democratic citizenship in a free society. (2) In each of the chosen areas, materials for an integrated series of films are to be prepared, which materials would be adequate for one or more courses that are commonly taught.

Educational Projects

Supported by the Motion Picture Association

1. **TEACHING FILM CUSTODIANS, INC.:** A non-profit organization for making available to schools non-current theatrical films which, in the opinion of educators, have educational value.
2. **COMMISSION ON MOTION PICTURES,** The American Council on Education: Organized to study the needs of schools for motion pictures which would help meet the postwar challenge to education, and to prepare educational specifications and treatments for such films.
3. **MOTION PICTURE RESEARCH PROJECT:** A program to discover, through controlled experimental studies, methods of improving the teaching effectiveness of educational films.
4. **PILOT FILM PROJECT:** Organized to produce several experimental films to gain additional information on procedures, processes, and costs of producing effective teaching films.

The four areas that have been chosen are: (1) global geography for the junior high school, (2) problems of democracy for the senior high school, (3) art for the elementary school, and (4) mathematics for the elementary and secondary schools.

As materials are completed in the areas outlined above, they will be made available without cost to educational film producers whether they are members of the Motion Picture Association or not. In some cases it may be desirable to attempt to interest one company in producing an entire series of films where careful correlation of films is required. It should be made clear, however, that the Commission is set up to serve all education and not a particular company or group of companies. The responsibility of the Commission ends with the preparation of the educational specifications and treatments, and it assumes no responsibility for seeing these materials through production. The geography series is now completed.** Producers interested in seeing these materials should apply to the director of the Commission. The director and staff are located at Yale University. They are: Gardner L. Hart, Director; George F. Kneller, Editor-in-chief; and A. E. Knepler, Research Assistant.

III. MOTION PICTURE RESEARCH PROJECT: *A program to discover, through controlled experimental studies, methods of improving the teaching effectiveness of educational films.*

It is generally agreed that existing educational films fall far short of attaining maximum effectiveness as teaching devices. More specific, incisive, and better-established principles than are available at present are needed to furnish practical guidance to producers and users of films. The major aim of this research program is to develop such principles by studying experimentally the influence of critical factors which seem likely to affect the educational effectiveness of a film.

Teaching Film Custodians, Inc.

"The Story of Alfred Nobel" (MGM) tells how the inventor of dynamite discovered that the road to peace leads from the council table.

This is done by controlled experiments either comparing the effects produced on school children by alternative versions of a film, or by comparing the effects of alternative ways of utilizing a finished film product. Depending on the type of film being studied, the effects measured may include learning of factual information,

Teaching Film Custodians, Inc.

"The Boss Didn't Say Good Morning" (MGM) demonstrates the unhappy psychological effect on an employee when the boss fails to say, "Good Morning."

acquisition of a skill, or modification of interests, attitudes, and opinions.

This research program is supported jointly by grants directly from the Motion Picture Association and from Teaching Film Custodians. One center for carrying out this program, called the Motion Picture Research Project, has been set up at the Institute of Human Relations, Yale University. Other centers may be established later. Results of completed studies will be reported in EDUCATIONAL SCREEN. The members of the research staff of this project are: Mark A. May; Reign S. Hadsell; Gardner L. Hart, and Arthur A. Lumsdaine.

IV. PILOT FILM PROJECT: *This was organized to produce several experimental films to gain additional information on procedures, processes, and costs of producing effective teaching films.*

In March, 1946, the Board of Directors of the Motion Picture Association appropriated \$100,000 for the production of several experimental educational films. This project is under the general management of Mr. Arthur L. Mayer of New York City, and while administratively independent of the other three mentioned above, it is interrelated with all of them in the following ways: (1) It is understood that the titles, scripts, and finished products of these pictures must be approved by the Commission on Motion Pictures in Education. (2) In the production of some of these pictures, alternate versions will be made and tried out in schools by the Motion Picture Research Project. (3) It is understood that the finished products will be distributed to schools by Teaching Film Custodians.

In addition to the above-mentioned four projects, the Motion Picture Association on September 29, 1946, announced the establishment of a Division of Educa-

(Concluded on page 232)

*Directors of university rental libraries and directors of visual education may secure a copy of the catalog of Teaching Film Custodians by writing this organization at 28 West 44th Street, New York 18, N. Y. (Unfortunately the supply of catalogs is so limited that copies can not be sent to individual teachers.)

**Editorial Note: Refer to the "Audio-Visual Trade Review" section for details of the arrangement whereby Louis de Rochemont will produce this or a similar series of 86 films for United World Films, Inc.

Juvenile Delinquency On Film

A Graphic Film Review by
EDWARD T. MYERS

“Children on Trial,” a new British Information film, is especially appropriate for National Boys & Girls Week—April 26 to May 3.

THE latest film on juvenile delinquency, *Children on Trial*, (62 minutes), comes from England and tells the story of Britain's Approved Schools for the rehabilitation of youthful offenders, dramatically pointing out the sources of infection which are present in modern society. Since the Approved School idea is fairly new and since there is a universality about this problem, the film has great value for use in America. A list of American produced films on this subject is appended to the end of this article. One of these short films might be used with *Children on Trial*, on a forum program. Authenticity has been characteristic of British documentary production, and the tradition is continued in this film even though there is some fictionalization, though a professional actress was used for the role of Shirley, and though studio sets were built for the slum interiors. On the other hand, John Vardy, who plays the part of the Headmaster of the Boy's Approved School is actually Headmaster of the Liverpool Farm School. He has 24 years service in such schools and is the author of a factual book, entitled *Their Side of the Story*. School sequences were taken at the Leicester Home School for Girls and the Liverpool Farm School.

The Youths' Side

The youths' side of the story is not forgotten in the film which shows clearly the depraved conditions in some homes. For purposes of getting the material across, two boys and a girl, all constant offenders, were chosen. One of the boys, Fred, is sullen and intractable. He is the leader

(Concluded on page 204)

From a gutter card game to crime is an easy step for these slum boys whose adventurous instincts are thwarted.

Fred's home is a sordid place. His mother, upon returning from the public house, is apathetic about her son's absence.

Fred, after breaking into the warehouse, is caught by a policeman.

Taken before “the bench,” Fred is sent to an “Approved School.” There he is surly and apathetic, at first.

Shirley, a girl of 15 having violated her probation, is brought before the Juvenile Court and sent to an Approved School.

Shirley escapes from the Probation Officer and is "adopted" by a prostitute. Not liking crime, she returns voluntarily to the Officer.

At the School, Shirley is trained in domestic science, for the constructive use of her leisure time, and for motherhood.

Fred, disliking the School, persuades a new boy to leave with him. There are no bars—only the honor system.

Disgusted with his home, Fred steals some food. Again, he is faced with prosecution. Headmaster of the school defends him.

At School, the headmaster puts Fred at hard farm work. To his surprise Fred likes this work and is happy.

BELOW: At length, Fred earns a vacation at home. His old gang tempts him to "slip back" into old bad habits.

BELOW: Headmaster and his wife wait up for Fred who has overstayed his leave. Shortly after midnight, Fred returns.

BELOW: After two years, Fred leaves. His surly disposition is gone. His outlook is healthy . . . no more back sliding.

of a gang, accused of robbing a warehouse. He has appeared three times before the magistrates. His mother is a drunkard; he has no father; and his home conditions are dreadful. The role of Fred is actually played by a boy from the slums of Birmingham.

Shirley Reynolds is a sex delinquent, aged 15. She stopped school and frequently runs away from her poverty stricken home. Her hard working mother is unable to control her. Shirley likes nice clothes and good times. She knows only one way to obtain them.

Walter Wilkins, a weak character, who commits many petty crimes, comes from a good home. His prideful father and his stepmother fail to understand him. He has adequate pocket money and has been raised well; however, he is maladjusted.

Before the Court

Children on Trial shows how the court and the judges deal with these offenders. After giving each an opportunity to reform and to cooperate with the probation officer, the court commits them to an Approved School. The story is told clearly in the accompanying stills, although the third character, Walter Wilkins, has been omitted. The British government claims that about 60% of the children sent to the Approved Schools become so firmly set in the path of good citizenship that once they leave the school, they never give any indication of backsliding.

Production

Children on Trial was produced by the Crown Film Unit for the Central Office of Information in England. Basil Wright (*Song of Ceylon*) was the producer, and Jack Lee (*Close Quarters*) was the director. Music was written by Clifton Parker and conducted by Muir Mathieson with the London Symphony Orchestra.

Approved Schools

The Approved Schools do not conform to one narrow pattern. Each has worked out its own system of rehabilitation within the confines permitted by the Home Office. A great deal of attention is given to the classifying of a child, in order to determine to which type of school he should be sent . . . formal, progressive, strict, or liberal. If a poor choice is made, the mistake is rectified by transferring the child to a more suitable School. No child may be committed for more than three years, and he may be released on recommendation of the Headmaster after a period of twelve months. Whatever the difference in administration may be, the Schools are unanimous in their main objective; namely, to impress upon the children their obligation to the community and to instill in them a strong enough feeling of responsibility to combat the undesirable influences which they are bound to meet when they attain full freedom.

The reasons for the success of the Approved Schools are not difficult to find. The sense of security which the children gradually acquire there is a tremendous factor in their improved conduct. The uncertainty of their lives at home aggravated their

already unstable behaviour. At the Schools, they get for the first time in their lives the even routine which is so necessary to every child. The hours are regular; the meals are good; their clothes are clean; their daily lives are orderly. Although it is a very simple matter to run away, very few do so. The great majority settle down in several months and learn the satisfaction which comes from contributing to the life of a community.

Children of the City

It is interesting to compare this film with the slightly earlier Paul Rotha Film, *Children of the City* (30 minutes), also a British Information film. The latter indicated how the problem was handled in Scotland. Three boys, all members of a gang of housekeepers, were seized and brought before the court. Each, though accused of the same crime, was handled differently. One boy, a first offender, was paroled. A second boy needed the services of a psychologist. The third boy was an incorrigible. He was sent to an Approved School.

Films on Juvenile Delinquency in America

Berkshire Industrial Farm (1 reel)—Methods of institutional treatment of delinquent boys.

Boy in Court (1 reel) — How family, city government, and probation officials can cooperate to remedy juvenile delinquency.

Boys' Gang (1 reel)—An ever present social problem.

The Building of Boys (1 reel)—How boys' clubs can develop recreational programs to exert beneficial influences over the boys' lives.

Challenge to Crime (1 reel)—Moline, Illinois developed a clean-up campaign to eliminate juvenile delinquency. Ruth Clifton, originator of the plan, and Warden Lawes of Sing Sing tell what the plan can do. Recommended for young people as well as for parent-teacher groups, and law-enforcement agencies.

Children of the City (3 reels)—Scottish approach. Mentioned above.

Children of Mars (2 reels)—The rise of juvenile delinquency during recent years and especially in homes where the parents work. Remedies are suggested.

A Criminal Is Born (2 reels)—The story of four boys whose parents show little interest in them. They turn to crime, but one is saved by chance when his father begins to take an interest in him.

The Disinherited (2 reels)—Rehabilitation program of New York Children's Aid Society.

Juvenile Delinquency (1 reel)—The development of a delinquent from his boyhood in tenements to his imprisonment.

That Boy Joe (2 reels)—Causes of juvenile delinquency and preventative means.

Youth in a Crisis (2 reels)—A March of Time film showing how the excitement of war has resulted in a breaking of parental authority and in greater indulgence of youth in demoralizing pastimes. This film still has value.

Note: For sources of the above films, refer to "1000 and One" or your local film distributor.

The Curriculum Clinic

Utilization Can Be Democratic

TO me the most important, the most significant, the most exciting part of the whole audio-visual cycle—from production through administration and distribution to utilization—is the point of contact between the visual material and the learner. That's the point of "payoff". That's the final test of the product: what happens to the individual when he sees and hears the motion picture. That's the important point.

One day recently, I had the opportunity of visiting three different classes in two schools where in the ordinary course of instruction they were using motion pictures. There were visitors in town, so we had selected three classes where we expected we might see good teaching; but there was no staged demonstration. These teachers had already planned to use pictures on this day. We saw a twelfth grade English class using *You and Your Family*; we saw a ninth grade group using *The City*; and we saw a first grade class using *The Fireman*. But first let me tell you about our visitors.

The press release from the War Department put it this way:

Dr. Hylla, German Educator, Studies American Program

"Dr. Erich J. Hylla, outstanding German educator, has just arrived in this country for a period of study and conference with American educators as the guest of the Rockefeller Foundation.

"While here, Dr. Hylla will be concerned chiefly with developments in audio-visual education in the United States. He will also assist in the screening and selection of American instructional and documentary films for use in German schools and in the general reorientation and re-education program of Military Government.

"Dismissed in 1933 as a staff member of the Berlin Education Ministry because of anti-Nazism, Dr. Hylla lived in comparative seclusion until the fall of the Hitler regime in 1945. His professional career had included positions as an elementary and secondary school teacher, principal, superintendent, professor of education, and in 1922 he was appointed to the Education Ministry. Until 1933 he was in charge of curriculum, textbooks and teaching aids, including films and radio."

Dr. Henry Ehrman and Boyd Wolff of the Civil Affairs Division of the War Department accompanied Dr. Hylla. Although his principal mission in this country was the screening of dozens of pictures to find those most suitable for bringing an understanding of democracy and the United States to the German people, Dr. Hylla's primary interest in Rochester was to observe the regular classroom use of motion pic-

Rochester Public Schools

tures. He knows that a film, in itself, is unimportant; it's what happens to people as a result of seeing a picture that's important.

Classroom Films in Germany

I had spent several days with Dr. Hylla in Washington prior to his coming to Rochester. I was impressed with the importance of what he was trying to do and the tremendous educational task that faces the Military Government in Germany and the German educators. They recognize full well the power of the motion picture as a means for helping to get that job done. In fact prior to the war, every school in Germany was equipped to use motion pictures, and no school was farther than ten miles from a well-stocked educational film library.

One of the significant differences between instruction in American and in the traditional German schools that we discussed with Dr. Hylla was the difference in relationships between teachers and pupils. As I got the picture, the instructor in German schools dominates the learning situation. The flow of communication is all from instructor to learners. Educational pictures as they conceived them were simply "raw" visual experiences to be used by the teachers, and they preferred silent pictures. Student response in learning situations was upon demand and with the permission of the instructor.

In American schools (how many, I don't know), there is a much freer relationship. There is greater respect for the learner as a learner. Communication is considered a two-way process. Discussion among the learners with the skilled teacher as a guide is a fundamentally democratic learning procedure. Probably the most challenging thing we saw on this visiting

Let's Give a Tea

(Simmel-Meservey, 9538 Brighton Way, Beverly Hills, California) 20 minutes, 16mm., sound, color, \$187.50.

Description of Contents:

Four high-school girls are faced with the problem of arranging a mother-daughter tea. Barbara is the only one in favor of it, since the other girls, not having had any experience with teas, think that they are dull. Barbara supervises the writing of formal invitations, after consulting an etiquette book for the proper form. She points out that legible handwriting well spaced is as important as correct form. While the girls are planning the entertainment, which must be suitable for both the girls and their mothers, Corrine comes in very overdressed. A discussion of dress follows, emphasizing simplicity and appropriateness. Ann practices serving from the tea table and learns that efficiency and grace are most important. Barbara shows how a guest should raise her veil, remove her gloves, put her handbag under or on her arm, pick up her napkin, and take the food which her hostess offers her.

At the tea, the girls make introductions correctly and are soon having a pleasant time. Corrine learns from a stylist guest that naturalness is much more attractive than affectation. For entertainment, the girls present a style show in which the use of line, color, and fabric to bring out one's best features is emphasized. The success of the tea convinces the girls that the purpose of a tea is sociability and that such an affair can be simple and enjoyable.

Committee Appraisal:

Problems which many girls face during their high school careers are solved or simplified in this film. It emphasizes constantly that naturalness, good sense, and consideration for others form the basis for proper etiquette and that there

Simmel-Meservey

"Let's Give a Tea" indicates how the high school girl should dress and act at a tea party.

are only a few set rules to be mastered. The girls are types which offer contrast and add interest because of their varied reactions to the problems confronting them. The specific information about teas is valuable, but the chief value of the picture would probably be its applicability to social situations of all types. Emphasizing a proper viewpoint, it makes rules and specific information secondary. The color photography is generally attractive. The settings, in both the homes and the hall, are somewhat above average. The Barbara. Should be of interest to all junior and senior incidental humor furnished by the athletic Ann should overbalance the slight condescension sometimes apparent in high school girls.

Brotherhood of Man

(Brandon Films, Inc., 1600 Broadway, New York City 19) 10 min., sound, kodachrome, \$80.00. Produced by United Productions of America for UAW-CIO and released by Film Alliance of America. Both teachers' guide and community discussion guide available.

Description of Contents:

Through animated color cartoons and music, the film *Brotherhood of Man* treats the problems involved in developing one world and suggests partial solutions. Based upon the Public Affairs pamphlet, *Races of Mankind*, by Ruth Benedict and Gene Weltfish, the film begins with a sequence showing that all races and nationalities have really been drawn very close together. This idea is presented figuratively by showing the Caucasian, Negroid, and Mongoloid nationalities living together in one backyard. Each is restrained in his attempt at brotherliness by a green monster within him which emerges and pulls him back from all efforts at getting along with the others. The green monster in the Caucasian causes him to ask a series of such questions as what about the differences in our hair, skin, noses, and sizes; what about the comparative size of brains; is our blood alike; can we get along when we live so differently. All questions are answered to the satisfaction of each of the nationalities, and the film ends with them shaking hands and marching forward together to equal opportunities in health, medicine, education, and work.

Committee Appraisal:

Highly recommended as an effective means of presenting the problems of interracial cooperation and understanding from intermediate level through adult. Music, animation, art work, and color are skillfully combined to present the facets of the problem, the basic scientific facts bearing upon the problem, and suggestions for solving it. The use of the green monster which prevents interracial and intercultural cooperation and which is never specifically identified in the films was commended, since it permits a variety of interpretations and connotations such as jealousy, ignorance, suspicion, isolationism, or prejudices. What appears, at first, to be a simple conventionalized art pattern and treatment may prove to be really very sophisticated and complex. Should be an excellent film for provoking group discussion.

Atomic Energy

(Encyclopaedia Britannica Films, Inc., 20 North Wacker Drive, Chicago, Illinois) 10 minutes, 16mm, sound, black and white. \$50.00 less 10% discount to educational organizations. Discussion guide available.

Description of Contents:

THE shell of a bubble contains millions of small particles called molecules, which in turn contain many atoms. The negative charge, which is very light in weight, is called an electron. The positive charge, which is 2,000 times as heavy as an electron, is called a proton. A neutral charge, which is about as heavy as a proton, is called a neutron. The hydrogen atom is shown as the simplest in construction, with one electron and one proton. Helium, with its two electrons, two protons, and two neutrons, can be formed by the combination of four hydrogen atoms, with two protons and two electrons unchanged and two protons and two electrons combined to form two neutrons. When this combination takes place, some weight is lost. The loss during the process of combination is called nuclear synthesis, which is one way of releasing atomic energy.

The sun loses five million tons of matter every second as radiant energy. It is the source of virtually all energy on earth. Solar energy is changed to chemical energy in plants by photosynthesis. In plants, only the electron orbits can be changed, not affecting the nuclei. The heat of the sun increases the orbits of the electron and thus raises its energy level. This energy is also released in combustion.

Radium, which gives off energy spontaneously, is changed in its nucleus through natural radioactivity. Uranium has the most complex nucleus found in nature. When bombarded by a single neutron, the uranium nucleus splits, producing two free neutrons which in turn split other uranium atoms, thus releasing a relatively large amount of energy by nuclear fission. This chain reaction continues in geometric progression until the energy is burned out; however, the whole process takes less than a millionth of a second.

These principles are used in the atomic bomb, which creates extreme heat causing the air to expand rapidly, which in turn causes an explosion. This process of nuclear fission is much newer to science than is natural radio-activity. The picture ends with a scene of the explosion of an atomic bomb and the raising of the question of the future uses of atomic energy.

Committee Appraisal:

The motion picture is an ideal medium for the description of atomic behavior, and this treatment of the subject is exceptionally lucid. Its animated diagrams progress from the simple to the complex, with the latter still kept in the simplest possible form. Each point discussed by the narrator is very well illustrated, and terms commonly used in reference to atomic energy are explained. One statement, however, that "uranium has the most complex nucleus found in nature," could well be qualified by the words "up to the present time." The spectacular application of these principles in the atomic bomb is mentioned briefly, and the question of the future use of atomic energy could well serve as a springboard for discussion groups. The narration complements and reinforces the visual presentation especially well, making labels on the diagrams unnecessary. Recommended for high school science classes and adult discussion groups.

Pudge

(Children's Productions, Box 1313, Palo Alto, California) 10 minutes, 16mm., sound, color, \$75.00.

Description of Contents:

When his master moves away, Pudge, a beautiful red cocker spaniel, is destined to be taken to the dog pound. However, he escapes from the dog catcher's truck and sets out to find a new home. He soon meets Billy, a small boy who is trying to escape an irate neighbor whose window has just been broken by Billy's baseball. Billy takes Pudge home with him and succeeds in convincing his mother that he should be allowed to keep the dog until someone claims him. He builds a dog house, gets a suitable bed and feeding dish, and learns to care for him properly. He is responsible

"Pudge" is the story of a dog and his young master.

Children's Productions

for feeding and bathing Pudge and uses his own savings to buy the necessary dog license. When the man whose window had been broken comes to the house, Billy is embarrassed to find that he does not have any money left, and so his mother has to advance the money. Faced with the problem of repaying his mother, he gets jobs cutting grass and cleaning yards. However, he is amply repaid by Pudge's constant company. When the money is finally accumulated, Billy and Pudge are free to go fishing, their favorite pastime.

Committee Appraisal:

This story, told by Pudge himself, should appeal to all ages. Attractive color, natural characters, and appropriate background music all contribute to a delightful aesthetic experience which could be used to stimulate expression in the elementary grades or for general assembly programs on the elementary and junior high school levels. Billy's care of Pudge should make the film appropriate for a unit on the care of pets, while his earning the money to pay for the broken window is a good illustration of how all people, including children, should be responsible for their actions. The type of work he does could suggest to other boys and girls that they can often earn the money for things they want or need. The only weakness in the plot is the improbability that anyone would abandon a dog like Pudge.

Children's Productions

Billy is responsible for the care of Pudge who is a beautiful red cocker spaniel.

Educational Film Library Meets at Columbus, May 1 to 5

THE annual conference of the Educational Film Library Association will be held concurrently with the Institute for Education by Radio on May 1 to 5 at Columbus, Ohio. Many EFLA members are expected to participate in the radio sessions on May 3, 4, and 5.

The EFLA conference will not only survey the most recent developments and trends in the audio-visual field but will also provide material of great importance to the newer persons in the field. Such topics will be covered as "Organizing and Administering State and local programs of Audio-Visual Materials," "Community-wide Programs," "Training of Teachers and Adult Leaders in Utilization of Audio-Visual Materials," "Proposed Activities of the Film Council of America," "Meeting Problems Involved in the Operation of an Audio-Visual Center," "Selection, Purchase, and Preparation of Audio-Visual Materials for Use," "Circulation Procedures," and "Audio, Photographic, and Art Production Services."

Members of the conference committee are L. C. Larson, Chairman; J. R. Bingham, Director, Association Films; I. C. Boerlin, Supervisor of Audio-Visual Aids, Pennsylvania State College; Dr. Edgar Dale, Professor of Education, Ohio State University; Paul Reed, Director, Visual and Radio Education, Rochester City Schools; and Norman Woelfel, Director, Teaching Materials Laboratory, Ohio State University. Others who helped work out the program include James Brown, Vernon Dameron, Dave Strom, Don White, and Thurman White. Suggestions received from members were carefully considered in making out the final program. These suggestions were received in reply to a questionnaire circulated by Mr. Larson.

Thursday, May 1. Theme: *Organizing and Administering State and Local Programs of Audio-Visual Materials.* There will be two morning sections under this heading. Sections will emphasize both the individual and the complementary functions of various agencies in the state and local program. The section on state programs will consider the responsibilities of state departments of education, health, conservation, agri-

culture, and colleges, state universities, state libraries, historical associations, and labor groups. The section on community programs will include discussions on county and city schools, county and city departments of health, public libraries, county agricultural agents, religious workers, youth organizations, recreational agencies, and other groups. Later in the day, there will be a brief presentation on trends in production, distribution, utilization, professional training, and technological developments.

Friday, May 2. Theme: *Meeting Problems Involved in Developing the Use of Audio-Visual Materials.* Emphasis will be placed on principles, procedures, and practices involved in directing a program of audio-visual materials. This theme will be developed in several different sections. A new theme will be featured in the afternoon: *More effective production, distribution, and utilization of films and other aids for school and community use.* Some aspects of most of these topics are of concern to the elementary, secondary, and college levels and to adult programs of civic, cultural, and religious organizations as well as to farm, labor, and business groups. Again there will be concurrent sections discussing the various phases of the theme. Saturday will involve a joint general session with the Institute for Education by Radio and with the Junior Town Meeting League.

THE PROGRAM

Thursday, May 1—9:00 Registration at Deshler-Wallick Hotel 9:45-11:45 Section 1. State-Wide Use of Audio-Visual Materials; Section 2. Community Use. 1:30—3:15 "Training Teachers and Adult Leaders in Utilization," Chairman: Charles F. Hoban, Jr. 3:30—5:00 "Contributions of Federal Agencies to School and Community Programs," Chairman: Paul Howard. 7:30—9:00 "Significant Developments and Trends in the Use of Audio-Visual Materials," Chairman: Mildred Batchelder. 9:00—10:00 "Work of the International Film Foundation," Chairman: J. R. Bingham; Julian Bryan, speaker.

Friday, May 2—9:00 "Film Council of America," C. R. Reagan with I. C. Boerlin, presiding. 10:00—11:45 Sectional Meetings: (1) Administration; (2) Evaluation, Selection, and Circulation; (3) Utilization; (4) Production. 12:00 Luncheon with Edgar Dale, presiding; speaker Charles F. Hoban, Jr.; 2:00—3:45 Sectional Meetings: (1) Religion; (2) Film Forums; (3) Citizenship; (4) International Understanding; (5) Inter-group Education. 3:45 "EFLA's Project for 1947-48."

Saturday, May 3—9:30 "UNESCO's Role in Radio and Films." 2:00 "Varied Media as Discussion Resources."

Film Council of America Governing Council and nearly 50 additional interested persons met at the Hotel Senator, Atlantic City, March 5, to discuss and revise the new FCA constitution. Paul Howard, American Library Association (standing at the far end of the table) presents the work of his committee on the constitution.

Visual Aids for the Extended Session

ONE of the best ways to get more time for religious education is to use *all* of Sunday morning. More and more churches are joining the ranks of those who follow the regular church school with a "church-hour program" or "extended session," and many of these churches are finding that visual aids are useful in the total curriculum of these extra hours of teaching.

In the photograph, a group of primary children are seeing a filmstrip, *Forward All Together*. It is but one of many visual aids used by the leaders of this group. The leader is operating the projector, and her helper is sitting directly in front of it. One of the ministers of the church has dropped in to see how things are going. These thirteen children are taught by being shown.

In another room, this group was prepared by directed study and adult-led discussion for this particular experience. Each one is learning according to his prior information and understanding, his increment of interest and purpose, and his general readiness. As they sit here, seeing this filmstrip, frame by frame, and listening to the "script" which the leader is speaking off slowly and in the vocabulary of the first, second, and third graders, they are mentally participating in the totality of this educative situation. Here their participation is primarily intellectual.

While they are in this quiet room, they will talk about the ideas and questions which arise in their minds. The leader will not only pay attention to the questions which are asked at the end of the showing, but she will be especially alert for the hints and references which will enable her to tap the experience of the group.

Some of them will know that their grandfathers were Irish, English, German, Dutch, Syrian. Several of them will tell of experiences they have had with those of a different color or race. Some of them may contrast their ideas on race with those of their parents, and the leader will need to be very careful of her comments and reactions when this occurs. Some child may remember that Jesus was a Jew and that lead will be followed in a short and fruitful way.

These children will be encouraged to tell their parents all about what they learned in church school today, and in this way, the home will be stimulated to further the learning of the child at mealtime, at prayer

time, and for a few of the more alert and concerned parents, at other times such as when the newspaper is read.

On the following Sunday, the leader will briefly review this unit in the learning schedule to see if any wrinkles got into the rapidly woven cloth of learning or if it frizzled on the edges any during the week.

It is by using this extra hour and a half that these children are getting more than double the religious education of those attending only the regular session of the church school. Here is Sunday time, church time, God's time which the church is not using by and large. While the churches ask for "released time" from the public school, they would do well to reappraise Sunday time now unused.

A new curriculum is not necessarily desired for these extension sessions of the various departments. The regular unit of study can be further explored. It can be deepened, broadened, and generally enriched by the well-planned use of visual materials. Visual materials add variety to such extended sessions and prevent them from hogging down.

Is the extended session the neglected opportunity of your church?

John C. Van Der Velde, Jr.
A primary group watches the filmstrip, "Forward All Together."

Film Notes

■ The 10-minute color cartoon sound film, *Brotherhood of Man* (Brandon Films, N. Y. C.) begins with the idea that the world has shrunk to the point wherein all nations and races live in each others' backyards. In

this situation, the spirit of brotherhood is a necessity; not an optional luxury for a few ethically motivated people. In this film brotherhood is based on the principle that each man accepts the other as inherently equal.

The film does a fair job of dramatizing and generalizing certain scientific facts. If this film has a weakness, it is that its point of reference is weak. What *compels* men to accept the principle of equality? Their minds may be confronted by a mountain of facts without changing one iota their behavior. The film does not assault successfully the citadel of bigotry and prejudice. That must be an inside job, the result of stronger convictions and feelings than this film has the power to arouse.

However, the churches will do well to use this film, strengthening it by reference to undergirding religious concepts, principles, and convictions.

Slides Promote the Camp

By VIRGIL E. FOSTER
Director of Religious Education
Congregational-Christian Churches of Iowa

A MODEST amount of equipment and an average amount of imagination can make possible some original uses of audio and visual materials.

The Congregational Christian Conference of Iowa has had some success with such equipment. A Presto-K model record cutting and playing machine, a borrowed mike, bugle and marimba, a group of boys and girls, and the churches of this conference have a synchronized record and slide story of its Junior High Camp to acquaint prospective campers and their parents with the opportunities of the camp.

A church group preparing to record the sound accompaniment for a slide story, using a small disc recorder.

During the Junior High Camp last summer, the director took Kodachrome pictures of the activities. Later he selected thirty of the best of these slides, arranged them in a sequence, and wrote a script telling the story they portrayed.

Four of the camp staff and some junior high young people from one of the churches gathered in the home of the director one day and put the story on records. The records, slides, and cue script are now being used by the churches for an interesting presentation of the conference camp.

As the opening slide shows the bugler announcing the beginning of the day, the sound of the bugle comes from the record. When another slide shows the

marimba player calling the camp to worship, the music of the marimba is heard. There is singing by the group of young people when the slides show the camp in morning worship and at vespers. Here and there, as the director tells the story presented by the slides, a boy's voice is heard adding a bit of realism to a baseball game or boating.

The set is popular with the churches. The conference is planning to make synchronized slide and record sets to tell the story of such works as that of the larger parishes, the young peoples conferences, workshops, and training schools.

Setting Up Projection Equipment

THIS discussion assumes the use of portable projection equipment in the average church situation. It will attempt to indicate how the projection apparatus should be set up and why.

There are five factors to be dealt with: the screen, the projector, the loudspeaker, and the power and speaker cords. The placement of each one of these is controlled by certain considerations, which will be identified.

The screen: In any set-up, the location of the screen comes first. A portable screen is located with respect to, and is controlled by, the following conditions:

1. *The usual use of the room.* If the furniture is immovable, there may be little choice in the placement of the screen. If there is a platform at one end and extra height is needed for the screen, the platform should be used.

2. *The required use of the room.* What the room itself requires for best utilization will determine the placement of the screen. Color projection on a beaded screen indicates its location in the end of the room and not on the side. A larger percentage of the audience can be kept within favorable viewing angles than when the screen is placed on the side of the room. In a square room, having movable seating (all other factors being equal), it is sometimes advantageous to put the screen in one corner and the projector in the opposite corner.

3. *The source of daylight or artificial light.* Place the screen so that the least amount of light falls on it, and so that light will not fall into the eyes of the audience. It is best to place it so that what light there is comes in on one side of the group.

4. *The audience requirements.* It should be two of its widths away from the nearest row of seats. It should be high enough so that the bottom of the image can be seen over the heads of those sitting in front.

The projector: Every projector should have its stand. Any odd table will not do. The stand has a specific job to do and it should be designed to do it. First, it must be strong and light. It must stand solidly on the floor. To do this it must have only three legs, not four, because four are not self-leveling. (There are four-legged stands with adjustable legs.)

Second, it must be the right height—high enough to get the projection beam over the heads of a six footer when he is seated. This means 53 to 56 inches. Most stands on the market are too low. Forty-inch tables don't get most projection beams high enough to clear all heads.

Location of the Projector

Much has been written about the location of the projector. Its placement is controlled by three basic considerations: the screen, the size of the image desired (or required), and the audience.

1. *The projection beam must be perpendicular to the screen.* However, several degrees either way are allowable. There are several ways to line up screen and projector so that the axis of projection is at right angles with the screen. First, adjust screen so that it is at right angles with an imaginary line running through the center of the audience. Now, if in a carpeted room, note the relation of the center of the screen to a certain seam in the carpet, and place the projector so that its lense is the same distance from this same seam. If the floor is bare, use a particular piece of flooring as you would the carpet seam. If neither is available, locate the projector and the screen an equal distance from the same sidewall, and adjust the screen so that the focus is sharp on both right and left sides.

2. *Image size, with a given objective lense, is determined by the distance of the projector from the screen.* Locate the projector back from the screen just far enough to give you an image large enough for comfortable seeing. Keep the group compactly seated. The rule-of-thumb is that the image in its width should be $1/6$ the distance to the last row of occupied seats. Thus, in a room $24' \times 36'$, and fully occupied, the image should be $6'$ wide. If you have a smaller group in the same room, and fill the seats half way back, an image $3'$ wide will be sufficient. Why all this bother? There are two reasons: The larger the image the less brilliant it is. This is very important in color projection. Also, there is a certain amount of eye strain in looking at an image larger than is needed. Despite these considerations, the theatrical rule-of thumb (fill the screen under all circumstances) is often given. For the large auditorium, a special lens of a longer than standard focal length may be helpful. Refer to your manufacturer's catalog, or see your audio-visual dealer for suggestions.

3. *The third factor controlling the placement of the projector is the audience.* There are those who say that it must be back of the group and never in its midst. In many church situations this will not be possible unless you have a special lens as mentioned above. Is projector noise a factor here? The answer is "No." The noise from a film projector is monotonous in pitch and the mind adjusts itself to it. The click of a slide projector will disturb more than the hum of a quiet film projector or cooling fan in a slide projector. This does not mean that noise should not be reduced to a minimum in all projection equipment. It should. However, the objective attitude of the operator makes him more conscious of noise than the audience.

The speaker: Speaker placement is controlled by

two factors: the audience and the acoustical qualities of the room.

1. Some experts claim that the speaker can be located any where in the room—in the back, in the front, at the projector, or even over the audience. Since the ears have been put on the head to face in the same general direction as the eyes, why not *place the speaker in front of the audience?*

The need for a suitable stand for the speaker has been generally overlooked. In improvising, many projectionists have cut down speaker effectiveness. A three-legged stand of light weight materials can be designed and made by any one possessing a little ingenuity. Still another solution lies in hanging the speaker at a suitable height by means of a cord placed through the speaker handle and hooked over a wall hook.

2. The acoustical qualities of the room determine, in the second place, the placement of the speaker. By trial and error, find the best location. Generally, it should not be close to a flat smooth surface. *It should be a little above the heads of the group and pointed toward the middle of the last few rows.*

Speaker and power cords: With portable equipment, they are a necessary bother. *The power cord will be located with reference to (a) the power outlet and (b) the lines of traffic.* If possible, keep the power cord on the side of the room having the least traffic. If either the speaker or power cord must cross lines of foot traffic, place a carpet or rubber rug over them. When the group is small, the speaker cord may go around it. If the group is large, it may need to go up the aisle. If possible, have power cords of optional lengths for reaching near and distant power outlets. Avoid splicing power cords. Arrange speaker cords so that there is some slack. Some projectionists claim that the power and speaker cord should not lie close to and parallel with each other because the induction thus set up will interfere with speaker performance. Good quality extension cords may be purchased to extend the lengths of the regular cords. These are available with the proper plugs from the manufacturer of your projector. Where projectors are used a great deal in a given location, speaker wiring and power outlets may be permanently installed in the building.

In conclusion: Use common sense. Don't follow any idea out the window! Learn from your own experience. Think out the reasons for doing things. Improve on the other fellow's ideas.

Which Comes First?

MRS. C. L. Zink, of Cuyahoga Falls, Ohio, wants to know if the nine churches of her community should undertake a conference on visual methods before they have a preview or two of materials. She indicates that there is considerable interest among the clergy and some of the church school leaders.

A cooperative preview conference should come before the methods conference. It will be easier to arrange. Your objective will be to *show* materials of various kinds. They will be presented as typical of what is now available to the church. The accent will be on seeing. There can be some discussion about the quality of the material or its usability if you desire. You will find it easy to succeed with the preview conference.

The methods conference presupposes the availability of some very competent leaders—people able to demonstrate *how* to use material. This is not easy. It is a better second or third step than a first one. Too, your people will be more interested in *seeing* materials than in learning how to use them. Start where they are. After they have seen materials, they will be partially motivated in seeking to know how to use them.

You might start your preview in the early afternoon, adjourn for supper, and come back for an evening session. Set up your schedule, and tell people to come for part, if not all, of the preview. Keep a record of who comes. That's your promotion committee for the next one.

Nothing is more fundamental to making a start in such a community than the preview conference. People should see what the visual aids look like. Many of them do not know. Promote visual aids visually. Show them to the people. It's fundamental.

News Notes

A preliminary announcement indicates that Rev. Howard E. Tower, of the Methodist headquarters in Nashville, will be chairman of the Fourth International Workshop in Visual Education which is to be held at Green Lake, Wisconsin, September 1 to 6, 1947. Miss Pearl Rosser, of the International Council staff, will serve as the Workshop Director. A descriptive folder giving complete information, including room rates and transportation, is available from Miss Rosser, ICRE, 203 N. Wabash Ave., Chicago 1, Ill.

Dr. Luther E. Stein, formerly Secretary of the Division of Church Relations of the Presbyterian Board of Christian Education, became the pastor of the First Presbyterian Church, Oak Park, Ill., the first of last month. While with the Board, he supervised the production of the sound film, *The Church Related College*, and two filmstrips: *The Church's Basic Business*, and *World Order and You*. Those interested in these materials should write to 825 Witherspoon Building, Philadelphia 7, Pa.

Denominational V.A. Directors

While the following list of denominational directors of visual aids is probably not complete, it is given for your information and files. These are the people to whom you should write concerning all visual education matters that have a denominational reference.

CONGREGATIONAL CHRISTIAN, Alexander B. Ferguson, Missions Council, 287 Fourth Avenue, New York 10.

BAPTIST (North), Edmund C. Shaw, Northern Baptist Convention, 152 Madison Avenue, New York 16.

BAPTIST (South), Earl Waldrup, Southern Baptist Convention, 161 Eighth Ave., N., Nashville 3.

DISCIPLES (Position vacant).

EPISCOPAL, Charlotte C. Tompkins, National Council Protestant Episcopal Church, 281 Fourth Ave., New York 10.

EVANGELICAL and REFORMED, Oscar J. Rumpf, Bd. of Christian Education and Publication, 1505 Race Street, Philadelphia 2.

LATTER DAY SAINTS, Marvin M. McDole, Herald Publishing House, 103 S. Osage St., Independence, Mo.

LUTHERAN (Missouri), Melvin F. Schlake, Evangelical Lutheran Synod, 3558 South Jefferson St., St. Louis 18.

LUTHERAN (United), George B. Ammon, United Lutheran Publication House, 1228 Spruce Street, Philadelphia 7.

METHODIST, Howard E. Tower, The Board of Education, Room 600, Medical Arts Bldg., Nashville 3.

and
Harry C. Spencer, The Board of Missions, 156 Fifth Avenue, New York 11.

PRESBYTERIAN (U.S.), Alex R. Batchelor, Committee of Religious Education and Publication, Presbyterian Building, Richmond 9.

PRESBYTERIAN (U.S.A.), Frederick R. Thorne, Board of National Missions, 156 Fifth Avenue, New York 10.

and
S. Franklin Mack, Board of Foreign Missions, 156 Fifth Avenue, New York 10.

Interdenominational Agencies

AMERICAN BIBLE SOCIETY, H. H. Ragatz, Department of Visual Materials, 45 Astor Place, New York 3.

PROTESTANT FILM COMMISSION, Paul E. Heard, Executive Secretary, 45 Astor Place, New York 3.

RELIGIOUS FILM ASSOCIATION, William L. Rogers, Executive Secretary, 45 Astor Place, New York 3.

School-Made Motion Pictures

DAVID SCHNEIDER, Editor
Evander Childs High School
New York City

Oscars for Dr. Wheat

IN that excellent book put out by the Educational Policies Commission of the N. E. A., *Learning the Ways of Democracy*, the authors list among other identifying hallmarks of democratic education, the "right to share in determining the purposes and policies of educational activities," the "use of democratic methods in the classroom as well as in the school club," the "efficient use of personnel," and "respect for competence." If I were asked to nominate the one person who best exemplifies in practice all these hallmarks, I would, without hesitation name Dr. Frank M. Wheat of George Washington High School, N. Y. C.

Dr. Wheat is one of the pioneers in the field of audio-visual education whose influence has been felt nation-wide. Dr. Wheat was never afraid to experiment with any new materials or methods in visual education. More important than that, he is the first to encourage any one with a novel approach to a problem, be that person a teacher or a student. When the authors of that famous case book in Civic Education decide it's time for a revised edition, let me recommend them to Dr. Wheat.

The very able account of Film Production at George Washington High School was prepared by Mr. David R. Estlow, the faculty adviser of the school's Arista. Mr. Estlow's Arista and Dr. Wheat's Motion Picture Squad have turned out some prize winning films—democratically conceived and democratically completed.

—D. S.

Film Production at George Washington

by DAVID R. ESTLOW

THE production of films at the George Washington High School is due largely to the inspiration and initiative of Dr. Frank Wheat, Chairman of the Biology Department, also for several years chairman of New York City's Committee on Visual Aids. Our biology laboratory has always been a place of many activities, and it was only natural that Dr. Wheat's enthusiasm for his personal hobby of motion pictures should be communicated to the students in his classes and laboratory. Field trips and experiments provided opportunities for our first attempts to produce our own films. School assemblies gave students the chance to show their work, and it was soon suggested that we make a thirty-minute silent guidance film which would acquaint freshmen entering high school with the school, its activities, and opportunities.

At this point, the Arista, the student service and honor organization, was invited to participate in film production. An Arista Film Committee was created to suggest ideas and to write scripts for the Biology Department's Motion Picture Squad. Equipment and film were supplied by New York City and the school's General Organization, although not as liberally as our photographers wished. Our camera men, like Oliver Twist, always wanted more—more lenses, more

"Emphasis on Science," produced by the Arista Film Committee of George Washington High School, won the American Museum of Natural History's bronze eagle.

The need for young scientists was the theme for "Emphasis on Science."

lights, more film, and even a new camera. We finally purchased a titling machine, and for several months, we have been trying to purchase a wide-angle lens for our motion picture camera.

Planning the production of a film requires several long afternoon committee meetings. Usually, each student has some favorite idea to explain, and new members on the committee make their criticisms of our older masterpieces. Much time is given to considering how different school subjects and activities may contribute scenes to our work. Many ideas have to be discarded, because we do not have the equipment or the techniques to execute them. It is always difficult to persuade novices that motion is the special characteristic of motion pictures. This is particularly true for school-produced silent films. Thus, many admirable features of our school activities, particularly in English and the Social Studies, have to be discarded. One of our films, *Introduction to Poetry*, illustrates the basic difficulty of using verbal experiences for a motion picture. The next step by the Committee after choosing a theme for the film are the selection of titles and the preparation of a "shooting script" for the camera men. We try to make these directions as definite as possible.

The photographers now attempt to carry out our plans. This is quite a problem in a large school, be-

cause students must be excused from classes and the room with the proper facilities may be in use when we desire to take certain scenes. In addition, we have often had the lack of sunlight or an insufficient number of electric outlets disrupt our plans. We have also discovered that a forty minute period is too short for taking a good scene because we must get our equipment, transport it to the set, rehearse actors, check lighting, and finally take our pictures. One of the most effective series of scenes we ever made in a classroom required ninety minutes. A recent two-minute film of our Cheering Squad required an hour. We have found it absolutely necessary to have several rehearsals of each scene, because our actors are too self-conscious at first. We are not too satisfied with our pictures of classrooms in action, because we are unable to show an entire class. We believe a wide-angle lens would overcome this problem. Auditorium scenes have not always been successful because of poor lighting and our inability to photograph a large group at one time. Some scenes, attempted in color, should have been done only with high-speed black and white film.

After the films have been developed, the Committee looks over the results; then two or three of the more

(Concluded on page 224)

The best color scenes from an earlier student production on guidance were cut out and used in "Emphasis on Science."

A SPECIAL PLEA

To All Producers of School Made Motion Pictures

We are almost ready to go to press with the up-to-date list of ALL School-made Motion Pictures. We want to make sure that all your school made films will be included in that list. Please do not be too modest about your achievements. If your school did not return the Questionnaire printed in these pages more than a year ago, will you please take a few moments to fill out the following information and return immediately to DAVID SCHNEIDER, EVANDER CHILDS HIGH SCHOOL, NEW YORK 67, N. Y. The various educational agencies who have been awaiting such official list will be very much indebted to you for your cooperation.

New Biology Film Helps Girls

The film is an ideal medium for teaching "hard-to-handle" areas in human biology.

BIOLOGY has long been taught in schools, often under some such euphemistic heading as "healthy living," "hygiene," or "physiology." Human biology was covered to a given point in such courses. But available teaching tools and materials were inadequate to permit teachers to proceed further. Thus, it was difficult to keep such instruction impersonal—difficult, even, to make it clear.

One subject in the hard-to-handle classification has been menstruation. Teachers of adolescent girls know well the problems resulting from lack of information, misinformation, and a wrong mental attitude toward this normal bodily function.

This cheerful girl typifies the film.

Many mothers give their daughters no information, either because they feel unable to explain the function or because they shrink from frank discussion. Others merely pass on inherited superstitions or set up limitations on activity during the menstrual period, which activities medical science has proved are unnecessary or even harmful. These misconceptions often become responsible for serious psychoses in the adult woman.

A Film Can Teach a Difficult Subject

Teachers have persisted in their efforts to wipe out the evil influence of ignorance on the subject of menstruation. They have welcomed every teaching tool that has been made available to help them.

Today, the motion picture is proving the ideal medium to impart sound information and to develop a wholesome mental attitude toward this function. The film, as a medium, has outstanding advantages. It is impersonal. It is run in a darkened room which prevents embarrassment on the part of the students. Furthermore, a trained commentator speaks from the screen without self-consciousness. Thus, no factor is present which might

She radiates health as she takes her daily shower.

cause students to feel that this is a subject which should not be discussed openly.

All of these advantages have been incorporated in a carefully prepared film, entitled *The Story of Menstruation*, produced by

Walt Disney Productions for the International Cellulose Cotton Products Company. The film is for teen-age girls and will reach them through classes in high schools, junior colleges and 4-H Clubs.

This film has been built around the reasoning that substituting accurate knowledge for fear and mystery will help to create a healthy attitude toward menstruation. It should help to banish girl-to-girl superstitions and misconceptions. It should serve to minimize the mental handicap which hampers many girls during their periods.

"Don't be droopy," she warns.

A Pleasant, Direct and Scientific Approach

The initial plan of the sponsor called for a frank, pleasant directness that has proved to be the essence of wholesome good taste. The tone was to be straight-forward, matter-of-fact, and casual. Any apparent "delicacy" would be an obvious signal that there is something to be delicate about. The whole approach was keyed by the frank title, *The Story of Menstruation*. No coy or sugar-coated, no fluttery or clever title was employed, because it might suggest that the producers didn't dare call things by their right names. There is no suggestion of a "bees and flowers" approach. But don't think that the film is stuffy. It isn't. It couldn't be with the Disney colorful and striking animations.

Two years were spent in making this film, during which time thousands of drawings were created and hundreds discarded. Subject matter, in story-board form, was checked repeatedly in various parts of the country by teachers, girls at various age levels, and medical authorities. The constant effort to refine and to revise resulted in a high standard for the picture. The investment in this one-reel film runs to a sum which few producers of educational pictures could afford to spend.

No mention of the sponsor's product appears anywhere, only the name of Kotex on the title cards at the beginning and end, putting responsibility for subject matter directly upon the sponsor.

She says that good posture is important.

Difficult Production Problems

The making of this film posed many difficult problems. Animation was, of course, a happy solution

(Concluded on page 218)

She gives helpful hints on appearance.

VISUAL INSTRUCTION

BOOK REVIEWS

- **Freedom of the Movies**—Ruth A. Inglis, University of Washington—Report from the Commission on Freedom of the Press., Chicago: Univ. of Chicago Press, 241 pp. 1947 \$3.00.

Note: The Commission on Freedom of the Press, under the chairmanship of Dr. Robert M. Hutchins, was begun in 1943, with the aid of grants of \$200,000 from Time, Inc. and \$15,000 from Encyclopaedia Britannica. The Commission was made up of 13 outstanding educators, economists, professors, philosophers, and a business man.

A thorough inquiry into present trends and practices in the mass communication fields (newspapers, radio, motion pictures, magazines, and books). The Commission published its general report with the following very significant recommendations:

1. "We recommend that the constitutional guarantee of the freedom of the press be recognized as including the radio and motion pictures.
2. "We recommend that government facilitate new ventures in the communications industry, that it foster the introduction of new techniques, that it maintain competition among large units through the anti-trust laws . . .
3. "As an alternative to the present remedy for libel, we recommend legislation by which the injured party might obtain a retraction or a statement of the facts by the offender or an opportunity to reply.
4. "We recommend the repeal of legislation prohibiting expressions in favor of revolutionary changes in our institutions where there is no clear and present danger that violence will result from the expressions.
5. "We recommend that the government, thru the media of mass communication, inform the public of the facts with respect to its policies and of the purposes underlying those policies and, that, to the extent that private agencies are unable or unwilling to supply such media, the government itself may employ media of its own."

Other significant recommendations are made to the press and to the public, all of which should be read in the summary report, which appears as the April, 1947 supplement to *Fortune Magazine*, and is available in reprint form through the University of Chicago Press.

Among the volumes to be published on the basis of this inquiry are:

Freedom of the Press: A Framework of Principle by William Ernest Hocking.

Government and Mass Communications by Zechariah Chafee, Jr.

Freedom of the Movies by Ruth A. Inglis.

Peoples Speaking to Peoples by Llewellyn White and Robert D. Leigh.

The American Radio by Llewellyn White.

The American Press and The San Francisco Conference by Milton D. Stewart; introduction by Harold D. Lasswell.

In *Freedom of the Movies*, Dr. Inglis has examined the motion picture in relation to all other media of mass communication, e.g., press, magazines, radio, and the like. The motion picture industry, as in all previous studies, stands out as a tightly organized monopoly with complete control of the world's production, distribution, and the exhibition of motion pictures. All films that we see are those which the Hollywood producers permit us to see, and for the most part represent their political, social and economic attitudes. Is this freedom of the screen? Obviously not, and Dr.

ETTA SCHNEIDER RESS, Editor

Inglis devotes most of the volume to a discussion of the economic development of the industry, with a review of efforts by the public to curb industry practices, and the results of the industry's own attempts at self-regulation. The recommendations for expanding the screen's mission to include greater public enlightenment and a more significant interpretation of everyday life would appear to be clear and logical:

1. The constitutional guarantees of freedom of the press be recognized as including motion pictures.
2. The government should use its anti-trust powers to destroy monopolistic control of production, distribution, and exhibition.
3. The motion picture industry, by its own action, should place increasing stress on its role as civic and informational agency . . . to promote an intelligent understanding of domestic and international affairs, guard against misrepresentation of social groups and foreign peoples . . . promote newsreels and documentary films for popular enlightenment;
4. The industry be constantly alert to opportunities to experiment with films that would further the screen's artistic and intellectual possibilities, using part of its profits . . . to promote such experimentation;
5. The public itself insist upon the highest attainable accomplishment by the movies, through the press and through local groups . . . that the public set up centers of advanced study and research, whose investigations and reports would incite both public and producers to higher standards.
6. The public sponsor a national advisory board to review and propose changes in the Motion Picture Production and Advertising Codes.

Educators and workers in the documentary and educational film movement can surely find no quarrel with such a long-range point of view. This inquiry reaffirms the great danger which has been borne out by all previous inquiries over the past two decades, that the Hollywood film industry has woven an intricate web of control over the screens of this country and the rest of the world, and that under such a system freedom of the screen could never exist. As usual, spokesmen for the industry will ridicule the report, as did the trusty Motion Picture Herald of Feb. 22, 1947:

"The author of the report . . . decides on what to do about everything and everybody in the picture business . . . She would open the screen to discussions of white slavery, venereal disease, and miscegenation. She is also in favor of not giving 'judges or the clergy protection against indirect censure or ridicule.' She would have, in behalf of freedom, mind you, 'a national advisory board, made up of distinguished and responsible citizens.'

"What Dr. Inglis is asking is a set of national censors to tell the picture business what to do . . .

"Why Time, Inc. and Britannica should underwrite a prescription for the conduct of this industry is not disclosed. Who asked them?"

That the motion picture business, like the newspaper and radio business must accept "the responsibilities of common carriers of information and discussion" with all the social duties that this implies will not readily be accepted by these industries, except in annual reports and after-dinner speeches.

amazing
new

**BESELER
MODEL
OA3**

opaque projector

first and only projector to project FULL PAGE MATERIAL

Now you can see for yourself . . . without cost or obligation . . . how the Beseler Model OA3 clearly projects full pages in magazines and books, as well as maps and other large size material. We are prepared to have this fine opaque projector demonstrated anywhere in the United States in your own office, classroom or church.

The Beseler Model OA3 has met with enthusiastic response wherever it has been shown. Modern in design, compact and quiet, it delivers brilliant screen illumination, outstanding in an opaque projector. The Model OA3 accommodates an 8½" x 11" page, the actual projection area being 7½" x 10".

Mail the coupon today for Free Demonstration of the Beseler Model OA3 Opaque Projector.

Added features of the Model OA3 are self leveling platen with ratchet handle, permitting the use of both hands while inserting copy, and concealed elevating legs. Air cooling system assures adequate cooling of the two 500 watt medium pefocus lamps.

The BEST Projector is the BESELER Projector

(Concluded from page 216)

If only the motion picture industry would heed the long-range recommendations of the Commission, it could achieve greatness on a world basis to compare with the fame, the notoriety, and the technical skill that it already has. But then, on whose side are you?

* * *

Recommendations by Llewellyn White in *The American Radio* include:

1. The FCC should make the separation of programming and advertising compulsory; program standards should be considered when licensing stations;
2. Broadcasters must cut themselves free from the "strangle hold" of advertisers;
3. Broadcasting should come within the meaning of "press" as protected by the Constitution's first amendment;
4. The FCC should license more self-supporting, non-commercial stations run by educational institutions and state and local governments;
5. An independent agency should be established to inquire into radio practices, to appraise government actions effecting communication, and the like.

TRENDS

- **Going to School with the Movies**—Hubert A. Kenny—*American Mercury*, 64:36, January, 1947. (Reprints available.)

A popular appeal for the greater use of films in education, emphasizing the fact that only one-fifth of our public schools have sound projectors. "Here is a means of making them (students) think, and they love it," the author writes as he sets out to prove by citing experimental studies that children gained more knowledge and retained it over a longer period of time with the aid of educational films. Should serve a useful purpose as documentation for local school boards.

TEACHER TRAINING

- **Developing Standards of Teacher Competency in Audio-Visual Education**—A Committee Report for the American Council on Education—*California Schools*, 18:3, January, 1947.

A footnote explains that this report is to be incorporated in a report by the Committee on Content in Audio-Visual Education of the American Council on Education. The 26 educators from colleges, universities, and school systems of California were asked to find out what teacher-education institutions should do in order to comply with the state regulation in California (effective July, 1947) that they give a course in audio-visual education to all prospective teachers.

The outline of criteria for evaluation should be helpful where teacher-training institutions want a guide for their own program. This report supplements the details given in the Western Illinois Teachers College survey described above.

FILM GUIDES

- **Look and Talk**—National Institute of Social Relations, Inc., 1029 17th St., N.W., Washington 6, D. C. 5c ea.

Three guides have been published to date, viz. *Man in the Cage*, *It's Your America*, and *Brotherhood of Man*. They contain significant information on each topic, leading questions for discussion, and a reading list.

Talk It Over, from the same source, is a clever, attractive and stimulating pamphlet reviewing America's race problem, under the sub-title, *Red, White, Blue—and Black*. There are suggestions for visual aids and sources of information, together with a summary of pertinent facts.

PHOTOGRAPHY

- **So You Want to Make Lantern Slides**—B. A. Aughinbaugh—*Film and Radio Guide*, 13:10, December, 1946.

Describes simply and clearly how photographic slides are made.

New Biology Film Helps Girls

(Concluded from page 215)

to most of these. With this medium of expression, "glass-figure" technique could be employed to show the internal organs. A half-real and half-diagrammatic rendering of these was developed in order to avoid any unpleasantness. Thus, the technical clarity of straight diagrams was maintained, and the ghastly effect of a realistic rendering was avoided. No nude figures were shown. Medical language was simplified, and unnecessary terms eliminated without a loss of essential accuracy. A gynecologist of the highest reputation checked the story in detail at every stage of its development: words, pictorial representations, animations, and implications. For example, the bridegroom was removed from the marriage scene which occurs near the end of the film. The succeeding shot shows a young mother with her baby, suggesting the natural course of life. This idea of a natural and normal cycle of life is constantly stressed in the film. In her final words, the commentator states, "There is nothing strange or mysterious about menstruation. All life is built on cycles. And the menstrual cycle is one normal and natural part of Nature's eternal plan for passing on the gift of life."

Woman Narrator

While most films are narrated by men, a woman was chosen for this one. "This narration presents a peculiar problem," reads the neat bit of understatement in one of the dialogue director's reports. "To project, unobtrusively, our theme that menstruation is a natural and normal routine and nothing to get excited about, our voice must project the acme of matter-of-fact sincerity. . . . The voice must not call attention to itself by being too good, or too bad; too glib, or too amateurish."

Teachers who have used the film are deeply impressed by the reaction of girls. They enter into discussion readily and ask questions with sincere, simple frankness. Some schools have arranged to have the films reviewed by P.T.A. groups before it is shown to students. Parents reflect eagerness to have the picture shown to their daughters.

One surprising development from teachers' meetings was the recommendation that the film be shown to boys. It was argued that girls would be saved a lot of embarrassment if boys were given this healthy accurate information. Many groups of boys have now seen the film. Teachers comment upon their courteous, attentive interest. Boys frequently express gratitude for the opportunity to see the film. Some even express the opinion that all boys should see it.

Distribution

Bookings for *The Story of Menstruation* will be handled by the International Cellucotton Products Co., 919 N. Michigan Avenue, Chicago 11, Illinois. It is 16mm. 10 minutes long, sound, and in color. Use of the film opens the way for a frank discussion of problems after the showing.

Teaching Films, Inc.

PRESENTS

MOTION PICTURES

- **Behind the Scenes at the Airport**

Presents airport operations with the dramatic clarity of first-hand observations. For primary grades. Running time, 10 minutes. Price, \$50.00.

- **Animals of the Farm**

A reading readiness film. It provides the child an intimate introduction to the common farm animals. Running time, 10 minutes. Price, \$50.00.

- **What is a Map?**

An introduction to map concepts that will help the teacher of primary grades translate map symbols into a child's reality. Running time, 10 minutes. Price, \$50.00.

- **Bowling Fundamentals**

A skill film designed to teach the basic fundamentals of bowling. Running time, 16 minutes. Price \$75.00.

- St. Valentine's Day
- Lincoln's Birthday

FUTURE RELEASES TO BE ANNOUNCED

Price, \$6.00 per filmstrip; \$43.00 for entire series of eight.

- **Food, Clothing, and Shelter Series**

A series that tells how man has fed, clothed and sheltered himself through the ages. Primary grades.

APRIL RELEASE

- How Man Learned to Shelter Himself
- Man's Shelter Today
- How We Get Our Food
- Preserving Food
- How Man Learned to Feed Himself

MAY RELEASE

- How We Get Our Clothes
- How Man Learned to Make Cloth

Price, \$2.50 per filmstrip; \$15.75 for entire series.

- **International Date Line**

A needed teaching tool on a complex subject. Illustrated with original black and white drawings. Junior and Senior High School. Price, \$2.50.

MAY RELEASES

- How To Tell Time
- Problems in Sports—Basketball
- Use of Fire (series)
- Ancient History (series)

Teachers' Guides accompany all Productions
Catalogue available upon request

This symbol assures the teacher the best materials in visual education, as set forth by these standards:

1. Our motion pictures, filmstrips and slides are planned for use in the classroom.
2. Each production is designed to cover a specific curriculum area at a particular grade level.
3. These teaching tools are produced to assist the teacher in giving the best presentation of the subject.

These standards are maintained by the combined efforts of an editorial board of experienced educators and expert film technicians. All of our efforts are concentrated on a single objective: **THE PRODUCTION OF GOOD EDUCATIONAL FILMS.**

Significant Conclusions at DVI Atlantic City Conference

THE Department of Visual Instruction of the National Education Association held a conference concurrently with the AASA Convention at Atlantic City March 3 through the 5th. Nine group sessions with a panel of specialists for each of the conference topics were held. The 150 members present added their opinions to those of the experts, resulting in the following conclusions and suggestions:

What is the superintendent's responsibility in regard to the audio-visual program?—William B. Hartley, Chairman. An attempt was made to identify those aspects of the audio-visual program for which the superintendent is directly responsible, should assist in supervising, or should actively encourage. These were designated as including:

1. Provision for adequate budget and personnel.
2. Establishment of a well-balanced program, consisting of many various types of audio-visual materials.
3. Evaluation of audio-visual materials in terms of specific curriculum needs and desirable pupil attitudes and behavior.
4. Recognition of audio-visual materials as an integral and essential part of formal instructional materials.
5. Provision for in-service teacher training in audio-visual instruction.
6. Encouragement of greater appreciation for audio-visual materials.

How can the distribution of audio-visual materials over large geographical areas be improved? It was recommended:

1. That the Department of Visual Instruction confer with the U.S. Postmaster General relative to obtaining parcel post rates for film shipments comparable to the present rates for the shipment of books.
2. That film libraries experiment with the use of such supplementary transportation facilities as independently established trucking services, general commercial truck-

ing agencies, 35-mm entertainment film trucking agencies, and passenger bus companies.

What are the trends in production of audio-visual materials?—Charles F. Hoban, Chairman.

1. More films are now in production than during any previous time period, a large proportion of which are being designed for use in the elementary grades, especially to meet important curriculum needs in the fields of science, social studies, reading, and arithmetic.
2. An increasingly large number of films are also being planned for secondary and adult education.
3. Producers are taking definite steps to improve the teaching qualities of films, and educators are working more directly with producers to insure that curriculum needs are more adequately fulfilled.
4. Textbook publishers are producing films to correlate with their textbooks and to present material which can be covered better in films than in books.

How can the problems of evaluation of audio-visual materials be met?—Lee Cochran and Stephen Corey, Chairmen.

1. The need was recognized for distinguishing between appraisals—rapidly derived ratings based upon rather subjective judgment, primarily for immediate selection needs—and true evaluations, which include consideration of the actual effect upon the learner.
2. Emphasis was placed upon the desirability of extending the evaluation process into the planning stage of production through direct channels of communication between producers and users.
3. The validity of appraisal by parents and pupils was discussed.

What constitutes adequate budgets for audio-visual instruction?—Margaret Hudson, Chairman.

1. Small school systems need proportionately more funds than large systems to maintain adequate programs.
2. Various methods of determining the funds needed to finance an audio-visual program were discussed, including:
 - a. A survey to determine what equipment and materials are already available.
 - b. Determining the funds necessary for the purchase of needed additional equipment and materials, rental of materials, staff salaries, and operation and maintenance expenses.
 - c. The relative merits of basing the financial needs upon a per-pupil or per-teacher formula.

It was emphasized that there are two basic factors which should always be considered in determining financial needs: Quantitative—including provision for adequate equipment and materials—and qualitative—including provision for good utilization, administration, and supervision.

What is the status of present and proposed statewide audio-visual programs?—Morland Kopka and Lee Cochran. Following a resume of the status of the audio-visual programs in Iowa, Michigan, Nebraska, New York, Ohio, South Carolina, and Virginia, the group discussed some basic questions, resulting in the following recommendations:

1. There should be an organization, responsible for the audio-visual program, in each and every state.
2. The primary consideration with reference to the placement of the audio-visual organization should be that

(Concluded on page 232)

RCA

"Seeing themselves in television" was the unique experience of educators from all parts of the country who participated in the special television demonstration staged by RCA Victor at the American Association of School Administrators Convention at Atlantic City. Watching their own pictures in the receiver screen while being televised are (right) Dr. Richard S. Pollock, Superintendent of Schools, Sayerville, N.J., and George F. Roberts of Garrett-Buchanan Co.

Tailored TEACHING

"DINNER PARTY"...a personal yet practical approach to the problem of table etiquette instruction. Subtle contrasts are employed to emphasize the reasons for, and the advantages of correct table manners. By its personal approach, the film motivates self-analysis of individual development. A valuable addition to every domestic science curriculum. High school and college level ... color and sound ... 2 reels ... complete with study guide.

Photo, EWING GALLOWAY

"HISTORIC NEW ENGLAND"...a dramatic and colorful picturization of the New England states, produced by Burton Holmes, world-famous lecturer and travel authority. Provides a valuable stimulus in inspiring a wholesome interest in the historic, geographic and economic importance of this region. This film has a cultural and educational value for elementary, high school and college audiences. Color and sound ... 2 reels ... complete with study guide.

WE USE the phrase "tailored teaching" because we feel it most aptly defines the philosophy behind every Simmel-Meservey educational film.

No particular "pattern" can be employed in producing educational films, because no one production style can present all educational subjects effectively. The treatment of each individual subject must be tailored to the existing curriculum and tuned to the tempo of the minds it is designed to instruct.

These two films in the Social Science and Geography Series are convincing testimony of the skill exercised in the execution of that philosophy.

Order them for preview today.

(We are deeply gratified by the response to our recent "Pledge to the Educators of America." In answer to numerous requests we are making available a limited number of reprints suitable for framing. Just send us a note on your letter head or fill in the attached coupon. A copy will be mailed to you without charge.)

Film Production at George Washington

(Concluded from page 214)

experienced members do the editing and attempt to fit the narration to the several scenes. The process of editing is slow, the more so because of the necessity of having a narration to explain the different scenes. The time spent on this phase of production is, however, well spent because the final work, spliced together, is ready to be shown without too many last minute adjustments. All of our films are silent so that a narration seems necessary; moreover, audiences today, particularly those of adolescents, seem to demand a vocal accompaniment. This requirement means that we spend much time fitting our silent film to a narration.

Film Wins Museum "Oscar"

The Film Committee prepared *Introduction to Poetry* in the Spring Term of 1946 for the Audio-Visual Institute Contest, but after the Summer vacation, the committee decided to prepare a second entry. It was felt that we could make a film which would seem more vital to those who would attend the Institute meetings. The publicity given to the need for training young scientists offered us a theme which would permit us to use some of the best science scenes from our thirty-minute guidance film as a background for a strong editorial. We cut out our best color scenes, selecting those which were self-explanatory. Discovering a student who owned recording equipment, we spent several afternoons preparing records of our narration. Unfortunately, however, we were unable to coordinate the recorded narration with the film. One of our artists prepared some titles which were photographed in color; the actual title, *Emphasis on Science*, was simply typed in red. Refer to "Third Annual Museum Audio-Visual Aids Institute," *Educational Screen*, February, 1947, p. 95 for details of the American Museum of Natural History award. The Committee, in talking over the award which our film received, felt that our success was due to a combination of good color photography and an important theme, which was narrated by a girl with an excellent dramatic voice.

Preview it this Summer!

The Story of Menstruation

By Walt Disney Productions

This new movie — planned for teen-age students — is now available for review by teachers and students attending summer schools. Here is a thoroughly researched film . . . designed to save you time and work. One teacher said, "This picture covers more in ten short minutes than a teacher could deal with in forty, even with careful preparation."

Teachers can obtain prints for classroom use during the school year. Reviewing the "Story of Menstruation" this summer will enable you to set up a schedule for next term's work.

The movie does a two-fold job. Superstitions are replaced with scientific facts . . . and easily understood diagrams clarify the physiological background. Attractive cartoons cover such phases as the do's and don't's of "those days" . . . and encourage a healthy, normal attitude. The cartoon treatment in the film has met with enthusiastic approval wherever it has been shown. It not only adds to the interest, but also dispells embarrassment.

The use of prints is *free*. Simply fill out and mail the coupon below for full details.

MAIL TODAY!

Washington Film Council Elects Officers

The Washington (D. C.) Film Council elected new officers at its March 5 luncheon meeting. The executive committee now consists of William H. Wells, UNRRA; Herbert T. Edwards, State Dept., Floyd E. Brooker, Office of Education; Lilius Savage, Canadian Embassy; and John Bradley, Library of Congress. J. Walter V. Evans, Navy, and W. Gayle Starnes, Library of Congress, were made vice chairmen. Mrs. Marian Jarnagin, USDA, was elected secretary-treasurer, and Chester A. Lindstrom, USDA, was chosen chairman.

Program committee: Robert Konikow, Public Health Service; Vernon G. Dameron, National Education Association; and Mrs. DeForest Anthony, consultant. Publicity committee: Alice Lichtenstein, Office of War Mobilization and Reconversion; Ernest Bryan, Navy; and Joel E. Ferris, Motion Picture Association.

New Atlanta Council Officers

Rev. S. L. Laird, Emory Christian Association, Emory University, is the newly-elected chairman of the Atlanta Film Council. Program chairman is Sam Linch of the Audio-Visual Education Dept., Atlanta Board of Education; secretary-treasurer, Mrs. Jessie G. Harris, University System of Georgia. Division of General Extension.

Film Council Organized in Idaho

The Idaho Film Council was organized in Boise, March 10. O. D. Cole, Assistant State Superintendent of Public Instruction, was elected President; Neil F. Blair, Assistant Extension Editor of the University of Idaho Extension Service, Vice President; Rita Hanson, State Supervisor of Elementary Education, Secretary. The Board of Directors elected by the group to represent membership in the Council includes: S. R. Meadows, Pocatello, film libraries; Howard P. Evans, Boise dealers; Rev. Forrest Werts, Boise Religious education; A. H. Chatburn, Boise, schools and educators; W. Dehlin, information groups.

The Curriculum Clinic

(Concluded from page 205)

day was the relationship between motion pictures and discussion when pictures are used well. We saw it not once, but three times, in three different teaching situations. With each of these classes, an intelligent and skillful teacher had provided an opportunity for the pictures to have a maximal impact upon the students.

Films Used in Context

First of all, each picture was used in the context of an on-going learning situation. The pictures weren't dragged in as an extraneous experience. They were an integral part of the instruction. The twelfth-grade group had been spending two or three weeks concentrating on human relationships and a consideration of their own personalities in relation to other people. *You and Your Family* was a "natural" for that class at that time. The ninth graders in an experi-

mental "general education" group, were studying about the modern community, and they had arrived at a point for considering the machine and its effect upon community living with particular reference to their own community. It was imperative that they see *The City*. The first graders were also studying the community and those in the community who help us. Previously they had visited the firehouse across the street from the school. They had written reading charts about their firehouse visit, and they had read stories about firemen. They were ready to widen their experiences with firemen.

Secondly, there was evidence that each of these teachers was thoroughly familiar with the picture he was using. Mr. Jenkins had previewed the "family" picture the day before. Mr. DeZafra had used *The City* many times in the past half dozen years. And Miss Colligan not only previewed the picture but had used the teacher's handbook.

In the third place, before each group saw its picture, each pupil in the group knew why he was seeing the picture. With the two high-school groups, a rather simple but clear cut introduction by the teacher did the trick. In the first grade, a fifteen-minute or so discussion recalling the visit to the firehouse and recalling other experiences with fires and firemen motivated an interest in seeing the picture and served to help them discover the things they didn't know.

In all three cases, the mechanics of projection were smoothly handled in a way that caused no distraction. The groups went to the visual room, and in all cases including the elementary school, student operators handled the projection.

Films Motivate Discussion

Then, what happened when the picture ended? Did the picture have an effect? There was discussion, and it was clearly evident that the pictures had provided rich and vivid experiences that motivated discussion. The twelfth graders were opened up and freed to talk about themselves and their own problems. They were alert to the fact that the picture had placed all the responsibility on the adolescents and that the grown-ups really had some responsibilities too. They were aware of the fact that the same answer wouldn't work in all cases. They realized the importance of their own personalities in their relationships with other human beings.

From Rochester, Dr. Hylla went to New York, where he was to review a list of a hundred or more American motion pictures to aid in the selection of those most important for immediate educational use in Germany. By now he is back in Germany serving as an educational adviser to the American Military Government. We hope that he found many pictures that will help the German people to understand what we mean by a democratic "way". We hope, too, that optimal learning situations can be provided, with teachers who can appreciate the importance of permitting the free and enthusiastic discussion that good motion pictures can stimulate. We hope that Dr. Hylla recognizes that the way the pictures are used may be as important as the pictures themselves in developing understandings of democracy.

Stimulate

the young pupils' interest!

Each of these primary grade full color slide films averages about 50 frames. Each tells a complete tale — one that children love and which they should know as their natural folk tale heritage.

NOW AVAILABLE!

1. Hansel and Gretel
2. The Lion and the Mouse
3. The Little Red Hen
4. The Cat Who Lost His Tail
5. Little Black Sambo
6. Rumpelstiltskin

ADDITIONAL TITLES IN PREPARATION

THESE FILMS ACHIEVE 4 IMPORTANT OBJECTIVES:

1. Develop reading readiness — the young pupil is strongly motivated to read the story he has seen and other stories as well.
2. Remedial Reading—for, with every child's attention sharply focused, the teacher has the very best opportunity to develop word, phrase and sentence meaning.
3. Choral Reading — develops rhythm and fluency.
4. Ideal Sight Saving Classes — for by placing projector in proper relation to screen, type of any desired size can be shown.

Complete set of 6 films \$30.00. Individual slide films \$6.00 each. Without obligation, write for FREE brochure on these outstanding slide films.

Commission on Motion Pictures In Adult Education Established

Announcement has just been made at the offices of the American Association for adult Education of the establishment of a Commission on Motion Pictures in Adult Education to facilitate the distribution and utilization of films useful in the educational programs of adult groups. The work of the new Commission is to be sponsored by the American Association for Adult Education and its activities financed by Teaching Film Custodians, Inc. The Commission consists of 18 members representing a cross section of adult educational activities in various parts of the country, and has been organized under the chairmanship of Morse A. Cartwright, Director of the American Association for Adult Education. Its Executive Secretary is L. Harry Strauss, formerly Consultant on Audio-Visual Services of the National Council of the Y.M.C.A. and the central office of the Commission has been established at 19 S. La Salle St., Chicago 3, Illinois.

The Commission first will be concerned with the educational utilization of films commercially produced—in the form of short subjects and of excerpted longer theatrical films. The distribution of such films for several years has been limited to elementary and secondary schools. For several years such distribution has taken place under the auspices of Teaching Film Custodians. The distribution of films hitherto rigidly restricted has been broadened so that selected films can now be used in the educational programs of adult groups. President Eric Johnston of the Motion Picture Association of America has requested the Commission to determine the basis upon which appropriate films may be selected and to determine effective distribution channels.

Mr. Cartwright, as Chairman of the Commission, stated, "While there has been considerable activity in the production and distribution of film materials there has been relatively little done in the field of utilization with respect to adult education."

The immediate objectives of the Commission include the development of principals and procedures under which films will be selected, evaluated, annotated and distributed to adult groups. The long-term objectives include widening the area of search for potentially valuable adult education films. Adult education areas will be studied in relation to film needs and where film coverage is found to be inadequate, production will be recommended.

It is anticipated that several film organizations now operating in the field of adult education will be used to select and evaluate films for the project. The Chicago Film Workshop and the Institute of Adult Education at Teachers College, Columbia University, have already indicated willingness to

Notes

cooperate with the Commission and to make available suitable reviewing groups. Films selected, evaluated and annotated will eventually become available through Teaching Film Custodians, Inc.

New Distribution Policy for USDA Films

As soon as any film library buys ten or more of a group of twenty "general interest" motion pictures now being selected, that library will be considered a cooperator on a non-depository basis and will be so listed in literature issued by the Motion Picture Service of the Department of Agriculture. The new policy also permits cooperating libraries to make their regular charge, but not in excess of \$1.00 per reel per day or a maximum of \$5.00 per booking for black-and-white prints.

The first ten of the twenty films designated are: *Freezing Fruits and Vegetables*, *The Golden Secret*, *Guardians of the Wild*, *The Home Place*, *In the Beginning*, *Learn to Swim*, *The Man Who Missed His Breakfast*, *Mosquito—Public Enemy*, *Realm of the Wild*, *The River*.

These pictures were chosen with the cooperation of the Film Council of America. All are recommended for showing before any age group except *The Golden Secret*, which is for children. Descriptions are in the USDA Motion Picture Catalog. Publication No. 574.

Ball State Audio-Visual Conference

Mr. Floyd Brooker of the United States Office of Education will highlight the second annual Audio-Visual Conference at Ball State Teachers College, Muncie, Indiana, April 25 and 26. The State School Library Association of Indiana is sharing the program as a guest organization.

Topics under discussion on April 25 include "Audio-Visual Developments," "Architectural Flexibility," "School Librarianship in Review," and "The Role of the Educational Motion Picture." The second day will involve lectures and demonstrations of audio-visual materials. Request screening of films and auditioning of records will be a feature of the afternoon session on that day.

University of Tennessee Branch Libraries

The Extension Division of the University of Tennessee has established two branches of its film library to give film users in the state better service. One new branch is located at the Agricultural Extension office in Nashville, and the other at the Junior College in Martin. The main library remains at the University in Knoxville.

Booking figures, namely 7,000 bookings for 18,000 showings before audiences totaling two million, indicate the need for these branches. J. E. Arnold is in charge of the film library at Knoxville.

For PERFECT SOUND PROJECTION

It's the New Victor 16mm. Sound Projector

Easy to set up and operate. Equipped with many new operating features. Film library of over 2,000 subjects available for rental.

A New Way To Teach

The army and navy tried a bold new teaching method during the war—**visual training cards**. They worked—dramatically well! Thousands of men learned service tasks quickly and easily through use of the cards.

Now the visual training card has been adapted to peace-time education in **TRAINDEX**. This important new learning technique will be introduced to the teaching profession this month. Ask to see **TRAINDEX**—the teaching aid which makes your classroom work easier and more efficient.

Audio-Visual Programs in Washington

Frequent conferences, sponsored by the Bureau of Visual Teaching, State College of Washington, Pullman, keep Washington educators abreast of latest developments in trends, techniques and equipment in the audio-visual field.

At a North Central Washington group meeting on March 15, Mr. William G. Gnaedinger, Head of the Bureau of Visual Teaching, delivered "Some Help in Teacher-Training for Visual Aids," while D. L. Kruzner, deputy supt of King County Schools, discussed "Setting Up an Instructional Materials Center." Amo DeBerardis of Portland Schools talked on

"Learning Concepts with Visual Aids."

Guest speaker at a conference in Walla Walla on February 20 was Glenn Jones, Director, General College Extension, State College. He described a "Teaching Film Program for This Community."

Board of Review Reorganization and Conference

The National Board of Review of Motion Pictures announced completion of its plan to reorganize the structure of the Board to include representation for twenty-two organizations of national scope at its 38th Anniversary Conference. The plan, first projected at the 1946 Conference, was described by Quincy Howe, CBS commentator who is President of the National Board of Review.

Organizations which have accepted the Board's invitation to join in its work, Mr. Howe said, include: American Association for Adult Education, American Association of University Women, American Bar Association, American Federation of Arts, American Jewish Committee, American Library Association, Association of American Colleges, Association of Better Business Bureau Inc., Boy Scouts of America, Boys' Clubs of America, Camp Fire Girls, Inc., Cooperative League of the U. S. A., East and West Association, General Federation of Women's Clubs, National Council of Women of the U. S., National Council on Freedom from Censorship, National Federation of Business and Professional Women's Clubs Inc., National Society D. A. R., Protestant Film Commission, Society for the Americas, Young Men's and Young Women's Hebrew Association, Young Women's Christian Association. Delegates from the twenty-two organizations were among the Conference audience of 500, which also represented Motion Picture Councils and other community groups throughout the country.

Children's Film Library

The Conference also cited for special praise the Children's Film Library, created by the Motion Picture Association of America in 1946 for the purpose of making widely available films specially suitable for children.

The Conference, which consisted of a morning and afternoon session, was featured by the appearance of Jean Benoit-Levy, director of such noted French films as *La Maternelle* and *Ballerina* and now Director of Films and Visual Information for the United Nations who described the plans of his department for filming the work of the United Nations in all its branches and for the world distribution of these films.

"Cleaned Up" for Export

Orton H. Hicks of Loew's International Corporation told approvingly how such films as *Grapes of Wrath* and *Mr. Smith Goes to Washington* were "cleaned up" before they were allowed to be exported, in order that foreign audiences might not get any unfavorable impressions of democratic processes. Louis de Rochemont, who followed, countered this statement with a report on the foreign reception of American films which told the truth about the evil as well as about the good in American life. Such pictures as his *Boomerang* were given a welcome because of their

honesty. He discussed the techniques which he employed in making *House on 92nd Street*, *13 Rue Madeleine*, and *Boomerang*. De Rochement mentioned the possible application of the technique to both fiction and documentary films.

During the morning sessions, Mildred L. Batchelder, of the Department of Information and Advisory Service of the American Library Association, described the work of the Association in aiding public libraries to serve as community centers for 16mm educational films. The Children's Film Library was discussed by a panel consisting of Marjorie Dawson, assistant director of community service of the Motion Picture Association of America; Lucille Hein, of the Camp Fire Girls; and Bettina Gmeczy, Secretary of the National Board of Review.

Librarians and Teachers Meet

Audio-visual aids in the classroom were discussed at the third annual Secondary School Library Institute held by Marywood College's department of librarianship on Friday and Saturday, Feb. 21 and 22. Nearly 200 librarians and educators from six states and the District of Columbia were present for the two-day conference, which emphasized co-operation between librarians and teachers.

"Should the time come when we are willing to pay for education what we pay for entertainment, we can enjoy the same high quality of educational films and projection equipment for both, but at present we cannot, or should not, compare the two," stated Dr. Charles F. Hoban, director of audio-visual edu-

cation for the Philadelphia (Pa.) public schools. Dr. Hoban, speaking from his experience as an officer in charge of distribution of training films for the Army during the war, told of the importance and value of films in the classroom, as proved by Army and Navy tests.

In a materials center, films, filmstrips, recordings, and printed material on the United Nations and racialism were assembled and demonstrated to librarians and teachers as examples of what can be done in specific areas.

Perhaps of most importance to the librarians present was the general agreement that the library itself is a strategic center for the distribution of information and materials in an audio-visual program for the school.

Iowa Teaching Conferences

Practical use of audio-visual teaching aids in the classroom and the place of these aids in the school program and the community were covered by talks and demonstrations in five Iowa cities from March 17 to 21. The conferences were conducted by a staff of eight experts under direction of the University of Iowa's bureau of visual instruction of the extension division.

Director Bruce E. Mahan of the university's extension division said the daily programs included demonstration of use of maps, filmstrips, and motion pictures in the classroom; radio and recordings, laboratories on operation and maintenance of projection

equipment; and radio, disc, and wire-recording equipment.

In addition to Director Mahan, the staff consisted of Lee W. Cochran, executive assistant; John R. Hedges, director of the bureau of visual instruction; Dr. James B. Stroud of the college of education; and Robert E. de Kieffer, graduate assistant in education.

Included will be three visiting authorities in the visual education field: Roger Albright, director of educational services, Motion Picture Association of America, Washington D. C.; Dean E. Douglas, regional manager, RCA educational department, Chicago; and Joseph E. Dickman, regional manager, Encyclopaedia Britannica Films, Inc., Chicago.

Chicago Preview of "Children on Trial"

John Hamilton, Chicago Film officer of the British Information Services, has announced that a preview showing of *Children on Trial* will be held May 7, Woodrow Wilson Room, 81 East Randolph Street, Chicago at 2:30 and again at 8 p.m. This screening will give club program chairman, teachers, and civic leaders an opportunity of seeing this feature-length documentary at first hand.

Loan Exhibits

An exhibit covering Approved Schools and juvenile delinquency is available on a loan basis upon request to the nearest office of the British Information Services. For the address, refer to "A Trade Directory for the Visual Field" on the last page of this issue.

School for Screen Writers

(Concluded from page 184)

ing, *I Know Where I'm Going* and *A Matter of Life and Death*; Anthony Havelock-Allen, David Lean and Ronald Neame, who made *Blithe Spirit*, *In Which We Serve*, *This Happy Breed*, *Brief Encounter*, and *Great Expectations*; Frank Launder and Sidney Gilliat, who distinguished themselves in productions like *Millions Like Us*, *Notorious Gentleman*, *The Rake's Progress*, *I See a Dark Stranger*.

Almost all these men began their brilliant film careers with script writing, and up to the present day still continue the practice of working out their own scenarios. Their names can be found on the list of the committee members of the Screenwriters' Association, the president of which is the famous J. B. Priestley. Another prominent member of the Screenwriters' Association, Gordon Wellesley, will also play an important part in the development of the young writers.

The four production companies which are organizing the scheme as a combined effort constitute the Independent Producers, Ltd. This progressive film is headed by George Archibald, J.P. as its managing director. During the war he held one of the most important posts with the Films Division of the Ministry of Information.

Educational Projects

(Concluded from page 200)

tional Services under the direction of Mr. Roger Albright. Mr. Albright is also the Director of Educational Services of Teaching Film Custodians, and one of his duties is to coordinate all projects supported by the industry. He is working with Mr. Johnston in

organizing a program of expanded educational services.

Mr. Johnston, in his last annual report to the Motion Picture Association, titled *The Motion Picture on the Threshold of a Decisive Decade*, says "There has been much talk about motion pictures for the classroom. The need has been only partially met. . . . What has been done so far, at best, dimly foreshadows the accomplishments of the future."

Significant Conclusions at DVI Conference

(Concluded from page 220)

of facilitating coordination with the school officials responsible for curriculum construction, instructional methods, and instructional materials.

3. The functions of the department should include:
 - a. Guidance in the selection and utilization of audio-visual materials.
 - b. Promotion of audio-visual instruction.
 - c. Provision of leadership for inservice teacher training.
 - d. Statewide research on audio-visual problems.
 - e. Coordination of production, and, in some instances, engaging in the production.

How can teacher-efficiency in the use of audio-visual materials be increased?—L. C. Larson, Chairman.

1. Objectives for teacher-education in audio-visual instruction should be established on a functional basis, in terms of specific knowledge and abilities.
2. Effective use of audio-visual materials should be exemplified throughout the curriculum of the teacher-education institution, in both the general and professional education courses.
3. One or more special courses in audio-visual instruction also should be included.
4. An audio-visual center with a well-qualified staff and an adequate supply of materials and equipment should be provided. This is a responsibility of college administrators.
5. The service provided by the college audio-visual center should include keeping the faculty members informed on the availability of materials, supplying materials and equipment for use in the classrooms, and assisting faculty members to use and evaluate materials effectively.
6. Training through conferences, institutes, and workshops must be provided for teachers now in service. This is a responsibility of superintendents, principals, supervisors, and directors of audio-visual instruction.

How can a typical city or county establish an audio-visual program?—James Brown, Chairman.

1. All "first steps" in planning a program should be made on a cooperative basis which encourages the widest possible participation of interested school personnel.
2. A survey should be made to determine the present status of audio-visual instruction within the school unit as a basis for determining additional needs.
3. Subsequent steps should include:
 - a. Determining how audio-visual materials can contribute best to the on-going program of instruction.
 - b. Determining the budget, based upon needs and cooperatively developed.
 - c. Selection of qualified personnel to serve as coordinators in each school.
 - d. Provision for inservice training.
 - e. Establishment of an instructional materials center easily accessible to all schools within the unit, to provide distribution of materials too expensive to be purchased by the individual schools and to provide consultative services for teachers.
 - f. Provision for the individual school to own and circulate within the building the many less-expensive types of materials.

It was also emphasized that funds for the audio-visual program should be a regular item of the school budget and not regarded as an "extra" to be financed by voluntary contributions.

AUDIO - VISUAL TRADE REVIEW

Production Activity

Academy Films in Production

From Hollywood comes the announcement of the formation of the Academy Films organization under the leadership of James A. Larsen, who was associated with Coronet Films for several years in the capacity of cinematographer, producer and director. The new company expects to specialize in the production of the finest educational films of a type which should be readily welcomed and much sought for instructional purposes.

Academy Films are being released through an organization of franchised dealers and will be supported by a comprehensive national advertising program, running currently throughout the school year. The first three films, each 1-reel 16mm sound, of eleven-minutes' duration, include *Circus People* and *Circus Animals* designed for lower grades, and *Water Supply* for upper grades and junior high science classes. Recorded in Hollywood on the latest Western Electric Sound system, these films are available in natural-color Kodachrome and black-and-white. The same subjects are also offered in 35 mm filmstrip and 2x2 slides. Script writing and editing were done in collaboration with prominent educators to assure a high degree of academic value.

United World to Distribute Geography Film Series

Louis de Rochemont is organizing an educational film company which will produce a series of 86 short color films on geography. These films will be released through United World Films, formerly Bell & Howell Filmosound Library. United World is said to have budgeted \$3,500,000 toward this undertaking. Cameramen will be organized to shoot film in the various countries of the world. Approximately, two years will be spent making the films. Louis de Rochemont was at one time the producer of the *March of Time*. He is now under a part-time contract with 20th Century-Fox.

Textfilms for Publishers

The Society for Visual Education, Inc. announces that the first Textfilms are available in the new textbook-filmstrip program undertaken in cooperation with leading publishers. Both S.V.E. and the particular publishers involved in the program will market these completed filmstrips through their regular distribution channels. The same academic specialists who have for years channeled their efforts into textbook developments are now thinking in terms of presenting appropriate concepts by a powerful additional means of communication—the filmstrip. The procedure for preparing these films involves an analysis of the subject-matter area presented by the textbook. The filmstrip is then prepared so that an integrated teaching-learning experience will be gained by the student through the use of the two media.

Row, Peterson, and Company have correlated the Textfilm, *Simple Machines* with two books: *Doing Work* (third and fourth grades) and *Machines* (junior high). The film will carry that part of the teaching load impossible to the textbook because of the book's limitations as to size and cost. "Book and film together are aimed at the same goal," according to Eric Bender, Visual Education Editor.

Silver Burdett Company have correlated the filmstrip *From Australia to the Arctic* with the chapter of the same title in the textbook, *In Our Big World*. Pictures have an especially important place in geography text such as the *Man in His World* series of which the above is a part. Clarence Woodrow Sorensen, co-author of the series states that the filmstrip presents a unique opportunity for students to think geographically and become aware of the tremendous diversity of detail in regions which are fundamentally much alike.

American Book Co. Correlated Aids

The American Book Company has announced a correlated program of visual aids to accompany their new post-war high school Physics Book by Whitman and Peck.

The Visual Aids program to accompany this text has been developed by the authors working in collaboration with Visual Education Consultants, Inc. of New York City. The filmslides and other materials that will be recommended for use in connection with the text

ROBERT E. SCHREIBER, Editor
Audio-Visual Center
The University of Chicago

have been carefully selected after reviewing a great field of subjects.

Among other services to the users of the Whitman-Peck text is a set of selected motion pictures and slides prepared by and for the U. S. Government and now offered to schools at special prices. The American Book Company will sell these selected films along with the texts. A special teachers manual dealing with Visual Aids in Physics and organized to supplement the teaching units in the text will be furnished teachers.

People

Loew's In Latin America

Sixteen millimeter operations in Latin America are developing slowly but soundly according to expectations, reports Seymour Mayer, 16mm sales chief for Loew's International Corp. Mayer, who recently returned from a two months' inspection tour of all MGM offices in South America, stated that the future of commercial 16mm is bright and lucrative.

He indicated that the first year of business has revealed a definite preference on the part of 16mm patrons for Spanish synchronized films. This is particularly true in the back-woods areas, where titles are not acceptable and there is unfamiliarity with the English language. Mayer said that it was these provincial areas which were proving themselves the most fertile spots for 16mm operations, and that there was nothing unexpected in their preference for all-in Spanish films. The flow of 16mm equipment during the past six months has put business on a sound basis, well into the operational stage.

Levy to Midwest

Appointment of Alfred Kahn Levy as production manager was announced this week by Midwest Film Studios, 1740 Greenleaf avenue, Chicago's newest producer of motion pictures and slidefilms for commercial and television use.

Mr. Levy, formerly with the motion picture department of the Reynolds Metals Company, Louisville, brings to his new post a background of years of experience in commercial and documentary film-making. While with the State of New York, he pioneered in the making of documentary film subjects on public health education for theatrical release, and while assigned to the Pacific Theater, he filmed sequences for such widely-distributed films as "Brought to Action," "The Fleet That Came to Stay," "Fury in the Pacific," "Action on Anguar," and others.

Morgan to Mitchell

George H. Mitchell Company, Dallas, Texas, announces the appointment of R. S. Morgan to the position of General Manager.

University of Illinois Prexy an EBF Director

George D. Stoddard, president of the University of Illinois, has been named a member of the Board of Directors of Encyclopaedia Britannica Films Inc., it was announced by E. H. Powell, chairman of the board of the educational motion picture producing concern. Long interested in visual education, President Stoddard has written and done research work in the field.

On the board of directors of Encyclopaedia Britannica Films he joins two other chief executives of colleges, Chancellor Robert M. Hutchins of the University of Chicago, and President Emeritus Ernest M. Hopkins of Dartmouth College.

RCA 16mm Sales Con'tacts

A week-long planning meeting to discuss distribution and product plans was held by RCA's 16mm Equipment Section at the home office in Camden, N. J., April 14 to 18.

O. V. Swisher, Manager of the 16mm Equipment Section, revealed first details of the new line of 16mm equipment to be announced soon. W. H. Knowles, Manager of the Educational Department, described the Section's plans for working with schools across the country.

A series of follow-up meetings to announce plans made at the Camden meeting to RCA 16mm Equipment dealers, will be held in New York, Cleveland, Chicago, New Orleans, and Los Angeles in May.

Victor Training Program

In line with policy of providing efficiently-trained service men throughout their entire distributor system, the Victor Animatograph Corporation recently completed the training of 24 men. Another class is now in training at the Victor factory in Davenport, Iowa.

These servicemen are provided with a free two-week course in the Service and Repair Department. This factory training under the supervision of Victor's

own representatives provides Victor distributors with men who can efficiently service their 16mm sound motion picture equipment.

Although many Victor distributors took advantage of this opportunity prior to World War II, the expansion of the distributor system and the number of enlarged service departments in the system, has given added impetus to the program during the past few months.

NAVED Meetings

The Western Regional Meeting of the National Association of Visual Education Dealers will take place at the Hollywood-Roosevelt Hotel, Hollywood, California, on April 24, 25 and 26, it was announced today by Merriman H. Holtz, President of the Screen Adette Equipment Corporation and NAVED Western Regional Director. Better than 100 persons are expected to attend the meeting, including dealers, film librarians, and salesmen.

The third in the NAVED series of four regional meetings was held in Chicago on March 29. C. R. Reagan explained to members the newly-enlarged program of the Film Council of America. Mr. Reagan, who was a charter member and first president of NAVED, told the group of a recent UNESCO decision to give "strong consideration" to the Film Council as the American non-theatrical film body of UNESCO. The meeting was called to order by Olson Anderson of Bay City, Michigan, NAVED Vice President. E. C. Waggoner, Director, Audio-Visual Education, Illinois State Department of Education gave the welcoming address. Bernie Cousino of Toledo, President of NAVED then spoke on "1947, Your Year of Opportunity."

The second regional meeting had been held previously in Atlantic City. Art Zeiller, NAVED Regional Director, was in charge of the program. Dennis Williams, sales manager for Encyclopaedia Britannica Films, talked on "The Balance Between Salesmanship and Management." The Association's Board of Directors approved a pro-

posal that NAVED work with the Federal Trade Commission in a proposed Trade Practice Conference, leading to the establishment of a set of Trade Practice Rules for the visual education industry. An item of discussion was the NAVED 1947 convention, which is scheduled for August 4-6 at the Sherman Hotel in Chicago.

DeVry Offers Administration Pamphlet

Suggestions For Organizing a Functioning Audio-Visual Teaching Aids Department is the title of a new DeVry School Service Bulletin now available, without charge, to readers of this publication.

Written by Mr. Charles R. Crakes, DeVry Educational Consultant and famous authority on audio-visual teaching aids, the bulletin covers in concise form, fourteen basic steps involved in setting up a well organized, functioning audio-visual teaching aids department.

You may obtain a free copy of this pamphlet by writing to the DeVry Corporation, 1111 Armitage Avenue, Chicago 14, Illinois, and requesting the DeVry School Service Bulletin Number 3.

Stanton Joins Florez, Inc.

Norman B. Stanton, formerly Assistant Publication Manager of the McGraw-Hill publications *American Machinist* and *Product Engineering*, has joined the staff of Florez, Incorporated, Detroit.

As Editorial Manager, Stanton will supervise all creative work on films, printed material and other media used in the promotion and training programs which the firm develops.

Harry E. LeRoy Moved Up at RCA

Harry E. LeRoy, who started as a 60-cent-an-hour electrician, has been appointed to the newly created position of Director of Manufacturing for the RCA Victor Division, Radio Corporation of America, it has been announced by J. G. Wilson, Operating Vice President of the Division.

NAVED members at the association's midwestern regional meeting in Chicago.

Prior to this appointment, Mr. LeRoy was General Plant Manager of the RCA Engineering Products Department, a unit of the Division. In his new position he will coordinate and direct the manufacturing activities of the company's ten plants throughout the country.

Mr. LeRoy first became associated with RCA in 1923 as an electrician at Harrison, N.J., and in 1932 had risen to manager of test equipment design and electron tube manufacturing. Four years later he was named manager of the RCA Victor plant at Indianapolis, a position which he held until 1938 when he was appointed executive assistant to the Vice President in Charge of Engineering in Camden, N. J.

Equipment

Perflex Magazine Loading 8mm Camera

Camera Corporation of America is now making available through dealers the new Perflex 8mm cine camera that brings many of the conveniences found only in high-priced cameras: magazine loading, three-lens turret front, and five operating speeds ranging from eight to thirty frames per second. A 64-page booklet entitled "Perfect Movies and How to Make Them" is available free to interested readers. Write Camera Corporation of America, 844 W. Adams Street, Chicago 7 for your free copy.

Sears Introduces a Wire Recorder

The introduction by Sears, Roebuck, and Company of a low-priced wire recorder, radio, and phonograph combination confirms rumors which have been sweeping the radio industry that Sears would be the first distributor to offer a wire recorder in the low-priced field.

Sears wire recorder, radio, and phonograph.

According to T. V. Houser, Sears' vice president in charge of merchandising, the sale of this new recorder is at present being restricted to the company's Chicago area stores. Large-scale factory production is just beginning to get underway. Hence, the company is hopeful of being able to achieve national distribution through its stores at an early date.

The recorder being introduced by Sears carries the distributor's brand name of Silvertone. It was developed by Sears in conjunction with several of its manufacturing sources.

The first Silvertone wire recorder combination is a table model which includes a radio and a phonograph. Recordings are made on a 3½ inch spool of stainless steel wire which is capable of recording a one hour's continuous program. The wire may be played back an unlimited number of times. A method of electrical erasure removes the recording when desired, and this makes it possible to use the wire over and over again. Music or speech on this wire is said to have unusually high fidelity.

Natco Projectors Go Abroad

The U. S. Army has contracted with Natco, Inc., of Chicago for 1500 sound film projectors to be used in the German de-nazification program and for general educational purposes in Japan and Korea. Announcement of the order was made by Gerald Gidwitz, president of Natco, Inc.

New Test Chart Set Checks Photo Equipment

The Spencer Company of Mount Vernon, New York, announces the introduction of the Spencer Test Chart Set. This new set will enable photographers to check their photographic equipment and techniques without complicated and expensive equipment. Some of the tests that can be made with this set are:

ADAPT YOUR CAMERA FOR KODACHROME

With the amazing Essenkay Color Film Adapter (patented) you can enjoy the thrill of color pictures in the popular Bantam (828) picture size. Kit consists of mask and film spool extension to fit Argoflex, Rolleiflex, Rolleicord, Super Ikonta B and BX, Ikontex, Korell-Reflex, Attilflex, Wirgin Reflex, Speedex, Super Sport Dolly, Kodak Duo 620, Exacts and other 120 and 127 size cameras.

S-T-R-E-T-C-H your teaching time handle MORE students

Use
SOUNDSCRIBER
Trade Mark

WITH a vastly increased enrollment in language classes, time and teacher shortage become the instructor's most important problems.

Many language departments are solving this problem by employing the SoundScriber electronic disc recorder as an aid to voice and language instruction—in lesson planning, testing and drill.

The SoundScriber electronic recorder records every shade of inflection, every nuance of diction on paper-thin, unbreakable plastic discs. Thus the scope and effectiveness of live voice in-

struction is multiplied—and students' comprehension is increased by testing their own voice-recordings on SoundScriber discs that cost only a few cents.

SoundScriber will instantly repeat a word, a phrase, or a sentence. The SoundScriber is light in weight, is readily portable from one classroom to another, and easy to operate. It is low in first cost and low in operating cost.

Write for complete information on the ways in which the SoundScriber is being used by leading schools, colleges and universities.

lenses, cameras, filters, exposure meters, developers, films, and many others including resolution tests.

The set consists of a specially designed master test chart which measures 11x14 inches. Six special Target charts supplement the main chart in many tests. Data slips are provided to record information. An illustrated manual gives complete details on how to make the various tests.

Sound for 16 Frames

United Motion Pictures, Ltd., have announced a unique facility of their new London studios, 16 frames-per-second sound. A 5000 cycle fidelity sound track is made possible through reducing the recording slit width to less than .0005 inch.

The new method makes possible the synchronization of sound with silent productions in a more showmanly manner. Heretofore, when sound was added to silent footage, the resulting necessary increase in projection speed produced a jerky movement which greatly lessened the efficacy of such films for general use.

Slidefilms and Slides

■ **YOUNG AMERICA FILMS, INC.,** 18 East 41 Street, New York 17 has announced the first 12 titles in a new series of primary grade story slidefilms in color art work. The stories are sold by sets.

Set No. 1—*Hansel and Gretel, The Lion and the Mouse, The Little Red Hen, The Cat Who Lost His Tail, Little Black Sambo, and Rumpelstiltskin.*

Set No. 2—*Cinderella, The Three Bears, The Three Little Pigs, The Boy Who Went to the North Wind, The Four Musicians, and The Dog and the Cat.*

Young America's "Three Bears"

■ **COCA-COLA COMPANY,** 515 Madison Avenue, New York 22, N.Y. announces a sound slidefilm entitled, *The Story of Oil.* This slidefilm, with record, contains no advertising and was produced by the Jam Handy Organization with the cooperation of the American Petroleum Institute, Mid-Continent Gas & Oil Association, and the Western Oil & Gas Association.

■ **SIMMEL-MESERVEY**, 321 South Beverly Drive, Beverly Hills, California, are producing a new line of slidefilms, employing a type of cartoon visualization which is intended to help motivate student thinking and action.

The Field Trip (35 color frames) is designed to aid both teachers and students in planning a successful field trip. It suggests ways of doing it and makes it primarily the students' responsibility to think of all the procedures necessary for a worth-while trip.

Schoolground Discover (23 frames) deals with the problem of the untidy schoolyard, subtly placing responsibility on the student.

Transcriptions and Recordings

M-G-M into the Record Field

Metro-Goldwyn-Mayer is providing its lion with platters now that it has entered the record field. Ready to offer RCA-Victor, Columbia, and Decca stiff competition, M-G-M has begun production in its three million dollar New Jersey record plant. Distribution will be through Zenith Radio's dealers. First records have been recorded from motion pictures produced by the parent company. These records have been largely of the popular type.

■ **RCA VICTOR**, Camden, N.J. has released two albums of value to school record libraries. Bach's Cantata No. 4, *Christ Lag in Todesbanden* and a Handel-Beecham ballet, *The Great Elopement*.

Recorded closely in the authentic tradition is Bach's Cantata No. 4, *Christ Lag in Todesbanden*, Album DM-1096. Critics have praised Robert Shaw for his conducting of the recent Bach releases. This is the first domestic recording of the entire work.

The Cantata No. 4, *Christ Lag in Todesbanden*, is a solemn work of great beauty and dignity. Bach, for the first time in his life, took an entire Lutheran congregational hymn. He had already employed this melody before in four of his choral-preludes for organ and at the close of Cantata No. 158. Victor does an extremely authentic job of recording this work. The orchestra is of an appropriate size— not overly large—and includes a harpsicord, the instrument used in Bach's time. David Hall in his notes to the album states that this work was first played and sung on Easter Sunday at Leipzig's St. Thomas' Church in 1724.

Handel was a contemporary of Bach, both being born in the year 1685. In recent years, many musicians have taken an interest in the early music. Some have attempted to play it in an authentic

manner while others have rescored such music for the large modern orchestra.

Sir Thomas Beecham, known for his understanding of Handel's music, arranged a ballet suite from the works of that master. The suite is called *The Great Elopement* (Handel-Beecham), recorded on three 12-inch records in album DM-1093 by Sir Thomas and the London Philharmonic Orchestra.

Sir Thomas Beecham has drawn from Handel's compositions to produce a number of suites. Most of the music in *The Great Elopement* was drawn from ballet and dance movements. All the selections have been rescored for modern orchestras. *The Great Elopement* is in itself a ballet with the story by Sir Thomas himself. It had its world premiere in America on April 7, 1945 when Sir Thomas conducted the American Broadcasting Company Symphony Orchestra. The first concert performance took place a few days later with Sir Thomas conducting the Rochester Philharmonic Orchestra.

- **POPULAR SCIENCE PUBLISHING CO.**, 353 Fourth Ave., N.Y.C. 10 has the following Teach-O-Discs on its list of double-faced 12-inch 78 r.p.m. records in addition to those reviewed last month:
- Ivanhoe*, Parts I & II.....Scott
 - Ivanhoe*, Part III and *Treasure Island* Part I.....Stevenson
 - Treasure Island*, Parts II & III.....Stevenson

- My Financial Career*.....Leacock
- The Azeful Fate of Melpomenus Jones*
- A Christmas Carol*, Parts I, II, III, IV.....Dickens
- The Legend of Sleepy Hollow*, Parts I to IV.....Irving
- The Necklace*.....de Maupassant
- David Copperfield*, Parts I to IV.....Dickens
- A Dissertation upon Roast Pig*....Lamb
- Aladdin and His Lamp*..Arabian Nights
- Ali Baba and the Forty Thieves*.....Arabian Nights

New Transcription Corporation

Officers of the newly incorporated Eastern Radio Transcription & Sound Recording Corporation were elected by the board of directors at sales office headquarters of the firm, 189 Mathewson Street, Providence.

Named as president was Frank A. Lepore. William L. Cooper Jr., Providence was elected vice-president in charge of production, and Walter J. Maxwell was named vice-president in charge of sales.

Mr. Lepore explained that the firm was organized to produce radio transcriptions for commercial purposes. Future plans call for the production of sound-slide films and motion pictures for industrial and educational uses. The firm is now prepared to offer original music, lyrics, sound effects, recordings and production of all types of radio advertising transcriptions.

"NEAR HOME"

A Film on Good Teaching To Help Teachers and Students Understand Their Community

16mm. sound 25 minutes
Rental \$3.00 • Sale Price \$56.25

"NEAR HOME" illustrates several principles of good teaching. A teacher and his class study the community in which they live. The teacher is shown guiding the work which results in the students acquiring knowledge of their city, and in so doing they get into the habit of wanting to find out things for themselves.

Special introduction written and spoken by Lester Anderson, Professor of Education, University of Minnesota.

Current Film News

■ **FRITH FILMS**, Box 565, Hollywood, Cal., have produced another subject in their series of social living films dealing with a typical American family, titled:

Family Team Work—590 feet 16mm sound and color. This story gives an understanding of how children and parents help each other—how they pull together in the home and in their outside activities. The children develop habits of good judgment, self expression, and work. Since this screen family live on a small suburban farm, the film includes material for the farm units of study.

■ **SIMMEL-MESERVEY**, 321 South Beverly Drive, Beverly Hills, California, have produced a new film on Indian life.

The Modern Chipewea Indian (1 reel, color) deals with the economical and cultural advancement of the modern Indian. The entire production was filmed on the government reservation at Red Lake, Minnesota.

■ **BRANDON FILMS, INC.**, 1600 Broadway, New York 19, has the 16mm distribution of a 10-minute short subject filmed by Mostechfilm Studios in Moscow, called:

Life at the Zoo—based on some amazing experiments with the instincts and behavior of animals recently conducted at the Moscow Zoo. The transplantation of the odor of young kittens to baby mice and their adoption by a mother cat is one of the most unique experiments ever filmed. Pictures of the animals at play provide many amusing instances of strange friendships that grow among animals when their conditioning is changed. Released here with English narration.

■ **THE JAM HANDY ORGANIZATION**, 1775 Broadway, New York, loans free of charge a 2-reel 16mm sound motion picture produced for The W. A. Shaeffer Pen Company:

The 26 Old Characters—which visualizes and explains the origins of writing, beginning with picture writings and drawings on prehistoric cave walls and following the development of writing down to the present day.

■ **THE RELIGIOUS FILM ASSOCIATION, INC.**, New York, has acquired exclusive general non-theatrical distribution rights on the following films:

Marie-Louise—the Swiss Academy Award winner of 1945. Told in French, this is the story of a sensitive young French girl who takes refuge (from the War) in Switzerland.

The Forgotten Village—John Steinbeck's documentary film on Mexico. This picture and *Marie-Louise* are being handled by the RFA for Mayer and Burstyn, owners of rights to the films. Heretofore 16mm prints of these films have been available only to church agencies. Both are film classics, the former in the fictional field; the latter in the documentary field.

According to Mr. Rogers the release of these films represents a new emphasis on wholesale distribution which marks the policy of the RFA as established at its annual meeting last February. The Association has also acquired exclusive non-theatrical rights to two new British Information Services films, *Historic St. Pauls'* and *Shrine of a Nation* and to the films of several denominational church agencies including the new color sound film, *Heart of India*. Some time ago the Protestant Film Commission designated the RFA as its official distribution agency. The organization will continue to co-operate with United World Films in the distribution of films produced under the auspices of the Religious Film Society of Great Britain in an effort to secure their widest possible use. Prints of all these films will be made available on a lease basis to reputable film libraries throughout the U.S. In keeping with the new policy the new catalogue of the RFA due for release in April will list lease as well as rental prices.

■ **THE MARCH OF TIME**, 369 Lexington Ave., New York, announces three new timely 16mm educational releases in Forum Editions, namely:

Atomic Power—Traces its early beginnings back in 1905 when Einstein proved that matter could be converted

The origins of writing are explained.

into energy up to 1945 when the first atomic bombs were used. Besides explaining the nature of atomic energy, the film includes re-enactments of the actual scientists performing the original experiments and concludes with the scientists' current campaign to tell the world the full meaning of atomic power.

The New France—delineates how old patterns of Europe are changed by new influences. It explains the political problems of France, the necessity for a five-year plan for economic reconstruction, the indomitable spirit of the French people.

Tomorrow's Mexico—Beginning in Mexico's unenlightened past and looking to its future, this *March of Time* issue covers Mexico's 36-year social upheaval. From the revolution of 1910 to today's industrial expansion it shows the growing determination of the Mexicans to throw off the bonds of ignorance and raise their standard of living.

These subjects were chosen from the regular *March of Time* releases because of their educational potentialities. They have been carefully edited especially for classroom and discussion group use. Newly prepared Discussion Outlines are available for each of these films. Apply directly to The *March of Time* for further information regarding this *three-year continuous possession of the print plan*. A booklet describing all 29 issues so far released may be obtained from your local film library or from The *March of Time* Form Edition.

■ **ENCYCLOPAEDIA BRITANNICA FILMS, INC.**, 20 N. Wacker Drive, Chicago 6, has released a number of new classroom films dealing with a variety of subjects, such as:

Making Shoes—the latest in a series on social sciences—shows how America's shoes are made in modern time-saving factories. The aim of this series is to demonstrate to students (primary grades to junior high school) how modern science and industry affect their personal lives.

Water Cycle—designed for the middle grades and junior high—traces and explains the phenomena known as the water cycle from ocean, to sky, to rain, to streams, to rivers, and back to oceans. The picture describes by actual photography and animation, atmospheric and ground circulation of water, how clouds form, how storms develop, how rain falls, and follows the movements of surface and underground water.

Catching in Baseball; Throwing in Baseball; Hitting in Baseball—three baseball training films on basic fundamentals of the game. Each shows accepted standard procedures involved in the three major activities of the sport, illustrated by Hollywood baseball players. The films were produced by Jimmy Dykes, former Chicago White Sox manager, and Hollis Thurston, coach of the Hollywood Stars. Ken Carpenter is the narrator.

■ **DEVRY CORPORATION**, 1111 Armitage Ave., Chicago 14, have made arrangements with Braatelein and Drews, Hollywood 16mm film producers, for the exclusive worldwide distribution of their new Kodachrome sound motion picture:

Norwegian Folk Dances—featuring the distinctive dance routines of that country as handed down from genera-

Technique of the folk dance.

tion to generation. Comprising the cast are approximately 35 members of the "Leikarring", a folk dance group sponsored by the fraternal order of the Sons of Norway, Los Angeles. The techniques of three dances are presented with the dancers attired in the colorful costumes of the Hardanger district.

■ **LEWIS S. BAER**, 18 E. 41st St., New York (formerly with Young America Films), is distributing, through rental libraries, a new baseball teaching film:

Swing King—(3 reels)—produced by Bert Dnnne, who also made *Play Ball, Son*. Ted Williams demonstrates in the batting sequences and animation shows the defense strategies evolved to stop him. The pennant-winning Boston Red Sox are also featured.

Fiction Features

■ **FILMS INCORPORATED**, 330 W. 42nd St., New York, announces the availability in 16mm of the Twentieth Century-Fox feature:

Call of the Wild—Jack London's story of the Alaskan wilderness. Released for approved school use.

3 NEW 16 MM SOUND MOTION PICTURES IN COLOR

*to
enrich
the
school
curriculum:*

CIRCUS PEOPLE

An interesting film for primary grades, depicting behind-the-scenes circus activity. Selection of scenes and narration are designed to develop proper attitudes of work and cooperation and offer stimulation for oral composition and foundation for reading readiness.

CIRCUS ANIMALS

A companion picture to Circus People, revealing, in natural color Kodachrome, fascinating circus animals—their care, training, habits, etc. Authentic in every respect, these films were produced under expert direction and keyed to fit the requirements of lower grade curricula.

WATER SUPPLY

Designed for upper grades and Junior High Science classes. Dramatically portrays, through natural scenes and animated diagrams, the source, storage and handling of water by nature and man. Collaborators: James M. Montgomery, B.S., and Richard Pomeroy, Ph.D., University of California at Los Angeles, consultants on water purification.

ACADEMY FILMS are produced by James A. Larsen, who has, for many years, been identified with the creation and production of high quality educational films.

Above subjects are 1-Reel 16 MM Sound, available in color or black-and-white. The same subject material is also offered in 35 MM color or black-and-white filmstrip, as well as 35 MM 2 x 2 Slides in color only. Arrange for an early preview.

The DAVI Looks at UNESCO And Educational Reconstruction

By EDGAR DALE,

Prof. of Education and Head of Curriculum
Division, Ohio State University

THE first general public conference on UNESCO held anywhere in the world is over. This conference at Philadelphia had a two-fold approach to problems relating to international education, science, and culture.

First, we had noted speakers, including A. J. Stoddard, Superintendent of Schools, Philadelphia; Bernard Drzewieski, Director, Educational Reconstruction and Rehabilitation Section UNESCO; Howard Wilson, Assistant Director, Division of Intercourse and Education, Carnegie Endowment for International Peace. Representative Karl E. Mundt of South Dakota told the 1,000 delegates representing 500 of the leading educational, professional, labor, civic, fraternal, and religious groups in the nation what UNESCO was trying to do and the grave problems confronting those concerned with international education.

Approach to the Problems

A second approach to these problems was through a series of 14 sectional meetings. These were: (1) Problems of Educational Reconstruction; (2) Community Participation in UNESCO; (3) How Do We Teach for International Understanding? (4) The Revision of Textbooks and Other Teaching Materials; (5) The International Exchange of Persons; (6) Press and Radio in UNESCO; (7) Films and UNESCO; (8) The Study of Social Tensions; (9) Humanities and Philosophy; (10) UNESCO's Program of Fundamental Education; (11) The Contribution of the Creative Arts to UNESCO; (12) The Natural Sciences in UNESCO; (13) Books and Libraries in UNESCO's Program; (14) Museums in UNESCO's Program.

The panel on "Films and UNESCO" included the following speakers: John Grierson, Head of the Media Division of UNESCO; George Zook, President of American Council of Education; Edgar Dale, Ohio State University; Floyde Brooker, U. S. Office of Education; Roger Albright, Motion Picture Association; Miss Irene A. Wright of the State Department. Edgar Dale and Floyde Brooker served as delegates from the Department of Audio-Visual Instruction of the NEA.

Among the problems discussed and the conclusions reached were the following. First, foreign countries devastated by the war need help in building up their visual programs. They need photographic equipment; there is need for scholarships and fellowships by means of which young able persons can be sent to England, United States, and other countries for additional training. Great Britain has already offered twenty-six such scholarships.

(Concluded on page 246)

The **ONLY** Projector for **ALL** these uses...

SPENCER

Model GK Delineascope

Here is the answer to a distinct need—a versatile instrument that projects both 2" x 2" and 3 $\frac{1}{4}$ " x 4" color slides. By means of interchangeable condensing systems and a choice of projection objectives in a wide range of focal lengths, the Model GK is quickly convertible to either size slide or adjustable to room and light conditions.

This 750 watt instrument provides greater brilliance than most 1000 watt projectors.

"Movies That Teach"

by Charles F. Hoban, Jr.

In this *new* book, Dr. Hoban reviews the new conceptions and uses of motion pictures in education. Because of its significance in the audio-visual field, "Movies That Teach" is a *must* for all those interested in more effective teaching. Dryden Press, 386 Fourth Avenue, N. Y. 16. 189 pages \$2.50.

HAVE YOU SEEN THESE NEW MOVIES THAT TEACH?

"ATOMIC ENERGY" Collaborator, Willard F. Libby, Ph. D., The University of Chicago. Explains three ways of releasing atomic energy.

"IMMIGRATION" Collaborator, Henry S. Commager, Ph. D., Columbia University. Traces historical immigration into United States. Depicts melting pot process.

"PETROLEUM" Collaborator, Lester E. Klimm, Ph. D., University of Pennsylvania. Shows importance of petroleum to world affairs.

"THE WATER CYCLE" Collaborator, S. Ralph Powers, Ph. D., Teachers College, Columbia University. Traces water from ocean to sky and back to ocean.

"BUILDING AMERICA'S HOUSES" Collaborators, Twentieth Century Fund and Miles L. Colean. Analyzes reasons for high building costs.

"FIRE" Collaborator, Charles K. Arey, Ed. D., University of Alabama. Describes domestic uses of fire, principles of combustion, nature of fire hazards.

"THE MAILMAN" Collaborator, Paul R. Hanna, Ph. D., Stanford University. Shows importance of mail service in our lives.

Bernard New Board Member

Mr. Edward J. Bernard has accepted the invitation offered him to become a member of the Editorial Advisory Board of *Educational Screen*. Mr. Bernard is in charge of the Instructional Materials Program, Curriculum Development Division, Board of Education of the City of New York.

During the War, he was in charge of Navy Training Aids Production and Distribution. With the *March of Time*, he was producer of *The War on the Seas*. Previously, "Ned" was Director, International Cinema League, New York; lecturer at the School of Education, City College of New York; and Assistant Managing Editor, *The Modern Language Journal*. He is author of two high school English texts as well as of numerous articles.

The DAVI Looks at UNESCO

(Concluded from page 244)

We must break down tariff barriers so that educational films will flow freely from one country to another. To this end, a treaty must be signed by our Congress by means of which the educational quality of films is attested and their free flow to all nations facilitated.

Cultural Reciprocity

The danger of cultural imperialism through films and other media was noted. There was a discussion of the need for preventing false notions about America arising through the kinds of films that are sent abroad. The importance of cultural reciprocity was stressed and the need for a free flow of ideas to the U. S. as well as from it. There was commendation to the State Department for the films which it has produced showing the nature of life in various parts of the United States.

An Advisory Commission on Films

It was suggested that the National Commission for UNESCO establish an Advisory Commission on Films. It was also suggested that this Advisory Commission explore the possibility that such an organization as the Film Council of America could aid the National Commission with its work relating to UNESCO.

It was pointed out that we have done little in an organized way in selecting, using, evaluating, or producing films which will show to the people of the United States the basic current objectives of the UNESCO. These objectives are, first of all, to aid in the educational reconstruction, and second, to develop a broad program of international understanding.

What does this program mean specifically to the Department of Audio-Visual Instruction? Let us remember that there are 30 million boys and girls, young men and women, in the schools of America. They need to be informed about the problems of international reconstruction and international education.

Many of these problems seem remote to us here. But they can be brought alive and made real by visualization. We need to discover films, charts, posters, recordings, photographs, slides, which will make international relationships graphic, real, vital to every American. The DAVI can do this thru UNESCO.

"Speaking of Film Councils"

by

PAUL C. REED

WE saw the beginnings of the Washington Visual War Workers and attended a great many of their weekly luncheons. We noted the organization of the New York Film Council and followed with interest (as best we could, for he is an elusive traveler) the news of CR's trips and conferences and enthusiasm in developing the Film Council of America. We read every word of the reports from FCA meetings in Washington, Chicago, New York, and Atlantic City; we noted the impact of Scott Fletcher's words in Chicago; and we viewed approvingly the revised Constitution. We also read and even studied that most interesting manual "Speaking of Films." But for some reason, we didn't get enthusiastic; we didn't understand. Somehow the luncheon meeting "get-together" on the local level seemed superficial and far from being the answer to the problems of the film field.

An Important Trend

NOW WE KNOW DIFFERENTLY. Maybe we do not learn from words describing the experience of others. Maybe we are too visually minded; maybe we have to see for ourselves. Anyway, within the past few months we have become convinced that the most exciting, the most significant, the most important trend and development in the audio-visual field is the trend that is symbolized by the Film Council of America and especially by the local film organizations that are surging up country wide.

As we see it, this trend is not the local film council or the FCA in itself, rather it is the active and intense interest of group leaders everywhere, who have been awakened by war-time experience to the power and potentiality of audio-visual media. They know that these media, properly used, can aid them in achieving their objectives with their groups more efficiently and more effectively. But they need help. They need materials better suited to their needs. They must be able to get them when they will best serve their needs. And they need to know how to use them in the way that will achieve maximum results. The film council idea on both the local and national levels can be a MEANS for filling these fundamental needs. It is the logical democratic means of solving problems through sharing experience.

We have recognized the reality of these needs and the imperativeness of this kind of solution through what has been happening in our own community, (we mean Rochester, not Chicago). Nobody tried to start a Local Film Council here, but a virtual film council is evolving from basic community needs. The Research Director of the Council of Social Agencies called together the representatives of a dozen community organizations, because each had told him individually of the problems he was having in attempting to make use of motion pictures. They were

representatives of the YMCA, the Federation of Churches, the YWCA, the Public Library, the public schools, the JYMA, the Neighborhood Centers, Settlement Houses, and the Hillside Children's Center. They met a second time, and at the third meeting, there were thirty people representing almost as many organizations and institutions. They were meeting for the serious business of solving their mutual problems. The fourth meeting will involve a still greater number and will be for the purpose of organizing for definite action. This group hasn't called itself a "film council" yet, but we believe this is IT. We think we know now what this film council idea is all about.

The Problem: What Film and Where?

Today people do not have to be "sold" on the power of the media. They are convinced. They are ready to go in every community. They want to know which film, how to get it, and how to use it. At the moment, perhaps the most troublesome of these questions is "How to get it?" We believe that this question and all the others related to making the most effective use of motion pictures for community educational purposes can be solved through the sharing of experience at community, regional, and national levels. The Film Council of America provides the means for bringing together at all levels, beginning with the smallest local community, the people who are sincerely concerned with making serious use of the media, the people who have had experience in this field, and the people who have a professional and commercial interest in the problems involved. Together they can solve the problems.

Now where do the schools fit into this picture? There are some professional school people who believe that "the school is the community." School people with this point of view, who cannot see beyond the limits of the school yard, cannot be very helpful. We believe that the schools are a part of the community, and a very important part at that. We believe that the visual specialists and teachers with many years of experience in using motion pictures have significant contributions to share with other community educational organizations and institutions. But they can only make this contribution if they see their schools in realistic relationship with other community agencies and join with others respectfully for the purpose of achieving community-wide objectives. They may even assume leadership in the solving of community problems, but they cannot solve them if they believe that "the school is the community."

We have stated that we believe that the trend symbolized by the Film Council of America is the most exciting, the most important, and the most significant thing that is happening today in the audio-

WANTED-

Stimulation and Coordination

How a group of teachers may plan a campaign for improving the audio-visual instruction in a particular school.

WILLIAM J. MICHEELS

Associate Professor, Industrial Education
University of Minnesota, Minneapolis

WHY or when or how does the typical teacher use audio-visual instructional materials? Perhaps a better question would be to ask how many have ever made effective use of audio-visual materials? Quantitative evidence has been collected in answer to similar questions,* but for the purpose here a simple observation is sufficient.

Illogical, but Typical

Many teachers read about a movie, or hear about a new chart, or get a hankering to make some kind of a model and then order the movie or buy the chart or construct the model with little or no thought as to value, use, or flexibility. This is illogical to be sure, but typical. Such teachers have let the bug bite them. It may or may not result in an improvement of their instruction. Let's assume they have at least a "hunch" as to how learning takes place and how teaching should proceed.

To the Right, To the Left

At the same time, these teachers have on one side of them a significant number of colleagues who have never seen an educational film, who would never think of ordering a new chart and who would not know what to do with a model if it were placed in their classroom. To complete the picture, mention must be made of those few teachers on the other side who are "on their toes", who develop and use audio-visual materials, who know how to stimulate their students, how to guide them and how to make learning effective. These few are successful not simply because they use instructional materials, but because, among other things, they know how and why and when to use them. The problem thus raised is simple—why cannot all teachers learn "why" and "how" and "when"? The solution is somewhat more complex but possible of at least partial attainment, as later paragraphs will attempt to show.

One method of approach is to revert to a popular theme—the use of training aids by the armed services. Few readers will disagree with the statement that the military went overboard with respect to training aids of all kinds. Oftentimes it seemed as if the objective was to turn out teaching aids just to turn out teaching

aids. It was the thing to do. The aids looked nice. Visitors were impressed. Therefore, "make them big", "make them colorful." "We'll find a place to use them."

This may sound like an exaggeration. Perhaps it is. If so, the purpose is not derogatory but rather to state that at least a significant number of the aids were useful and valuable. Learning was facilitated. The teaching became more effective. Objectives were easier to attain. Whatever the waste, it was overshadowed by the results.

Money, Organization, Facilities

A popular misconception exists among teachers, as well as others, that this extensive and effective use of training aids was a peculiar and original creation of the military. The facts warrant a slightly different deduction. The armed services provided encouragement, yes. They gave every assistance, yes. But the important point is that they also selected expert teachers and specialists and aided them in doing what the teachers and specialists had been thinking about, wanting to do and trying to do for some time. The only special military formula was money, plus organization, plus facilities, plus concentrated objectives. This same formula can produce results in any school system, though the results would not be, nor need not be on the grandiose scale of the military.

Stimulate the Program

Any school has at least a few dollars that can be budgeted for improving instruction. Every school has facilities of some sort. Any intelligent group of teachers can determine what might be done and what should be done. In other words, the ingredients are present in any school, however large or small it might be. The trouble is that the ingredients are in an inert state. Something must be done to counteract this inertia. Two things are necessary: first *stimulation* and then, *coordination*.

The person who should be charged with the responsibility of stimulating and coordinating is the administrative head of the school. That means the

A Professional Study in Audio-Visual Education

Audio-Visual materials are aids for the teacher

Encyclopaedia Britannica Films, Inc.

The aim of good teachers is to improve the effectiveness of the classroom film. These scenes from "Using the Classroom Film" show the teacher (1) previewing the film and making notes, (2) preparing (motivating) the class for seeing the film, and (3) writing motivational or participational questions on the blackboard.

RALPH E. BADGLEY
Associate Professor of Science
ROBEN J. MAASKE, President
Eastern Oregon College of Education, La Grande

THROUGH extensive research and experimentation, it has been demonstrated quite clearly that the proper use of audio-visual materials in supplementing the usual instructional procedures has considerable value. There is a current danger, however, that the unintelligent and often improper use of such materials in the hands of untrained teachers and administrators will tend to obscure the real potential in their effective use.

Use of Audio-Visual Materials

Common criticisms of the use of audio-visual materials in learning and teaching stem largely from inexperience in their use. Teachers must plan carefully to bring to the learner at the proper time the material most useful in mastering a skill, in providing informational backgrounds, in building concepts, or in developing attitudes, relationships, interests, and appreciations.

Audio-visual materials lose their effectiveness whenever they are considered anything but aids to enable the teacher to do more effective and stimulating teaching. The teacher needs to be as familiar with the content of the material used as he or she would be with the usual textbook material relating to the subject.

The various training programs of the military in wartime forcefully demonstrated the effectiveness of many different forms of audio-visual training aids. There has been considerable speculation recently as to the implications of this for the stimulation of peacetime use of such aids in the instructional program in public schools and higher institutions.* Their expanded use in the coming years will in no small part be attributable to the vast amount of trial and experimentation in the military.

Need for Audio-Visual Training

However, if the effectiveness of audio-visual materials is to approach its real potential in public schools and higher education, considerably more emphasis must be placed upon the pre-service and in-service preparation of teachers. In the pre-service program, this means not only opportunity for students to take courses in this field but also to see in the practice of their instructors the actual use and approved applica-

Threading and checking the projector

Encyclopaedia Britannica Films, Inc.
After the showing, a discussion is held.

tion of these materials in the daily classroom teaching-learning procedures.

For teachers already in service, it means special training through summer-school courses, summer workshops and in-service training during the year. Perhaps above all, it means having presidents, superintendents, and principals who are intelligently aware of equipment and other needs.

A primary purpose of this paper is to set forth the essentials in a good college course in audio-visual education. It should be apparent that a stereotyped lecture course, with a rehashing of textbook materials, will not accomplish the purpose effectively. The course here suggested follows quite a different approach.

The syllabus for this course has the materials and problems organized into appropriate units, with clearly-defined objectives set up for each. The complete syllabus contains a series of related readings carefully selected for appropriateness and for timeliness. These are selected from such sources as books, periodicals, bulletins, theses, manuals, yearbooks, encyclopedias, catalogs, and unpublished materials. The units contain projects, sets of pointed study-discussion questions, and problems.

Outline for Desired Course

Such a college-level course in audio-visual education as herein proposed for prospective teachers is valuable also as a tentative outline for a workshop or other form of in-service preparation for teachers in this field. The syllabus was adjudged among the topmost few of such syllabi in Audio-Visual Education from various colleges which were examined recently by a faculty committee at Northwestern University. Each of the ten units suggested are here outlined together with a concise summary of the main topics and problems included under each.

Unit I. Scope, History, and Value of Audio-Visual Materials.

The objective of this unit is to review briefly the history of audio-visual materials in teaching and learning, and to acquaint the student with the value of such materials. The results of selected experimental investigations in this area are studied.

Unit II. The Use of Audio-Visual Materials.

An understanding of the principles underlying the successful use of audio-visual materials is the objective of this unit. A general classification of the various types of materials is made. The student is required to write a pointed discussion on how audio-visual materials can

help to eliminate verbalism.

Unit III. Still Pictures, Specimens, and Models.

The objective here is to study how the flat picture, graphs, maps, posters, charts, etc., together with specimens and models, can be utilized to make teaching more effective. The student is required to write a discussion on the organization and use of a school museum. As a laboratory exercise, twelve flat pictures, which could be used in presenting a typical unit on such topics as transportation, clothing or electricity, are to be prepared.

Unit IV. Various Still Projection Apparatus.

In this unit, the objective is to acquire an understanding of the principles underlying the selection and use of a projector. Various types of still projectors are considered together with their operation and care. A study of the projection screen and projection room is included. For laboratory work the student is expected to become proficient in the operation of the various types of still projectors. (e.g. opaque, slide, and filmstrip.)

Unit V. Photography and Its Use as a Teaching Aid.

The objective of this unit is to show the student how photography may be used as an aid to better teaching. A considerable amount of laboratory work is required here to give the student practical experience in the following: use of the camera, developing the negative, making prints and enlargements, and making lantern slides and filmstrips.

Unit VI. The Construction of Lantern Slides.

The objective of this unit is to give the student first-hand experience in the construction of various types of lantern slides including etched-glass slides, silhouette slides, inked slides, etc., both large and small. Ways and means for using them in teaching are discussed and stressed.

(Concluded on page 285)

Encyclopaedia Britannica Films, Inc.
This boy is following up an interesting topic which he has seen in the film, "The Wheat Farmer."

Experimental Research and The Improvement of Teaching Films

How can teaching effectiveness be increased through improved film production and by improved film utilization?

IT IS generally agreed that many existing classroom films fall far short of attaining maximum effectiveness as teaching materials. Opinions differ as to how the quality of the films themselves can be improved, and also as to the way in which existing films can be most effectively utilized in the classroom. Thus, the broad question of what can be done to increase the effectiveness of audio-visual education breaks down into two related problems: first, how can teaching effectiveness be increased through improved film production, and second, how can it be increased through improved film utilization? One of the tools which could be employed more widely to help in the solution of these two related kinds of problems is the research technique of controlled experimentation.

Experimental Film Research

The kind of "research" referred to does not mean the important preparatory work that goes into a film in its planning stage—the looking up and verifying of factual material. Nor does "research" in the sense used here refer to the use of surveys such as those designed to find out the status of current usage of audio-visual aids or the consensus of teachers as to what kind of visual aids they would like to have available for teaching a particular subject. Rather, the term "experimental research" as here used is essentially synonymous with the idea of *measurement of the effects on pupils produced by film instruction*.

Measurement of a Film's Effects

How are these "effects" of films on pupils to be determined? If one seeks more than reliance on opinions—often contradictory—he is led inevitably to a problem of measurement. If the success of a film is to be determined by *measuring* the effects it produces, we have to decide *what to measure*, and this decision leads directly to the need for specifying the *purpose* of a film. We need to know quite explicitly what the film will have to accomplish in order to be regarded as successful.

Criteria of "Success"

The "success" of a theatrical film is its popularity as entertainment, generally measured by box office receipts. The success of a teaching film, unlike that of a film designed primarily for entertainment, cannot be assessed merely in terms of its popularity or even in terms of judgments about its artistic merits.

In saying that an educational film is "successful" in accomplishing something, there is the implicit assumption that pupils who have seen a film are expected to be somehow different from what they were before they saw the film. Obviously, within the broad framework of an educational program, there is room for

A. A. LUMSDAINE
Motion Picture Research Project
Institute of Human Relations
Yale University

films having a variety of purposes. The main purposes of a large number of films, however, may be classified under the headings of imparting factual information, developing skills, or modifying attitudes or interests. Although a particular film may have more than one of these purposes, its success may be examined separately with respect to each. How, then, can measurements be made to determine whether a film is successful in accomplishing its purpose?

The staff of the Motion Picture Research Project (page 256). Left to right: A. A. Lumsdaine, R. S. Hadsell, Mark A. May, and Gardner L. Hart.

How Can Effects Be Measured?

In general terms, the answer is simple although in application considerable technical difficulty may be encountered. First of all, we need a *measuring instrument*. For a film designed to convey factual information, the instrument needed is an appropriate *test*; pupils' scores on this test will indicate how much they know about the subject. But in the case of a film designed to modify attitudes an appropriate measuring instrument might be an attitude scale of some kind which can measure the extent to which attitudes or opinions are held; in the case of a film primarily designed to arouse interest in a subject, techniques must be devised to give a reliable assessment of "interest" or the actions which indicate interest.

Given an appropriate measuring instrument, the basic method of measuring effects produced by a film is also straightforward. The measuring instrument must

be used to determine, first, what the pupils are like initially—that is, in the case of a factual film, how much they know about the subject *before* seeing the film. Second, the measuring instrument must be used again to find out what pupils are like—how much they know—*after* they have seen the film. The difference between those two measurements then represents the effect of the film; it tells how much pupils have changed (learned) as a result of the film presentation.

Use of Experimental Measurements of This Kind

Assuming that it is possible in this way to measure the effects of a film by controlled experimental comparison, how can such measurement of film effects be employed to improve the quality of teaching films? Two kinds of application may be noted. For want of better terms, these may be called "applied" research and "basic" research. These two uses of experimental research technique may be characterized as follows:

1. **Applied Production Research.** This ordinarily represents measurement of the *effects of a single film*. Such a study can tell the producer of a film which points of his presentation are getting across and which ones are not. The potential value of such research is that, particularly if it is carried out at the interlock stage or in any case before final completion of a film, the results may be utilized in correcting or reinforcing weak spots in a particular film's content. (Such data may also be used, of course, in designing supplementary materials, such as film strips, to use in conjunction with the film.) Research of this kind has the advantage that it can be carried out relatively rapidly and the results can be utilized immediately. It has the limitation, however, that the application of its results may be largely restricted to their use in improving the *specific film studied*.

2. **Studies of Basic Factors in Film Production.** This class of research seeks not simply to evaluate a particular film but to measure the *comparative* effectiveness of alternate versions of a film which present a subject in *two or more different ways*. In the simplest case, the content of the two parallel film presentations which are compared as to effectiveness will *differ only with respect to a single specified factor*.

The second of these two kinds of studies is the primary concern of research work such as that undertaken

Student operator ready to project an experimental film. Students are tested before and after each film showing to discover how much they learn from the various films studied. Refer to article on page 255.

by the Yale Motion Picture Research Project. The cumulative results of research of this kind should contribute ultimately to the development of a body of principles stating, for the general guidance of film production, what kinds of film presentation are likely to be most effective for the achievement of particular educational purposes. In other words, such research should

Punching test data on cards for machine tabulation, to facilitate handling data for large group of pupils.

in time furnish concrete evidence to help resolve some of the existing confusion and differences of opinion as to how to design a teaching film to do its job most effectively.

The study described in the following article, "Do 'Motivating' and 'Participating' Questions Increase Learning," furnishes an example of experimental methods that can be used in work of this kind, although the study is to be regarded only as a preliminary and exploratory one. The formulation of a body of principles of teaching film effectiveness will not result from any single experiment or even any one series of experiments. The development of such principles, like any other scientific principles, is a long-term project which can attain maximum usefulness only as the cumulative product of a coordinated and continuing research effort. This will require time and the cooperative efforts of many workers in the field of audio-visual education.

"Speaking of Film Councils"

(Concluded from page 250)

visual field. And here's why we think so: If this interest and belief in the power of the educational motion picture can be effectively guided and directed into patterns of utilization that are truly community-wide, reaching effectively and regularly every group organization in the community, the school use of motion pictures in the future will be only a minor part of a much greater whole, even though the school use of pictures may multiply many times. In the Film Council of America, there is hope for this achievement.

Do "Motivation" and "Participation" Questions Increase Learning?

Teachers and producers may profit from the results of such studies and apply the findings to their audio-visual work.

I. BACKGROUND OF THE PROBLEM

THIS study grew out of an interest in the contribution of two important factors which influence the teaching effectiveness of films. These two factors may be termed "motivation" and "participation."

"Motivation" refers here to the extent to which pupils are alert, interested, and trying to learn the material presented in a film.

"Participation" refers to the extent to which pupils are responding actively by practicing or rehearsing the things to be learned as the material is presented.

Why These Two Factors Were Studied

Theories of learning based on psychological and educational research underline the importance of these two factors of motivation and participation in determining how much a person will learn in any given situation. On common sense grounds, the importance of *motivation* in learning is also fairly obvious: one has to make an effort in order to learn effectively. The critical importance of *participation* may be less readily apparent, but it is equally well-supported by scientific theory and evidence in the field of human learning. The essential role of participation is crystallized in the statement that we learn only by doing, not by mere passive stimulation of our sense organs—that what we learn is determined by what we do in the learning situation.

Purpose of This Study

Obviously, there are many different techniques by which pupils may be motivated to learn material presented to them. Similarly, there is a wide variety of techniques which can be used to stimulate pupil participation during the presentation of a subject. No one study can adequately assess the importance of these factors in general terms nor investigate the effects of

Report on an Exploratory Study
MOTION PICTURE RESEARCH PROJECT*
Yale University, New Haven, Conn.

all of the possible ways in which they can be manipulated. As a preliminary attack, the present study investigated the contribution of two specific procedures:

1. A procedure which attempted to increase pupils' motivation to learn specific material in a film by the use of questions designed to arouse curiosity concerning the facts about to be presented; and
2. A procedure which required pupils to participate more actively during the film showing by answering questions about various points just after they were presented.

The specific procedures used are described below. It is to be emphasized that the results of this study measure only the added contribution to learning produced by specific procedures of the type employed. Obviously, some degree of

A Summary

1. An investigation was made by the Yale Motion Picture Research Project to study the educational value of introducing into a film questions designed to increase the pupils' MOTIVATION TO LEARN and to increase their ACTIVE PARTICIPATION as they viewed the film.
2. The method of study was that of controlled experimental comparison. It consisted essentially in testing the AMOUNT LEARNED by groups of high school pupils from several alternate versions of a film designed to teach a standard factual subject.
3. EFFECT OF "PARTICIPATION" QUESTIONS. A considerable increase in amount of material learned was shown to result from the introduction of a procedure requiring the pupils to participate more actively by answering questions on a worksheet at the end of each unit or "block" of material presented.
4. EFFECT OF "MOTIVATION" QUESTIONS. The experimental data further suggest that the addition of questions designed to increase the level of pupils' motivation to learn, preceding the presentation of each unit of material, may also increase somewhat the amount of material learned from a film.

*This project was carried out under the general direction of Mark A. May, Director of the Motion Picture Research Project and of the Institute of Human Relations, Yale University. Those affiliated with the present study included: Gardner Hart, who was mainly responsible for the preparation of the film materials used; J. W. Whiting and R. S. Hadsell, who organized the film presentations, designed the tests, and administered the experiment in the schools; and A. A. Lumsdaine and R. S. Hadsell, who were responsible for the tabulation and analysis of the results. Assistance in the initial planning stages was given by J. W. Tilton and C. I. Hovland of Yale University, and William Dyckes of Hamden High School. The successful execution of the testing program was due primarily to the cooperation of Mr. W. H. Moody, Principal of Hamden High School, Hamden, Conn.; Mr. George Hutchinson, Principal of the Commercial High School; Mr. Albert Harter, Principal of Fair Haven Junior High School, New Haven, Conn., and Mr. D. W. Belcher, Principal of West Haven High School; members of their teaching staffs; and Miss Leonie Brandon, Director of Visual Education in the New Haven Schools.

participation and motivation is already present in viewing a film in any class room situation. Thus, the present results are in no sense to be construed as representing an over-all assessment of the importance of "motivation" or "participation" as general factors in learning.

II. HOW THE STUDY WAS DONE

Subject Matter of the Film

In order to avoid having to shoot new film footage a subject was selected for experimentation on which film material was already available. The subject chosen was "The Heart and Circulation of the Blood," a widely taught topic encompassing a considerable variety of factual material. Pictorial material from two already existing films was organized into a series of seven units or "blocks" of material, with titles such as "Structure of the Heart," "Heart Valves," "Sound of Heart Beat," and "Pulmonary Circulation," with accompanying voice-over narration.

Experimental Film Materials

Four different versions of the film were prepared, each giving exactly the same factual presentation, with identical pictorial materials and accompanying commentary. In some versions, the units were preceded by titles giving "motivating" questions, and in other versions the units were followed by titles directing pupils to answer "participation" questions. The use of these "motivating" and "participation" questions is described below.

"MOTIVATING" QUESTIONS: These were questions given on titles spliced into the film just before each unit of factual material. The questions were designed to interest the pupils in learning the material about to be presented and to direct attention to the relevant aspects of what was to be shown. For example, just before the mechanism of the audible heart beat was explained, the question was asked, "Do you know exactly what parts of your heart make the sounds which the doctor hears in the stethoscope?"

"PARTICIPATION" QUESTIONS: These questions were designed to get the pupils to respond actively by answering, at the end of each unit, a question concerning the material that had just been presented. The questions were printed on a worksheet which the pupils used during the film showing. As each unit was completed, a film title directed the pupils to answer the question covering that unit. After a short interval the correct answer was then given on the screen. For example, after showing the relation of the pulmonary circulation to the action of the heart, the film directed the pupils to answer the question, "Which chamber of the heart pumps blood to the lungs?" The contribution of these two kinds of questions in improving the film's effectiveness was studied by comparing the amounts learned by four matched groups of pupils, when each group was shown a different version of the film. The four versions were as follows:

Version I, shown to the first group. This was a straight factual presentation, with neither the "motivating" nor the "participation" questions.

Each of the other three versions used a factual presentation identical with that in Version I, but included in addition one or both of the two types of questions described above:

Version II, shown to the second group: the factual presentation supplemented by "participation" questions answered by the pupils after each unit of material.

Version III, shown to the third group: the factual presentation supplemented by "motivating" questions preceding each unit of the material.

Version IV, shown to the fourth group: the factual presentation supplemented by both kinds of questions: "motivating" questions preceding each unit of material and "participation" questions following each unit.

Average Percentages of Correct Answers on Subject Matter

Graph 1. Version I shows the improvement of the group as a result of seeing the factual presentation. Version II indicates the improvement when participation questions were added to the factual presentation. (See "Results," page 258.)

Measuring the Effect of the Film

The basic procedure used to determine the relative effectiveness of the four versions was the method of controlled experimental measurement outlined in the preceding article "The Improvement of Teaching Films." Approximately 150 tenth and eleventh grade pupils in public schools in the vicinity of New Haven, Connecticut, were used for each of the four versions described above. Students were assigned to the various versions in such a way as to have the group for each version balanced with the other groups with respect to grade level, initial test score (before the film), general ability, sex, and other factors.

A factual test was developed to measure pupils' knowledge of the subject matter covered by the film. The test was composed of forty multiple-choice questions.

All pupils were tested twice. The first test was given a week before the film showing in order to determine how much the students already knew about the subject. The second test was given just after the film in order to determine how much they had learned from seeing the film. The amount of material learned from each version of the film is, therefore, revealed by the difference between the "before" and "after" test scores for each version.* The *relative effectiveness* of any two versions of the film can then be seen by comparing the gain made by a group that saw one version as against the gain made by another group that saw a different version.

III. RESULTS

1. Contribution of the Procedure Used to Increase Participation (Comparison of Versions I and II)

The addition of participation questions following each block of the factual presentation resulted in a significant improvement in the amount of learning produced by the film.

This is seen in graph one which compares the average test scores for the group of pupils that saw Version I, the factual presentation only (at the left), and for the group that saw Version II, presentation including participation questions (at the right). The length of the bars represents the average per cent of test questions correctly answered before the film (upper bars) and *after the film* (lower bars). The initial comparability of the two groups is illustrated by the fact that the two top bars (scores before seeing film) are equal.

The amount learned by each group is thus indicated by the shaded portions of the bars, which show the *increases* in average per cent of correct answers after seeing the film. (See also graph 2.)

The results charted are "average" results. Thus, the values are averages for all individuals in each experimental group, and they are also averages for all 40

test questions used to test knowledge of the subject matter. Naturally some individuals learned more and others less than the average. Similarly, the percentages learning various items of information varied from item to item, and the average superiority of the participation procedure was not manifested equally on all test questions but varied from question to question.

Very marked superiority of the participation procedure is illustrated by a test question on how stimulation of the vagus nerve affects the rate of heart beat. On this question, the gain in per cent of correct answers in the participation group was 47% (from 19% before the film to 66% after the film). But in the group that saw the standard presentation the gain was only 10% (from 11% to 21%).

Equal gains for both versions are illustrated by another question (normal rate of heart beat). The gains on this question were 28% for one version and 29% for the other.

2. Effect of Adding the "Motivating" Questions (Comparison of Versions I and III)

A comparison between Versions I and III deals with the contribution of the questions, designed to increase the pupils' level of motivation, which preceded each block of factual material.

Graph 2. A comparison of the gains produced by Version I and Version II, represented by the shaded portion of the lower bars in graph I, is here presented in simplified form.

The gain in average per cent of correct answers for Version III, employing factual presentation plus motivating questions, was 10.5% (from 38.8% before the film to 49.3% after the film). Graph three shows the comparison between this gain and that effected by the factual presentation alone.

It is seen that the higher average gain was for groups that saw the version in which "motivating" questions were included. The small size of the difference between the two versions (2.3%) does not, of course, imply that motivation is unimportant as a general factor in learning. This is particularly apparent in view of the likelihood that in all versions the pupils probably had considerable incentive to do

*Measurements were also made for a "control group" which was tested and then re-tested after the same interval as the other groups but which was *not* shown the film. The average score for this group was the same (39.5%) on the first test as on the second test, showing that any gain in test scores for the other groups must be attributed to the effects of the film.

well due to the general nature of the testing situation. The results do mean, however, that the further addition of this particular kind of motivating device made at best a limited contribution to the effectiveness of the film.*

3. Further Results

A. Combined Effect of Participation plus "Motivating" Questions

The evidence in the preceding two sections shows that an improvement in learning was made by the procedure for increasing participation and also suggests that the insertion of "motivating" questions probably increased somewhat the amount learned.

The question naturally arises as to the effect of introducing *both* procedures into a film. In graph four, the results obtained when this is done (Version IV) are compared with those for the versions using each of the procedures singly. Two questions arise:

(1) *How much did the further addition of the "motivating" questions contribute to the effectiveness of the version that already incorporated participation questions?* The answer is seen in graph four by the difference between the third and fourth bars (Version II vs. Version IV). The difference in this case is only 1.8—a difference too small to be regarded as fully reliable for the samples studied. Thus again the evi-

*It must also be remembered that all measurements of this kind are subject to a certain amount of chance fluctuation. This in turn means that, even if the "motivating" procedure had actually been completely ineffective, we would still expect in the course of a series of repetitions of the experiment to obtain slight differences in favor of the "motivation" group about half of the time. On the other hand, fairly large differences—of the size obtained through the use of the participation procedure, for instance—would occur so infrequently by chance that we may confidently conclude that the participation procedure really made a significant contribution. But less confidence is justified in the conclusion that the addition of the Version-III procedure (motivating questions) made any contribution. Thus, it can be shown that if there were in fact no advantage at all in the use of the motivating questions, differences as large as the obtained one of 2.3% would occur about once in 20 repetitions of the experiment, with similar groups, simply as the result of chance fluctuations.

Average GAIN in Per Cent of Correct Answers Produced by

Graph 3. A comparison of gains produced by Version I (factual presentation only) and Version III (same presentation plus "motivation").

dence suggests, but does not conclusively establish, that adding the "motivating" questions increased the average effectiveness of the film—a conclusion which is the same whether the "motivating" questions are added to just the basic presentation or to the presentation already augmented by participation.

(2) *How much did the further addition of participation contribute to the effectiveness of the version that already incorporated "motivation" questions?* The answer here is given in graph four by the difference of 3.5 between the length of the second bar (Version III) and that of the fourth bar (Version IV), and indicates that the further addition of participation significantly increased effectiveness, just as was found when the participation questions were added to the basic factual presentation alone.

(Continued on page 274)

Average GAIN in Per Cent of Correct Answers Produced by

Graph 4. It is seen from this chart that the largest gain in correct answers was obtained for Version IV, the combined motivation-participation procedure.

TEACHER-COMMITTEE EVALUATION of NEW FILMS

L. C. LARSON, Editor
Director, Audio-Visual Center
Indiana University, Bloomington

CAROLYN GUSS, Instructor, School of Education
BETTY STOOPS, Film Librarian, Audio-Visual Center
Indiana University, Bloomington

Heidi

(Teaching Film Custodians, 25 West 43rd, New York City)
45 min., sound, black and white. Three-year lease \$100.
Produced by Twentieth Century Fox. Contact distributor
for rental source.

Description of Contents:

Based on Johanna Spyri's book by the same title, the film chronicles the incidents in the life of Heidi from the time her cruel Aunt Dete deposits her with her recluse grandfather, Adolph Kramer, until the visit of Clara Sesemann and her father to the Grandfather's.

Wanting to be free from the responsibility of caring for her niece, Aunt Dete takes Heidi to Dorfli to leave her with her grandfather. Here in the Alps with his two goats the

Teaching Film Custodians, Inc.

An abridged version of the film, "Heidi," based on Johanna Spyri's book of a little girl who lived with her grandfather high in the Alps. The film (1937) shows the customs and life of people who live by their own labor and was produced by 20th Century Fox.

Grandfather has isolated himself from the fellowship of his friends and neighbors. Heidi, through her cheerfulness, resourcefulness, and regard for her grandfather, breaks down his resistance and wins his love and companionship. Many incidents show the growth of their love for each other and their mutual joy. The Grandfather's change of attitude is climaxed by his decision to return to church, where Heidi and he are welcomed by all the townspeople.

As the year goes by, Heidi becomes a great friend of Peter, the goat general, and blind Anna. A cloud is cast over the party which Heidi and her grandfather plan for Peter and Anna by Aunt Dete's kidnapping Heidi, against

her will and without the knowledge of her grandfather, to be the companion of Clara Sesemann, a rich invalid girl. Fraulein Rotternmeir, Clara's nurse and tutor, strenuously objects to Heidi principally for the selfish reason that she intentionally plans to keep Clara an invalid in order to assure her own pleasant employment in the wealthy household.

Heidi, however, is immediately accepted by Clara and is retained in spite of her strong desire to return to her grandfather. Without the knowledge of the tyrannical Fraulein Rotternmeir, Heidi encourages Clara to practice walking, and thus on Christmas Eve, Clara is able to walk across the room to her father. Mr. Sesemann expresses his deep gratitude to Heidi, and even though he and his daughter hate to see her go, Heidi returns to her grandfather. By spring, Clara is able to walk. She and her father climb the mountains to Grandfather's cabin, where they are lavishly feted by the Grandfather and Heidi.

Committee Appraisal:

Even though the screen version deviates somewhat from the original plot, it vividly depicts the character conflicts, the interrelationship of the actions of the characters, the way of life of one who lives by his own labor in the mountains, and manners and customs of the people. The characters are well cast; the condensed version climaxes the scenes in the original photoplay which were introduced to feature Shirley Temple; the photography and musical background are very good. The film should be interesting to intermediate grades either before or after reading the book. It will appeal, from a general interest point of view, to more mature groups.

Return of the Vanishing Herd

(Hardcastle Films, 818 Olive Street, St. Louis 1, Missouri)
10 minutes, 16min, sound, color, \$75.00.

Description of Contents:

The film depicts in some detail the activities of the Alaskan fur seals and the conservation program of the U. S. Government which operates to conserve these animals for human use.

The four small Pribilof Islands two-hundred miles off the west coast of Alaska are first shown as the only land home of the seals. The seals are then seen and heard on the islands. The film records the exodus of the seals from the islands about the first of November as they leave to spend the winter months in southern waters. They are shown again in the spring as they return. The bulls arrive first and preempt the spots for their homes. The cows then arrive and join the harem of a particular bull. Each mother has one seal pup a year. The film shows the young puppies emulating their parents and enjoying youthful capers.

The film next covers the U. S. Government conservation program, which includes an annual census of seals and a controlled plan of killing seals for furs. The final sequences of the film show the preparation of the pelts and the sale of furs in a government-controlled auction.

Committee Appraisal:

This film is recommended for use by groups from intermediate through adult levels interested in the story of the Alaskan fur seal. The subject gains interest from the excellent color photography and informative commentary. It should be useful for showing the habits and behaviors of seals, the success of one government conservation project, and the economic importance of seals.

Water Supply

(Academy Films, 1448 West 61st Street, Los Angeles 44, California) 10 minutes, 16 mm, sound, color, \$75.00.

Description of Contents:

This film shows the various sources of water supplies for farms, small towns, and cities. The opening sequences show how all water from rain or snow collects in rain barrels, lakes, ponds, and rivers as surface water; or in the soil above the rock level as ground water. By means of an animated diagram, the film shows how a spring is the water level coming out the side of a hill. Special machines are shown digging shallow wells in high-water level areas and drilling deep wells in other areas. Deep wells generally have purer water. The old-fashioned bucket in the well is contrasted with the hand pump, the windmill, and the electric pump. An animated cross-section diagram shows how artesian wells flow without pumping, the water being stored under pressure is a porous layer between two non-porous layers.

The second part of the picture emphasizes the fact that although small cities may use ground water, most cities are dependent upon surface water. The various systems used are explained by means of animation and photography. Cities near the Great Lakes have intake cribs out in deep water, from which the water is pumped to the purification plant where chemicals are added; pumping plants finally distribute the water. Next the film shows how St. Louis pumps the muddy water of the Missouri and Mississippi Rivers into settling basins, where lime helps settle the mud so that it can be scraped out. The water is settled again, pumped through a sand filter, and finally stored in a huge covered reservoir above the city. As a third example, the film shows Southern California getting water by means of aqueducts from sources several hundred miles to the east. A dam in the Colorado River provides power for pumping the water, and its lake acts as a settling basin. The water is pumped over the mountains or through them in tunnels, across the desert in open canals, and by a pipeline over the Santa Anna River to the filter plant. It is partially softened by lime, a sand filter, and a zeolite softener, which are shown by animation.

Testing and research laboratories are maintained to protect the purity of water supplies. Thus, people can be confident of recognized water supplies.

Committee Appraisal:

This is an excellent addition to the films already avail-

able for use in units on water supplies. It deals with the scientific aspects of water supply exclusively, introducing many terms which are well illustrated by means of photography and animated diagrams. The first part of the picture shows ways in which ground water becomes available; the second part shows how cities obtain surface water and make it fit for use; and the third part reviews the important points made, thus rounding out a comprehensive treatment of the subject. The color photography, subdued, clear, and natural, is excellent, as is the animation. Recommended for use on the junior and senior high school levels of general science.

The Librarian

(Vocational Guidance Films, 2708 Beaver Avenue, Des Moines 10, Iowa) 10 minutes, 16mm, sound, black and white. \$50 less 10% cash discount. Discussion guide available.

Description of Contents:

One of "Your Life Work Series," this film discusses the aptitudes necessary for success in the field of librarianship, the different types of library work, the training necessary, and the value and compensations of the work. Beginning with the assumptions that if one likes books and if he likes people, he might consider librarianship as a profession. The film proceeds to delineate the various types of libraries. It shows the Library of Congress, a small rural library, a university library, a special library, and an extension library. It also shows that the work of librarians falls into five broad classifications—cataloging, reference, circulation, children's library work, and school library work.

One sequence of the film deals with the more recent services developed by libraries, including circulation and utilization of motion pictures, microfilm, musical scores, recording and transcriptions, and posters. For a few librarians, the film points out that there exists an opportunity to go into such specialized fields of librarianship as public relations and administration. The film concludes by indicating the high school courses which contribute to a background for library training and the organizations such as library schools and the American Library Association which can be contacted for specific information.

Committee Appraisal:

The film should be effective for the following purposes: (1) indicating the nature of librarianship as a profession; (2) the qualifications—both personal and vocational—required in several different types of library work; and (3) providing information on professional guidance available to one considering library work as a career. The film, following the pattern of others in this series, is recommended for use with high school students for the purpose of occupational guidance. It covers the significant problems in the field in a highly satisfactory method from the viewpoints of emphasis, clarity, and economy of time.

This dam is a source for power which will pump a city's water. Water may be obtained from lakes, rivers, wells, or catch basins.

"Water" is vital to man's existence. Los Angeles receives its water by means of aqueducts and canals from sources far away from the city.

No old-fashioned bucket well is this. Modern wells are dug by specialized equipment. Deep wells generally have purer water than shallow wells.

Engineering Progress Opens New Vistas

*The Society of Motion Picture Engineers discuss
8 and 16mm films as well as trends in education*

WILLIAM F. KRUSE

President, Allied Non-Theatrical Film Assn.

TO VISUAL education enthusiasts in all fields, the recent 61st Semi-Annual Convention of the Society of Motion Picture Engineers offered promising new vistas of progress to come, in equipment and materials for the taking and showing of motion pictures and other projected visual aids. Indicative of the growing significance of the 16mm motion picture field, as compared with its parent 35, is the fact that of the sixty-odd papers delivered during the five-day session, half were equally applicable to both fields, while of the specialized remainder, three times as many centered upon the narrower widths as upon the wider. To be sure, the convention was held in Chicago, the heart of the 16mm industry. At the SMPE's Hollywood meetings, the emphasis might well be different. Nevertheless, this meeting showed clearly that the engineering brains of the film industry are very much preoccupied with developments that will vastly expand and improve present facilities for making and using 16mm motion pictures.

Improvements

For the most part, the papers and discussions dealt with improvements in the performance of present equipment and materials, rather than with radically new models. The chimerical 20-pound, under \$200, cartridge-loading 16mm or 8mm sound projector remains to be unveiled at some future occasion, how far off no one can tell. But new war-born lead-sulfide photocells and indirectly heated exciter lamps, demonstrated by Northwestern University representatives, give considerably increased volume as compared with current caesium-oxide phototubes, thus forecasting the possibility of smaller and lighter amplifiers without sacrifice of volume. Several papers dealt with modified laboratory techniques to produce better quality sound tracks; a theater demonstration of 16mm sound with a "semi-portable" dual-diaphragm speaker of improved design gave exceptionally pleasing reproduction.

Application to School-Made Films

A number of the papers dealt with problems similar to those encountered by educators who produce their own record and teaching films. Two were on the use of the Bell & Howell magazine camera for microphotography, with built-in illuminants. Among the "gadgets" were a "multi-effects" title stand and a professional type sunshade and filter holder. A 16mm film developing machine taking up only two cubic feet of space was described by Eastman Kodak representatives. In this experimental development, each processing bath takes only five seconds. The growing role of the local 16mm service studio and laboratory, able to make recording and professional looking titles,

as well as reproduce copies and help the semi-professional producer in other ways was described by Lloyd Thompson. The problems involved in producing training films, as presented by Reid H. Ray, parallel many of those encountered in the making of films in educational institutions. Since all convention papers are eventually published in the SMPE journal, it is well worthwhile for educational institutions to include this publication in their reference files. Address: SMPE, Hotel Pennsylvania, New York. Three papers were given on 8mm production, projection and recording. One, on basic research at Illinois Tech, was delivered by Robert E. Lewis.

Magnetic Recording

A magnetic track, recorded on an impregnated band deposited on either edge of 8mm film, demonstrated passable results on voice when recorded at 24 frames but rather bad sound when attempted for music with film running at 16-18 frames per second. The advent of the tape recorder holds great promise for semi-professional producers and will come into wide use just as soon as the film coating and recording services emerge from their present advanced experimental stage. It will make possible the fitting of sound to any edited film under conditions well suited to amateur and training productions. Any track can be recorded anywhere in the film, and instant magnetic erasure makes possible unlimited change. The process will be of major value

Dr. Walter A. Wittich receiving a "16mm Pioneer Award" in behalf of NEA's Department of Audio-Visual Instruction. A. G. Petrasek of RCA made the presentation on the occasion of the 16th anniversary of sound-on-film. Left to right are Col. Gerald N. Bench, Director of Visual Instruction, Chicago Public Schools, Mr. Petrasek, Dr. Wittich, and Dr. Joseph Park, Director of Visual Education, Northwestern University.

in overcoming foreign language difficulties on entertainment and educational films for export. The magnetic track or tracks can be added to a film carrying the regular track, making possible the use of either, or both, should occasion require. At present the magnetic head is simply substituted for the conventional sound take-off, no special projector being involved. Radical as are some of these coming innovations, they are solidly built on existing projection, production, and even processing equipment. Projectors with dual systems for optional use of magnetic or photoelectric reproduction appear entirely feasible.

General Principles not Overlooked

An engineering meeting may be expected to emphasize most heavily the scientific and development aspects of the industry. Established achievement is fixed in common basic standards; current experimentation is disclosed so that collaboration may accelerate progress. But SMPE meetings recognize clearly that the true social role of the engineer is more than that of scientist and gadgeteer. At the Chicago Meeting, as always heretofore, numerous papers dealt with social problems. Perhaps the highlight of the meeting in this respect was the carefully prepared discourse of L. Mercer Francisco on "The Psychology of the Sound Film." His basic thesis, amply documented, was that "as an educational instrument, the sound film is particularly effective for influencing people in groups, bringing to bear factors on social as well as individual psychology: social facilitation, the impression of universality and prestige."

Dr. W. A. Wittich, president of the Department of Audio-Visual Instruction of the National Education Association, spoke on "Trends in Audio-Visual Education." While acceptance of the value of projected aids is today quite general, he pointed out that of 248,000 one-room schoolhouses (80% of them electrically equipped), a large part remain without these media. At present, he thought, only 10% of our teachers use these aids, generally not because they are too expensive but rather because of teachers' fear that they are still too complicated. If the threading of a projector could be made as simple as that of loading a 16mm or 8mm magazine camera, a large part of this timidity might be overcome. If New Zealand can spend 18% of its national income on education, and the Soviet Union only a trifle less, Dr. Wittich thought there should be no question of the ability of the American people to finance any educational program they became convinced was necessary.

American Films Abroad

Orton H. Hicks of Lowe's International spoke on "American Films Abroad." His paper described the procedures involved in dubbing English language tracks into other tongues. He then told of the resentment encountered abroad to attempts by the Motion Picture Export Committee to control the content of American entertainment films shipped abroad. Singling out two films, *Mr. Smith Goes to Washington* and *Grapes of Wrath*, as examples of what might give other peoples a "bad" impression of American life,

New equipment was unveiled by some manufacturers at the SMPE convention in Chicago. RCA displayed a complete line of 16 and 35mm sound-on-film recorders.

he told how the latter had been fitted with an antidotal explanatory foreword. He also explained that the Norwegian government, exhibitors and public had refused to receive the film except in its original American form and that finally the propaganda foreword had to be withdrawn. This paper, the very curtain raiser of the meeting, precipitated a good-natured but lively discussion. The question was raised as to whether the American motion-picture industry should set itself up as a censor to dictate what part of the pictures that appear on screens should be permitted to reach the eyes of people abroad, especially when it had already become obvious that such attempted "thought control" on our part is strongly resented by our potential customers in other lands. Was not the remedy, rather, to feed the American screen with more of what is true, and fine, and significant in our own life, and then let foreign audiences take their own pick, and draw their own conclusions?

The issue was seized upon by Nathan D. Golden, of the U. S. Department of Commerce, who objected that certain foreign governments such as Russia and Yugoslavia would not pick pictures that showed life in America in any favorable light, and that as long as we had a backlog of over 1200 pictures that had never been shown in theatres abroad, we should do our own picking, as to what goes into export. In reply, Hick's own statements were cited to the effect that Deanna Durbin was Russia's favorite actress and that only four American feature films all told had been bought by the Soviet Union over an extended period. Certainly none of Universal's Durbin films could be accused of excessive social significance or of hostility to the American way of life. The British attempted no such censorship at their end even concerning the "table" manners of Henry VIII in Korda's film, or the blundering stodginess of Col. Blimp. However, they did expect us to be equally respectful of their intelligence and good taste and so did the Norwegians. Most foreign audiences can be expected to resent emphatically any attempt on our part to decide for them which of our pictures they are intellectually old enough to look at. Louis de Rochemont's report at the National Board of Review conference was cited, as to the unanimously favorable review given his *Boomerang* by all British critics, without exception. The British press was said to have complimented the Americans on growing up at last, to the point where our films might finally be willing to concede that all American life, as they reflect it, is not necessarily milk-toast and honey.

WANTED—Stimulation and Coordination

(Continued from page 251)

principal, or in smaller towns the superintendent, who also acts as principal. He may delegate the responsibility; he may call in outsiders for advice, but he is primarily responsible for improving the instruction within his school—in this instance through an improved use of instructional materials. A first step then is to stimulate the principal so that he in turn will stimulate his teachers. His goal will be a cooperative program with all teachers participating actively.

The inertia mentioned above will be present in many administrators. It includes the attitudes of those persons who are content to let things stand and who dismiss any constructive idea with the statement, "We've tried those things and they didn't work". Remember, we are thinking here of a concerted, concentrated attack on the problem, not a let-every-teacher-take-care-of-himself approach.

Getting the principals active is the responsibility of you who are specialists in audio-visual education. You know the values. You know most, if not all of the answers. One of your prime interests is in solving the problem presented here.

The Campaign for Audio-Visual Materials

A well-planned campaign should be organized and launched. The procedure must be that of master teachers. The principles of learning will enter the picture as directly as in any classroom teaching situation (motivation, repetition, evaluation, and so on). A selling program will be necessary. You will be re-emphasizing your public relations—in this case principal relations. Closely associated with these efforts, or perhaps an integral part of them, should be a handbook (or its equivalent) showing what to do and how to do it. In brief, it would take the principal by the hand and lead him through the several steps necessary to get his teachers motivated and organized. Perhaps the handbook would be augmented by a film or film strip developed expressly for the job at hand. At any rate, there would be suggestions, methods, hints, and techniques aimed at getting the teachers ready and started. And as you prepare such a guide you would be keeping in mind the several criteria underlying effective visual materials: simplicity, colorfulness, flexibility, and so on.

Specialized Committees

There are many ways in which the teachers might organize and work on the problem. One such plan, usable in large and small schools, is to organize on the basis of individual committees representing the various types of instructional aids. In this approach, there might be one committee each on movies and filmstrips, slides and opaque projection, graphic aids, models, objects and specimens, blackboard and bulletin board, field trips, and booklets and bulletins. The grouping might be different. That would be determined by the teachers after considering the problem.

The aim of this approach would be to have the members of each committee become specialists in a particular area. This would make the most advantageous use of whatever time the teachers could devote

to the program. It would result in a concentration of efforts. It would cut across subject matter lines. It could bring everyone into the picture.

The results of committee activity would be available to all teachers. An individual teacher wanting special assistance could enlist the aid of any committee. Libraries of various types could be established, mailing lists could be maintained, simple workshop projects could be organized, and displays could be initiated. Each committee might prepare demonstrations or criteria to aid the other teacher in selecting, making, or using the several types of materials. In brief, each committee would serve as a clearing house for a certain type of material.

There are those who might argue that it takes more than committee appointments to make specialists. That is true, but concentration, however slight, is better than no concentration at all. The writer has observed the wisdom of this fact in working with college classes on the development and use of instructional aids. A few weeks' work by committees similar to the above in variably produces results much superior to the usual method of trying to make everybody learn everything about everything. It has been interesting to note how, within a few weeks' time, the class members turn to a particular committee when a problem arises in their sphere of activity. There is no question but that similar results could be obtained in any school system with a little *stimulation* and *coordination*. A few examples will highlight the potentialities of this approach.

Committee on Motion Pictures

Suppose that the committee on motion pictures consisted of three members at the start. One person might become the specialist on projection with the others working on related aspects. Among other things, the latter group might initiate a library of film titles and descriptions in the various subject matter fields. They might review the literature on selecting and using films. When their turn comes, they could be in charge of a special teacher's meeting on the selection and use of motion pictures. They might also be responsible for the student operator's club, which many schools are now organizing.

Because film projection has certain technical aspects, the specialist on projection would want to become as proficient as possible. The audio-visual dealer of the local theater operator might provide answers to some questions, but the best procedure would be to call on the State University, the nearby Teachers College, or the State Department of Education for special help in getting underway. If this school were in Minnesota, the writer would suggest that the principal send this committee member to the Audio-Visual Education Service at the University for a two- or three-day concentrated training program on the care and use of projectors. Even a one-day session would bring noticeable improvement in the typical school situation. The logic and value of such a visit should be readily apparent.

No doubt every state has or could have a similar service. Sometimes the service will be able to go out to the schools. This is fine, but the writer would not

(Concluded on page 284)

One Way To Improve Utilization

HOW can the producers and the distributors of visual materials help to improve utilization? One good way comes to mind. It is the development of a simple, practical, and educationally sound guide or manual for the user. It should be sent to him when his booking is confirmed. It will help and guide him as he plans the use of the visual material. If it arrives with the material, it is too late to do the maximum good.

Two Necessities

What should it contain? At least two things: A summary of the content of the visual aid, and suggestions as to how it can best be used with certain groups. If ideas on getting the group ready and on follow-up can be included, so much the better. The description of content should be accurate. Many workers for years to come will be unable to preview all the materials they use.

The suggestions for use should be educationally realistic and not designed to promote the sale or use of other kindred materials. Visual materials must be fitted into the church school. Utilization suggestions should imply the supplementary use of visual materials, and not infer the total displacement of other materials and methods.

Who?

Who is to prepare these guides? At first, it will probably be the producer of the materials. Later, as the upper levels of leadership in the churches become conscious of their responsibility for the improvement of utilization, their preparation will be undertaken by these responsible for the total curriculum of the church. When this stage is reached, there can be an integration of materials and methods not possible otherwise. With the rapid increase in visual materials, the church should be thinking seriously of its obligation to give fruitful assistance to the local user.

Guides Are Available

Here and there, starts have been made, mostly in the first phase. The Concordia Press' two-page guide on the filmstrip, *The Visiting Teacher*, is a good job. The discussion guides accompanying the filmstrips of Church Screen Productions (*Boy Meets Girl*, *The Christian Family*) would have greater value if a synopsis were included and if they reached the user before the aid arrived.

Guides are needed for such films as the *Two Thousand Years Ago* series; for the alcohol filmstrips of the

WTCU, and many other visual aids. By providing helpful guides, Association Films increased the usefulness of its "Art of Living Series," *You and Your Family*, *You and Your Friends*. Similar guides are needed for the mission films of the church, and improved utilization will wait to a considerable degree upon their production. This department will welcome an article critically evaluating present guides and indicating a pattern for more adequate ones.

We Use Opaque Materials

N. EUGENE KIRCHNER*

MANY church groups have yet to discover and utilize the advantages of opaque projection. It is not new. Churches have been somewhat slow in incorporating this aid in their teaching techniques, largely because slides and films have occupied the center of attention. We have used opaque materials, and we are enthusiastic about them.

Limitless Material

This type of projection can be done in any room suitable for other forms of projection. The specific advantage of opaque projection is that useful materials are limitless. Illustrations from magazines, from religious papers and periodicals; maps, charts, graphs, pictures—all are at the teachers disposal.

*Minister of Education, Plymouth Church, Wichita 8, Kansas.

Bausch & Lomb Optical Co.

With the opaque projector, pages from books, photographs, and small objects may be projected onto a screen. Lantern slides may also be used; this particular projector is known as a combined Balopticon, Model LRM.

Mount Pictures

We mount pictures on black backgrounds (black construction paper cut to a convenient size), thus enhancing the picture and facilitating their insertion in the machine. Pictures up to six inches square can be used. Larger pictures can be shown in sections. One projector now on the market will accommodate pictures up to $8\frac{1}{2}$ x 11 inches.

Opaque Materials for Motivation

We used opaque materials to help motivate a group of boys and girls in the weekday school to buy a heifer for relief purposes. From many sources we gathered pictures showing the needy children of Europe. They spoke more forcefully than words. Even the smallest child could appreciate that these children needed food.

This initial presentation was followed by the showing of the film, *Our Foster Mother, The Cow*. We followed this with two stories from the *All Abroad For Adventure Series II*, "The Missionary Cow", and "The Cow That Went To Sea". Both stories dealt with Puerto Rico, and both were illustrated by opaque materials.

Circumstances prevented our showing the real cow to the boys and girls. However, we did take her picture and show it. Thus, photographs made by group members may be shown.

For Small Children

We like opaque projection for small children. The fine stories in the 12-volume series, *Bible Books For Small People* can be used in the opaque projector. The picture is mounted, for easy insertion, and the script read. To duplicate these stories on slides would cost many times the price of the books which are "sacrificed." One of our primary teachers uses this method extensively.

Clip Magazines

We used pictures from the *National Geographic* to show a sixth grade group the caves of Cappadocia in which the hermits of the fourth and fifth century tenanted. A kindergarten group shared in the support of a little French boy. He was made real to these children when his photograph and a picture of his home were shown. Buying magazines just to cut up for the picture library is really quite economical; usually, however, old magazines may be used. The mounted pictures should be filed in manila folders for future use.

Opaque projection was especially valuable to us in our observance of Brotherhood Month. Slides and filmstrips that depict the limited home conditions of many Negro homes are very scarce. We used pictures from many sources to show Negro home life. We presented great Negro personalities such as Dr. Carver and Marian Anderson. This unit was augmented by such stories as "My Little Brother" and "Building With Bricks" from the *All Aboard For Adventure Series*.

We took 350 boys and girls to visit a synagogue. The trip was motivated and made more meaningful by using the illustrations from Mary Fitch's book, *One God*.

Our boys and girls enjoyed their study of India

The user of this opaque projector has created a picture strip from magazine clippings. (Refer to Frank Walter's article, October, 1946, page 439). The projector is a Spencer Delineascope made by the American Optical Co. The Charles Beseler Co., New York City makes opaque projectors accommodating $8\frac{1}{2}$ "x11" pages.

largely because of the pictures we showed them. The *National Geographic* afforded us many fine illustrations.

Cost of Materials Is Negligible

These are but a few of the ways the opaque projector can be used. It is easy to operate. The cost of materials is negligible. Useful resources are plentiful. Any teacher can prepare and use the materials. Almost any topic or lesson can be illustrated. Opaque projection will not supplant films and slides, but it can supplement them. Note that opaque projectors must be used in rooms that are very dark.

One large denomination is now developing packets of pictures to be used in conjunction with lesson materials. They will be a great aid to effective teaching, especially in the church with a budget too limited for the more expensive media.

Film on Atom Peril

The 19-minute Lutheran film, *The Way of Peace*, was given its premiere screening in Constitution Hall, Washington, with President Truman and his cabinet, the Supreme Court justices, the diplomatic corps, the clergy of all faiths, and top officials invited to attend. Following this showing, it began a tour of the country.

The Reverend H. K. Rasbach, pastor of the First Lutheran Church of Fullerton, California, originated and supervised the shooting of the film with the American Lutheran Churches of the country sponsoring its production. It is a screen version of how the world could be destroyed in this atomic age and is reported to have excellent technical qualities.

One Dealer's Criteria

In the absence of a criterion to be used in the purchase of leasing of films, one dealer* formulated his own. It is given here not because it is perfect or ultimate but because it is realistic and indicative of what may come. This document is called "Criteria by Which to Judge if a Film Which Claims to Be Religious Is First Class or Ordinary, Both as a Film and as a Religious Production." In detail, it follows:

Lighting—Brightly illuminated throughout, or only in spots; dull and indistinct throughout.

Photography—Sharply focused throughout or clear only in spots. Monotonous or interesting angles.

Color—Natural, vivid, overdone, blended where sequences are joined; mostly reds, browns, blues, greens.

Composition—Groupings of people and background settings merely casual and ordinary, or artistically arranged so that the film is a work of art.

Soundtrack—Easy to understand, or requiring strained attention. Even or uneven volume.

Voice—Pleasant, restful, animated, well-pitched, change of pace, monotonous, harsh, flat, stilted, too solemn, too much bass, too shrill.

Music—In or off key, incidental background music adjusted to mood of pictorial sequence, selected with imagination, too obvious, strident, not well-modulated, dull.

Animation—Clever, humorous, too humorous, childish, and amateurish, farfetched.

Action—Too detailed and slow, too condensed and rapid, right speed to tell the story clearly.

Content—*Type*: documentary, dramatic, entertaining, Biblical, theological. *True*: from standpoint of science, history, economics, social implications, Christian principles, human emotions. *Scope*: Superficial, comprehensive, narrow, raises questions it does not settle, sense of frustration, satisfying. *Plot*: Struggle in which audience can take a side; climax or none.

Religious message—Saturated with feeling of dependency upon God, and illustrating the principle of doing justly, walking humbly, and loving mercy. Sunday religion, weekday religion, all-of-life re-

ligion. Expressed in theological or everyday words. Piety or social Gospel, fundamentalist, reverence, missionary enthusiasm.

Age level—Primary, junior, intermediate, high school, young adults, middle age, old people.

Utilization—For worship services; for teaching; for the Sunday school; gives information; attitude forming; calls for action.

Intention—What does the film try to do, and does it succeed? Is its objective real, important, or imaginary?

Usableness—Will my customers find it easy or hard to use? Is there a guide or manual?

Whether every dealer has a formulation like this before him when deciding to purchase or lease religious films, he does follow some pattern of evaluation concerning the content, technical excellence, and usefulness of the film. The criteria which teachers and other users of religious films might formulate would vary from the above in content and emphasis. What are the items in the criterion which you readers are applying to religious films?

*Church School Pictures, The Old Arcade, Cleveland, Ohio

Audio-Visual Courses

College of the Pacific

The Department of Christian Community Administration, the College of the Pacific, Frank A. Lindhorst, Director, is offering four summer courses to the leaders of school, church, and other character-building agencies.

A five-week course, "Introduction to Audio-Visual Education," (June 24-July 25th) should interest those who need to make a start in securing an understanding of materials and processes. "Improving Teachers' Use of Audio-Visual Materials" (five weeks as above) is designed for those who have made a beginning in classroom and chapel.

The two-week seminar, "Audio-Visual Materials for Church and Community Leaders," (July 14-26) will be conducted by Mr. Howard Tower. An intensive workshop, "Audio-Visual Materials for Church and Community Leaders," (July 21-26) will be directed by Mrs. Frank A. Lindhorst.

ready to photograph the crucifixion scene in the American Lutheran film, "The Way of Peace."

The cyclotron scene in "The Way of Peace" which is distributed by the Wartburg Press, Columbus.

Photography: Glen Chang, East West Studio
Lew Ayres is the narrator. Idea was Rev. Rasbach's. This is the concentration camp.

Few colleges will be able to equal this program. Here we have an indication of things to come: the college serving all the educational workers of a given community and adjusting its courses to their specific needs. The result of doing this is likely to be more education per square inch than heretofore.

Another item in this announcement catches the eye. "A committee has recently made a study of the need to make a wider use of audio-visual materials in (all) college courses." Every college course could be made more interesting and effective by wise visual supplementation, and students taught visually will certainly be predisposed to look more favorably upon the use of visual aids in church and school in post-college years.

Wheaton College

Wheaton College, (Wheaton, Ill.) announces the course, "Visual Aids In The Church School," for the period June 10 through June 20. It will meet four hours each morning and receive two hours of college credit and will be taught by Mr. Donald Broadman. Inquiries should go to the Director of the Summer School.

Correspondence

Mrs. Eugenia Hester, Bryan, Ohio, tells in a letter too long for printing here, how the Mothers Club led the way in cleaning up a bad theater situation in that town. First, the Club organized a boycott against the Saturday matinees. Next it set up a community-wide committee to work out and present a plan to the owners of the two theaters. Lastly it provides a committee to preview all films, and another to supervise the theater during the two-hour Saturday performances. Out of this effort has grown a Motion Picture Council "to keep the Saturday matinees going, to promote better pictures in general, and to further visual education in Bryan."

"Your criticism of the three pictures of the American Bible Society in the February issue is not too harsh," writes Rev. John W. Gable, Director, Religious Film Service, Richmond, Ill.

Mr. Gene Brandon
Ideal Pictures
Chicago 5, Ill.
My dear Mr. Brandon:

You wrote that some people considered the film, *Seeds of Destiny*, too realistic and horrifying for general use by churches and other groups who are trying to build our present civilization into one-world which might endure for a while in peace, security, and a measure of prosperity.

Let me report my use of the film. Our high school young people, meeting on Sunday nights, have been giving some thought to the condition of the postwar world. They have seen other films. *Seeds of Destiny* was presented after an opening

The discussion which followed the showing turned wholly upon whether the film should be used with youth and adult groups.

There was no objection. Was it too shocking? No. "It shocked some, but we need it." Was it too realistic? No. "It takes realism to make us think." Is the film slanted, biased, angled

for effect? No. "Every soldier knows that the film is true." Did it leave you feeling resentful and helpless? No. "How can the truth be resented? Did we not give a part of our Christmas offering to our denomination's Restoration Fund?"

Should the churches use the film? "Absolutely!" How about the school? "We'd be better off if we saw some films of this kind. Maybe the kids would not leave so much good food on their plates in the cafeteria."

There you have it—the reactions of the group. The film held their attention as no other film we have had. It got under the skins of several sophisticated youth, and it made those with low I.Q.'s think a bit.

At the New Year's Eve party, three girls came in, signed up and said: "We've just come from waiting on tables at the Masonic Temple where there was a supper. You should have seen the food that people wasted! It was terrible! They should have seen the film we saw last Sunday night."

During the discussion which followed the film, a member of the group, derived from rather aristocratic folks in Hungary, spoke with feeling, saying: "Here we sit, amid plenty which we have not deserved, not very much concerned about the rest of the world. This (the film) is what we need to shake us out of our indifference. Believe me, I know."

Personally, I like the film. If a depression comes, we will try to see how we got into it, and we will resent the War as a factor in our troubles. Then people will want realistic things. Now, clothed in war-born prosperity, which is beginning to wear thin in spots, we tend to want to think that the world is better off than it is. In winning the victory, all we won was the right and the chance to help put the world together again.

Therefore, I say, circulate the film. I will use it again. It is much like *He Restoreth My Soul*, *Good Fight*, and better than *The Pale Horseman*, and some others.

Sincerely,

Wm. S. Hockman

Write to—

- Mr. John Oliver Nelson, Federal Council of Churches, 297 Fourth Avenue, New York 10, for information about a filmstrip, *Look at The Ministry*, based upon his book by the same title and highly useful in interpreting this vocation to youth. This excellent filmstrip is the result of the joint labors of Mr. Nelson and Mr. Robert M. Griffin, of S. V. E.

- Your bookstore for the latest, revised, illustrated, and improved catalogue of the Religious Film Association. This book, secured in this way, is free and is a "must" for every church.

- Director of Visual Aids, Missions Council Congregational Christian Churches, 287 Fourth Avenue, N. Y. 10, for a reprint of the article, "Getting Your Money's Worth in Audio-Visual Aids," which gives good advice on what to buy.

Film Sources

Because the question of Miss Nell Peerson, of Florence, Alabama, is one that comes in frequently, I will answer it here. She wants to know *where* she can get catalogues of film materials which a worker in the rural field might use.

First, you should secure the lists of visual materials which your own denomination has. In this instance, it is Methodist. Write to Rev. Howard Tower, Room 600, Medical Arts Building, Nashville 3, Tenn.; and, to Rev. Harry Spencer, Methodist Board of Missions, 150 Fifth Ave., N. Y. 11. Ask each for a list of materials available.

School-Made Pictures Department

DAVID SCHNEIDER, Editor
Evander Childs High School
New York City

Slide Production at Midwood High School

UNDER the very able leadership of Dr. Charles Gramet, one of the pioneers in the field of audio-visual education, Midwood High School, Brooklyn, N. Y., has now become a center for the production of still pictures in the form of 2"x2" slides and film strips. These pictures are produced by students of a special class in photography. Their photographic equipment handles and turns out material in both black and white, as well as in color.

Since this production center serves all city high schools in all subject areas, a plan of operation and procedure was set up by Dr. Gramet in order to avoid duplication of orders from teachers of the eighty or more secondary schools of the city. This plan requires the clearing of all requests through the Standing Committees in the various major subjects of instruction. The Standing Committee evaluates the materials submitted and suggests changes, wherever necessary. All this is important in view of the fact that a set of pictures ordered by one school often has to be duplicated for the other schools using the same course of study.

How good are the pictures produced? Schools that have been the recipients of these slides and film strips have been most unstinting in praising the quality and artistry of the materials produced. Among the subjects recently produced are the Historical Development of Science, a set of color slides illustrating types of Italian paintings, personalities at the United Nations Assembly at nearby Lake Success, slides illustrating good and bad manners at the Midwood School, and many varied subjects.

In order to acquaint prospective producers of school-made visual aids, many of whom, no doubt, will be found in the summer sessions of our Schools of Education, this year with all the details of the Midwood plan, we hereby take the liberty of quoting from Dr. Gramet's circular of instructions.

1. Explore the courses of study to disclose topics in which enrichment and clarification by means of projected still pictures would be desirable.
2. Plan picture units for each topic. A plan

should correspond roughly to a lesson plan or a picture script.

3. Secure the pictures necessary for each unit to be pictured. Illustrations may be taken from magazines, newspapers, books, post cards, original drawings, etc.
4. Where illustrations are to be copied from books and magazines, etc. permission to reproduce should be secured from the author or publisher. This is invariably given if acknowledgement is made. Blanket permission may be secured from some magazines if it is explained that the slides will not be sold.
5. The pictures must be suitably mounted. Our photographic unit does not have the time allowance nor the facilities to prepare, arrange, mount, title or do any work on the pictures submitted—except to photograph them.
6. The pictures in each unit must be arranged in order, clearly numbered and labeled. The number of copies wanted should be indicated.
7. When mounting is necessary or desirable, the pictures should be mounted on a dark gray or black cardboard mount. The overall proportions of the pictures and mount should be 2:3, the horizontal axis being longer. A margin of about $\frac{1}{2}$ inch all around should be allowed.
8. A simple teaching guide, which may be mimeographed, should be prepared.
9. Single pictures, diagrams, maps, etc. can and will be made. We emphasize the lesson unit

A copy stand will greatly speed the making of negatives for slides. The camera will always be centered on the copy. A different stand is needed for different reductions. Refer to Mark J. Flanders' article, "Two-by-Two Slides — and How!" in September, 1946, p. 362.

as a more efficient and desirable method of using these visual aids.

10. To insure maximum returns in value for all high schools from our production unit, all material should be cleared through the Standing Committee's sub-committees.

Readers of the *Screen* may recall that in the past year or two, this magazine carried some illustrated articles on the use of the 35mm. camera as a copying device; for example, "Two-by-Two Slides and How!" by Mark Flanders, September, 1946, p. 362. With the mechanics of operation as outlined in this article together with Dr. Gramet's instructions on picture preparation, it should be a simple and pleasant task for any school to create its own still film library.

The most difficult jobs of picture production, be they for Hollywood or local school, are not in the mechanics of photography. They are in finding the right scripts to work with. As a means of exploring the courses of study for picture possibilities, this department suggests that each subject department compile an inventory of already existing visual aids in the possession of the school, or available from outside sources, for each of the units or individual lessons taken up in the course of study. This should be followed by a careful evaluation of the existing visual aids, being on the lookout for possible picture revisions, where such revisions are clearly and definitely indicated. After lesson, by lesson is thus analyzed—and this may take many a summer—the alert and imaginative teacher will begin to discover many a gap in the visual materials waiting to be created for enrichment of learning.

This department would like to hear from all schools that have been creative along those lines. Send your accounts, together with glossy illustrations to this department so that we can all profit from and share with others these worthwhile educational experiences.

Books for Cinema Club Libraries

- How to Make Good Movies**—Eastman Kodak Co.
Eastman Reference Manual—Eastman Kodak Co.
Amateur Cinema League Movie Book—Amateur Cinema League, Inc.
How They Make a Motion Picture—Thomas Y. Crowell Co.
 by Ray Hoadley and Roman Freulich
Making the Movies—McGraw-Hill Book Co.
 by Jean Bendick

Cartoons on every page to illustrate well-written text explaining how a movie begins, casting, costuming, camera tricks, newsreel, documentary, and educational films.

CAMERA FANS: ATTENTION—Next month, the "School-Made Pictures Department" will carry a complete review of 8 and 16mm motion picture cameras with brief descriptions of each. Mr. Schneider will give tips and recommendations to prospective purchasers of motion picture cameras for school use.

A book shelf of one motion-picture enthusiast. Note the copy of 1000 AND ONE, handy for locating film sources. Eastman Kodak's booklet, "How to Make Slides" is nearby.

Talking Pictures—Johnson Publishing Co.
 by Barrett C. Kiesling

Begins with motion picture appreciation, selection of motion picture stories, research, how sets are made, properties, stars, director, sound recording, editing, use in home and school. Written especially for laymen.

The Rise of the American Film—Harcourt Brace & Co.
 by Lewis Jacobs

A critical history, good for background study.

Photography—U. S. Navy.

Navy training courses in photography for sale by Supt. of Documents, Washington, D. C.

Vol. I. Mainly on still photography.

Vol. II. Deals with color photography, aerial photography, stereoscopy, motion picture cameras, techniques, processing and projection. Type and illustrations easy on the eye, worthy of emulation. End of each volume has series of Self-Tests based on each chapter. Correct answers found several pages away.

Making Films Work for Your Community—Educational Film Library Assn.

A handbook on how to use educational films in the community.

1000 and One—Educational Screen.

Essential information on some 6,500 films, including their sources.

Educator's Guide to Free Films—Educators' Progress Service, Randolph, Wis.

Carnegie Corp. Grants \$175,000 to Study The Adequacy of Public Libraries

The Carnegie Corporation of New York has granted \$175,000 for a two-year study of how well existing public libraries are serving American communities and whether libraries should become future custodians of non-commercial radio, films, and television, according to an announcement made by Robert M. Lester, secretary.

Dr. Robert D. Leigh, who has just completed his work as director of the Commission on the Freedom of the Press, has been appointed to head the inquiry which will be conducted under the auspices of a special committee of the Social Science Research Council, 70 East 45th St., New York 17.

Pointing out that \$50,000,000 is spent annually in this country to support public libraries, Mr. Lester said, "It is of the utmost importance to know how adequately the library as an institution, is meeting the public's urgent need for information on local, national, and international problems."

In a statement to *Educational Screen*, Mr. Leigh stated, "The Public Library Inquiry, in its study of the function of the public library in relation to its constituency, will certainly give attention to the question of film libraries and whether or not the public library should extend its services to include custodianship, distribution, etc., of films for non-commercial purposes."

MAKE FULL USE OF YOUR *Overhead Projector*

IT MEETS EVERY NEED OF GROUP INSTRUCTION

Of course, it gives you the finest obtainable projection of

● **STANDARD LANTERN SLIDES**

Have you seen the latest additions to Keystone's vast library of educational slides? Some of these new units will make your work more effective--and easier.

Many instructors realize the possibility of

● **HANDMADE LANTERN SLIDES**

—not only for the presentation of special subjects, but for obtaining enthusiastic group participation.

You can sometimes make a worthwhile cut in the cost of lantern slides, by using

● **QUADRUPLE SLIDES**

—with four exposures, which are screened singly by means of a quarter-size mask.

Place a Flashmeter on your Overhead Projector, and you have a

TACHISTOSCOPE ●

—of thoroughly proven value for efficient training in spelling, reading, recognition and general visual skills.

By means of an inexpensive adapter, you can show

2-INCH SLIDES ●

—with the clear, inexpensive daylight projection made possible only by a 750 or 1000-watt lamp.

You can also buy an attachment for showing
STRIP FILM ●

—and here again, have the advantage of the Keystone Overhead Projector's powerful illumination.

Write for Circular.

VISUAL INSTRUCTION

ETTA SCHNEIDER RESS, Editor

ADMINISTRATION

- **Establishing a Visual Education Program**—Clifford H. Wise, Medina, N.Y.—*New York State Education*, 34:438, March, 1947.

The school has various types of projectors and a visual aids room for projection. To carry out the program, a director of visual education is recommended, and in a small school system, this would be a teacher who is willing to become familiar with sources of materials. Rental of films is preferable to purchase, so membership in a cooperative film library is useful. The director of this school prepares requisitions for the coming school year, based on teachers' requests. He mimeographs the schedule and sends weekly reminders. Films are previewed, when possible, and teachers file reports of use and evaluations. Projection service is furnished by student operators.

- **How to Use Films in Teaching Intelligently**—Beatrice Schwartz—*Progressive Education*, 24:126. Feb. 1947.

What our education system needs is a federally-sponsored and federally-financed program of education toward democracy through the medium of films. And . . . the showing of these films should be compulsory in every grade school in America, and that no American boy or girl should be considered eligible for entrance into high school until he or she had passed examinations on all—perhaps a dozen such films.

Among the films to be made would be documentary scenarios, possibly four full-length, of American history; one on a trip to Washington D.C., one on building physical fitness, one on seeking world order, etc.

This is a worthy but provocative point of view for at least two reasons: if straight federal aid to local schools is so difficult to legislate, how can we ever expect the politicians to permit federal production of films on the American way of life? And secondly, what assurance is there that federally-produced films will interpret our history and current foreign policy to satisfy the various conflicting pressure groups with the "objectivity" (Is there such a thing?) that the author demands? Add your own arguments, although there is no denying the great need for documentary classics to interpret our heritage with truth and emotion.

ART OF THE CINEMA

- **An Anagram of Ideas on Art, Form and Film**—Maya Deren—Alicat Book Shop Press, 287 South Broadway, Yonkers 5, N. Y. 1946, 52 pp. \$1.00.

A philosophical approach to the film by a creative producer of experimental films. Miss Deren proceeds from "the nature of forms," "the forms of art," to "the art of the film." This is her anagram. Of interest to followers of the experimental art film.

BIBLIOGRAPHY

- **The Informed Movie Fan—What He Reads**—Edward T. Myers—*Popular Photography* 20:118-128, April, 1947.

A thoroughly-annotated discussion of books to help the movie enthusiast in understanding the background of the cinema industry as well as techniques for amateur productions. Among the topics included are: history, semi-technical, production, scripts, the industry, advanced technical, aesthetics, encyclopedias, and yearbooks.

BOOK REVIEW

- **The Factual Film**—The Arts Enquiry, by Political and Economic Planning Committee of the Dartington Hall Trustees. *Oxford University Press*. 260 pp. 1947.

This survey, although made for an entirely different purpose, is exactly what American visual workers have wanted—a documentary account of the British factual film movement since its inception, with a frank discussion of current trends and possibilities.

The study was begun in 1943 by a semi-official committee, and involved the compilation of data from published material and personal interviews. A preliminary summary, circulated in 1944, brought valuable comments and criticisms, and the present volume, finally published in January, 1947 includes the considered judgment of the committee based on the consensus of advice received.

The recommendations (page 35-42), written in 1945, were so basic and far-seeing that by the time of publication, most of them had been put into effect—either directly or indirectly influenced by this study. The recommendations were: (1) that the Films Division of the Ministry of Information be continued or set up as a National Film Office to produce and distribute factual films, to ensure cooperation between government departments and independent producers; (2) that the Ministry of Education develop an educational film policy to include the sponsored production and distribution of educational films, provision of projectors, and the training of teachers; (Note: "sponsored" later is described as government-produced by the Films Division); (3) that the British Film Institute be re-organized to promote the educational, cultural, scientific, and recreational film and to assist the British film industry; and (4) that support be given to a film department within UNESCO.

Among the developments that have made these recommendations a reality are: (a) a newly established Central Office of Information with a permanent Films Division; (b) a policy of visual education adopted by the Ministry of Education which includes a Film Committee of educators, and the commissioning of an annual program of films through the Central Office of Information; (c) the creation of a section on mass communication media within UNESCO.

The greater portion of this volume constitutes an excellent history of the factual film in Great Britain from the point of view of a qualified committee of educators. A worthy addition to the bibliography in this field.

HUMAN RELATIONS

- **One World in School**—Louella Miles, St. Paul Council of Human Relations—The American Teachers Ass'n., Box 271, Montgomery, Alabama. 1946, 58 pp. 35c.

A source book of appropriate books, periodicals, plays, and audio-visual aids in all the important aspects of human relations: race prejudice (anti-Semitism as an example of prejudice), Negro, Oriental-Americans, and similar relations.

The author describes this bibliography as an inter-racial project of mutual cooperation. With reference to the audio-visual aids, these were well chosen at the time, and, as is inevitable in this field, can be supplemented and corrected in some instances.

An invaluable source book for teachers and community workers.

TODAY: a successful student... TOMORROW: ?

"JUNIOR PROM"... affords direct, effective instruction on matters of dress, conversation, introductions and general "date" conduct. Because of its personal approach, students recognize themselves in the characters and situations presented. It is a film that will aid in creating a high receptivity for this type of instruction. Junior high school, high school and college... 20 minutes... Color and sound... Complete with study guide.

THE SUCCESSFUL student of today is not always the successful man or woman of tomorrow.

The difference may be the result of the educational technique employed.

Modern business and professional standards require social and cultural presence as well as intellectual superiority. In recognition of this, leading educators are incorporating the development of social poise as an integral part of their curricula.

To aid educators in the effective instruction of this material, Simmel-Meservey have pioneered in the production of social and cultural educational films. "Junior Prom" is but one of many such films which have been adopted by leading educational institutions throughout the world.

Write today for a preview print.

SIMMEL-MESERVEY BIG SIX

The following six educational films were most in demand during the month of December. If you do not already have them—order them for preview today.

LET'S GIVE A TEA......a comprehensive treatment of accepted procedures of dress, invitations, guest lists, etc., and proper conduct at tea-time.

DINNER PARTY......training in table etiquette for the teen-age student; portrays proper table manners with a friendly, personal approach

MONARCH BUTTERFLY......film begins with the development of the caterpillar into the chrysalis and depicts each successive phase of the evolution to the adult butterfly.

REDWOOD SAGA......a comprehensive study of the lumber industry from the forest to the finished product.

THE MODERN CHIPPEWA INDIAN......the story of the modern Indian—how he lives, works and contributes to our national welfare.

AFRICAN FAUNA......an interesting and informative study of the wild beasts of the jungle.

“Motivation” and “Participation”

(Continued from page 259)

The question arises as to how the increase in effectiveness due to the increased participation should be assessed. Was its contribution, for instance, worth the additional amount of time required for the use of the participation questions? A complete answer to this question calls for a comparison of the contribution made by the participation procedure with the effects that could have been achieved by spending the time in other ways. No exhaustive study of this kind was made in the present investigation. However, a comparison that is relevant is afforded by the results of one additional group of pupils who were given a double showing of the film. This comparison is presented below.

B. Comparison of Group II (Participation) and Group V (Double Showing)

The additional group of pupils (Group V) was tested to find out how much was learned by showing the basic film presentation twice (without the addition of “motivating” or participation questions). The time required for this double showing was about 17 minutes—as compared with about 13 minutes for the single showing with the participation procedure.

Comparative results of the single showing of the factual material (Group I), the double showing (Group V), and the single-showing-plus-participation (Group II) are shown in table I.

Instruction	Approximate Time Required	Average Gain in % of Correct Answers
GROUP I—Single showing of factual material.....	8.5 min.	8.2%
GROUP V—Factual material shown twice.....	17 min.	12.0%
GROUP II—Single-showing-plus-participation-questions	13 min.	12.2%

It is seen that the single showing with participation procedure (Group II) and the double showing without participation procedure (Group V) were about equally effective although the latter required considerably more time. (Either of these methods, of course, was considerably more effective than just the single showing of the factual material alone.)

These results help to afford a base of comparison for evaluating the worth of the participation procedure. Also, they point to the need for further study both of the use of devices to increase participation in learning from films and of the effects of repeated film showings in increasing learning.

C. What Material Was Affected by Participation Questions?

An important question arising in connection with such devices as the use of “participation” questions

in films is: *What is the factual content that is favorably affected by the inclusion of the questions?* An important possibility is that while the answering of a question about a particular point will help in the learning and remembering of *that one point*, it may produce distraction that results in decreasing the extent to which other points are learned.

To throw some light on this problem in the case of the present study, the gains in percentage of correct answers were analyzed separately for those test questions that were directly “covered” by the participation questions. These results were then compared with the gains on test questions that were not “covered.”

The results on the two sets of questions are shown in table II for the standard version and the “participation version” of the film.

	Coverage by Participation Questions in Version II	
	Test Questions that WERE “Covered”	Test Questions NOT Previously “Covered”
Version II: WITH PARTICIPATION PROCEDURE	17.8%	9.0%
Version I: FACTUAL PRESENTATION ONLY	10.5%	7.8%
Difference	7.3%	1.2%

As we might expect, the major gain from including the participation procedure was on the test items quite directly covered by the participation questions. (This gain is shown by the difference of 7.3% at the left.)

For the average test item *not* specifically covered by participation questions, neither a loss nor an appreciable gain was found. (The average difference of 1.2% for these items is too small to give reliable evidence of any differential effectiveness for the two procedures.)

4. Some Possible Implications of the Results

A. Implications for Film Producers

The results of this study show clearly that even the relatively crude procedure used for increasing pupil-participation can materially increase effectiveness of an educational film. The results also suggest that the insertion of orienting or “motivating” questions preceding the presentation of factual material may contribute to the learning of that material. This means that as a tentative guide pending further investigation, film producers may well consider making increased use of such devices in attempting to increase the effectiveness of factual presentation in films.

In the case of the study reported here, “participation” and “motivation” sections were simply spliced into

(Concluded on page 283)

begin to build a film library NOW!

Here are 6 reels from
Coronet INSTRUCTIONAL FILMS
to give you an ideal start...

HOW TO STUDY

Designed to motivate better study habits as well as to give practical hints on study techniques. Educational collaborator: Dr. William G. Brink, Professor of Education, Northwestern University.

WE DISCOVER THE DICTIONARY

Teaches important points regarding dictionary usage in an interesting story about three students. Educational collaborator: Dr. Viola Theiman, Assistant Professor of Education, Northwestern University.

KNOW YOUR LIBRARY

Dramatizes use of typical high school library as Betty seeks material for her civics assignment. Educational collaborator: Miss Alice Lehrer, Assistant Professor of Library Sciences, University of Illinois.

SPELLING IS EASY

A motivational film presenting the five rules for learning to spell in an interest-holding action story. Educational collaborator: Dr. Viola Theiman, Assistant Professor of Education, Northwestern University.

HOW TO READ A BOOK

Designed to aid in the development of reading skills necessary for careful and thorough understanding. Educational Collaborator: Dr. William G. Brink, Professor of Education, Northwestern University.

IMPROVE YOUR READING

As an aid to the correction of poor reading habits, this reel is ideal for use in language arts classes. Educational Collaborator: Dr. John J. DeBoer, Chairman, Education Department, Roosevelt College.

THESE SUBJECTS ARE 1-REEL 16 MM. SOUND MOTION PICTURES. PRINTS ARE AVAILABLE IN COLOR OR BLACK-AND-WHITE

YOU couldn't have a better nucleus for a film library than these six Coronet "basic skills" films. They can be used time and again the year 'round, year after year, by any school system... And they are rapidly becoming the most popular educational motion pictures available anywhere.

These six basic sound films may be had in full natural color or in black and white, for as little as \$270 for the entire six in black and white. Furthermore, they may be acquired by using our convenient lease-purchase plan, by which you pay for the films while you use them.

WRITE TO: CORONET INSTRUCTIONAL FILMS—65 E. South Water St., Chicago 1, Illinois

Summer Courses in Audio-Visual Education, 1947-Part II

The following courses have been reported to date. Title, number of courses, dates of summer session and name of instructor are given insofar as data was provided. Figures in parenthesis show credits (semester if quarter is not indicated).

Arizona

- Arizona State College*, Flagstaff June 9-Aug. 1
Audio-Visual Aids in Elem. School (2-5); Audio-Visual Aids in Sec. School (2-5); Admin. & Supervision of the Audio-Visual Program (3) All given by Del Shelley
- University of Arizona*, Tucson July 14-Aug. 16
Visual and Auditory Aids in Teaching, Ed 117 (2)
E. L. Larson

Arkansas

- Arkansas State College*, Jonesboro June 2-July 5
Audio-Visual Aids (3) Garland Beavers
- Henderson State Teachers College*, Arkadelphia June 2-July 5
Audio-Visual Instruction (3) F. B. Wright

California

- Chico State College*, Chico June 23-Aug. 1
Audio-Visual Aids, Ed 111 (2) Mr. King
- Claremont College*, Claremont June 23-Aug. 1
Audio-Visual Aids to Learning, Ed 246 (6)
Hariett Genung-Allison McNay
- College of the Pacific*, Stockton June 24-July 25
Introduction to Audio-Visual Education; Improving Teachers' Use of Audio-Visual Materials; 6 courses on Radio Instruction (each 5 wks.); Seminar in Audio-Visual Materials for Church and Community Leaders (2 wks.—July 14-26); Workshop in Audio-Visual Materials for Church and Community Leaders (1 wk.—July 21-26)
- Dominican College of San Rafael*, San Rafael July 1-Aug. 12
Audio-Visual Education (2) Earl Mennet
- Fresno State College*, Fresno June 16-July 25
Audio-Visual Education (2) James H. McCammon
- Humboldt State College*, Arcata June 23-Aug. 1
Audio-Visual Education (2) George Monroe
- Occidental College*, Los Angeles June 23-Aug. 1
Materials and Methods in Audio-Visual Instruction, 162 (2) Amber Wilson & Staff
Advanced Project Studies and Research in Audio-Visual Education, 262 (2) Margaret Divizia & Staff
Radio Workshop, 164 (4) Mr. Lindsley
- Pacific Union College*, Angwin June 16-July 10
Audio-Visual Workshop, 145 (3 qr.) R. F. Cottrell
- San Francisco State College*, San Francisco June 30-Aug. 8
Audio-Visual Education, Ed 370M (2-4) Earl Mennet
- Santa Barbara College*, Santa Barbara June 23-Aug. 2
Audio-Visual and Radio Education, Ed S121 (2) L. B. Sands
- University of California*, Berkeley June 23-Aug. 2
Workshop in Audio-Visual Education (4) Elizabeth Noel
- University of California at Los Angeles* June 23-Aug. 1
Audio-Visual Instruction, Ed 147 (2); Audio-Visual Education Seminar, Ed 257 (2) F. Dean McClusky
- University of Redlands*, Redlands June 16-July 25
Visual Education, 189 (2) Fred J. Sales
- University of Southern California*, Los Angeles June 13-Aug. 1
Introduction to Audio-Visual Materials, Ed 177 (2) (Required of all candidates for teaching credentials)
Doane, Estes, Gorow
Workshop in Audio-Visual Materials, Ed 177E (2) Estes
Audio-Visual Materials in Modern Curriculum, Ed 277 (2) Donald Doane
Educational Film Production; Workshop in Educational Film Production, Cinema 175-6 (2 each) Mr. Moore
Motion Picture Appreciation, Cinema 178 (2) Mr. Gessner
Teachers' Radio Workshop, 190 (2) Mr. Touton

- Whittier College*, Whittier June 16-July 25; July 23-Aug. 22
Audio-Visual and Radio Education, 147 (both terms)
Robert Hall

Colorado

- Colo. A & M College*, Fort Collins June 23-July 18
Use of Objective Aids in Teaching, Ed 125 (3 qr.)
Mrs. Coleman
- University of Colorado*, Boulder June 16-July 18
Visual Aids, Ed 137 (3 qr.)
Lelia Trolinger
- University of Denver*, Denver June 16-Aug. 22
Survey of Audio-Visual Materials, Ed 235 (5 qr.)
Dr. Kauffman

Florida

- John B. Stetson University*, DeLand June 16-Aug. 22
Materials and Methods of Audio-Visual Education, 333 (5 qr.)
Andrew Preston

Indiana

- Indiana University*, Bloomington June 18-Aug. 15
Survey of Audio-Visual Materials, Ed 526 (2½)*; Utilization of Audio-Visual Materials, Ed. 523 (2½)*; Selection of Audio-Visual Materials, Ed 624 (2½); Administration of Audio-Visual Materials, Ed 529 (2½); Production of Audio-Visual Materials, Ed 23 (3); Administration of a College Center of Audio-Visual Materials, Ed 626 (2½); Seminar in Audio-Visual Materials, Ed 724; Research in Audio-Visual Materials, Ed 741; Thesis in Audio-Visual Materials, Ed 781 (Cr. Arr for last 3 courses) Courses given by Staff
*Also offered in Post Summer Session, Aug. 14-30

Iowa

- Drake University*, Des Moines June 9-Aug. 1
Visual Aids, Ed 208 (3) Margaret Black

Kentucky

- Eastern Ky. State Teachers College*, Richmond June 9-July 15
Audio-Visual Education, 53 (4 qr.) Anna A. Schnieb
- Morehead State Teachers College*, Morehead June 4-July 11
Visual Aids, 483 (4 qr.) Mrs. Hart

Louisiana

- Louisiana State University*, Baton Rouge July 21-Aug. 8
Audio-Visual Education (3) Harrison-Michalak-Daniels
- Southwestern Louisiana Institute*, Lafayette June 16-Aug. 15
Audio-Visual Education, Ed 390 (3) G. A. Zernott

Maine

- University of Maine*, Orono June 30-Aug. 8
Motion Pictures in Education, Ed 79s; Audio-Visual Aids to Instruction, Ed 79As; Problems in Audio-Visual Education, Ed 79Bs (2 each) 3 courses by Joseph I. Hall

Massachusetts

- Boston University*, Boston (write for dates)
The Use and Teaching of Visual Aids, S173 (2); Visual Education Management, S174 (3) E. Carleton Moore

Michigan

- University of Michigan*, Ann Arbor June 23-Aug. 1
Audio-Visual Aids in Education, B133; Seminar in Audio-Visual Aids, B233 (2 each) F. L. Lemler

Minnesota

- State Teachers College*, Duluth June 9-July 18
Audio-Visual Education, Ed 220 (4 qr.) M. I. Smith
- University of Minnesota*, Minneapolis June 16-July 25
Visual Aids in Teaching, Ed CI 105 (3); Coordinating a Visual Education Program, Ed CI 106 (3); Problems in Visual Education (Cr. Arr.) 3 courses by Paul R. Wendt

Teaching Films, Inc.

PRESENTS

MOTION PICTURES

- **French for Beginners**

The French language is brought to life for your pupils. Here are everyday activities of French-speaking people, pictured in their own environment. Slowly paced narration—precise diction—authentic pronunciation—make this an indispensable teaching tool. High School and College, Foreign Languages. 10 minutes, black and white.

- **It's YOUR Library**

A stimulating film that will encourage children to use their library. It gives basic rules for library procedure. This picture opens the door to a new world, rich in adventure and experience. Elementary Grades, Social Studies, 10 minutes, black and white.

- **Communications and Our Town**

A comprehensive and interesting presentation of the way in which a town is tied together and linked with other communities through its network of communications. Elementary Grades, Social Studies. 10 minutes, black and white.

All Motion Pictures—16mm., Sound

BLOWER COOLED

... AND LIGHT WEIGHT, TOO

GoldE TRIPLE-PURPOSE
FILMATIC
Slide and Film Strip
PROJECTOR

3 way use

- For Single Frame Slidefilm
- For Double Frame Slidefilm
- For 2x2 (35mm) Kodachrome or Black and White Slides

- Motor-Driven Forced Air Cooled
- No Rewinding Necessary
- Anastigmat Projection Lens
- Smooth, Sharp Focusing

- Easily Adjustable for Either Horizontal or Vertical Pictures
- Instant Framing
- Monumatic Slide Carrier
- Professional Efficiency
- Rugged—Stable—Portable

The GoldE Filmatic enables you to make the most effective use of all three types of still projection material. Can be changed from film to slide showing in a jiffy! Permits use of 300 as well as 200 or 100 watt lamp for more brilliant projection... yet safeguards precious slides or film against heat damage. Cooler handling. Complete with carrying case.

News a

New England Convention—May 24

On May 24 at the School of Education, Boston University, the Massachusetts Teaching Aids Society, Department of Audio-Visual Instruction of the National Educational Association in cooperation with Boston University, Harvard University, and the Massachusetts Department of Education are holding the 15th annual New England Convention in Audio-Visual Education.

Discussions will be held on the following topics: (1) "Standards and Trends in Production of Audio-Visual Education Materials and Equipment"; (2) "Standards and Trends in the Administration of Audio-Visual Education Programs"; (3) "Standards and Trends in the Utilization."

Godbey Elected President, Kentucky SVI

Gordon C. Godbey, assistant director of the University of Kentucky Extension Department, was elected president of the Kentucky Society for Visual Instruction for the coming year at the recent annual convention of the Kentucky Education Association. Tandy Chenualt of Maysville High School, Maysville, Ky., was chosen as vice president of the society.

Announcing plans for reorganization during the coming year, Mr. Godbey also revealed that plans for an extensive membership drive are being arranged. A utilization program was presented by the Louisville classroom teachers during the three-day meet.

Mr. Godbey, a native of Troy, Ky., is a graduate of the University of Kentucky with an A. B. degree in 1941. Before joining the University administrative staff he held the position of manager of the D. T. Davis Company, Cincinnati, O., served as principal of Lee County High School, Beattyville, Ky., and headed the Audio-Visual Branch, Training Division of the Lexington Signal Depot.

Illinois Educator Appointed to MPA Staff

Appointment of J. Stanley McIntosh, of Evanston, Illinois, as assistant director of the Department of Educational Services of the Motion Picture Association was announced by Eric Johnston, Association president. The Department is headed by Roger Albright.

Mr. McIntosh will assist on projects being carried out by the Association in cooperation with educators to help develop the maximum educational usefulness of the motion picture, particularly as a teaching tool in classrooms. He was trained for the teaching profession and has served as a school principal in Evanston, Illinois, as assistant superintendent of Cook County Schools, and on the summer faculty of Northwestern University and the State University of Iowa.

Prior to joining the Association, he was with Encyclopaedia Britannica Films in Chicago as associate in research and production of educational motion pictures. He assisted in making Encyclopaedia's recent release, *Atomic Energy*.

Notes

Chicago Film Festival—June 2 to 6

The Film Council of America, in cooperation with various civic organizations using nonfiction films, is sponsoring a Spring Film Festival in Chicago, June 2 to 7 at 84 East Randolph Street. The purpose of the Festival is to acquaint civic leaders, teachers, audio-visual directors, and others with the variety of non-fictional material available in 16mm films. A different area of learning will be covered each day, and the program will be repeated twice in the afternoon and twice in the evening.

On Monday, June 2, a group of films in the Fine Arts will be screened; on Tuesday, films in the Social Sciences involving inter-group relationships; on Wednesday, films in the Natural Sciences; on Thursday, world geography; and on Friday, languages with special emphasis on French and Spanish. The newly formed French Film Society and the Chicago Scientific Film Society have assisted in selecting films related to their respective fields. Persons desiring details of the festival program may write to Wesley Greene, Chairman, Festival Committee, 84 East Randolph St., Chicago 1, Illinois.

Illinois State Library Adds Stereoscopic Photos

The Art Department of the Illinois State Library has added three-dimensional color photographs and modern stereoscopes for viewing them to its loan services. Schools, churches, and community groups as well as individuals in the State are invited to make use of this service.

Audio-Visual Awards to Schools

Dr. John E. Dugan, President of the National Education Association's Department of Secondary Teachers, has announced that the Department will present Audio-Visual Awards at the end of the academic year 1947-48 to schools and colleges doing outstanding work in audio-visual education.

"Pilot" schools in a series of states from coast to coast are being selected to compete for the awards. To qualify, schools and colleges must have a majority of teachers at all grade levels making curricular use of audio-visual materials of various types. After the year 1947-48, institutions receiving awards will serve as demonstration centers for the advancement of audio-visual methods in teaching.

In addition to receiving "glory" in the form of "oscars," winning schools will be eligible for awards of new equipment and materials, including projectors, screens, films, etc.

The project is under the supervision of Dr. William Lewin of Weequahic High School, Newark, New Jersey, chairman of the Department's Advisory Council. Application forms for participation in the awards may be obtained by addressing Dr. Lewin.

Tri-State Audio-Visual Conference

A particularly successful audio-visual conference was held recently in Evansville, Indiana, under the sponsorship of the Evansville College and Public Schools, Indiana University, and Vanderburgh County Schools.

Miss Margaret Hudson, Director of Audio-Visual Education, Richmond (Va.) Public Schools emphasized the importance of audio-visual instructional materials and, with appropriate illustrative anecdotes, encouraged the teachers to make wider use of these materials. She also indicated the value of audio-visual materials in caring for individual differences commonly found in the classroom.

Dennis Williams, Director of Distribution for Encyclopaedia Britannica Films, discussed the type of education which is necessary for the establishment of "one world," and by reference to teaching situations, he indicated the role that these materials could play in enriching the curriculum.

Wesley Greene, International Film Bureau, John L. Hamilton, British Information Services, and Carl F. Mahnke, Vocational Guidance Films, discussed plans for film production and showed a number of recently released films. Miss Ann Hyer, Audio-Visual Center, Indiana University, demonstrated with a 6th grade class the use of the sound motion picture, *What Makes Rain*. Demonstrations of the use of opaque projectors, wire recorders, filmstrips, lantern slides, graphic materials, and the micro-projector were carried out on the second day of the conference.

Mr. I. C. Larson, Director Audio-Visual Center, Indiana University, spoke on "The Role of the Film in Adult Education." Religious education by means of audio-visual materials was covered by a panel which included Carolyn Guss, Associate in Selection, Audio-Visual Center, Indiana University, chairman; Armin Limper, Director of Religious Education, St. Lucas Church; Sam Medlicott, Director of Y. M. C. A.; H. C. Paulson, Executive Secretary of Boy Scouts; Freda Peters, Executive of Y. W. C. A.; Kenneth B. Thurston, Supervisor of Audio-Visual Education, University School; R. Dale Tennison, Cynthia High School; and Charles W. Tyrrell, Director of Religious Education, First Presbyterian Church.

Films and Recordings on Your Library Card

Books and magazines in the Cincinnati Public Library have some new allies. Recordings, films, filmstrips, and standard 2" x 2" slides are supplementing the traditional book and are being loaned like the book, without charge on a library card. The library's collection includes such classic documentary films as *The City* and *The River*. Projectors for showing the slides are available from the library on payment of a small rental fee.

New Hampshire Audio-Visual Meeting

Last month a 150 educators and teachers of New Hampshire met to hear Dr. Abraham Krasker, Boston University speak on "The Values and Uses of Audio-Visual Aids"; to see Miss Isabelle Dionne demonstrate handmade lantern slides; and to listen to Dr. Edgar Fuller, State Commissioner of Education; Dr. Lloyd

RADIANT Screens make all pictures look better . . . !

Project your motion pictures and slides on a screen which makes them fairly "POP OUT" into the room with you. Thrill to sharper, clearer black-and-white pictures . . . richer, more vivid color shots. Such performance is the result of the Radiant "Hy-Flect" Screen surface . . . thousands of tiny glass beads set in the snow-white plastic screen surface—glass beads that *reflect* light, never absorb it. You get this in New 1947 Radiant Screens . . .

Plus all these Wonderful Exclusive New Features

- | | |
|--|---|
| 1. Automatic Leg Opening (Pat. Pending) | 6. Built-In Shock Absorbers (Pat. Pending) |
| 2. Screen Leveller (Pat. Pending) | 7. Automatic Leg-Lock |
| 3. Shakeproof Safety Catch | 8. Rubber-Bail Tripod Feet |
| 4. Feather Touch Adjusting Handle (U. S. Patent) | 9. Triangular Steel Tube Construction |
| 5. Double-Action Auto-Lock (Pat. Pending) | 10. Automatic Leg Adjustment |
| | 11. Finger Grip Carrying Handle |
| | 12. Streamlined Design and Duo-color Scheme |

All pictures look better . . . when projected on the new, brilliant, instantly adjustable 1947 Radiant Screens.

Safety Education

Only 36 credit courses in safety education are to be given this summer, according to a report of the National Higher Education Safety Committee in *Safety Education*. In spite of the increased interest in safety, this record is poorer than the 1946 record, when 35 institutions reported 44 credit courses. In 1941, the last pre-war year, 82 institutions offered such courses. The field of "safety" is one in which visual materials play an especially important role with many motion pictures and filmstrips available.

Chart and Graph Service

Ohio State University has a unique service for the benefit of its professors: a chart-and-graph picture service which delivers painted or drawn illustrative material for use in classroom discussions on difficult or abstract areas of knowledge. The service is manned by a full-time staff artist, part-time student artists, and a professor's wife. The service is administered by the university's audio-visual materials committee under the direction of Dr. Edgar Dale and Dr. Norman Woelfel, Bureau of Educational Research.

Montana Conference

A special Audio-Visual Aids Conference will be held at the University of Montana, Billings on July 10, 11, and 12. Dr. Melvin Brodshaug, Vice-president of Encyclopaedia Britannica and Harry K. Norton, State Supervisor of Visual Aids for Montana will speak. Equipment manufacturers will hold exhibits.

"Motivation" and "Participation"

(Concluded from page 274)

existing film material. With film scripts specifically designed to permit integration of these devices with the factual presentation, it is quite likely that the devices would contribute appreciably more than was shown in the present instance.

B. Implications for Users of Existing Educational Films.

The results of the study—particularly those bearing on the effectiveness of participation questions—suggest that teachers may use existing teaching films to greater advantage by interspersing such questions between sections of a film. The results obtained with the additional group to whom the film was shown twice also help to document the advantage that can be produced by the frequently used practice of showing a film more than once. However, the way in which this may most effectively be done remains a problem for further investigation, particularly since in the present study the double showing of the factual material alone was found to be no more effective than a single showing supplemented by the participation questions.

3 Filmstrips on Christian Courtship and Marriage

WANTED—Stimulation and Coordination

(Concluded from page 264)

let this take the place of the special committees in the school. The solution is more than bringing a visual expert to the school and having him talk and demonstrate. There is need for a continual awareness on the part of the teachers, and this can best be developed when certain teachers are responsible for keeping their colleagues active.

The Bulletin Board

The possibilities are many and varied for each of the proposed committees. A little planning and organization could do wonders with the typical school bulletin board. Very few teachers are aware of the several simple techniques that add to the effectiveness of black-board illustrations. Little has been done, generally speaking, to enlist the aid of local merchants in obtaining educational displays of materials, processes, and products. Most teachers know little or nothing about the simple methods that can be used to make enlarged and colorful charts.

These are merely typical avenues open to the individual committees. A host of others could be added. To be sure each of the above techniques or possibilities has been described in some textbook or article at some time. They are not new. They are merely waiting to be demonstrated and used.

It should be repeated that even more important than the physical aids is the use to which they are put. This would be a major function of each committee aided by the principal in his supervisory and coordinating capacity. With proper stimulation and direction, healthy competition could be engendered within the faculty—not to make bigger and gaudier materials but to make learning easier and more effective. What could be a better objective for a school system? What is a better means for getting a group of teachers doing something about the improvement of instruction?

One final suggestion seems necessary to insure the success of such an approach. Perhaps it should have been mentioned at the outset since it is primary. Learning requires activity. We learn to do so by doing. Though this may appear trite, it is in large part the secret, if there is a secret. The committees must experiment; they must try different things; they must actually enlarge the drawings, or arrange the bulletin boards or show the motion pictures, or make the models. Then they must be held to account for their activities. They must keep the other teachers informed. They must help all who require assistance. They must be encouraged. Perhaps one afternoon and evening each month could find all of the teachers in the shop, art room, science lab, or regular classroom, making, reviewing, or discussing instructional aids. It would be informal. It would be interesting.

These paragraphs have contained the outline of one approach. Other methods might be equally successful. The formula will apply in varying situations. The salient point is to bring all of the teachers into the picture. This requires *stimulation* followed by *coordination*. You in audio-visual education must get to the principals, who must get to the teachers, who must get the job done.

A Professional Study in Audio-Visual Education

(Concluded from page 253)

Unit VII. Projection Apparatus for Motion Pictures.

The outcome of this unit is to make the student proficient in the selection, care, and operation of the 16mm motion picture projector. The student is required, under supervision of the instructor, to project selected films for preview by the class. The proper care and storage of films are also emphasized.

Unit VIII. Evaluating Projected Materials.

The enumeration of criteria for evaluating educational motion picture films, lantern slides and filmstrips is the objective for this important unit. Further study of their proper use as aids in teaching is made. A large number of motion pictures selected by the members of the class are previewed. Each student is required to prepare a teaching unit in which the various visual materials studied so far are utilized helpfully.

Unit IX. Auditory Equipment.

The outcome of this unit is to acquaint the student with the use of the different types of auditory equipment such as the radio, the phonograph, the sound recorder and the public address system. Their place as aids in teaching is outlined and discussed carefully.

Unit X. Source of Materials.

The outcome of this unit is to put the student in touch with the various sources of both free and rental aids. A selected compilation of current materials is made by each student, suited to the subjects or grades in which each is teaching or planning to teach. A collection is made of selected free materials for continuing reference.

Summary

The special talents and experiences of individual students in the group are utilized to enrich the class discussion and exercises. Individual conferences on special problems and projects with the instructor are encouraged. Provision is made for exchange of materials among the class members. In addition, each member assembles a file of information and a working kit of materials to aid him in his actual work in the classroom.

Such a course as outlined above should serve to give the administrator and instructor alike a fresh assurance that he or she understands the intelligent use of audio-visual materials in teaching and learning. He can move forward with constructive plans, confident that he is on reasonably sound ground.

Moreover, it will enable careful and progressive planning to enrich the teacher's everyday classroom efforts, thus giving added satisfaction in a task better done than without the experiences and insights gained in a course of this nature.

ERRATUM

The name of W. Robert Dixon, University of Michigan was unfortunately omitted from the article, "Improving Adult Reading Through Visual Aids." Mr. Dixon was co-author of this very excellent article, and his name should have appeared as such. The article appeared in the April issue of EDUCATIONAL SCREEN on pages 195, 196 and 197.

ANNOUNCING...

TWO NEW AND UNUSUAL EDUCATIONAL FILMS

One hundred years into the past by horseback! Beautiful Hacienda San Carlos is eight days from the nearest point of civilization over rough

mountain trails. Built more than a century ago, it has been handed down from generation to generation with almost no change. This Hacienda exists today as it did in the past, producing its own food, clothing, and shelter, without modern aids. Even the oxen drawn plow is made of wood in primitive style. Here is a startling contrast to our civilization of today, only a few hundred miles away in our neighbor republic, Mexico. This picture, highly interesting to young and old, is excellent for lower elementary grade study of community life. Simple, primitive, easily understood methods of wool processing, weaving, and butter and cheese making are depicted.

This film is one-reel, 16mm. Kodachrome. Both photography and sound are of excellent quality.

This picture deals with tin, that world important, commonplace commodity which one meets at every turn in our modern way of life.

Filed in Malaya, a major source of the world's tin supply, it clearly depicts modern tin prospecting and mining methods. One high point is the construction of an enormous dredge in the Malayan jungle from parts shipped from all parts of the world. The interdependence of the nations of the world is demonstrated in this picture. Finished manufactured goods are shown in use in the Malayan jungle helping in the production of a metal highly important to the whole world. The social aspects, showing how people of different nationalities work together to produce this important commodity, are well emphasized. This picture is a valuable social studies document. One-reel, 16mm., black and white.

Write for prices and further information regarding these and other instructional films.

6060 SUNSET BLVD. • HOLLYWOOD 28, CALIFORNIA

AUDIO - VISUAL TRADE REVIEW

Equipment

International Exhibition of Modern School Equipment

The Belgian Minister of Education has decided, as part of a campaign of rebuilding and modernization of Belgian schools and reformation of teaching methods, to organize an International Exhibition of Educational Equipment.

This Exhibition will be held from the 22nd of June to the 21st of July 1947 and will therefore coincide with the World Festival of Film and Fine-Arts and other important cultural events.

It will take place in one of the largest and most modern State-Schools of Brussels. It is hoped that a large number of exhibitors of all kinds of educational material: books, scientific apparatus, laboratory equipment and glassware, cinema apparatus, epidiscopes, records, radio-receivers, and even television will take part, together with Belgian and foreign firms.

There will be a full programme of demonstrations, auditions, projections, lessons and lectures, showing the use of different forms of educational equipment.

In order to allow the Executive Committee to take all necessary measures in good time and to proceed to the selection of materials answering fully the aim of the Exhibition, it is of importance to mention in detail and to describe briefly the proposed objects and the areas and space required for their exhibit.

Applications must be addressed immediately to: Ministry of Education, (Exhibition 1947—Eximadim), 44, Rue de Louvain, Brussels.

RCA's 16mm Story

Sixteen years ago RCA introduced the first 16mm sound film projector. Celebrating the occasion as the "Sweet Sixteenth" anniversary of 16mm sound, RCA reveals for the first time, the step-by-step development in its laboratories which led to the present 16mm sound projector.

First to overcome, in the early thirties, what was then commonly considered the insuperable obstacle of putting sound on the narrow 16mm film, the company went on to score most of the significant "firsts" in the 16mm industry. These included the introduction of film with a single row of sprocket holes and the engineering of the first projector designed to use such film, the development of a simplified film-threading arrangement which solved the problem of film damage; the development of the now-universal dynamic speaker and the closed-cavity speaker case which made satisfactory response at low as well as high frequencies possible; and the cylindrical lens, sound-reproducing optical system which permits the use of a low-power exciter lamp in 16mm projectors.

The first 16mm sound projector, the PG-38 (illustrated), was developed by RCA in 1931. Behind it lay years of pioneering effort aimed at solving the many problems, optical, photographic, electronic and mechanical which plagued photographic sound recording. RCA's first innovation was 16mm film with one row of sprocket holes which reserved the other side of the film for the sound track. In cooperation with the Eastman Kodak Company, the film was presented for standardization to the Society of Motion Picture Engineers and, after being adopted as the American standard, was later made world standard.

ROBERT E. SCHREIBER, Editor
Audio-Visual Center
The University of Chicago

RCA's First 16mm Sound Projector (1931)

RCA's first 16mm sound projector introduced in 1931 solved the basic problem of 16mm sound so thoroughly that it inadvertently led to a peculiar international incident that eventually involved the high diplomatic machinery of the League of Nations itself. Viewing the newly born RCA projector, the Germans, who had been very much in the 16mm sound steeplechase, abandoned their own efforts and adopted the principles incorporated in the RCA projector. However, in picking up the diagrams as published in the journal of the Society of Motion Picture Engineers, the eager Deutschers interpreted one small detail backwards. The result was fantastically exhibited at an early exposition in Paris when it was revealed for all the world to behold, that the German-adapted projectors ran the titles of our standard 16mm film backwards! Likewise, German-made film run in our projectors showed the titles as though seen in a mirror.

Unwilling to junk their huge investment in 16mm sound projectors, the Germans refused to bow to the standards set up on the basis of the American made equipment. After preliminary jockeying in the Educational committee of the League of Nations, the issue was carried to the International Standards Association where the problem was finally solved by appointing the Germans as secretariat of the committee. This "neutralized" the Germans and judgment was inevitably rendered in favor of the American equipment.

SINCE 1897

In 1933 and 1934, improved models of the original RCA 16mm sound projectors were placed on the market, and in the latter year, RCA further improved 16mm sound by designing an optical reduction printer that made it possible for film-processing laboratories to make 16mm prints from 35mm negatives. This produced 16mm prints of finer quality than the "re-recording" method then in general use for making 16mm sound records from originals on 35mm film.

RCA engineers broke the back of another problem that had been plaguing the 16mm industry. This was damage to film in 16mm projectors. Casting previous threading arrangements aside, RCA engineers designed a much simplified threading arrangement and incorporated it another new model of the RCA projector. The new arrangement featured large 16-tooth sprockets and passage of the film in wide curves and long flowing lines to end crimping and tearing.

The introduction of a newly improved projector, the PG-170, by RCA in 1939, was followed in 1940, by the Mills Novelty Company selecting this projector for use in a large-scale, coin-operated motion picture venture.

In 1942, the RCA 16mm sound projector donned the olive-drab of the Armed Forces and went to war. As models PG-200 and PG-200A, it saw global service with both the Army and the Navy. During the war years, the unusual requirements of field use led to another step forward in 16mm sound with the perfection of the "closed-cavity" loudspeaker, a development that had been simmering not very successfully on the scientific fire for almost two decades. Rugged conditions imposed on 16mm sound equipment had brought a request from the Army Signal Corps for a loudspeaker, weather-tight, smaller sized and which would improve the radiation of lower tones. Overcoming the problems of "cavity" resonance, RCA technicians by 1943 had fulfilled the Army's request.

Today, looking back over 16 years of dramatic progress in 16mm sound film projection, RCA's 16mm equipment section is even now readying equally important developments based on know-how gained in the war years.

B. & L. Miniature Slide Projector

The Bausch & Lomb 2" x 2" Slide Projector is again on the market. This popular miniature slide projector is making its appearance with a number of improvements—two of which are a new projection lens and a new slide carrier.

This model establishes new standards for brilliant, crisp, sharply defined screen images in miniature slide projector performance. In actual screen tests, the projector, using a 150 watt lamp, delivers

from 26% to 120% more light in foot candles on the screen.

The body of this projector is designed for easy accessibility to the lamp—and pleasing appearance. Both the metal chimney and the lamphouse are easily removed—merely by sliding upward—no screwdriver is necessary.

A companion for this miniature slide projector is the carrying case which is sturdily constructed, covered with pebble grain leatherette, and fitted with chromium plated hardware. Space is provided for approximately 25 glass covered slides (about fifty paper mounts) at one end of the case.

Bausch & Lomb Projector

Movie Kodaguide

A simple, new exposure guide for the movie maker—the Movie Kodaguide—has just been announced by Kodak. Similar in format to the internationally famous Snapshot Kodaguide, the new Movie Kodaguide covers practically all movie-making situations. It provides an easy method of calculating correct camera settings for the exposure of Ciné-Kodak black-and-white films and of Kodachrome Film outdoors and indoors with Photo-flood Lamps.

**Three ways to...multiply instructor's time
...increase teaching effectiveness**

The SoundScriber method simplifies language instruction and makes it more effective because:

1. It permits additional students to have individual instruction.
2. It provides countless hours of self-instruction for the student.
3. It enables the instructor to do more corrective work with the individual student without requiring any more of the instructor's time.

Because SoundScriber is an entirely electronic device, every word is recorded with radio-like clarity. The flat, unbreakable SoundScriber disc holds up to 30 minutes of recording; costs only a few cents. Discs handle and file like a sheet of paper; can be played back a hundred or more times. For student drill purposes, electronic controls make possible instant and precise repetition of words or phrases; by this means the instructor drives home his point, and by the same means the

student records and checks his own pronunciation, diction and usage.

With SoundScriber both instructor and student work more effectively during drill periods. Actual use in schools, colleges and universities is a tribute to its effectiveness.

Ask for material telling how leading schools, colleges and universities use SoundScriber to meet the problem of increased enrollment in language classes.

Use **SOUNDSCRIBER** electronic disc recorder

Kolograph 16mm Projector With Intermittent Sprocket

A new 16mm sound film projector featuring "Rock-Still" pictures made possible with a novel intermittent mechanism has been released by the Kolograph Corporation, 223 West Maryland St., Indianapolis, Indiana, is announced by Lawrence D. Kohlmeier, president of the firm.

No newcomer to the sound projection field, having built the first 35mm sound projector for the famous Dr. Lee DeForest in 1916, Mr. Kohlmeier states that his latest development, the "Rock-Still" intermittent (which runs quietly and is permanently oiled) is the foundation around which the new unit has been designed. The intermittent is guaranteed for life against all defects and wear and, it is claimed, prevents most film wear and avoids torn sprocket holes.

Special development of the cooling system permits the instrument to be used with a 1250-watt lamp, without burning the film or causing appearance of the well-known "door-knob" on the bulb.

Designed for use from either 115-volt ac or dc source, the projector features a 2" coated lens, f 1.6, as standard equipment but the lens mount will accommodate any other type or size. When necessary, sprockets may be easily changed, and a simple screwdriver is the only tool required. The condenser system is especially designed with a larger diameter lens than has ever been used in 16mm work.

DeVry RS-ND30 Back On the Market

The well-known DeVry Professional Model RS-ND 30 is now in production in the Chicago shops. Highlighted by the powerful 30 watt amplifier, the RS-ND 30 also features coated light optics, motor rewind, automatic loop setter, dual exciter lamps, "hum-free" exciter supply, dual sound stabilizers, floating power, and other characteristic DeVry features.

New Low-Priced Portable Screen

To satisfy the demand for an economically priced screen, especially for the 8mm field and the slide market, Radiant Manufacturing Corporation has designed a new lower priced tripod model which will be known as the Model "Q".

The features of this newest Radiant screen include a self-locking lowering and raising device on the extension rod, for

easy, instantaneous adjustment in screen height.

This new tripod model was designed for the consumer who is looking for an outstanding projection screen within range of every pocket. It is manufactured in the 30 x 40 and 40 x 40 size to accommodate distances of between 10 to 15 feet between projector and screen.

For further information write to the Radiant Manufacturing Corporation, 2627 Roosevelt Road, Chicago, Ill.

New Kolograph 16mm Projector

G. E. Exposure Meter Accessory

A means of measuring higher levels of illumination through the use of three new clip-on type multipliers has been announced by the General Electric Company. These multipliers will extend

the range of all DW-48 and DW-58 exposure meters up to 7000 foot-candles. To use the multipliers on G-E exposure meters it is only necessary to remove the hood from the meter and clip on the multiplier. This method of measuring exposure is known as the "incident-light" method. The incident-light multipliers are available in three ratios which will measure light up to 700, 1400, and 7000 foot-candles respectively.

Television

EBF On the Air

A bright future for the use of educational motion pictures on television programs is seen in the Encyclopaedia Britannica Films Science program on the United States Rubber. "Serving Through Science," telecasts over Dumont television stations in New York and Philadelphia.

Two important conclusions are revealed by the survey of listeners to the telecasts conducted by Television Magazine, according to C. Scott Fletcher, president of E.B. Films. "Adults are eager to learn and want information, and Encyclopaedia Britannica Films, although they are professionally created to be used by teachers as an integral part of the school curriculum, also enjoy unusual interest among adults."

Instructional films will undoubtedly play an increasingly important part in future television developments, Fletcher predicted. The high cost of producing television shows, in comparison with radio, precludes the airing of only "live" programs. The use of films is the best way of filling sustaining television time.

■ **PUBLIC AFFAIRS COMMITTEE, INC.**, 22 East 38th Street, New York has released Public Affairs Film-strip Packet No. 3—*Your Stake in Collective Bargaining*. This was produced in cooperation with the Twentieth Century Fund research Foundation and stresses the effect on the public of the day-to-day workings of collective bargaining. Six recommendations are offered for better labor management relations: (1) Labor and management must learn how to settle matters between themselves without calling on the government. (2) Collective bargaining contracts should be flexible. (3) More organizations of employers to negotiate with unions, not to combat them. (4) Management and union should explore together advantages of industry-wide collective bargaining. (5) Democracy works both ways in good collective bargaining. (6) Willingness to employ impartial experts is a sign that collective bargaining is growing up. Original cartoons and drawings for the filmstrip were prepared by artist Stanley Meltzoff; photography, by United Productions of America.

■ **ACADEMY FILMS**, 1448 West 61st St., Los Angeles 44, California announces the release of three filmstrips and also 2x2 slide versions, which have been taken from motion pictures of the same names, described under "Current Film News."

Circus people (color and black-and-white)

Circus Animals (color and black-and-white)

Water Supply (color and black-and-white)

■ **RCA VICTOR**, Camden, N. J., has issued a second volume of folk songs and ballads by youthful Susan Reed (M-1107). It is certainly true that today's students should hear gentle-voiced Susan sing these old songs which have been handed down by mouth from generation to generation. Susan learned these early Anglo-American melodies one by one from such folk enthusiasts as Carl Sandburg. *Greensleeves* was mentioned twice by Shakespeare in *The Merry Wives of Windsor*. Others include *Danny Boy*; *Mother, I Would Marry* (Irish); *Black Is the Color . . .* (Celtic); *I'm Sad* (mountain blues). Every school needs a collection of early folk music.

Current Film News

**State Department Newsreel
For World Distribution**

A unique kind of international newsreel, narrated in 24 different languages and distributed to more than 52 countries outside the United States, goes into production this week at RKO Pathe, it was announced today by Hamilton MacFadden, Associate Chief of the International Motion Picture Division, Department of State.

Titled *The News Magazine*, the one-reeler will be released by the State Department's Office of International Information and Cultural Affairs. Unlike the conventional type of motion picture newsreel which emphasizes spectacular occurrences, *The News Magazine* will present pictorial events that influence and reflect the lives of all in the United States.

"It is designed to give the rest of the world a better understanding of America," MacFadden said.

The new newsreel will be under direction of Jack Connolly. Newsreel Liason for the International Motion Picture Division, Department of State, and former well known newsreel executive.

Heading *The News Magazine's* staff are editor Harold Bonafield and script editor Robert Youngson, both veterans of many years on Pathe News. The vast picture gathering facilities of RKO Pathe, plus its extensive library of historical events, will be fully utilized in preparing the new release.

Distribution will be in 35mm and 16mm, both to foreign theatres and schools throughout the world.

■ **TEACHING FILMS, INC.**, 88 Lexington Avenue, New York 16 has released the following new 16mm films:

Behind the Scenes at the Airport (1 reel)—a tour of an airport for children in grades 2, 3, and 4. The work of the mechanics, pilots, and dispatchers is shown.

Bowling Fundamentals (2 reels)—the techniques of the game for physical education in high school.

What Is a Map (1 reel)—the explanation of a map at the level of grades 1, 2, and 3. Students map their room and then see each piece of furniture fade into place behind the map symbols.

Animals of the Farm (1 reel)—dramatic treatment of the habits and ap-

pearance of the common farm animals: chickens, ducks, turkeys, pigs, cows, sheep, horses for grades 1, 2, and 3.

■ **INTERNATIONAL FILM BUREAU**, 84 East Randolph St., Chicago 1 has acquired, for rental and sale, a series of instructional films in French dealing with the geography of France in elementary-school terms. Designed for French language classes, the films have no English titles. Copies of the commentary are provided for class use before the film showings, aiding the student in following the French.

A Paris (16 min., French)—a survey of Paris, dealing with the economic and cultural life of the city, the Seine, the subway, street transportation, industry, stores, the Latin Quarter, and important landmarks.

La Loire (15 min., French)—the course of the river from source to mouth. The country and the people, including the chief towns, are shown.

La Champagne (20 min., French)—animation and aerial views of the country. "La Champagne Seche" and "La Champagne Humide" as well as the chief activities of each part of the Province are shown, plus Rheims, Troyes, and Bonneprise.

Les Canaux (14 min., French)—canals in the transportation scheme of France.

■ **ACADEMY FILMS**, 1448 West 61st St., Los Angeles 44, California announces the release of three new 16mm educational films in natural color and in black-and-white. The same subjects are also offered in 35mm filmstrip (color and black-and-white) and 2x2 slides (color only).

Circus People (1 reel)—primary-grade film showing behind-the-scenes life and activity at a circus. The spirit of teamwork and efficiency is stressed. The unloading of a circus train is one of the highlights.

Circus Animals (1 reel)—showing how the animals travel, how they are fed, what work they do, and how they perform. A companion film to *Circus People*.

Water Supply (1 reel)—dramatically portraying the methods by which man obtains his water.

■ **THE PARAFFINE COMPANIES, INC.**, 475 Brannon St. San Francisco, Calif. are distributing a new film about PABCO paints.

Paint It Right (30 min., color) tells the home owner how to paint his house from the siding, the porch floor to the kitchen stool. The common mistakes made by amateur painters are pointed out, and the correct methods are shown. How to keep paint from blistering, how to remove old paint, how to patch cracks in plaster before painting, and other such questions are answered in the film. The PABCO label appears prominently in the film.

EXPERIMENTAL JOURNEY

Teacher, photographer—driving from New York to National Parks—will undertake to supply Schools and other Educational Agencies looking for ORIGINAL 16 mm. color footage or 2x2 Koda-slides of Historical Places, Geographical and Nature Subjects. Please specify your needs. For further information write to:

Box 4F, 2047 Holland Ave.,
New York 60, N.Y.

■ **A. F. FILMS, INC.**, 1600 Broadway, New York 19 announces the adaptation of a 4-reel French film produced by Roger Leenhardt into two 2-reel shorts:

Animated Cartoons: The Toy That Grew up (2 reels)—how animated cartoons developed from static drawings. The work of a Belgian physicist and of Emile Reynaud is shown.

The Biography of the Motion Picture Camera (2 reels)—film record of the successful inventions of Marey, Edward Muybridge, Louis Lumiere, Thomas Edison, and others, resulting in the modern moving picture. Under the title of *The Birth of the Cinema*, these two films were shown at the Cannes Film Festival in tribute to the 50th anniversary of the motion picture.

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20 has released a number of new 16mm films:

Does It Matter What You Think? (2 reels)—a provocative film which arouses many questions in the minds of an audience. Are your conclusions the result of your own thinking, or do you think what you are told to think? Is public opinion a power which forces legislation, or is it a pliable weapon which is wielded by the press and the politicians?

The Proud City (3 reels)—a plan for blitzed London. The present moment is one in which the crowded and confused city can be replanned and rebuilt. Even before the end of hostilities, the London County Council began a study of London's traffic, sewage, power, homes, and factories, hoping to create self-contained communities within the city.

Steel (4 reels, color)—the backbone of Britain's industrial power. The film describes the steel industry and the processes used from the time the iron ore is dug out of the ground until the finished product leaves the plant.

The Great Game (2 reels)—the story of soccer (Association Football). Famous international amateurs and professionals explain the tactics and help young enthusiasts in the game.

■ **DEVRY CORPORATION**, 1111 Armitage Ave., Chicago 14 has announced the distribution of two 16mm films:

Bathing Time for Baby (13 minutes, color)—expert instructions on the bathing of a baby, sponsored by Johnson and Johnson and produced by Walt Disney Productions. It has been approved by the Children's Bureau of the U. S. Department of Labor and Visiting Nurse Service, New York.

New York Calling (2 reels, color)—a new revised version of New York Central's popular film on the daily life of New York. It portrays the railroad's contributions to the promotion of nation-wide interest in the cultural, educational, and entertainment facilities of New York City. Other New York Central films available from DeVry include: *Freight Yard*, *Steam Locomotive*, and *The Railroad Signal*.

■ **CASTLE FILMS**, Division of United World Films, Inc., 30 Rockefeller Plaza, New York 20 is distributing the following films:

Sport Thrillers of the Year! (100 ft., 400 ft., or sound)—American and Mexican polo games, Golden Gloves tournament, yacht racing, motorcycle marathon, Hambletonian Trotters, and similar items from 1946 events.

Shanghai Today! (100 ft., 400 ft., or 400 ft. sound)—the old and the new . . . modern traffic and coolie-drawn carts.

Aqua Frolics! (100 ft., 400 ft., or 400 ft. sound)—basketball game under water . . . water ski champs . . . canoeists shooting rapids . . . surf riders.

Lion-Tiger Fight (100 ft., 400 ft., or 400 ft. sound)—ferocious jungle battle between two beasts trapped by East Indian natives.

Fiction Features

■ **COMMONWEALTH PICTURES CORPORATION**, 729 Seventh Ave., New York 19, have acquired the exclusive distribution rights to 9 hard-riding, straight-shooting musical westerns in the Bob Baker series. Each is six reels long. Similar rights have been acquired to 7 Epic pictures of the old West starring Johnny Mack Brown, a fearless son of the saddle.

■ **ASTOR PICTURES CORP.**, 130 W. 46th St., New York 19, has released the first Nelson Eddy picture in the 16mm field, namely:

Knickerbocker Holiday—a 10-reel United Artists 1944 release. It is a period costume story centering around Peter Stuyvesant, Dutch governor of New York. Also in the cast of this musical romance are Charles Coburn, Constance Dowling, Johnny "Scat" Davis, Carmen Amaya, and her Company.

A Boy, a Girl, and a Dog—73 minutes—the tale of a stray pup adopted

by two youngsters who live in a hotel where restrictions against animals are very rigid. Forced to part with him, they enlist the dog in the Army's K-9 Corps where "Lucky" distinguishes himself, returning home a hero.

■ **IDEAL PICTURES CORP.**, 28 E. Eighth St., Chicago 5 announces the distribution of the following film:

Journey Together (80 min.)—the story of two air cadets trained under the tough but human instructor, Edward G. Robinson. Script is by Terence Rattigan, and direction, by John Boulting (*Pastor Hall* and *Thunder Rock*). Bessie Love, early silent actress, plays a short role.

■ **UNITED WORLD FILMS, INC.**, RCA Bldg., Rockefeller Center, New York 20, report the addition of the following Universal Pictures to the Bell & Howell Filmsound Library:

This Love of Ours—9 reels—based on the Pirandello play, "As Before, Better than Before." A 14-year old girl worshipping a mother supposedly dead resents the appearance of her stepmother when her parents become reconciled after a 12-year separation. Merle Oberon and Charles Korvin are the stars.

This Love Of Ours

Shady Lady—10 reels—comedy with music in which card sharper rescues reputations and helps justice and happiness win out. The cast includes Charles Coburn, Ginny Simms, Robert Paige, and Alan Curtis.

That Night with You—9 reels—musical mix-up in which young singer (Susanna Foster) gets Broadway role and the right husband (Franchot Tone).

■ **GREAT WESTERN PICTURES, INC.** through its president, John W. Mangham of Atlanta, Georgia, has announced the reissue of sixteen JOHN WAYNE westerns, print deliveries beginning April 1, 1947. United States and Canadian rights, for both 35mm. and 16mm., have been purchased directly from Monogram Pictures, which owns the copyrights.

16mm. sales distribution has been turned over to W. Wells Alexander, the Distributor's Group, Inc., 756 W. Peachtree Street, N.W., Atlanta, Ga., who will act as selling agent for Great Western Pictures, Inc.

12 New Hopalong for 1947

“More high school graduates showing scientific promise must be encouraged to take advanced college training”—ALAN VALENTINE, President
The University of Rochester

Unfortunately, many high school graduates of exceptional scientific ability are forced to choose a job. Financial requisites set up too great a barrier. According to Dr. Bush's study*, it takes 1000 fifth-grade pupils to make 72 college graduates.

If our war-depleted supply of scientific manpower is to be replenished, we've got to provide more substantial assistance to a greater number of high school graduates who qualify for college scientific work.

We must aggressively support the various governmental programs now in effect or under consideration, which include scholarships in science.

We should promote and help formulate an increasing number of science scholarship programs in private industry.

We must make every effort to increase America's force of scientific personnel.

"Audio-Visual Methods in Teaching"

by Edgar Dale

The "what," the "why," and the "how" of all types of audio-visual methods are thoroughly explored in this new, comprehensive work. Because of its importance to better teaching today, this book can be considered a basic text for all who are concerned with the effective use of any audio-visual material. Dryden Press, 386 Fourth Avenue, N. Y. 16. 546 pages. \$4.50.

HAVE YOU SEEN THESE NEW CLASSROOM FILMS?

"ATOMIC ENERGY" Collaborator, Willard F. Libby, Ph. D., The University of Chicago. Explains three ways of releasing atomic energy.

"IMMIGRATION" Collaborator, Henry S. Commager, Ph. D., Columbia University. Traces historical immigration into United States. Depicts melting pot process.

"PETROLEUM" Collaborator, Lester E. Klimm, Ph. D., University of Pennsylvania. Shows importance of petroleum to world affairs.

"THE WATER CYCLE" Collaborator, S. Ralph Powers, Ph. D., Teachers College, Columbia University. Traces water from ocean to sky and back to ocean.

"BUILDING AMERICA'S HOUSES" Collaborators, Twentieth Century Fund and Miles L. Colean. Analyzes reasons for high building costs.

"FIRE" Collaborator, Charles K. Arey, Ed. D., University of Alabama. Describes domestic uses of fire, principles of combustion, nature of fire hazards.

"THE MAILMAN" Collaborator, Paul R. Hanna, Ph. D., Stanford University. Shows importance of mail service in our lives.

"MAKING SHOES" Collaborator, A. S. Knowles, Ph. D., Rhode Island State College. Complete step-by-step process of shoemaking.

Film Council Operates on New Constitution

At the May meeting of the Film Council of America in Columbus, Ohio, Mr. C. R. Reagan said "We are now in formal session and in accordance with the new constitution, which has been ratified, the new Film Council of America is born today."

The officers of the Senate elected at this meeting include: C. R. Reagan, President; L. C. Larson, Indiana University, Vice President and Miss Mildred Batchelder, American Library Association, Secretary. A meeting of the Board of Trustees will be held in Chicago June 22 and 23. Mr. Larson is editor of the "Teacher-Committee Evaluation" Department of *Educational Screen*. There is a growing interest in the Film Council of America, and film councils are now springing up all over the United States. There are now twenty-five Film Councils in eighteen States, and many more are in the process of organization.

Washington Council Hears Begg On U.S. Films Abroad

John M. Begg, assistant director of the State Department's Office of International Information and Cultural Affairs, reported recently to the Washington Film Council on the use of 16mm films about the United States in other countries.

Distribution has been built up largely with the cooperation of local organizations in the different countries. Hence the pattern differs from country to country.

In England, the Central Film Library makes prints from U. S. negatives for showing in schools. . . . In Norway, these films are shown in more than 200 labor "temples" run by the Workers Educational Association of the Labor party. . . . In Sweden, distribution is chiefly through co-ops; out of a population of 6,500,000, more than three million saw 40 U. S. films (one co-op has films from 19 countries including 100 titles from Russia, 40 from the United States and more from the United Kingdom). . . . In Poland, chief distribution is through the Educational Film Office of the Government. . . . In Czechoslovakia, youth organizations and technical schools are the distribution agencies. Mexico is operating a 16mm program that has brought observers from other Latin American countries. The State Department helped through cooperation with Mexican departments of health and education and in training projectionists.

U. S. films of chief interest in other lands are those that show the people of this country. Secondly, foreign audiences want to see agricultural films, for food is of much concern. Other film subjects in rough order of interest are industry, science, education, health, and social life.

Health films from this country helped put across a vaccination campaign in Bombay. A film on the Tennessee Valley Authority has been of unusual interest in Norway, stimulating questions that one film couldn't possibly answer.

WHAT A DIFFERENCE CARBON ARC PROJECTION MAKES!

IT'S SO
BRIGHT!

PERFECT!

WHAT
DETAIL!

ASTONISHING!

SUCH
COLOR!

• When you view a 16 mm color film projected on a screen with the carbon arc, you will see an astonishing difference. The picture will be much *brighter*. Detail will be *sharper*: objects heretofore hidden in shadow or washed out will be plainly seen. And the color will be richer, more *natural*.

In short, projection with the carbon arc leaves the impression you are viewing an entirely different and more lavishly produced film!

In this way, carbon arc projection makes films more interesting... more instructive... and more effective. It thus gives you a greater return on your 16 mm film investment.

Brooker Addresses Chicago Film Council

At the May luncheon meeting of the Chicago Film Council, Floyd E. Brooker, Chief of the Visual Education Section, U. S. Office of Education, spoke on the topic, "UNESCO and the Film Council of America." Following this talk, Lyle Stewart, University of Chicago led a panel discussion on "What the Film Council of America Can Do to Help UNESCO." The panel, in this case, included all the Council members.

Peace Is a Foremost Problem

In his talk, Brooker emphasized that "peace" is the number one problem before us, and that if we do not achieve peace, nothing in the world is important. He then showed that UNESCO (United Nations Educational, Scientific, and Cultural Organization) and the use of mass educational media are important, because wars begin in the minds of men long before the actual bombing and shooting start. A first step, however, must be one of reconstruction and rehabilitation. Hungry people are ripe for ideas of revolt and only too ready for the promises of false leaders. At least six months will be required for UNESCO to reach a solution on these first problems.

International Law Necessary

In order to have peace, there must be international law. Successful and permanent international law must be democratically obtained, and this can only follow world literacy. By the use of mass media, world literacy may be reached via a short-cut without the necessity of putting millions of persons through the "book stage." The motion picture is an art form in which a broken people can come back quickest. Poland, Czechoslovakia, France, and China are among the nations emphasizing film production even in the face of equipment shortages. There is a resurgence of nationalism coupled with a fear of American imperialism.

UNESCO plans to survey the world needs in regard to mass media materials and equipment, and the organization hopes to establish an international treaty to facilitate the free flow of films and materials. The institution of a world-wide radio system is also forecast.

"The Film Counselor"

The Film Council of America recently published the first issue of a news letter to be known as *The Film Counselor*. This is designed to enable local film councils in all parts of the country to exchange ideas, to give suggestions to prospective local groups who are interested in becoming established as chapters of the Film Council of America, and to carry news.

The first issue of *The Film Counselor* introduced its readers to the local film councils which now exist, telling where they are and what they are doing. Stress was placed on organizing new councils and in attempting certain goals: (1) increase membership; (2) interest other groups in the council and in films; (3) design programs that will get specialized groups interested in the local council; (4) start organizing film councils in neighboring communities. Write to Film Council of America, Room 1228, 431 South Dearborn, Chicago 5, Illinois for information.

COVER PICTURE: A teacher at the Bureau of Visual Instruction, State University of Iowa learns to inspect and to repair motion picture film. Part of the Bureau's operation involves the lending of film. When film is returned to the Bureau, it is examined for damage, loose splices, and dirt. If necessary, repairs are made, and the film is cleaned in a special cleaning machine. The rewind units and the splicer are fundamental equipment items in the lending library.

As Viewed From Here

And the Greatest of These . . . Is Distribution

A CUSTOMARY and convenient way to classify the problems of the audio-visual field is to think of them as falling into the areas of production, distribution, and utilization. As viewed from here at the present time, it seems to us that the greatest problems center around the area of distribution. The users of films just are not getting the films they want and need when they want them.

Consider the school user of instructional films, for instance. In how many cases can he select a title from a catalog list and be reasonably sure of having that film for use in his class within a week—or within a month for that matter? We dare say that it's a rare teacher in a rare situation where that can happen. How can a teacher make good use of films unless he can get the right one at the right time?

Consider the adult leader in a Y.M.C.A. for another instance. Just suppose he is trying to plan to use two or three films on the subject of inter-racial relations for some future meeting of his group. He would be, indeed, lucky if he could find all three subjects he wanted listed in any one catalog, and even if he did, his chances of being able to get all three on the same date would be extremely slim. How can he be expected to make good use of audio-visual materials unless such distributional problems are solved so that he can get the films he needs when he needs them?

By centering our attention for the moment on some of these distribution problems, we do not mean to imply that all the problems in film production and utilization are being solved. It just seems to us that unsolved distribution problems are retarding the rapid developments in the field that have been expected.

Film distribution, for the most part, is being carried on in the same old patterns which seem to serve the distributor far better than the user of films. There is little, if any, creative and imaginative effort being applied to the solution of distributional problems.

One Suggestion for Improvement

We recognize that it is far easier to point up a problem than it is to solve it, but let's go back to that hypothetical group leader we mentioned three paragraphs ago. His need for two or three films for a group discussion on inter-racial relations was the same need shared by hundreds of other group leaders. If the distributor had foreseen these needs, he could have had available, already mounted on one reel, three such films as *AMERICANS ALL* (March of Time), *BROTHERHOOD OF MAN*, and *THE HOUSE I LIVE IN*. These would have been announced in catalog listings as a ready-made

program suitable for certain specific purposes.

Now this suggestion is not made as a panacea for all distributional problems. In fact if it were to be misapplied to instructional films for classroom use, more harm than good would result. Rather it is suggested as merely one way that distributors might better serve some of the users of films. There may be better ways. One thing, however, we do feel certain about: the problems of distribution are great, and it is vitally important that solutions be found.—P. C. R.

Inexpensive Materials Can Be Effective Too

WE were strongly re-impressed the other day with the fact that the motion picture is not the only "audio-visual" material for achieving strikingly effective instructional results in a classroom. This time we visited a first grade classroom where it was clearly evident as one approached the closed door that something had been happening inside. A large painted picture of a circus clown, hanging on the door, offered the first hint.

Inside the room, there were many other circus pictures, each one a free expression resulting from a vivid experience. Some were grouped together in book form with manuscript written stories accompanying them. All these stories and pictures were about a very particular circus and a very special clown whom they had met a few days before. His name was Tingo.

The children told us orally the story about Tingo, and as they told it, they transparently disclosed their sincere interest and genuine liking for their new circus friend. They knew him well; yet they had never even seen a picture of him. *TINGO, The Story of a Clown*, is a story told on records. Here was excellent and meaningful classroom use of audio material. Here real learning had been achieved in several of the communications arts—listening, writing, painting, speaking, and even singing, for the children had learned one of Tingo's songs.

These records had been well used. The teacher had used the records at the right time—after the children had read a circus story in their readers. She had heard the records before and was familiar with the story. She had a plan for using them, and she knew in advance the kind of learning she would like to achieve. The children were prepared for their listening experience, and they heard the records several times as they worked on their pictures and stories. This was good utilization.

Neither the cost nor the kind of audio-visual material determines the degree of instructional effectiveness. Effectiveness is dependent upon having the right material at the right time and then using it right.—P. C. R.

COREY, DALE, McCLUSKY, EBY,
TROLINGER, RESS and COCHRAN

Teacher Training Techniques

Editor's Note: This is a symposium of tried and proven ideas about the training of teachers in the use of audio-visual materials. Each of the participants in this "panel" has had many years of unusually successful experience in working with teachers enrolled in university classes. Your editor, serving as chairman of this symposium, asked each of the participants if he would be willing to share one of his best teacher training ideas in this exchange of experience. This they have done willingly and interestingly.

For you who have assumed the responsibility of guiding teachers to a better understanding of the use of audio-visual media in courses this summer, there are ideas here that may prove inspirational and helpful. For you who are enrolled in such courses, there are ideas you may wish to work on while you are learning.

Dr. Stephen Corey's statement emphasizing that "students will learn best what they practice" is a most appropriate introduction for this symposium.

Paul C. Reed

They Will Learn What They Practice

STEPHEN M. COREY
The University of Chicago

THIS summer, in institutions all over America, teachers and administrators will be taking courses in order to learn more about audio-visual instructional materials. They will listen to lectures, make slides, paint pictures, read books, watch and give demonstrations, exchange experiences, and examine at first hand ever so many still and motion pictures, mock-ups, models, records and transcriptions.

All of these students will learn best whatever they practice. This always is the case. Examining the stated objectives of these courses dealing with audio-visual instructional materials may not reveal much about what the students learn. The best way to find out what is being learned is to observe what the students actually do. If most of their time is spent listening critically to lectures about better utilization of materials, they will learn, primarily, how better to listen critically to such lectures. If some of these summer school students actually practice teaching with a variety of instructional materials, and are criticized wisely, they will learn better how actually to use these materials. If a great deal of their time is spent in committees, examining, criticizing and appraising audio-visual instructional materials, increased expertness will be obtained in this activity.

Keeping in mind the large numbers of teachers in most colleges and universities during the summer term, probably the most fruitful and feasible single experience that they can have will involve the critical study, by small groups, of many different kinds of teaching materials. When this happens, teachers teach one another a great deal on the side. Previews of motion pictures, for example, almost inevitably develop into animated discussions of the strengths and weaknesses of instructional films, in general and in particular, and of best methods of utilization. This small-group study of instructional materials may not be so fruitful a learning experience as actually using the materials to teach chil-

dren. The latter practice, however, is precluded in most teacher training institutions during the summer, because there are too many teachers to make it possible to arrange for much "practice" teaching.

At many institutions this summer, there will be not only courses, but "workshop" groups of teachers who wish to spend all or part of their time learning how better to cope with some particular problem. These teachers will use the resources of the college or university to get answers to questions that they believe important. Such learning is usually well-motivated, practical, and exceedingly satisfying. The workshop idea is well adapted to the needs of experienced teachers. It represents, too, a type of instruction that many of the people teaching about audio-visual instructional materials find most congenial.

What Do They Want to Know?

EDGAR DALE

The Ohio State University

AN idea that I have used with a great deal of success over a number of years has been that of asking every student, at the beginning of the course, to write out a list of the questions that he would like to get answered during that course. I then take these questions, classify and mimeograph them. We watch course content carefully to see that all important questions are answered.

I now have several hundred of these questions and have classified them under the following headings: (1) Materials; (2) Philosophy or Theory of Visual Education; (3) Techniques of Teaching and Preparation; (4) Equipment; (5) Finances; (6) Evaluation; (7) Administration; (8) Initiation of Project.

Here are two or three sample questions from each of the headings:

Materials

1. What visual aids (including journey, specimens, models, motion pictures, slides, photographs, charts, graphs, etc.) are available, and where may they be secured on the following subjects?
 - a. Health and Physical Education
 - b. Social Sciences
 - c. History (American and World)
 - d. Spelling and Penmanship (on a high school level)
 - e. English Grammar
 - f. English Literature (Shakespearian plays and poetry)
 - g. General Science
 - h. Conduct, morals, and manners
2. What is the quality of the visual material now available?
3. Why are comics so popular with children and some adults? Can we possibly use the same technique in education?

Philosophy or Theory of Visual Education

1. How do children at various levels react to different types of visual aids?
2. What are some of the general objectives of visual education, the justification for their use?
3. How does the effectiveness of visual aids vary with the subject material?

Techniques of Teaching and Preparation

1. Exactly how does one teach with films—preparation and follow-up?
2. How can one get the most out of a field trip?
3. How may suitable techniques be worked out for combining the various visual aids with nonvisual educational devices in order to realize worthwhile educational objectives?

Equipment

1. What mechanical devices are necessary for the showing of visual materials?

2. How may camera clubs be used to aid class work?
3. How should the projection room be arranged for the full utilization of space and visual efficiency?

Finances

1. How may funds be raised for the purchase and rental of visual aids? How is this done in various places?
2. How much does it cost to start building up a small library of visual aids?
3. How can we get boards of education to provide for visual materials on the same basis that they are providing text books?

Evaluation

1. What are the criteria for evaluating visual aids?
2. What constitutes a good criterion for evaluating *facilities for showing films*?
3. How can I best use the wealth of free visual aids furnished by commercial organizations?

Administration

1. What are the best methods of filing, cataloguing, and enumerating visual aids?
2. How can teachers influence administrators to allow them to select materials for their own classes?
3. What can the administrator do to eliminate uninformed and inaccurate opinions of teachers as to the values of visual aids?

Initiation of Project

1. What are the steps one should take in setting up a school museum?
2. How can greater cooperation among schools, industries and civic organizations of the community be realized?
3. What procedures can be used to educate parents to the values of visual aids?

A Class Produces Its Own Audio-Visual Handbook

F. DEAN McCLUSKY

University of California, Los Angeles

LIKE all summer session classes in audio-visual instruction which I have taught, the 1938 class at the University of Michigan was no exception in the range of interests which were represented among the members of the class. So the class, 125 in number, was organized in special groups which studied such topics as: evaluation; administration; research; financing a program; selection of materials; cataloguing, housing and distribution; sources; and teacher training.

These groups met as the need arose—sometimes during the scheduled class periods and at mutually agreed upon times in addition. Each group elected its own chairman and secretary. The original plan was to have each group make an oral report to the entire class. However, as the work progressed the chairmen and secretaries, meeting as a steering committee, expressed the opinion that the group reports were valuable enough to be shared more fully than would be the case if an oral report were made. It was decided to organize an editorial committee to summarize the written reports and arrange to have them mimeographed and bound in book form. Arrangements were made with a local mimeographing firm to do the work, and deadlines for copy were established. The members of the class chipped in to pay for the mimeographing. The day before the final examination, the reports were ready for distribution. Enough extra copies were run off to supply the School of Education Library with five; the Extension Division Film Library with five; and fifteen copies were sold at one dollar each to students outside of the class. The extra money was turned over to the School of Education library to buy additional books in the audio-visual field.

The project proved so successful that the next four summer classes continued the "tradition." In all, five audio-visual handbooks were produced. The evaluation committee report alone was worth the effort, and of particular value were the reports on sources of materials which were organized by subjects. This project gave the class members a handbook of value to take home. It was their own work, written in their own style, and it satisfied their own needs.

Have You Tried Music?

HAVE you ever tried opening each class period with music? We have! Music which hath charms to soothe the savage breast also hath the power to soothe the harassed schoolman. Summer schools should do two things for teachers: refresh the mind and restore the soul. Can you spare two minutes out of every hour for the pale, translucent souls of this vanishing race? We have tried it, and the two minutes paid bigger dividends than the remaining fifty-eight.

Large classes seldom can get settled down to work under two minutes so we snap the lights off and close the door right on the bell and give the class two minutes of uninterrupted music. This music can be presented in a wide variety of ways. You can play records accompanied by appropriate Kodachrome slides.

GEORGE S. EBY
Stockton (Calif.) Junior College

Poems also lend themselves excellently to Kodachrome slides. Our classes always listen intently to such poems as Robert Frost's, "The Road not Taken." We project autumn scenes of the forest while someone begins reading over the P.A. system:

"Two roads diverged in a yellow wood
and sorry I could not travel both
and be one traveler, long I stood
and looked down one as far as I could. . . ."

Don't forget that teachers like to sing as well as listen. About twice a week, we use our two minutes for community singing. The songs are projected on the screen while one of our class leads the group. One summer, our V. I. classes were held in Engineering Hall. These "singspirations" put stresses and strains in that building which no engineer had ever seen before. Finally, during an especially vigorous song, one engineer left his research and dashed over to our lecture room to give us all a grand "hawling

out." He swung open the door with fire in his eyes, but when he saw the spirit and tone of the whole group, he froze in his tracks, utterly speechless. When the last note died away, he quietly closed the door and was never seen again. If the song had lasted two minutes more, I believe he would have joined in the chorus.

Let the teachers prepare their own songs on lantern slides and see how much spirit they have singing them. Don't be surprised when a song like this is suddenly projected before the class:

"There are slides that really have a meaning
That the eyes of all who look may see
But the slides that fill our lives with sunshine
Are the slides earning A or B"

This summer while you are lecturing to your V.I. class (or any other class for that matter) if you see a dull glaze gradually creeping over the eyes of the teachers in your class and each response shows:

"The emptiness of ages in his face
A thing that grieves not and that never hopes
Solid and stunned, a brother to the ox"

and you wonder:

"Whose was the hand that slanted back this brow?
Whose breath flew out the light within his brain?
Is this the thing the Lord God made and gave
To have dominion over sea and land?"

Stop! Perhaps you are the one who is to blame. Do you "trace the stars and search the heavens for power"? In short, have you ever tried music in your classes?

Two Ideas From Colorado

LELIA TROLINGER
University of Colorado

ONE of the most fruitful activities of my class in audio-visual aids has been demonstration lessons planned by the students themselves and then given before the class. During the class in the Winter Quarter, 1946, four such demonstrations were planned. A class of about thirty divided itself according to special interests and set to work. One group gave a demonstration using the motion picture; one used the lantern slides; one, a filmstrip, and one a recording. The first group by chance, or good judgment, used several other types of aids to serve as a build-up and with that as an example, the others followed suit.

As a result, each student not only helped prepare what was meant to be a perfect lesson, but he also heard and saw the lessons using other media. The lessons were remarkably good and the questions used in preparation and also following in the general discussion brought out well-planned objectives and their realization.

A more extensive project that students felt was valuable was carried out during the summer of 1946. A large class of teachers, more than half of them graduate students, undertook to select basic films on different grade levels for a school that was undertaking the purchase of a basic film library.

The class of fifty, more than half graduate students, divided into groups on grade levels. In the junior and senior high school groups, there was a further division of the students into subject-matter fields. The groups analyzed courses of study. Then they undertook a survey of basic films to fit that particular grade level. The *Wilson Educational Film Guide*, the *Educational Screen 1000 and One*, "Blue Book," educational magazines, catalogs from different film centers, all were consulted. I met with the committees several times, and some of the films they did not know, I could give information about. Many of the films had been seen and used by members of the class; some they previewed and evaluated; in some cases, they recommended a film because of a superior rating given by some evaluating committee. If there had been time and facilities, a preview of all films would have been desirable. The resulting lists of basic films correlated with curriculum were mimeographed and made available to all.

It was only a beginning, but if a similar project were undertaken in several summer school classes over the country, we could get teacher reaction to basic films that, when integrated, could be very helpful

to teachers and to audio-visual centers, both in public schools and distributing centers. All too many of our film evaluations are made by "so-called" experts and all too few by classroom teachers. This project not only called for evaluation but a consideration of integration of film materials with curriculum.

Repeated Showings

ETTA SCHNEIDER RESS

Teachers College, Columbia University

WITH a class of graduate students from all sections of the country, representing home economists, primary teachers, rural teachers, social studies and science teachers, and commercial teachers, the unit under consideration was "Techniques of Using Motion Pictures."

We tend to take too much for granted with experienced teachers when we recommend showing a worthwhile film twice. We usually verbalize the teaching principle and let it go at that. One summer session, we showed *The Corn Farmer*. Although I do not usually agree that certain films can meet educational objectives at all age and educational levels, it occurred to me that this subject was especially broad. The assignment to the class for that night was to relate that film to whatever field the teachers were interested in. Meanwhile, I carried out the assignment for myself, by thinking of applications along many lines.

The next day we had reports by the group—not very resourceful ideas at that. When they had finished, I gave them my report: The film might be used in discussing the nutrition underlying corn as a food for animals and for man, thereby making the corn farmer an important food producer; the economics of corn farming, including the amount of hard work, long hours, participation of all the family, need for machinery and scientific knowledge, dependence on weather and other natural conditions, etc. Such a film gives an insight to the city resident and one who had to voice an opinion on legislation that would affect the farmer. Then there was the science of agriculture that permits better crops, wiser use of the soil and the like.

After this presentation, I announced that they would now see the film a second time. The group did not appear too enthusiastic. But, at the end of the ten-minute showing, they admitted that the class discussion and the second showing had given them much greater insight into the content of the film and its implications for the curriculum than they had realized. And then they acknowledged that such understanding would come to their own pupils if a worthwhile film were properly presented.

Students Prepare Study Guides

IN observing the audio-visual classes here at the State University of Iowa, we are always on constant guard for the types of instruction that provide the greatest amount of practical experience for the student. During the past year, we have come to the conclusion that one of the most important factors in making our students aware of the educational content of projected materials and effective utilization practices is the writing and preparing of study guides.

LEE W. COCHRAN

State University of Iowa

The first units of the course consisting of philosophy, research, equipment, procurement, and production are presented to enable students to acquire a basic understanding of the field of audio-visual education. When we come to the Selection, Evaluation, and Utilization unit, students have the background necessary to prepare study guides for specific projected materials. Students never seem to be fully aware of the actual educational implications and content of projected aids until they have prepared study guides. A typical example of students becoming aware of the potentialities of projected materials was demonstrated last summer when a committee of six superintendents in the audio-visual class came to see the instructor following their evaluation and study guide assignment. They claimed that for the first time in their life they had become fully aware of the educational content and teaching possibilities of the teaching film.

We consider that students should have the experience of preparing study guides in every college audio-visual course, and as a result of such preparation they will be better teachers.

Costs of Audio-Visual Materials

Where Oklahoma gets its audio-visual dollar and on what it spends that dollar

HENRY R. HANSEN
Graduate Student,
Stanford University

THE hickory switch was inexpensive. Modern instructional tools and materials are expensive and, therefore, have brought to the fore the practical administrative problem of finance.

One factor of this cost problem of instructional materials was examined recently in a state-wide survey of 1946-47 costs of representative audio-visual materials. Results give a view of how one state, Oklahoma, is actually allocating its audio-visual dollars. The survey did not pertain to utilization; it asked, rather, "How much is actually being spent?" and "What proportionate amount is spent for the various items?" and "Where does the money come from?"

The accumulated data differ from goals or standards in that they are descriptive of present practice.

Since the problem of costs in education has no visible limit, this survey examined only the costs of specified audio-visual materials—materials which invite special attention because of rapid and radical developments as to engineering and utilization.

Every white public school having four or more teachers was reached by questionnaire. One hundred seventy-one (approximately 23%) of the schools responded. Resulting data showed the *planned expenditures* of these schools for certain items for the present school year. Some of the per capita expenditures re-

ported were very close in amount to some of the more common current estimates. The particular value of the results lies, however, in the scope and in the

An instructional aid of another generation.

photographic quality of the data, which give a picture of the planned expenditures within the area of an entire state for the current year. They are pertinent to both large and small systems. However adequate or inadequate, good or poor, the total program may be, the study shows the per capita expenditures, expenditures by types of material, and the sources of funds as they do exist, today.

Per Capita Costs and Totals

Allocations for audio visual materials by totals and by per capita costs are shown in the table below. Each horizontal line shows the data for a particular size of school system.

Allocations for Audio-Visual Materials

Average Daily Attendance	Number of Usable Replies	Total Average Daily Attendance	Total Cost of Specified Items	Cost Per Capita
under 200	63	8,078	\$14,005	\$1.73
200 - 399	49	13,344	18,367	1.37
400 - 799	37	19,367	15,846	.82
800 - 2,999	19	21,405	17,497	.81
3,000 - 9,999	2	8,635	3,440	.39
over 10,000	1	31,377	18,573	.59
All sizes of schools combined	171	102,205	\$87,728	\$.86

Total allocations are seen to be very considerable when it is remembered that the total of \$87,728 is for approximately 23% of the schools contacted in the survey. Yet those respondents who answered a question as to the "amount deemed adequate" estimated, on the average, that an adequate program would cost a little over twice the amounts shown above.

The items covered in the above figures were those named in the survey questionnaire:

- Maps, charts, and globes
- Museum materials
- School excursions (except inter-scholastic contests)
- Motion picture films
- Filmstrips, glass slides
- Projection equipment
- Phonograph records
- Auditory equipment
- Specialized supervision of the above-named items.

In addition, a question called for information on "all other aids (except books, laboratory supplies, shop equipment, and building fixtures)," but amounts listed

Merrill McMillan, co-ordinator of visual materials, distributes an order for visual equipment.

The opaque projector may be used in a variety of ways and in many courses from shop to history.

in that connection were so small that it is apparent that most respondents concerned themselves almost entirely with the items specifically named.

The per capita costs shown average \$.86 per pupil per year, whereas the total per capita expense in Oklahoma schools is approximately \$90 annually. Great difference in per capita expenditures in schools of various sizes is especially apparent. Small-school costs are disproportionately high even though they spend nothing for specialized supervision or administration with respect to audio-visual materials.

Types of Materials

The pie-chart shows the proportionate division of the audio-visual materials dollar. For example, respondents are spending 8% of the \$87,728 total this year for School Excursions, 18% for Motion Picture Films, etc.

Proportionate Division of Expenditures By Types of Materials

The chart indicates the great interest in motion pictures. Even schools with the least money are emphasizing the most expensive materials. This probably indicates that the cheaper materials are often overlooked. But it also indicates that (1) the great value of motion pictures is generally recognized and (2) the value of motion pictures as a means of "selling" the whole matter of effective audio-visual materials is likewise appreciated.

Comparatively small amounts are allocated for film rentals even after schools have made the investment in a motion picture projector. Small amounts are allocated for filmstrips and other effective (and inexpensive) materials. Negligible amounts are spent for specialized supervision. Other studies¹ show that at present large, successful users of audio-visual materials need approximately \$2 for specialized administration and supervision of audio-visual materials for every \$1 spent for the materials themselves. That is, large systems find specialized supervision quite expensive, yet most of the schools surveyed are attempting to use

¹McPherson, Harry M. *Organization, Administration and Support of Visual Instruction in California*, University of California, 1939 (Doctoral dissertation), p. 114.

audio-visual materials *without any specialized supervision*. The obvious, practical conclusion is that extensive teacher-education is essential to meet the need.

Sources of Funds

Data as to sources revealed that only approximately 59% of the monies allocated for audio-visual materials were derived from taxation. Since audio-visual materials are certainly legitimate educational tools (and *essential* tools), and since the public shows real enthusiasm for their use, it is to be expected that their support will come in time from taxation, directly, just as in the case of other phases of instruction. In the meantime, remarkable public interest and support is evidenced by the fact that communities are raising the other 41% outside of and beyond the regular school taxes.

Sources of Funds Reported for Audio-Visual Materials

Average Daily Attendance	Taxation	Student Fees	Admission to School Film Showings	Student Activity Funds	Parent-Teachers Association	Total
under 200	\$ 7,616	\$	\$ 500	\$ 4,856	\$ 100	\$ 13,072
200 - 399	8,956	260	635	7,155	..	17,016
400 - 799	8,357	490	430	4,696	600	14,573
800 - 2,999	11,138	425	2,908	14,471
3,000 - 9,999	1,400	1,377	563	3,340
over 10,000	10,425	8,148	18,573
TOTAL	\$47,902	\$10,700	\$1,565	\$20,178	\$700	\$81,045
Per cent of grand total	59	13	2	25	1	100

The table heading, "Student Fees," refers to formal assessments upon pupils for meeting the cost of instructional materials, and "Student Activity Funds" includes money derived from a variety of sources ranging from senior class gifts and dramatic productions to athletics and "queen contests".

Public Interest and Support

An incidental result of the survey was emphasis upon the *recognized* value of the newer materials and methods as shown by the general willingness of the public to support their use. However great may be the contrast between the old and the new instructional aids, and in spite of the greatly increased cost involved, the school-supporting public recognizes the value of audio-visual materials (and of films in particular), and gives evidence of that recognition by its financial support.

The schools surveyed, like many others everywhere, were struggling to meet minimum state education department requirements as to teachers' salaries, library books, and similar items; yet they were meanwhile going forward with the building of creditable standards of their own as to audio-visual materials, even in the absence of state requirements in that newer area. The financial methods often are not suitable or dependable; yet there is the significant fact that communities are going *beyond* older standards of excellence as to teaching materials.

It bears repeating that a survey of practices in the matter of expenditures for audio-visual materials has

This is where the audio-visual dollar goes in Oklahoma.

results which are descriptive; they are not standards. Many detailed and careful studies in this field will be of use to all who are concerned with such matters as budget limitations, sales opportunities, legislative enactments, and the obvious, clearly-felt need for the best of tools in the job of education.

National University Extension Association Meets at Atlantic City

Audio-visual instruction and "Labor on the Campus" shared the limelight at the annual meeting of the National University Extension Association, held at Hotel Dennis, Atlantic City, May 6-8. An excellent audio-visual exhibit and program was organized by Boyd Gunning, of the University of Oklahoma. It was found that about two-thirds of the Extension Divisions of the country have active Audio-Visual Departments and that their services are being turned increasingly toward the field of informal adult education and community activities. Among the many who participated actively in presenting papers and in their discussion were:

Glenn Jones—State College of Washington
 Carolyn Guss—Indiana University
 Lee W. Cochrane—State University of Iowa
 Irving C. Boerlin—Pennsylvania State College
 Mark Starr—International Ladies' Garment Workers' Union

Invited as resource persons were Roger Albright (Motion Picture Association), Wm. F. Kruse (United World Films), Gardner L. Hart (American Council on Education), and Dennis Williams (Encyclopaedia Britannica Films). Following a report by F. C. Lowry, and supplementary statements by Boerlin and Kruse, a favorable vote was taken to continue membership in the Film Council of America.

Audio-Visual Workshop For Administrators

Teachers must enlist the cooperation of the school principal if they desire the maximum improvement in the audio-visual program.

HELEN GRINDROD
Director of Audio-Visual Aids
DON HARRISON

Deputy Superintendent of Schools
Stockton (Calif.) Unified School District

SCHOOLS and school systems that are seriously working on the improvement of instruction soon discover that the principal is a key man in the picture. Teachers will seldom go any farther, or go any deeper, than the principal is willing to go.

The principal is often a hard man to corner. Too frequently, he is busy with a parent when the audio-visual conference is held. There is an important meeting on salaries when films and equipment are previewed, and so it goes through the year. As a consequence, the expenditures for new instructional aids are drastically reduced in the new budget. Teacher enthusiasms, at best, are met with condescending tolerance.

However, by the law of averages, the principal may finally be caught for at least one meeting, and if the speaker or demonstration is persuasive, he may leave the meeting as a convert to the new magic. But again there will be little time for the necessary study to equip him for real leadership in the improvement of instruction.

Nevertheless, some solution must be found, since the instructional aids program, without a doubt, is of utmost importance to the administrator and because he, as key person in his building, wants his teachers to do the best teaching job possible in the most efficient manner. One possible solution to this dilemma is to provide a series of carefully planned conferences or workshops specifically for building principals and coordinators. If such a series of meetings can claim an important place on the principal's calendar, one hurdle is surmounted. Recognizing this, Stockton and San Joaquin County recently held the first of a series of instructional materials workshops for administrators. A wide variety of library materials, charts, maps, radio, and other audio-visual tools were included with the intent that this workshop not only would be helpful and informative but also interesting. Participation by the administrators in the use and development of audio-visual materials was stressed throughout the one day program. Over one hundred principals and coordinators attended this program in Stockton.

The general plans for the workshop were developed by the Institute Committee, the necessary funds made available, and the detailed planning and scheduling of the program turned over to the director of audio-visual aids. Preliminary announcements were sent out as much as three weeks in advance to keep the administrators reminded of the workshop date. The tentative program was distributed one week before the event.

Purpose Explained

The opening session, forty-five minutes in length, was devoted to an explanation of purpose, and an attempt was made to create the following point of view: first, that instructional materials, if used effectively produce valid results; and secondly, these aids provide greater variety in teaching methods, and help to arouse interest and a sense of purpose in the pupil. The Navy motion picture, *Film Tactics* was used to illustrate the fact that audio-visual materials can become distractions and disturbances to effective learning if improperly used. The film also stressed the basic elements of good utilization needed in teaching with instructional aids.

Charts and diagrams illustrating simple criteria for the selection and use of materials were displayed in sectional meetings throughout the day to keep such criteria constantly in the picture.

The principals and administrators at the workshop had an opportunity to handle the machines and equipment and to familiarize themselves with the construction and operation of these devices. The afternoon sections included the previewing of selected films and filmstrips. The discussion of each film as well as the studying of teacher guides as a basis for further discussion and evaluation preceded the showing of each film. Opportunity for making slides was provided throughout the afternoon.

One general session, to open the afternoon program, was devoted to an over-all discussion of values and standards for in-school and out-of-school radio listening. There was a general interest in these discussions and several principals have since developed programs for more effective use of radio listening, and now Stockton students are helping to produce a fifteen-minute educational program once a week over a local station.

An all-day trade show provided demonstrations of projection equipment, slide kits, wire recorders, and other equipment for study and operation by the principals. Kits of instructional aids for selected elementary school units were on display in the library. It was notable throughout that this kind of a program lends itself to attractive and stimulating displays.

Wartime Wedding---

The Documentary and Fiction Film

The documentary is a film with a serious purpose, gaining its end by dramatizing facts. But how far may this dramatization go before the film becomes a piece of fiction? Shearman reviews the situation in Britain.

JOHN SHEARMAN*

Documentary Film Director
Great Britain

THE great period of true documentary was before the war. *Drifters*, *Song of Ceylon*, *Shipyard*, *Night Mail*—the classics of documentary—were the revolutionary products of the nineteen-thirties. At

Museum of Modern Art

"New Earth" (1934) filmed by Joris Ivens in Holland was a pure documentary. Man was pitted against the natural forces of the sea in a fight to close the Zuider Zee.

Museum of Modern Art

"Song of Ceylon" (1934-6), produced by John Grierson and directed by Basil Wright, was pure documentary in the naturalist tradition.

that time, a good many people looked at documentaries with suspicion—a not unusual attitude toward revolutionary art.

The true documentary continued into the first years of the War. *Men of the Lightship*, *Coastal Command*, *Fires Were Started*, and *Ack-Ack* were in the straight line of descent from *Night Mail* and *North Sea*. But nobody was suspicious of them. It had suddenly become immensely important to depict how a small group of people, typical of many such groups, behaved in actual circumstances—circumstances of the greatest and most urgent reality. The war demanded (*inter alia*) documentary films. The founding child of the film industry was suddenly welcomed into the very best society and became a part of the mental life of the people.

At about the same time, feature film makers in this country found themselves caught by a strange emotion. They wanted to say something sincere about people at war.

The two groups, feature and documentary film makers, had spent the pre-war years sniffing haughtily at each other ("Say what you like; it's not box-office," and "But it's nothing to do with real life.") Now, with the coming of war, they stopped sniffing and began to

*John Shearman was a member of the R.A.F. Film Unit during the War. He found himself working alongside both feature film and documentary film technicians, and he had consequently a special opportunity of observing the interaction of the two film forms. This article originally appeared in the *Documentary News Letter*, a British publication.

British Information Services

"Next of Kin" was an 84-minute, reconstruction documentary. At what point does "reconstruction cease to be documentary and become fiction?"

Museum of Modern Art

"Housing Problems" (1936), directed by Arthur Elton and Edgar Anstey, was a reportage type of documentary. It presented the facts.

British Information Services

"Children on Trial" (1946), produced by Basil Wright and directed by Jack Lee, had a story to demonstrate the evil effects of bad environments.

get something from each other. Documentary directors found that they needed the technical resources of the studio in order to make their films big enough to match the giant size of their subject—war. Feature film makers found themselves wanting to leave behind the fantasy-life of the popular film and turn to a life which was a good deal closer to reality: a fusion of techniques was inevitable. Other causes operated towards the same end. Documentary and feature technicians found themselves working together in the Service Units. A great documentary unit was accommodated in a requisitioned feature studio along with the R.A.F. and Army film units. The authorities wanted films for specific purposes and entrusted the making of them to both groups.

Thus, feature films began to acquire a flavor of the documentary—*The Foreman Went to France*, *One of Our Aircraft is Missing*, *Forty-Ninth Parallel*, *Next of Kin*. The effect of this infiltration of the documentary

idea can now be traced in most of the great British features made during and just after the war—*In Which We Serve*, *San Demetrio London*, *The Way Ahead*, *Canterbury Tale*, and, outstandingly, in *Journey Together*. After the first showing of this film (before its London opening), a group of feature technicians wandered out of the theatre saying, "Of course, it's pure documentary." They were closely followed by a group of documentary technicians saying, "Of course, it's a pure feature." This was in 1945. A fusion between feature and documentary techniques and ways of thought had taken place.

The feature film makers were not the only ones affected. Something had happened to documentary film makers, too. Documentary is more than just a special technique of making short films with picture and commentary. Documentary is an idea. But it is true to say that before the war documentaries generally were short and had little or no synchronized dialogue. If

British Information Services

"Next of Kin" was produced during the war for the purpose of impressing soldiers with the dangers of careless talk.

British Information Services

Though this was an early "reconstruction-type" documentary in England, the *March of Time* and the *Russians* had used the form for years.

documentaries were to get longer and use more synchronized dialogue, they would become more like features. Both these things happened to documentaries during the war. They became long, because there was more to say. But why did they tend towards more synchronized dialogue?

For a number of reasons: because, granted greater length, commentary alone was no longer adequately gripping; because dialogue does in fact take place in the real-life equivalents to documentary situations; because, for example, the best way to show a man giving orders

English Films, Inc.

"Journey Together" was produced by feature-film-trained people, using professional actors, studio sets, and trick effects.

is quite simply, to show a man giving orders; because the specialized jargon of the bomber and the gun site has its own artistic value.

For documentary film makers, the need for synchronized sound brought its own practical problems. It is axiomatic that sound on location is hell. Documentary, therefore, had to go into the studio to a greater extent than had been its habit. Fortunately it managed to do so without losing reality.

British Information Services

"Fenlands" is a recent documentary film, being one of a series known as "The Pattern of Britain."

There were problems, too, for documentary writers. Dialogue must, on the whole, be written before it is shot. It must say, or imply, what has to be said or implied; yet it must be as near as possible to what would, in fact, be said, though it must be tighter than normal speech and less profane. Writing it is an expert job.

A still greater problem confronted the director of this type of film. He could, with a reasonable hope of success, film a non-actor doing something. He could not, except in special circumstances, get a non-actor

(Concluded on page 322)

British Information Services

"Crofters" is another "Pattern of Britain" film which attempts to describe a principal area of the country and to show the contributions its people have made to the national life.

The Film and International Understanding

The State Department's OIC Film Program

Dr. JOHN E. DUGAN, Editor
Head, Department of Education
Beaver College, Jenkintown, Pa.

OIC, the State Department's Office of International Information and Cultural Affairs, is officially organized to see "that other peoples receive a full and fair picture of American life and of the aims and policies of the United States Government." How are films used in this program?

United States diplomatic missions in other countries co-operate in distributing the films. Sometimes it is necessary to provide projection equipment and services as well as films in order that showings may be held in some areas.

OIC films reach a variety of audiences in a variety of places where understanding of the United States should be spread. Some idea of the audiences which these films may reach may be gained from the following tabular report of non-theatrical showings of films about the United States in Latin American republics during 1945.

TYPE OF AUDIENCE	NUMBER OF SHOWINGS	ATTENDANCE
Business and Professional	6,357	456,488
Official Display	3,475	627,739
Religious Groups	4,024	732,437
Hospitals & Institutions	6,224	1,349,200
Sports Clubs	4,398	1,663,853
Military Groups	6,302	2,003,955
Workers Groups	5,478	2,061,967
Schools and Universities	32,234	9,363,401
Cultural Institutes	5,320	1,069,025
General	36,285	22,569,511
TOTAL	110,106	41,953,531

National educational authorities in some countries cooperate in arranging regular showings of OIC films in schools. Such showings now are in progress in Great Britain, Egypt, South Africa, Mexico, Chile, Argentina, and Brazil. Plans are under way for extending this type of arrangement.

Films used in the OIC program come from a variety of sources. Some are edited or adapted from existing theatrical, documentary and informational motion picture material depicting various phases of life in the United States. Other films are produced to meet specific requirements for which no suitable film material is available.

Film material for adaptation may be secured from other governmental departments, from industrial concerns, from theatrical film producers, from state and national organizations, and other sources. Examples of typical sources are: United States Steel Corporation, Oregon State Highway Commission, Greyhound Lines, National Tuberculosis Association, Westinghouse Electric Corporation, and Atchison, Topeka, and Santa Fe Railway Company.

Recording of soundtracks in various languages is part of the process of editing and adaptation. Languages so used have included: Arabic, Bulgarian, Chinese,

Czech, Dutch, Finnish, French, Greek, Hungarian, Italian, Norwegian, Polish, Rumanian, Russian, Serbo-Croat, Slovak, Swedish, and Turkish.

During the first ten months of 1946, OIC sent 4,347 prints of documentary and informational film subjects to 86 points throughout the world. It is estimated that the monthly audience for such films now is in excess of fifteen million. Some typical reports received in 1946 follow:

Brazil—"In 6,128 showings, 2,721,049 persons were reached in Brazil during July and August by OIF films."

China—"Some 865 showings in June reached audiences totaling 1,174,192 persons."

New Zealand—"The month of March, 100,603 people attended 927 screenings of the Legation's documentary films."

Norway—"Our 16mm. documentaries have been screened before more than half a million people during the last eight or nine months."

The OIC film program includes the use of filmstrips now are reaching an audience of twelve million organized groups, in connection with special educational projects, and in schools and colleges. Diplomatic missions are furnished with English and foreign language title lists for ordering purposes. In China, such filmstrips now are reaching an audience of twelve million school children a month.

Attestation of audio-visual materials also is part of the OIC program. At many foreign ports of entry, certification of these materials by the State Department procures for them exemption from normal custom duties. The State Department began the attestation film materials in 1941 and of sound recordings in 1945. A special Committee on Attestation, now attached to the Office of the Director of OIC, has been created for this purpose. This committee has certified more than two-thousand items to date.

(Concluded on page 334)

An enthusiastic crowd filled the auditorium of the Houston Museum of Fine Arts for a series of travel films and entertainments on Latin America.

TEACHER-COMMITTEE EVALUATION of NEW FILMS

L. C. LARSON, Editor
Director, Audio-Visual Center
Indiana University, Bloomington

CAROLYN GUSS, Instructor, School of Education
BETTY STOOPS, Film Librarian, Audio-Visual Center
Indiana University, Bloomington

Making Shoes

(Encyclopaedia Britannica Films, Inc., 20 North Wacker Drive, Chicago 6, Illinois) 9 minutes, 16mm, sound, black and white, \$50 less 10% discount to education organizations. Discussion guide available.

Description of Contents:

Turning pieces of leather into finished shoes is the subject of this film. It opens in a shoe factory, where a worker selects enough calfskin for a dozen pairs of boys' shoes. Next, pieces of calfskin for the uppers are cut out by a large stamping machine. After matching, cloth and inner linings are cut, the leather and cloth pieces are trimmed and pasted together before being sewn. The purpose of each step is carefully explained, and during the stitching and folding operations, the uppers gradually take shape.

After temporary strings are inserted to help hold the shape of the shoes, the uppers are placed on wooden lasts of the correct size. When the insoles have been tacked to the uppers at the heel, close-ups show the claws of the pulling-over machine stretching the leather tightly over the lasts to shape it. The tacking completed, the toes are finished, and leather strips called the "welt" are sewn to the edges of the uppers. Cork paste and steel arches are inserted to increase the comfort and wearing qualities of the shoes before the heavy outsoles are added. Workers fasten these soles first with rubber cement, trim the edges, and then stitch them. After they are shaped by rollers, the shoes are dried. Heels are tacked on and smoothed, sole edges are stained and polished, and the wooden lasts are removed. The next scene shows the room where the finished shoes are cleaned, washed, and polished.

Encyclopaedia Britannica Films Inc.
Scene from "Making Shoes."

Committee Appraisal:

The manufacturing process pictured is so interesting that it could well be shown in even more detail, although this film gives a very good step-by-step picture of how boys' oxfords are made. The camera is generally used efficiently, giving the audience a feeling of standing beside the worker, watching his operations; however, a first-hand observer would undoubtedly tarry longer at several points. The narration is very helpful, and is appropriate to a wide age and interest range. The film should be useful in an intermediate-grade study of manufacturing in the United States, in economic geography on several levels, in junior and senior high school home economics, and as a general interest subject on the adult level.

Seashore Oddities

(Young American Films, Inc., 18 East 41st Street, New York 17, N. Y.) 20 minutes, 16 mm, sound, color, \$180. Produced by William Harold Oliver, Jr.

Description of Contents:

This film presents many unusual seashore animals found in the protected pools near the Hopkins Marine Laboratory, at Monterey, California. First, a scientist is shown gathering specimens on rocks, under rocks, and in the sand; then four classes—coelenterata, echinodermata, mollusca, and arthropoda—are shown in close-ups and their characteristics are described in non-technical language. The hollow-bodied animals are represented chiefly by the jellyfish and the sea anemone, whose peculiar food-gathering mechanism is demonstrated. The example of the spiny-skinned animals is the starfish, whose unusual muscular efficiency is emphasized. The soft-bodied animals shown are the snail, sea hare, sea slug, abalone, and octopus. The animals with jointed feet include the hermit crab, whose clownish tendencies are shown, and the barnacle.

Committee Appraisal:

The excellent marine photography of these strange and colorful little animals very effectively emphasizes their outstanding characteristics. Photographed in aquaria, they can be seen from the most convenient angles without seeming to be out of their natural surroundings. The commentary is well presented, with a vocabulary level suited to junior and senior high school. The film should be useful for science classes on these levels and for general interest on the senior high and adult levels.

Wild Fowl in Slow Motion

(Hawley-Lord, Inc., 61 West 56th Street, New York 19, N.Y.) 9 minutes, 16 mm, sound, color, \$75.00.

Description of Contents:

Birds which winter in the marshlands of the South are shown in their many activities by means of both regular and slow-motion color photography. The Western sandpiper, the dowager or robin snipe, and the willet are shown both on the ground and in the air. The duck family is represented by the canvasback duck, the redheaded duck, the pintail duck, the shoveler duck, the broadtail or blue-bill duck, the blue-winged teal duck, and the baldpate or American widgeon. Their takeoffs, ranging from the slow takeoff in which the feet are used to get up speed by paddling the surface of the water, to

the short, speedy zooming upward, are shown in close-ups. Their flight, landing, and feeding on open water and on the marshland are also shown. The Canada goose is pictured leaving her nest of fledglings, taking off slowly, and flying gracefully and tirelessly. Next, a flock of snow geese are seen in flight, and soaring pelicans bring the film to a close.

Committee Appraisal:

The beauty and grace of these birds, photographed in natural color, is emphasized in the slow-motion sequences, where the medium of the motion picture is utilized especially well. In this aspect, the film should be effective in stimulating the creative imagination of art students. Close-ups showing the appearance and characteristic movements of the various birds should be of interest to zoology students and perhaps aeronautics students. From an aesthetic viewpoint, the film should be of general interest to high school students and men's clubs.

The Andes—Chile's Barrier

(Hollywood Film Enterprises, 6060 Sunset Boulevard, Hollywood 28, California) 10 minutes, 16mm, sound, color, \$75.00.

Description of Contents:

With the Andes Mountains as both the hero and the villain, this film shows how that formidable range has determined Chile's shape, weather, natural resources, way of living, and international relations.

Opening with a sequence of animated maps which first locates Chile and then shows the three distinct areas: the northern desert, the central pampas, and the southern mountains, the film shows, by means of a cross-section view, the comparative heights of the Andes, the Rockies, and the Appalachians.

Hollywood Film Enterprises

Punta Arenas, the southernmost city in the world, is situated in the Straits of Magellan . . . from the film, "The Andes—Chile's Barrier."

The current theory of how the Andes range was formed is presented. Next, by means of animated diagrams, the interaction between the winds and the mountains is explained. The northern desert is the result of the mountains' stopping the rain clouds on the east side of the range. Farther south, the prevailing winds are from the west and bring moisture which makes a fertile central valley and a stormy area similar to the Aleutian Islands in the southern mountains.

The importance of valuable nitrate and copper ore deposits in Chile's economy is stressed; the heavy undergrowth, dense forests, irrigated agricultural areas, and waterpower as a source of cheap electricity are shown. The scene then shifts to the mountains, which form a natural barrier between Chile and Argentina. Powerful electric and cog-wheel locomotives pull trains across the mountains, through tunnels, and through protective sheds; airplanes carry passengers and mail, while the Pan-American highway makes automobile trips possible. Horses and mules carry many persons through the passes, but changeable weather and uncomfortable altitudes make all

In the film, "The Andes — Chile's Barrier," these mountains are compared with the Rockies and the Appalachians. The theory as to how the Andes range was formed is presented along with animated diagrams showing the effects of the winds on the mountains on the climate and occupations of the people.

Hollywood Film Enterprises

methods more or less unsatisfactory. Scenes in the mountains (including the radio station, the statue "The Christ of the Andes," and some of the highest peaks) bring this part of the picture to a close.

Committee Appraisal:

Excellent color photography and emphasis on the role of the Andes in Chilean life combine to make this a definite contribution to the study of Latin America. The position of the country and its three definite divisions, as well as the effects of the winds and the mountains on the climate, are very clearly shown by animation. The glimpses of Chilean industries should arouse interest in two other films of the six in this series. The transportation sequences are especially valuable for showing how such problems are being partially solved. The sense of man's struggle against such giant barriers is well portrayed, and a feeling of the vastness of these mountains is very vivid. Sound teaching techniques and valuable subject matter are combined in such a way as to make this film valuable for junior and senior high school social studies, science, and geography.

Introduction to Fractions

(Joseph W. Burke, Audio-Visual Consultant, 1133 N. Highland Avenue, Hollywood 38, California) 10 minutes, 16 mm, sound, color, \$75. Produced by Johnson-Hunt Studios.

Description of Contents:

This film, the first in a series on elementary mathematics, covers the meaning of fractions, the writing of fractions, the meaning of the numerator, the meaning of the denominator, and the way of determining the value of a fraction. The film begins by showing such tools as shears, a saw, and a square; and then shows that fractions too are tools to be used for the division of a whole into the desired number of parts.

The film next treats the written fractions. By means of animated models and numbers, it shows, through many examples, that as the denominator becomes larger, the parts become smaller and that the numerator counts the number of parts. Improper fractions are next discussed. Through the use of models, the film shows that an improper fraction can be changed to a mixed number.

The conclusion of the film shows the use of fractions by relating them to the child's everyday experience with such objects as a quart and pint of milk, a piece of cake, and three pencils from a box of twelve.

Committee Appraisal:

The film is designed to be used in a unit of work dealing with fractions on the intermediate grade level. It should be useful either in introducing the subject or in reviewing the subject for those who need it. It was also suggested by the committee that the film might be used in the seventh grade where the transition is made from fractions to decimals to percentage. The use of animation and repetition is excellent. The lack of children in the film may or may not be desirable; it does permit focusing of attention on the basic ideas, and yet it minimizes pupil participation and identification with the film.

Observations on the Audio-Visual Movement in Canada

DURING recent weeks, the writer has had the pleasure of consulting with a number of the educational leaders of our "neighbor to the North." During these conferences, certain definite trends and problems have come to light. The majority of Canadian educators have been somewhat slower in recognizing the vital necessity of including audio-visual materials among their essential teaching tools. However, certain leaders have for the past five or six years been devoting much energy and time to telling their colleagues about the many advantages to be gained through the effective use of such teaching materials. During these spring months of 1947, I sensed that this missionary work has begun to have its effect throughout the provinces.

Ontario Advances

In Ontario, I found that Mr. J. W. Grimmon, Director of Audio-Visual Aids for the Province of Ontario, has developed an excellent film library and radio program. This service is providing materials to an ever-increasing number of schools throughout the Province. I learned that over 40% of the secondary schools in the Province were making use of the school radio broadcasts, over fourteen thousand students had listened to programs on guidance and that twelve thousand listened to programs on mathematics. About 30% of the Ontario elementary schools use radios.

Mr. Grimmon indicated that there was a substantial increase in the demand for films, film strips, and other similar materials. The number of showings of educational films was more than doubled during the year. Seventy-five new film titles were added to the Film Library and thirty rural school circuits were provided with films on an extended loan basis.

Mr. Grimmon has organized a five weeks' summer course in audio-visual aids, to be offered at the University of Toronto. As in the States, summer-school enrollment in available audio-visual aid classes will be extremely heavy here in Canada.

Quebec Circulated 8,400 Films

In Quebec Province we found that Macdonald College will be offering a regular five weeks' course in audio-visual materials. The Jacques Cartier English-speaking Catholic Teacher Training School in Montreal may also offer a course in audio-visual aids.

A brief survey indicated that about 8400 films were circulated in this Province during the last school year. During the same period, 140 sound motion picture projectors and 47 film strip projectors were available for use in the classrooms.

C. R. CRAKES, Educational Consultant
Devry Corporation, Chicago

This number is rapidly increasing as more equipment is made available to the schools.

Manitoba Uses Radio

In Manitoba, there is an increase in the number of radio programs being utilized by students. Mr. E. T. Armstrong, Supervisor of Audio-Visual Aids for the Provincial Department of Education, reports a 200% increase in film rentals over last year and a 100% increase in calls for filmstrips. The Provincial Library owns 600 16mm film subjects and 800 film strips.

Saskatchewan Publishes a Manual

Over in Saskatchewan an increasing number of boards of education are purchasing sound projectors. Several have appointed directors of Audio Visual aids. A number of audio-visual aid conferences were held during the current school year. Twenty-two of the larger units of administration have now employed full-time audio-visual aid directors. The Provincial Minister of Education in the forward to the recently published audio-visual aids manual for Saskatchewan schools states, "I believe that the intelligent use of the great variety of audio-visual aids will re-vitalize our teaching, will broaden the concepts of our girls and boys, and, through their enriched experiences, will help them to face the future with greater confidence." The interest is strong and there is every indication that under the leadership of Mr. E. T. Holliday, Provincial Film Commissioner, we may expect the Movement to make rapid advances in this Province.

Alberta Six-week Summer Course

In Alberta, a six-weeks course in audio-visual aids will be offered at the University during the coming summer. Mr. Donald Cameron, Director of the University Extension Department, is taking an active interest in further expanding the use of these materials throughout the province. Mr. D. S. Hamilton, Supervisor of the Audio-Visual Aids Branch, Provincial Department of Education, is planning to develop a series of audio-visual aid institutes to be held in various sections of the province.

British Columbia Advances

In British Columbia I learned that two summer school courses in audio-visual aids will be offered. The provincial Department of Education is planning to offer two summer courses in audio-visual aids from July 2nd through August 4th, the first

(Concluded on page 333)

THE CHURCH DEPARTMENT

A Monthly Service

WILLIAM S. HOCKMAN · EDITOR · 2043 MARS AVE. · LAKEWOOD, OHIO

Insufficient Liaison

POOOR films are being produced for the church field by those who have not thought or cared to consult the church concerning its needs and desires. After these films are made they are backed up by high-powered releases and announcements, and uncritical reviews and thus pushed into circulation among churches which are none too discriminating in what they select for use. These churches, more enthusiastic than wise, will give testimonials as to the merits of the films, and they are on their way, and the kind of visual education the church at large needs and wants receives another setback.

Rev. John W. Gable, formerly of Richmond, Indiana, and now head of the newly-formed Religious Film Service (5121 West Devon Avenue, Chicago) has this to say:

"Theological training is required in those who would evaluate and supply proper materials in the church field. It is also necessary that the same persons know the technical side of motion and still pictures, both to pass upon the quality of extant films and to direct new productions. The large number of poor films now being produced and distributed are the result of insufficient liaison between those theologically trained and the technical experts. The church must be on guard against technical mediocrity and doctrinal obscurity."

Candid Film Reviews

In addition to closer cooperation between producer and user, we need more candid reviews of new films. While perfection is not sought, a reasonable usefulness is expected in films made for the church. Films must be made for a purpose as well as used for a purpose. When a film is good for everything, it is probably good for very little, if anything. Blurbs that immodestly assert super superiority may be discounted 200% in the theatrical trade, but they throw the unwary of the church for a loss every time, since they expect a certain amount of sincerity and straightforwardness in such announcements. Competent and candid reviews in responsible magazines and church papers will help remedy this situation.

How?

Eventually the church must set up some sort of evaluation organization or utilize one already in existence. The Religious Film Association has done very good work, but its coverage of new films is delayed and incomplete. It might be possible to amplify this service to the place where the church would wait for

the reviews and evaluation of new films by this agency before announcing, praising, or condemning new materials. If producers knew that their films would have to run this gauntlet, they might be restrained to build in a little more quality and utility and spend less on high-powered promotion. There is a scarcity of good and useful visual materials, and the church must be on guard lest all kinds of slapped-together and "quickie" materials fill this partial vacuum.

It is distressing to see mediocrity praised by the very people of the church who should be on guard against it. Better liaison will help at the production stage. Honest evaluation of all new materials by those with competence and objectivity can also protect the church from the disillusionment which inevitably results from the acceptance and use of mediocre visual materials.

American Lutheran Film

The Way of Peace is an 18-minute sound film in color. It was produced by the East-West Studios for The Warburg Press and is available from their Columbus, Ohio office (57 E. Main St.) Lew Ayres does the narration. A California pastor, Rev. H. K. Rasbach, gets credit for the original idea and gave technical supervision. Frank Tashlin did the writing; Eddison von Ottenfels composed and directed the music; and Wah Ming Chang and Blanding Sloan were the co-producers.

The story starts with the Creation. Then sin comes, and man, with his greed and hatreds, shuts God out.

Photography: Glen Chang, East West Studio
Rev. H. K. Rasbach with the model rocket used in "The Way of Peace," an 18-minute sound film.

As man turns from God, he walks further and further into the shadows. Then Christ comes, and only a part of mankind heeds His call to the Light. Man stumbles on through wars and cruelties, unheeding Christ's message. The atomic age is ahead. It may be beneficial; it may spell doom. Man can tear down the wall, let in the Light, and be in brotherhood, but will he?

There are no humans in the film, and all the backgrounds are miniatures. Puppets are used. The background music is by an orchestra.

While some of the releases on this film will lead many people to expect more than they should, the film will be generally accepted as useful and as a call to repentance. The dominant note is negative, even to the end when the world is destroyed. It is a film version of hell-fire and damnation.

The utilization of puppets against miniature backgrounds gives a film with little elemental movement in three-fourths of the footage. This is a definite weakness. The animation of some of the puppets tends to lessen, rather than heighten, the illusion of reality. The only way for puppets to get accepted as reality by the mind is for them to keep still!

Basically, the commentary is a sermon. It is well-paced and well-spoken. At times, the music occupies the soundtrack alone and with excellent effect. The Nativity music has great beauty.

While there are certain to be exceptions, most church leaders will consider *The Way of Peace* a film for young people and adults only.

"The Spirit That Came to Earth"

An Audio-Visual Sequence, Produced as a Church-School Activity

By HAROLD CLARK*

HERE at Brick Church, a group of us wondered what values there would be in producing an audio-visual sequence as a church-school activity. What would be the problems involved? What would be the response of the leaders, the young people and the children who took part? Would it stimulate interest and enthusiasm, and what would those who took part learn? Having finished the project, would there be a desire to repeat the experience?

We formed a committee. It began meeting early in September. It discussed the children's part in the Christmas Vesper Service held in the church, saying: "Instead of having the children speak and sing, why not plan a series of still pictures in color on the Christmas theme to be projected. For these pictures, let us record Christmas music. The voices of the children singing carols would be beautiful. Other appropriate music could be used, and the whole could be accompanied by a carefully prepared narration. Let us make the whole a church school activity."

For the purpose of discussion and production we called our project "an audio-visual sequence."

The Project Committee

In forming the general committee we sought out what skills were available and let both the skill and the personality of our leaders influence the final result. The church school's director was ex-officio. The director of the children's choir, the director of the speech choir, two photographers with experience in Kodachrome, two sound technicians, a dramatic coach, an artist, two consultants from Eastman Kodak, and several people with a general interest in the project, rounded out the committee.

A Christmas Audio-Visual Sequence

First, we defined our objective. We set out to prepare and present an audio-visual sequence for the church on the occasion of the Christmas Vesper Service. As we got under way, we began to ask specific questions: Should the sequence be a presentation and incidents of Christ's birth? Should we photograph a dramatic presentation of the story? Should we attempt to interpret the meaning of Christmas? As we thought these questions through, we defined an objective which satisfied and stimulated us. Certain basic conclusions emerged: We felt that the advent of Christ was not an isolated event in history. This was and is a continuing event. We felt that our objective was to present simply and yet impressively the historical advent and then show that "The Spirit That Came To Earth" still influences us and will continue to influence the world beyond our time.

The Script

With this objective in mind our committee proceeded to create the story and to set down the details of the sound and visual sequences. A final correlation was detailed in the form of a work sheet. It consisted of three basic portions of the production arranged in parallel: the pictures, the music, and the narration. By consulting this work sheet we could determine the idea every picture was to convey and its relation to the other parts of the sequence.

The cooperation of all leaders was good and enabled us to keep rigidly to a production schedule. When all pictures and recordings were ready, we held an evening session to put the sequence together. The commentary was recorded against appropriate background music and synchronized with the slides. This involved five men working with players, recording equipment, microphone, and mixing panel.

Values of This Group Project

What were some of the values of the project? Participation extended directly or indirectly to over two-hundred children and adults. Many of these found an unusual degree of satisfaction and a real sense of achievement in the project. Aside from tangible results in pictures and sound, we felt that the activity and fellowship of the project was worth while. The presentation was well received by Brick Church and by the community beyond. It has been presented in other churches here in Rochester and in neighboring communities. It was well received by the faculty and students of the Presbyterian Leadership School at Wooster, Ohio, in 1946.

*Minister of Youth, Brick Church, Rochester, N. Y.

Religious Film Association

For summer showings to church and other groups of all ages, "Marie-Louise," the Academy Award winner from Switzerland (1945) is an excellent choice. This is the story of a sensitive French girl who takes refuge from the war in Switzerland.

Pittsburgh V. A. Conference

An afternoon and evening conference and demonstration of visual education was held April 14th in the East Liberty Presbyterian Church of Pittsburgh under the auspices of the Committee on Visual Education of the Council of Church of Allegheny County. This committee, under the able leadership of Dr. James S. Kinder of the Pennsylvania College for Women, planned and carried through a well-rounded program which included two general sessions (Visual Aids In Worship, and Visual Aids In Teaching), interest groups on administration, film forums for adults, and visual aids with children, and with youth. The fellowship dinner was attended by 200 and the editor of this department spoke on "How To Use Visual Aids In Recreation."

In the preview period, some of the latest materials were presented, such as: *Boy Meets Girl*, *The Christian Family*, *The Visiting Teacher* (filmstrips). *The Rich Young Ruler*, *Jairus' Daughter*, and *Thy Will Be Done*, (16 mm religious films).

Other councils of churches contemplating such a conference should send to Rev. F. L. Gibbs, Director of the Department of Christian Education, 400 Granite Building, Pittsburgh, for a detailed copy of the program of this conference.

■ Joel Studios, Bond Building, Washington 5, D.C., announces a new film, *Rice Harvest*, a one-reel sound film on farmer activities in Korea. Churches having mission work in this country may find this film useful in their educational programs.

■ Telefilm Corporation (12 E. 44 St., New York 17) announces the release of a series of five filmstrips, *Through China's Gateway*. Pearl S. Buck does the story and narration. Printed copies of the narration accompanies the silent version, and 16-inch recordings (33 $\frac{1}{3}$ r. p. m.) carry it in the sound. The five titles are: *In The Chinese Manner*, *China's Children*, *Food For China*, *A Nation of Scholars*, *China's Tomorrow*. They will be reviewed in the September issue.

Dayton Workshop

Under the general auspices of The Otterbein Press, Dayton, Ohio, a three-day conference on audio-visual aids was held the last of April. The first two days emphasized all aspects of visual aids and the last day was devoted to audio-aids and broadcasting in religious services. Guest leaders included Mr. William L. Rogers, Executive Secretary of the Religious Film Association; Miss Pearl Rosser, Director of Radio Education for the International Council of Religious Education; Rev. W. L. Krepps, Millersburg, Ohio; and, Rev. Raymond Beals, Findlay, Ohio.

Visual Aid Pamphlet

The second of a series of pamphlets planned to meet an immediate need for guidance in the local church's use of audio-visual aids was published in April by the Sunday School Board of the Southern Baptist Convention, Nashville 3, Tennessee. Its author is Mr. Earl Waldrup, secretary of the Visual Education Service of the Division of Education and Promotion. It bears the title, "Getting the Most From Audio-Visual Aids." This 16-page pamphlet is packed with insight and sound advice, well seasoned here and there with common sense warnings and caution.

Under the topic, "Thoughts for the Members of the Audio-Visual Aids Committee," are these excellent statements. We quote:

"Be sure you know where you are going—delay is better than defeat."

"Begin where the church is as a whole—some pioneers will be much farther advanced in their thinking than the masses."

"Start out on a small scale—a good foundation is necessary for a worthy structure."

"Keep materials and values before people."

"Correlate audio-visual aids with other materials and methods."

While this valuable pamphlet is free to Southern Baptists, those not of this communion ought to inclose at least a quarter with their request for a copy.

Correspondence

Miss Edith Craig, of the Visual Aids Service of the Missionary Society of the Church of England in Canada (604 Jarvis St., Toronto 5) writes:

"In the summer of 1946 the Archbishop of Canterbury sent a commission to Japan to investigate ways and means by which the Church of England, the Church of England in Canada, and the Protestant Episcopal Church could cooperate with the NIPPON SEI KO KWAI in its re-establishment during the coming years. The Rev. H. G. Watts recorded much of this trip on 16mm film. From this footage, we have reproduced a 400' sound film, *Report From Japan*. It has already been most effective in Canada and a print is in the hands of the Protestant Episcopal Church headquarters, 281 Fourth Ave., New York 10.

"I get a great deal from 'The Church Department.' *Educational Screen* is a good magazine. I get many ideas which I incorporate in my work."

When "The Spirit That Came to Earth" is presented, we stress that it was not made to be used in other churches. It was a cooperative and creative experience for us. Its real value is in suggesting that other churches may do likewise. The skills we found in Brick Church are in varying degrees present in every church and community. In undertaking such a project, the church can provide the opportunity for wide participation utilizing the talents of the church and community in a beautiful and creative experience.

Teaching Values

Many of our leaders stressed a value which they designated "teaching activity." For instance, in the first part of the sequence the Torah was photographed as a symbol of the hope that the people of Israel have held through the ages. A church-school group went to a Jewish Synagogue. They saw the sacred scroll. They were told of the care with which it was copied, how no errors could be corrected. The Torah's rich and decorative cover was examined. The symbolism of the shield was explained. The children then watched as the pictures were taken.

Some of the most unique pictures in the sequence were the table-top models of the Nativity. These were done with figurines arranged by an artist and his son, one a teacher and the other a pupil in the church school. The photography was done by a father and his children. Working close and with special lighting, they achieved wonderful depth and beauty of color.

There is one sequence in which hands show the continuing influence of "The Spirit That Came to Earth"—the potter's hands at his wheel creating "the thing of beauty that is a joy forever;" the hands of a mother cutting the overhanging crust from the edge of a pie; the hands of an aged person moving across a page of braille; the hands of a worshipper in prayer; a little child, in simple trust, reaching for the hand of his father.

Looking critically at what we had done, the committee felt that the project was in too great a measure handed down to the church school rather than growing

up out of the experience of individuals and groups. In our next project, the material for the sequence will grow out of the study course of the school. Again, we felt that we should extend participation to children and youth at the planning level in future productions. We want them to undertake script and plan the picture sequences. In the measure that this wider participation can be achieved, we will enhance the value of the whole project.

News Notes

- The Department of Audio-Visual Education of the Board of Education of the Methodist Church, Mr. Howard E. Tower, Director, will sponsor a visual seminar to be held at the University of Southern California, August 2 to 22. It will be similar to the seminary held at Emory University last summer but will undertake specific work toward the visualization of the curriculum.

- The National Christian Education Worker's Conference of the Northern Baptists, to be held at Green Lake, Wisconsin, July 14 to 22 is budgeting considerable time for visual aids. An advisor on visual aids will be available for the daily conferences of age-group workers, and the entire program on July 17th will be devoted to a demonstration of the various types of visual aids and to a roundtable discussion on "Visual Aids and Their Use In Christian Teaching." Mr. Joseph John Hanson will be the general director of the conference.

Mr. Melvin F. Schlake, Director of Visual Education Service, Evangelical Lutheran Synod of Missouri, St. Louis 18, writes that "35mm prints of the film, *The Power of God*, are available for immediate use from my office." Ask him about that excellent film-strip, *The Visiting Teacher*. It's just what you want for a workers' conference of Sunday School council meeting.

Religious Film Association

"The Forgotten Village" is the John Steinbeck documentary on Mexico, but it has a missionary message for the underprivileged people whose lives are steeped in tradition, superstition, and ignorance. The witch doctor is seen here attempting to cure the little boy.

THE LITERATURE IN

VISUAL INSTRUCTION

ETTA SCHNEIDER RESS, Editor

ADMINISTRATION

- **Audio-Visual Education in City-School Systems**—Research Division, NEA—*NEA Research Bulletin*, 24: no. 4, December, 1946. 40 pp.

The most important research study since the outbreak of war is this detailed analysis of trends in the administration of audio-visual aids in school systems throughout the nation. The report is based on the answers to a comprehensive questionnaire received from 1,037 school systems representing more than one-fifth of the teachers and pupils of the country.

Among the questions asked on the questionnaire were: What provision for audio-visual aids are made in the budget? What special equipment and materials, and in what amounts? What technical and professional leadership? How much money is spent? How widespread is the use of these aids throughout the school system and how satisfactory are the audio-visual programs now in operation?

Replies were tabulated in five groups, depending on population of the city or community: 2,500-5,000 and up through the over 100,000 cities. Most replies came from the large city systems and about 60% from elementary schools.

The findings are concisely and directly pointed up through charts and tables, with brief text. The pamphlet should be read in its entirety by all workers in the field, first as background for understanding the trends in audio-visual administration, and secondly as a basis for comparison with one's own school system. Here are a few highlights:

1. **Leadership:** Full-time directors were reported in 62 systems, of which 34 were in the over 100,000 cities. Among the 102 part-time directors, 48 were classroom teachers, 35 supervisors, 14 principals, 4 assistant superintendents, and 1 director of the public museum.
2. **Facilities:** Administration buildings, abandoned school buildings, or the offices or classrooms of the part-time directors are usually designated as central headquarters for storage and circulation of materials.
3. **Selection:** In two-thirds of the cities where there is a director of audio-visual education, it is he who selects new equipment. In other cities, it is the superintendent, principals, supervisors, teachers, or school board committees. But, in selecting new films, slides, recordings, and the like, it is most often classroom teachers or staff committees that evaluate and recommend.
4. **Utilization:** There was general dissatisfaction with the extent and quality of present programs, and very few believed that too much attention was being given to audio-visual education. Most directors believed that elementary teachers were making the most extensive use of these materials. But in smaller cities and in cities having no special department, it is the senior high school teachers that use them most.

As for frequency of use, 248 school systems (27%) indicated that a majority of the teachers use films frequently; 276 (30%) that a majority use them occasionally; and 396 (43%) that a majority use them not at all.

Subject matter areas in which films were used, in order of frequency were: social studies, science, health,

English, safety, etc. Subject matter areas in which there is the greatest need for films were: social studies, English, mathematics, health, practical arts, and foreign languages.

The survey includes many other significant aspects of the field, including an analysis of the per capita expenditures, types of equipment owned, and the like. The obstacles which the respondents indicated for future solution included: teachers' lack of interest and skill, absence of a trained director with time and facilities for a program, shortage of essential equipment, poor physical conditions for projection, lack of funds, and some indifference or even opposition by the administration.

BOOKS

- **From Caligari to Hitler**—Siegfried Kracauer—Princeton University Press. 361pp. \$5.00. 1947.
- **Magic and Myth of the Movies**—Parker Tyler—Henry Holt & Co. 283pp. \$3.50.

Both these new releases would appear to be of interest to our readers, altho your editor has not yet examined them. A review in the *Sunday Times* for May 18, 1947 by Eric Bentley favors both books for their critical appraisal of the film as an expression of mass behavior in the society of today.

"The Kracauer book is a history of German movies apart from the Hitler era, with an appendix on the Nazi film. . . . The Tyler book is a critique of American life as it is reflected, or rather refracted in the movies."

FILMS FOR DISCUSSION: SOURCES

- **Films for Forums on International Relations**—Robertson Sillars, ed.—*Film Forum Review* vol. 2 Spring, 1947 pp 13-64 (Institute of Adult Education, Teachers College, Columbia University, N. Y. 27 \$2.00.

A carefully evaluated and thoughtfully annotated listing of nearly 50 films on the general topic, "International Relations", with various sub-topics. For each title there is a fairly extensive summary of content; good evaluative comments; a succinct rating, based on standards previously discussed; a discussibility Index Number; and a list of questions for possible discussion with the film.

The announcement on the back cover promises additional evaluated, annotated films on a variety of topics that are of concern in adult education for the Summer Issue, and subsequent numbers of the *Review*.

LEGISLATIVE TRENDS

- **A Summary of Actions of the State Board of Education and the State Curriculum Commission in Adopting "Building America"**—Roy E. Simpson, Supt. of Public Instruction, and H. M. McPherson, Secretary, State Curriculum Commission—*California Schools*, vol. 18, no. 4 pp 59-69 April, 1947.

A highly revealing case study of the attempt of pressure groups to cancel the selection of a revised edition of the photographic units, *Building America* (published by Americana Corp. for the N.E.A. Dept. of Supervision), as supplementary teaching aids in the social studies program of California. The story should be read in its original to show how an educational body, clear in its objectives and highly discriminating in its choice of materials defended its position in the face of a state-wide smear campaign, and succeeded.

PERIODICALS

- **Cinema**—Vol. 1, No. 1, June, 1947, 12 issues, \$2.50.
Eli Willis is editing this new monthly film magazine which interprets the motion picture as an art. This field of film appreciation and criticism has been largely overlooked, despite the advances made by the *avant garde* group of film workers in times past. The address of *Cinema* is 8066 Beverly Blvd., Hollywood 26, Calif.

PUBLIC RELATIONS

- **Explaining the Schools through Films**—Editorial Comment, by Stephen M. Corey—*School Review*, 55:196-8 April, 1947.

Comments on a mimeographed bulletin, "Charter for Film Production 1946-7" by the Committee on Lay Understanding of the Metropolitan School Study Council, a group of 28 school systems in the metropolitan area of N. Y. C. The committee has undertaken an experimental program using non-professional motion pictures to interpret their educational objectives to the public.

Each picture to be produced will try to interpret for the lay audience and for teachers such generalizations as: a) that most of the lessons that children learn well result from repeated experiences; b) that while children are learning school 'lessons' they are also growing in other respects; c) that there are many different types of experiences that are appropriate for specific boys and girls in order for them to achieve the same type of growth.

The first two films produced by the committee, "The Teacher as Observer and Guide", and "Combined Art and Home Economics" are available for rental from the Bureau of Publications, Teachers College, Columbia University.

TEACHER TRAINING

- **A University's Audio-Visual Extension Service**—Thurman J. White, Univ. of Oklahoma—*Film and Radio Guide*, 13:5, December, 1946.

Describes a project, sponsored by the Oklahoma Education Association, to supplement the distribution and in-service guidance given by the Audio-Visual Aids Department of the University. Experienced teachers, with the aid of resource persons and workshops, will prepare lists of aids which they regard as most suitable for use in various subject matter areas. These will be grouped and published according to grade levels. The handbook, to be distributed to all schools, will be turned over to the State Department of Education with the request that it be kept up to date.

There follows a description of the kind of consultant service that is now offered by the University to individual schools which are seriously interested in improving their use of audio-visual aids. The teacher-guidance services of the University of Oklahoma are practical and sound and should be noted by all who are concerned with teacher education.

TECHNIQUES OF UTILIZATION

- **Did Movies Win the War?**—William W. Wattenberg, Chicago Teachers College—*Progressive Education*, 24:176 March, 1947.

Altho films did serve as valuable aids in developing insight and understanding, there were certain limitations that should be recognized:

1. To secure significant learnings, a film should be an integral part of a well-planned series of functional activities involving active participation by the learners.
2. Administrators must provide flexible machinery for making equipment, films and space available for showings when they are most appropriate.
3. Examine a moving picture to make sure that the psychology of learning upon which it is based is in accord with that upon which your instructional procedures are founded.
4. In a rapidly changing field, an obsolete film may do more harm than good.
5. Beware of encyclopedic films that include in one or two reels the content of units which usually require weeks or months of full understanding.

6. Beware of films produced under the auspices of an interested party. Teachers should inquire carefully into any motion picture developed directly or indirectly by anyone who stands to benefit by the spread of particular ideas.

Wartime Wedding—

The Documentary and Fiction Film

(Concluded from page 312)

to speak dialogue. With the best will in the world on everybody's part, a non-actor speaking lines usually creaks a bit. There are, of course, shining examples to the contrary, and routine words such as "Contact," "Left, left . . . steady . . . bombs gone," and the like can be perfectly satisfactory. But to ask more than that is to ask an amateur to do something for which professionals train and study during their whole working lives.—The result of using amateur voices, generally speaking, is bad. Sometimes it is unspeakably bad; sometimes there is but the vaguest suspicion that something is not quite right.

That was the problem. The immediate tendency was for documentary directors to use a professional actor now and again—not at all for his or her star-value, but simply because he did the job best. But not all professional actors did the job best. Stagey dialogue and action are as bad (in documentary) as creaky dialogue and action. The professional actor with a tradition of stage and feature work only is not the final answer.

So the two pre-war worlds of feature and documentary have, during the War, made contact. *The Raiders* is perhaps the perfect example of the feature-like documentary. It is of feature length; it is made in Technicolor, that spoilt darling of the studios; it uses no commentary. But it was made by a documentary unit under documentary conditions. No professional actor played in it. Synchronized sound, Technicolor camera, cast and technicians went to sea in the real Atlantic, not in a tank or before a back projection screen. Is it feature? Is it documentary? Or is it, like *Journey Together*, some new fusion of both schools?

The two films, *The Raiders* and *Journey Together* are an instructive comparison for, starting from opposite poles, they have arrived on common ground. In *Journey Together*, script, direction, photography, and recording were carried out by people with a feature, not a documentary, training and background. Almost every part was played by a professional actor. In production the technical resources of the studio were fully and admirably employed. Back projection, model shots, tanks and so forth were used freely and fully. The editing was by a feature editor.

What is the common element in these two films which sprang from such different beginnings? It is, perhaps, that in both these films and in the many others like them, real-seeming circumstances surround a small group of real-seeming people whom we get to know individually and with whom we identify ourselves to a greater or less extent. They are symbols of many people to whom similar important events are happening.

Your Guide to Camera Buying

TIME and again, this department has been called on for guidance and recommendation in the purchase of motion picture cameras, projectors, and other accessories. Certain questions invariably turn up: "Shall we invest in eight or sixteen millimeter? Shall we be able to add other accessories to the camera, when the time comes, or shall we have to trade it in for a more advanced model? Can this camera accommodate an extra lens? How many speeds does it have? Do we have to stop a scene in the middle to rewind, or does one winding give enough footage to complete that scene? Is it cheaper in the long run to get a roll loading or magazine loading camera? How large is it? How much does it weigh? How much does it cost? Do you think we can get one immediately, or do we have a long waiting period between ordering and delivery?"

In view of the fact that teaching films and projectors have now been standardized to the 16mm size, any contemplated school-owned cameras should conform to that dimension. This does not mean that eight-millimeter filming is out for school use. On the contrary, many new 8mm cameras, combining some of the best features (and prices) of the 16mm field are being produced as fast as materials are becoming available. In fact, our records show that quite a number of excellent school-made films have been produced with 8mm equipment.

However, our personal experience has shown that for home or single classroom use, 8mm pictures are highly satisfactory, but that the demands of a school auditorium for more details, less grain, sharper, crisper, and larger images can be met only by the larger-sized film. Another reason why 16mm is preferable for school use is that it gives the individual teacher an opportunity to cut up some commercially prepared 'teaching' film, and by adding some of his own shots and titles, he can really create a new classroom film to fit the particular needs of his students. A well prepared 16mm school-made film, shot at 24 frames per second, though more expensive, has possibilities of acquiring a regular sound track. Sound for 8mm would have to be recorded by one of the newer magnetic processes (Feb. p. 119) or at least on separate

equipment in order for voice or music to be played back.

As to the merits of magazine vs. roll film loading, the number of feet of film to be used annually should be a determining factor. 2000 feet of color film may amount to \$15 more if magazines are used. Inertia to threading will have to be overcome, since every film maker will eventually have to thread the projector.

We have put many of the questions asked by our readers directly to the manufacturers and have received varying replies as to the availability and costs.

8 mm

Revere "88" Cine Camera

Speeds 8, 12, 16, 24, 32

Universal Focus F 2.5 coated lens

Price listed at \$77.50

Revere "99" Turret Camera

Speeds 8, 12, 16, 24, 32

Rotating turret head to hold 3 lenses

Extra telephoto view finder

Price: with F 2.8, 13mm Bausch and Lomb,
Universal Focus, Animar Coated lens
\$110.

with F 1.9 Focusing mount 13mm (1/2
inch) lens \$137.50

8 mm

Filmo Tri-Lens 8 (Bell & Howell Co.)

Three-lens turret model
 Weight—2 lbs. 5 oz.
 Rest of information same as that of Filmo Sportster
 List price without tax: \$132.55

8 mm

Cine-Kodak Eight—25 (Eastman Kodak)

Weight 2 lbs. (approx.)
 Roll loading
 Speeds—16 frames per sec.
 About 6 feet per complete winding
 Fixed focus Kodak Anastigmat F 2.7 luminized lens
 Lens mount: fixed
 List price without tax: \$50.00

8 mm

Filmo Sportster (Bell & Howell Co.)

Weight 1 lb. 8 oz.
 Roll loading
 1/2 inch F 2.5 Universal Focus lens
 Speeds—16, 24, 32 and 64 frames per second
 5 feet per complete winding
 Lens mount: interchangeable
 List price without tax: \$87.95

8 and 16 mm

Cine-Kodak Magazine 8

Weight under 2 1/2 lbs.
 Magazine loading
 Speeds 16, 24, 32, 64 or 8, 16, 24, 32 f.p.s.
 12 feet per complete winding
 Focusing Kodak Anastigmat F 1.9 luminized lens
 Lens mount: interchangeable
 Footage indicator
 List price without tax: \$125.00

Cine-Kodak Magazine 16 (Eastman Kodak)

Weight 2 lbs. 10 oz.
 Magazine loading
 Speeds 16, 32, 64 or 8, 16, 24 f.p.s.
 11 feet per complete winding
 Kodak Anastigmat F 1.9 luminized lens
 Focusing lens
 Interchangeable lens mount
 List price without tax \$150.00

8 mm

Keystone Model K-6

Shutter speeds 12, 16 and 48 f.p.s.
 F 2.5 or F 1.9 lens
 Lens mount: interchangeable
 Roll loading, but no sprockets to thread
 Visual and audible footage indicator
 Price listed at \$70 with F 2.5 lens

Keystone 16 mm. Camera

Size 9" long x 4" wide x 2 3/4" thick
 Roll film loading
 Wollensak interchangeable lens F 2.7 or F 1.5
 Variable speeds from 10 to 64 f.p.s.
 Audible footage indicator

16 mm

DeVry Movie Camera—16mm

Roll loading
 Speeds 16, 24, and 64 f.p.s.
 Coated F 2.5 or F 1.5 lens
 20 feet per complete winding
 Price: \$110.00 for F 2.5 camera; \$142.00 for F 1.5 camera

Bolex H-16

Bolex H-16 has many of the devices found in the Eastman Kodak Special and the Bell & Howell Filmo 70-DA. Features include still picture mechanism (time or instantaneous), rewinding of film for fades, dissolves, superimpositions, automatic threading, parallax correcting viewfinders; critical visual focusing through the lens on ground glass; three-lens turret. Price listed at \$265, no lens but including Federal tax.

16 mm

Filmo Auto Load (Bell & Howell)

Weight—2 lbs. 7½ oz.
 Magazine loading
 Speeds—16, 24, 32, 48, 64 f.p.s.
 12½ feet per complete winding
 F 2.5 Universal Focus lens
 Lens mount: interchangeable
 Single frame exposure for animations
 List price without tax: \$160.

16 mm

Filmo Auto Master (Bell & Howell)

Weight 2 lbs. 10 oz.
 Three lens turret model; F 1.9 Focusing mount lens (basic)
 Rest of information same as that of Filmo Auto Load
 List price without tax: \$285.

16 mm

Cine-Kodak Special (Eastman Kodak)

Weight 9½ lbs.
 Roll loading, 100 or 200 foot film chambers
 Speeds variable from 8 to 64 f.p.s.
 25 feet per complete winding
 Kodak Focusing Anastigmat F 1.9 luminized lens
 Double lens turret for interchangeable accessory lenses
 Equipped for multiple exposure, single frame exposure, dissolves, fades, and mask shots
 List Price without tax includes one 100 foot film chamber—\$525.00

16 mm

Victor Animatograph—16mm

Roll loading up to 100 feet
 Speeds: 8, 16, 25, 32, 64, 80 f.p.s.
 22 feet per complete winding, automatically stopping camera before motors slows.
 Stop-gear prevents over-winding
 Full-vision focusing finder, parallax correcting, 4 field areas for 4 lens.
 Hand cranking for tricks and continuous filming
 Turret head for three lenses.

List price: Model 3 (less lens, carrying case, turret head, and special finder) \$99; Model 4 (less lens and carrying case) \$140; Model 5 (with reverse winding), less lens and carrying case \$165.

Note: Not all lenses are interchangeable from cameras of one manufacturer to those of another. State camera for which lens is intended. A separate survey will be devoted to lenses for motion picture cameras. The above list appears merely as typical.

Prices quoted are subject to change and represent only the best approximation possible at the time this study was prepared.

16 mm

Filmo 70-DA (Bell & Howell)—16mm

Weight 5 lbs. 10 oz.
 Roll loading—100 ft. maximum in regular model
 Speeds 8, 12, 16, 24, 32, 48, 64 f.p.s.
 23 feet per complete winding
 F 1.9 focusing mount lens (1-inch basic lens)
 Turret head to accommodate three lenses.
 Direct focusing through the lens, lock for continuous filming.
 (Special attachments including large magazine and electric motors may be added.)
 List price without tax: 70-DA, \$295; 70-D \$265.

16 mm

Maurer 16mm Professional

Weight: camera with magazines, motor, finder, sun shade 28 lbs.

Loading: gear-driven magazines of 200, 400, and 1,200 foot capacities

Turret head for lenses

Interchangeable motors

Automatic and manual fades, adjustable shutter, direct focusing through lens covering entire frame

View finder automatically compensating for parallax

Universal Cinemaster—8 mm

F 2.5 lens, price listed at \$66.65

Bolex L-8 and H-8

Lenses: from F 2.8 to F 1.5

Prices: from about \$152.00 to \$443.00;

H-8 less lens but including tax: \$265.

See Bolex H-16 for description applicable to H-8.

16 mm

Mitchell 16mm Professional

Weight:

camerahead only with 4 lens17 lbs.

tripod and friction head22½ lbs.

magazine, 400 ft. 3½ lbs.

motor 5¾ lbs.

approx. total48½ lbs.

Loading: Removeble magazine, 400 ft. capacity, light tight for changing

Turret head for four lens. Available lenses: 15, 17.5, 20, 25, 30, 35, 40, 50, and 75 mm.

Hand crank geared for 24 f.p.s. at 120 turns per minute

Motors: high speed, variable speed (wild), synchronous, or interlocking

Counters: footage and frame counter, the latter enabling operator to return to the same frame for trick work

Spirit level, matte box, and sunshade

View finder focuses as it is adjusted for parallax

Adjustable shutter and hand dissolve

Direct focusing through the lens, covering entire frame

Audio-Visual Workshop for Administrators

(Concluded from page 309)

All of the administrators and coordinators were asked to submit evaluation blanks. There was nearly unanimous agreement that this type of workshop is of great value, and nearly all those responding requested that follow-up workshops be held for teachers and that this first program be one of a yearly series for administrators.

Experience with this one program indicated that (1) principals and administrators are interested enough to give a full day to such a workshop, (2) sectional groups should be kept small enough to allow for free discussion, (3) participation and an opportunity to work with machines, slides, and audio-visual materials in general are crucial to the success of this kind of program.

This one workshop program has already shown

some results in wider and more effective use of instructional tools. It would, of course, be wrong to assume that the whole job can be done with one such meeting. In some cases, more harm than good may result. Poorly directed enthusiasm may result in some side-shows and "window dressing." Such efforts can, however, be channelled and directed by a follow-up of the supervisors. A series of three or four such workshops should help to establish better educational procedures in this area.

In planning for the next program at Stockton, an effort is being made to utilize teacher committees more extensively in order to relieve the director of audio-visual aids of some of the responsibility. This will also make it possible to do a better job with the classroom environment. This will nearly insure that the sectional meetings will bear more directly on the teaching situation.

Inspiring Instruction

...IN A SUBJECT THAT CAN'T BE TAUGHT!

OUR FLAG... an inspiring and moving story of our Country's flag and its meaning. The customs and traditions surrounding the flag are explained in a direct, meaningful manner that will motivate a never-to-be-forgotten respect for our national emblem. Elementary and Secondary Schools...Black and White...Color...Sound...11 minutes. Also available in film strips.

STORY OF A CITY: NEW YORK... a comprehensive educational study of our largest city. Presented factually, rather than in travelogue form, the film is designed to integrate with courses in history, geography, civics, economics and sociology. Elementary, Secondary, High School and College...Black and White...Color...Sound...20 minutes...complete with Study Guide.

Simmel- 

PRODUCERS
DISTRIBUTORS

Meservey

BEVERLY HILLS, CALIFORNIA

CITIZENSHIP is more than the subject heading of a course in good government.

It is a way of life...an inherent part of our make-up. It stems from the sincere belief that ours is the finest, the most productive country in the world. It is reflected in the immense feeling of pride we experience at the sight of our flag.

These are not lessons to be learned by rote. They must be inspired, for to learn them well one must feel them. They must be *voluntarily* impressed on the minds of our citizens of tomorrow.

These two Simmel-Meservey releases have been produced with just that philosophy in mind. They are designed to transcend the limitations of existing educational films on this subject.

They will aid in motivating that type of thinking which has made this the greatest nation on earth.

Order them for preview today.

SIMMEL-MESERVEY BIC SIX

The following six educational films were most in demand during the month of November. If you do not have them—order them for preview today.

LET'S GIVE A TEA... a comprehensive treatment of accepted procedures of dress, invitations, guest lists, etc., and proper conduct at tea-time.

YOSEMITE—END OF THE RAINBOW... one of the most outstanding pictorial tours of Yosemite National Park ever filmed.

PALOMINO—THE GOLDEN HORSE... depicts the fundamentals of horsemanship, history of the horse.

THE INCAS OF PERU... explanation of archeological importance of Incan lore; pictorial study of the great Inca empire.

SKI THRILLS... depicts the exhilarating movement, charm and rhythm of this popular and healthful sport, amidst the inspiring High Sierras.

DEATH VALLEY NATIONAL MONUMENT... an educational tour through the scientific wonders of this ancient natural phenomenon

"Significant Developments and Trends in the Use of Audio-Visual Materials" was covered by a panel of experts. Left to right: Floyd E. Brooker (U. S. Office of Education), Edgar Dale (Ohio State), L. C. Larson (Indiana University and Editor of "Teacher-Committee Evaluation of New Films," EDUCATIONAL SCREEN), Miss Mildred Batchelder, Chairman (American Library Association), Paul C. Reed, (Rochester, N. Y., Public Schools and Acting Editor, EDUCATIONAL SCREEN), I. Keith Tyler (Ohio State), Melvin Brodshaug (Encyclopaedia Britannica), Roger Albright (Motion Picture Association).

EFLA Annual Conference

MAY first, second, and third were auspicious audio-visual dates in Columbus, Ohio, as the Educational Film Library Association convened for its fourth annual conference, concurrently with the Institute for Education by Radio. The sessions drew an attendance of over 200 audio-visual educators, dealers, and manufacturer's representatives to participate in a variety of discussion panels.

At a Board Meeting held during the conference new officers were elected. These included:

President—J. R. Bingham, Association Films; Vice President—Paul Reed, Rochester, New York; Secretary—L. C. Larson, Indiana University.

Other Board members are: I. C. Boerlin, Pennsylvania State College; Miss Elizabeth Golterman, St.

TOP LEFT: "Inter-group Education" was discussed by a panel composed of Lawrence Jordan (West Virginia State), Patricia Blair (Rochester Public Schools), Edgar Dale, Chairman (Ohio State), Emily Tinsley (Columbus Council for Democracy), and Roy Wenger (Westchester Teachers College, Pa.). BOTTOM LEFT: The panel on "Religious Films" consisted of I. C. Boerlin (Pa. State), J. R. Bingham (Assoc. Films), William S. Hockman, Chairman (Editor, "Church Department" of EDUCATIONAL SCREEN),

William L. Rogers (Religious Film Association), Rev. E. H. Meuser (Board of American Missions). BOTTOM RIGHT: The panel on "International Understanding" was composed of Esther Berg (New York City Schools), William T. Blackwell (International Film Foundation), G. L. Carnes (UNESCO), Floyd Brooker, Chairman (U. S. Dept. of Education), Thomas Baird (British Information Services), Herbert Edwards (Dept. of State), Wesley Greene (International Film Bureau).

New York

Louis Public Schools; Russell Munn, Akron Public Library; Francis Noel, Cal. State Department of Education; John S. Richards, Seattle Public Library; Walter A. Wittich, University of Wisconsin.

Much of the conference was devoted to panel discussions. At these sessions a group of people with particular knowledge and experience in the field under discussion acted as members of the panel. Each spoke briefly on the subject and it was talked over among the panel, with questions from the audience. Among the subjects treated were: Organizing and administering state and local programs of audio-visual materials; Community-wide use of Audio-Visual Materials; General Administration and Finances; Evaluation, Selection and Circulation, Utilization; and Production of Audio, Art and Photographic Resources. Another group dealt with the use of films in religion, film forums, citizenship, international understanding and inter-group education.

Great concern was expressed about improving the whole audio-visual field. More equipment, better films, more adequately trained teachers are all vital needs. One general session was devoted to the problems and prospects of training teachers and adult leaders in the utilization of audio-visual materials.

A session on Contributions of Federal Agencies to School and Community Programs of Audio-Visual Materials gave those present an opportunity to find out the present status of films in the programs of the Department of State, Office of Education, Department of Agriculture and Library of Congress.

Mr. Julien Bryan of the International Film Foundation spoke of the work of the Foundation and of the difficulties faced by an independent producer, and also related the story of his recent European trip and of the months he spent in Russia. The films screened included *Artisans of Florence*, material on Russia, and *Boundary Lines*, an animated color film on the tensions which build up hostility among groups and races.

The speaker at the luncheon meeting was Mr. Charles F. Hoban, Jr. of the Philadelphia Public Schools. His subject was the same as the title of his recent book—"Movies that Teach." He outlined the situation at the present time, with more pupils and fewer teachers than ever before, and the part that films can play in the improvement of general education.

Two sessions were devoted entirely to EFLA business. At one reports were made of the status of continuing projects, such as the Evaluations, Bulletins, Service Supplements and general publications. Announcement was made of two new publications—a booklet on *Films for International Understanding* and a Health Films Catalog. Both should be ready in June or July.

At the Business Meeting the Executive Secretary gave the Financial Report and a report on membership. Since the last Business Meeting in April, 1946, the number of Constituent, International and Service members has increased 58%, but with the cooperation of the present members, an even greater increase is expected for next year. Mr. Bingham, the new President of EFLA, took office to serve for the coming year.

BLOWER COOLED

... AND LIGHT WEIGHT, TOO

TRIPLE-PURPOSE
FILMATIC

Slide and Film Strip
PROJECTOR

3 way use

- For Single Frame Slidefilm
- For Double Frame Slidefilm
- For 2x2 (35mm) Kodochrome or Black and White Slides

- Motor-Driven Forced Air Cooled
- Easily Adjustable for Either Horizontal or Vertical Pictures
- No Rewinding Necessary
- Instant Framing
- Anastigmat Projection Lens
- Manumatic Slide Carrier
- Professional Efficiency
- Smooth, Sharp Focusing
- Rugged—Stable—Portable

The GoldE Filmatic enables you to make the most effective use of all three types of still projection material. Can be changed from film to slide showing in a jiffy! Permits use of 300 as well as 200 or 100 watt lamp for more brilliant projection . . . yet safeguards precious slides or film against heat damage. Cooler handling. Complete with carrying case.

U.S.A. Sends Film Entries to Brussels World Film Festival

The Committee on American entries to the Brussels World Film Festival, June 1 to 20, appointed by William F. Kruse, President of the Allied Non-Theatrical Film Association, included Dr. Grace Fisher Ramsey, Rita Hochheimer, Iris Barry, Bosley Crowther, Horace O. Jones, and William K. Hedwig.

Non-theatrical films forwarded by the committee included the following: *The Robin*, (Heidencamp Nature Pictures), *Springboard Techniques* (Coronet Instructional Films), *The Monarch Butterfly* (Simmel-Meservey), *Kodachrome Cinematography of Bronchial Tumors* (Dr. Paul H. Holinger), *Bathing the Baby* (Johnson and Johnson Co.), *Story of Menstruation* (International Cellucotton Products Co.), *Junior Citizen* (Alvin J. Gordon), *Eggs, Petroleum, Tuberculosis, Immigration, Atomic Energy, and Using the Classroom Film* (Encyclopaedia Britannica Films).

In addition to these, the following government films were submitted: *Journey into Medicine* (State Department), *Men Who Grow Cotton* (Department of Agriculture), *Operation Crossroads* (Navy), *To Hear gain* (War), *Floating Drydocks* (Navy), *Technical Principles of Radar* (War), *Fundamentals of Small Arms, Cycle of Operations* (War), *Hay Is What You Make It* (Agriculture), *Milk Processing* (U. S. Public Health Service), *The Crop That Never Fails* (Treasury).

International Exhibition of Motion Picture Technique Venice, Aug. 14 to Sept. 10

American, British, Russian, and French film industries are planning to be represented at the International Exhibition of motion picture technique to be held in Venice from August 14 to September 10. A whole section will be devoted to such non-theatrical films as the educational, scientific, newsreel, and cartoon.

In general, the Exhibition will enable the public to become acquainted with the technical mysteries regarding the preparation of a film, the instruments, the apparatus and the methods of film making. Scholars, technicians, industrialists, businessmen, and all interested parties will find a complete review of the film industry and its history grouped together in one exhibition.

Section I will cover the making of the motion picture from the manufacture of the raw film through to the editing and synchronization of sound. Section II will treat the distribution and the showing of films. Section III will demonstrate color methods. Section IV to sub-standard films; Section VI, to invention and research; Section VII to television. Section VIII will be dedicated to photography; Section IX, to historical apparatus dating from pre-Lumiere days to the present.

Iowa Extension Division Given College Status

Emphasizing the importance of the university's relationship to the community it serves, the University of Iowa has given its Extension Division the same status as the university's colleges.

President Virgil M. Hancher has appointed as dean Bruce E. Mahan, present director of the Extension Division.

Mahan has directed the Extension Division since 1929 and has served as director of the alumni service and also as the executive secretary of the University of Iowa Alumni Association since 1935.

Mahan joined the University faculty as history lecturer and associate editor of the state historical society in 1923. He served in those positions until he became Extension Division director. He was president of the National University Extension Association from 1938 until 1939.

Wisconsin Visual Institute

The fifth annual Audio-Visual Education Institute will be held July 14-17 during the 1947 summer session at the University of Wisconsin, Madison. Matters which will receive general attention include: (1) the materials of audio-visual instruction, (2) international understanding through audio-visual materials, (3) the audio-visual program, including budget, administration and supervision, and school building plans.

Joint Film Program Planned By U. N. Film Board

A broad program of joint film and other visual activities, including the production of films, was approved by the United Nations Film Board at its second quarterly meeting held at Lake Success.

Mr. Benoit-Levy, Director of the Executive Office of the Board, who is also Director of the United Films and Visual Information Division of the Department of Public Information, reported that plans for the production of a list of 14 films were well advanced. These films will be distributed among the member nations for production.

Plans were also agreed upon for joint action, with the assistance of member nations, in the collection and international dissemination of information about films in the fields of international understanding, health, agriculture, industrial welfare, fundamental education and others.

In his report on the organization of an Executive Office to serve the members of the Film Board, Mr. Benoit-Levy disclosed that both the United Nations Department of Public Information and UNESCO were making available to the Board their entire film and visual information staffs. The New York headquarters of this Executive Office is located at Lake Success. The Paris office is located at the UNESCO headquarters under Mr. William Farr, chief of UNESCO's Film Section.

Recommendations to Illinois State Department of Education

The St. Clair County Audio-Visual Education Workshop (Bellville) submitted certain recommendations to the State Department, hoping to improve and expand the wise use of audio-visual aids in the State.

1. That a state appropriation of 50c per pupil per annum, based on average daily attendance, be designated as audio-visual aids money to be used for films, slides, projectors, recordings, or rentals of the same, providing the local taxing district matches the above amount through local revenues to be spent for the same purpose.

2. That teachers be given credit for operating, directing, or supervising audio-visual education programs in their school buildings equal to the teaching schedule, i.e., small systems of 20 to 50 teacher schools one hour per day, 50 to

100 teacher schools two hours per day. In cities of 10,000 to 50,000 population, the director of visual education be given from one-fourth to one-half time for directing and supervising such a city-wide program and that in cities of 50,000 or more population a full-time director of visual aids be employed.

3. That these directors of audio-visual education shall be especially trained, qualified people with a legal teaching or supervising certificate.

4. That by 1950 all prospective teachers in the state be required to have at least a two-hour course in Audio-Visual Education, in order to qualify for a teaching certificate. (Note: California now has such a law.)

5. That such a program as outlined above should be supported by the State because:

a. Audio-visual aids were found to be efficient means of teaching in the education of members of the armed services.

b. Audio-visual aids accelerate the school program, enabling educators to meet the needs of pupils more efficiently.

c. Audio-visual aids enrich the school program enabling teachers to provide for the individual differences in learning ability that exists within any group of children or pupils.

d. We should be especially concerned now about what is being done in the name of audio-visual education because, if the program is not properly planned, operated, and supervised, it can degenerate from an efficient teaching method to mere entertainment and fall into disrepute.

Previews for Texas A & M Faculty

Previews of available films for faculty members of Texas A & M were arranged by George B. Wilcox, head of the Department of Educational Psychology. One of the local film dealers cooperated in this undertaking and presented films in seven fields: business administration, engineering, fine arts, education and teacher training, military science, athletics, and health, and agriculture.

Simplified Controls For Student Operation *Distinguish* **The DP 300**

The DP 300 will make your visual education program a simple school day routine, because *anyone* can operate it. Sensational refinements in design by precision craftsmen have eliminated mechanisms which have heretofore complicated the use of a slide and slidefilm projector. It is the easiest of all units to operate, for only the DP 300 has Simplified Controls. See your Visual Education dealer or write for descriptive circular 112.

- Focus-Finder automatically centers slides.
- Micro-Focus knob focuses with micrometer exactness.
- Gear-driven wheel tilts unit up and down.
- Control knob reverses slidefilm safely.

"PROJECTORS WITH SIMPLIFIED CONTROLS"

Observations on the Audio-Visual Movement in Canada

(Concluded from page 316)

entitled, "Problems in Visual Education in Elementary Rural Schools" will be offered in Victoria with Mr. J. R. Pollock, Director of Visual Aids, Provincial Department of Education in Victoria in charge. The second course entitled, "Visual Aids Workshop," will be offered in Vancouver with Mr. Gordon Kilpatrick, Director of Visual Education of the Vancouver School Board in charge. The Provincial University and the public schools of Vancouver are both operating audio-visual aid libraries. The Provincial Department under the direction of Mr. Pollock has developed a start of such a library to serve all areas in the province.

The Maritime Provinces

Although I did not cover the Maritime Provinces on this trip, a report from Nova Scotia indicates there has been an increase of 1695 films in circulation throughout the Province during the current school year.

As indicated in my report made last spring covering a tour of the Maritime Provinces of Canada, I believe that Canadian educational leaders have definitely launched upon an expansion program in the use of films, radio, and other audio-visual materials.

Canadian Audio-Visual Needs

First: University and Normal School courses de-

signed to train teachers in the proper utilization of such materials.

Second: Well coordinated in-service training program to provide teachers on the job with the latest information on techniques of utilization, evaluation, selection, and care of equipment and sources of materials.

Third: The lack of electric power in many of the small communities prevents the use of projectors of various types.

Fourth: There is great need for many more audio-visual libraries, because of the great distances between centres of population.

Fifth: More professional literature must be made available to the classroom teacher. Audio-visual publications provided in the States are not receiving wide enough circulation.

Sixth: There must be produced more materials which are correlated with the curriculum offered by the Canadian schools.

Seventh: Materials with French commentary are quite essential for the many schools in which this language predominates.

The Film and International Understanding

(Concluded from page 313)

OIC also is making extensive use of short-wave radio for broadcasting to foreign countries. An average of about sixty program-hours daily, in twenty-five languages, is being sent out over this medium. Musical and other programs also are transcribed on records for loan by United States diplomatic missions abroad to foreign radio stations. Reports indicate extensive use of these transcriptions abroad.

A Local International Film Project

By BRUCE UNDERWOOD

More neighborliness toward Latin American countries because of increased appreciation of their scenic and cultural wonders is an outstanding result of a series of Latin America travel films and entertainments presented recently in the Houston Museum of Fine Arts. Originated by the international relations committee of the Houston Junior Chamber of Commerce,

Programs at the Houston Museum included native songs and dances.

the series was sponsored jointly by that organization and the Art Museum Guild, and culminated in a special Pan American Day observance in Houston, Texas, April 14.

The Pan American Day observance included the showing of travel films at various civic clubs and at the University of Houston, feting of Latin American exchange scholars at the University, entertainments for school children and presentation of a radio discussion by several consuls from Latin American countries.

"The programs," explained Peter Whitney and T. L. Cummins, committee co-chairmen, "represented only one phase of planned activities of our committee, and should help give a better perspective of factors leading to current world events."

Plan Developed Locally

The series of entertainments, the first four of which entertained almost 2,000 persons, was the outgrowth of a tentative plan to show films on Latin America. The international relations committee co-chairmen; Roy Reagan, head of the committee's visual education subsection and Henry Escamilla, committee secretary, were credited with developing the idea.

Last November, Junior Chamber members presented an outline of plans to Art Museum officials who gladly offered their cooperation in organizing and directing the project. The Mesdames Paul Wagenseller, president; H. E. Rickard, vice president; S. S. McClendon, Jr., public relations chairman; James Chillman, music director, and T. Harold Coley volunteered for service.

After Junior Chamber members located suitable films by writing to various educational and film agencies, Mr. Reagan arranged through Visual Education Inc. for providing projection and record playing equipment, while the Art Museum Guild under direction of the Mesdames McClendon, Coley, and Richardson mailed notices, communicated with interested groups and planned additional entertainment.

Racial Situation Helped

A number of Houston citizens of Latin extraction were drawn more closely into local social groups than ever before when their services were obtained for entertainment numbers on the programs.

The publicity chairman of the international relations committee worked with Bill Adams, public relations chairman, and Herman Smith, director of the Houston Junior Chamber of Commerce to secure cooperation of local newspapers and radio stations to publicize the series.

Houston residents illustrated their interest when more than 500 attended the first of the series of programs. After all seats and standing room were filled, many were turned away from the museum.

A typical program included the singing of Latin American folk tunes by radio entertainers dressed in native costumes, a talk by Senor Alberto Barreto, consul from Peru and showing of films on South America. Houston's Gonzales sisters, Misses Eloisa and Olivia, radio performers who recently completed a tour to Hollywood sang, while Miss Gloria Reyes played the piano accompaniment.

Programs Varied

Another program featured color films on Central America and Mexico, dancing of the "Jarabe Tapatío," Mexican Hat Dance, by Miss Patricia Saule, music by the Houston Mariachi Band, and a talk by Mrs. S. W. Heald, vice consul for Panama.

Speakers for other programs in the series included Harry de Ybarrando, director of foreign trade for the Houston Chamber of Commerce and Senor Hector Martinez, Mexican vice consul.

"Besides creating more international understanding and helping local interracial cooperation, the programs have increased the prestige of the local Junior Chamber by attracting attention of other organizations to this series of programs," local members explained.

AUDIO - VISUAL TRADE REVIEW

People

EBF Adds Rohyans And Dragstrem

Dan J. Rohyans has been appointed director of adult and home education for Encyclopaedia Britannica Films, it has been announced by H. R. Lissack, vice-president in charge of sales. Rohyans, a veteran of two years in the U. S. Navy in the Pacific, will direct E. B. Films' expanded program of adult educational pictures, first of which will be released shortly. These will include films for use in the home, by adult discussion groups and in industry education programs.

D. R. Dragstrem of Somerset, Indiana, has been named district manager of Encyclopaedia Britannica Films for the state of Indiana, it was announced by H. R. Lissack, vice-president in charge of sales.

Dragstrem will serve as an educational representative of E. B. Films, working with Indiana school administrators and educators to help them organize and augment audio-visual educational programs.

NAVED Convention in Chicago, August 3-6

More than 1200 persons are expected to attend the 1947 Convention and Trade Show of the National Association of Visual Education Dealers, which will take place at the Sherman Hotel, Chicago, August 3, 4, 5 and 6, 1947. Detailed plans for the convention were announced recently by NAVED President Bernard A. Cousino, who stated that new and interesting features will be added to make this year's meeting more valuable than the Association's highly successful 1946 convention.

Headline speakers who have agreed to appear on the 1947 program include Dr. Robert M. Hutchins, Chancellor of the University of Chicago and long-time advocate of audio-visual education; and Arthur H. "Red" Motley, Editor of PARADE Magazine, who is one of the country's outstanding speakers on sales topics.

The program will center around a series of "open forum" discussions in which those attending will have ample opportunities to take part. These dis-

cussions, which have proven most valuable in NAVED's previous conventions and regional meetings, will be broadened and given additional emphasis at this year's meeting. One new feature of the 1947 meeting will be an "Educator-Dealer Panel" in which prominent educators will discuss present educator-dealer relationships with a view to better service to the customer.

One of the most important features of the meeting will be the Trade Show, which will include 89 exhibits of audio-visual equipment, films, materials, and supplies. This year's Trade Show runs 4 days, is open an average of 7¼ hours per day. Initial announcements of the Trade Show have been mailed to manufacturers, film producers and distributors. Further information, hotel reservation and registration blanks, and advance programs may be obtained from NAVED, 431 S. Dearborn St., Chicago 5, Illinois.

David E. Strom Consultant For McGraw Hill

The appointment of David E. Strom as educational consultant to be available for advisory service to users of McGraw-Hill Text-Films has been announced. Mr. Strom for the past 6 years has been director of the Audio-Visual Aids Center at the University of Connecticut and before that was director of the Visual Aids Department of the Minneapolis Public Schools. The first Text-Films are scheduled to be ready for distribution about July 1st.

In announcing the appointment, Albert J. Rosenberg, Manager of the Book Company's Text-Film Department, pointed out that Mr. Strom is well qualified to work with educators in making most effective use of the combination of text-

ROBERT E. SCHREIBER, Editor
Audio-Visual Center
The University of Chicago

book, motion picture, and filmstrip which McGraw-Hill is producing as a "packaged unit" in selected college and high school subjects.

Text-books included in the initial phase of the McGraw-Hill program are Schorling's *Student Teaching*, for normal schools, teachers colleges and "in service" teacher training programs; French's *Engineering Drawing*, for colleges and technical institutes; French and Svensen's *Mechanical Drawing* for high schools; and Diehl's *Textbook of Healthful Living*, for college hygiene courses. Each of these books is supplemented by a series of Text-Films, consisting of six or seven 16-millimeter sound motion pictures and a like number of coordinated silent filmstrips. All three units—textbook, motion pictures and film-strips—use the same terminology and the same basic approach to the subject.

ANFA Re-Elects Officers At Convention

The Allied Non-Theatrical Film Association, Inc., observed its Eighth Anniversary at a national convention held at the Hotel Vanderbilt, New York City, May 15, 16, 17. The three days featured special programs involving each of the seven sections of the organization.

Among the problems discussed were: the trend of major Hollywood film sources to enter the non-theatrical field; film distribution by public libraries; differentiation among various types of film dealers; the quality of motion picture prints.

Motley

Hutchins

Cousino

The same slate of officers was re-elected for the coming year. They are: President, William F. Kruse; Vice-Presidents, Stanley Atkinson and Sam Goldstein; Treasurer, George H. Cole; Secretary, Hal Baumstone; Executive Secretary, Wilfred Knighton. On the Board of Directors are Thomas Brandon, Kent Eastin, Edward H. Stevens, and E. E. Carter.

The following were named Section Chairmen: Edward H. Stevens, Film Libraries; Sam Goldstein, Distributors; Sol Jeffe, Laboratories; Horace Jones, Manufacturers; Clem Williams, Dealers; Fletcher Smith, Producers; George H. Cole, Projection Services.

The ANFA Trade Show was held May 16-18 at the 71st Regiment Armory in conjunction with the Photographic Carnival of 1947 sponsored by the Photographic Merchandising and Distributing Association, Inc., and U. S. Camera.

Wilton to Da-Lite

Oliver N. Wilton has been appointed General Sales Manager of the Da-Lite Screen Company, Chicago, according to an announcement by Chester C. Cooley, President. Mr. Wilton is widely-known in the photographic trade and brings a wealth of experience to his work. With Bell & Howell for many years as Assistant Vice President in charge of Domestic and Export Sales, he has visited most of the United States, Europe, Mexico and Cuba. During the war he acted as Liaison Engineer to the Army Air Force and Navy Bureau of Ordnance, and was instrumental in the design and production of numerous optical and photographic devices.

Oliver N. Wilton

Jordan Completing Book

William (Bill) E. Jordan, 16mm distribution specialist, is putting the finishing touches on his book, "Motion Picture Profits," which deals with basic 16mm industry practices and public exhibition outlets as an extension of existing 35mm markets, based on a fifteen year survey of the field. He will spend a considerable amount of time in Texas and the Southwest inspecting semi-permanent theatre installations using 16mm equipment and will arrive in Los Angeles sometime in the summer.

Photographers Association To Meet, August 25-29

The 55th Annual Convention of The Photographers' Association of America will take place from August 25 to 29, inclusive, at the Hotel Stevens, Chicago, Ill. With a membership today of 7,231 as compared with about 5,500 when last year's convention opened, this year's attendance should at least equal the 8,486 figure of 1946.

The most important thing right now is the matter of advance registration, which will save those who plan to come the grief of standing in line. Incidentally, advance registration fees will be refunded to all who find later that they cannot attend.

New Appointments to T F Staff

Mr. Louis N. Freedman, President of Teaching Films, Inc., has announced the appointment of Mr. Leonard Amster as Editor. Mr. Amster attended Harvard University and came to Teaching Films, Inc., from the publishing field, in which he had been active up until the outbreak of the war. His activities with Teaching Films, Inc., will be largely concerned with the development of instructional materials in the cultural fields of music, art, and literature.

Also announced is the appointment of Mr. George Pease as Regional Director of sales for the West Coast. He will be in charge of film sales and distribution in eight states.

Joseph M. Kirchheimer is Sales Director of the organization and will also be in direct charge of the sales staff of the Eastern Division. He will coordinate sales and advertising and promotion activities in the New York office, as well as maintain and service the distribution system. Prior to his association with Teaching Films, Inc., Mr. Kirchheimer was in charge of South American Sales for the Central National Corporation. The appointment of Mr. David J. Wolper as Assistant Sales Director has also been announced. Before entering the service, Mr. Wolper was engaged in the radio field.

United World Appointment

Matthew Fox, Chairman of the board of United World Films, Inc., has announced the appointment of Edward T. Dickinson, Jr., as Vice-President in charge of the development and distribution of educational films for United World, the 16mm subsidiary of Universal Pictures Company, Inc.

Mr. Dickinson took his A.B. at Yale in 1932. Prior to the war, he was Research Assistant to the Chairman of the Board of U. S. Steel. His duties included the supervision of research and scripts for the steel company's motion pictures. After the outbreak of the war he was granted leave to become Executive Director of the Planning Committee of the War Production Board coordinating industrial training efforts, followed by service in the United States Marine Corps overseas for two and a half years.

Underwood & Underwood

Edward T. Dickinson

Ad Award to Victor

An award for the best product-selling color ad in business and trade magazines was presented to the Victor Animatograph Corporation, Davenport, Iowa at the fifth annual awards luncheon held by the Chicago Federated Advertising club at the Continental Hotel in Chicago Thursday, May 8.

Nearly 500 attended the awards luncheon which was climaxed by awards to winners in 10 different classifications of advertising. Grand prize of the meeting went to Swift and Company of Chicago. There were 443 entries in the contest.

The award to Victor, a division of Curtiss-Wright Corporation, was presented to Robert DeLay, representative of the Victor advertising department. The winning ad, which appears in this issue of the *Screen*, was prepared by the L. W. Ramsey Advertising agency and was the original idea of Paul Norton, art director of the Ramsey firm.

Production Activity

Britannica Production to Chicago

Research and production offices of Encyclopaedia Britannica Films were officially opened in the former First National Bank Building of Wilmette (Illinois) late last month as the entire production and research staffs of the educational motion picture producer complete their move from New York City.

The move from New York was led by Dr. V. C. Arnspiger, executive vice-president of Encyclopaedia Britannica Films, who has been associated with the company since its founding in 1929. Others include Dr. Melvin Brodshaug, vice-president in charge

of research and James A. Brill, vice-president in charge of production.

The 12,000 square feet of floor space in the former bank building had been undergoing extensive remodeling and alteration since April 1 to make the building ready for offices and an experimental photographic studio and projection room.

Since its organization as Erpi films in 1929, Encyclopaedia Britannica Films has done its research and production work in or near New York City. The move to Wilmette will place all departments of the company's operations in close touch with its two parent organizations: the Encyclopaedia Britannica and the University of Chicago. Administrative and sales offices of the company will continue to be maintained in the Civic Opera Building, 20 North Wacker Drive, Chicago.

American Film Producers Abroad

A permanent professional motion picture unit now is established in Europe, and is ready to function in supplying coverage in 35mm and 16mm anywhere on the Continent and the Near East, according to Robert Gross, executive producer of American Film Producers.

The American Film Producers is clearing all requests for motion picture coverage in Europe and the Near East through their executive offices in the Empire State Building, New York City.

Religious Film Service Formed

Visual aids in churches and Sunday Schools step forward again through the organization on June first of Religious Film Service, 5121 West Devon Avenue, Chicago. The Rev. John W. Gable, Lutheran minister, resigned a pastorate of eight years at Richmond, Ill. to become its head.

Sixteen years of study and practical experience in producing religious films precedes the Rev. Mr. Gable's decision

Rev. John W. Gable

to direct the distribution and production of projected visual aids for Religious Film Service.

Religious Film Service will provide complete facilities to answer the needs of churches for help in utilization of visual aids. Among the services offered are a film rental library with many unique features, production on order of promotional and record motion pictures, assistance in securing all types of visio-audio materials and equipment, projection service for churches without equipment, lectures and demonstrations of correct methods of teaching with visual aids, and personal attention to problems of individual churches and organizations.

Equipment

Ampro in Great Britain

Ampro Corporation of Chicago announces that arrangements have been completed to manufacture their well known 16mm silent and sound motion picture projectors in Great Britain. A newly formed British distributing company, "SIMPLEX-AMPRO LTD." located at 167-169 Wardour Street, London, W.1, will direct the sale of Ampro projectors in Great Britain, Ireland, and the Continental Markets.

Film Preserver from Bolex

American Bolex Co., Inc., 521 Fifth Avenue, New York City, announce that they will handle exclusive distribution of AMBOLAC, a new film preserver. The new AMBOLAC is quickly and easily applied to the film without special equipment. A 2-ounce bottle will serve to cover approximately 5000 square inches of still film or about 1500 feet of 16mm movie film. It provides a thin film to protect the emulsion without impairing screen brilliance or color values. The protective coating safeguards the delicate emulsion against mechanical damage resulting from dirt piled up on the aperture plate, from rewinding scratches, fingermarks, curl, and brittleness. This film preserver is equally suitable for black-and-white, Ansco Color, or Kodachrome.

Weston Photographic Analyzer

The new Weston Photographic Analyzer, consisting of a densitometer, an illumination meter, and a calculator, has been announced by the Weston Electrical Instrument Corporation, Newark, N. J. The instrument has been designed and developed to enable professional and amateur photographers to make prints and enlargements, and especially to produce color photographs by any process through the aid of instrumentation.

By means of the Analyzer's critical measurements, the photographer can accurately appraise the value of negatives as to density and contrast range. The user can calculate, in terms of his own equipment and working conditions, the

Weston Analyzer

exact contrast ranges of printing papers, and match the correct grade of paper to any particular negative. It determines definitely the correct printing exposures, and controls many other processing operations designed to produce technically correct pictures in either black-and-white or color.

New GoldE Color-in-Motion Rotochrome Spotlight

A new modern 500 watt Color-in-Motion Spotlight is announced by the GoldE Manufacturing Company, Chicago. This GoldE "Rotochrome," which is the smallest spotlight of its kind, combines the attraction of light, color and motion in one compact, safe, simple unit with a continuous, even changing symphony of color-light.

Action is completely automatic. Color change is smooth, soft, pleasing. Internally mounted color wheel is fully enclosed. Prevents damage to glass color panels or other working parts . . . avoids damage to draperies or any surrounding objects.

GoldE Rotochrome Spotlight

The Rotochrome uses 500, 400, 300, 250 or 200 watt Medium Prefocus Base Lamp. Table type as illustrated is standard. Ceiling or wall mounting bracket also available. Dimensions: 10" long, 13" high, 8" wide. Net weight 10 lbs. Operates on 110 volts 60 cycle A. C. Other voltages and frequencies available.

Write for Bulletin 471 to GoldE Manufacturing Company, 1214 W. Madison St., Chicago 7, Illinois.

Distribution of Kolograph Projector Arranged

Don Oliver, well-known figure in the 16mm projector field, is handling national sales distribution at 188 West Randolph Street, Chicago 1, Illinois.

Unusual features of the new projector include provision for using a microphone simultaneously with sound on film because of the separate audio input channels built into the amplifier; the large T-20 bulb with a life of more than two and half times that of the smaller T-12 may be employed without fear of overheating; and conditions of low or exceptionally high line voltage do not affect the photo-cell because of the use of rectified rather than oscillatory current. Silent and sound speeds are available at the flick of a switch.

The unit is entirely portable, built into two cases of which one contains the projector and the other the loudspeaker. Both are finished in a fine grade of top leather, while the loudspeaker cabinet is lined with material for enhancing sound production. Complete literature and cables together with microphone and desk-stand are included.

The lens mount is hinged, making it easy to clean the aperture, and the framing lever moves the entire optical system thus avoiding the picture "jumping" off the screen when the film is reframed. Usual tilting mechanism is furnished.

New Paper Tape Recorder

The Brush Development Company has announced a new portable paper tape recorder, the model BK-403. In fundamental principles, it is similar to the home model BK-401, both models recording magnetically on a narrow paper tape which is coated with a magnetic material. The new recorder weighs 50 lbs. and has a two-speed capstan. Set to run at low speed, the normal roll of tape will record voice for one hour which is 50% longer than the high-speed recording which

Simplified control panel on the new NATCO projector. Sound controls are at lower left between the microphone and speaker jacks. Projection rewind control is to the right of the sound head.

must be used for music. The BK-403 is more ruggedly built than the non-portable model and includes 5 reels of tape in a built-in carrying compartment. The paper tape may be edited by means of a pair of scissors and Scotch tape. The recorded sound may be erased from the tape at any time, and the tape may then be used again. Add to Recordings

Ampro Trains Student Projectionists

An interesting experiment in training students to be expert motion picture projectionists was recently conducted by Ampro Corporation. When the Chicago Board of Education recently purchased a number of Ampro-sound 16 mm. projectors, Ampro invited student projectionists from the various schools receiving the units to their Chicago plant. An informal class was held in Ampro's projection room where Ampro representatives explained the easy procedure of threading and operation.

Students were then given the opportunity to show what they had learned by operating the projectors themselves. As testimony of their proficiency, Ampro gave each student a card stating that the bearer was an "Authorized Ampro-sound Operator... thereby certified to be a competent Ampro-sound 16 mm. motion picture operator."

Price Reduced on Natco Projector

Natco, Inc., Chicago, has announced the first general price reduction for 15mm sound motion picture projectors, along with several new design improvements that are said to increase the film life and permit even more faithful reproduction of sound. Information on the new Natco Model 3019-2, which sells for \$20 less than the current model, was furnished by Willard Gidwitz, executive vice-president and treasurer of Natco, Inc.

Important among the new features of the improved projector is the centrifugal switch controlling both the projector motor and projection lamp. The new switch, developed by Natco engineers, eliminates all danger of burning the film by permitting the projector motor to attain operating speed before the projection lamp is turned on. Use of the new switch also permits improvements in the amplifier circuit and wiring that give a wider range of frequencies and improve the tone quality of the sound.

Of equal importance is the governed voltage control for the sound exciter lamp and the photo-electric cell which prevents "wows" and distortion of sound when the electric power supply fluctuates.

Projector controls are regrouped for added convenience on the new Natco projector. Tone and volume controls are located side by side on the lower left of the operating side of the projector while the new centrifugal projection switch, threading lamp switch and speed control switch are above and to the right of the sound controls to prevent confusion when operating in the dark. The threading knob, used to rotate the film mechanism while threading the projector, is directly under the threading lamp which is, in turn, under the projector lens.

Other new features of the Natco Model 3019-2 include an amber indicator lamp to show when the amplifier is in operation, an improved release catch on the folding reel arm, grey enameloid finish and black, instead of maroon, leatherette covered cases for both projector and speaker units.

According to Mr. Gidwitz, the reduction in price for the new Natco Model 3019-2 was prompted by several factors. These included the rapidly expanding demand for the projector, enlarged plant facilities for volume production, and accessibility of basic materials. The company makes practically all of the projec-

The new portable Brush "Soundmirror" recorder. This model (BK-403) has a low-speed drive for recording speech. A magnetic paper tape is used, which may be edited with a pair of scissors and some Scotch tape.

tor components, including small motors, in its own plants, virtually eliminating dependence on outside suppliers for parts.

The original Natco design and all subsequent improved models are unique in that they incorporate unit-construction of several major elements of the projector. The sound head, for example, is built as a separate unit and assembled into the complete projector on a regular assembly line. The picture unit, including the shutter and shuttle mechanism, also is of unit construction. Either of these units may be removed from the projector in a matter of seconds and sent to a dealer or service station if repairs resulting from normal use become necessary.

Slidefilms and Slides

■ **CURRENT HISTORY FILMS**, 77 Fifth Ave., New York 3 have issued a new filmstrip dramatizing the need for health insurance. The film, entitled *Medical Insurance—Pathway to Health*, gives facts and figures on America's health conditions and dramatizes the proposals contained in the controversial National Insurance and Public Health Act, introduced into Congress on May 20.

Highly graphic illustrations and pictures give the layman a quick grasp of an involved technical subject.

■ **TEACHING FILMS, INC.**, 2 West 20th St., New York has released the following new slidefilms:

International Date Line (35 frames)—why it was created; how it functions; its importance in an air age.

Food, Clothing, and Shelter Series (35 frames each for grades 2, 3, 4)—tracing the development from the day when man lived in caves and fed on wild fruit and animals down to the present: *How Man Has Learned to Shelter Himself*, *Man's Shelter Today*, *Early Man and His Food*, *Our Food and How We Get It*, *How We Preserve Our Food*, *How Man Learned to Make Cloth*, and *How We Get Our Clothes*.

Holiday Series (35 frames, grades 1, 2, 3)—familiarizes children with the people and events: *Arbor Day*, *Thanksgiving Day*, *Columbus Day*, *Christmas*, *Hallowe'en*, *Lincoln's Birthday*, *Story of St. Valentine's Day*, and *Washington's Birthday*.

■ **UNITED NATIONS**, Dept. of Public Information, Films and Visual Information Div., Lake Success, L. I. N. Y. offers free a 35mm single-frame slidefilm which presents in 90 frames of photographs and illustrations the organization of the United Nations. Commentator's notes accompany each film. Available in English, Spanish, French, or Russian versions: *The United Nations at Work—The Secretariat*.

■ **THE SOCIETY FOR VISUAL EDUCATION, INC.**, 100 East Ohio Street, Chicago has released a new SVE Library of 100 Slide Units (each unit containing 10 color slides) organized into three main fields of study: (1) General Science Units, (2) Social Study Units, and (3) Art Appreciation Units. The series is called *Visualized Units in Color*. The manuals, accompanying each slide unit, provide the instructor with sufficient factual and interpretative information to evaluate each slide. Although each slide unit is organized to meet a specific study objective, the instructor will find that the slide set itself may be utilized with value in many other related fields of study. A descriptive catalog will be sent upon request to the above address.

■ **DEVRY CORPORATION**, 1111 Armitage Ave., Chicago 14, Illinois has prepared an attractive 16-page catalog listing 2"x2" Kodachrome slides on North and South America, Southern Europe, Asia, Africa, and the Pacific Islands.

Manuals, designed especially for educational purposes, are available for

each group of slides. Copies of the catalog may be obtained by writing to DeVry at the above mentioned address.

Transcriptions and Recordings

■ **RCA VICTOR**, Camden, N. J. recently released an album of dramatic readings of especial interest to high school English teachers. *Leaves of Grass* (Album M-955) includes 19 Walt Whitman poems read by Ralph Bellamy. Most effective use of such an album may be made if the teacher will play only the poems under study for a given day. A second playing after a brief analysis or discussion is usually beneficial.

Whitman works included are *Introduction*; *To a Certain Civilization*; *I Think I Could Turn and Live with Animals*; *To the Man-of-War Bird*; *For You O*

SOUNDSCRIBER
Trade Mark

WITH a vastly increased enrollment in language classes, time and teacher shortage become the instructor's most important problems.

Many language departments are solving this problem by employing the SoundScriber electronic disc recorder as an aid to voice and language instruction—in lesson planning, testing and drill.

The SoundScriber electronic recorder records every shade of inflection, every nuance of diction on paper-thin, unbreakable plastic discs. Thus the scope and effectiveness of live voice in-

struction is multiplied—and students' comprehension is increased by testing their own voice-recordings on SoundScriber discs that cost only a few cents.

SoundScriber will instantly repeat a word, a phrase, or a sentence. The SoundScriber is light in weight, is readily portable from one classroom to another, and easy to operate. It is low in first cost and low in operating cost.

Write for complete information on the ways in which the SoundScriber is being used by leading schools, colleges and universities.

The **SOUNDSCRIBER CORPORATION**, Dept. ES-10, New Haven 4, Connecticut

Leopold Stokowski and the Hollywood Bowl Symphony Orchestra have made the first domestic recording of *The Plow That Broke the Plains* (DM-116), the music which Virgil Thomson wrote for the documentary film of the same name. The recording was made on a motion picture sound stage of superb acoustical quality. The subtitles of the music follow the tragic evolution of the great American plains from grasslands to wheatfields to drought and dust-bowl — "Drought," "Desolation," "Blues," and "Cattle."

■ **POPULAR SCIENCE PUBLISHING CO.**, 353 Fourth Ave., N. Y. C. 10, has the following English literature recordings on its list of Teach-O-Disc, 12-inch, double-faced, 78 r.p.m. records: *Les Miserables*, Parts I to IV.....Hugo
The Black Arrow.....Stevenson
Huckleberry Finn, Parts I to IV..Twain
Rip Van Winkle.....Irving

The Rime of the Ancient Mariner.....Coleridge

Westinghouse Teaching Aids

Three new teaching aids—The Electron-Tube Wall Chart, a transcription kit called *Electronics at Work*, and a sound motion picture entitled *Adventures in Research*—have been announced by the Westinghouse School Service Department, 306 Fourth Ave., Box 1017, Pittsburgh 30, Pennsylvania. A leaflet describing these aids is available from the above address.

The Electron Tube Chart is printed in eight colors on heavy linen paper. It contains basic information on operation, types, and applications of electron tubes. It shows how the electron is freed in electron tubes, basic structural types of electron tubes, action of gas-filled and vacuum tubes, and their six primary functions. The 25" x 36" chart is reinforced top and bottom by tin strips and is hinged for hanging. The price is reasonable.

The transcription kit *Electronics at Work* provides six 15-minute programs especially prepared for classroom use. A Teachers' Guide and supplementary literature on electronics are included. The kit is available for purchase. The film, *Adventures in Research*, is described under "Current Film News."

Current Film News

Rental Program for Britannica Films

A nation-wide sound films rental program, designed to supplement existing film rental services for schools, has been announced by Encyclopaedia Britannica Films.

The new program will go into effect June 1 this year, H. R. Lissack, vice-president of EB Films, announced. It is aimed to provide an additional means of using and evaluating EBF classroom sound motion pictures and to assure better utilization results with professionally created classroom films. Encyclopaedia Britannica Films Preview Libraries, in five strategically-placed cities, will handle the program.

"The new rental service will make it easier for all schools, even those with small budgets, to use the right EBF film close to the time when it is needed," Lissack said. "No rental plan can be as good as a school's ownership of a film library, but by encouraging educators to rent a number of EBF films closely correlated with the curriculum objectives, utilization of film materials can be greatly improved," Lissack added.

■ **ENCYCLOPAEDIA BRITANNICA FILMS INC.**, 20 North Wacker Drive, Chicago 6, Illinois announces the following new films:

Fire, (1 reel)—a film intended to teach pupils of the middle grades and junior high school the important uses of fire, the principles of combustion, and the nature of fire hazards. The principal methods of extinguishing fires are shown. Animated drawings illustrate the three essentials of combustion—fuel, oxygen, and a kindling temperature.

Immigration (1 reel)—the story of the steady movement of people into the United States from Colonial times to the present day. By animated maps, the film shows how the United States became populated and why Europeans left the Old World. It is intended for American history, social studies, sociology, and civics classes.

Petroleum (1 reel)—first of a series of classroom films treating the problems of world energy resources. The importance of petroleum in the modern industrial world is stressed, and the social and political problems involved in oil production are not overlooked.

How a Baby Grows (series of ten 1 reel, silent films)—produced at the Yale University Clinic of Child Development in collaboration with Dr. Arnold Gesell, authority in the field of infant psychology. The films show the growth of individual babies through various periods.

Encyclopaedia Britannica Films will soon release its first full-color sound films. Four of the six color films now in production are on art subjects. The first to be released will be "The Making of a Mural," executed by Thomas Hart Benton. The other three art pictures were produced with the collaboration of Eliot O'Hara, water colorist.

■ **BUSINESS EDUCATION VISUAL AIDS**, 104 West 61 Street, New York 23 has announced the following film for use in business education:

The Duties of a Secretary (3 reels)—covering office procedures, dress, business confidence, filing procedures, mail handling, keeping of appointments, telephone etiquette, and the tactful handling of callers. A dramatic treatment is employed to make certain points more forceful. The new secretary dreams of the first day at the office. She does everything wrong, but an off-stage voice prompts her in the correct procedures.

■ **CHINA FILM ENTERPRISES OF AMERICA, INC.**, 35 Park Ave., New York 16, is the only private Chinese film company incorporated in this country, formed by both Chinese and Americans. It is one of the first Chinese companies to promote and produce 16mm films. It also acts as consultant to others who produce films concerning China. Included among their film offerings are three Kodachrome 16mm sound subjects, 1 reel each:

Painting a Chinese Figure—illustrated by Mr. Yeh, a famous Chinese artist.

Painting the Chinese Landscape—in which the four important steps in painting are depicted.

Chinese Shadow Play—presenting a short version of a popular Chinese fairy tale, "The White Snake Lady." The actors, painted in transparent color, perform behind an illuminated screen.

■ **CORONET INSTRUCTIONAL FILMS**, 65 E. South Water St., Chicago, have these five new films ready for release, all of which are available in color or black and white:

Shy Guy—guidance film treating the problem of shyness as it affects the adolescent.

Playground Safety—motivational film, planned to improve playground behavior by implanting three basic safety rules.

Science and Superstition—reflects a changing point of view in the philosophy of science education, the necessity of teaching pupils how to use the scientific method in their own thinking.

The Halogens—presents the four members of this group and their physical and chemical properties, free and in their most important compounds.

The Colorado River—contrasts its untamed beauty and lack of commercial traffic with the controlling influence of its giant dams which serve civilization.

■ **FILM PUBLISHERS, INC.**, 25 Broad St., New York 4, who specialize in films and filmstrips on international relations, have sales rights on the following:

One World or None—produced by Philip Ragan in cooperation with the National Committee on Atomic Information and the Federation of American Scientists. Clearly projecting a summary of the world atomic situation, the "One World" implications of atomic energy for the greater need for unity in cooperation on all levels of life; international, national, and community. It stresses the need for all nations to unite to establish worldwide control of atomic energy and other weapons of mass destruction. The technique is an unusual animated drawing method developed by Ragan interspersed with live-action scenes. The narrative is delivered by Raymond Swing. A slidefilm version with printed speechnotes and a 12-inch phonograph record on this subject are also available.

John Bull's Own Island—a 20-minute film survey of Britain's outlook in the postwar economic world, produced by National Film Board of Canada. A 35mm silent slidefilm of the same title has been especially adapted from the motion picture by Film Publishers for American discussion.

Operation Underground—a Tele-news-Newsweek Magazine production, telling in 2 reels the thrilling and authentic story of how one section of the French underground helped the Allied cause in the past war. Under the very eyes of the Nazis, who appear unsuspectingly on the screen, the picture was filmed by three Frenchmen with amazing courage.

■ **THE NATIONAL FILM BOARD OF CANADA**, 620 Fifth Ave., New York 20, has assigned to Castle Films the exclusive 16mm distribution rights in the U. S. for a series of short films on industrial safety. The series title is "Accidents Don't Happen" and the individual titles are "Organization", "Machines", "Handling" and "Falls".

■ **NEW JERSEY STATE COMMISSION FOR THE BLIND**, Newark, New Jersey is the distributor for the following film produced by the Emerson Yorke Studio, 35 West 45th Street, New York City 19:

Conquering Darkness (2 reels)—a portrayal of the work of the New Jersey State Commission for the Blind. The theme of the film is that blindness is not an insurmountable obstacle. The following activities are

covered: education, industrial placement, assistance, home industries, talking books, Braille library, and prevention. The film may be used in the community or the school.

■ **THE LIBRARY OF CONGRESS**, Motion Picture Division, Washington 25, D. C., is selling prints at cost of the motion picture:

The Flow Process Chart and How to Use It (15 min.). By color animation this film shows how to prepare a flow process chart. The four keys to process charting are illustrated: operation, transportation, storage, and inspection. The film is recommended for use in the study of work simplification.

■ **THE PRINCETON FILM CENTER**, Princeton, N.J., is handling the distribution of a film recently completed for the McDonnell Aircraft Corporation of St. Louis, with the title:

The Phantom — 20-minute 16mm sound film in color which has as its subject the new twin-jet propelled Navy fighter by that name. It is said to be the first film of its kind in the history of jet propulsion.

■ **SHELL OIL CO., INC.**, 50 West 50th Street, New York 20 and 100 Bush Street, San Francisco, California has recently released a free safety film for general showings:

Screw Drivers and Screw Jays (12 min.)—careless drivers and pedestrians rapped via humor. Funnymen, Lew Lehr, and radio announcer, Don Wilson, employ chuckles instead of blood and wreckage to point out the many thoughtless habits which menace life and limb on city streets. It is sponsored by the National Safety Council.

■ **SIMMEL-MESERVEY**, 9538 Brighton Way, Beverly Hills, Calif. has released the following new film:

Historic New England (2 reels, color)—produced by Burton Holmes, world traveler and lecturer. This is not a travelog; it places primary emphasis on the historical, economical, and geographical significance of the six New England states.

■ **M. STONE**, Room 904, 1472 Broadway, New York 18, has made a 16mm Jiu Jitsu wrestling film.

Jiu Jitsu (1 reel) is an instructional subject on the defense against each of four common attacks. An expert, a black belt holder, and an instructor demonstrate the four throws in detail, move by move, at normal speed, in slow motion and in closeups. The picture which was filmed at the New York Academy of Jiu Jitsu, opens and closes with some fast free play.

■ **SUPERIOR COACH CORP.**, Lima, Ohio has produced a film on traffic safety in 16 and 35mm for free distribution:

Priceless Cargo (18 min.)—past perils and modern progress in school transportation. Highway safety requires the cooperation of motorists,

educational authorities, parents, and pupils as well as the manufacturers of motor equipment. The film is intended for showing to school executives, parents, teachers, youth groups, and similar organizations.

■ **THE MOTION PICTURE SERVICE, U.S. DEPARTMENT OF AGRICULTURE**, Washington D.C., held a premiere last month in Washington of the new 20-minute color film:

Men Who Grow Cotton—sponsored by the Agricultural Extension Services of ten cotton states and agencies of the Department of Agriculture to encourage discussion of cotton and the future. It covers cotton's contribution to the national economy, ups and downs of life in the cotton belt, mechanization, foreign competition, Southern industrial expansion, new uses for cotton.

Prints of this film are deposited with the agricultural extension libraries in the ten participating states and are available for purchase to all other libraries.

■ **WESTINGHOUSE ELECTRIC CORPORATION**, School Service Department, 305 Fourth Avenue, Box 1017, Pittsburgh, Pennsylvania announces:

Adventures in Research (2 reels)—a science demonstration on electronics by Dr. Phillips Thomas of the Westinghouse Research Laboratories. Highspot of the film is a radar demonstration in which the strength of radio energy is shown. Dr. Thomas also demonstrates the vacuum tube, the X-ray tube, the pinhole detector tube, the Stroboscope, the Ignition tube, the cathode-ray tube, and the photo-electric cell. Each experiment is followed by a portrayal of the electronic device's use in communication, transportation, health, or entertainment. It will be lent free except for transportation charges.

■ **YOUNG AMERICA FILMS, INC.**, 18 E. 41st St., New York 17 has announced the release of four new films:

The Curious Coati (¾ reel)—designed for the primary school level. The film deals with the activities of the coati (coatimundi), a small Central and South American animal related to the raccoon. The coati's natural friendliness makes him easy to tame and an excellent pet.

"The Curious Coati"

Your Teeth (1 reel, edited from British Information's *Your Children's Teeth*)—explains the growth, structure, and care of the teeth.

Your Ears (1 reel, edited from British Information's *Your Children's Ears*)—illustrates the construction of the human ear and the function of each of its parts. The film stresses the necessity for proper care of the ears.

Your Eyes (1 reel, edited from British Information's *Your Children's Eyes*)—showing the construction of the human eye and the function of each part. By means of animation and live photography, such maladjustments as farsightedness and nearsightedness, and their manner of correction are shown. Proper care of the eyes is stressed.

The Fur Seal (1 reel)—a Telenews Production made under the supervision of Dr. Anthony of the American Museum of Natural History. It deals with the life and importance of the fur seal, and uses material photographed in the Pribilof Islands.

Tea from Nyasaland (1 reel)—a British Information Services' film on how the tea plant is grown and cultivated, blended and packed for the consumer. Exclusive American distribution rights owned by Young America Films.

Entertainment

■ **UNITED WORLD FILMS, INC.**, Rockefeller Center, New York 20, has acquired the following Universal Pictures for 16mm release:

Because of Him (9 reels)—starring Deanna Durbin and Charles Laughton. A stage-struck waitress cuts many corners to get her chance in a play where her acting talents and voice justify her stratagems.

"Because of Him"

Girl on the Spot (7 reels)—murder mystery with Gilbert and Sullivan tunes drawn on for music. A beautiful young singer is falsely suspected while the real criminal remains undetected until nearly the end of the film.

■ **ACADEMIC FILM COMPANY**, 1450 Broadway, New York 16, has 16mm distribution of the Universal feature:

The Man Who Found Himself—featuring Brian Aherne and Kay Francis. Brian plays the bewildered victim of a hilarious, complicated mistaken-identity situation.

Catalogs

■ **IDEAL PICTURES CORP.**, 26 East 8th St., Chicago 5, Illinois (or nearest branch) has issued the 27th edition of their 16mm *Sound Motion Picture Catalog* combined with 16 and 8mm silent list. This catalog is issued roughly every two years.

■ **EASTIN PICTURES CO.**, Davenport, Iowa has published its 20th Anniversary catalog of feature films. Separate lists of instructional and religious films are available on request.

■ **POST PICTURES CORP.**, 723 Seventh Ave., New York 19, N. Y. has recently distributed its new brochure listing its streamlined major features, features, dramatic features, musical comedies, Westerns, serials, songs, music, nature, sports, and other films.

■ **CORONET**, 65 E. South Water Street, Chicago 1 has announced its new condensed catalog of 100 different 16mm sound motion pictures. Nearly all films are in color or black-and-white. The new catalog indicates the grade levels for which each film is available and subject area; thus, business education, guidance, health and safety, general science, and similar classes.

■ **UNITED NATIONS**, Room 6300 C, Empire State Bldg., 350 Fifth Ave., New York 1 has published a partial list of official films, available for distribution in the United States dealing with the United Nations, Member States, and subjects related to the aims of the Organization.

■ **SOUTHERN VISUAL FILMS**, 66 Monroe St., Memphis, Tenn. has recently issued a new catalog, listing the entertainment features, Westerns, religious, colored casts, educational, comedies, and other films.

■ **CASTLE FILMS**, Division of United World Films, Inc., 30 Rockefeller Plaza, New York 20, N. Y. has released its list of *U. S. Government Films for School and Industry*. Films included are those of the U. S. Department of Agriculture, U. S. Office of Education, U. S. Navy and War Departments, U. S. Public Health Service, Civil Aeronautics, Veterans Administration, and other related governmental and industrial films.

■ **PICTORIAL FILMS**, Inc., Radio City 20, N. Y. has issued a brochure on movies for the home library, including puppetoons, cartoons, sports, nature, travel, music, and fiction plus a series of 2x2 slides.

■ **LEWIS FILM SERVICE**, 149 North Broadway, Wichita 2, Kansas, is distributing the Second Edition of its 1947 16mm sound motion picture catalogue. The films are grouped under such headings as Adventure, Children's Films, Color Cartoons, Foreign Language, March of Time, Major Productions, Religious Films, Sport, Travel, etc.

Films from Britain

FOUR NEW 16 MM SOUND FILMS

GENERAL ELECTION 2 reels - 20 minutes

Parliamentary Elections in Britain. Shows nominations, campaign strategy and methods of secret voting. "General Election" was made at Kettering during the last general election and highlights campaign oratory.

THE GREAT GAME - SOCCER 2 reels - 23 minutes

All over Britain men from factories and offices spend their Saturdays playing soccer, their favorite sport. Children play it in fields, school yards and streets. Professionals explain the tactics. Cup competitions provide crowds and excitement.

THE STORY OF OMOLO 1 reel - 9 minutes

Omololo loses his home by fire and goes to Bukura, in Kenya. Here the British Government has an agricultural center where the Bantu people are allotted temporary holdings and are taught practical farming.

DOES IT MATTER WHAT YOU THINK? 2 reels - 16 minutes

An amusing and provocative film for adults and teen-agers. Do we think what we are told to think, or do we come to independent conclusions? If you form an opinion, do you make use of it?

PICTORIAL

FILMS CREATED FOR THE CLASSROOM VIEWPOINT

NEW The approved "behavior" picture—

JOHNNY LEARNS HIS MANNERS

Read what a distinguished educator says...

"This story proved to be a very delightful and valuable one for children of the elementary classes. We are placing an order for its purchase immediately"...

Alon H. Nicol, Director
Visual Aids Division, Board of Education
Buffalo, New York

NEW Three important classroom pictures in FULL COLOR
the **MEXICAN ARTS AND CRAFTS** series

1. COPPER AND SILVER
2. TEXTILE AND DESIGN
3. WOOD, CLAY AND FINE ARTS

A detailed survey of Mexican arts and handicrafts, rich in cultural interest and stimulating to students in many fields. Planned for curricular inclusion in arts, crafts, social sciences and language studies.

Made to motivate and encourage approved social conduct in children, 5 to 14.

A delightful combination of animated cartoon and live action, in a skillfully written and produced motion picture.

TWO REELS—BLACK AND WHITE

Produced by Hugh Harman Productions for Pictorial Films, Inc.

A good government film—

Step-by-step visualization of the part played by the ordinary citizen, his legislators and the Chief Executive in the making of our federal law. An invaluable film for the better understanding of democracy. Teacher approved for its clarity, conciseness and complete factual objectivity.

HOW A BILL BECOMES A LAW

A health-teaching film—

(Produced with the aid of the U.S. Public Health Service)

WINKY THE WATCHMAN

(IN COLOR)

Rolllicking health cartoon for primary grade students. The story of sleepy "Winky" and his "Great White Wall" creates an immediate understanding of the need for vigilance and the importance of the dentist in oral hygiene.

TWO NEW TEACHING FILMS!

"An outstanding contribution to the field of music education", say leading educators who have viewed this film. Original in its content, significant as an effective teaching tool, this film is the finest picture ever produced to give the child an understanding of rhythmic patterns.

Time: 10 minutes
Grades: 1-3

\$50.00 Black and white
16 mm sound

A new approach to the study of stringed instruments of the orchestra. Not only is performance given by skilled musicians to show tonal effects, but a visit to a musical repair shop also enables a study and analysis of the physical make up of each instrument.

Time: 10 minutes
Grades: 4-6

\$50.00 Black and white
16 mm sound

A catalog of all films and filmstrips of TEACHING FILMS INC., as well as preview prints, may be obtained by writing to either your local distributor or directly to us.

Film Council Elects S. M. Corey, Acting Director

Thurman White, Executive Director, Plans for 350 Councils This Year

STEPHEN M. Corey of the University of Chicago was elected acting director of the board of trustees of the Film Council of America as its trustees held their first meeting in Chicago during the sessions of the National Association of Visual Education Dealers at the Hotel Sherman.

Corey, who is head of the visual education center at the University, is recognized as one of the leading educational experts in the entire field of audio-visual education and has written extensively upon the subject.

At the same time the trustees selected Thurman White, on leave of absence as head of the department of visual education at the University of Oklahoma, Norman, Oklahoma, as executive secretary and field director of the Film Council. White will take office September 1 and lead the immediate goal of the Council

At the Film Council of America booth during the NAVED Convention were (left to right) C. R. Reagan, S. M. Corey, and Thurman White.

which is the establishment of 350 community film councils this year. In a few years, it is hoped there will be thousands of such groups making more and more people familiar with films, their use, and how to obtain them in every community.

Executive Committee

The trustees also selected an executive committee to organize national affairs of the councils. Its members are Carl Milam, executive secretary of the American Library Association; Paul Reed, editor of *Educational Screen* and director of visual education in Rochester, New York, schools, and Bruce E. Mahan, dean of the extension division of the State University of Iowa.

The Film Council Trustees meeting preceded an open session of film council leaders Tuesday evening at which NAVED members learned how to organize film councils in their own communities. The evening

The Editors Report . . .

MISS Elizabeth Golterman, Director, Division of Audio-Visual Education, St. Louis Public Schools and Mr. Walter S. Bell, Director of Audio-Visual Education, Atlanta (Georgia) Public Schools, have accepted the invitation of EDUCATIONAL SCREEN to become members of the Editorial Advisory Board.

Two board members have announced changes in their regular positions: Gardner L. Hart, formerly Director, Commission on Motion Pictures, Institute of Human Relations, New Haven has returned to his permanent post of Director, Audio-Visual Education, Oakland (California) Public Schools. James Brown has accepted the position of Assistant Professor of Education, Syracuse University, Syracuse, New York.

Church users of audio-visual materials may continue to rely upon the "Church Department" of EDUCATIONAL SCREEN to bring them the latest information on the use of films and slides in religious education. New materials, unbiased evaluations of such materials, and new sources of films, slides, catalogs, and booklets are constantly being announced.—Edward T. Myers.

Film Council Elects S. M. Corey. Acting Director

(Concluded from page 354)

meeting was presided over by C. R. Reagan of Austin, Texas, president of the council. White conducted a "parade" of leaders of many of the 26 existing film councils, as they explained how they organized and how they plan their meetings and attract new members into active participation.

C. Scott Fletcher, president of Encyclopaedia Britannica Films, and chairman of the finance committee of the Film Council, outlined the financial drive objectives and explained how the council can serve American education.

Objectives of the Film Council

Reagan outlined two principal objectives of the Film Council. Speaking on the eve of the second anniversary of the dropping of the atomic bomb on Hiroshima, Reagan said that audio-visual education offers the greatest hope for educating all peoples to an understanding by which they can prevent future atomic wars. "Our greatest goals must be to be of real service to our communities," he said, "and to help other groups do the job for which they were founded more effectively. Films can vitalize their programs, and in so doing can raise our knowledge, our understanding and advance our fight for peace."

Numerous members of community councils told how their groups arrange programs to interest outside people in films. Plans for a "Films of the World" festival in Chicago during October and November were hailed as a prototype for other film festivals to be held by other councils. Reed told how Rochester's Film Councils conducting a survey of all audio-visual materials available for use by every group in Rochester. Lexington, Kentucky, representatives told how they interest such groups as the Lexington Police Department in their programs, and Austin, Texas, members explained how they have secured the appointment of special representatives on the Austin Film Council by most of the local civic organizations in Austin.

COVER PHOTOGRAPH: A "still" from the Coronet film, KNOW YOUR LIBRARY, a one-reel motion picture in color or black and white. Students entering high school must be taught to use the library. Betty, the girl in the film, was at a loss, trying to find her way in a library. To her, it was just a room full of books. The film shows how she learned to use the card catalog, to understand the Dewey Decimal System, to locate books on the shelves, and to use the reference materials.

As Viewed From Here

Salaries and Budgets

THE awakening of the people to the critical shortage of adequately trained teachers in their schools has been a striking phenomenon of recent months. To underpaid teachers hanging on to their jobs in spite of inflationary prices, either because of loyalty to their chosen profession or because circumstances bound them, the people have seemed slow in recognizing teacher needs. Legislatures, city councils, and school boards are responding, however, and new and improved salary schedules are resulting. Teachers may yet recover their lost economic status.

These circumstances of teacher shortages and the dire necessity for increasing teacher salaries have definitely affected and retarded the development of audio-visual instruction in the schools. Limited school funds diverted to the payment of salaries could not be spent for needed equipment and materials of instruction. In some school systems, audio-visual budgets have been cut back even below their sub-standard pre-war levels. In very few have there been appropriations adequate to achieve the kind of audio-visual programs needed for most effective instruction. There have been pennies for audio-visual instruction where dollars were needed. Consequently the expected post-war boom in the use of audio-visual materials has not materialized. Many a new company, prepared to help fill the need for more materials, has already given up; the production plans of others have been altered.

We recognize that questions of teacher salaries come first. There can be no schools without teachers. But coming more closely second are questions of adequate equipment and materials for instruction. Even the best of teachers is a far better teacher when he has the right materials with which to teach. This is a fact which now demands concentrated attention. Once we have teachers, the next great need is for materials.

Recently one of the country's outstanding visual leaders suggested the desirability of bringing about a closer relationship between teachers and materials in budgetary thinking. It has been customary to think of school audio-visual budgets on a per pupil basis; yet a much more accurate and forceful presentation might result from calculations on a per teacher basis.

Our friend suggested aiming toward a minimum appropriation of at least three hundred dollars per year per teacher. Multiplying that figure by the number of teachers in your school or school system may produce a figure that seems quite unattainable. But why should it be? If that amount is needed to provide teachers with the necessary materials with which to do their jobs, then it should be sought and provided. Amounts currently appropriated are hopelessly inadequate.

The A. L. A. Film Project

THE launching of the new Film Project of the American Library Association seems to have come at just the right time—a time when it can be most helpful. Made possible by a two year foundation grant, this project will be aimed toward stimulating the establishment and use of informational film collections in public libraries. For the first time the A. L. A. will now have personnel working full time in assisting librarians with their audio-visual programs.

One of the reasons that the A. L. A. project seems particularly timely is the coincidence of the developing program of the Film Council of America. Local film councils, stimulated and assisted by the F. C. A., will bring together film users at the community level to clarify, study, and solve the problems that are blocking the most effective use of motion pictures by all community groups. It is our belief that one of the most pressing problems will be that of getting the films which are wanted, when they are wanted.

Already there are striking examples that public libraries in some communities can provide valuable film distribution services for community groups. Further analysis and study of the activities of such libraries as those at Charlotte, N. C.; Cleveland; Milwaukee; Beaumont, Texas; Akron; and Dallas by the Film Project will provide a sound basis of practical experience for the extension of this kind of library service.

There may be some who feel that this trend of public library interest in providing film services is an encroachment upon the interests of existing film libraries—both public and private. In fact this thought may have been in the minds of some of the participants in a conference called by the U. S. Office of Education last June when a whole day's session was devoted to discussing the relationship between school film libraries and public libraries. Two conclusions resulting from that meeting seem especially pertinent: first, that in the total 16mm film distributional pattern, many different kinds of film libraries have their legitimate place; and, second, that there is need for close cooperation between all film distribution agencies.

There is a growing awareness of the potentiality of the film medium in serving wider community educational programs; there is greater need than ever before for improved distributional services; and there exists a background of public library achievement in providing audio-visual services. Furthermore, this project is being undertaken within a general framework of cooperation, exemplified by the fact that the American Library Association is one of the seven constituent members of the Film Council of America.

—Paul C. Reed

INTEGRATION

of Instructional Materials

Instructional materials must be weighed in relation to the total learning process and to the classroom needs of the particular teacher.

WILLARD B. SPALDING

Superintendent, Portland (Oregon) Public Schools
Now Dean of Education, University of Illinois

THE history of education, like the history of so many other social and political movements, is the history of a pendulum swinging first to one extreme and then to the opposite one and finally resting somewhere near the middle. For example, the very earliest educational method was that of the tutor. For the poor, he was usually the father or mother; for the rich, he was either a slave, a clergyman, or some local scholar. In that tutor was concentrated all of the educational functions which are now scattered in every school system through a large number of departments, schools, classrooms, and separate subjects. He alone decided what was to be taught; how it was to be taught; what aids to teaching and learning were available; and what might be the capacities of the student. The tutorial system of education is still to be found in universities like Oxford and Cambridge and for us in America, it is symbolized by the oft quoted illustration of the ideal university consisting of Mark Hopkins at one end of the log and the student at the other.

From that highly integrated educational system consisting of one tutor and one child, we gradually developed an elaborate and highly departmentalized system in which a child no longer had one teacher who was his guide, friend, counselor, and chaperone rolled into one but a dozen teachers—each one teaching a separate subject, often, as in the platoon school, in a separate room.

The Pendulum Swings

The platoon school was the opposite swing of the pendulum, and we are now going through the process of watching it come back somewhere towards the middle. We can't go back to the single tutor for each child because that is financially impossible, but we are getting back to a single teacher for each class, and we are trying to make that class as small as possible. We still furnish separate services—the doctor, the dentist, the music teacher, the physical education expert, the psychologist, and perhaps the remedial teacher, but these are not separate teachers to whom the child owes an accounting. They are merely assistants to the one teacher, helping her to become more effective in doing for the individual pupil in a class of thirty what he needs to have done. Every effort is made to integrate the child's environment to make him look upon his school as his second home and upon his teacher as his home teacher. In a very real sense, the teacher is now *in loco parentis*. He is the counterpart of the real mother, interested in the all-round development of the child and using all available resources in behalf of that

The educational pendulum swung from the highly integrated system of one tutor and one child to the platoon school with many teachers for one group of children. It is now returning somewhere near center with one teacher for a small group.

child. The same sort of development is taking place in the case of instructional materials. In the beginning to paraphrase the Bible, there was only the word. That word in the earliest days was the oral speech of the tutor. Lessons were transmitted and were learned orally. You have all seen pictures of the schoolmaster sitting on the ground in ancient Greece or modern Arabia, surrounded by his pupils, all listening intently to the words of wisdom falling from his lips. When books became common, all wisdom and learning were summed up in the textbook. And the textbook became, in addition to the word of the teacher, the integrated source of instruction for the child.

New Avenues of Learning

In time the march of modern science began to open up new avenues of learning and eventually to provide the technical means by which those avenues might be explored and used. The word was no longer sufficient. With Comenius, there came a great interest in pictures and maps, illustrations which would bring before the mind of the child the thing of which the word was only the symbol. This developed and grew until it brought about a revolution in the make-up of books. Today a school book is a delight to the eye as well as a food for the mind. Soon there came the multiplication of the one textbook into many textbooks and then into supplementary books and picture books and stereographs and slides and silent motion pictures and finally sound pictures. As many varieties of books became available, school systems set up special textbooks and supplementary book departments, to store them, circulate them, repair them, and account for them. As

slides and motion pictures were produced for use in schools, separate audio-visual departments were established to organize and distribute this material, to lend the necessary equipment, and eventually to service it.

Education via Electronics

A little later, the miracle of radio came into being. The electronic tube opened up tremendous, fascinating vistas of auditory experience. Available for the purposes of education were the voices of famous men, the travels of modern Marco Polos, the dramatizations of the world's literature, the performance of all varieties of music, and all the varied tapestry of politics, science, current events, and commercial life which is a picture of our present civilization. How perfectly natural it was to set up a separate radio department, even to the extent of a separate broadcasting station, in order that the new miracle might become part of the instructional program of the school. In time television will be added to this, and perhaps a new department may be set up for that. Note that while all this multiplicity of teachers and teaching aids has been developing, the child still remains a single and a comparatively simple individual.

Specialization Enlists Enthusiasm but . . .

In this multiplicity, we see the pendulum swinging to the far end of the arc, the same thing happening in the field of instructional supplies and materials that we saw in school organization and in the curriculum. We see many departments each with its own staff, each pushing its own wares, each propagandizing for its

(Continued on page 393)

Modern science has opened new avenues of learning. Each addition to the original teaching tool—the spoken voice—has made education more efficient. The problem is for each generation to pass its knowledge to the next in the shortest possible time.

CANADIAN WHEAT STORY was a film made specifically for the schools as a part of the "Work and Wealth" series. A wheat harvest is followed from the prairie to the city bakery.

Visual Education in Canada

Another "Work and Wealth" film was CATTLE COUNTRY, an account of ranching in the western foothills. All illustrations used with this article are National Film Board of Canada photographs.

JESSIE MENNIE,

Education Office
National Film Board of Canada

PERHAPS we should remind ourselves more often that visual education is of a fairly respectable antiquity; it is at least as old as Comenius—older than the blackboard (which, of course, is a form of visual education), and surely not much junior to that sacred symbol of our profession, the much-maligned text-book. Such a reminder would perhaps be the best reply to those people who look down their noses at the very mention of a classroom film or even of the less revolutionary filmstrip. "Oh," they sniff, "that stuff! Fads and frills! There's no place for such frills and furbelows in my school."

Some such people are still to be found in the teaching profession, alas, in Canada as well as in other countries. Pictures in a text-book it would never occur to them to question, nor pictures to hand round the class or pin up on the walls; but twentieth-century visual education, as compared with seventeenth-century, is suspect. Projection seems to confer a quality of untrustworthiness, or time-wasting, or even frivolity, upon perhaps a very similar set of images. Every year, though, the ranks of the anti-visual-educationists grow thinner, as the movies make their power more strongly felt and as the supply of good visual aids improves. Teachers are becoming ever more familiar with the scope, purpose, and techniques of visual education; they realize that it

TRAPPERS OF THE SEA, a film on the lobster industry of the maritime provinces, was produced for general circulation but proved to have classroom value.

is a matter of help and not of hindrance. A year ago the growing importance of visual education in Canada was recognized by the establishment of a provincial department of visual (or audio-visual) media in the few remaining provinces which had not already done so.

Education Is a Provincial Matter

This is important, because in Canada education is constitutionally a provincial and not a federal concern. It is the provinces who are responsible for providing schools, who set curricula, take charge of inspection, and make whatever arrangements they see fit to about examinations. Local school boards, too, have a great deal of authority and responsibility. While remaining subject to the general financial and curricular control of the provincial government, a local board may have a high degree of independence, and its activities are governed largely by its own concepts of education and by the tax rate it can persuade the local ratepayers to accept. In the Dominion government, there is not even a body equivalent to the U. S. Office of Education.

Every province, then, has now its own visual education system, headed by a supervisor who is an experi-

GREAT LAKES illustrated the importance of industry and transportation about the Lakes.

enced teacher, familiar with curricula, with the problems of teachers, with the nature of the young, and with visual media as such. He it is who builds up the visual aids library, directs its utilization, arranges teachers' courses in its use, issues catalogues, and generally fosters visual education within the province. Some libraries contain filmstrips and slides as well as films; others take the view that these can more usefully and practically belong to the school district or to the individual school.

Several cities have long maintained their own visual education departments. An extension of this system, perhaps on a co-operative basis for small communities, is greatly to be desired; it seems by far the most sensible and economical way of dealing with the demand for films, filmstrips, and slides which are in constant

E. L. Earl, teacher, conducts a screening as part of the curriculum at the Kingston (Ontario) Collegiate.

use, year in and year out, by reason of their intrinsic merit and their adaptation to the course of studies.

As a rule, projection equipment is owned by the school, having been supplied by the school board, the P. T. A., or through the efforts of the students themselves. Some school boards have projectors which travel from school to school on a regular schedule, or can be booked in advance just as films are. As equipment becomes more plentiful and, we hope, cheaper, we shall grow nearer to the ideal: a projector, not only in every school, but in every classroom, too.

One very encouraging development in school use of films is brought out by statistics for the last few years for Ontario, the most populous and educationally one of the most advanced of the Canadian provinces. Not only does the number of showings reveal an almost spectacular increase; but the size of audience per showing has dropped remarkably of late. In other words, films are being used more and more as they should be: in easily darkened classrooms as a teaching tool, not in the auditorium as painless (but vague) education or as a bit of fun for the kids.

Film Libraries

Department visual aids libraries for the most part lend their material to schools free of charge, shipping costs being shared equally. The chief drawback to date has been the inability of these libraries to fill all requests, for naturally everyone wants the really good

aids and wants them at the same time to fit in with the curriculum. This situation is eased by the string of film libraries which stretch across Canada from Nova Scotia to Vancouver Island—often housed in the local public library for convenience's sake. This system of film libraries was originally set up under the auspices and by the efforts of the National Film Board of Canada, and many of the films are still deposited free of charge by the board. Most of the libraries nowadays, however, are under the wing of a local film council composed of citizens from many walks of life. These councils encourage the use of films in all sorts of public concerns, including of course education; and the film libraries are a convenient and inexpensive source of material for teachers.

Rural Film Circuits

The only schools which find serious obstacles in the way of visual education are the small ones in remote districts, where no projectors are available and films and filmstrips are hard to obtain. It is these schools which benefit from the rural circuits operated by the National Film Board. Originated in 1942, the circuits run only in regions where ordinary theatrical film shows are seldom, if ever, to be had. The Film Board man with his portable equipment has a regular route to cover every month, except July and August. In every place, he gives a general community show in the evening, and in the day time, he visits the schools. Often several small schools will gather for the show in the largest school-house or in the community hall. For many of the children present, these are literally the only films ever seen in their lives; and needless to say, they look forward eagerly to the Film Board's monthly visit. The educational value to them of a carefully selected film program is incalculable—far greater, surely, than to the city child who feels hard done by if he is not allowed to spend every Saturday afternoon at the movies.

Each of the rural circuit programs contains one film specially chosen for school use. Last year they included an N.F.B. film for young children on the work of the police; British films on the eyes and ears; U. S. productions on communications (*Our Shrinking World*)

SALT FROM THE EARTH describes the Malagash salt mine in Nova Scotia, largest in the British Empire.

Grade 3 of the Kingston Public School attend a screening as part of their curriculum. G. B. Scott at the projector is a member of the Audio-Visual Education Department.

and on race relations (*The World I Live In*); and a beautiful Swedish film about life in Lapland. The coming season's program will bring to country children films on the instruments of the symphony orchestra; on postal services; on electricity; and on Eskimo life. It is recognized, however, that when teachers cannot choose the films to be shown, the time for showing, and cannot preview the films, we have but a makeshift form of visual education. It is far better than none, of course, but still far short of the best. To overcome these drawbacks, each rural program is accompanied by a teacher's guide, sent out ahead of time in order to let the teacher familiarize himself with the films as well as possible without preview. These guides, while dealing particularly with the films labelled "school," also cover every other film on the program which might be useful as a school film, in order to cater as far as can be to the needs of all grades. In addition to a synopsis of the film, the guides contain suggestions for class preparation, follow-up work, and a certain amount of background material for the benefit of the teachers far from reference libraries. There is never the slightest suggestion, either in the guides or in the actual showings, of supplanting the teacher or of telling him what he ought to do; everything is offered as a service to assist him.

In fact, teachers are encouraged to ask the Film Board man to bring a certain film with him next time

TREES THAT REACH THE SKY is a film on spruce logging in British Columbia. The train hauls logs down to the water.

for showing; or they may obtain the film themselves and have him project it for them. In this way, real visual education is brought within the reach even of those schools which have no projectors of their own.

The value of this National Film Board service is recognized by local education authorities, who in a number of cases have granted financial aid, and by provincial departments of education, who have made blocks of their films available to the circuits. This winter the Ontario Department will collaborate with the National Film Board on an experiment in itinerant visual education in one of the rural counties of the province. In many cases, regional supervisors and field representatives are employed jointly by the National Film Board and the provincial Department of Education.

Proper Utilization Stressed

It is felt that the utilization material supplied with the circuit films (and with all the Board's educational productions) performs a very valuable function. The idea is still wide-spread that projected material has some magic power to teach with little or no effort on the teacher's part. But teaching guides assume the absolute necessity of preparing for screenings and following up with various classroom activities. Thus they bring home to teachers the truth that to use a good film properly not only requires a very considerable effort on their part but also brings with it a very considerable reward.

Normal schools have not for the most part been very quick to add techniques in visual education to their already full courses of instruction, but the deficiency is gradually being made up, to some extent, by summer courses in visual aids offered by provincial departments of education and by colleges. It is hoped that before long such instruction will form part of the training of every teacher.

Films for Adults and for Schools

In addition to its distribution through Film Councils and to rural schools, the National Film Board has also aided education by the production of films and filmstrips. For several years, the exigencies of war left little time, effort, or raw stock available for the special needs of schools, but some of the films produced for general circulation proved to have real value in the classroom too. Such were *Great Lakes* (illustrating the importance of industry and transport in that region); *High Over the Borders* (a film on bird migrations, with an implicit lesson in international relations), and *Trappers of the Sea* (on the lobster industry of the maritime provinces). The only films made specifically for schools during those years were those of the Canadian Work and Wealth series: *Canadian Wheat Story*, wherein a wheat harvest is followed from prairie field to city bakery; *Cattle Country*, an account of ranching in the western foothills; *New Homes for Beavers*, which describes how fur resources are maintained by re-stocking depleted areas with beaver from game reserves; *Salt From the Earth*, a picture of the working of the huge salt mine at Malagash, Nova Scotia; *The Story of Oil*, filmed in the Alberta oil fields,

with a brief survey of the many every-day uses of petroleum products; and *Trees That Reach the Sky*, which shows the operations involved in transforming a Sitka spruce into an airplane.

Related Units: Film, Filmstrip, and Wall-sheets

Since the end of the war, the Board has embarked upon an experiment in visual units: film, filmstrip, and wall-sheets dealing with the same topic and designed for related use in the classroom. In view of the dearth of suitable material for the very junior grades, the topics chosen were in the field of social studies for primary classes. The first of this Junior Community series showed the work of the policeman as seen through a child's eyes. The second deals with the post office in the same manner: a short film explains the functions of the postman and other postal employees; a filmstrip entitled *I Am a Letter* tells (in a vein reminiscent of Hans Christian Andersen) how a letter travels from sender to receiver; and a wall sheet recalls some of the many people who help to get the mail from place to place. A useful short segment is added to the film to impress upon children how and why a letter must be properly addressed. Another film-and-filmstrip unit on electricity will be out shortly; the film will explain the functions of power houses and power lines and the filmstrip will deal with the nature of electric currents and switches and with the dangers of treating household appliances carelessly. The Junior Community series will be completed by another film called *Water*, showing how water reaches a city home, the purification at a filtration plant, and the laying of pipes to a new housing section. It is hoped that the whole series will prove of real value to teachers.

In producing these visual units, the Film Board has enjoyed the collaboration of the Film Advisory Committee of the Canadian Education Association, a body which reflects the educational interests of all the nine provinces. The Committee, composed of visual education directors, inspectors, and teachers, advised on the choice of subjects, and plans for each unit, with film scripts, were submitted to the members before production began. The Committee has laid down a set of guiding principles for the production of visual media for elementary grades: simplicity of story, treatment,

Sheep raising in the far West.

Teaching with the Aid of Motion Pictures

The careful preparation of a lesson plan is a necessity for good teaching.

CECIL E. WILKINSON
Whitney Public School
Toronto, Ontario, Canada

Editor's Note: Mr. Wilkinson, in his lectures and demonstrations given as a part of the Ontario Department of Education's summer course in audio-visual education, recommends the preparation of a lesson plan such as that which follows. A typical motion picture, "Three Little Kittens," an Encyclopaedia Britannica film, which happened to be in the Ontario Department of Education library was chosen for illustrative purposes. Mr. Wilkinson is convener of the Visual Aids and Theater Committee of the Ontario Federation of Home and School Associations.

MOST teachers prepare their lessons carefully, and in these lessons, they use many helps to learning. A moving picture is a visual aid which may be used as a part of a unit of study. Such a picture should not, however, be employed without careful preparation and planning. Experimentation has proved that the following scheme brings the best results:

1. Preparation of the teacher by the teacher himself—a part of such preparation being a preview of the film.
2. Preparation of the pupils—including the setting up of definite objectives.
3. Screening the film.
4. Immediate discussion after the screening.
5. Applications.

Three Little Kittens

Grade Level: This film is particularly suitable for kindergarten as it tells about something with which little children are familiar; it is easy to understand; and it deals with a subject universally appealing to small children—animals. However, it can be used in Grade I as the course of study for that grade suggests, "Keeping a pet at school for a few days"; or in Grade II for the unit "Describing good homes for pets," and the one "Talking about some common pets and how to care for them in Winter."

Type of Film: A text film which is *informative* in that it tells about the life and ways of kittens, which is *motivational* as it arouses a special interest in kittens and pets in general, and which *creates a desire* to know more about them, or possibly to own one.

Class for Which This Lesson Plan Is Applicable: Kindergarten.

Setting and Use: A child of five or six is nearly always vitally aware of the animal world and, especially, of its inhabitants that are pets. From stories which he has heard during his early childhood, in his experiences with pets, and possibly at the Zoo, he has learned to love animals, but perhaps he does not yet know very much about them.

Ranking high among the child's favorites must be the more familiar dogs and cats. Only a few children will have had any opportunity of watching these from

Encyclopaedia Britannica Films

THREE LITTLE KITTENS is a film dealing with a subject universally appealing to small children.

the day of their birth until they have grown up. Such experience can hardly be given in the classroom. But a sound motion picture like *Three Little Kittens* does much to overcome this difficulty.

There are various possible approaches, and any one, or any combination of these, could be used. They might be: (a) the outcome of another unit—say on dogs or birds—wherein cats are seen and discussed,

Encyclopaedia Britannica Films
At the request of the teacher, a child brings a kitten to school.

and curiosity is aroused; (b) a child's story about a cat's adventure, or a newspaper story about a cat, possibly with an accompanying picture; (c) the reading of stories about cats—life stories, or the much loved story about *The Three Little Kittens* who lost their mittens; or (d) a visit to the room by a cat or kittens.

For our purposes, let us consider that the kindergarten class has been hearing the story of *The Three Little Kittens*, learning the valuable lessons for life which it teaches and dramatizing the story, as well as studying pictures of kittens.

Then a child, at the request of the teacher, brings a kitten to school. This visit arouses keen interest and curiosity, thus enabling the teacher to develop a felt need for the moving picture, *Three Little Kittens*, and to set up objectives for its use.

Many of the objectives will be developed by the spontaneous questioning of the children during the study of the story and pictures or during the visit of the kitten. At this stage, the teacher will have to select and organize the questions asked so the objectives will be purposeful and so the answers will nearly all be obtained from seeing the moving picture.

Preparation Before Screening: The teacher will remind the pupils that they have asked some questions to which she has promised to try and give them the answers. She reads the questions and then tells the children that she is going to show them a motion picture called *Three Little Kittens* which will answer most of the questions for them. She should point out (for of course she has carefully pre-viewed the picture) that the picture is not about the three little kittens who lost their mittens, but about three real baby kittens. At this time, the children are asked if there are any other questions they would like the moving picture to answer for them about kittens. The number of questions set as the objective must, of course, be kept small for these young children.

These questions might be:

1. How big is a new born kitten?
2. Can new born kittens see very well?
3. What do kittens eat at first? Where do they get this food?

4. How does a mother cat carry a kitten?
5. How does a mother cat wash a kitten? How does she wash herself?
6. What games do kittens play?
7. What harm do cats do? How can such harm be prevented?
8. Can cats see in the dark?
9. What are a cat's whiskers for?
10. What can a kitten do with its claws when it doesn't want to scratch? How does it sharpen its claws?

(SCREENING OF *THREE LITTLE KITTENS*)

Follow-up: There should be immediate discussion after the showing, and answers to the questions should be sought. Some may not be well answered. This suggests the need for using these questions to set up new objectives for a second showing of the picture the following day.

Some of the questions are not answered by the film. These are: What harm do cats do? How can such harm be prevented? Can cats see in the dark? What are a cat's whiskers for? What can a kitten do with its claws when it doesn't want to scratch? These questions may be answered by pupils who own cats, or such pupils may be assigned the task of getting the answers and reporting to the class the following day.

To the unanswered questions may be added others to form the objectives for the second screening:

1. How long is it before kittens eat just like their mother does?
2. What does a mother cat eat? How does she do this eating?
3. Do cats like their masters and mistresses? Do they like being petted?
4. What work do cats do for their masters?
5. What noises do cats make? Can they show different feelings by the kinds of noises? Would you say they can talk?
6. When a kitten meets an enemy how does it protect itself?

Application: This might take the form of oral stories about kittens; art lessons; construction of panels; dramatizations; a visit to a pet shop; a cat show in school; or a study of jungle cats. There might be a third screening of the picture as a summary, and a conclusion to the unit.

Questions for Discussion

1. Could any other teaching aid have been used which would have taught these lessons as quickly and effectively?
2. Which do you consider to be the greatest value of this film—the information it imparts, or the attitudes it helps to build toward kittens?
3. In what ways is a motion picture lesson such as this even more valuable than taking the children to a farm to see a family of kittens?
4. Can you suggest other ways of presenting this lesson?
5. What have you learned about the preparation of a lesson plan for a motion picture lesson?

Stephen Corey, New President, DAVI Holds Summer Meet

Problems of audio-visual education discussed, including general promotion of the field, the February Atlantic City Conference, adequate personnel and physical facilities in the schools, and other related problems.

IN connection with the meeting of the NEA Representative Assembly in Cincinnati this summer, Vernon G. Dameron, Executive Secretary of the Department of Audio-Visual Instruction (DAVI) announced the new officers of the Department and also the members of the National Executive Committee.

Stephen M. Corey, University of Chicago, was elected president; F. Dean McClusky, University of California, first vice president; Francis Noel, State of California Division of Audio-Visual Education, second vice president. All terms were for two years.

Delegates-at-large include Gardner Hart, Thurman White, Grace Ramsey, Camilla Best, Roger Albright, Winifred Crawford, Irene Cypher, Helen Rachford, C. R. Reagan. The first three hold office for three years; second three, for two years; and the last three, for one term. Walter Wittich, University of Wisconsin was the retiring president.

Because of a shortage of housing accommodations in Cincinnati and because of observations made in Atlantic City at the last meeting of the Department of Audio-Visual Instruction, only one day could be allotted to department meetings. This one-day restriction and the exclusion of exhibits greatly limited the number of Department members who could otherwise have come to Cincinnati. NEA meetings were confined almost entirely to (1) members of the Representative Assembly, (2) persons who live in Cincinnati or vicinity, and (3) the necessary participants. In the light of these factors, an informational rather than a workshop type of conference was held. This type of conference further permitted DAVI members to infiltrate other

groups and thus stimulate audio-visual discussion in such groups.

Promotion of Audio-Visual Education Within the NEA

The great need for stimulating the expansion and development of audio-visual instruction via the various NEA departments was clearly recognized as a major activity of the DAVI. Many efforts have been exerted in this direction by both formal and informal means. A cooperative attitude exists on the part of the NEA departments; however, no effective pattern of cooperation has yet emerged. In fact, it is doubtful that any kind of general pattern would be practicable, primarily because of the great range in the status of audio-visual instruction among the various departments. For example, a few of the departments have very active audio-visual committees of which the Audio-Visual Committee of the National Council for the Social Studies and the Audio-Visual Project of the National Association of Secondary School Principals are probably the best examples. A few departments have no such committees. Accordingly, a different procedure must be developed for cooperative action.

Another example of cooperative effort is that of a project which is being planned with the American Association of School Administrators in which one or more joint-discussion meetings may be held in Atlantic City next February. In addition to the NEA departments, the possibility of increasing the promotion of audio-visual instruction through the 48 state education associations was considered. The conditions and problems are very similar to those of the NEA departments.

(Continued on page 399)

The NEA held its summer meet in Cincinnati and allowed but one day for department meetings. The Department of Audio-Visual Instruction held a series of informational conferences. Visible behind the banquet table (left to right) are Winifred Crawford, Henry Childs, Grace Ramsey, Floyde Brooker, Keith Tyler, L. C. Larson (photo to right) Vernon Dameron, Walter Bell, not identified, Carolyn Guss, Dave Strom, Harley Lyons, and Dorothy Anthony.

Boundary Lines

(International Film Foundation, Inc., Suite 1000, 1600 Broadway, New York 19, N. Y.) 10 minutes, 16mm, sound, color. 1947. \$90.00 less 10% educational discount.

Description of Contents:

By means of animated symbols, puppet-like figures, and paintings, this film illustrates some of the many connotations which the word "line" may have socially. Starting with a single line, it shows how "a line may be many things," and then, using familiar incidents, it presents the thesis that "a line is only an idea."

An apparently insignificant quarrel between two boys over some marbles, their growing consciousness of the social lines of color, origin, wealth, and poverty, a neighborhood gang war of nerves, and finally their adult hatreds, multiplied the world over, result inevitably in war. The true relationship of the barbarity of the jungle and the ignorance and superstition of the Middle Ages to their modern counterparts—the Ku Klux Klan, the concentration camp, and mass murder—is pictured next.

Boundary lines between countries can be friendly, or they can divide people against people. The increasing danger of the latter is emphasized by showing the gradual development of a primitive arrow into an atomic bomb against the ever-changing background of the intervening centuries.

The film concludes by posing several vital questions. It asks if, in a civilization which has built great cities, harnessed the elements, and fought disease, there is a place for lines of greed, possession, fear, and hate and reiterates the basic idea that a boundary line is just what we make it.

Committee Appraisal:

This film combines unusual modern art techniques and a powerful musical interpretation to produce a unified appeal for tolerance and the total abolition of all barriers between

Boundary lines between countries can be friendly, or they can divide people against people.

International Film Foundation

individuals, groups, and nations. Color, form, movement, and sound are synchronized so effectively that the picture should be of great interest to students of art and music, as well as to those interested chiefly in the ideas presented. It is more abstract in treatment than most other films in the area, and would consequently be limited in appeal chiefly to audiences bringing a background of experience to it. It uses an intellectual approach; yet it has a deep emotional impact. The ideas and questions presented should almost invariably stimulate lively discussion, whether in advanced high school social studies classes, in college, or in adult groups.

Wheat: The Staff of Life

(Simmel-Meservey, 321 South Beverly Drive, Beverly Hills, California) 27 minutes, 16mm, sound, color. 1947. \$225.00
 Produced by Jones and Kellogg. Study guide available.

Description of Contents:

Divided into three reels which may be used separately, this film covers the growing of wheat, the milling of wheat, and the uses of wheat.

The first reel shows a map of the wheat-growing areas of the world and then how wheat is grown in the United States. It includes the preparation of the soil, the use of machinery for planting and cultivating, the characteristics of winter and spring wheat, seed germination, and plant growth, conditions required for a good crop, hazards such as insects and drought, reaping and threshing by machine, the use of straw, statistics on wheat flour consumption and the use of other starches in some parts of the world, the easy storage of wheat, and the function of the grain elevator.

The second reel shows how wheat samples are ground and baked for testing purposes and then how large-scale milling is done. It includes an explanation concerning the use of the three parts of the wheat, the sifting and cleaning operations, a comparison of primitive and modern milling methods, steam tempering for easy removal of the bran, the various grades of flour produced, the use of wheat embryo and bran for animal food, the bleaching process, the addition of vitamins, and packaging the finished product.

The third reel explains that some wheat products are not suitable for human consumption but are good for animals, and then it shows large-scale baking operations. It includes the use of hard wheat flour in making elbow macaroni, spaghetti, noodles, and other similar foods, the machinery used to produce their characteristic forms, their value as foods, the entire process of bread-making, which requires blended flours, and finally some of the steps in making doughnuts and iced cakes.

Committee Appraisal:

Emphasizing both an understanding and an appreciation of the significance of wheat as a basic food of a large part of the world's population, this film explains step-by-step how wheat is grown and used in this country. Almost all of the scenes have inherent interest, and enough facts about wheat and the processes shown are presented to make the film of value on many age levels, from elementary through adult, and in many subject areas, including social studies, home economics, agriculture, health, science, and vocations. The

treatment is simple, and the material should be of equal interest to rural and urban audiences. Excellent color photography, well-paced narration, and a detailed study guide should all contribute to the general effectiveness of this film as a teaching tool.

Simmel-Meservey

Wheat is a basic food of a large part of the world's population. An appreciation of this fact is important.

Les Canaux

(International Film Bureau, Inc., 84 East Randolph Street, Chicago 1, Illinois) 14 minutes, 16mm, sound, black and white, \$67.50. Produced by Jean Brerault (Pathé). Commentary, edited with vocabulary and notes for class use, available in quantities.

Description of Contents:

Opening with a series of picturesque river scenes, this film, which was produced for elementary geography classes in France, presents several phases of the importance of canals and rivers in the life of France. The Seine and Oise are given as examples of navigable rivers, while the Loire is so shallow that a canal has been built to accommodate shipping.

Next, boats using various sources of power, such as men, horses, tractors, and motors, are shown. An explanation of the operation of a typical set of canal locks follows. Drawings are super-imposed upon photographs, and then animation alone is used to explain in detail how locks can raise and lower boats. From aboard a canal boat, the audience is shown how a canal is carried across the Loire River on a bridge.

The fact that, although slow, canal transportation is the most satisfactory form for heavy merchandise because of its low cost is illustrated by many scenes along the rivers and canals where boats are being loaded and unloaded. The port

This "still" from CHINESE SHADOW PLAY shows the priest Fa Ha at the left, the sea demons in the center, and the White Snake Lady at the right.

China Film Enterprises

of La Villette at Paris is shown in particular. The film closes with scenes of life aboard a canal boat.

Committee Appraisal:

Well-chosen scenes which carry most of the content of the film, combined with slowly-paced, well-ennunciated, simple French commentary, make this film one which should be very useful for elementary French classes on both the high school and college levels. Excellent photography and effective animated diagrams of canal locks in operation should make it valuable both for presenting information and for developing an appreciation of a phase of French life.

Chinese Shadow Play

(China Film Enterprises of America, Inc., 35 Park Avenue, New York 16, New York) 10 minutes, 16 mm, sound, color, 1947 \$75.00

Description of Contents:

This film presents a Chinese shadow play and then shows the parchment puppets and musical instruments backstage. As the curtained miniature stage appears, the thousand-year-old history of shadow plays in China is described briefly, and the fairy story of the "White Snake Lady" is introduced. The curtains part, the gongs sound, and the story, as enacted by the painted parchment figures with quaint, high-pitched voices, unfolds.

The White Snake Lady goes to the temple to try to recover her husband, who has taken refuge there. She is repulsed by a dragon and resorts to magic to summon the sea demons, which are driven back, in turn, by a magic ball. The White Snake Lady becomes a snake again and is imprisoned in a pagoda. When her son grows up, he visits her there.

At the close of the performance the audience is taken backstage to see the two-dimensional, jointed actors as they actually appear. The diminutive figures are stored all together in a folder.

Committee Appraisal:

Skillful presentation of an unusual art form which combines visual beauty, dramatics, and appropriate sound effects with Chinese mythology should make this film useful in several subject areas and on various grade levels. The fairy story should be appropriate for world literature classes on most any age level, while the technique of the shadow play should be of interest to dramatics groups, hobby clubs, and art students. Adult groups of similar interests should also find the film invaluable. The camera, which catches the beauty of the delicately painted parchment figures very effectively, remains stationary throughout the performance, unobtrusively transporting the film audience to the actual theater situation. After the final curtain, the film makes possible a visit backstage, where one could wish only for the opportunity to try his skill at making the strange little figures come to life behind the translucent screen.

DAVID SCHNEIDER, Editor, Evander Childs High School, New York City

FIDELITY OF REPORT, a Film For the Psychological Lab

By WILBERT S. RAY
Trinity College

Editors Note:

PUT down Professor Ray of the Psychology Department of Trinity College Hartford, Conn. as the Columbus who charted a newer way of creating and using educational films. Although this film, *FIDELITY OF REPORT* is the product of the psychological laboratory, this department recommends, without reservation, the use of this and similar types of films in all science classes, for one of the most important principles of scientific method—that of accuracy of observation. And, besides, what progressive departments of education can get along without “fidelity of report”?

This department would like to commend Dr. Ray for proving our contention, that worthwhile educa-

tional films need not be characterized by lengthy footage. In fact, Dr. Ray has shown, very effectively, that brevity. (60 seconds in *FIDELITY OF REPORT*) can be the soul cinematography.

THIS is a description of a film, *Fidelity of Report*, prepared for use in laboratory courses in Psychology. The film has also proven useful in other more general ways.

A Familiar Experiment in Observation

The Fidelity of Report experiment is one of the older experiments in the field of Psychology. It has usually consisted in looking at a tray of objects or a still picture for a few seconds and then reporting from memory on what was seen. It is, thus, a test of powers of observation plus immediate memory. The reader may be familiar with the same idea as a parlor game. Sometimes the experiment has been conducted by the teacher's arranging beforehand for some dramatic, unusual event (e. g., a loud quarrel with the janitor) to

(Concluded on page 390)

Workshop group at University of Florida experiments on making shots for nature slides. Mr. George Crutcher and Miss Norma Barts, the latter from the Educational Department of the DeVry Corporation, were in charge of the workshop.

Ragan Plans Film Series for International Understanding

By DOROTHY GRAFLY

A TOPIC under constant discussion in the field of international understanding is that of the atomic bomb. Philip Ragan of Philadelphia, last spring, completed for The National Committee on Atomic Information, with the technical assistance of The American Federation of Scientists, one of the most important films on the subject—*One World or None*. Film Publishers, Inc., 25 Broad St., New York City 4 are the 16mm distributors.

From NCIA film "One World or None"

Artist's reconstruction of Manhattan as it appeared before an atomic bomb attack. Below: Atomic fission. Shall the people of the world use this energy for the destruction or the betterment of mankind?

JOHN E. DUGAN, Editor
Head, Department of Education
Beaver College, Jenkintown, Pa.

Its significance, however, is greater than that of any one film, as it is the first in an important Public Service Series of films now being planned by the Ragan organization.

Ragan, himself, feels deeply that the abolition of war is the most urgent task now facing mankind, and believes that, to forward such an objective, the peoples of the world must be made to understand the immediacy of their peril, the obstacles in their path, the rewards of their goal, and their responsibilities in a world of peace.

As a step, therefore, toward meeting this challenge, he has undertaken two series of public service films to be produced under authoritative sponsorship. Designed to reach the public at home and abroad through every available channel, including the commercial theater, these films, while effective individually, increase their significance when presented in series.

Titled *Problems of the Peace*, the first series tackles some of the most immediate and perplexing problems of the atomic era and will not only visualize the appalling destruction deriving from negative use of atomic energy for purposes of war, but will follow the first film in the series, *One World or None*, with a second film in which the constructive possibilities of the same energy will be discussed. The aim will be to show how, through intelligent application of science and technology, man may raise the level of well-being for all the earth's peoples. It is, in fact, for all the earth's peoples that the entire series has been planned.

Profiting by opportunities offered during World War II to reach and mold public opinion, the Ragan technique has matured to the point of developing a unique and universal visual vocabulary. He believes that the visual comes first and the word afterward. Consequently, commentary flows from his visual sequences. This fact gives him distinct advantage when his output is aimed at international understanding, for Ragan's visualization, not the written word, supplies the story. Anyone can understand picture sequences, and what Ragan and his artists express in the film medium can be as readily understood in China as in the United States. Anyone in any country of the world who has eyes to see and a brain to comprehend can get the basic idea even without benefit of supplementary wordage.

The third film, *World Government*, will show through graphic symbols, and when necessary, through a combination of documentary shots and animations, how the abolition of war and the advent of world-wide plenty can come only through a universal rule of law, binding on all individuals.

That war must be outlawed if the world is to survive is made terrifyingly clear in *One World or None*, a film that proves what has actually happened when force took precedence over law. Tracing, as it does, the progressive lethal effectiveness of weapons from the Greek spear, which killed one, to the atomic bomb that killed 80,000, it ends with a sea of crosses calculated to bring home to every individual, illiterate or learned, the pressing need for the outlawing of war in order to end forever the menace of the misuse of atomic energy.

World Government, thus, seems a logical sequel to *One World or None*. But generalization is broken down into contributory problems as the series progresses. Fourth will come a film on *World Trade* which points up the menace of old habits of thought on the distribution of the world's goods and shows how such habits can lead, and have led, to conflict, chaos, and war. Visuals will indicate how the reduction of trade barriers and the industrialization of backward world areas can contribute to peace and universal prosperity.

Another important problem to be handled is that of *Kace*. Linked inseparably with both the problem of world government and that of world trade, it is placed fifth in the series, and it will take its theme from the fact that racial discrimination is morally indefensible and that tremendous political, economic and social losses result from the failure to provide opportunity for all without regard to race, creed, or nationality.

While such problems are immediately pressing, they cannot be permanently solved until youth has been trained to think and to act in accordance with the demands of the new atomic age. Consequently, this first Public Service program will end with a film on education of the individual for his new and great responsibilities as a world citizen.

It is, however, clear to anyone who reads newspapers that to achieve such citizenship there are individual countries to be considered no less than such broad considerations as world government, trade and race.

Key countries, then, will be given film treatment in the second series, titled *The Nations*. Included are the U. S. S. R., The U. S., Britain, China, India, France, and the Nations of the Middle East.

From 1942 to 1946, Ragan turned out forty films dealing with many different phases of Canadian war effort. These films brought home to the public a variety of subjects, ranging from need to mail Christmas parcels early to an understanding of economics in peace and in war.

As a precursor for *World Trade*, Ragan has already produced *Mutual Aid*, a film dealing with Canada's form of Lend Lease and visualizing flow of trade throughout the world. Coupled with *Money, Goods and Prices*, it provides excellent background material for the *Problems of Peace* series.

Ragan animation grew out of serious, informative subject matter, and from its inception it has taken the stand that facts have a drama all their own that can be made visually effective. Its objectivity is the animation of facts without recourse to a fictional indirection that tells an amusing story and hopes an audience will absorb the message as a by-product of a laugh.

From NCAI film, "One World or None"
The international involvement of the theories of atomic energy is shown graphically through the use of animation.

Ragan points to recent scientific developments as proof of the dramatic force of facts. Atomic energy and radar, for instance, are outstanding examples of facts that pack a punch and have direct audience appeal.

When Ragan feels that an actual documentary shot is more telling than animation he uses it. His *One World or None* has many such pertinent shots. But the burden of its message is carried by the animation. Ragan also believes in collaboration, and his associates are made up of a group of individualists, each a specialist in his own right.

The group, with its different egos, Ragan claims, tends to retain objectivity, and to produce visuals that are intelligible to it as a group. And what is intelligible to a group, rather than to an individual, can be communicated readily to that larger group which is the world audience.

Since public service films must be accurate and authoritative, Ragan is seeking as a sponsor for each the organization most vitally concerned with the particular problem. Through it, he reaches top authorities, and with their technical aid, he develops his visual sequences and his resulting story board.

In producing *One World or None*, he had several conferences with Dr. Albert Einstein, consulted with Dr. Harold C. Urey, and was in constant touch with Dr. Leonard L. Schiff of the Randall Morgan Physics Laboratory of the University of Pennsylvania. Raymond Swing contributed the commentary.

At no time in the world's history has mankind so desperately needed a direct technique for intercommunication. What Philip Ragan has developed is, therefore, of the greatest potential importance as a contribution to universal human understanding.

WILLIAM S. HOCKMAN, Editor, 1616 Marlowe Avenue, Lakewood 7, Ohio

Seeing and Doing In the Vacation School

By CHARLES W. TYRRELL*

The Significant Use of Sensory Materials in The Church

ON the second day of vacation church school, my daughter came home with two snails in a sack. My curiosity was aroused. What did snails have to do with religion? Perhaps the letter which came with the snails would explain. In it the teacher reminded us:

Earth's crammed with heaven
And every common bush afire with God.

Then she went on to explain that in the lowly snail is exemplified one of the most significant principles of the universe, the spiral pattern. Life tends to move out, around, and up toward God. For our own edification, we were reminded of Elizabeth Barrett Browning's *What Is Art* and Oliver Wendell Holmes' *The Chambered Nautilus*.

At the Church

The next day, I went to the church to observe what use the teacher was making of other sensory materials. The room was arranged around an exhibit center. On one small table covered with a gray cloth was the teacher's exhibit, consisting of a picture-poem folder, fern, large shell, small spring, pine cones, a snailery, black paper for the snails to crawl over, and a magnifying glass. On another table were the children's exhibits, consisting of shells, shell-bead strings, cones and various articles which suggested the spiral pattern. Around the room were pictures cut from magazines or drawn by the pupils. In another part of the room was a book browsing table. By the number of children referring to the pictures and book table, I could see that it was a significant part of this well planned unit of study.

In addition to the exhibits, there were projected colored slides which illustrated certain days' lessons. When appropriate slides were not available, the teacher produced her own handmade lantern slides in color.

What Keeps the Stars from Falling?

During the second week, the sound of children having a happy time on the church playground took me to the window. In response to my inquiry, the teacher told me that the pupils had been studying "What Keeps the Stars From Falling." I observed that each child had a string, one end of which was held by the child in the middle. They were all moving in a certain

relation to the middle person. As the teacher continued the conversation, the strange game took on meaning. The center child was the sun who held the planets in position by the pull of gravity.

Here was visual education at its best. In an area of interest where there are few good prepared visual materials, the teacher produced her own from things near at hand. Most of the materials she used were of such a character as to promote pupil participation.

Develop Visual Materials

It is rare to find prepared sensory materials which meet the requirements of a course of study. In most cases, the materials must be adapted, and the course, revised to provide for the use of such aids. Here, however, the sensory materials were developed to fit the needs of the unit. Good integration was the result.

At this point, visual materials produced by the teacher and pupils have a decided advantage: They can be designed and introduced according to the needs of the hour. Pupils do not get the feel that these materials are dragged in, but that they are integral part of the unit of study.

Such materials are easily accessible. The only cost for the aids used in this nature course were the snailery and rental on a set of slides. The snails were collected by an older boy who is interested in nature study. All of the exhibits were picked up by the teacher or supplied by the pupils. Since one of the considerations in the use of visual materials is cost, here is an answer in the use of home-produced aids.

Active Participation

Too often what passes for visual education is in the passive mood. Children are invited to observe but not to do anything about what they observe. This is

There are many kinds of boundary lines. This painting from the film, **BOUNDARY LINES**, shows the boundary line between wealth and poverty.

International Film Foundation

*Director of Religious Education, First Presbyterian Church, Evansville, Indiana.

A "still" from the 16mm film, **THE BLIND BEGGAR**, showing Jesus and the beggar.

especially true when the medium is projected pictures. But the visual method used by this teacher required active participation on the part of the pupils. The children became the planets on the playground. They went on field trips to discover the spiral pattern of the universe. They learned to see God's handwork in the snails they cared for.

At best, the classroom is an artificial situation. Little real learning takes place there unless the teacher is sufficiently creative to bring the ideas expressed into a meaningful life situation. Through the use of sensory materials, so that the pupils actively participate, the situation becomes a learning experience.

The last verse of a song composed by this group expresses best what the vacation school experience meant to the children:

What do you think, dear God?
Down in the woods I found
A snail dressed in brown,
And I found it by a pond.

Emory Seminar Report

The report of The Emory Seminar, conducted by the General Board of Education of the Methodist Church, and the Candler School of Theology of Emory University, is now available. This 176-page report includes all the principal addresses and discussions, and presents the findings of the several specialized work groups. Approximately 40 pages are devoted to detailed statements of four seminar groups—children, youth, adults, and the general church school. Each one is characterized by clear thinking and a lively awareness of the place of visual methods and materials within the total educational work of the church. Here is convincing evidence that "the churches have made more progress in three years than the school has made in fifteen," as Mr. Dennis R. Williams is reported on page 25 as saying. Schoolmen can learn many helpful things from this report, and church officials will do well to ponder its pages.

Church Interest Extensive

According to Mr. Ralph F. Peck, a Presbyterian elder who founded the Selected Films Release Sheet Service, his church clients stretch across this country, into Canada, and inquiries come from Belgium, England, Holland, Hawaii, the Philippines, and Dutch Guiana. This Whittier, California, concern supplies free a standardized descriptive sheet on all the religious films and can book just about any film a church would desire.

The Pastor Makes a Movie

By HAROLD E. WAGNER*

FOR something over twenty years I have been a camera enthusiast but I did not acquire a movie camera until 1945 when I bought a Cine-Kodak Model B, f/3.5 lens. I began to think up ways and means of making it useful in my educational program. The first result was the filming last summer with my vacation Bible school of a 350 foot film entitled, *The Seven Sacraments*.

Our modern emphasis on visual education is most excellent, but far too many children still look upon pictures as entertainment. My experience has been that even with planned discussion before and after films they still fail to obtain maximum teaching values. I got the idea that if the children helped to make a film on a religious subject that they would be more interested and would learn more than in several months of lectures or even in "visual" sessions. With this thought in mind, I adapted a religious mystery written by Reverend F. J. Powell, of Cambridge, Mass., and enlisted the cooperation of the boys and girls of the Junior and Senior departments of the vacation Bible school.

We pastors talk quite glibly about the various sacraments and rites of the church to our children. How many of our children and young people have ever witnessed an ordination? To give the children the opportunity to see and take part in each of the sacramental rites, as well as to learn something of the technique of taking movies, was the underlying purpose in making the film.

All the roles were taken by members of the church school. The Bishop was my son, then aged 19; the Angel of the Sacraments was 16, and the priest a lad of 14. The children helped with the script, the lighting, and the costumes.

The film opens with a sequence showing a group of children playing on the green, taken in a neighboring country park. On the horizon appears a strange lady, who proves to be the Angel of the Sacraments. The children inquire who she is and are told that she can tell them of "means of grace" which can aid them in their everyday life. She gathers them around her under a tree and tells them of the various sacraments. The film then is a series of flash-backs, first to baptism, then to Holy Communion, Confirmation, Penance, Ordination, Matrimony, and Unction. The epilogue is a repetition of the opening scene, only in reverse.

I did the photography and the main titles. The children, however, helped make all the sub-titles. We made two "on location" trips: to the park for the prologue and the epilogue, and to a home for the scene of the Unction sequence. All other scenes were taken in the church.

The film was shot on Kodachrome, and is silent. I edited it to 350 feet. It has been very well received. Our Bishop has recommended it for diocesan showing and the Photoart people (Milwaukee) are using it as a regular feature in their weekly institutes on visual education. Our national office in New York (281 Fourth Avenue, N. Y. 10) will review it for possible national use.

The film has rather obvious defects, such as the opening pan being too fast and the dolly shot made

*Vicar, St. Peter's Episcopal Church, West Allis, Wisconsin.

without a dolly. It was filmed entirely with five floods, the only special equipment in addition to my camera. I had no faders; no back winds. In my next picture, I will use my new Cinklox camera with an f 2.5 lens, fast and slow speeds, and a coated lens. I will use Kodachrome again, and I may undertake filming Marie J. Hobart's drama, *The Book Beloved*, featuring those sections of our Prayer Book dealing with the consecration of a church, the institution of a minister, etc.

The rental of *The Seven Sacraments* to churches outside Wisconsin is five dollars per showing and requests should be addressed to me.

Wheaton College Conference On Audio-Visual Materials

By GROVENER C. RUST*

THE smaller, more localized type of audio-visual conference for the church worker had its worth demonstrated in a seven-session conference here at Wheaton College. Many personal problems were threshed out, and many valuable reports on utilization gathered.

Seven topics were considered, one at each meeting. The topics represented areas of usage full of problems and questions for those enrolled: young people's work, worship programs, missionary promotion, the church school, constructive recreation, and education for the entire church family.

One interesting and stimulating report covered the "church field-trip," or "school journey," as public education calls it. They were considered excellent projects for young people's groups. One minister indicated that they helped to hold interest by giving his youth something stimulating and worthwhile to do. These "church field-trips" can be made to country homes, orphanages, country churches, hospitals, sanitariums, blighted urban areas, reform schools, rescue missions, and other similar institutions. These trips served outstandingly to inform and create attitudes in

*Director of Visual Instruction, Wheaton College, and co-director, with Mr. Donald C. Boardman, of the conference.

the minds of the pre-adults and made the fields of Christian service dramatically living to them.

In considering the area of the "produced" audio-visual aids, the following "findings" were set down:

1. More films on Christian living, with the Bible as a behavior text, are wanted. Some of the parables—"The Sower," "The Prodigal Son," "The Good Samaritan," and others—should be done in modern raiment with the modern counterpart of the life they portray so that they will "strike closer to home." (One film-user reported that the Baptista film, *The Prodigal Son*, made a greater impression than the Cathedral film of the same name, even though it was inferior in technical and dramatic quality.)
2. Churchmen want slidefilms on doctrine from the pure biblical point of view.
3. It was generally held that the producers of materials for the church should have had practical experience in the work of the church. Theological seminaries, it was held, should give courses in audio-visual aids.
4. Hymn films in color with high-quality musical scores and very closely correlated pictorial material were considered very effective. (Editor's note: Wish we had a few!)
5. It was felt that motion pictures belonged to the older groups of the church school, and slides, filmstrips, flat pictures, etc., were considered more effective with the children.
6. The church is making too little use of graphic materials, which have excellent possibilities in religious education.
7. The conference held that more local film depositories were needed to increase availability. A 48-hour shipping radius was suggested as the maximum for efficiency.

In this type of conference, needs were defined, and individual problems dealt with clinically. Those attending expressed a general feeling of satisfaction with the intention and method of the conference. The "public" afternoon sessions were well attended and the discussions indicated a high level of interest. The morning training classes gave practical "know-how" instruction to neophytes and helped the others extend their familiarity with materials and equipment. This type of conference is commended to other denominational schools of the country as an effective way to serve their constituencies in visual education.

Church Screen Productions

BOY MEETS GIRL is a wholesome, Christian approach to some of the initial problems of boy-girl friendships. After boy meets girl, he dates her over the phone. (Filmstrip, consisting of 40 frames, complete with script and discussion guide.)

Correspondence

Dr. Arthur O. Rinden, Director of Audio-Visual Aids for the National Christian Council of China, with offices at the University of Nanking, after five months in his work, writes that he reads with profit and enjoyment every issue of THE SCREEN. He says:

"We can get some excellent materials here locally. For instance, we are nearing completion on a set of color slides on "Amos," and are well started on a set depicting the story of "Silent Night." In two more weeks, we will have two more artists begin work to speed up production a bit.

Only a week ago, we finished our First National Christian Council Audio-Visual Aids Workshop, held here at the University of Nanking. Since we had so little equipment (due to delays at Shanghai customs), and because we wanted to have it as a pilot workshop in preparation for a more ambitious effort next year, we did practically no advertising. On account of travel difficulties and high costs, we expected an attendance of 10, but 23 came. (I am enclosing a picture). They want a longer program next year. . . .

It is obvious that there will be a large demand for filmstrips, because of their economy and ease of use. Already we have started to make our own. There is, also, a real demand for movies. We have just received the 2000 Years Ago series. . . . We find a clear-cut story film like *The Healing of M'vondo* very useful. . . . Keeping informed on new films is very difficult for us. The Church Department will be a big help."

Before returning to China, where he had served as a missionary ten years prior to the War, Dr. Rinden was director of visual aids for the Congregational-Christian churches.

New Materials

• *How to Use Bible Slides In The Sunday School*, a set of 24 full-color 2x2 slides, by Church Craft Pictures, designed to help the teacher make effective use of the Bible slides of this producer, were released in July.

• Church Craft's kodachrome slide set, *The Ten Commandments Visualized*, whose production was delayed, was released during the summer.

• *Into All The World*, a 20-minute black and white sound film on world evangelism, was produced for the Northern Baptist Convention (152 Madison Avenue, N. Y. 16) and released early this summer. It presents dramatic material from Protestant missions in many lands and at home.

• *Boundary Lines*, produced by the International Film Foundation (1600 Broadway, N. Y. 19), is a 19-minute sound color film which makes a plea for eliminating the boundary lines which divide people from each other and nations from nations.

• *Not By Bread Alone*, a 20-minute black and white sound film, is the first of the films on European reconstruction which actually shows church-supported relief and rehabilitation under way. It was produced for the National Council of the Protestant Episcopal Church 281 Fourth Ave., N. Y. 10).

• During the summer the Methodist (150 Fifth Ave., N. Y. 11) four-reel color film, *Go Ye*, was revised into a shorter film by Harry Spencer, Director of Visual Aids for the Board of Missions.

News Notes

• In June about four thousand leaders of The Church of The Brethren met in Orlando, Florida, for their 161st national annual conference. Visual education was brought to the attention of the delegates by Dr. E. G. Hoff, Dr. Mary Leigh Palmer, and Mr. Robert Knechel, by means of addresses, conferences, demonstrations, and exhibits of equipment as well as the screening of films.

• Dr. Mary Leigh Palmer, formerly Director of Visual Education for the International Council of Religious Education, taught the course on audio-visual aids in religious education in the summer school of Union Theological Seminary.

• The Christian Education Committee of the Manitoba Conference (441 Somerset Building, Winnipeg, Canada) has issued a bulletin on visual aids and provided the churches of the conference with a catalogue of visual materials which it can supply. The Reverend Peter Gordon White is secretary of the committee.

In Production

■ Church Craft Pictures is planning to produce the *Passion Story* in both slide and film form this fall.

■ Church Screen Productions (5622 Enright Avenue, St. Louis 12) will bring out this fall a filmstrip on how to use filmstrip. It will be called *How To Use Filmstrip In The Church*. Order from your visual education dealer. This firm is also doing a Christmas filmstrip in full color.

The First Audio-Visual Aids Workshop of the National Christian Council of China, held at the University of Nanking in May, 1947. Dr. Arthur O. Rinden, Director, is in the center of the back row.

The Story of Menstruation

A 10-minute color movie with sound
by Walt Disney Productions

SPONSORED BY KOTEX* PRODUCTS

Teachers of Teen-Age Girls

From **THE JOURNAL of the American Medical Association**—“This excellent film (*The Story of Menstruation*) is intended for showing to groups of adolescent girls to explain the physiology of menstruation. This film accomplishes the extraordinary feat of teaching something essentially serious while preserving an air of good cheer and relieving the tension by unexpected humor. It consists entirely of animation, beautifully colored and accompanied by carefully worded commentary. The film does not undertake too much, since it is specifically adapted to a particular group. The introduction of this film

into the schools should of course be accompanied by the teacher's guide and by the pamphlets 'Very Personally Yours' for individual distribution.”

Teachers Welcome It—*The Story of Menstruation* was filmed to help teachers create a normal, healthy attitude in the minds of teen-age girls. Teachers have found it such a big help in handling this difficult subject that they have shown it to literally hundreds of thousands of students since its release in November of '46. In city after city, school systems are registering their approval by showing the film to every girl in all junior and senior high schools.

Acclaim New Educational Film

As one teacher commented, "The picture portrays beautifully and unemotionally a phase of a normal girl's life. It covers in ten short minutes far more subject matter than a teacher could handle in forty-five minutes, even with careful preparation."

Students Applaud — The reaction of students is deeply gratifying. Girls participate in discussion readily — ask questions freely — with no trace of embarrassment. Fear and superstition are banished in the light of scientific fact. And common-sense rules for physical and mental health take the place of rumors and taboos.

Parents Are Enthusiastic — "I'm glad my daughter had the opportunity of seeing this film. I wish I could have seen such a film when I was a girl" — that has been the reaction of hundreds of parents at PTA meetings where the film has been shown.

How to get Prints — 16 mm. prints are available to schools without charge on a short-term loan basis. Just fill out the coupon below and you will receive complete information promptly. Demand for prints for Fall is heavy, but we will try to meet your request so that you can fit the picture into your schedule at the right time.

THE LITERATURE IN

A Monthly Digest

VISUAL INSTRUCTION

EXPERIMENTAL FILM TECHNIQUE

● **Art in Cinema**—Frank Stauffacher, ed., Art in Cinema Society, San Francisco Museum of Art. 1947. 104 pp. An extremely attractive brochure prepared as a background for the series of avantgarde films, "Art in Cinema," presented at the Museum.

The articles by leaders of the experimental film movement explain the motivation and intent of some of the productions. Included are statements by Hans Richter (a very illuminating history of avantgarde film workers in various countries), Elie Faure, Man Ray, Luis Bunuel, John and James Whitney, Erich Pommer, and others.

The ten programs in the series were arranged in collaboration with the Museum of Modern Art Film Library. Included were the classical *Cabinet of Dr. Caligari*, *Ballet Mecanique*, *Skeleton Dance*, *Meshes of the Afternoon*, *Berlin: Symphony of a Great City*, *Blood of a Poet*, and many others whose authors attempted to use the film medium for introspection, fantasy, and non-objective expression. Detailed program notes are given for each of the ten programs.

This booklet should be of great assistance to the many other individuals who have the ability and creativity to stretch the canvas of the motion picture medium, for it brings together the statements of avantgarde producers, as well as the titles and descriptions of noteworthy films.

BOOK REVIEW

● **Magic and Myth of the Movies**—Parker Tyler. Henry Holt & Co. 1947. 283 pp. \$3.50.

This appears to be the second volume by the author in which he indulges in a psychoanalytical study of the persons that have been depicted in Hollywood films. The critical dissection of the Hollywood product is not intended so much as a criticism of the industry as of its methods. The author, it would appear, has been so completely projected into the situations shown in movies that he engages in a prolonged analysis of why certain characters behaved as they did.

The book could not be recommended for students of photoplay appreciation in high school, and it might leave their teachers as confused as it did this reviewer. In his preface, Mr. Tyler explains that he intended to give some voice on the positive side to Hollywood's films through this book. His thesis is that the movies, similar to much else in life, are seldom what they seem. In this sense, movies are dreamlike and fantastic . . . The author regards the cinema as contemporary *myth*, rather than art because each film is a composite of group action and often does not resemble the original literary work, and therefore lacks any form (or art), but rather attempts to mirror public superstition and belief.

To further this thesis, Mr. Tyler then goes through 12 chapters of most unconventional movie analysis—not criticism as it is usually found in newspapers, periodicals, or even in previous books on this subject; but the psychoanalytical interpretation of why Mildred Pierce, or Neff or the soldiers in war films behaved as they did.

Mr. Tyler has obviously been read with mixed reactions before. At the beginning of chapter 10 he writes: (p. 211)

"There have been critics of my method of interpreting movies who claimed that the movie I reconstructed on an

ETTA SCHNEIDER RESS, Editor

analytical basis bore little resemblance to the actual Hollywood product; the more literate if less acute have implied that my criticism was but a superoptical rationalization of visible reality.

"I don't mean to apologize by justifying myself on the basis of Granted, so what? I want to carry my theory of meaning as essence rather than as form to the point where the senses themselves are in question, in just as much question as though we were dealing with magic psychology, rather than rational or scientific psychology."

It seems to the reviewer that the book may have a basis for endless discussion among the sophisticated "students of the cinema." But if I may be allowed to represent the conventional educator, I would conclude that it is not a very useful book for an educator's bookshelf.

RADIO YEARBOOK

● **Education on the Air**—I. Keith Tyler and Nancy Mason Dasher, editors—16th Yearbook, Institute for Education by Radio. Ohio State University, Columbus. 1946. 524pp. \$3.50.

The total impression of the proceedings of this, the first postwar conference of the Institute, is that the persons engaged in education by radio have attained a maturity and self-confidence which can lead to greater and more effective growth. First, there were addresses by radio-minded confreres around the world that brought home the critical problems of keeping the masses of people informed and mutually interested in the affairs of the rest of the world. Secondly, under the topic "Radio Faces the Future," administrators debated with the Federal Communications Commission on the newest policy it has adopted in defining what public service on the air should mean.

Educators got down to business as they described actual programs and community efforts to use radio as a social force. Outstanding representatives, for example, of various social and religious groups told of the achievement and problems still ahead. These addresses were followed by section meetings where radio educators were given a chance to exchange ideas.

Through panels, round-table discussions, demonstrations and section meetings, the Institute attacked such other topics as the effectiveness of International Junior Town Meetings, radio workshops, the adequacy of university training for radio, some new techniques at audience reactions, and the like. Throughout the transcript of debates and discussions, there is implicit a mutual respect between those radio workers who are employed by the industry and those who are concerned with education on the air.

SOURCES

● **Educators Guide to Free Films**, 7th Annual Edition—Educators Progress Service, Randolph, Wisconsin. 341 pp. 1947. \$5.

The book is composed of six sections planographed on different colored paper: subject index, film listings by areas, title index, source index, cross index (referring to films in related fields), and an availability. Free filmstrips are also included. John W. Diffor, Visual Education Director, Randolph High School, Randolph, Wisconsin, is editor.

For the first time

the complete story of wheat!

 PRODUCERS
 DISTRIBUTORS Meservey
 BEVERLY HILLS, CALIFORNIA

HERE is a classroom film you have waited for . . . a single film that presents the complete and fascinating story of our nation's most important grain.

Produced in three parts, "Wheat: The Staff of Life" is a factual step-by-step study of all the highly interesting operations required to bring wheat from the farm to the homes of America. The subject is treated so extensively, it will interest and inspire city and rural students alike.

REEL I—Wheat-Growing: An absorbing demonstration of the growing of wheat: preparation in plowing and discing; planting and growing; reaping and threshing; and delivery to local grain elevators. Especially outstanding micro-photo sequences showing germination of wheat.

REEL II—Milling: Following wheat through one of the world's largest mills; laboratory tests are detailed; then the process of cleaning, tempering, milling, grading and packaging of wheat.

REEL III—Wheat uses for men and animals: All the interesting bakery processes for bread, cakes, cookies, etc.; the making of macaroni and spaghetti; and the use of wheat as a food for domestic and farm animals.

THOUGH individual reels may be used independently for *special emphasis* on a particular phase, the three sequences are realistically woven into *one* consistent treatment of this all important subject. Order for preview today.

THE PILGRIM PRESS

- **Sources of Information on Teaching Aids**—John Pullman Kishler—Visual Education Consultants, Inc., 47 W. 56th St., New York 19. 10pp. mimeo. 25c.

A guide for the beginner, including books, organizations, periodicals, and master lists.

- **Audio-Visual Aids Catalog, Vols. I and II**—Board of Education, Dept. of Libraries, Visual Aids, and Radio, 31 Green Street, Newark 2, N. J. 379 pp. 1947. \$2.

The Newark Board of Education has recently issued a complete list of teaching aids, covering 2,000 motion pictures, 1,800 filmstrips, 30,000 lantern slides, and 800 records. Items are arranged by subject heading and also by title, running strictly alphabetically. A system of abbreviations indicates the type of material; e.g., L for lantern slides, M for motion pictures. A very complete introduction contains many suggestions for classroom use of audio-visual aids and bibliographic references.

- **Motion Pictures—Basic Information Sources**—Inquiry Reference Service, U. S. Department of Commerce, Washington 25, D. C.

A list of published material on motion pictures, both fictional and nonfictional. Foreign marketing material is included in one section. The booklet is divided into the following parts: I. Governmental Publications, II. Non-Governmental Publications, III. Directories, IV. Trade Journals.

PERIODICALS

- **Look and Listen**—Vol. 1, No. 6, June, 1947. 30 Fleet St., London E.C. 4, England. Monthly.

A new publication of broad scope, whose editorial staff is not credited by name.

The articles tend to be provocative, rather than pedantic. In "New Methods for New Teachers," J.E.B. Peet describes how much was accomplished in an Emergency Training College course for teachers through a film society for film appreciation as well as through a methods and materials course.

"Sorting Out the Visual Education Muddle" by G. Patrick Meredith is part of a series on principles and methods of visual education. It is an interesting criticism of the status of the visual aids movement today, with particular emphasis on the kind of research still needed.

There are other thoughtful articles on the filmstrip (contrasted with the slidestrip which is a series of slides put together for the convenience of an off-screen narrator). on the unfulfilled possibilities of broadcasts to schools, and so on.

UTILIZATION

- **A Group of Class Projects**—*New York State Education*, 34:441, March, 1947.

The "World's Fair Exhibit" at the John F. Hughes School in Utica, under the direction of Mrs. Marjorie Wagner, the teacher, was the outgrowth of the social studies class work in the 6th grade. The class was divided into seven groups, each selecting a country for study. Each committee prepared a program for presentation to the class, with pictures, maps, costumes, speakers, films, and the like. A colorful 20-foot mural showing the natives of each country, with typical architecture in the background was prepared in the art class. A variety of interesting activities were included in the unit which correlated arithmetic, language, art, music, and the other school subjects. The culminating World's Fair Exhibit was held for two days and over one thousand people visited the room, including classes from parochial and public schools in nearby towns.

SPONSORED FILMS

- **Sponsored Films in Education**—Wilfred F. Howard, J. Walter Thompson Advertising Agency, N.Y.C.—*Film and Radio Guide*, 13:7 Feb. 1947.

A digest of a report prepared last year which was circulated on a confidential basis. It represents a thorough and open-minded investigation of the possibilities for public relations in the educational motion picture and the needs of education which such films would fill.

The author found in talking to "leading figures in education, the Services, and business" that sponsored films would be welcome to the schools provided they fulfilled certain requirements: they must have tangible value in the curriculum; they must be aimed at a specific group; they should cover only one subject, have clearly descriptive titles (not 'cute' or 'tricky'), and run less than 20 minutes. As to advertising, it must be short, honest, accurate, and readily identifiable; it should not try to put over a political, social, or economic point of view.

Next is discussed the potential outlet for sponsored films and some of the areas in which such films would be useful. But to be truly educative, they must be used in schools where films are used effectively.

The two possibilities for the future are:

"Poor films, poorly produced, poorly utilized, will discourage educators, disillusion the public, discredit the use of films in the schools, and weaken if not destroy a valuable medium of advertising and public relations.

or

"The right kind of educational films, many of them sponsored by responsible elements in business—by men capable of civic leadership and willing to accept it—will become a powerful force in creating the kind of world we want to live in."

Films of the World Festival Is Announced for Chicago

The Chicago Film Council has completed arrangements for a "Films of the World Festival" to be held for seven consecutive Saturday afternoons at the Surf Theater beginning October 11 and continuing through November 22. Outstanding short documentary and informational films will be selected by a panel of judges from the films submitted to the contest committee. These select films will be screened for the benefit of the public, including especially teachers, church people, and leaders of community and adult groups. Through the "Films of the World Festival," producers and distributors of the world have an opportunity to gain public recognition of the importance of their industry," stated Ralph Creer, president, Chicago Film Council.

USDA Sees Need for Festivals

Experience gained at a local Chicago Film Festival last spring indicated that there was a true demand for something larger . . . for a festival patterned after those held in many countries in Europe. Even the United States Department of Agriculture, important producers of serious films, issued a festival plea in its newsletter of June. "How about holding some informational film expositions in this country?"

A Civic Enterprise

The "Films of the World Festival" is truly a civic enterprise. Supporting this festival are many of the leading civic and educational organizations of Chicago and of the nation, including the General Federation of Women's Clubs, the Parent-Teacher Associations of Chicago and of Illinois, the University of Chicago, Northwestern University, the Junior Red Cross, and the Film Council of America as well as many producers and distributors of documentary and informational films. Wesley Greene is "Festival" chairman.

Surf Theater

Elmer and Harry Balaban, leading Chicago theater owners, have donated the use of the attractive Surf Theater for the festival and will present an award for the outstanding amateur film shown during the festival.

Conditions for the Entry of Films

There will be seven categories or areas of subject matter covered by the festival: (1) **Arts, Crafts, and Music**; (2) **Sponsored Films** (on any subject, must have been made as public relations films, financially sponsored); (3) **Peoples and Lands of the World**; (4) **International Interdependence**; (5) **Physical Sciences**; (6) **Biological Sciences**; (7) **Amateur** (16mm. any nonfiction subject). An entry fee of \$10 per title in all categories except amateur will be charged to defray the costs of the festival. The amateur fee is \$5. Producers desiring to enter films should act at once and write the Chicago Film Council, 222 North Michigan Ave., Chicago 1, Illinois, U. S. A. for complete rules and entry blanks.

UN Film Production Assigned To Ten Countries

The United Nations Film Board at its third quarterly meeting at Lake Success today assigned ten films to ten different countries for production. The meeting also elected the United Nations Educational, Scientific and Cultural Organization (UNESCO) to the chairmanship of the Board for one year. UNESCO's representative, Mr. Gerald Carnes, presided at today's session.

Mr. Benjamin Cohen, U. N. Assistant Secretary-General for Public Information, opened the meeting as chairman and conducted the election of his successor. He also welcomed the representative of the International Labour Organization (ILO) which today became a formal member of the Board and pledged its full cooperation.

The Board's Executive Director, Mr. Jean Benoit-Levy, read a message from Governor Carl Millikan, Chairman of the U. S. Film Committee for the United Nations, greeting the Film Board, emphasizing that there will be only one committee in the United States to serve the United Nations and all its agencies and offering its utmost support to the Board.

The Board passed a resolution, expressing its appreciation for this assurance of the Committee's full cooperation.

Following its previously adopted policy of internationalizing production of United Nations films,

the Film Board made the following assignments: BELGIUM, *Combating Juvenile Delinquency*, international efforts to solve the problem of juvenile delinquency; CANADA, *Surface of the World*, accurate mapping of the earth's surface is only possible by international cooperation, exchange of information, and standardization of geographical and geological concepts. CZECHOSLOVAKIA, *Young Ideas*, the common problems and aims of youth throughout the world; FRANCE, *From Lighthouses to Radar*, international cooperation to insure safety at sea; MEXICO, *The Fight Against Illiteracy*, world efforts to combat illiteracy in promoting human welfare and international understanding; POLAND, *The United Nations in Action*, how the United Nations works on a problem pointing up the necessity for individual action by every United Nations citizen, using the International Children's Emergency Fund as an example; SCANDINAVIA, *Timber*, world forestry programs, showing common problems of timber shortage and transportation, effects on climate and soil erosion; UNITED KINGDOM, *Common Ground*, how people of different nationalities and backgrounds work together on the basis of common crafts and skills; UNITED STATES, *In The Long Run*, production of agricultural surpluses benefit the farmer as well as the consumer in the long run; U. S. S. R., *New Frontiers of Science*, how scientific research is extended through international coordination and exchange of information.

Fidelity of Report, A Film for the Psychological Lab

(Concluded from page 374)

take place in the classroom. The difficulty with this is that such an event can never be repeated exactly with another group of students. A movie of some event could, however, be used as often as desired; norms accumulated, different groups compared, or other studies made with such a repeatable experiment. Another advantage of the movie is that observers' reports can be checked by looking again at the movie, which is obviously impossible in the case of a quarrel with the janitor.

The script of this film was prepared by the present author and the film produced by a commercial company. The production was financed by the Helen Hartly Jenkins Fund, a fund for research in Psychology at Trinity College, Hartford, Conn. The action which occupies sixty seconds, is an armed robbery of a woman by a man, the man being in turn held up by a second man. The film is silent.

After the film is shown to the class (or to an individual if in a psychological laboratory), a prepared set of question is read with the observers writing down their answers. The questions must be read to the group to prevent hints from one question about answers to other questions. This questionnaire contains just over 100 questions and has been revised three times on the basis of results secured from several groups of college students. It is planned to publish the questionnaire with the answers which were given and the number of times each answer was given by the final standardization group of 100 college students, and with indications as to which answers are acceptable.

For Police Training

As the result of an invitation to use the film in the training school of the Hartford Police Department, a second, shorter questionnaire has been prepared. This one is a quarter of the length of the one described above, has (we hope) no questions which give hints about others, and can be mimeographed and handed out for the answers to be written.

Standardized Questionnaire

In use with a group of people, the film is shown, the questions answered, discussion permitted, and then the film is shown again. The action is printed twice on the same reel for this purpose. The second showing has, of course, no effect on the answers, but is done to satisfy the interest and curiosity of the group. If the long questionnaire is used, there is not time in an ordinary class period for scoring the answer sheets, but with the shorter form, the answers can be read out; the sheets, scored by the class; and the whole thing finished during one fifty-minute period.

The Observer Cannot Be Certain

One of the main benefits of the film is to convince the observer that he cannot be as positive about what he "knows" as most of us usually are. He is requested to underline those items about which he is certain enough that he would swear to them in court. All subjects find that they have sworn to the correctness of some wrong answers. If this value is to be secured from the film, we count only the definitely wrong answers, omitting blanks, partial answers, and those about which there could be an argument. If the student is offered norms, he has a chance to rationalize his errors and comfort himself by saying that there are others who are even less accurate than he. Using norms, thus, destroys the effect of convincing him that he should not be so sure of himself.

Many Uses

Although this film was prepared with psychological laboratory courses in mind, it can, of course, be used with a class in Elementary Psychology, or with other high school or college classes. It has shown itself useful and interesting with embryo policemen and could be used with various types of groups. The author will be very happy if it can be used to demonstrate to people that they are not always correct and that maybe, sometimes, the other fellow may be right. If this is so on the level of simple facts, it is much more so on the more complicated levels of judgment, conclusions, economic and political predictions, and similar matters.

The film has been accepted for distribution by the Psychological Cinema Register at Pennsylvania State College, from whom it may be rented or purchased.

Visual Education in Canada

(Continued from page 368)

and photography, in order not to confuse the young minds; the use of characters within the children's own age group; minimum, purely functional use of music, commentary, and sound effects; and recapitulation at the end of the film.

The Film Advisory Committee of the C.E.A. has performed another very useful function in working out a scheme for centralized and co-operative film evaluation. A form has been issued for the use of panels of educationists in every province; the films are to be graded as suitable for primary, elementary, intermediate, or senior grades (if suitable, that is, for Canadian schools at all); and comments are requested as to the teaching value, relation to the provincial curriculum, photography, sound, and so on. The evaluations are then sent to the C.E.A., who distributes them all across Canada. The aim is to evaluate every film acquired by provincial visual education departments or by school boards, and to enable the schools to build up a continuous catalogue of films which have been evaluated by Canadian educators in relation to Canadian needs.

Revising Films for School Use

In addition to the visual units produced, the National Film Board has recently been engaged in revising for school use certain of its films originally meant for general distribution. *Alexis Tremblay*, for instance, a four-reel colour film about French-Canadian rural life—rather on the long side for school use—is being transformed into a set of three shorter films on *Summer*,

The best for our children

It is vital that today's youth, our citizens of tomorrow, receive the benefits of the best visual education available. What they see on the screen leaves a lasting impression and will be a vital factor in the moulding of their young lives.

Through the medium of NU-ART 16mm sound and silent films, your school may be assured of the best subjects for youthful audiences. Both our educational and entertainment films are selected with the school audience in mind; examination of our catalogue will clarify your planning program and fill all your requirements.

The following are examples of films you need and should have . . .

- PUBLIC LIFE OF ABRAHAM LINCOLN
- CHEERS FOR MISS BISHOP
- PECK'S BAD BOY
- PRISONER OF ZENDA
- OUR TOWN
- SEVEN HISTORICAL DRAMAS OF UNITED STATES

Over 60 excellent geographical films. More than 200 miscellaneous short subjects, sports, cartoons, comedies, novelties, musicals and historical films. More than 150 full length feature films of both educational and entertainment value.

SOUTHERN VISUAL FILMS

686-9 Shrine Building Tel. 8-4870 Memphis, Tenn.

Autumn, and Winter on a Quebec Farm. Birds of Canada, a colour film about three of our commonest birds, with some remarkable shots of nests, fledgings, and feeding habits, has been cut down to include only the robin and the red-eyed vireo—a simplification which will greatly increase its value in the classroom. As this re-editing was originally undertaken for schools in Britain, where many teachers much prefer the silent film, the new version is silent and will be provided with detailed notes. It may turn out to be an interesting experiment in the use of silent films in Canada, where most teachers demand either a sound film or a silent filmstrip.

Recent Productions

The National Film Board's recent productions include a number of very useful filmstrips for schools. In addition to those forming part of a visual unit, there have appeared in the last few months filmstrips on the maple sugar industry, on the Royal Canadian Mint, and on the capital city of Ottawa (the first, it is hoped, of a series on Canadian cities). *Canada Stamp by Stamp* is a sort of history of the country told in postage stamps, which will be as useful for philatelic clubs as for social studies classes. Perhaps the most valuable of all is *Canadian Journey*, a series of coloured drawings and maps showing the geography and chief resources of each of the provinces. In order to make the strip as widely useful as possible, names and other text have been deliberately omitted, but copious notes, with suggestions for use and sample quizzes, will accompany the strip. Here too it is hoped that the strip now issued will be but the first of a series on all the different regions of Canada.

The New Era

We stand at the beginning of a new era in education; for who can deny that the camera, projection equipment, and particularly the stereoscopic devices of the future are in essence as revolutionary as the discovery of printing? They are the next great advance in our methods of communicating ideas and information from man to man. Just as in our day radio and airplanes have shortened the distance from China to Peru, so visual education has shortened the distance between the child who learns and the matter he studies. The inner nature of education remains of course unaltered; the more it seems to change to meet changing conditions, the more it ought to remain the same. But the old methods, the old curricula, cannot stand up against the dynamic new tools that visual education places in our hands. Everything depends however, upon how we go about using them. There must be the closest co-operation between the people who make the visual tools and the people who use them; there must be constant experimentation and constant research, if visual education is to fulfill its vital possibilities. And through it all the central, most important figure will remain what it always has been in education: the teacher.

INTEGRATION of Instructional Materials

(Continued from page 364)

own share of the teacher's attention and effort, each striving to build up its own importance and extending its own scope. That is a perfectly natural development—a development not without its virtues as well as its weaknesses. Specialization does enlist great enthusiasm, highly technical competence, a rapid expansion of effort. These are virtues. At the same time, however, it creates a distortion of emphasis. It becomes a thing unto itself rather than a part of the greater whole. It loses sight of the main ends of education in the preoccupation with methods and devices.

The time has come to bring the pendulum back to center. That center today is the same it has always been, namely, the maturation of the child, a single organism with limited powers of perception and a comparatively slow rate of development, a newcomer into a strange, complex, and somewhat terrifying world, and one who is easily bewildered. If pushed too far or too fast, he sets up intellectual and emotional blocks which act as barriers against all our efforts.

The Child

In all this multiplicity, we must never forget that the child, though complex, is indivisible. His mind cannot be separated from the rest of him. It cannot be transplanted from one place to another and from one experience to another too rapidly any more than a plant in your garden can. It takes time to grow roots. It takes time for the child to integrate within himself all of the various stimuli to which he is exposed. He

must unify those stimuli into concepts which he can understand and which he can use for future instruction.

Integration

To help him do this, we are beginning to integrate rather than departmentalize. We are discarding too great a specialization in school organization and curriculum. We are restoring him to one teacher, and we are asking that teacher to unify his curricular experiences for him so that he may be able not only to understand them but also to use them in his future behavior. That unification must be extended to instructional methods and also to instructional materials.

Of course, in doing so we shall not discard any of the hard won advances in the techniques of education. We shall not discard or weaken any of the instructional aids which the last decade has made available to the teacher. We shall not only continue to use the present text and supplementary materials but we will buy much more so that each school may have adequate reference libraries and each class may have a sufficient variety of books to satisfy each type of reading interest and on each level of achievement. We will still supply every type of map and globe which may help the child to acquire some notion of this wonderful earth on which he lives. We will still make every effort to build up a film library that will take every child into every corner of the globe, into every factory, and every laboratory in order that he may see the world itself and not just a word picture of it. We will still insist that every school have adequate receivers, reproducers, and recorders so that the best music of the world may become part of the spiritual experience of each child. We will

PAUL HOEFLER PRODUCTIONS

Pioneers in 16mm. Educational Films

Ever since Paul Hoefler produced the first 16mm color and sound picture, his work has been distinguished for photographic excellence, high sound fidelity and accurate, interesting presentation. Current releases, in full color and sound, are outstanding in their field. Preview prints are available, charges prepaid. Prices include cans and reels.

continue to maintain our radio station, perhaps changing it over to FM when the opportunity and the facilities permit, and I confidently expect that in time a children's museum will be created which our pupils might visit and from which specimens may go out to all the schools in a constant stream.

Tools for the Teacher

All these instructional materials and equipment will still be available to the teacher. But making them available will not be enough. It will be necessary to do something more. It will be necessary for all of us to keep in mind that textbooks or films or radios are but tools which modern science has made available for the teacher's use. They are not in any sense a substitute for the teacher any more than the tools in a carpenter's chest or the instruments in the little black bag are substitutes for the carpenter or the doctor. These tools have their special uses, and they are not interchangeable. The better they are, the more skillful must be the one who uses them and the more intelligent must be the selection of the right one for the job. In selecting the right tool, the teacher must think not only of the subject matter she wishes to teach, or of the fact that certain films or certain radio programs are available just at that time, but she must think first of all of what will best advance the program of learning experiences she is conducting. Only then is she ready to choose the type of instructional aid which best fits into that program.

Glamour

I'm afraid this has not always been done. There has been such glamour in the motion picture, such a build-up for radio instruction, such a natural interest in field trips, that teachers have often been inclined to assume that any motion picture, any radio program, any field trip is worth the time and effort spent on it. In other words, these things have been made substitutes for teaching. They have lost their real character as mere instruments and have become ends in themselves. Part of that may be due to the glamour of these new instructional materials; part of it to the lack of integrated planning; part undoubtedly to the eager stimulation from the various departments' eager to expand the use of their particular specialties.

The time has come now to put all instructional materials in their proper places and to train our teachers in their proper use. One way to do this is to integrate the various departments supplying instructional aids to classrooms into one unified center. People working in these departments need not fear for themselves or for the importance of their services. The use of books or audio-visual equipment or classroom supplies or radio programs will not be lessened. In fact, integration would increase their use. It would make each one of them not something to be regarded as an extra to be used or not, as a sudden inspiration may prompt. Instead, each teacher would come to look upon an instructional aids center as the place to which she must turn before undertaking any unit of work in order to find what learning tools will be of the greatest help.

The Materials Center

At the head of such a unified instructional materials center will be somebody who will think, not of this or that type of material to the exclusion of any other, but of all of them in relation to the learning process and to the classroom needs of the particular teacher.

Of course, there must at the same time be a similar integration in the teacher's mind. All lesson planning should contemplate the selection of the proper instructional aids before and during the lesson experience. There are some learning experiences which can best be vitalized through books, others through the motion picture, still others through models or dioramas or radio programs or field trips. The teacher must think the problem through before deciding which of these learning tools should be brought into the classroom and used in promoting the development of the child. An integrated instructional aids center would simplify her task by offering suggestions, assembling supplies, delivering them to the class, and assisting the teacher in using them.

Integration of the Curriculum

And finally, there must be an integration in the curriculum itself. Very happily we have come to see the curriculum with its variety of subject matter in a new and better light. We still have arithmetic and language and geography and history and science and music and art and civics and health, but they no longer exist of and by themselves. Where integration has become

the common practice, they are woven together into a curriculum unit which is more an experience of living and doing, than it is one of memorizing and reciting. Into such an experience, instructional materials enter not for their own sakes but only as they fit into the life of the classroom.

It was with the idea of helping teachers to look upon education as unified experience and instructional materials as means rather than ends, that we planned a department of instructional aids in the Portland Public Schools. This department includes in its general responsibility such things as textbooks, supplementary books, reference books, library books, maps and globes, flat pictures, slides and films, exhibits, community resources, and radio programs as well as the general list of instructional supplies which are customarily found in school storerooms. It is possible through such a center to present to schools and to teachers a unified approach to the whole problem of instructional materials. It is possible to economize on delivery service and make it more efficient. It is possible to economize on teacher time because principals and teachers needing advice or materials find them through one headquarters. Publicity, in-service training, purchasing, and distribution come under one management. In time, I hope, this integrated center will find such a degree of cooperation between the schools and itself that its staff will be welcomed in every classroom, not as strangers or as overseers, but as friends and helpers in a common task—that of making education more effective.

Oklahoma A-V Appropriation

The twenty-first Oklahoma State Legislature appropriated \$125,000 for the development of a state-wide audio-visual program. Earl Cross is State Coordinator of the new Division of Audio-Visual Education.

Of this amount \$40,000 will be used for the purchase of motion picture films for deposit at the State University at Norman and seven regional libraries. The films will be assigned by the University to the regional college depositories.

A total of \$68,000 will be set aside to match funds with district school systems or such schools as desire to establish their own local film libraries.

Film Advisory Service for Public Libraries

The American Library Association has announced that Mrs. Patricia Blair, working under a grant from the Carnegie Corporation of New York, is now adviser on "Film Service Through Libraries" with headquarters at the Association offices, 50 East Huron Street, Chicago 11, Illinois.

Mrs. Blair will advise libraries on problems of establishing film collections, the training of film librarians, building requirements, and film selection. Much of her time will be devoted to field work in which she will work directly with the library entering this field. Her office will be a clearing house of information on films for such libraries. At present, between 75 and 100 libraries in the United States and Canada loan informational films to service clubs, women's groups, discussion forums, and adult classes. Many other libraries have expressed interest in adding films to their collections as a part of their community service.

Mrs. Blair is especially suited to this work, having been former Director of the Film Bureau, Cleveland Public Library and a board member of the Educational Film Library Association of America (EFLA).

Art and Photographic Contest for Students

The Conde Nast Publications—Vogue, House & Garden, and Glamour—announce their annual art and photography contests for students in high schools, colleges, or specialized schools who are not working full-time. The contests are designed to give students an opportunity to express their art and photographic talents. Each contestant is required to prepare the answers to art or photographic questions which will be sent him on receipt of an enrollment blank. The deadline for enrollment is October 1, 1947. Awards include either a year's job in the Art department of one of the Conde Nast Publications or money for further art training. For an enrollment blank, write: Contest Editor, The Conde Nast Publications, 420 Lexington Ave., New York 17, N. Y.

National Audio-Visual Education Week

National Audio-Visual Education Week will be inaugurated during the last week of October under the auspices of the Department of Secondary Teachers of the National Education Association. It has been announced by Dr. John E. Dugan, President of the Department.

Audio-Visual Awards Endorsed By ANFA, NAVED, FCA

The Board of Directors of the Allied Non-Theatrical Film Association, at their regular June meeting, in New York City, went on record in favor of the program of Special Merit Awards for schools excelling in the use of audio-visual materials and methods. This project, announced by Dr. John E. Dugan, president of the National Education Association's Department of Secondary Teachers, is being administered by Dr. William Lewin, of Weequahic High School, Newark, N. J., from whom participation forms can be obtained.

William F. Kruse, ANFA president, stated that Dr. Lewin's program deserves the support of every member of ANFA and of the non-theatrical film industry generally, because of completeness and breadth of vision. "It combines some of the best features of programs worked out in the past and is of special interest to our industry," he said, "because it correlates the usual primary factors of classroom utilization, selection and evaluation procedures, pilot schools, research, and teacher training with such phases as the stimulation of reading by photoplay study, the development of community children's programs, encouragement of critical appreciation of theatrical as well as documentary films, and support of freedom of the screen from censorship."

The National Association of Visual Education Dealers, headed by Olson Anderson, has also heartily endorsed the project. The Film Council of America, through its president, C. R. Reagan, has offered enthusiastic cooperation.

The Awards

At the end of the academic year 1947-48, the Department of Secondary Teachers will present audio-visual awards to schools and colleges doing outstanding work in audio-visual education. "Pilot" schools in a series of states from coast to coast are being selected to compete for the awards. To qualify, schools and colleges must have a majority of teachers at all levels making curricular use of audio-visual materials of various types. After the awards are made, winning schools will serve as demonstration centers for the advancement of audio-visual methods in teaching. Schools desiring to participate should write for application forms, addressing Dr. William Lewin, Weequahic High School, Newark 8, New Jersey.

Second Ten General Interest Films—USDA

With the cooperation of the Film Council of America, the U. S. Department of Agriculture has selected a second group of ten general interest films from USDA titles. The selection of 20 films was a part of the plan of distribution of USDA motion pictures that can be taken up by libraries generally. For details, see "New Distribution Policy for USDA Films," the April *Screen*, page 229.

These films are: *Canning the Victory Crop* (2 reels, color), *The Cicada* (2 reels), *For Health and Happiness* (1 reel, color), *Harvests for Tomorrow* (3 reels), *Heritage We Guard* (3 reels), *Lifesaving* (2 reels), *Men Who Grow Cotton* (2 reels, color), *Poultry—A Billion Dollar Industry* (3 reels), *Realm of the Honeybee* (5 reels, silent), and *Sugarcane* (2 reels).

Annual Film Festival at Cannes—Sept. 12 to 25

The Film Festival at Cannes, France will take a slightly different form this year, judging being done by the public itself instead of by jury. Films will be divided into categories: (1) psychological and love; (2) adventure and detective; (3) social; (4) historical; (5) musical comedies; (6) animated drawings; (7) short subjects. The producers of the various countries entering the Festival will select their films for entry.

A special theater has been constructed for the Festival at Cannes—the "Palais des Festivals," which includes an auditorium for 1,800 spectators. Tourists as well as the profession are invited.

Six international conventions will meet at Cannes during the course of the Festival. The International Congress of Cine Clubs with members from 15 countries will show their films. An exhibit of "Fifty Years of the French Cinema" will also be held. The Ninth Congress of the Scientific and Technical Film will be under the direction of Jean Painleve. An International Day of Films for Youth will be held. It is hoped that an International Committee on the Cinema for the Youth may be organized. The International Federation of Newsreel Photographers will hold their first convention as planned at the Festival of Brussels, and an International Convention of Publicity Men will also meet at Cannes.

JULIEN BRYAN, Executive Director

NEW YORK 19, N. Y.

Stephen Corey, New President, DAVI Holds Summer Meet

(Continued from page 371)

Two Major Sessions

One of the two major sessions was designed to provide information and guidance to teachers, and the other was planned to be of special assistance to school administrators. The discussion in these two sessions was based primarily upon questions raised by the audience. Approximately 100 persons attended the Conference. Special communications

On Sunday Evening, July 6, a group of 26 motion pictures of special interest to teachers because of their appropriateness for NEA, PTA, and local education association meetings was available from which to make selections for presentation. James R. Brewster was in charge of the screenings.

At a Business Meeting held Monday morning, July 7, the following topics were considered:

(1) Procedure for most expeditious change from the zonal system to more localized divisions.

Most of the discussion centered around the proposal that the basic divisional organization of DAVI should be that of the audio-visual sections of state education associations.

(2) Advisability of holding a national conference on architectural provisions for audio-visual programs.

The main suggestions were that such a conference be held at the earliest practicable time, that it

be preceded by a thorough review of all available information on the subject, and that it include plans for adapting existing buildings. A motion was carried to the effect that the study be made by DAVI at the request of some organization such as the American Association of School Administrators, and that it include recommendations on both minimum and desirable standards.

(3) Use of existing publication channels and development of any additional special publications.

It was recommended that DAVI begin to publish a series of yearbooks, and opinions were expressed in regard to the content of such publications.

(4) Preliminary planning for the Atlantic City Conference to be held next February.

It was urged that the secretary follow through on his proposal that one or more joint discussion meetings be held with the American Association of School Administrators. It was further suggested that the Conference be of the workshop type and that it include extensive use of audio-visual materials.

1947

Suffern, New York

On Monday, July 7, 10:30 a.m., a Discussion Meeting was held on the topic, "Audio-Visual Problems of the Classroom Teacher: Selection, Utilization, and Evaluation of Audio-Visual Materials." Chairman was Henry E. Childs, Supervisor, Visual Education, Providence, Public Schools, Providence, R. I., who was aided by the following consultants: Wilbert Emmert, Director, Film Library, State Teachers College, Indiana, Pa.; Evelyn Hoke, Director, Bureau of Teaching Materials, Ball State Teachers College, Muncie, Indiana; George E. Mills, Western Michigan College of Education, Kalamazoo, Mich.; Grace F. Ramsey, Curator of School Relations, American Museum of Natural History, New York, N. Y.; David E. Strom, Text-Film Department, McGraw-Hill Book Co., New York, N. Y.; V. L. Tatlock, Director of Extension, Indiana State Teachers College, Terre Haute, Indiana; Thurman White, Director, Audio-Visual Education Department, University of Oklahoma, Norman, Oklahoma.

Major Areas

Following introductory remarks by Carolyn Guss, Co-Chairman of the Cincinnati Conference Committee, Mr. Childs presided over the meeting.

Some of the major areas of discussion included: the necessity for allotting sufficient time to audio-visual coordinators to accomplish their work adequately; the need for developing a broad view of the audio-visual field so as to include consideration of non-projected as well as projected materials; the need for enlisting the active cooperation of teachers in selecting audio-visual materials; what constitutes adequate personnel and physical facilities for the audio-visual program; the desirability of the teacher having constant access to the more basic audio-visual materials; the use of educational resources available in the classroom, school building, home, and museum; the desirability of teachers becoming acquainted with current sources of information such as *Educational Screen*; sources of equipment and materials for teaching reading; the need for closer cooperation between producers and users of audio-visual materials; the inclusion of pupil preparation and motivation in films; the relative merits of the concepts of "visual communication" and "audio-visual education."

Following a luncheon, two talks were heard: "The Role of the Teacher in the Audio-Visual Program" by L. C. Larson, Director, Audio-Visual Center, Indiana University, Bloomington, Indiana; and "Educational Radio and its Development in Post-War Germany" by I. Keith Tyler, Director, Educational Radio, Ohio State University, Columbus, Ohio.

The Pupil in World Society

Mr. Larson stressed the need for using instructional materials as a means of developing the pupil along lines which are most advantageous to both the pupil and society, the need for relating learning to experience, the necessity for using audio-visual materials to provide real and functional learning, and the relationship between the budget appropri-

ation and the degree of excellence a particular school or community wishes to attain. Mr. Larson drew several interesting analogies between the inadequacy of current audio-visual programs and some of the more adequate, commonly accepted conditions in everyday life.

Radio Pre-educating Germany

Mr. Tyler's talk was based largely upon his experience in Germany as an advisor to the Army with reference to the development of educational radio. After a description of the general conditions in post-war Germany, he stressed the contribution which radio can make in re-educating the people and in establishing the goals of peace and democracy in a devastated country demoralized by war. He stated that in Germany radio is considered authoritative; that there is an average of one radio receiver to each house; that radio listening is already a common practice there; and that an inadequate supply of teachers and instructional materials, plus the responsibility of educating an increasing school population in the American zone, places a great emphasis upon the use of radio. He further stated that provisions are being made for German radio personnel to come to the United States for training, and that a great need exists in Germany for equipment and resource materials for educational radio programs. He expressed the hope that the Americans will remain in Germany long enough to educate a new generation.

"Audio-Visual Problems of the School Administrator" was the discussion topic for Monday afternoon. The chairman was Walter S. Bell, Director, Audio-Visual Education, Atlanta Public Schools, Atlanta, Georgia.

Following introductory remarks by Dorothy D. Anthony, Co-chairman of the Cincinnati Conference Committee, Mr. Bell presided over the meeting. The main topics discussed were: How to stimulate more interest in audio-visual instruction on the part of school administrators and teachers (this subject was role-played by Mr. Boerlin as a superintendent and Miss Lyman as a teacher); the minimum cost of an adequate audio-visual program; the advisability of submitting to the superintendent detailed plans for the establishment of the audio-visual program; sources of audio-visual materials; the necessity for close cooperation between the audio-visual director and the teachers; the need for much more extensive use of audio-visual materials at the teacher training level; the desirability of a comprehensive master-film library in each state, with smaller libraries in colleges and school systems throughout the state; the special need for assisting and encouraging new and young teachers in the use of audio-visual materials; the difficulty of scheduling films on short notice for immediate use; methods of increasing film life through proper handling and storage; the urgency of making available existing information and, in addition, preparing an architect's manual to provide guidance in planning new school buildings to accommodate the audio-visual program.

AUDIO - VISUAL TRADE REVIEW

NAVED Convention Introduced New Products And Discussed Dealer Problems

ROBERT E. SCHREIBER, Editor

Olson Anderson Elected President

During Chicago's hottest weather in half a century, 1219 members of the National Association of Visual Education Dealers held their most successful convention in the organization's history. Approximately 100 visual education dealers, producers, and manufacturers exhibited their latest products to the field.

More than 1,000 conventioners listened to Robert M. Hutchins, Chancellor, the University of Chicago; Arthur H. (Red) Motley, President, Parade Publication; and to Floyde E. Brooker, Chief, Visual Education Section, U. S. Office of Education, the keynote speakers.

Predicting that "the widespread distribution of educational films might do more than any other single thing to unite the world and save us from destruction," Chancellor Hutchins called upon NAVED members to recognize their grave responsibilities and their mission, which he said transcends that of any ordinary business.

Hutchins warned that "the simultaneous explosion of two of the atomic bombs which can now be manufactured could make the United States uninhabitable."

The task of our generation, he declared, is to establish peace. "It is impossible to exaggerate the urgency of that task. We know that some other

country will have the atomic bomb within five years."

Calling the film the "most economical, as well as the most dramatic method of communicating the leading facts and ideas in many fields," the University of Chicago chancellor said films have a force, impact and power which no other medium can command. "The production and distribution of films for the education of adults is the great new field that is now opening up."

Hutchins' analysis of the power of films had been emphasized the day before by Motley who spoke on "Picture Power."

"Audio-Visual education is a force that can be more powerful than the

atomic bomb or any super-duper atomic bomb that will be developed in the next 100 years," he stated, urging his audience to realize the possibilities of their medium. "In the field of education, progress in the years ahead will depend upon you people persuading everyone of the real power in pictures."

Brooker said that education by films is imperative if we are not to sink into a new dark age. "We must remember," he said, "that we are never more than one generation from darkness. If we do not educate the younger generation in all the knowledge mankind has amassed up to today, we will fall back on the march of civilization. We cannot afford to do that. There is so much knowledge that must be learned today that films, which are quicker and better, must be utilized."

Greatest innovation at the convention was the employment of three preview theaters in the hotel, at which the industry screened nearly 300 of its latest informational films. Most exciting feature of the convention was the Trade Show with 100 booths where the product of the field was displayed. Several new projectors were displayed: the Empire

NAVED members assembled to hear the feature convention speakers: Robert M. Hutchins, University of Chicago; Arthur H. Motley, Parade Publication; and Floyde E. Brooker, Visual Education Section, U. S. Office of Education.

New NAVED officers. Front, l. to r.: Douglas Hammett, New England; Hazel Calhoun, second V. P.; Olson Anderson, president; and Ernie Ryan, Plains States. Back, l. to r.: E. E. Carter, Southeastern; Merriman Holtz, first V. P.; and Howard Smith, Western.

Sound King projector weighing 38 pounds; the Kolograph projector featuring an intermittent sprocket in place of the usual claw mechanism for moving film; and the RCA Model 400 projector, weighing 39 pounds. New magnetic recorders of both the wire and paper tape types, manufactured by Webster-Chicago, WiRecorder Corporation, and the Brush Development Company, attracted considerable attention.

Angle Products displayed the new Messner Phonoscope which employs a beam of light to synchronize a musical (or verbal) score with a phonograph record. Berndt-Bach Inc. displayed for the first time a new Auricon single-system, sound-on-film camera. Other items introduced to the public for the first time included splicers, carrying cases, record players, and other items.

Twelve discussion groups met to consider the problems with which the visual education dealer is faced. The dealers agreed unanimously not to release products for television, this being a matter strictly for the film producers to handle. One panel recommended that a film to sell audio-visual education be produced. A panel discussing problems of film distribution recommended that films be sent via parcel post, special delivery, and asked that NAVED investigate forms for uniform booking procedures. Suggestions for the establishment of a clearing house for credit and reference information were put forward. The need for personnel training was strongly emphasized both in the church panels and in the industrial panels. Dealer sales-

men must know the customer's needs before calling on him. A recommendation that NAVED issue a manual of procedures for the holding of competitive demonstrations was put forward.

Many dealers objected to the selling of equipment under the competitive demonstration method which has become a relatively common request of church and school purchasing committees. The dealers were especially anxious that the NAVED bluebook of trade-in allowances for used equipment be issued as soon as possible.

A significant recommendation made by the Education Committee called for the establishment of a National Training Institute for dealer employees. Northwestern University has agreed to cooperate in holding a one-week training institute on the week preceding the annual convention. Under this plan, salesmen and members would receive training in practical matters of audio-visual education with possibly some educational theory and some emphasis on specialized applications in schools, churches, and industry.

NAVED Elects Officers

Olson Anderson of Bay City, Michigan, was unanimously elected president of the National Association of Visual Education Dealers as NAVED concluded the biggest convention in the organization's history.

Anderson, who has been engaged in audio-visual education for the last 17 years, succeeds Bernard A. Cousino of Toledo, Ohio, as chief executive of the association.

At the same time NAVED members elected Merriman H. Holtz of Portland, Oregon, as first vice-president, and Hazel Calhoun of Atlanta, Georgia, as second vice-president. Both are visual education dealers in their own cities, while Miss Calhoun is outgoing secretary-treasurer of the organization, and Holtz has been a regional director of the association.

Mrs. Roa Kraft Birch of Milwaukee, Wisconsin, was named secretary-treasurer for 1947-48, while directors at large selected are: M. L. Stoepfelwerth of Indianapolis, Indiana, and E. H. Stevens of Atlanta, Georgia.

All the above officers will serve for one year. At the same session four

zone directors were named for terms of three years each. They are: Ernie Ryan of Davenport, Iowa, for the Plains States; E. E. Carter of Raleigh, North Carolina, Eastern States; D. K. Hammett of Portland, Maine, New England States; Howard K. Smith of Los Angeles, California, Western States. NAVED members voted to hold their 1948 convention during the last week of June next year.

People

Monson, 16mm. Pioneer, Retires

The retirement from active duties of Axel Monson, for over 32 years head of the Ampro Corporation of Chicago and its antecedent company, has just been announced.

As one of the early manufacturers in the field, Mr. Monson has been closely associated with the development and production of the modern 16mm silent and sound-on-film projectors and 8mm silent projectors. He is widely known throughout the motion picture industry as a pioneer in the building of improved non-theatrical projection.

A. J. Palmer

Mr. Monson will be succeeded as President and General Manager of the Ampro Corporation by Mr. A. J. Palmer, former Vice-President of the General Precision Equipment Corporation, Ampro's parent company. Mr. Monson will retain his connections with Ampro as Chairman of the Board and upon his return from a trip to Europe will act in a consultant capacity.

Keeping Post-ed

Post Pictures Corporation has announced the association of Milton Salzburg and Harold Baumstone with its organization, effective August 1, 1947. Under the new set-up, Post acquires the exclusive distribution rights to all of Academic Film's products, consisting of its features and short subjects. Milton Salzburg and Harold Baumstone, heads

SINCE 1897

of Academic, become sales executives of Post Pictures, which will operate from its new offices at 115 West 45th Street, New York City. The new offices provide for larger quarters for the expanded operation and house the executive offices, screening room, shipping, and stock rooms. This association brings together three individuals who have long been engaged in the 16mm industry and have become recognized leaders in the field.

NATCO Promotes Yankie

Natco, Inc., Chicago, announces the promotion of Russell H. Yankie, Southern district sales manager, to the newly created position of Natco Educational Director for its motion picture projection equipment. With Mr. Yankie in this new post, Natco will be in a position to render increasing personal assistance to the ever growing number

ty Centennial Exposition, Texas Memorial Museum, Texas Student Publications, Inc., and the Public Relations Office.

General Films Sales Meet

General Films Limited recently completed their annual Sales Convention with the Eastern section being held at Toronto, Ontario, and the Western section at Regina, Saskatchewan, attended by the complete sales staff of all offices.

Stressing the growing importance of the Church and School field was the presence of several outstanding executives associated with the production, distribution and equipment sales. Representing Encyclopedia Britannica Films Incorporated were Mr. C. S. Hansen, Treasurer and Controller; Mr. Theo Lacey, General Credit Manager; and Mr. Dennis Williams, Director of Distribution. From Jam Handy Organization, Detroit came Keith Ledyard, and appearing for the Charles Beseler Company was Mr. Herb Myers. Newly-elected President Sam Rose spoke on behalf of the Victor Animatograph Corporation, Davenport, Iowa. During the portion of the convention dealing with the Church and School field, discussion was led by Dr. M. H. Ritchie of General Films Educational Department.

Da-Lite Brightens the Price Picture

Chester C. Cooley, president of the Da-Lite Screen Company, Inc., has announced that prices on most models and screens for the duration of 1947 will remain equal to or below prices charged ten years ago for similar sizes and models.

Tripling of plant area, streamlining of manufacturing and assembly methods, and an expenditure of a quarter-million dollars in post-war tooling and new production machinery account for Da-Lite's ability to hold the line on prices despite sharply increased labor and material costs, according to Cooley.

At the same time, completely new models, and the growing interest in home movies and slide projection have helped quadruple consumer demand. O. N. Wilton, general sales manager, says that the Da-Lite price policy is based on anticipated sales volume which is expected to set an all-time record this year.

Various sizes of the New Challenger, most popular Da-Lite model for home movies and slides, are now priced from 21 to 33½ percent less than comparable sizes of this model in 1937.

Klein Opens Sales Office

Max R. Klein, nationally known in the audio-visual educational field has recently opened his own office at 27 East Monroe Street, Chicago 3, Illinois. As manufacturers' representative of a quality line of audio-visual aids equipment and devices, Mr. Klein will represent products through dealers and distribu-

tors not only covering the educational field but also industrial and business establishments.

Ampro Appoints Three

With the addition of three new representatives to its sales staff, Ampro Corporation of Chicago, is continuing a sales expansion program designed to give dealers more intensive assistance in developing the movie projection business in their territory. Lou H. Walters has been appointed Ampro's sales representative for the South Western Division; George I. Schectman is now sales representative for the mid-western division; and James J. Craven is Ampro's new sales representative for the central division.

These new sales representatives recently completed a period of intensive training at the Ampro plant to especially acquaint them with the various dealer and territory problems. They will spend practically all of their time in the field, and so will be available for direct consultation with dealers to help them with their own particular selling and merchandising problems.

Focus on Reflection

Mathew J. Betley, RADIANT'S newly appointed Plant Superintendent, covers his new assignment with the confidence that stems from complete knowledge of every phase of his work. Mr. Betley is charged with the full responsibility of production, production methods, service and personnel. Mr. Betley has served more than thirteen years in similar executive capacity with manufacturers of precision built products.

Russell H. Yankie

of educational dealers who handle Natco equipment throughout the country. In addition to his new duties, Mr. Yankie will continue as Southern district sales manager for Natco.

United World Appoints

James M. Franey, President of United World Films, Inc., announces the appointment of Erwin H. Ezzes to the Managership of its Non-theatrical Entertainment Film Division. Mr. Ezzes, who since the formation of the company has been in charge of Branch Operations, will visit leading 16mm film dealers and libraries, and will supervise the work of the United World field representatives.

Visual Education Inc., Adds Cook

Announcement of the appointment of C. C. Cook as Manager of the Dallas Office of Visual Education Inc., has been by C. R. Reagen, President of the company.

Cook was formerly connected with the University of Texas in the Universi-

George Long

With the announcement of the addition of Mr. George Long to its executive staff Radiant Manufacturing Corporation extends its unusually active sales structure from coast to coast. Mr. Long, who will cover the Mid-Western area, has come a long way in the photographic trade with a background that includes years of experience in sales promotion and management, motion picture writing and production.

Equipment

RCA Ends Long "Weight" Introduces New Projector

Weighing 39 pounds (some 20 pounds less than the PG 201) and newly styled and engineered throughout, the widely-heralded new RCA "400" projector has been introduced in conjunction with the Sixteenth Anniversary of 16mm Sound celebrating RCA's development of the first 16mm sound-on-film projector in 1931. The separate speaker weighs 27 pounds.

A material reduction in the overall size of the new projector was accomplished by the use of a new "L" shaped amplifier mounting. Styled with a striking blue-green hammertone finish, the unit embodies the results of 16 years of RCA research in the 16mm field. Two models will be available, one providing both sound and silent speeds, the other, sound speed only.

Among the new operational features of the projector is a new tilt-wheel which permits rapid raising and lowering of the projector by fingertip operation of a small dial, "cushion-action" sprocket shoes, and an embossed guide line for easy threading. Rewind of film is an automatic operation and does not require changing reels. The RCA "even tension" take-up, which maintains the proper tension on the film regardless of the amount of film on the reel, has been further improved in the new model.

Changeover from sound to silent speed in the sound-silent model is accomplished by simply turning a knob. The cooling system for the 1000-watt lamp in the

unit needs no adjustment, since the changeover merely shifts the drive belt from one pulley to another and the motor speed remains the same.

Newly designed, the powerful four-stage amplifier in the projector delivers a full 10-watt output at less than five percent distortion throughout the 16mm recording range. Also of new design is the "400" speaker, utilizing the super-sensitive RCA MI-6333-B mechanism, which is engineered to deliver an optimum of high-quality 16mm sound reproduction, regardless of speaker location. A rubber gasket around the speaker case lid assures an acoustical fit for the cover, eliminating the "barrel" effects caused by loose-fitting covers.

Die casting of the main frame, backplate, and lamp house of the new projector—a departure from the usual sand casting of structural parts—permits even greater accuracy of assembly and closer control in fabrication. It is believed that the PG 201 will continue to be available for heavy-duty applications.

The new RCA "400" 16mm sound projector weighs 39 pounds, offers a choice of sound and silent speeds if desired, includes a new tilt-wheel for raising and lowering the front of the projector, and has the features of its predecessor.

GoldE Is Where You Find It

A double-blower-cooled 1000-watt all-purpose projector has been developed and produced by the GoldE Manufacturing Company, Chicago. This one complete projector handles everything from 3-1/4x4 down to 2x2 (35 mm) slides plus single and double frame filmstrip. It provides extremely high-power illumination for professional and visual aid use in auditoriums, schools, industrial organizations, clubs, theatres, etc.—with lower operating temperature.

Total light output is directed through the smallest slides and filmstrips, and a stream of cold air is forced over the small slides or filmstrips by the front blower. Maximum cooling and protection are thus obtained.

A spiral-focusing thread permits critical focusing to hairline sharpness. The lens is easily removed for cleaning. Accurate positioning of heat-proof pre-focus socket aligns filament on correct optical axis. Simple control adjusts beam spread—no dark corners. Ground and polished condensing lens plus heat absorption filter are present. Low center of gravity on rugged base prevents shaking or tipping. The base has rubber legs to prevent surface scratching. Positive tilt control.

GoldE projector, for all sizes of slides and filmstrips, has 1,000-watt lamp capacity with double blower. It may be used in large auditoriums and theaters.

And Still Another

W. C. DeVry, president of the DeVry Corporation, 34-year old Chicago manufacturer of motion picture equipment, announces that his firm will soon introduce a new, lightweight, low priced, 16mm. sound motion picture projector.

Color Facsimile Reception For the Home

In a demonstration before the press, full-color pictures were transmitted by a color facsimile system invented by W. G. H. Finch. The new device permits colored comics and newspapers to be received directly in the home via radio. The pictures are printed on ordinary white paper, and the system is said to be low in cost.

Victor Announces New "Lite-Weight" Projector with Demountable Speaker

A quality, lightweight 33 pound 16mm sound motion picture projector has been announced by the Victor Animatograph Corporation, A Division of Curtiss-Wright Corporation, Davenport, Iowa. The Victor "Lite-Weight" is now in the hands of all distributors and dealers throughout the United States and Canada.

"We in the 16mm industry have long realized the existing need for a portable sound projector," declared Samuel G. Rose, president of the Victor Corporation, "but it has taken years of painstaking development to perfect such a piece of equipment. Therefore, it is with pardonable pride that we announce the new "Lite-Weight" which should bring the benefits of this modern tool of education, training and entertainment to many new millions of people throughout the world."

picture projection, and either sound or silent film can be shown at their respective speeds.

The "Lite-Weight" incorporates the exclusive safety film trip. In addition it has the 180-degree swing-out lens, exclusive framing screw adjustment, "Spira-draft" lamphouse, and the "Duo-flexo" pawls—all time-tested Victor features. The 750-watt illumination of the "Lite-Weight" is standard, and the top-mounted reel arms will accommodate 2000-foot reels.

The new Victor "Lite-Weight" sound projector weighs 33 pounds with the demountable speaker. Volume is ample for home, classroom, church Sunday school, or business office.

The Victor "Lite-Weight" is 52 per cent lighter in weight, and 69 per cent smaller in size, than earlier projectors and is housed in a streamlined single unit aluminum case. The demountable speaker fits snugly inside the projector case for carrying purposes and is mounted on the front of the projector during operation.

Designed especially for use in the home, in the school classroom and for the innumerable uses of business training and selling, the "Lite-Weight" is as versatile as it is portable.

The new "Lite-Weight" is not intended to replace the Victor "Triumph 60" which was introduced by the company last March.

The "Lite-Weight" produces sound of remarkable fidelity ample for the home, school classroom, and for sales conferences. It contains clutch-controlled rewind, the unique "Instantilt," reverse operation, has the advantage of still

Production Activity

Charter Oak Films

H. Lash Bauman of the Connecticut Film Service, New Haven, Connecticut, announces the formation of a new producing company to be known as, Charter Oak Films.

Charter Oak Films will specialize in color filmstrips in the educational field. One package on elementary science is ready and two more are in production. CHARTER OAK FILMS will temporarily be located at 212 Crown Street, New Haven, Connecticut, and welcomes dealer inquiries.

PLANE GEOMETRY

A SERIES OF NEW AND ORIGINAL 16MM SOUND FILMS DESIGNED TO AID THE TEACHER

"LINES AND ANGLES"—It is the purpose of this sound film to help the student visualize the mathematical applications of basic Geometry. Beginning with the erection of a perpendicular, the film illustrates the relationship of the perpendicular with the ordinary plumb bob, level and square.

"ANGLES"—This film will help the Geometry student understand all the various types of angles and their relationship to each other. After the student has become familiar with the construction of angles by means of intersecting lines and to measure them with a protractor.

"CONGRUENT FIGURES"—A Concise demonstration of the geometric principles for finding and proving that triangles with "equal sides," "equal angles" or the combinations of both are equal and congruent.

"SIMILAR TRIANGLES"—Presents Similar Triangles in a graphic manner. Begins by showing practical uses. Shows properties of Similar Triangles, and demonstrates the "two angles equal" proposition.

"QUADRILATERALS"—It is the purpose of this film to illustrate and explain the chief properties of the important quadrilaterals, such as: parallelograms, rectangle, rhombus, square, trapezoid and trapezium. This visual method of presenting this important phase of geometry will prove very helpful to most students and will enable them to distinguish readily each type of quadrilateral.

"LOCUS"—The entire concept of Locus is clearly visualized and explained by this combination of Animated Drawings, regular photographic motion and the spoken word.

"THE CIRCLE"—The circle is a rather simple geometric figure, yet it presents many problems to the geometry student. In this film such important phases as radii, diameters, chords, tangents, secants, arcs and central angles are presented and clarified.

"CHORDS AND TANGENTS OF CIRCLES"—This is a further advanced phase of our film on "The Circle" and is intended to follow it as the next lesson. It deals with the theorem on a perpendicular to a chord within the circle. All types of tangents are dealt with in detail.

"ANGLES AND ARCS IN CIRCLES"—This film deals with the measurement of central angles, arcs, inscribed angles and angles formed by two chords. Theorems and proofs are effectively introduced and demonstrated.

"AREAS"—Presents the needs and uses for finding Areas of various figures. Shows clear graphic demonstrations of recognized methods for the computing areas of Rectangles, Parallelograms, Triangles and Circles. The film will help the student fix fundamental principles in his mind by showing how relations in the figures result in relationships in the formulas.

Purchase Price—\$40.00 per reel
Rentals—\$2.00 per day

KNOWLEDGE BUILDERS
625 Madison Ave., New York 22, N. Y.

Florman Organizes to Produce

A new motion picture production organization, specializing in educational films has been formed by Arthur Florman, who has recently been released by the Army Signal Corps where he served as Officer-in-charge of Motion Picture Production in the European Theater. The organization is called Arthur Florman Associates with offices at 70 West 45 Street, New York.

Arthur Florman, one of the pioneer educational film producers, is the producer of the "Handicrafts Teaching Films" series as well as numerous other

school films made in cooperation with New York School personnel and Brandon Films.

Present plans include a series of kindergarten and lower elementary school level films, as well as a series of language teaching films.

DeVry Sells Film Rental Library

The DeVry Corporation, 34 year old Chicago manufacturer of motion picture equipment, has disposed of its 16mm. film rental library to the American Film Registry, 28 East Jackson Blvd., Chicago, operated by Mr. Lee Robins, widely known throughout the 16mm. film industry.

In announcing the transfer of the Library to its new owners, Mr. W. C. DeVry, president, stated the reasons for the sale: "First and foremost was the urgent need for increased manufacturing facilities. Secondly, we felt that it was only a matter of time before the DeVry Corporation would have to concentrate its vast resources exclusively to the manufacture of its extensive line of motion picture products.

Educational Television Can Be Good

Educational subjects can be presented to the expanding American television audience in the form of appealing entertainment, holding their own competition with soap operas, film comedies, and vaudeville, according to Richard H. Hooper, Promotion Manager of the RCA Victor Division, Radio Corporation of America.

"Certainly nobody would say that education is uninteresting or without its entertainment aspects," Mr. Hooper said. "There are those who have sold much potential worth-while attainment down the river through the belief that idealism and impracticality are inseparable companions."

Some of his suggestions to help win an important role for education in television are: "Master facts about television equipment, its capacities and limitations, so that you know the materials with which you will work. Strive for teamwork between educators and local television broadcasters so that each other's problems may be understood and solved by cooperation. Avoid amateurishness in educational productions. Study scripts and production methods to learn how to build programs along professional lines.

Ray-Bell Films Inc. In Name Change

A change in the name of one of the oldest commercial motion picture producers in the country has just been announced. Since 1925, when Reid H. Ray purchased interest in the then named company, Mills & Bell Motion Pictures, this company has been known as Ray-Bell Films, Inc. The firm was originally located on University Avenue in St. Paul and in 1936 moved to its own studio-laboratory on Ford Parkway.

With the retirement of Mr. Charles E. Bell from the company, and the acquisition of his interests by the present management, the name of the corporation was changed July 1, 1947, to Reid H. Ray Film Industries, Inc. The film company produces advertising, institutional and educational motion pictures and slide films. A division of the firm also sells and distributes theatre screen advertising in ten Mid-West states.

Recognize distinguished work in educational television broadcasts by presentations of awards and citations."

He described the status of television today, stating that "new stations may be expected to come on the air at the rate of almost two a month for some months to come." In summarizing the achievements of various schools and colleges which have experimented with television programming, Mr. Hooper gave particular recognition to the work done by the New York City Board of Education in presenting television broadcasts over New York stations.

The speaker asked the educators to recognize the fact that sponsored programs teaching how products are made, the role of these products in our national economy, and how to buy them properly, are often educational problems, too.

He described closed-circuit television facilities as the best means of presenting those educational television programs which cannot interest large cross-sections of the public. This type of television will permit superior instructors to teach all the students taking a given course in a community, allow the operation of costly facilities such as electron microscopes, which

could not practically be duplicated in each school, to be observed in the various classrooms, and permit the educational system to determine the hours of the television presentation.

Transcriptions and Recordings

■ **RCA VICTOR**, Camden, N. J., has released a number of fine recordings made by the Boston Symphony Orchestra, Serge Koussevitzky, conducting. Some of these such as the Bach Suites, *No. 2 in B Minor* and *No. 3 in D* were recorded at Tanglewood, Lenox, Mass., during the Berkshire Festival Concerts. *Suite No. 2 in B Minor* is scored for flute, strings, and basso continuo. Georges Laurent gives a distinguished treatment to the prominent flute part which is heard either in unison with the first violin or as an unaccompanied solo. *Suite No. 3 in D* is somewhat heavier, being scored for two oboes, three trumpets, timpani, strings, and basso continuo. This Suite contains the famous *Air for the G String*.

For Children in the Grades

Pan the Piper (Album Y 331)—the story of "The Reed That Grew Into an Orchestra." This is an achievement in children's recording, written and narrated by Paul Wing with an imaginative symphonic score by George Kleinsinger. The development of the woodwind, the brass, the string, and the percussion instruments is told simply but interestingly against an illustrative background of musical examples. A slightly humorous story maintains interest, and the examples demonstrate the characteristic sounds of each type of instrument. The two records (four sides) are pressed on non-breakable stock and packaged in a neat record-story album.

For the Drama or English Class

Henry V (Album DM-1128)—starring Laurence Olivier with music by William Walton played by the Philharmonic Orchestra of London and Chorus, conducted by the composer. On eight record sides, the most important excerpts and soliloquies from

CHURCH-CRAFT PICTURES, St. Louis 3, Mo.

the play, alternating with sufficient musical episodes from the film, produce a work of extreme value. The Battle of Agincourt is represented by the speech wherein Henry V exhorts his troops, "Once more unto the breach, dear friends, once more; or close the wall up with our English dead. . . ." Here also is the deeply moving Night Soliloquy, beginning, "Upon the king!" . . . In which Henry, on the eve of battle, contrasts the weighty responsibilities of his crown to the life of the simple peasant. Photographs from the film and seven pages of comment by the noted Shakespearean authority Dr. J. Duncan Spaeth complete the album.

Slidefilms and Slides

■ **THE SOCIETY FOR VISUAL EDUCATION, INC.**, 100 East Ohio Street, Chicago, has completed a number of textfilms—filmstrips correlated with textbooks. Although the filmstrips listed below were made especially for use with a given book, the teaching material is presented in such a manner that it can be used advantageously with other basic textbooks in the subject-matter areas indicated.

The filmstrips below are also available through Row, Peterson and Company.

Tell Another Story (64 frames)—to aid the child in retelling a sequence of events in logical order and with a ready flow of words. Utilization frames for the teacher are included at the beginning. Stories included are *The Pancake*, *The Three Billy Goats Gruff*, *The Three Little Pigs*, *The Old Woman and Her Pig*, and *The Elves and the Shoemaker*.

I Live in the City (54 frames and a Teacher's Guide).

I Live in the Country (54 frames and a Teacher's Guide)—both strips intended to review, clarify, and enrich children's experiences with country or city life. They were prepared in correlation with *Alice and Jerry Basic Readers* of Row, Peterson and Company.

Skip Along (40 frames and a Teacher's Guide)—an additional reading film for vocabulary learning, prepared in correlation with *Skip Along*, the first pre-primer of the new *Alice and Jerry*, Basic Reading Series, Row Peterson and Company.

Simple Machines (74 frames and a Teacher's Guide)—the principles of the inclined plane, lever, pulley, wheel-and-axle, wedge, and the screw. Correlated with *Doing Work* (3rd and 4th years) and *Simple Machines* (junior high), Basic Science Education Series, Row, Peterson and Company.

Current Film News

■ **INTERNATIONAL FILM BUREAU, INC.**, 84 East Randolph Street, Chicago 1, Illinois, has acquired the United States distribution rights from the National Film Board of Canada to the following educational sound films in color:

Great Lakes (22 mins.)—highway for one of the greatest industrial regions on earth. An immense amount of diversified cargo moves along these lake routes, which constitute some of the world's busiest shipping lanes. The shipping theme is used to link short sequences on steel production, pulp-making, shipbuilding, grain storage, and the workings of canals and locks.

Fur Country (22 mins.)—story of an Indian trapper on one of his periodic visits to his trapline in the region of James Bay. Winter travel by sled and snow-shoe; camping in the snow; various ways of setting traps and the best way to dry a pelt are all shown.

Eskimo Arts and Crafts (22 mins.)—arts and crafts of Baffinland Eskimos. Their kyaks are marvels of craftsmanship and speed. Their decorated skin garments, carved ivory and hand wrought implements are products of traditional skill, and their

legends, drumming, dancing and singing have been handed down for generations.

Vegetable Insects (22 mins.)—close-ups of the common garden pests that do so much damage to vegetable crops. Their colors, markings, and eating habits are clearly shown and emphasis is laid on how each species does its damage, and how it may best be destroyed. Some helpful insects are also shown. Modern entomological research is described and a number of practical control measures demonstrated.

■ **TEACHING FILMS INC.**, 2 West 20th St., New York is distributing several groups of films for use in the Social Studies, music, and physical education:

Rhythm Is Everywhere—responses of a student on his way to school to the rhythms about him.

Musical Instruments: the Strings—the relationships among stringed instruments, demonstrated at a quintet rehearsal.

Fundamentals of Swimming and Fundamentals of Diving—two films of value in physical training classes in junior and senior high schools.

Understanding Basketball and Problems in Sports: Basketball—the former is for the spectator; the latter, presents problems and their solutions.

■ **FILMS OF THE NATIONS, INC.**, 55 West 45th Street, New York is distributing three films produced abroad:

Historic Switzerland: the Rhone Valley (2 reels)—a view of Switzerland, a democracy for over 650 years. Because the Rhone River Valley has been the setting for much of Switzerland's rich history, this highly educational film on the Rhone Valley reveals

much of the country's ancient and modern history, its scenery, villages and cities, traditions, agriculture, work of the people, architecture and great men.

The Wind From the West (2 reels)—a unique film on the land of the Lapps in northernmost Sweden. By a charming blend of fact and fantasy, the film tells the story of the nomadic Lapps, their traditions and mode of living. The film follows Nils, a school boy, on a dream excursion into this northern country of scenic beauty and grandeur, of reindeer, and of people whose habits and costumes appear strange and exotic to the uninitiated.

■ **AWARD FILMS**, 115 West 44th Street, New York 18, has acquired the exclusive 16mm distribution rights of a recent British Information Service's film:

Does It Matter What You Think? (15 minutes)—a provocative film on the subject of "you and public opinion," surveying not only the various media through which we see, hear, and think but cleverly examining the larger question, "Do we think what we are told to think, or do we come to independent conclusions?"

■ **ENCYCLOPAEDIA BRITANNICA FILMS, INC.**, 2 North Wacker Drive, Chicago 6, has released for distribution two art films:

The Making of a Mural (1 reel, color)—showing Thomas Hart Benton creating a 22-foot mural entitled "Achelous and Hercules" for a Kansas City

Two New Releases . . .

- **A CHRISTIAN AND HIS MONEY** (40 frames, manual \$2.50) Christian stewardship forcefully visualized. Photos and cartoons. For young people and adults.
- **USING FILM STRIPS IN THE CHURCH** (60 frames, manual, \$3.00) How to use film strips in all phases of a church program. Interesting, practical.
- Order these and other Church Screen Productions from your visual aids dealer.

"PUPPY TROUBLE"

The First of the series, **TRAINING YOU TO TRAIN YOUR DOG**. Three 16mm Sound Films in Color or Black-and-White.

Demonstrating the Puppy's First Lesson in House Manners.

Helen Hayes & Lowell Thomas, Narrators. Blanche Saunders: Director. Louise Branch: Producer & Photographer.

UNITED SPECIALISTS, INC.

America's foremost producers of Dog Films
PAWLING, NEW YORK

Thomas Benton at Work

store. The techniques and processes necessary to create a mural of this size are shown. Benton, long noted as one of America's greatest contemporary artists is especially famed as a Missourian.

Painting Reflections in Water (1 reel, color)—the technique of water color painting. Eliot O'Hara, a distinguished American artist and teacher, demonstrates his methods while painting a view of Gloucester Harbor. The film is designed for art students and art appreciation classes in schools, colleges, and adult groups.

■ **UNITED WORLD FILMS, INC.,**
 RCA Bldg., Rockefeller Center, New York 20, has added 37 Universal titles heretofore distributed through other channels to its library. Included in this group are such films as *The Invisible Man* with Claude Rains, *Three Smart Girls Grow Up* with Deanna Durbin, *The Sun Never Sets* with Basil Rathbone, Douglas Fairbanks, Jr., *Tower of London* with Basil Rathbone and Boris Karloff, *When Tomorrow Comes* with Charles Boyer, *You're a Sweetheart* with Alice Faye and Andy Devine, and many others including three to be released early in 1948: *Destry Rides Again* (James Stewart, Marlene Dietrich); *100 Men and a Girl* (Deanna Durbin, Leopold Stokowski); and *I Stole a Million* (George Raft). New films include the following:

Tangier (8 reels)—a mystery-drama. At the cross-roads of the world, a group of international agents tangle, with Maria Montez, Preston Foster, Robert Paige, Louise Allbritton, Kent Taylor, and Sabu . . . mature.

The Seventh Veil (93 minutes)—a psychological drama with the popular James Mason and Ann Todd. A celebrated concert pianist is rescued from

James Mason and Ann Todd

suicide and is treated by a psychiatrist who is able to delve into her past life and obtain the facts which enables him to solve her present problem . . . mature.

Ideal Girl (6 reels)—behind the scenes in the music publishing game with Jess Barker, George Doenz, Alan Mowbray . . . lively tunes . . . family.

Scarlet Horseman (a serial in 13 episodes of 2 reels each)—story laid in the Texas of 1875.

■ **PICTORIAL FILMS, INC.,** RKO Building, New York 29, announces that 40 full-length Hollywood productions will be released to the 16mm field during 1947-48. Five features will be in color. Among the 40 films are the following:

Danny Boy (66 minutes)—the story of a boy and his dog with Robert "Buzzy" Henry, Ralph Lewis, Sybil Merritt, Helen Brown, and Walter Soderling.

FILMS NEW 16mm SOUND *from* BRITAIN

CAMBRIDGE 2 reels — 17 mins.

This is a portrait of one of the oldest universities in the world. The film shows the surrounding landscape and many of the historical colleges. It explores lecture halls and laboratories, and presents sequences of famous professors in session.

DOES IT MATTER WHAT YOU THINK? 2 reels — 15 mins.

This is an amusing and provocative film for both adults and teen-agers, which arouses many questions in the mind of its audience. Do you think what you are told to think or do you form independent conclusions? Do you read a newspaper because it expresses your ideas or because you accept its editor's ideas? When you form an opinion, what use do you make of it?

GENERAL ELECTION 2 reels — 20 mins.

Shot at Kettering during the election of 1945, the film begins with the formal proposal of the candidates and ends with the drama and excitement of polling day. The voters are coaxed and cajoled by the oratory of each candidate. Detailed scenes of polling day show the mechanics of voting and stress the importance of an election in a democratic society.

THE GREAT GAME — SOCCER 2 reels — 23 mins.

All over Britain men from factories and offices spend Saturdays playing their favorite sport—soccer. Children play it in fields, schoolyards, and even in the streets. Famous international amateurs and professionals teach football tactics to the young enthusiasts. The film also shows the excitement of the finals of the Cup Competition.

HISTORIC ST. PAUL'S 2 reels — 14 mins.

This is a picture of St. Paul's Cathedral, past and present. St. Paul's rebuilt by Sir Christopher Wren after the Great Fire of London and St. Paul's the Shrine of a Nation's heroes—Nelson, Wellington, Roberts, Kitchener, Jellicoe and Beatty. The film shows recent historic occasions and the great Dome riding high above the blitz of 1940.

INSTRUMENTS OF THE ORCHESTRA 2 reels — 20 mins.

The famous British conductor, Dr. Malcom Sargeant, is the commentator of this brilliant film. He demonstrates the sound of each instrument, and then conducts the London Symphony Orchestra in Benjamin Britten's Variations and Fugue on a theme by Purcell. The director is Muir Mathieson, permanent conductor of the London Symphony Orchestra.

MYRA HESS 1 reel — 10 mins.

Since Dame Myra Hess first appeared on the concert platform with Sir Thomas Beecham in 1907, she has become one of the supremely great British pianists. It has been justly claimed that no other woman pianist in the world can equal her rendering of the work of Beethoven. In this film she plays the first movement of Beethoven's Sonata in F Minor—the Appassionata Sonata.

PROUD CITY 3 reels — 26 mins.

This is a plan for London. The great damage wrought by the blitz can now be turned to good advantage, for the plans for rebuilding are the result of careful study and investigation, and will prevent haphazard regrowth. Here is the opportunity for the huge straggling metropolis to become a planned and practical city.

SHRINE OF A NATION 2 reels — 14 mins.

The history of Westminster Abbey is the history of England. Here Parliament once met; here for centuries the Kings and Queens of England have been crowned; and here are buried illustrious Englishmen of all times—sovereigns, statesmen, poets, scientists, musicians. Westminster Abbey is a lovely example of Early English architecture. Shots include the coronation of King George VI.

YOUR CHILDREN AND YOU 3 reels — 31 mins.

This subject concerns the care of young children from the first months to the age of four or five. It realistically portrays the struggles of average imperfect parents and average imperfect children. Although the film is mainly a counsel of perfection, the suggestions are practical and parents could adopt them all without growing wings.

The Enchanted Forest

The Enchanted Forest (77 minutes, color)—the story of a boy lost in a forest. The many animals living there and a hermit are his friends. The cast includes Billy Severn as the boy, Edmund Lowe, and Brenda Joyce.

The Wife of Monte Cristo (80 minutes)—a screen adaptation of the Alexander Dumas story, starring John Loder and Lenore Aubert.

Down Missouri Way (75 minutes)—a hill-billy musical with tunes by Kim Gannon and Walter Kent, starring Martha O'Driscoll, John Carradine, Eddie Dean, and William Wright.

Club Havana—featuring Carlos Molina and his "Music of the Americas" band, playing such songs as *Besame Mucho* and *Tico Tico*. The film stars Margaret Lindsay and Tom Neal.

Films for United Nations Week September 14 to 20

Better Performance on 16mm. sound

"Premier-20"

16MM. SOUND PROJECTOR

Close-up of new swing-out gate, showing gate in open position

The new "Premier-20" embodies many advanced features which combine to create new standards of 16mm. sound performance . . . convenience . . . and efficiency of operation. The new swing-out gate, shown above, permits easy cleaning of the aperture plate and pressure shoe . . . without ever disturbing the lens focus.

New Richer Tone Quality—The latest 12-inch Jensen Permanent Magnet Dynamic Speaker reproduces sound faithfully, realistically . . . has adequate power for moderate size auditoriums.

Streamlined Carrying Cases—Rugged . . . scratch-resistant . . . easy to clean, they offer complete protection for your Ampro projection equipment.

New Ampro Slide and Filmstrip Projector

New from every angle, this Ampro Model 30-D Projector for 2"x2" slides and 35mm. filmstrips is ideally suited for classroom use. Simple to operate . . . with curved film guides to guide filmstrip in exact position for crisp, brilliant pictures. Automatic snap-action, self-centering slide carrier assures perfect focus . . . with one hand operation. Quick tilting . . . sharp, clear reproduction . . . lift-off carrying case . . . many other outstanding features.

Films of the World Festival Announces Program Schedule

FACTUAL films entered by producers all over the world will be shown to the general public and particularly for representatives of community organizations who are potential users of this valuable medium on seven consecutive Saturdays, beginning October 11 and continuing through November 22 with the first screening at 2 p.m. and the second at 4 p.m. at the Surf Theater in Chicago.

International Interdependence will be the keynote of the first week's program. Documentary film producers are well aware of the force with which the factual motion picture can stress and dramatize the world's problems.

The Biological Science category on October 18 will, it is expected, present films on Public Health, Nutrition, and Mental Health.

Another program in the field of social analysis will center on films about Peoples and Lands of the World on October 25.

The Amateur (16mm open) film showings will be on November 1. The Festival will be an excellent opportunity for Amateur producers to obtain recognition.

The November 8 program will present films on the Physical Sciences with much informative material for the layman.

Many industrial and commercial organizations in the United States have sponsored the production of public relations films which contribute to the information and public welfare. These Business-Sponsored films will be shown on November 15.

The final program of the series will feature films in Arts-Crafts-Music.

Series tickets at \$3.90 for seven programs and individual program tickets at 70c may be secured in advance by writing to the Chicago Film Council, 222 N. Michigan Avenue, Chicago 1, inclosing a check in payment.

The Chicago Film Council is a non profit educational association of members representing community organizations and the industry. The Council has chosen the FILMS OF THE WORLD FESTIVAL as one of the best ways to acquaint the public with the wide scope of films available to them.

Executive Board

The Festival Executive Board includes the following persons:

Daniel Catton Rich, Director, Art Institute of Chicago; Robert Maynard Hutchins, Chancellor, University of Chicago; Ethel Kay Benson, Director, Junior Red Cross; Dr. Henry T. Heald, President, Illinois Institute of Technology; Donald G. Williamson, Jr., President, Chicago Junior Association of Commerce and Industry; Mrs. J. R. Chesser, Chairman, Motion Pictures Section, General Federation of Women's Clubs; Mrs. W. L. Levedahl, Chairman of Audio-Visual Education of Illinois Congress of Parents and Teachers; Russell Babcock, Educational Director of Mayor's Committee on Human Relations; Elmer Balaban, President, E. & H. Balaban, Inc.

Motley Joins Film Council Board

Arthur H. "Red" Motley, President of *Parade Magazine*, has accepted a position on the Board of Trustees of the Film Council of America, it was announced by Stephen M. Corey, Acting Chairman of the Board of Trustees.

Motley, who as publisher of *Parade* has been an ardent exponent of pictorial journalism, will devote a large share of his time to the activities of the Film Council of America. Its immediate goal this year is the establishment of 350 community film councils which will help all groups throughout America obtain informational films for their education and enlightenment.

A long experience in sales and publishing comprises Motley's eventful background. Last month in speaking before the annual convention of the National Association of Visual Education Dealers on "Picture Power", Mr. Motley said, "Pictures and films present the best means at hand to educate peoples of the world for peace and prosperity."

National headquarters of the Film Council of America are at 6 West Ontario Street, Chicago 10, Illinois.

Newark Film Council Joins the Growing List

Representatives of over 50 community organizations met in the Board of Education Building to formally organize the Newark Film Council. The constitutional committee was enlarged in order to better represent the increasing group.

Councils are in the process of formation in Cleveland; Dayton; Los Angeles; New Albany, Indiana; Terre Haute, Indiana; Kansas City; Akron; Chester, Pa.; Wyomissing, Pa.; San Antonio; Big Spring, Texas; and Victoria, Texas.

First Council Formed in City Under 5,000

Allegan, Michigan with a population of 4,500 has the honor of being the first city with a population under 5,000 to organize a chapter of the Film Council of America. Rev. Charles Dobbertin, Acting Chairman of the Allegan Film Council says, "We have great plans, and there is much enthusiasm. We realize that the Film Council of America has a definite contribution to make to the community, and we are confident that through a local film council we can carry on a great program of adult education through the various organizations within our community."

Films of the World Festival

(Concluded from page 416)

Screening Committees

Chairman of the Screening Committees which will select the films to be shown include the following: Arts Crafts Music, Mrs. Katherine Kuh, Art Institute of Chicago; Biological Sciences, Mr. Ralph Creer, American Medical Assoc.; Physical Sciences, Col. Gerald Bench, Chicago Public Schools; Peoples and Lands of the World, Mrs. Patricia Blair, American Library Association; International Interdependence, Miss Ethel Kay Benson, Jr. Red Cross; Sponsored Films, Mr. John Paidar, Jr. Assoc. of Commerce and Industry; Amateur, Dr. C. Enion Smith, President, Association of Amateur Cinema Clubs of Greater Chicago.

MAKE FULL USE OF YOUR **KEYSTONE** *Overhead Projector*

IT MEETS EVERY NEED OF GROUP INSTRUCTION

Of course, it gives you the finest obtainable projection of **Standard Lantern Slides**

Have you seen the latest additions to Keystone's vast library of educational slides? Some of these new units will make your work more effective—and easier.

Many instructors realize the possibilities of

Handmade Lantern Slides

—not only for the presentation of special subjects, but for obtaining enthusiastic group participation.

You can sometimes make a worthwhile cut in the cost of lantern slides, by using

Quadruple Slides

—with four exposures, which are screened singly by means of a quarter-size mask.

Supplementary Lens

as with two-inch slides and strip film) you can use the five-diopter *supplementary lens*, shown at left, which enlarges the projection two dimensions each way.

Place a Flashmeter on your Overhead Projector, and you have a

Tachistoscope

—of thoroughly proven value for efficient training in spelling, reading, recognition and general visual skills.

By means of an inexpensive adapter, you can show

2-Inch Slides

—with the clear, inexpensive daylight projection made possible only by a 750 or 1000-watt lamp.

You can also buy an attachment for showing

Strip Film

—and here again, have the advantage of the Keystone Overhead Projector's powerful illumination.

An adapter is also available for **Microscopic Slides**

—and with the microscopic slides (as well as with two-inch slides and strip film) you can use the five-diopter *supplementary lens*, shown at left, which enlarges the projection two dimensions each way.

Milwaukee Forms Film Council

THE Milwaukee Film Council was organized August 27th to co-ordinate educational 16 mm. film activities in the Milwaukee area. Meetings will be held monthly on the third Wednesday at 8 p.m. in the Milwaukee Art Institute auditorium.

The new council, which is open to all organizations and individuals using 16 mm. films or interested in their production and distribution, plans to co-operate with the Chicago Film Council in bringing to the mid-west in October and November the World Film Festival being sponsored by the Chicago group. It also will encourage film showings and special programs in Milwaukee during United Nations Week, September 14-20.

Headed by a board of 14 members, the council elected the following officers at its organizational meeting: Paul Gratke, chief of the Milwaukee Public Library's Education department, president; Murl Deusing, curator of education at the Milwaukee Public Museum, vice-president; and Miss Nancy Grey, of WTMJ, the Milwaukee Journal station, secretary-treasurer.

The purpose of the council, according to Gratke, is to act as an informational exchange on 16 mm. film trends and technical developments and to educate for improved utilization of films. It will also evaluate films for community use, inform the community of film services available in Milwaukee, and acquaint film producers with 16mm. film needs in Milwaukee.

Movie Fest Planned in Oklahoma City

Amateur movie makers who trek to Oklahoma City to attend the annual convention of the Photographic Society of America, meeting at the Oklahoma Art Center from October 8 through 31, are going to be in for a real treat movie-wise. This is because the P. S. A. Motion Picture Division is assembling one of the most comprehensive collections of outstanding amateur-made motion pictures ever gathered in one group of film cans.

The pictures—several hundred of which are expected to be judged prior to the selection of those to be shown during four days of intensive activity—will be both 8mm. and 16mm. They will be shown mornings, afternoons, and evenings at the Art Center.

In addition to the presentation of these films, the program will also include screenings of special films of an industrial, educational, and commercial nature, and talks on movie making by such outstanding cinematographers as Ralph Gray of Mexico City; Dick Bird of Saskatchewan, Canada; Kenneth B. Space of New York City; Harris B. Tuttle, Chairman of the Motion Picture Division of the P. S. A.; and others.

The most of the outstanding films in the opinion of the exhibition judges will be duplicated with the maker's permission, following the showings, and sent about the country as a traveling show of 1947's finest amateur-made motion pictures.

As Viewed From Here

From the Experience of Others

DURING the years, there was plenty of talk about how the schools were going to greatly increase their use of audio-visual tools for learning, and that has been happening—although at a much slower rate than had been expected. But the phenomenon of the audio-visual field in the past few years is what has been happening in the churches. Filmstrips, motion pictures, lantern slides, and transcriptions are being used not only in increased quantity but in original and uniquely effective ways. Church leaders are studying these new media and their applications to the church's instructional objectives. They are putting them to work, and they are getting results. These are significant facts for school users of audio-visual materials and for all group leaders in the community.

Church leaders have not ignored the experience of the schools and others in learning about the use of these newer materials. They call upon school visual educators to bring their experience to church visual conferences. In local communities, church workers have profited from the successes and mistakes of the schools. They have found much of the best literature of the audio-visual field to be universal in its application although it may have been written with a school teacher readership primarily in mind.

Learning from the experience from others need not be uni-directional. Schools can learn from the churches too. Although instructional objectives may differ, the principles of good instruction and good use of instructional materials are the same. Furthermore, technical and mechanical problems related to the use of projection and reproducing equipment are much the same in school and church. Most of the problems of the school and church related to the use of audio-visual materials they hold in common, and greatest gains can be made by both groups through a continuous sharing of experience.

This is the principal function and a primary aim of this magazine—to provide a way of sharing experience—not only among school and church people, but among all who would use audio-visual materials for educational purposes. That is why many months ago The Church Department was established as an integral part of THE EDUCATIONAL SCREEN, and the wisdom of this coordination has been proven by reader response. School readers have profited from the experience and the ideas generating from the church use of visual materials. Church readers have read beyond the pages devoted exclusively to the Church Department and have gained from the experiences of a much wider field. There has been an effective sharing of experience.

There is this same kind of value inherent in the Film Council of America idea, and that is why we are supporting that development as strongly as we

know how. The Film Council of America is concerned with the community-wide use of audio-visual materials. Through local film councils all group leaders interested in the use of these new materials in their programs are provided an opportunity for getting together and sharing experience—for working cooperatively and learning from one another. The Film Council of America is not for school people alone, or for church workers, or for the adult forum leaders, it is for all who believe that their objectives can be better achieved through using visual media.

Likewise EDUCATIONAL SCREEN is not concerned with education only in the schools, or only in the churches, or only in the YMCA, the settlement house, or the grange hall. We are concerned with education wherever it takes place, and we will constantly endeavor to show through the sharing of experience how it can be done better through the use of audio-visual materials.

Picture Power

ONE of the most memorable events of NAVED's eventful convention last August was a talk given by Arthur H. ("Red") Motley, President of Parade Publication, Inc. Although his subject was "Picture Power," he incidentally built up an extremely strong case for the power of words—especially his words.

"Nothing happens until somebody sells something," he said and proved his point rather convincingly, even to the educators who were there. "Needs are not important. If they were, then China ought to be the most prosperous country in the world, because she has the most needs. . . . A need must be converted into a want that must be sufficiently strong to persuade a person to sacrifice dollars to satisfy that want."

"Red" Motley from his editorial and advertising experience knows the power of pictures on the printed page. He knows the power of motion pictures. He believes that this great power must be used to develop a better-informed world. Picture power must be used in education. "The need is there but we haven't made the tradition-bound school boards want this modern educational aid enough to appropriate the money for its use in the schools."

The Visual Education Dealers were challenged to expend new energy in creating the wants that would move school boards to action. This is a challenge that should be heeded not only by those whose business it is to provide the equipment and the pictures but by all who believe in the power of pictures. It is their business to help create the wants that will put all the power of pictures to work in our schools. "Nothing happens until somebody sells something." Let's sell picture power.

—Paul C. Reed

Familiar Patterns

Now that summer is over, it is far too easy for any individual to settle into the usual routine of life, forgetting the exciting patterns which abound everywhere.

Howard A. Shiebler and Ambrose J. Hickey discovered that many interesting photographs could be made about schools. For 13 years, they have publicized New York City schools by means of their photographs. Many of these have been used to illustrate the annual report of the superintendent, City of New York.

Fall is a good time for a field trip to the local museum. If a school bus is available, trips may easily be made to historic locales not too far from every school. Careful preparation must be made if pupils are to profit from the trip.

Bicycles and white shirts are common place sights, but not when Ambrose Hickey sees them through his camera.

Photographs are by courtesy of New York City Schools and Etna M. Kelley, author of "Children at School," *Popular Photograph*.

A Last Look at Summer

Gardner L. Hart, Director, Audio-Visual Education, Oakland Public Schools, Oakland, California and a member of the Editorial Advisory Board, *Educational Screen* is seen editing an experimental film.

Florida's campaign for more effective and economical use of audio-visual materials gained tremendous impetus this summer as school teachers and administrators made a full-scale orientation study at a workshop on the University of Florida campus, Gainesville, Florida.

Professor George L. Crutcher's staff included Miss Norma Barts; Miss Ruth Thompson, assistant director, Cleveland division of visual education; Miss Mary Rees Land, film division, Library of Congress. At times, specialists were called in to augment the staff.

Final Breakfast Meeting

At Northwestern University, Evanston, Illinois, 124 educators from 31 states and one province of Canada were enrolled in the 1947 Summer Course, Audio-Visual Teaching Aids in the Classroom. Mr. C. R. Crakes, Educational Consultant, DeVry Corporation again served as instructor and reported that enrollment had tripled since 1944.

They Didn't Have Electricity

An alert teacher uses such visual devices as exhibits, maps, blackboards, herbariums, and aquariums

IT WAS on my way home from one of those "inspiration and gripe" meetings on visual instruction where the "experts" inspire, and the majority of the audience gripe about inadequate facilities.

As I rounded the dusty county corner I saw it. Like most public school buildings its appearance spoke accurately of the material resources and civic pride of the district. Its two rooms and a roof were cheaply constructed of wood, showing no attempt to present a well-kept look. The building sat in the sun like a Bowery bum who had long since lost all sense of self-respect.

My visit was not anticipated by the occupants of Sunnyslope School so with the consent of the County Superintendent who accompanied me, I walked into the grades 4 to 8 room unannounced. To my surprise there was no choked, embarrassed hush or feverish "good-afternoon-I-see-we-have-visitors" which from my previous experiences in visiting rural schools, I had come to expect. There was a friendly "I'll-be-with-you-in-a-minute" smile and nod from the neatly ginghamed young teacher who stood near a front window with a group of three boys and a girl who were hovering over a home-made relief map of the neighboring three converging apple growing valleys and the three mountain ridges of the area in which the little school was located. As we moved closer we discovered that two of the four youngsters were placing properly labeled match stick pennants at the various spots on the map which represented their own farms and homes. The other two were pasting down to the surface of the relief map a red yarn string over the route of their proposed visit to the apple storage plant.

Exhibits

Turning from the busy little map group, we watched for a moment two youngsters who were reading at an interesting display table. The table was covered ("a little too crowded," I thought, as my old habit of looking for theoretical perfection arose for a second) with bottled and labeled samples of tree-spray, with booklets and pictures showing how fruit was damaged by certain insects and with the two Department of Agriculture pamphlets with which the two readers were engrossed.

Blackboard

Next came the blackboard. The first two panels were clean except for the carefully printed reminder at the top one of which read "He *had* gone riding." This we learned some time later was a carefully calculated device to help establish good speech. The center panel of the board was covered by a neatly drawn map of the state on which were shown rivers, apple-growing valleys, mountains, and prevailing winds. The last two sections of the board were bare except for an unerased calculation that someone had made.

Maps and Apple Growing

At the other side of the room stood a cabinet con-

A. J. FOY CROSS
Director, Visual Education
Central Washington College of Education

taining supplies. Over the front of the cabinet hung a standard physical-political map of the state. On a table immediately beside the cabinet was stretched an oil-cloth map of the United States on which was marked with "crayola" the various apple-growing sections of the county. Four children were busy at this map marking down the rank in apple production of each state of the union. They had at hand for their reference an encyclopaedia volume and a booklet from the Apple Growers Association.

Herbarium and Aquarium

On this same side of the room toward the rear and directly across the room from the old wood-burner stove stood a combined herbarium and aquarium both of which were well stocked and very clean.

The rear of the room sported two neat vertical display boards over which hung a full length friez on salmon fishing.

There was more in this school. There was a group of happy, alert, busy youngsters and a teacher with

(Concluded on page 454)

The youngsters were making a map of the neighboring area. They didn't have electricity, but they did have visual education.

The University In Transition

Postwar changes in university life are seen in a new documentary film, made by the Department of Photography at Ohio State

THE American university today has a dramatic story to tell. It's a story of an important period in the history of the university, a chronicle of higher education in the postwar, a reflection of life in our times.

The motion picture is the only satisfactory way in which this story can be told. Only through motion pictures can the reality of the American university be made clear to a public whose conceptions of college life are commonly limited to vague images of ivy-covered halls inhabited by absent-minded professors who are continually being embarrassed by the fact that female students have legs. The group image of college life inevitably includes a scene at "good old Tate" of Hollywood fame, with students marching across campus carrying high the hero of the day. Generally, in such inspired moments, a celestial choir, cleverly concealed in the sound track, fades in with the strains of *The Alma Mater*. There is seldom a dry eye in the audience.

Need for Documentaries

Interesting and entertaining as the more polished presentations of college life are, there can be no question of the need for documentary films to present the

ROBERT W. WAGNER
Director of Motion Picture Production
Ohio State University

real picture of the American university, its work with students, and its importance to the community, state, and nation it serves.

At least two major institutions of higher learning have produced such films—Pennsylvania State College, and the Ohio State University. Similar productions are in work at other colleges and universities. For example, at Chicago, a film, *Housing America's Students*, is in production. This trend toward university-made films should be encouraged, for perhaps only through such films may the public learn the vital importance of the American university to the democratic way of life.

At the Ohio State University, a sound film, *The University and the War*, had already been produced, depicting the role of the university in wartime. Early in 1947, the administration decided it was time for another film document to show the changing face of the university.

creased 50% since
V-J Day.

Specifications for the Ohio Film

The specifications seemed simple at first. A film was needed to show the flood of students crowding the doors, trembling the rafters of the academic halls. It would show students living in overcrowded dormitories, in temporary buildings, and in rehabilitated barracks moved in from army installations hundreds of miles away. It would show whole student families living in trailer towns which mushroomed near the campus because of the housing shortage.

The film would depict the vastly expanded teaching staff necessary to meet the needs of classes that had doubled, tripled in size. There would be scenes of young instructors just out of army centers and older, experienced professors coming out of retirement to help the university through its most trying period.

THE FILM

THE UNIVERSITY IN TRANSITION (27 minutes), 16mm, black and white, sound) is available for showing from the Bureau of Public Relations, Ohio State University, Columbus, Ohio. Copies were sent to the UNESCO Film Festival in Switzerland and to the University of Columbia at Bogota. It has been shown widely in Ohio and will be circulated to various Latin American cities.

There would be scenes in lecture hall and laboratory—familiar scenes of libraries and classrooms. There would also be strange, new sights—experiments in radar and in splitting of the atom. There would be human touches, too—a class in physical therapy for disabled veterans, counseling services for men and women undecided about their futures in a wide open, changing world.

The Student-Veteran Is Wiser

The student-veteran himself was older, wiser in many ways, and less patient with detail. Above all, he was filled with a sense of passing time and charged with a desire to cut through red tape in order to get finished with school and begin his life's work.

These things made the writing of the script less simple than the first draft of ideas had made it seem. The skeletal outline of the film was there, but the specifics, the human incidents which distinguish a good film from one which deals in generalities, had to be filled in.

Certain facts were at hand. For example, at Ohio State, 13,000 out of a total of 25,000 post-war students were veterans. About one-fourth of the total student body were women. There were figures on the building space needed to meet the increased demand for classroom space, figures on the number of books and supplies needed, and a whole host of classified information listing amounts, numbers, quantities.

Human Facts Were Needed

But other facts needed to round out the script were hard to find. A steel tape will tell the length of a classroom; but where is the yardstick to measure the human contents of that room, where the figures that stand for the pent-up aspirations of a young man with four years of war under his belt and with questions under his hat?

Pre-fabricated classrooms are used.

The human facts weren't listed in the college bulletin. Yet, these things had to find their way into any script that pretended to tell the story of the university and the people in it.

Story conferences with the President of the University, with key officials and with the deans who worked directly with the students, helped. Many of the men administering the affairs of the university were veterans themselves. Others had been directly concerned with the war effort in official capacities. They understood.

Personal Interviews

But this was not enough. One had to talk to students—lots of them. One had to see them standing in cafeteria lines a block long, studying on the steps of

An Introduction

By TU WEI-TAO, Director
Office of Audio-Visual Education
Nanking, China

AUDIO-VISUAL education is not new in China. Almost from time immemorial, the Chinese have used audio-visual methods in the study of the Chinese language itself—a great number of the Chinese characters are built from pictures and sound components. In fact, ancient Chinese scholars were fully aware of the importance of visual education when they said, “one picture tells more than a thousand words.”

Therefore, far from being received with suspicion and doubt, audio-visual education has received enthusiastic support from the leaders of education in China. In the program of education in China, there are two great tasks to achieve. The first is to raise the general education standard of a quarter of the world's population; the majority of which knows not how to read or write. In this respect, audio-visual media can teach the illiterate to acquire a minimum vocabulary in the shortest time possible and, at the same time, inject basic knowledge and new ideas through pictures combined with spoken words, the most effective and direct means of communication.

Tu Wei-tao, Director,
Audio-Visual Education,
Ministry of Education,
China.

Greater Things from Audio-Visual Instruction

But we expect even greater things from audio-visual education. The UNESCO charter states that, “Since wars begin in the minds of men, it is in the minds of men that the defense of peace must be constructed.” Our second task in education is to build a better understanding between China and every other country of the world. Visual media in particular are international in language, and their use is one of the best means of increasing international understanding.

(Concluded on page 459)

MING-CHING SWEN
Director, Audio-Visual Center
University of Nanking, China

THE DEVELOPMENT of the film and radio program at the University of Nanking may be divided into five periods. Each was interrupted such that the beginning of each period was almost a new start. As a result of national and international problems, the film and radio units in the University were challenged to do much with little. Victory on V-J day brought us many new opportunities, but also, the necessity of making another start after moving down the river from Szechwan to Nanking.

First Period: 1930 to 1935

Introducing Teaching Films

Prior to 1930. The Eastman Kodak Company of Shanghai imported nearly a hundred Eastman Teaching Films. However, little interest in them was shown on the part of Chinese educators. Dr. H. R. Wei, Dean of our College of Science, however, saw possibilities. He immediately secured a few reels together with a projector, and used them in classes in the College of Science with great effectiveness. Then, the principals of other schools in Nanking asked for the privilege of showing these films to their students. At first students were allowed to come to the College in organized groups to see these films. Then, when more students desired to see them, a projectionist was hired to go out to the various schools.

The Eastman (silent) films had English titles, and when they were used in Middle schools, they were not satisfactory. Accordingly the College made arrangements to translate all the films into Chinese. The Eastman Kodak Company, in return, agreed to give the College free use of all their films and give copies of the translated ones to the College for permanent use. Professor K. K. Chiu of the Chemistry Department was assigned the job of editing them. Many other faculty members also participated in the translation. Before

Ming-ching Swen

methods in the United
States, 1940 to 1941.

the war broke out, 60 films had been translated. These films constitute half of all educational films circulated in China before the war.

**Second Period:
February 1936 to October 1937**

1. Producing Chinese Educational Films
2. Organizing of a Special Department

This was a time of rapid development, but it did not last long. When educators over the entire country became aware of the effectiveness of these educational films, they asked, "Why can't we make some Chinese educational films?"

A country boy seeing the Eastman film about brushing teeth, said, "Oh, look at that foreign girl, why does she put stick in her mouth?" But if it had been a Chinese girl brushing her teeth, the audience would not think it a strange custom of foreigners.

With this in view the College started to make films in 1934. By February of 1936, a production program was in progress, under my direction. Twelve films were made during the first year. By the fall, a special department was organized, which later was to be known as the Audio-Visual Center. The department was moved from a crowded professor's office to a larger room in the attic of the Science Building. Here four cameramen were able to work. The Eastman Kodak Company of Shanghai provided the processing facilities, and work proceeded very satisfactorily.

At this time, the Ministry of Education began to promote motion picture education on a nation-wide scale. We were invited to cooperate in two major ways:

1. **To help with men:** Our Professor Pan, who was the head of the Department, was lent to the Ministry to take charge of the national program, along with a cameraman, Mr. Tsiang. The national program called for hundreds of men to work in the field. With our help, the Ministry offered three short training courses and prepared more than 200 persons, who later worked in 25 provinces with 135 sets of film equipment. Each set consisted of one projector and one generator provided by the Ministry. The Ministry also distributed a total of 4,000 radio sets through them.

2. **To help with films:** Films were in great demand, and hence, the Ministry of Education asked us to produce more than 20 films and also bought copies of our other films.

Interest in educational films was not confined to the Government. Many schools and social organizations

Air raids often interrupted outdoor showings. Equipment was kept in the caves of Chungking.

also became active. The National Association of Educational Films was organized. A film library service was developed which reached from Peiping in the North, to Canton in the South. Regular film programs were presented along the four railways. An expedition headed by Dean H. R. Wei was sent to Japan to photograph the total solar eclipse.

A new building, needed to house all these activities, was finally constructed. It is now the permanent home of the Audio-Visual Center and the Film and Radio Two-Year College Course. But, unfortunately, soon after we occupied it, we were forced by the war to pack up and migrate to Chungking.

Third Period: January 1936 to August 1941

1. Working Under Air Raids in Chungking
2. Film & Radio Two-Year College Course Organized

Together with the whole University, the department was evacuated on November 25, 1937 and not until January, 1938 was the department able to do regular work again, and this time, in Chungking.

The province of Szechwan is rich in scenery and in industries. It offers many opportunities for the photographers. With Chungking as a base, some very inter-

The Audio-Visual Center is housed in the Hall of Applied Science, Nanking.

The staff at home after eight years refugee in West China.

A class in "Photography as a Science" employs visual aids.

China Film Enterprises of America

esting films such as the *Salt Wells*, and *Mt. Omer* were made. A series of films was also made of Sikong (Eastern Tibet) during this period. The expedition lasted five months. We had to send films to Hongkong, and later to India for processing. This was very uncertain, and not only was it troublesome, but it required many months time, and many of our films were ruined.

While our Department was centered at Chungking, air raids were frequent. Very often we had to flee to the dugouts when the Japanese bombers arrived. Work was greatly hampered. Valuable equipment and films were put in boxes, and carried down to the dugouts at every raid. Much damage was done this way by the moisture. However, under these conditions, films taken in North China in 1937 were slowly edited, and several new films produced.

All this did not stop our new program. Seeing the need, the Ministry of Education offered cooperation and by the fall of 1938, a Film and Radio Two-Year College Course was offered by our College. At first, it was centered at Chungking and later shifted to Chengtu.

At the end of this period, the Rockefeller Foundation made a fellowship grant enabling me to go to the States for further study in film production technique and visual education in general.

Fourth Period: October 1941 to April 1946

1. Further developing the curriculum on film and radio
2. Publishing of "Film & Radio" Monthly
3. Promoting war effort through films and filmstrips
4. Encouraging various organizations to start their own program

At this period, it was found desirable to shift the center of activities to Chengtu where five Universities were located on one campus—that of the west China

Artist Yeh Chien-yu painting a figure for the film, PAINTING A CHINESE FIGURE.

Union University. For the whole visual education program, there was only one room available at first, but gradually, more space was provided until at the end of war, twelve rooms had been remodelled for visual activities.

With my return and with the equipment purchased by the Rockefeller grant, the five years of research experience of Mrs. Swen (Lu Chin-ai) in photographic emulsions, and the addition of Professor Ni Sheng-ta (Radio) and Mr. Tsao Sheo-kong (projection practice) as teaching staff, the curriculum on film and radio was greatly expanded. The Two-Year College Course on Film and Radio now offered eighteen courses. Beginning in 1944, students from other departments began to take film and radio courses as electives. This tendency continued until in the Spring of 1947, there was a total of 104 students from 14 departments taking film and radio courses. *The Film & Radio* monthly has been published since March 15, 1942 in order to build up an audio-visual literature in Chinese that Chinese students could read.

Before 1941, the University of Nanking had only silent films and silent projectors. But during this period, sound films and projectors were obtained through purchases. A large number of films were obtained through exchange with the U. S. State Department and the British Council to promote international understanding. The British BMOI and the US OWI put into circulation, through this University, a large number of films good for promoting the war effort. The United Nations Picture News Office in Chungking, during the last two years of war, produced 200 filmstrips on the promotion of the United Nations and the war effort. With these films and those we produced ourselves, frequent showings were offered both in the University and outside. During the whole year of 1944 for instance, we gave 826 exhibitions with motion pictures. They were given to an aggregate audience of nearly 900,000 persons. Of these showings, 540 were given in the Chengtu area, and 286 were given in the Chungking area. A number of these were in remote towns including some in the Province of Sikong. In Chungking, itinerate showings were given in factories. In Chengtu, the Friday night open-square shows were big occasions for the community. Usually more than ten thousand people attended each show. These showings consisted not only of film program but also of

broadcast programs, through our public address system. Sometimes voluntary contributions to the program were encouraged from the audience.

These showings cannot be fully appreciated unless the circumstances of the showings are understood. These figures represent only half the effort given for program preparation. On many occasions the equipment was set up; the program prepared; and the audience gathered, when an air raid warning would sound. The crew then had to carry back the equipment. Other times, the electricity failed just before or during the showing.

For the United Nations Picture News Office, a Chengtu regional office was operated by our Audio-Visual Center. A number of showing stations were set up in western Szechwan and Sikong, until at the end of the war there were a total of eighty. The regional office distributed two sets of new filmstrips each month to these stations. Between July 1944 and June 1945, these 80 stations gave 2,785 showings, using 12,128 filmstrips, to an aggregate audience of 3,050,101 persons. In the years of 1943 and 1945, we gave two extensive exhibitions of audio-visual education. Equipment was lined up in several big rooms, and special demonstrations were performed. Details of various items were explained in steps.

During the later part of the war, our Dean Wei had designed a microfilm reader, and one hundred sets were made in the machine shop of the College of Science. These were used in microfilm libraries all over the country. The College had helped in the promotion and distribution of hundreds of thousands of copies of microfilms, largely of scientific journals and also those of international culture relationships.

During the last year of war, as a result of our extensive service, many organizations, government and educational, began to realize the importance of audio-visual education. Many requests came to us for advice on how to start or how to develop programs of audio-visual education. We worked partly through the China Educational Film Association, and partly through our own *Film & Radio* monthly. I delivered a series of ten lectures under the auspices of the Association and West China Union University, on how to start and develop an audio-visual education unit. A number of articles were published in *Film & Radio* such as "A Plan for Postwar Film Work in China," "What Does a Visual Education Unit Need in the Way of Equipment," "Post War Film Production Policy," "A Selected List of Producers and Distributors of Educational and Documentary Films in the U. S.," "A Selected List of Equipment Manufacturers in the U. S.," and "The Architectural Designs of Classrooms and Auditoriums for Audio-Visual Education." At the eve of Victory, Dean Wei and I participated in three conferences in Chungking in the Ministry of Education to lay down a five-year plan for a national program in audio-visual education. At the same time, the Military Affairs Commission had opened a short training course for 80 motion picture workers, with the University taking full responsibility for the instruction. With 40 projectors obtained through Lend Lease, these men are now all over China working in the Army.

Fifth Period: May 1946 to the Present

The Great Transition Period

Audio-Visual education in the University of Nanking is now in its 17th year. It is quite beyond comprehension that this is the 5th start. We had our Golden Period during 1936-1937. But that was too brief. The eight years of war were a tremendous loss to us in many respects. Equipment depreciated terribly. Valuable documents left in Nanking were lost. Inflation caused a number of our experienced staff members to go into other jobs. We had to work in crowded corners while being cut off from supplies and information from outside.

By the end of April 1946, we started to move back to our old home in Nanking. We found our building still intact, but costly repairs were necessary. Our "Hall of Applied Science" had been finished only three months before the war.

With a new public address system (32 watts), we started an "audio-broadcasting station," The "University Voice." Three loud speakers were placed in the tower of the tallest building on the campus. From it, music, special announcements and morning religious programs are regularly and literally "on the air." The

China Film Enterprises of America

PAINTING THE CHINESE LANDSCAPE shows the technique as well as the philosophy of the Chinese painter. Note the ever-present "little man," crossing the bridge.

Central Broadcasting Station, XGOA, is now arranging to install a special cable to our studio of the "University Voice." This will enable us to broadcast over all the forty-nine stations in the Central network.

New funds to the total of \$300,000 U. S. dollars have been granted for the purchase of new equipment. Several scholars have gone abroad to study audio-visual methods, and the Foreign Missions Conference of North America has sent Dr. Arthur O. Rinden to work with us. He is in charge of still picture production and extension work for churches and Christian educational institutions.

(Concluded on page 455)

ABOVE: "This foreign trade now—it's like a roundtrip; it works best when there's a full load coming and going . . . We take stuff from where they make it to where they need it."

ABOVE: Looking out the dining car window, this skeptical passenger sees a freight train loaded with export goods. "Why should we send good American stuff out of the country without getting anything useful in return?" Then the passenger sees some heavy machinery for export. He is indignant. "What about all this manufacturing machinery. Isn't that setting our competitor's up in business?"

CUTTING: The editing of the film is especially interesting. Barriers of time and space disappear as the camera picks up a railway train carrying certain goods, cuts to engineer, then to passenger, then to each person concerned with the shipments on the train—imports as well as exports. Advice of experts is introduced where it is needed.

RIGHT: The American worker who built the lathe being exported to England defends the British worker. "That Limey needs new equipment, but fast!"

Then suddenly he realizes that goods made by that lathe will start coming back to this country. "Maybe we should have kept that lathe here in 'Cincy' . . ." I mean, that guy needs a new machine all right, but I don't want to see some American lose his job on account of what that Limey is going to make on our own machines.

Round Trip

This documentary film attempts to answer the question: What does foreign trade mean to YOU?

A Graphic Film Review by
EDWARD T. MYERS

ROUND TRIP is a two-reel, black-and-white sound film produced for the Twentieth Century Fund, an endowed foundation for nonpartisan research and public education on economic questions, by The World Today, Inc. The film has been endorsed by high officials and is based on a Fund research survey, "Rebuilding the World Economy: America's Role in Foreign Trade and Investment" by Norman S. Buchanan and Friedrich A. Lutz.

LEFT: A British machinist at a bomb-damaged lathe awaits the shipment on the freight train. He answers the passenger's question. "But we have to import food. So that means we have to sell goods."

ABOVE: The farmer, realizing that other folks must sell some of their farm products in this country in order to buy the things they need from us, is worried, too. "How can I compete with someone who gets only half the wages that I get?"

RIGHT: Winfield W. Riefler, economist, Institute for Advanced Study, states that the protected industries are not the ones that contribute the most to our American standard of living.

ABOVE: Likewise, the auto worker is concerned. He feels that if the American farmer gets protection, the foreign farmer will not be able to buy American tractors and motor cars. Then some auto worker would lose his job. "There's something fishy about that low-wage argument somewhere. You know, in England the same assembly line job pays about half what we get, but their cars cost twice as much."

The Production

Raymond Spottiswoode served as producer; Roger Barlow, as director. Music was composed by Louis Applebaum while Gordon Weisenborn served as Film Editor. Script was written by Boyd Wolff.

ABOVE: Paul G. Hoffman, President, the Studebaker Corp., states, "... Extra production for export is a very vital factor. It not only means more jobs in plants like ours, but it also means lower costs and, therefore, means lower prices for the home market as well as the export market . . . And that 10% export figure . . . That's overall. In some industries, ours for example, the figure has run much higher.

Use of the Film

Extensive use of the film has been planned by such organizations as the Junior Chamber of Commerce, The League of Women Voters, and The Department of Commerce field offices.

BELOW: The housewife, faced with high prices and a strained budget, is annoyed. "Yes, it's about time you got around to me. Aren't the consumers the ones who have to pay for all this protection?"

George Eastman House To Be A Photographic Museum

Gift of Eastman mansion and historical collection establishes an international instruction and demonstration center covering photography from its beginnings.

A WORLD historical and cultural center for the "display and demonstration of the art and science of photography in all its branches" will be established in Rochester as a living memorial to George Eastman, the chief creator of modern photography. Announcement of the project was made in a joint statement by Alan Valentine, president of the University of Rochester, and Thomas J. Hargrave, president of the Eastman Kodak Company.

The new institute, said to be the first of its kind anywhere, will be located in the magnificent Georgian Colonial home at 900 East Avenue which Mr. Eastman built for himself and his mother in 1905 and which he bequeathed to the University of Rochester at the time of his death in March, 1932, as a home for the University's president.

By joint action of the University, the New York State Board of Regents, and the Eastman Kodak Company, the project will be set up as an educational institute to serve as an instruction and demonstration center covering photography from its earliest beginnings to its latest development. The institute will be known as George Eastman House Inc. In it will be placed the historical photographic collection assembled over a 30-year period by Mr. Eastman and then by the Eastman Kodak Company, regarded as the best in the world and covering the entire photographic field.

Two Years to Prepare

The institute, expected to be in operation within two years, will not be merely a museum, it is emphasized, but will provide a "dynamic demonstration of the history and continuing progress of photography in all its stages." It will, its sponsors hope, be "an instructive and internationally renowned collection of photography from its inception through the latest apparatus, processes, and products, and the most interesting historical institute of photography in the world."

Museum contents, the cost of structural changes, and exhibits estimated at \$300,000, and the annual operating cost estimated at approximately \$100,000 will be contributed by the Eastman Kodak Company for the minimum period of five years.

World Center

Mr. Hargrave, Kodak president, expressing the belief that George Eastman House would draw visitors from all parts of the world, said:

"We anticipate that it will become a focal point for national and international conferences on the art and science of photography; for meetings of many interested groups; for regular educational tours for the school children of Rochester and other communities; for meetings of camera clubs, photographic societies, and other organizations; for exhibitions of the best local, national, and international photographic salons;

The Eastman House, Rochester, New York, built by George Eastman in 1905 as a home for himself and his mother, will soon house the historical photographic collection assembled over a thirty-year period by Mr. Eastman and the Eastman Kodak Company. This collection, regarded as the largest and most interesting historical institute of photography in the world, will cover the developments in photography dating back to the pre-photography days of the camera obscura through the introduction of photography by Daguerre in 1839 to present-day photographic equipment and processes.

The home has been the residence of the University of Rochester presidents for fifteen years.

The motion-picture equipment includes some of the earliest cameras and projectors. Two of Armat's original projector models will be added. There are also several of the famous Gaumont three-color movie projectors with sound, dated 1912.

The photographer of the 1870's had to carry his dark room along with his camera. Wet plates were used at this time and had to be processed at once. A large collection of wet collodion, albumen, Calotypes, and Daguerreotypes will be included in the Eastman House collection.

for demonstrations of the latest apparatus and processes; and for other allied purposes."

Historical Collection

The scope of the Eastman Kodak Company's historic photographic collection is the entire photographic field according to Mr. Hargrave.

"It covers the development of cameras, lenses, and other apparatus," he pointed out, "motion-picture equipment of all kinds; apparatus for manufacture, testing, control, and research; specimens of all types of photographic processes from the earliest days and also pre-photographic devices such as the camera obscura; a very extensive collection of material on the development of color photography; historically important literature; and scientific and technical applications of photography."

George Eastman, the founder of modern photography, and Thomas A. Edison, inventor of the motion-picture in the Eastman House gardens in 1928. Nearly four decades earlier, Eastman supplied the first strip of film for Edison's experiments.

Mr. Eastman's philanthropies were many. His principal gifts to educational, medical, dental, civic, and other fields in Rochester and elsewhere include the following:

University of Rochester, \$51,000,000; Massachusetts Institute of Technology, \$19,500,000; Tuskegee Institute, \$2,362,000; Hampton Institute, \$2,000,000; Rochester Institute of Technology, \$625,000; Stevens Institute of Technology, \$50,000; Eastman Visiting Professorship, Oxford, \$200,000; Waterville High School, \$50,000; Rochester Chamber of Commerce Building, \$1,350,000; Hospitals in Rochester, \$775,000; Various Rochester youth associations, \$375,000; Rochester Dental Dispensary, \$3,800,000; Dental Clinic, London, \$1,300,000; Dental Clinic, Rome, \$1,000,000.

Some Milestones in Photography

- XVIIth Century—CAMERA OBSCURA, a dark room in which an image could be traced or painted.
- 1665—The first portable CAMERA OBSCURA.
- 1727—Schulze found that nitrate of silver mixed with chalk discolored in the light.
- 1802—Thomas Wedgwood and Sir Humphry Davy made "photographs" on paper coated with silver chloride, from paintings made upon glass.
- 1816—Joseph Nicephore Niepce made a crude camera.
- 1835—Fox Talbot, using paper impregnated with nitrate of silver in conjunction with table salt, obtained an image formed in his CAMERA OBSCURA. Talbot was the first to use a transparent negative, make enlargements by photography, and publish (1839), a book illustrated by photography.
- 1839—Sir John Herschel recommended sodium thiosulfate ("hypo") to "fix" pictures. Daguerre announced the process, named after him.
- 1847—Niepce de Saint-Victor improved the Calotype process, which was introduced by Fox Talbot.
- 1851—Scott Archer introduced the wet collodion process of plate-making.
- 1877—First successful "dry plates" marketed.
- 1880—Eastman in the dry-plate business.
- 1884—Eastman paper roll film was introduced.
- 1888—The first Kodak.
- 1889—First transparent roll film on nitro-cellulose.
- 1896—Motion-picture positive film.
- 1900—Brownie camera.
- 1903—Non-curling film.
- 1906—Wratten Panchromatic plates introduced.
- 1909—Cellulose-acetate film.
- 1913—Panchromatic motion-picture film.
- 1914—X-ray film.
- 1923—Home movies.
- 1928—First amateur motion pictures in color.
- 1935—Kodachrome film.
- 1938—Reflection-reducing coating of lenses.
- 1941—Kodachrome prints from 35mm transparencies; Kodak's rare-element optical glass.
- 1942—Kodacolor film.

Films for International Understanding in the Whole School Program

JOHN E. DUGAN, Editor
Head, Department of Education
Beaver College, Jenkintown, Pa.

THE FILM for international understanding now has become an important part of the whole school program, just as concern for international understanding and a world at peace, instead of misunderstanding and a world at war, has become an important part of our daily lives. This type of film no longer is a specialty brought in to support the war effort or our allies. It now is concerned with the current basic problem of all education—training how to live in one world—or none!

March of Time

ATOMIC POWER, a March of Time Forum Edition film, gives the historical background of the atomic bomb.

The use of films to meet this problem is as great a challenge to audio-visual educators in the schools as the use of films for war training was to audio-visual educators in the services. How well can we meet it?

Inclusion of films for this purpose in the whole school program presents a greater opportunity at the same time that it presents a greater problem. No longer can they be presented under special privilege and with the intensely favorable, ready-made emotional and motivational setting of the war days. They now must earn their way as part of the serious everyday work of the school.

Educational Objectives

It no longer is enough merely to know that a film promotes international understanding or that it presents an excellent picture of some area or of some particular

point of view. How does it do it, and how can it be used? What is its place in a continuous and interrelated educational program? This problem becomes increasingly important as educational objectives for international understanding are being integrated into more levels and phases of the whole school program.

All of this places greater responsibility on the teacher who is interested in the use of films for the promotion of international understanding. He must cover a wider field, plan farther ahead, and think more comprehensively in terms of definite educational objectives for international understanding and of specific films to meet these objectives at specific times and places in the school program. This need not be limited to classroom considerations. It may involve assemblies or other group activities. Inspirational and morale-building programs for the whole school have their place and their objectives.

Thinking in terms of objectives implies thinking in terms of film sources, film bookings, film previews, film projection, and methods of utilization. It involves planning ahead so that the right film will be shown in the right place at the right time. It involves better knowledge of films themselves.

International Film Bureau

GREAT CIRCLE demonstrates how the airplane has shortened travel routes and made all men neighbors.

British Information Services

MAN—ONE FAMILY explodes the fallacious idea of racial superiority. A humorous example shows a Scotsman's idea of the Scots versus his idea of the Welsh. Thus, a 16th Century Scotch author wrote, "The Scots are of dispositions fitted for society. . . . The Welsh are dishonest. . . ."

Point of View Is Important

Even the point of view of a film can be very important. *General Election* (British Information Services), *Brotherhood of Man* (Brandon Films), and *Children of Russia* (International Film Foundation) all can be used to promote international understanding, but differences in point of view make for considerable differences in utilization and in educational objectives which can be met.

Is the film to be used to create an attitude, to convey knowledge, to indoctrinate, or to initiate a discussion? The choice of purpose by its very nature should affect the choice of film.

Correlation With Other Fields

The effectiveness of films for international understanding often can be greatly increased if they are correlated with and reinforced by other fields of interest

which they touch. *Instruments of the Orchestra* (British Information Services) can build on the human bond of music. Their Shakespearian films can weld friendship and understanding with the fire of immortal literature. *The Great Game—Soccer* can utilize the universal appeal of sports.

As objectives for international understanding are built into the whole educational program, it becomes increasingly possible for films which primarily serve other interests to make their incidental but important contributions to this field too. Here the alertness of the teacher is of great importance. Let us look at a few examples.

What Makes Day and Night? (Young America Films) is primarily concerned with answering that question. But in the film a father uses a rotating globe to explain the answer. As the globe is rotated, shots of children in various lands show what they are doing

TEACHER - COMMITTEE EVALUATION

L. C. LARSON, Editor
Director, Audio-Visual Center
Indiana University, Bloomington

CAROLYN GUSS, Instructor, School of Education
BETTY STOOFS, Film Librarian, Audio-Visual Center
Indiana University, Bloomington

Shy Guy

(Coronet Productions, 65 E. South Water Street, Chicago, Illinois.) 10 min, 16mm, sound, color and black and white, 1947. \$75, \$45. Teaching guide available.

Description of Contents:

The opening scene shows a boy left alone in a classroom as the rest of the class break up into small groups or couples and leave the room. Next he is shown in his radio workshop, alone, while others are enjoying the companionship of their friends. Bill's father visits with him in this basement radio workshop and suggests ways that he might "fit in" with groups of boys and girls his own age. He suggests that Bill study the popular boys and girls to see what they do. Following scenes

Coronet Productions

Bill's father observes that his son is shy and decides to have a little talk with him. He suggests that Bill study the popular boys and girls.

show Bill observing others and listening to their conversations, during which time he comes to realize that helpfulness, interest in others, and a willingness to share experiences are important. At a drugstore, he is invited to join a group and does so rather reluctantly but very obviously unbends and enjoys the companionship of the other three. During the conversation, he is invited to a mixer. Again somewhat reluctantly, he makes the effort to go, and once there applies the lessons he has learned through observation and becomes very popular, since he is able to repair the radio which was needed for music. While repairing it, he tells the group about his record player in his radio workshop. He is much delighted when they are interested and even more delighted when they accept his invitation to come visit it. Again, as on a previous night, Bill's father descends the stairs to this workshop—this time with a broad smile of approval and a tray of Coca Cola as treats for the group.

Committee Appraisal:

The educational advisor for the film *Shy Guy*, Dr. Alice Sowers, Director, Family Life Institute of the University of Oklahoma, writing in *Coronet*, February, 1947 points out "a short classroom film can not show all the causes for shyness nor suggest all the solutions for them." However, she and the reviewing committee feel as if the motion picture does permit students to identify themselves with characters in the picture and then begin their discussion of the various causes of shyness and the situations in which they occur with the film. The film does an excellent job of "holding the mirror up to youth"; it avoids, in a highly commendable fashion, the effect of being staged. It should be useful in discussions of personal and social guidance with groups of junior high and high school students, church groups, parents, religious educators, and youth counsellors.

Air Transportation

(Carl F. Mahnke Productions, 2708 Beaver Avenue, Des Moines, Iowa.) 10 min, 16mm, sound black and white, 1946. \$50.00 less 10% cash discount. Teacher's guide available.

Description of Contents:

The film shows planes in the air, planes landing, and planes taking off. The commentator states that it requires hundreds of workers to keep air transportation functioning. As he outlines the fields of work and the qualifications needed by employees in each, the film shows the workers themselves: the reservations staff, where prices and rates are given by telephone and tickets are sold; the teletype operators; the radio and radio phone operators; maintenance men checking planes for safety; control tower and control crew members;

TWA—Carl F. Mahnke Productions

Air transportation as a vocation is discussed with illustrations of each type of job.

and lastly the flight crew with special attention to the hostess and pilot. The recapitulation provides the names of the broad branches of air transportation personnel and data on training for such employment.

Committee Appraisal:

One in a series on "Finding Your Life Work," this film provides occupational guidance to those considering employment in any of the various branches of air transportation. It should be especially effective for use with junior and senior high school groups. The film contains much information as to the various types of work and the personnel and vocational abilities and aptitudes necessary for success in each.

Making of a Mural

(Encyclopaedia Britannica Films, 20 North Wacker Drive, Chicago 6, Illinois) 10 minutes, 16mm, sound, color, \$100.00 less 10 per cent. Teacher's guide available.

Description of Contents:

Thomas Hart Benton plans and executes one of his characteristic murals for a Missouri department store. Planning his design so that the desired rhythmical pattern will fit into the long, narrow panel, he first makes a rough pencil sketch, which is then interpreted in clay models. A strong overhead light brings out in sharp detail the forms and surfaces of the clay model, which represents a Greek myth of man's struggle against his environment, as typified today by the people of the Mississippi River Valley.

A small painting in the exact proportions is the next step, followed by larger clay figures modeled from life. Squaring off both an exact cartoon copy of the small painting and the full-sized panel, Mr. Benton transfers every line to the larger area with great care. The artist then mixes egg yolk and distilled water with dry pigment to produce a fast-drying paint. The problem of producing the desired color effects at the usual viewing distance of thirty feet is overcome by using a reducing glass to view the large painting in comparison with the small one; the same color effects, not the exact same color patterns, are the artist's goal. Using white and brown paint, he obtains a three-dimensional effect called "underpainting." Seven distinct shades of blue are thoroughly blended in the sky, which is painted in after the foreground is virtually completed. After adding a few last distinctive details, Mr. Benton gives the finished panel several coats of protective wax before it is mounted permanently where many busy shoppers will be tempted to stop and ponder on its significance.

Committee Appraisal:

Anyone who has ever had a part in creating a mural or has done any painting or clay-modeling should be very interested in this exposition of Thomas Hart Benton's technique. Even more important, this film should be quite effective in arousing in students of art appreciation an awareness of and interest in the significance of an artist's individual approach in his effort to create a certain impression. Containing much material of both general and specialized interest, it should be suitable for all age levels from the intermediate grades through adult. True-to-life color photography, basic to the subject, is in evidence throughout the film.

The Curious Coati

(Young America Films, Inc., 18 East 41st Street, New York 17, N. Y.) 8 minutes, 16mm, sound, black and white, 1947 \$30.00. Teacher's guide available.

Description of Contents:

With its locale an expedition camp in Mexico, this film follows two young coatis as they attempt to satisfy their insatiable curiosity concerning everything in the camp. The coatis, which are Central American relatives of the racoon and are officially named "coatamundi," are first seen as they awaken from a nap on a tree limb. The narrator mentions their characteristics briefly, as they leave the tree to do some exploring. After spilling a jar of dried beans, they manage to open a large bird cage, from which all the birds promptly escape. Next they go into a camp hut and start investigating the supplies stored there. One rips a cigar to shreds, evidently hoping to discover some insects and grubs which he is accustomed to finding in rotten wood.

Committee Appraisal:

Amusing adventures and rollicking music are combined to make this film a delightful experience for audiences far beyond the five-to-eight-year-old group for which it is primarily intended. Much of its appeal apparently lies in the audiences ready sympathy with the coatis' over-active curiosity and direct manner of satisfying it. Their complete lack of inhibitions is refreshing, and yet the situations are far enough removed from everyday life to preclude imitation on the part of members of the audience. The film should be very effective for stimulating both oral and written expression in the primary grades.

Encyclopaedia Britannica Films

"Achelous and Hercules" is the title of the completed Benton mural which adapts the Greek legend of Hercules fighting Achelous, a River God who assumed the shape of a bull, for the hand of the Princess Dejanira. Scene here symbolizes the fight to develop the Missouri River valley.

AN EXPLANATION— The New DAVI Constitution

The Department of Audio-Visual Instruction of the NEA has adopted a divisional organization to encourage local cooperative activities.

By VERNON G. DAMERON
Executive Secretary
Department of Audio-Visual Instruction

A constitution is often regarded as a drab, legalistic document to be filed away for infrequent reference. It should be recognized, however, that a constitution is a very important basic statement, reflecting the underlying philosophy and policies of an organization. This is particularly true of the new DAVI Constitution.

The need for extensive revision of the old Constitution became apparent after discussing the matter with Department members in approximately 35 cities throughout the nation. These discussions were followed up with several questionnaires to the members.

The Constitution was revised under the able direction of Paul Wendt, Chairman of the Constitution Committee.* The Committee consisted of a steering committee in Minneapolis-St. Paul and a national committee. It should be noted that this Committee did much more than merely write the new Constitution; it made many decisions on organization and procedure and other important matters upon which to predicate the writing.

There are many differences between the old and the new Constitutions. The purpose of this article is to direct attention to some of the major differences only:

1. Divisional Organizations. Under the old Constitution, the United States was divided into ten geographical zones. Each zone had its own officers and executive committee. This system has been declared impractical because: (a) the boundary lines were based upon rather arbitrary considerations; (b) the areas were too large to encourage the holding of the meetings; (c) the interests of the members and the status of development of the audio-visual field within each zone were too diversified to facilitate cooperative activities. The new Constitution states that:

The basic organization of the divisions of the Department shall be along state lines, but considerable flexibility of this rule shall be provided so that divisions combining states or parts of states may be permitted. A division of the Department may, on approval of the National Executive Committee, be established in any state, municipality or other region. If the territories of the two divisions overlap, the National Executive Committee will decide the limits of each. No minimum membership will be required of divisions organized on a state-wide or larger basis, but divisions covering a territory smaller than one state, shall be required to have a minimum of twenty-five members as determined by the National Executive Committee. A division may be established in other countries by the vote of the National Executive Committee. Each division may be governed by its own constitution and by-laws, provided they are not in conflict with the constitution and by-laws of

the Department. Members of the division shall be entitled to all the rights and privileges of the Department. Each division shall hold an annual meeting and report all proceedings to the national executive secretary.

A number of suggestions in regard to divisional organizations were made at the business meetings of DAVI in Atlantic City last March and in Cincinnati last July. The proposal which appears to have gained greater acceptance than any other is that the audio-visual organizations of the state education associations should constitute the general pattern of affiliation. Visits by the executive secretary to 19 of these associations and correspondence with all of the others indicate that the majority of them have already established audio-visual organizations.

Several inquiries have been received in regard to the affiliation of state-wide groups and regional groups within states. These requests have been referred to the National Executive Committee for action. Additional applications for the affiliation of existing audio-visual organizations and for the establishment of new organizations for affiliation should be sent to the NEA headquarters address.

2. National Executive Committee. Under the old Constitution, the officers, retiring president, ten zone presidents, and six national delegates constituted this Committee. Under the new Constitution, the Committee consists of the officers, retiring president, and nine national delegates. The new Constitution provided for election in 1947 of the present National Executive Committee from a list of 50 nominees submitted by the President. Beginning next year, three national delegates will be elected biannually from a list of nominees prepared by the presidents of the affiliated divisional organizations. Beginning in 1949, the president, vice presidents, and three national delegates will be elected biennially, also from a list of nominees prepared by the divisional presidents.

3. Term of Office. Under the old Constitution, the term was one year for the officers, retiring president, and zone presidents. The national delegates served for a three-year term, with two delegates being elected each year. Under the new Constitution, the term of office for the president and vice presidents is two years. In the case of the delegates on the present National Executive Committee, three will serve a three-year period, three for a two-year period and three for a one-year period. The term of office for all national delegates elected in the future will be three years.

WILLIAM S. HOCKMAN, Editor, 1616 Marlowe Avenue, Lakewood 7, Ohio

The Primary Children See a Film On Palestinian Home Life

While using THE HOME to teach about life in ancient Palestine, the author learns the film requirements of children.

By WM. S. HOCKMAN

Director of Religious Education
Lakewood (Ohio) Presbyterian Church

IN using the 20-minute sound film, *The Home*, of the British "2000 Years Ago" series, my principal objective was to teach the children of the Primary Department (first, second, and third grades) of the church school a body of facts about Palestinian home life of long ago, and to help them visualize the kind of home in which Jesus might have grown up. A secondary objective was to secure, if I could, some candid and critical reactions of a group of children to a film which had been made for them. This article will discuss the preview and utilization of the film. In a following issue, I shall present the implications for film making of the criticisms made by the children.

The Preview

I selected five children from the primary Department, two boys and three girls, to be my "helpers." I asked them to come to the church on Saturday morning to see the film and to help me plan for its use on Sunday morning. Before the children arrived, I ran the film through twice for my own benefit. I noted certain words which would be outside their vocabulary, and I wondered about the clarity of certain sequences.

When the children arrived I explained that they were to help me present the film to the other children on Sunday morning and that there would be a job for each one of them. I told my "helpers" that I had already seen the film and then sketched its content for them. I asked them to decide if it was a good film for the other boys and girls to see.

Next, I presented the film, running it as a sound film and including the header. This preview "committee" was very attentive to the end. Its abrupt ending bothered them. They asked if that was the end, and without turning on the house lights, we began to talk about the film.

Would the other children understand the film? Summarizing, the "helpers" thought they would, but there were some reservations. They said they had not understood "that first part about the maps." They wondered where the father and the son went. They did not understand what "that man" said about the pictures (i. e. the narrator). Without going farther, we decided what we would do about these two things. We would omit the maps at the beginning and the commentary. For these young children, I ran the film at silent speed.

Children Like Detail

We saw the film again. I asked them to decide where the film should begin on Sunday, and I told them that I would do the "talking." When we reached the sequence of the two roads and the distant view of the village, they decided this was the place to begin the film. At this point, I began my commentary. It was slow-paced, and I tried to anticipate the action a little and place it in a setting of larger meanings. For instance; when the mother is mixing the bread, she adds some sour bread (yeast). Here I said, "Having grown up in a home like this, Jesus saw his mother make bread and learned about yeast. Once he told

THE HOME

THE HOME, is the introductory picture of a series of five non-sectarian, 16mm sound films entitled, "2,000 Years Ago." This series of re-enacted religious documentaries is intended to provide a background for religious teaching. The films reproduce the life lived in Palestine in the time of Our Lord. The five are: THE HOME, THE DAY'S WORK, THE SCHOOL, THE TRAVELLERS, and THE SYNAGOGUE. Each has a running time of 22 minutes (2 reels).

The series was planned by the Education Committee of the Christian Cinema and the Religious Film Society (British, J. Arthur Rank affiliate) and made by the Gaumont British Instructional Films Ltd., under the direction of Miss Mary Field, noted director of children's films. Distribution in the United States is handled by United World Films, Inc., 445 Park Ave., New York 22.

a story about putting yeast in bread." And so on to the end of the film. . . .

Did they like this "silent" version? They did. One of the older boys remarked, "The picture seemed to go slower this time." I told them that it had and asked if it should go that way on Sunday morning. All agreed that it should. This reaction interested me, and I sought their reasons. I got them quickly. "We got a longer look" at the mother swaddling the baby, at the baking of the bread, and at similar scenes.

"Don't Talk All the Time"

I got another interesting reaction when we were discussing whether I should give the commentary: "That man in the picture talks too fast." Another observation and request, "Don't talk *all* the time, Mr. Hockman."

Now that the "helpers" had seen the picture twice, I invited criticisms. (As I reflect upon it, I believe that casting them in this role of helpers and critics encouraged them to react with candor and freedom. Again, we did not turn on the house lights. Could this have been a factor in inducing the mood of uninhibited talk?) Criticisms they had: "Why didn't they tell us the names of the children? I wanted to see what the

THE HOME (19 minutes) is a British film from the "Two Thousand Years Ago" series, showing life in Palestine in the First Century.

United World Films, Inc.

father looked like. The bread the boys ate for breakfast didn't look like that his mother made. Why was that? *What* grain did she grind? Of what was the thing in which the grain was kept made?"

A Dangling Sequence

The last question was about the little sister throwing one of the new loaves on the ground and then picking it up and brushing it off with her skirt. I had not heard the narrator plainly and could not explain this sequence. They had not understood it either, and seemed puzzled by its presence in the film. I remember one remark about it: "It doesn't make any sense!" Perhaps this is a "dangling" sequence—one without logical or obvious meaning. It bears on film making differently from another comment which was made about putting the baby in the manger: "If the father was a carpenter, why didn't he make the baby a cradle?"

Now the Sunday morning "work" was assigned to my helpers, and they went home. One was to be an usher; another a doorkeeper; another was "light man"; one would pull the shades, and the older girl would read the introduction which I would write for the film.

When my helpers were gone, I ran the film again, pondering as I went the meaning of all the things which had been said by these "babes and sucklings."

What did they mean for the utilization and the production of films?

For Utilization

From this preview session and the actual utilization on Sunday, several implications are more or less obvious:

1. All films should be previewed. This has been recommended for some time, but its importance is not thoroughly appreciated. I had seen the film before booking it. I ran it twice before the children came. I was very familiar with it. Every major sequence could be instantly recalled. No one would undertake to "tell" a story after one reading; yet films are used without thorough preview and study.

Pupil Participation Can Begin With the Preview

2. Pupil participation is of extreme importance in visual teaching, and a good place to begin it is in the preview and study of the material. By patient encouragement, these (small) boys and girls gave valuable direct and indirect suggestions for the more effective use of the film. They gave the teacher a glimpse into the thinking of children and compelled him to adjust his procedure to their needs, interests, and capacities. After hearing them talk freely, he could not ignore their ideas. It may take more time to include pupils in the preparation process, but it will pay off in more effective utilization. After all, the reason for using visual material is not to make teaching easier but *more effective*.

Commentaries, not Universal

3. It is very difficult to make films with universal commentaries, and teachers should not hesitate to run sound films as silent and give the commentary. The commentary of *The Home* is, taken as a whole, good. It is not continuous. It is slightly "British" in accent, velocity, pronunciation, choice of words, and manner. The use of such words as "swaddling," "alcove," "sour bread," parapet," "larder," "cruse," dowry," etc. in the commentary would require the user to explain them ahead of time, or consider them in the follow-up. By running the film at silent speed and making your own commentary, these words can be used with their (familiar) synonyms. When giving the commentary, stand to one side of the group so that you can follow the

The author together with five children as "helpers" previewed **THE HOME** before showing it on Sunday. This preview gave an insight into the children's reactions to the film.

United World Films, Inc.

screen, and yet direct your voice toward the group. Make allowance for the increase in running time if you slow the film to silent speed. It will be 50% more.

Adjust Follow-up to Pupil Reaction

4. Plan your follow up carefully but adjust it to the reaction of the pupils as revealed. While I had intended that my children should learn a body of facts, they insisted upon talking about the film *as if* it had shown them the home of Jesus. This was due, I am certain, to the occasional references I made to this home being like the one in which Jesus grew up. Sensing this angle in the reaction of the group on Sunday morning, I let the children talk and ask questions along this line. It meant a switching of my emphasis, but it was justified. Do not overlook follow-up. It is clinching the driven nail.

Use Good Films More Than Once

5. From the reaction of my "helpers" and the group on Sunday morning, I would not hesitate to plan a second use of this film with the same group. Many films have more than one use, and the better they are in content and structure, the more times they can be used with the same group. The second time I would have new objectives. Films are not "used up" by being shown once. Those who complain of the scarcity of good films should use the few good ones over and over again.

Closer to Your Children

6. Let visual aids bring you closer to your children—closer in getting ready and in use. Indicate to little people even that you, too, are learning. Have some happiness, surprise, and joy in this experience. It will tend to be contagious, and it will stimulate their quest for knowledge and truth.

Visual Aids in the Church

William S. Hockman, Editor of the "Church Department," is the author of the new book, **PROJECTED VISUAL AIDS IN THE CHURCH**, just published by the Pilgrim Press, Boston. Motion pictures, slides, and filmstrips are covered with special emphasis on their utilization. Topics treated by Mr. Hockman include: "The Role of the Teacher and Principles for the Teacher," "Picture Focused Worship," "The Film Forum Technique," "How to Choose Films and Slides," "Physical Factors in Audio-Visual Programs," "A Functional Analysis of Projection Equipment," and many others. The book is 256 pages in length and will sell for \$3.75.

The Author

A Virginian, graduated from Randolph-Macon College, Mr. Hockman received his A. M. from the University of Chicago in 1924. As Director of Religious Education for the past twenty years in the Lakewood Presbyterian Church, Lakewood, Ohio, he has had a ready laboratory in his church and school for many of his successful experiments in the use of projected visual aids.

A Review of the Book

A complete review of **PROJECTED VISUAL AIDS IN THE CHURCH** will appear in "The Literature in Visual Instruction Department" very soon.

The Fourth Workshop— At Green Lake, Wis.

THE Fourth International Workshop in Visual Education, under the auspices of the International Council of Religious Education, brought together the first week of September 260 leaders of the church having a special interest in or responsibility for the use of visual aids, a staff of 33, plus 23 exhibitors, and upward of 75 visitors and guests.

National Audio-Visual Leaders

After hearing addresses by such nationally known leaders as Floyde E. Brooker, Dr. I. Keith Tyler, and Professor L. C. Larson each morning, the student body reassembled for seven two-hour seminars under the leadership of the church's outstanding leaders in audio-visual education. These seminars were continued in the afternoons for one hour, and then the workshop broke up into seven interest groups and many informal preview and study committees. The evenings were given over to the preview of new and significant audio-visual materials.

It is too early to fully appraise the value and significance of the Fourth Workshop. We shall have the space to take up but a few aspects of this great meeting of church leaders.

We do not believe that any interdenominational meeting has ever been characterized by deeper and more inspiring fellowship. Sectarian notes were seldom heard, and the dominant note of the week was the sincere appreciation which prevailed for this genuinely Christian fellowship.

Many of those present spoke of the far-seeing wisdom of the International Council of Religious Education in planning the First Workshop in 1944, when the conditions imposed by the War would have made postponement easy and understandable. If that had been done, the church would have lost valuable time. We are at least even with our problems.

Need For Integration

The visual education leaders of the church are beginning to see clearly the need for sound integration of all visual materials into the total materials and methodology of the local church. The builders of the curriculum are aware of the need for planning the verbal and the visual together, giving to each that part of the total job of teaching best suited to its fundamental character.

On every hand, there is pressing need for the formulation, testing and refinement of utilization techniques for all visual media. Utilization patterns and procedure need to be formulated and made available to local teachers. The Workshop addressed itself to many facets of this general problem.

Previews of Material

In previewing a vast amount of new material in all media the Workshop rendered the church a valuable service. While only the best of the new materials were brought before the total group, much good and more "bad" materials were previewed and evaluated by sub-groups. The Workshop saw Cathedral's new film,

Queen Esther, and acclaimed it good. It saw *Amos* (Cathedral's) and found it very useful. It saw *Beyond Our Own*, the first film of the Protestant Film Commission and applauded both its technical qualities and its message.

The most critical problem in the church field today is that of distribution. All present distribution is scrambled into a most chaotic pattern, with some leaders of the church showing severe symptoms of indifference toward any ultimate solution which does not validate either their preconceived notions or protect their interests. The local church is not being effectively served at present. The clamor of dissatisfaction is growing and was heard on every hand during the Workshop. Between now and the next Workshop, the leaders in this field must re-think and re-design present distribution.

Visual Aids in a P.T.A. Meeting

By R. A. HARTMAN*

OUR school P. T. A. set up a discussion group series this past spring. It extended over five Monday evenings, and the general topic was "Citizenship." The discussion leaders came from the school and the community. One evening was devoted wholly to "citizenship" while other sessions were devoted to discussions of the school, the home, and similar aspects of society in relation to the general topic. I was asked to take charge of the last meeting, and since no definite topic was assigned, I was free to present whatever subject I chose by whatever means I desired.

As the discussion progressed, a definite pattern of interest became evident. The concern of all was for the teen-age boy and girl and how we leaders might more effectively provide moral guidance and direction. While "the church" was not among the sub-topics set up by the committee, the importance of the church in the minds of those participating made itself evident throughout. The church and the church school seemed to share equal honors with the home as agencies of vital importance in the training for wholesome citizenship.

*Pastor, First Presbyterian Church, Walkerton, Ind.

I selected two visual aids for the last meeting. The first, the filmstrip, *The Christian Family*, presented a pattern not only for a successful Christian home but for a Christian community as well and thus pointed the way to Christian citizenship. I revised the script to omit some material made obvious by previous discussions. This revision made possible a more rapid presentation of the filmstrip which was well received by the group.

The filmstrip was followed by a film, *You and Your Family*, one of the Art of Living Series of Association Films. This film brought the discussion down to cases by presenting specific family situations which every one recognized as authentic. The film had added value, because the situations were presented from the viewpoint of the teen-ager himself.

The discussion began where the film left off, and it was lively. It became evident to all that the youth problem, which looms so large at times, is made up of many small problems which seem unimportant. The group came to see that these small problems center in the attitudes of adults just about as often as they center in the behavior of the boys and girls. Once again, visual aids demonstrated their worth in a community program.

Catalogues and Materials

- Too many church leaders are trying to get along without a copy of the latest catalogue of the Religious Film Association, cooperative distribution agency of Protestant churches. Ask your book store for a copy. It lists and describes approximately 500 films and slide sets.
- The last packet which was sent to all members of the Visual Education Fellowship (VEF) of the International Council of Religious Education (203 N. Wabash, Chicago 1.) was easily worth half the cost of the yearly membership. Write direct to the VEF.
- In the 24-page booklet, "From Words To Objects," Mr. Oscar J. Rumpf gives the practical suggestions on visual aids which many church leaders need. While no price is given, send ten cents with your request for a copy. (Board of Christian Education and Publication, 1505 Race Street, Philadelphia 2. Pa.)

Church Screen Productions

The filmstrip, *THE CHRISTIAN FAMILY*, demonstrates the application of Christian principles to home and family life (40 frames, manual). The film emphasizes Christian democracy at home.

A Couples Group Uses a Filmstrip

By MR. & MRS. DON W. FEIN

AS WE sat discussing how we could sum up the previous lessons in our Christian Homebuilders course, my wife asked: "Is there a filmstrip about home and family life that emphasizes democratic living in the home as the Christian way?"

And before I could recall where I had seen a filmstrip title, *The Christian Family*, she continued with the specifications she wanted in this filmstrip. "I think the filmstrip should point out," she went on, "what makes a Christian home a family. It ought to show members of a family doing everyday things, such as parents and children eating together; children going out to play, and the family working together on the family budget or making vacation plans."

I took the privilege of adding several ideas of my own before Mrs. Fein elaborated her specifications further, "I'd like one that shows some of the things that should not happen in families—parents barking at one another, and parents laying down the law to their children."

And just then I remembered that I had kept the folder on that filmstrip which my dealer gave me. There it was: "*The Christian Family*, A Church Screen Production with printed script including suggested questions for discussion."

In preparation for the meeting of our couples group on Sunday evening, I ran the filmstrip and Mrs. Fein read the script. We did this several times, getting the presentation smoothed out and checking on pauses and emphasis.

For several Sunday evenings, we had been discussing Christian home and family life. Our last lesson had emphasized the Christian's reason for being democratic, and we were pleased to find the script reading, "Each person in the family, regardless of age, sex, or family position, is first of all a *person* and deserves to be treated as a person. This is the basic principle, and it is fundamental to Christian living in any group."

That was an excellent summary of earlier discussions. The filmstrip not only summarized but it raised questions for future sessions: finances in the family, recreation and social life, and the devotional life of the family.

Sunday evening came, and we presented the filmstrip. Those questions dealing with family incomes, expenses, and tithing would point the way toward future sessions. The group was enthusiastic. Some thought the entire family should know the extent of family earnings and obligations; others disagreed. We had not sought agreement; so we were pleased that a lot of thinking went on.

After the meeting, we tried to evaluate what had happened. We were delighted with the reaction of the group. It responded well. It seemed to pick up momentum for coming sessions. We liked the filmstrip. The photography was good, and the poster-frames were impressive. The script was excellent. It was easy to read. It wasn't dull. It was clear and clever. It was a *good* filmstrip.

Association Films

YOU AND YOUR FAMILY is one of the "Art of Living" series. Specific family situations are shown together with their solutions. Not seen in the photograph is a telephone handset off its cradle.

Although we used it in the middle of our course, it could be used with equal effectiveness at the beginning or end. When we take up a new course in a month or so I can, in my imagination, hear Mrs. Fein saying, "Is there a filmstrip . . .?" and I hope we find another as good as *The Christian Family*.

News Notes

■ Mr. R. L. Krepps, of Millersburg, Ohio, has been appointed director of the newly-created Department of Audio-Visual Aids of the Judson Press (of the Northern Baptist Convention) Philadelphia, Pa. Mr. Krepps joined the Judson Press organization August 1st and began his work after the Green Lake visual aids workshop. For a number of years, he has been very active in the visual field, teaching courses and speaking on visual education in conferences, institutes, and summer schools. Among the responsibilities of his new position will be the improvement of utilization in the local church.

■ Mr. John A. Johnston has been appointed visual aids consultant for the Christian (Disciples of Christ) Board of Publication (2700 Pine Blvd., St. Louis 3, Mo.) and is reorganizing the Visual Aids Department to increase its services to the churches of the denomination. A branch of the RFA library has been added to serve Mid-West churches, and 2 x 2 slides, filmstrips, and recordings will be carried for both sale and rental. A service bulletin will be mailed to churches, and a full line of visual equipment will be carried.

■ The Evansville (Indiana) Council of Churches has organized a visual aids preview group which meets on the first Monday of each month.

New Releases

• *Problem Drinkers*, a 19-minute March of Time Forum Edition film, presenting methods for combating excessive drinking, was released in June and may be booked through your regular film sources. You may write to The March of Time, 369 Lexington Ave., N. Y., for information concerning the location of a print near you. A short review will be given next month.

• *And Now I See*, a 20-minute sound film on Christian stewardship produced by Cathedral Films, Hollywood, for the United Lutheran Church (231 Madison Ave, N. Y. 16), was released on September the first.

• The Protestant Film Commission, (45 Astor Place, New York 3) expects its film on Stewardship to be completed in Hollywood in time for early fall release.

First P.F.C. Film

Beyond Our Own, first production of the Protestant Film Commission (45 Astor Place, N. Y.), will be ready for release to the churches early in November, according to Paul F. Heard, Executive Secretary of the Commission. Plans are being developed for the simultaneous premiere showing of the film in 100 cities throughout the U. S. A. and Canada.

This production, to be extensively used in the church's study of evangelism during 1947-'48 was sponsored and financed by thirteen major denominations working through the P.F.C.

Beyond Our Own is announced as a thoroughly professional dramatic production, utilizing Hollywood technical skill and actors. It is the story of a man who lost himself, and how he later found himself.

This film will be distributed through the sponsoring denominations, the Religious Film Association, and local film libraries. It is thirty minutes in length and will rent for \$10.00 per showing. It will be reviewed in this Department as early as possible.

BEYOND OUR OWN is the first film of the Protestant Film Commission and will be used in the church's study of evangelism.

Religious Film Association

Correspondence

Mr. John Marsh, trustee of The Scriptures Visualized Institute of South Africa, writes, "We are most anxious to contact all the producers of 16mm religious sound films of sound scriptural teaching, with a view to doing business with them. Can you assist us with the names and addresses of producers of such films?"

Will the producers of films in the above classification write direct to the above institute at P.O. Box 4037, Cape Town, South Africa, giving information in full.

An Explanation—the New DAVI Constitution

(Concluded from page 442)

4. Membership. The old Constitution provided for three types of membership: active, associate, and institutional. In addition to these, the new Constitution provides for a fourth type of membership: associate membership without publication, stating that it is "... exactly the same as associate membership with publication except that the member will not receive the official publication of the Department. The annual fee for associate membership without publication shall be determined by the National Executive Committee. This class of membership is intended for those teachers who cannot afford associate membership with publication and who may have access to a copy of the publication through an institutional membership or otherwise."

5. Official Publication. The old Constitution refers several times to the "official publication," but does not designate the name of the publication. However, the records indicate that the members have received *Educational Screen* as the official magazine since 1923, the year in which the Department was established. Also, this publication has, on occasion, been voted as the official publication for an ensuing year.

The new Constitution states that:

The publication now designated as the official publication shall continue to be the official publication until changed by vote of the active members. There shall be an official publication of the Department. The official publication of the Department shall be changed only by a vote of the active members on a special ballot to be sent to them by the executive secretary on May 1 at the same time as the annual ballot. The executive secretary shall be required to send out this special ballot upon receipt of a petition signed by one hundred active members. A vote of two-thirds of the returned ballots will be necessary to change the publication. Such a change shall not take place sooner than one year after this deciding vote.

The VA DELINEASCOPE

Basic INSTRUMENT
FOR VISUAL TEACHING

AUTHORITIES on visual education recommend this combination opaque and lantern slide projector as the fundamental audio-visual instrument.

- Material is readily available from magazines, newspapers, books, actual specimens etc.
 - at low cost or NO COST
 - without special preparation
 - without ordering from outside sources
- Adaptable to large or small groups
- Ideal for student participation and work projects
- Convertible to slidefilm and microslides, with excellent results
- Permits a personal touch in teaching.

The Spencer VA Delineascope has held first place among opaque projectors for many years.
For complete information write Dept. X12.

The Drama Of Steel

The science and history of the steel-making process are combined in this U.S. Bureau of Mines film, which was sponsored by the Inland Steel Company and produced by the Atlas Educational Film Company.

CAREFUL research into the earliest known methods of producing iron and steel has resulted in a film sequence showing one of the earliest known methods of steel manufacture employed by primitive man. Developments from the time of the American Revolution down to the present are shown, and animated diagrams indicate clearly what goes on inside white hot furnaces of the present day steel mill.

The Chinese were credited with the first development of a method of completely melting iron in large quantities, but it was not until the 14th century that European iron makers duplicated the process, and four more centuries elapsed before the first American furnace was built at Hopewell, Pa. in 1761, a few years prior to the American Revolution. Some of the iron produced by this furnace was cast into cannon and other war materials used by George Washington's Continental troops. A working model of the furnace, made for this production, may soon become a museum piece.

Of particular technical interest is the use of this scale model of the first American blast furnace. While digging in the ruins of the old Hopewell furnace, Mr. Robert B. Wesley, the producer, made an interesting discovery which provided the key to the method of operation of the old mill. He found a huge wooden cylinder and a leather-banded piston. He deduced that this device was used to pump air for the blast furnace and concluded that a water wheel must have provided the power for driving the

air pump. From this information, he constructed the working model of the mill.

Other Films

For other films on **steel** or on **other metals**, consult the new 1948 edition of **1000 and ONE**, the blue book of non-theatrical films. Note that British Information Services have a recent four-reel color film entitled, **Steel**, which describes the steel industry in Britain.

Primitive man working iron.

Distribution

Application for free short-term loans of **The Drama of Steel**, (34 minutes, 16mm, sound) should be sent to the Graphic Services Section, Bureau of Mines Experiment Station, 4800 Forbes Street, Pittsburgh 13, Pa.

An explanation of the open-hearth process of steel making.

The blast furnace charged with iron ore, limestone, and coke.

First American furnace was built at Hopewell, Pa., 1761.

4 NEW Aids to Learning...
4 NEW Aids to Teaching...
4 NEW EBFILMS!

See any of these new Encyclopaedia Britannica Films, and you'll quickly understand the success of these *classroom* films as core curriculum material.

Or, better still, observe an actual classroom showing. Notice the intense interest of the pupils as they absorb reliable information in an all-absorbing way. Listen to their keen observations and eager questions leading to further reading and study following the film. You will see how EBFilms help good teachers become better teachers.

EBFilms are produced in collaboration with eminent educators *for use by educators*. They have but one objective: to assist teachers in imparting to students skills and facts as well as developing attitudes professionally regarded as an integral part of the regular school curriculum.

3 EASY WAYS TO OBTAIN EBFILMS

1. Lease-to-OWN Plan
2. Cooperative Film Library Program
3. EBFilms Supplementary Rental Plan

WRITE FOR COMPLETE DETAILS
 AND LIST OF ALMOST 300 EBFILMS

WOOL. The complete story of wool from the sheep ranch to finished sweaters. An excellent addition to the widely praised EBFilms Series on common agricultural and industrial products. *Related EBFilms that belong in your film library:* Paper; Bread; Milk; Cotton; Making Shoes; Making Cotton Clothing.

BUILDING A HOUSE. The actual construction of a home is presented so skillfully in this EBFilm that very small youngsters easily get a clear idea of this complicated process. *Related EBFilms for your library:* Making Shoes; Making Cotton Clothing; Paper; Cotton; Making Books.

LIVE TEDDY BEARS. The cute antics at the strange little Australian bear (Koala) delight small pupils while greatly extending their scope of interest and understanding. *Related Films you should own:* Elephants; Animals of the Zoo; Black Bear Twins; Adventures of Bunny Rabbit; Gray Squirrel; Goats; Horse; Three Little Kittens; Common Animals of the Woods.

DRAWING WITH A PENCIL. The eminent artist, Kautsky, after making preliminary sketches, selects his preference and completes a charming drawing of a shingle-and-stone lodge. A thorough and instructive technical demonstration. *Related Films for your library:* The Making of a Mural*; Painting Reflections in Water*; Brush Techniques*; Pottery Making; Plastic Art; Modern Lithographer.

Hundreds of colleges have enrolled SoundScriber

SoundScriber electronic disc recording equipment is speeding language instruction in schools, colleges and universities all over America.

The biggest reason for the increasing choice of SoundScriber for language work is its simplicity of operation, its exceptional clarity of reproduction and its simple, fileable plastic recording discs.

With SoundScriber, any number of lesson discs may be provided for replaying by students any time—greatly extending the instructional period. The student can also record and check his own diction, pronunciation and delivery—an inestimable aid in mastering another language.

You should have all the information on the SoundScriber system. Complete data, plus authoritative case histories, will be sent upon request. Just mail the coupon for the new booklet, "Basic as the Blackboard".

University Film Producers Hold Conference at Iowa State

FORMATION of a new national organization, the "University Film Producers Council," was the highlight of a four-day conference of college and university motion picture producers held at the State University of Iowa, Iowa City, Iowa, this summer under the auspices of the University of Iowa Extension Division.

Film production staff members from the Universities of Southern California, Colorado, Indiana, Iowa, Minnesota, Nebraska, Oklahoma, and the Virginia State Department of Education, elected Harris C. Moore, of the University of Southern California, Chairman of the Council, and Don G. Williams, Indiana University, Secretary-Treasurer.

Objectives

The objectives of the Council will be to improve standards of university film production through development of new and improved production techniques applicable to this field, dissemination of information, and standardization of production equipment and nomenclature.

Membership in the Council is open to any state educational unit, college, university, church, or similar organization or individual actively engaged in the production of motion pictures for educational purposes.

Visitors to the conference examine production equipment on display. L to R: John Mercer, U. of N.; P. M. Stallings, U. of Minn.; J. Sol Wrenn, Va. State Dept. of Educ.; Larry Sherwood, Calvin Co., K. C.; and Charles N. Hockman, U. of Oklahoma.

Production Activities

The university film production conference consisted of a series of round-table sessions, and a number of films, recently produced or still in production by participating groups, were screened for discussion and criticism.

Following an opening session in which representatives summarized film production activities at the several institutions, the group joined in a discussion of the problems of motion picture production management, led by John Mercer, University of Nebraska. Questions of initial planning, finance, script preparation, organization for filming, editing, and sound were reviewed. Details of scenario preparation were outlined by Harris C. Moore, and questions and suggestions from the conference members were invited.

"Art Work in University Film Productions," a session led by Wendell L. Hoffman, University of

Coronet INSTRUCTIONAL FILMS

Lease-Purchase Plan

Own Your Film Library For Less Than Rental Charges!

Show your own films *when, where, and as often* as your students should see them—for as little as 4c a day for each film! Enjoy the advantages of film ownership *immediately* for as little as \$12 a title now, and as long as four years to complete payment.

Proper visual education procedure demands the right film at the right time—and often. Only through ownership can your film-showing and curriculum coincide . . . can the film be given proper preview for teacher instruction, shown to small groups of classroom size, and repeatedly used for later review.

Now, through Coronet's Lease-Purchase Plan, schools of limited budget may enjoy all the ad-

vantages of film ownership immediately, for as little as \$12 per film during your current budget period. Payments may be spread over as long as four years by successive yearly leases. Start your own film library now with as few as five Coronet titles. Any Coronet subject may be purchased under this budget plan. Select your five basic films now from the catalog of Coronet Instructional Films—the largest, newest library of 16 m.m. educational films in sound, motion, black and white and color. Write us for further details.

similar characteristics. But, it was time for us to leave. Expressing our sincere regrets, because we could not stay longer, we were bid a series of goodbyes. As we were ushered to the yard gate by the teacher, an invitation to return was extended. Knowing my title, but sadly misinterpreting the efforts of all "visual-educationalists," the leader of this good little school apologized, "I wish we could START 'visual education' here, but as you see, we don't have electricity to run a projector."

"My dear young lady," I managed to reply, "electricity will never have the honor of helping you START 'visual education,' as you call it. The best a projector could do would be to add a little to your already good use of visual-education techniques."

When will we learn what we have somehow done and permitted to be done to cause such narrow interpretations?

University Film Producers

(Concluded from page 452)

Nebraska, brought out problems of preparing titles and animation for typical university films.

Laboratory Problems

Two members of the staff of the Calvin Co., Kansas City, Mo., were invited by the Iowa Extension Division to lead question and answer sessions in their specialties at the conference. Larry Sherwood discussed relations between producer and processing lab-

oratory under the topic headings "What the Producer Should Provide the Laboratory for Best Results," and "What the Producer Should, and Should Not, Expect from the Laboratory." Allen Jacobs, Calvin Co. sound engineer, conducted a discussion of basic sound recording principles, equipment, and techniques.

Production Techniques

A general discussion of production techniques was led by Wescott Burlingame, Jr., of the Eastman Kodak Co., Rochester, N. Y., and an engineering model of a new 16mm sound recorder was described and exhibited by Everett Miller, of the RCA Victor Division, New York. R. Paul Ireland, of the Engineering Development Laboratory, Chicago, presented information concerning a new 16 mm. film processing machine, and William G. Straube, of the Viewfinder Corp., New York, described and exhibited a variable focal length lens for zoom effects.

JULIEN BRYAN, Executive Director
1600 BROADWAY NEW YORK 19, N. Y.**

The Fifth Start

(Concluded from page 433)

A number of film and radio organizations are located at the Capital. Consequently our University has found many opportunities for cooperation. With this in view, on July 22, 1946 a "Nanking Film & Radio Workers Forum" was organized. Since then nineteen sessions have been held fortnightly, ten of them at the University of Nanking. In the forum nearly twenty organizations have been represented, including the Ministry of Education, with its film production unit, the China Film Studio of the Ministry of Defense, the Central Broadcasting Administration and the U. S. I. S. The forum serves not only as a place for friendly fellowship, but also to compare notes on technical matters. Moreover, opportunities are offered to influence national legislation, such as regulations governing the import of films and supplies for audio-visual education. In this case the Forum requested that educational films be imported free from quota restrictions and duty, and our request was granted. The ban on photographic supplies has also been lifted.

While we have not been able to produce many new materials during this period, we are emphasizing "Visualizing the Curriculum" in the University. Professors are encouraged to use films in their classes.

The name of our service department has been changed twice due to the nature of the work we have been doing. From 1936 to 1940, it was called the Department of Educational Cinematography. Then, production was the primary emphasis. From 1942 to 1946

it was called the Motion Picture Department. Since April 1947, we have adopted a new name "Audio-Visual Center." This indicates more accurately the program we now are carrying on.

Plans for the future are directed into eight channels: (1) production of motion picture films, slidefilms, and sound recordings; (2) laboratory service for other film makers; (3) mobile demonstration and production unit; (4) training courses; (5) visualization of teaching; (6) film library; (7) broadcasting; (8) publishing; (9) photo service; (10) radio service.

**Extension Course for Teachers In
Downtown Los Angeles**

"Audio Visual Education," a course designed to acquaint teachers with the theories and methods of visual instruction and to furnish experience in the utilization of audio-visual aids, opened Friday evening, September 26 at University of California Extension's center in downtown Los Angeles. F. Dean McClusky is the instructor.

Freedom Train to Visit Local Communities

A special train, constructed as a National Shrine to house about 100 original documents of American history upon which the development of American democracy is based, will visit approximately 300 communities in all of the 48 states during a tour beginning in September, 1947, and continuing one year. The plan was developed from a proposal of the Attorney General of the United States and is sponsored by the American Heritage Foundation, which is assuming the financial responsibility for the tour.

The Foundation's chairman is Winthrop W. Aldrich, chairman of the board of the Chase National Bank. The three vice presidents are William Green, president of the AFL; Robert G. Sproul, president of the University of California; and Philip Murray, president of the CIO. Its board of trustees includes many prominent business men.

In connection with the tour of the Freedom Train, it is proposed that each community visited proclaim and organize a Community Re-dedication Week to be climaxed by the arrival of the train. This special Week will include special programs for schools such as excursions to the Freedom Train, classroom discussions, special assemblies, essay and oratorical contest, and other activities. Radio stations, newspapers, and motion pictures will herald the train's approach.

School Broadcast Conference Meet in Chicago

The Eleventh Annual School Broadcast Conference will meet October 26, 27, 28 and 29 at the Hotel Continental in Chicago, it was announced by George Jennings, Director of the sessions.

"The 10th Annual Conference in 1946 was perhaps the most successful meeting of its kind ever held, Jennings said, "but the Advisory and Executive Committees plan on making the 1947 meeting even of greater value to school radio administrators, educators, and public service program directors."

Outstanding feature of the fall meeting will be the exhibit of new equipment, transcriptions and records. Space has been increased to handle a larger number of exhibitors and the scope of the exhibit has been enlarged to include visual as well as radio classroom aids.

Notes

Edward Steichen to Museum of Modern Art

Edward Steichen, internationally-known photographer and one-time associate of the late Alfred Stieglitz has been appointed Director of the Department of Photography, Museum of Modern Art, New York. During the war, Steichen directed the Navy color film, *Fighting Lady*, showing action aboard an aircraft carrier in the Pacific. Part of his duties with the Museum will include the organization of such exhibits as the coming "Great News Photographs." During the war, Steichen prepared two Navy exhibitions for the Museum: "Road to Victory" and "Power in the Pacific"

Chicago French Film Society Organizes

The Chicago French Film Society has been formed to enable those persons interested in French films to preview the latest 16mm releases. The Society will meet the first Wednesday of each month from October through May at 8 p.m. in the Woodrow Wilson Room, 84 East Randolph Street, Chicago. The officers of the Society are as follows: Chairman, Miss Katherine Slaughter, Hyde Park High; Vice-Chairman, Miss Helen Geller, Oak Park High School; Secretary-treasurer, Miss Virginia Donham, New Trier High School.

Unesco Surveys Technical Needs Abroad

According to the survey recently made by the Unesco Commission on Technical Needs, a total of 15,000 16mm projectors are required by the countries of Europe and by China. Poland, Yugoslavia, Greece and China have large requirements which they have difficulty in meeting. These needs are especially strong in chemicals, special equipment, and film. Film needs total roughly 15 million meters of 35mm and a like amount of 16mm film. Fine grain, infra-red, and color film are in especially short supply.

The Commission also received and considered a suggestion that foreign exchange required to meet technical requirements for mass communication media might be provided by the flotation of loans by some appropriate organizations acting on behalf of Unesco, the service and liquidation of which loans would be effected by the provision, by beneficiaries of the loan, of educational and cultural facilities arranged under the auspices of Unesco.

The Commission was also impressed by certain suggestions as to achieving the same objectives through the industries themselves and through commercial channels. The Commission agreed that it was highly desirable that such schemes should be arranged and expressed the hope that the experts of the industries, who had participated in the work of the Commission would use their best efforts to stimulate the consideration of such schemes in the industries they represent.

There is important production of film stock in France and Belgium: in Poland, production is just

beginning. Plans also exist for production of color film. The export capacity of France and Belgium is considerable although hampered by chemical shortages.

Practically all countries have expressed the need for professional training of technicians. In most of the countries, the urgent needs may be satisfied by short-term schemes. For Yugoslavia, however, and for China, which has set up a five-year plan for the training of technicians in the educational field, long-term schemes will also be needed in addition to the short-term.

Important needs for 16mm projectors have been reported by China (6,000), Greece (4,000), Poland (2,000) and Norway (500). None of these countries has any domestic production of 16mm projectors. On the other hand France, Belgium, Denmark, and Czechoslovakia, and later the Netherlands and Yugoslavia should be able to meet their own needs by the development of domestic production. Some of these countries may ultimately be able to produce for export.

Chicago Scientific Film Society Meets

The Chicago Scientific Film Society announces the opening of its second season on October 8, 1947 at 8:00 P.M. in the Woodrow Wilson Room, 84 East Randolph Street, Chicago 1, Illinois.

At the first meeting, the films to be shown will include the following: *Steel*, a color film showing its manufacture; *Our Constant Enemy - Insects*, color; *The Halogens*, members of this chemical group; *Life in a Drop of Water*, brilliant micro-photography.

The purpose of the society is to present each year a series of new scientific films covering subjects in physics, biology, chemistry, medicine, health, astronomy, manufacturing processes and related fields.

For some time, it has been felt that this educational society should have a distinctive design to signify its purpose on its letterhead. The Board of Directors, therefore, has voted to conduct a contest to obtain sketches of proposed insignia. Interested individuals are urged to submit their ideas. The entry judged the best will be awarded a five-year membership in the society; while the second best entry will receive a one-year membership. Sketches ranging from four to ten inches in size must be submitted by November 1, 1947. Designs should be sent to the Secretary, of the society at 84 East Randolph St. Each contestant may submit more than one entry. The board of directors of the society will act as judges and their decision will be final. All entries become the property of the Chicago Scientific Film Society and none can be returned.

Study Role of Public Libraries in Promoting Use of Discussional Films

Miss Gloria Waldron, a staff member of the Twentieth Century Fund, has been appointed to make the film study, according to Robert D. Leigh, director of the Public Library Inquiry.

Stressing the broad scope of the film study, Miss Waldron said: "Our first thought was to focus entirely on the public library and how it might serve as a motion picture center for the community.

listing and describing available films, possibly storing them, possibly arranging regular showings and in general promoting the use of these films by schools, business firms and citizen-organizations of every kind.

"We soon realized, however, that we would have to study the whole field of non-commercial distribution and exhibition of films in order to arrive at any intelligent suggestions as to what part the public library might play in this whole process."

The film project is a part of a comprehensive two-year survey of American public libraries, financed by a grant of \$175,000 from Carnegie Corporation of New York and conducted by the Social Science Research Council. The purpose of the survey, according to Dr. Leigh, is to "appraise in sociological, cultural and human terms the extent to which the libraries are serving as centers of community enlightenment and to assess their actual and potential contribution to American society."

The Fifth Start—Introduction

(Concluded from page 430)

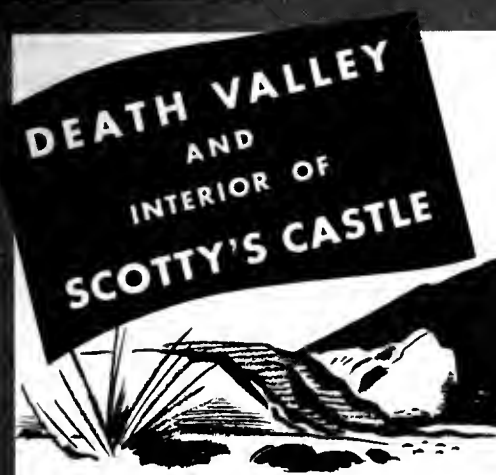

The invasion of China by the Japanese interrupted audio-visual plans, making it impossible for China to import needed equipment and materials. Since China can produce very little of the required equipment, this meant that we had to do more with what we had. Radio stations were set up in many parts of the country where previously radio had not even been heard of, and educational programs were carried on all stations. Over four

thousand radio receivers were sent to schools and social education centers. Mobile units were sent into villages to show movies to people who had never seen a movie before. One thousand and seventy reels of educational films, five hundred and sixty rolls of filmstrips were in use. Pictures and photographs also played an important part in keeping the Chinese people informed of events in other parts of the world.

A New Department

Just after the beginning of the war, the University of Nanking established a department of audio-visual education. Similar departments were also established at the National College of Social Education and Kiangsu Provincial College of Education. At present, two graduates from the University of Nanking are in the United States for further study in audio-visual education.

In 1940, the Committees of Film Education and Radio Education combined into one committee, and the Office of Audio-Visual Education was established in the Chinese Ministry of Education. This office supervises and directs audio-visual work in all the schools and social educational centers. Meanwhile, a 16mm film studio called Chungwa Educational Film Studio was established. Since 1940, it has produced 52 16mm films "Coal Mining," "Ship Building," "Singkiang," and "Szechwan." The Ministry of Education publishes, with the University of Nanking, a 50 page monthly

DEATH VALLEY AND INTERIOR OF SCOTTY'S CASTLE

WEST-VIEW
ANNOUNCES TWO NEW
KODACHROME SLIDE TOURS

DEATH VALLEY. From the barren wastes surrounding Bad Water (the lowest point in the Western Hemisphere) across bleak deserts and up through canyons of kaleidoscopic beauty, West-View brings you the true feeling and color of Death Valley. Zabriskie Point, the famous 20-Mule Team Canyon, the interior of the Borax Mines, Dantes View, the Golden Canyon and Artist's Drive are among the outstanding points covered in this slide tour. Complete set (18 Kodachrome slides) with instructional text manual, \$9.00.

SCOTTY'S CASTLE. One of the most fabulous spots in the world where two desert-wise partners built themselves a 2½ million dollar home—an oasis of architectural grandeur in the desert wastes of Death Valley. The interior of Scotty's Castle with its lavish furnishings and unique architecture is shown in all its full radiant color in this, the only set of Kodachrome slides ever made of the interior and presented exclusively by West-View. Complete set (18 Kodachrome slides) with instructional text manual, \$9.00.

Free Examination—No Obligation

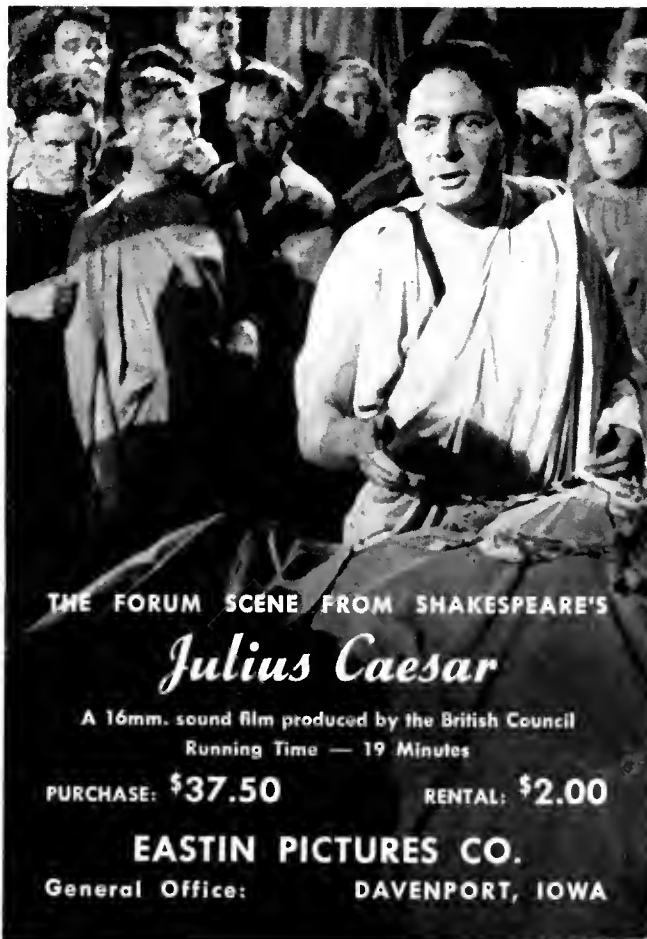

WEST-VIEW

magazine called *Film and Radio*. It helps organizations to improve and to get started with their own audio-visual programs.

Return to Nanking

Since the return of the Chinese government to Nanking, two educational broadcasting stations have been built, and four more are being planned in order to correlate their programs with the courses in colleges and schools.

Goal: 100% Literacy

Educational leaders in China hope that 100% literacy will be achieved in China within the next five years. The first step, that of purchasing films and equipment in the U. S. A., has been taken. Then will come the training of personnel, with the ultimate objective of equipping every school, college, and social educational center with audio-visual aids. At the same time there is a "Mass Film Education Program" which will sponsor and promote 16mm motion picture theatres through which good entertainment, documentary, and educational films will be made available. One of the means of utilizing films would be the establishment of an international clearing house through which educational films of all countries may be exchanged. Such a project would receive the full support and cooperation of the Chinese Government and the Chinese people.

The Film and International Understanding

(Concluded from page 439)

at given times. Whether the lesson for peace is missed or made impressive depends upon the teacher.

What Is Money? (Coronet Instructional Films) is primarily concerned with economics. In the course of the film, the dependence of sound money on a stable government is stressed, and attention is called to the importance of money for international travel and business. These last two points can be utilized to emphasize the economic importance of peace and international cooperation.

Immigration (Encyclopaedia Britannica Films) is primarily concerned with an American problem, but it shows our country in a world setting and offers many opportunities for stressing the importance of understanding various racial and national groups and the areas from which they came.

Utilize Potentialities of Films

Teachers in all areas of learning should be alert to such possibilities. Many fields of interest, such as science, music, religion, mathematics, art, dance, literature, economics, family life, children's activities, as well as others, touch upon common human interests which jump over the barriers of race and nationality. Their potentialities should not be neglected.

Utilization of the potentialities of a film is greatly facilitated if the teacher previews it shortly before it is used. To some, this may seem to be an obvious and routine procedure, but it is neglected all too often.

Many Films for International Understanding

A goodly number of fine films designed specifically to promote international understanding are available today, and more are on the way. It would be impos-

* Pat. Pending

sible to list all of them, or even all of their sources, within the scope of this article. A few can be mentioned.

The United Nations is promoting a visual education program of its own. A free slidefilm, *The United Nations at Work—the Secretariat*, already is available, and a number of other films are in the process of preparation. A list of official films, available for distribution, dealing with the United Nations, its member states, and its work, is available on request.

The current Forum Edition of *THE MARCH OF TIME*, available for use in schools, has releases on *Atomic Power*, *The New France*, *The Philippine Republic*, *Tomorrow's Mexico*, and other pertinent subjects in this field.

The International Film Bureau of Chicago lists a number of useful films including *Great Circle* and *Round Trip*, the latter covering foreign trade. Some are in French and Spanish.

Young America Films has coordinated units of motion pictures and slidefilms on *Our Shrinking World* and *We, the Peoples*.

Film Publishers, Inc., has coordinated movies and slidefilms on *One World or None*, *Man—One Family*, and other subjects in related fields.

Films of the Nations has an extensive list of films about numerous countries and areas. It distributes *Seeds of Destiny*, a film about the children of war-torn countries, which was pronounced the best short documentary of 1946 by the Award Committee of the Academy of Arts and Sciences; also, *The Peoples' Charter*, a film about the United Nations.

Some teachers may prefer to start with a general catalog of educational films and work out to specific lists. Sometimes the catalog of a local or regional film library offers an excellent starting point.

Educational Screen's 1000 and One, the Blue Book of Non-theatrical films, is a rich source of over 6,000 films and its system of indexing and classification is very helpful.

Many other sources, including the comprehensive list of the Y. M. C. A. Motion Picture Bureau, could be mentioned, but those already given will help the teacher who is interested in films for international understanding to find films that he wants, to use them more effectively, and to branch out into new sources. Refer also to "Films for United Nations Week," *Educational Screen*, September, 1947, p. 410.

The University in Transition

(Concluded from page 429)

buildings, thronging the reading rooms of the libraries. One had to observe them organizing to get things done—petitioning for a new student center, working for international relief organizations, taking a serious interest not only in campus affairs, but also in the things of the world of which they were a part. In former days, youth went from school to life. Today, they come from life to school.

As the film makers studied the situation first-hand, it became apparent that the university might have become a more democratic place than ever before. The college doors, thanks to the help of the G.I. Bill of Rights, were opened to young men and women who, without such financial help, might never have gone on to a higher education.

Observations From the Students

Also, a greater measure of give and take was noticeable between faculty and students. A man who has been an engineer on a B-29 is in a pretty good position to question his professor of aeronautical engineering about practical problems of flight. After four years in the Pacific theater, an ex-G.I. can make first-hand observations in any class on Far Eastern geography.

Many teachers, too, had come back to the University with added experience and maturity. A professor of political science just returned from a tour of duty as a political administrator in an occupied country makes a good teacher of post-war political problems. Certainly, a college instructor who has fought as a combat infantryman is in a good position to understand the former G.I. who is now his student.

Script material piled into the hopper each day—facts uncovered not by paper and pencil research but through first-hand observation of the university in action. The Department of Photography was assigned to see the job through. From the time that the script preparation was begun, it took approximately three months to complete the film.

The picture was shot in 16mm black and white with Cine-Kodak Specials. The sound is straight narration with two voices coming in offstage—the voice of a veteran who symbolizes all veterans, and the voice of the President of the university who sums up. The veteran's lines had to be dramatic and telling, without becoming sentimental. The voice of the President is authoritative, ending the picture on a firm, decisive note.

Many of the shots were candid—taken when the students being photographed were not aware of the presence of the camera. Photographically, the picture is not unglamorous. There is no make-up; no filtered skies; none of the clichés so common to many films on college life. This is an honest, documentary record of an American university.

The editing design emphasizes the increased tempo of college life. Sequences are short, and the finished film is only twenty-seven minutes in length. The commentary is simple, direct, and written in the tone of a film report, with a minimum of sentimentalizing over the old school tie. The film is a reflection of movement, of change, of things to come. This is *The University in Transition!*

AUDIO - VISUAL TRADE REVIEW

People

New Distribution For Paul Hoefler

Paul Hoefler, widely known explorer, author, lecturer, and producer of educational films, has set up his own distributing organization as a division of Paul Hoefler Productions for the marketing of his pictures in the audio-visual field. An energetic advertising and selling campaign has been planned to merchandise his most recent productions, including two one-reel teaching films on the tuna fishing and tuna packing industries.

Mrs. Leora Beyers has been employed as traveling representative. Her duties will be to contact audio-visual directors and keep in touch with their needs, as well as to arrange for screening of current releases.

Hoefler has set up an ambitious production schedule for the 1947-48 season, which will be announced in trade paper and direct mail advertising as rapidly as new offerings are ready for the screen.

Kodak Hears McMaster's Voice

Donald McMaster was recently elected vice president and assistant general manager of the Eastman Kodak Company at a meeting of the directors. His election, the directors stated, will permit a better distribution of the company's administrative duties. As assistant general manager, Mr. McMaster takes over certain responsibilities formerly discharged by Ivar N. Hultman, who will now devote full time to Kodak Park operations. Mr. Hultman has been carrying the three-fold duties of vice president, assistant general manager of Kodak Park, and assistant general manager of the company, the first two of which he retains.

Ament, Butterfield to New Posts in RKO Pathe Expansion

Frederic Ullman, jr., president, announced substantial changes in management personnel of RKO Pathe, Inc., led by the appointment of Walton C. Ament, formerly vice-president and editor of Pathe News, to the position of vice-president and general manager. In his new assignment, Ament will supervise

newsreel, documentary, and commercial picture operations, as well as the new RKO Pathe New York studios under Ullman.

Ament's responsibilities as Pathe News editor-in-chief will be assumed by Alfred Butterfield, formerly news editor, and most recently Promotion Director of RKO Pathe. Butterfield joined Pathe in 1942, coming from March of Time (radio) and an Associate Editorship of Life Magazine.

Dwinell Receives Radiant Appointment

Radiant's new district manager, the versatile William G. (Bill) Dwinell, has just opened his Chicago office and is hard at work on his new Central States assignment for Radiant Screens.

Steeped in photography from the beginning of his business career, Mr. Dwinell was taking pictures of the games at Northwestern, when coaches first relied upon films for training purposes. Also, during his association with Bell & Howell, 1935 to 1938, in an educational capacity, he shot many medical

William G. Dwinell

films. In addition, he has worked for many years in positions of responsibility, in the fields of market and consumer sales analysis, sales promotion, store planning, design and merchandising, dealer organization and salesman training.

E. D. Eades to New RCA Post

Appointment of Elmer D. Eades as Regional Manager of the Southern Regional office of the RCA Victor Division, Radio Corporation of America has

ROBERT E. SCHREIBER, Editor Supervisor of Teaching Aids Mishawaka (Indiana) Public Schools

been announced by Walter M. Norton, Director of Distribution for the Division. Mr. Eades succeeds W. L. Rothenberger, who has been named Renewal Sales Manager of the RCA Tube Department at Harrison, N. J. Headquarters of the office is in the Citizens and Southern Bank Building, Atlanta, Ga.

J. A. Dubray, Pioneer Cinematographer, Announces Retirement

Joseph A. Dubray, pioneer movie cameraman and technician, since 1929 associated with the Bell & Howell Company, Chicago, has announced his retirement, at the age of 65.

L. to R.: Mr. Dubray; J. H. McNabb, president; and A. S. Howell, vice president.

During his long career as a cinematographer, Mr. Dubray was associated with most of the famous early personalities of the early days of motion pictures. He served as chief cameraman for the original filming of *The Perils of Pauline*, famous thriller starring Pearl

Give

Now

To Your Community Chest

White, and he was then personal cameraman for Ethel Clayton, one of the most glamorous actresses of the day.

When it became apparent that sound was literally entering the picture to stay, and that amateur as well as professional motion pictures were to be an established part of American life, Mr. Dubray joined the Bell & Howell Company, pioneer manufacturers of precision motion picture equipment. He was placed in charge of the Hollywood office of the company,

where he remained until J. H. McNabb, president of the Bell & Howell Company sent him to Europe to organize the company interests in the motion picture industry there. Upon his return, he remained at the home office in charge of the B & H Professional Equipment Division.

Mr. Dubray is returning to France and will reside near Paris, where he expects to keep in close contact with developments in the movie industry.

Equipment

Ampro Not Mute on Silents

Greater simplicity and advanced performance are two advantages claimed for the new "Imperial" silent 16mm. projector developed by the Ampro Corporation of Chicago.

Ampro is calling particular attention to its new Swing-Out-Gate. It permits easy inspection and cleaning of aperture plate and pressure shoe, without disturbing the focus of the projection lens. Another convenient feature is the new Cordomatic-type power-cord attachment. The line cord is attached to the machine and rewinds automatically into the base. Only as much cord need be used as is required—no surplus cord on the floor to trip over.

Other noteworthy features: Still picture button for stopping any frame indefinitely (automatic safety shutter prevents damage to film.) Film movement can be reversed by switch, without stopping projector. This feature permits humorous projection effects. A fast automatic rewind operates without transferring of reels or belts. Pilot light facilitates threading and operation in darkened room—easy threading system

Ampro "Imperial" silent.

saves time. Powerful fan ventilates high-wattage lamps adequately, whether projector is running forward or backward.

The Ampro "Imperial" operates with any standard prefocused based projection lamp, T12 envelope or less, 750 watts or less. It is equipped with 2-inch coated super-projection lens, speed $f/1.6$. It can be used on both d. c. and 25 to 60 cycles a. c., 105 to 125 volts.

Kodak's 750-watt "8"

The Kodascope Eight-90—a brilliant, well-planned, de luxe 8mm. projector—optically and mechanically the finest Kodascope Eight, has been announced by the Eastman Kodak Company.

Teaming a 750-watt lamp with a Lumenized $f/1.6$ lens and an optical system which incorporates low-reflective coating of all elements of both the projection and condenser lenses, the projector is said to deliver light to the screen unsurpassed by any other 8mm. projector of similar lamp wattage.

The new projector's operation is simplified by conveniently located fingertip controls. Movable loop guides, accessible sprockets, and a latching film gate facilitate threading. The guides, by forming perfect upper and lower loops, assure even film flow and smooth projection. A three-way switch controls motor and lamp, a knob governs projection speed. Adjustments such as focusing, tilting, and framing are easily made. When the show is over, a built-in, motor-driven rewind helps finish the job by smoothly winding back the film.

The Kodascope Eight-90 incorporates a still picture control; drive shafts for the spindles are enclosed for quiet, protected performance; and a shift lever is built into the machine to permit "backing up" and the convenient re-running of portions of particular interest, or for reverse action—a warranted chuckle-producer. During rewinding, pressure on a button increases the tension to provide the drive necessary for rapid, snug winding of the film. The Kodascope Eight-90 has an especially efficient cooling system. Its film capacity is 200 feet.

Turning the Tables on Silent Films

The Model A Fidelitone Dual Turntable is now available for economically adding background music, sound effects, and narrative to church and school made silent films. This Fidelitone consists of two 78 r.p.m. turntables, three feather weight pickups with permanent sapphire needles, a microphone, a powerful amplifier and 12 inch loud speaker. It is housed in an easily portable carrying case and is suitable for use in small rooms or before an indoor audience of 1000 or more. Quality of reproduction

Model "A" Fidelitone.

and ease of operation are outstanding features. The Manufacturer, George K. Culbertson Company, 5133 Juanita Ave., Minneapolis 10, Minnesota, will furnish complete information on Fidelitones and an excellent reprint "Melodious Accompaniment" to all interested persons.

Webster-Chicago Wire Recorders Now Available

Latest entry into the educational field, and one that holds much promise for speech, drama, radio, and other classes, is an inexpensive portable wire recorder manufactured by the Webster-Chicago Corporation.

This unit, known as Model 80 Wire Recorder, comes complete with microphone and 3 spools of recording wire (two 15-minute spools and one 30-minute spool). The entire machine weighs but 27 pounds and is about the size of a small overnight case.

Operated as easily as a home radio, the Webster-Chicago Wire Recorder makes continuous recordings up to an hour in length. These recordings may be replayed thousands of times with no appreciable decrease in tone or volume. These same recordings may be "erased" and re-recorded at any time—and as many times as desired. Additional spools of wire are available in 15-minute, 30-minute and 60-minute spools.

The Webster-Chicago Wire Recorder consists of a wire transporting system, amplifier and speaker. Recordings made on it may be played back immediately and may be recorded directly from a

radio, phonograph, or through a microphone. It is also possible to connect a series of microphones to the unit to record conferences or meetings. Recordings made in this manner may be played back through the unit itself; or through an external speaker and amplifier, such as a public address system; or may be played through an external speaker, while utilizing the amplifier in the unit.

New Table Model Victrola

A new table model Victrola, specially designed for schools and offering for the first time console-instrument performance in a reproducer of table model proportions, has been announced by W. H. Knowles, General Manager of the RCA Victor Educational Sales Department.

Console quality has been achieved in this table model phonograph by a 12-inch speaker and large amplifier which provide outstanding tone quality in an instrument of compact proportions.

The instrument is attractively housed in a blonde hardwood cabinet measuring 18½ inches wide; 14 inches high; and 20½ inches deep. Three ivory tone control knobs on the right side of the cabinet are mounted flush instead of projecting, thereby reducing the possibility of damage or breakage. Separate bass and treble tone control knobs enable teachers to demonstrate high and low tone registers in musical recordings.

The pick-up is of a special RCA Victor lightweight design, with the "Silent Sapphire" point soldered into place. This feature, of particular importance in a classroom instrument, provides unsurpassed reproduction and long life for records. While designed primarily for classroom use, the new Victrola Classroom Senior Model has a powerful amplifier which provides sufficient volume for auditorium use. Hand holes in the cabinet help to give the instrument portability.

G. E. Educational Radio Kits

Radio receiver construction kits for radio education applications in schools and colleges have been made available by the Specialty Division of General Electric Company's Electronics Department.

Designed to illustrate all the principles involved in modern radio receiver construction, the new kits are similar to the type used extensively in the radio and electronics training courses conducted during the war by the Army and Navy.

The radio kits include all the parts necessary to build a complete 5-tube superheterodyne receiver, a punched chassis, tubes, loop antenna, five-inch loudspeaker and specially-written instructions and diagrams. Students may perform many instructive experiments such as studies of rectifiers, filters, amplifiers, oscillators, etc., according to E. C. Hovey, head of the division's educational section.

Further information on the newly-available radio receiver construction kits may be obtained by writing the educational section, G-E Electronics Department, Wolf Street Plant, Syracuse, N. Y.

Film Defect Indicator and Sprocket Guards from B & H

Designed for the rapid and thorough mechanical inspection of 16mm sound and silent film perforations, a new Film Defect Indicator is announced by the Bell & Howell Company.

As film is wound through the machine, the perforations are mechanically inspected, and when a broken or damaged perforation is encountered, a warning light calls the attention of the operator to the imperfection. Thus, film inspection is reduced to the minimum of time and effort.

The Film Defect Indicator was so designed that it may be removed from its base and mounted on a Bell & Howell Filmmotion Viewer base, thus combining the Indicator and the splicer in one unit for rapid inspection and repair. Since the Indicator is fitted to take the standard B&H connecting rods, it may be used between B&H Heavy Duty Rewinds, or it may be set up in series to become part of the complete Bell & Howell Filmmotion Editor. But even defective film has no chance to jump off

Film defect indicator.

the sprockets of 16mm Filmo projectors, now equipped with newly-designed sprocket guards.

The new guard was engineered, B&H states, to accommodate the difference in film curvature when a torn perforation, as compared with a perfect perforation, passes over the sprocket. Normally, it is not expected that film having broken or torn perforations will be used for projection purposes. However, if a damaged film perforation is unnoticed and the film is run through a Bell & Howell projector, the new guard keeps the film curved smoothly around the sprocket, teeth correctly engaged, with no chance to jump off and suffer further damage.

New Electro-Voice Crystal Microphone

A new Model 905 Crystal Microphone is announced by Electro-Voice, Inc., Buchanan, Michigan. It offers a combination of durability, attractive appearance and smooth reproduction of voice and music. Frequency response is substantially flat from 50-7500 c.p.s.

Output level is -54 db. This microphone is available at low cost for general sound work, recording and communications. Polar pattern is non-directional at low frequencies becoming directional at higher frequencies. Employs high capacity, moisture-sealed crystal, and has a built-in cable connector. Write for E-V Catalog, No. 101, which gives detailed information.

Production Activity

Geography Films (86) From de Rochemont

Louis de Rochemont Associates, Inc., recently organized as film publishers, has announced that it has begun production on the first of its 86 two-reel geographical color films to bear the series' title, *Your World and Mine*. The series is being made exclusively for classroom use and will be distributed by United World Films, Inc., a subsidiary of Universal-International Pictures.

Louis de Rochemont, President of the Company, also announced the appointment of John J. Wingerter as Vice President and General Manager, F. Borden Mace as Executive Assistant to the President, John A. Haeseler as Technical and Educational Consultant, and Victor Jurgens as Unit Producer for the Far East, with headquarters in Bombay.

John J. Wingerter

According to Mr. de Rochemont, the *Your World and Mine* series will be an integrated course of educational films embodying those aspects of the world and its people which can best be presented through the medium of the motion picture in sound and natural color. The first group of 36 is designed for the fourth, fifth, and sixth grades, with an additional series of 50 for high schools. The terms of the contract between Louis de Rochemont Associates, Inc., and United World Films, Inc., call for the completion of the first series by December 31, 1948.

Coronet Films Now Available Through Rental Sources

In keeping with CORONET'S policy of service, all CORONET Instructional Films have been made available now on a rental basis. Announcement of this change in policy has just come from the world's largest producer of 16mm., educational films. The service is scheduled to offer all of CORONET's titles.

The nation's leading film outlets stand ready to fill the rental requests of schools, churches, study groups, or individuals who wish to obtain CORONET Instructional Films for home showing. These rental outlets have been selected carefully and placed to offer efficient service at their usual, nominal rental charges throughout the United States.

Midwest Distribution For Official

Film Guild of America Inc., with offices and vast library in Chicago, has been named exclusive midwest distributor of Official Films. George P. Allen is listed as president of the Concern, with Grant Fitch as vice president, Gordon B. Mills as Chairman of the Board, and Frances Priester acting as secretary and treasurer.

Film Guild of America, Inc., will stock a wide variety of titles in 16mm sound, 16mm silent, and 8mm silent, film strips. The library will be supplemented from time to time, as the need arises.

"The" Film Center

The CMC Corporation trading as "The" Film Center purchased the Film Center of Washington, D. C. Inc., from International Theatrical and Television Corporation.

"The" Film Center is in the process of re-organizing so as to offer complete services in sale and rental of Audio Visual equipment and films for accounts in Washington, Maryland and Virginia.

John Morrow, former General Manager for International Theatrical and Television Corporation of Washington will be General Manager in addition to handling Catholic Accounts. Jack Carter will expand the Home Movie Department, and C. T. Chandler will be Sales Manager in charge of territory.

WITH YOUR CAMERA

Take color pictures with your present camera. Essenkay adapter kit consists of mask and film spool extensions for using Bantam (828) color film. Easy to install and remove. Enjoy the extra fun of color.

To Fit These Cameras

Argoflex - Rolleiflex - Rollei-cord - Super Ikonta B and BX-Ikoflex - Karelle Reflex - Ciroflex - Wirgin Reflex - Super Spart Dolly - Speedex - Kodak Duo 620 Exacta and other 120 and 620 size cameras.

SINCE 1897

Fairbanks to Produce Films for Television

Mindful of the 600% jump in television viewers in less than two years, but remembering that the total audience is still small as compared to radio, Jerry Fairbanks Productions has announced distribution plans for video films now being mass produced by that organization.

Cost of the films to each station will be based on the number of television sets in each city. Fairbanks estimates that there are 325,000 viewers in the nation. Each station may use a film three times in one year.

Pay-as-you-see Television

Early last summer, Commander E. F. McDonald, Jr., president of Zenith Radio Corporation, created a minor stir by announcing a plan which, he considered, would solve television's financial problems. His new system was called "Phone Vision," an arrangement whereby television set owners could see first-rate shows, free from "commercials." Only hitch in his plan was that the owners must pay on a per-program basis.

In operation, the subscriber to such a service would call his telephone operator and tell her the program he wished to see. Then he would tune his television set to the station broadcasting the desired program. He is unable to see the picture until certain key frequencies are returned to his set over the telephone wire. Thus, he can see the picture only after he has notified the telephone operator who places a charge on his bill. The television frequencies reach his set in the normal manner with the exception that they are split in a complicated way which requires the special key frequencies received over the telephone or electric wires to clarify them.

Film Daily states that the motion picture industry does not consider this new system a threat, because (1) the major producers will not supply motion pictures for television; (2) the public will not like to pay at the end of the month for its entertainment; (3) Federal Communications Commission would have to approve the plan, for the air has been interpreted as belonging to the public; (4) the Interstate Commerce Commission and the telephone company also would have to approve of the plan.

16mm Television Motion Picture Projector

A new 16mm motion picture projector, developed by RCA especially for telecasting purposes, will facilitate the use of newsreels, a wide variety of short film subjects, and film commercials, contributing to low-cost television programming. The new projector, RCA Type TP-16A, projects regular 16mm motion pictures onto the light-sensitive element of the electronic pick-up tube in a television camera. The projector uses an F.2 projection lens and features the famous RCA rotary stabilizer on the sound drive. Mounted in the light-weight pedestal are 115-volt single-phase and 220-volt three-phase circuit breakers and the field supply for the special three-phase motor.

Sponsored Programs Increasing

The Ford Motor Company has entered the West Coast television picture with a series of sports programs broadcast over Paramount's Los Angeles station KTLA. Union Pacific and the Northwestern Railroads have initiated a remote television program called "Streamliner Time." This program, broadcast over Paramount's Chicago station WBKB, is set against a backdrop of departure activity and excitement at Northwestern's Chicago railroad station. Interviews with top personalities are featured.

Top-Ranking Broadcasters Attend Television Clinic

Late last spring, thirty-three of the nation's top-ranking broadcast engineers, representing the major radio networks and leading independent stations which are operating or planning television service, attended the first television engineering clinic ever conducted in the industry. The clinic was sponsored by the RCA.

Designed to give the participants a comprehensive understanding of the theory, operation, and maintenance of television equipment, the program was conducted at the top engineering level, with a staff of instructors made up of the same RCA television engineers who designed and developed the equipment.

Lecture classes, employing the latest techniques of audio-visual instruction, including motion pictures and slides, were supplemented by "on-the-job" training with television production units identical to those which the broadcasters may soon be using in their own stations.

In Camden, the visitors saw RCA's new 5-kilowatt television transmitter in production and gained practical experience in transmitter tuning, operation, and maintenance. A visit to the television receiver assembly section enabled them to witness the mass production and testing of home receivers.

At the RCA Laboratories, the broadcasters were welcomed by Dr. E. W. Engstrom, Vice-President in charge of Research, and heard a technical discussion on the Kinescope, iconoscope and other television picture reproduction tubes, by Dr. Albert Rose, co-inventor of the Image Orthicon pickup tube.

Powerfully impressive and inspiring, Ten Commandments — Visualized are dramatically illustrated in dignified cartoon style for popular appeal. Simple, forceful, effective, these filmstrips are an invaluable aid to every Church, Sunday School and Bible Class in teaching the meaning and function of God's Divine Law in life today.

Ten Commandments — Visualized are furnished in sets of 10 black-and-white filmstrips having approximately 250 individual frames. Total cost \$20 per set.

Slidefilms and Slides

■ **THE JAM HANDY ORGANIZATION**, 1775 Broadway, New York York 19 has added seven slidefilms to its "Science Adventure" series of teaching films for use in later elementary and junior high school classes. The new kit deals with "The Sky," and the titles are as follows: *A Multitude of Suns, Stories of the Constellations, The Sun's Family, Interesting Things about the Planets, Our Neighbor, the Moon, The Changing Moon, and How We Learn about the Sky.*

■ **SYNDICATE STORE MERCHANDISER, INC.**, Visual Training Division, 79 Madison Ave., New York 16, has produced the tenth sound slidefilm for retail training.

Handling Difficult Customers (10 minutes)—instruction of salesgirls in handling problem customers. The film, a digest of customer-salespeople relations, shows how common sense, correctly applied, tames the most difficult customers. A "Photo Quiz," following the sound portion of the filmstrip, gives the audience an opportunity to participate in handling a series of customers in typical shopping situations.

HANDLING DIFFICULT CUSTOMERS is one of a series of slidefilms which includes "Step into the Customer's Shoes," "Cash Registering Made Easy," "Fire Is Your Responsibility," and "The Sale and How to Make It."

■ **TEACHING FILMS, INC.**, 2 West 20th Street, New York, presents two filmstrips on life in ancient Egypt and two on life in ancient Greece:

Growing Up in Ancient Greece (35 frames)—the story of an Athenian boy and girl. Home life and school activities are indicated. Grades 8-10.

A Day in Ancient Athens (33)—the commercial life of an ancient Greek city. Farmers, merchants, and artisans are shown pursuing their daily activities. Grades 8-10.

Growing Up in Ancient Egypt (35 frames)—the planning of a career by a 15 year-old Egyptian lad. His father shows him the various occupations of the city. Grades 8-10.

A Day in Ancient Egypt (33 frames)—the daily activities of an Egyptian family of nobility. A victorious army returns to the city with prisoners and spoils of war. Grades 8-10.

Transcriptions and Recordings

■ **RCA VICTOR**, Camden, N. J. has released a new album (DM-1129) of two 12-inch records featuring Serge Koussevitzky, conducting the Boston Symphony Orchestra in Prokofieff's *Romeo and Juliet* ballet Suite No. 2. Koussevitzky conducts this number with great insight and a real feeling for the work. Prokofieff completed the score for *Romeo and Juliet* in September, 1935. It was first played in concert form a month later in Moscow with the composer conducting. The ballet, however, became the subject of furious controversy when it became known that it was to have a happy ending, contrary to Shakespeare's drama. The traditional ending was restored. This work marked a turning point in Prokofieff's life when, after a 15-year absence from his native Russia, he had to face the problem of reconciling his creative outlook with the artistic trends of the day.

Two Important Film Strips for Two Important Sundays

Vital messages for Armistice and Thanksgiving Sundays.

PATTERN FOR PEACE

Inspiring, provocative film visualizing an answer to the question, "Does Christianity have a pattern for peace?" (40 frames, manual, \$2.50. Release: Oct. 15.)

COMBINATION OFFER: Both films, \$4.50. Save 50 cents.

LET US GIVE THANKS

Beautiful Thanksgiving worship service completely visualized. "Color-toned" in rich shades of harvest brown. (30 frames, manual, \$2.50. Release: Nov. 1.)

Current Film News

■ **AUSTRALIAN NEWS AND INFORMATION BUREAU**, 636 Fifth Avenue, New York 20 announce that their films will be distributed in the United States by the following regional organizations: Calhoun Company, 101 Marietta Street, N.W., Atlanta 3, Georgia; William M. Dennis Film Libraries, 2506½ West 7th Street, Los Angeles 5, California; International Film Bureau, Inc., 84 East Randolph Street, Chicago 1, Illinois; and Visual Education, Inc., Lamar and 12th Street, Austin, Texas. Included in the films, all with study guides, released are the following:

Australia Today (3 reels, color)—an overview of the cities, coast, mountains, mines, farms, ranches, trees, flowers, animals, and other features of the island continent.

Bushland Fantasy (1 reel)—an intriguing view of the naturalist's museum. The cities of Sydney, capital of New South Wales and Melbourne, capital of New South Wales are shown. Because of Australia's ancient separation from other land masses, the continent has fostered and saved from extinction animals that awaited the coming of man—the platypuses and marsupials, such as the kangaroo and the wallabies. Also shown is the koala bear which drinks no water, eating only eucalyptus leaves.

Fine Feathers (1 reel)—the birds which frequent the Australian bushland. Birds, unlike the primitive mammals, reached their highest development in Australia. Such birds as the emu, the world's second largest bird; the lyre bird, an accomplished bird mocker; and the unusual mound-building birds are shown.

School in the Mailbox (2 reels)—how children of the Australian "Out-

back," on farms and ranches in the most remote reaches of the hinterland are educated by correspondence from primary grades to high school. The mails are shown conveyed by train, motor car, buggy, bicycle, camel, and airplane. Conditions under which the children live are shown.

■ **AMERICAN FILM SERVICES, INC.**, 1010 Vermont Ave., N.W., Washington 5, D. C., are distributors for:

The Game of Games—a two-reel 16mm slow motion film showing the 1946 Army-Navy football game. Filmed by the official photographer of the Athletic Association of the U. S. Naval Academy. A rental subject.

Invitation to the Nation—a 16mm color film showing scenes of Washington, D. C., and historic American shrines in nearby Virginia, presented by The Greater National Capital Committee. Free loan.

■ **BUREAU OF MINES**, Graphic Services Section, 4800 Forbes St., Pittsburgh 13, Pa., reports the addition of several new films to their educational library, including:

Oklahoma and Its Natural Resources (30 min.)—covering the development of the State from early territorial days to modern times of mining miracles. Most of the film is devoted to the vast mineral wealth of Oklahoma.

The Drama of Steel (34 min.)—tracing the history of steel-making from the crude charcoal furnaces of the ancients to modern blast and open-hearth furnaces of today.

The Story of the Storage Battery (28 min.)—explaining its operating

All three films are free except for transportation charges.

An 18-month old Koala bear at Taronga Park, Sydney as shown in **BUSHLAND FANTASY**.

A scene showing sheep mustering at Roseneath Station, Tenterfield, N.S.W. from the film, **AUSTRALIA TODAY**.

■ **HARMON FOUNDATION**, 140 Nassau Street, New York 7, N. Y. recently produced in cooperation with the Faculty Centennial Committee of the City College of New York the following film which the Foundation is distributing:

Education for All (2 reels, color or 3 reels, black and white)—the story of free higher education in New York. The film traces briefly the history of the Free Academy, as it was first known down to the present City College. Narration is by Ben Grauer, a City College graduate.

PLANE GEOMETRY
A SERIES OF NEW AND ORIGINAL 16MM SOUND FILMS DESIGNED TO AID THE TEACHER

"**LINES AND ANGLES**"—It is the purpose of this sound film to help the student visualize the mathematical applications of basic Geometry. Beginning with the erection of a perpendicular, the film illustrates the relationship of the perpendicular with the ordinary plumb bob, level and square.

"**ANGLES**"—This film will help the Geometry student understand all the various types of angles and their relationship to each other. After the student has become familiar with the construction of angles by means of intersecting lines and to measure them with a protractor.

"**CONGRUENT FIGURES**"—A Concise demonstration of the geometric principles for finding and proving that triangles with "equal sides," "equal angles" or the combinations of both are equal and congruent.

"**SIMILAR TRIANGLES**"—Presents Similar Triangles in a graphic manner. Begins by showing practical uses. Shows properties of Similar Triangles, and demonstrates the "two angles equal" proposition.

"**QUADRILATERALS**"—It is the purpose of this film to illustrate and explain the chief properties of the important quadrilaterals, such as: parallelograms, rectangle, rhombus, square, trapezoid and trapezium. This visual method of presenting this important phase of geometry will prove very helpful to most students and will enable them to distinguish readily each type of quadrilateral.

"**LOCUS**"—The entire concept of Locus is clearly visualized and explained by this combination of Animated Drawings, regular photographic motion and the spoken word.

"**THE CIRCLE**"—The circle is a rather simple geometric figure, yet it presents many problems to the geometry student. In this film such important phases as radii, diameters, chords, tangents, secants, arcs and central angles are presented and clarified.

"**CHORDS AND TANGENTS OF CIRCLES**"—This is a further advanced phase of our film on "The Circle" and is intended to follow it as the next lesson. It deals with the theorem on a perpendicular to a chord within the circle. All types of tangents are dealt with in detail.

"**ANGLES AND ARCS IN CIRCLES**"—This film deals with the measurement of central angles, arcs, inscribed angles and angles formed by two chords. Theorems and proofs are effectively introduced and demonstrated.

"**AREAS**"—Presents the needs and uses for finding Areas of various figures. Shows clear graphic demonstrations of recognized methods for the computing areas of Rectangles, Parallelograms, Triangles and Circles. The film will help the student fix fundamental principles in his mind by showing how relations in the figures result in relationships in the formulas.

Purchase Price—\$40.00 per reel
Rentals—\$2.00 per day

■ **CHURCH WORLD SERVICE CENTER**, New Windsor, Maryland is distributing without charge except for postage the film, *Seeds of Destiny*, which won the Academy Award for documentary films in 1946. The film is a grim story of children in war-wrecked countries. It is appropriate for service clubs, civic groups, high schools, and churches but not for small children.

■ **INTERNATIONAL FILM FOUNDATION INC.**, 1600 Broadway, New York 19 has produced an animated, color film:

Boundary Lines (1 reel, color)—a unique film on the boundary lines which separate men. Millions have been persecuted; freedom has been denied; men have been killed because of boundary lines. For high schools, colleges, churches, adult discussion groups.

■ **NATIONAL COOPERATIVES, INC.**, 167 West 12th Street, New York 11 announces the release of its most ambitious film undertaking to date:

There Were Three Men (1 reel, color cartoon)—the story of a farmer and a worker who learn to solve their common problems by working together to organize cooperatives. Animation was done by Karel and Irene Doudal with music by Robert Strassburg and was produced by Tomlin Film Productions, Inc.

■ **DETROIT AUTOMOTIVE PRODUCTS CORP.**, 8701 Grinnell Ave., Detroit 13, Michigan has released the following film, produced for them by the Jam Handy Organization:

Pulling for Profits (20 minutes, 16 and 35mm)—unique motion picture techniques used to explain in simple terms the operation of a new type of motor truck differential. The film is especially suitable for classes in physics, general science, or automotive mechanics.

■ **YOUNG AMERICA FILMS INC.**, 18 East 41 Street, New York 17, announces three new films in the area of elementary school arithmetic:

Parts of Nine (1 reel)—a sequel to the earlier *What Is Four*, developing the meaning of the number "9" through experience situations and the use of concrete material involved in preparing for a birthday party.

Parts of Things (1 reel)—an introduction to the concept of fractions for the primary grades. Like the others in this series, it was made under the technical supervision of Dr. William A. Brownell, Duke University and Dr. Laura K. Eads, New York City Board of Education.

The Meaning of Percentage (1 reel)—an introduction to percentage for use in the middle and upper grades. The **Teen Numbers** a fifth film will be released shortly.

■ **FILMS OF THE NATIONS, INC.**, 55 West 45th Street, New York 19 is acting as official distributor for the first film production of the United Nations Film Board.

The People's Charter (2 reels)—the story of the United Nations organization. Using authentic documentary material, the film shows how, in the midst of war, the idea of the United Nations was born, including shots of the San Francisco meeting and the first UN Assembly in London. Throughout, the film stresses the relationship of the United Nations to the people of the world.

The Classic of Skiing (1 reel)—an opportunity to study some of the world's most expert skiers in action at the oldest and most famous of all ski events, the Holmenkollen, international ski meet in Norway. This exciting film is a must for all skiers and sports lovers.

■ **THE MARCH OF TIME**, 369 Lexington Avenue, New York 17, announces the release of three new Forum Editions and three specials which are regular theatrical releases of The March of Time being made available in 16mm because of their special message or specific usefulness to the community:

The Rise and Fall of Nazi Germany (2 reels)—Hitler's conquests and defeats documented in film.

The F. B. I. (2 reels)—a depiction of law enforcement as an exacting science. Re-enacted is the authentic case of August Baumeier, a portrayal of the F.B.I. in action.

The American Teacher (1½ reels)—what all good teachers know: that their methods are as individualistic as any other artist's and that they must develop in their pupils the ability to think as well as a knowledge of the facts.

Nobody's Children (2 reels)—problems of adoption. The film shows the dangers in lax adoption procedures and in black market babies. It documents the more advanced methods.

"PUPPY TROUBLE"

The First of the series, TRAINING YOU TO TRAIN YOUR DOG. Three 16mm Sound Films in Color or Black-and-White.

Demonstrating the Puppy's First Lesson in House Manners.

Helen Hayes & Lowell Thomas, Narrators. Blanche Saunders: Director. Louise Branch: Producer & Photographer.

UNITED SPECIALISTS, INC.

PAWLING, NEW YORK

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20 have announced the following new films:

Make Fruitful the Land (2 reels, color)—a short history of the method and theory of agriculture which has developed in England over the centuries. Animated diagrams show the wastefulness of medieval farming and the great advantages of the modern crop rotation. Britain is a small country with a large population and only by scientific agriculture can she get the maximum yield from her limited acres.

Your Children and You (3 reels)—the care of young children from the first months to the age of four or five. The straightforward commentary offers advice on sound training on the physical side and on the psychological side gives hints on the prevention of unnecessary fears, of boredom, and of

Your Children and You.

maladjustment. The approach is realistic, for the film shows the home as it really is and portrays the struggles of average imperfect parents and average imperfect children.

Myra Hess (1 reel)—story of a British pianist, famous for her interpretation of Beethoven. Since Dame Myra Hess first appeared on the concert platform in London, 1907, with Sir Thomas Beecham, she has become one of the great British pianists. She acquired new fame as the originator of the popular wartime Lunch-Hour Concerts, which were held in the National Gallery in London. American audiences have recently enjoyed her first post-war concert tour.

Picture Paper (2 reels)—the story of the production of one of England's great picture magazines. A reporter on the staff meets with the editor, photographers, and other journalists to discuss the material for the next issue. They plan new angles for new features, and as a result of the editorial conference, the reporter goes to cover a story on town planning. For a few days he lives in a certain town, talking to the people, finding out what their plans are. He and his photographer collect facts and pictures and build up a new feature story.

Films of the World Festival Opening Is a Success

WITH the blue and white flag of the Festival waving over the Surf Theater in Chicago, the Films of the World Festival opened Saturday, October 11, inaugurating the first such Festival to be held in the United States. A total of six factual films on the topic of "International Interdependence" were shown. The Festival will continue each Saturday through and including November 29 with showings at 2 p. m. and 4 p. m.

Physical Science Films, November 8

The Physical Sciences films are scheduled for the program of November 8. The British Information Services production in color *Let's See* will be followed by the McGraw Hill film, *According to Plan*. Encyclopaedia Britannica Films, Inc., *Atomic Energy*; Young America's *What Makes Rain and Flow of Electricity*; Films Inc-Phototronics Inc., *Light & Power*; *Latitude and Longitude* in color, United World Films, Inc.; and the concluding film, the French production by Les Films du Compas and Roger Leenhardt, *The Biography of the Motion Picture Camera* will also be shown at the program.

Public Relations Films, November 15

Films sponsored by and produced for commercial and industrial organizations as public relations films which make a contribution to public welfare and information will be shown on November 15. This program will present: *Men of Gloucester*, Ford Motor Company; *Clean Waters*, General Electric; *Lever Age*, Shell Oil Company; *Story of Menstruation*, International Cellulocotton Products; *Trees and Homes*, Weverhaeuser Sales Company; and *Children in Trouble*, New York State Youth Commission.

Louis Friedman, International Film Bureau and Edward T. Myers, Educational Screen film Festival notables.

Arts and Crafts, November 22

The November 22 program will feature films in Arts, Crafts and Music. A special program will be given on November 29 which will present several unusually interesting films from other countries.

Peoples and Lands of the World

Peoples and Lands of the World were seen in the program of films on October 25. Chosen for the public showing by the impartial screening committee were: *English Criminal Justice*, British Information Service; *Bread and Wine*, International Film Foundation; *Peoples of Canada*, National Film Board of Canada; *Brotherhood of Man*, Brandon Films Inc.; *House in the Desert*, United Palestine Appeal; and *Children of Russia*, International Film Foundation. The November 1 program included amateur and school-made films selected from those submitted.

Ralph Creer, president of the Chicago Film Council, reports that the Festival will be an annual affair. Plans

(Concluded on page 504)

Opening program of the "Films of the World Festival" met with the approval of the crowds in the lobby of the Surf Theater. First program covered international relations films.

...Teacher's Capable Assistant!

Model 6B20, shown above, records from its own selective radio or crystal microphone and functions as auxiliary public address system. Also available in a two-speed, Recorder-Phonograph—Model 6A20. Both models are carefully engineered, sturdily built and completely portable.

The RECORDIO Educator aids in the elimination of...

- Stuttering
- Stage Fright
- Monotonous Speech
- Poor Pronunciation
- Faulty Articulation
- Foreign Accent

● Classes in dramatics, civics, current affairs, music appreciation, foreign languages and speech all benefit tremendously through the assistance of the RECORDIO Educator with its versatile ability to record and reproduce sounds with absolute fidelity. Such recordings can be used over and over again for future classes with minimum effort and preparation. Use the accompanying coupon, now, to investigate this effective, low cost aid to better teaching.

Quicker results in speech correction with SoundScriber

Imperfections of speech are quickly and clearly understood by pupils when they are able to hear their own voices played back by SoundScriber electronic disc recording equipment.

Each thin, unbreakable plastic SoundScriber disc becomes an actual live-voice case history. By later replaying of earlier recordings, the pupil is emphatically shown his improvement, a pronounced psychological aid to greater effort.

SoundScriber discs are impervious to rough handling, even by pre-school patients. SoundScriber machines, too, are designed for hard usage.

Complete information on the revolutionary SoundScriber system is yours for the asking. Write for the new booklet, "Basic as the Blackboard."

SOUNDSCRIBER A basic new tool in:

- Language Instruction
- Speech Correction
- Public Speaking
- Dramatics
- Commercial Instruction
- Administrative Dictation

SOUNDSCRIBER

*"does for the ear precisely what
blackboard and chalk do for the eye."*

New Film Councils in Cleveland, Denver, and Minneapolis

FILM Councils have been established in three additional cities: Cleveland, Ohio; Denver, Colorado; and Minneapolis, Minnesota.

In the Treasury Room of the Cleveland Public Library, the Cleveland Film Council was officially organized last month, the constitution being adopted. Officers are Charles Burris, Manager of the Cleveland Telenews Theater, president; Virginia M. Beard, Curator of Films, Cleveland Public Library, vice president; Samuel Davies, Emerson Junior High School, Lakewood, Ohio, secretary; and Earl Carpenter, Escar Motion Pictures Inc., treasurer.

Denver and Minneapolis

In Denver, Dr. Harry M. Kauffman, Director of Audio-Visual Service, University of Denver, has been elected president of the newly formed council. E. Dudley Parsons, Jr., Director of Visual Aids, Minneapolis Schools, has been elected chairman of the new Minneapolis council. Arnold Luce, Department of Education, University of Minnesota, is vice-chairman while Tom Hope, Director of Visual Education, General Mills, is treasurer.

November Is Film Council Month

During the month of November, community councils are being urged to lay special emphasis on the film council idea. Leading audio-visual publications such as *Educational Screen* are lending special support to the council idea in the endeavor to stimulate the formation of 350 councils as soon as possible.

William H. Wells, Chief, Film and Television Section, Division of Films and Visual Information, United Nations has this to say about film councils:

"... We would like to see the local film councils numbered not in dozens or even hundreds but in thousands; second, we hope that one of the cornerstones of the film council plan will be, not the screening only, but on-the-spot discussion of the topics with which films deal. Information films are tools meant to be used, and we believe that the film councils can use them well."

Conferences of National Community Committees

A series of regional conferences has been planned to stimulate interest and inaugurate a campaign for 350 councils. On September 24, the Mid-West group met in Chicago. Mr. Stephen Corey, chairman pro tem of the Board of Trustees explained that the FCA wants people to have the opportunity of seeing the films which are available. Don White spoke for the commercial constituents; Mrs. Patricia Blair, for the educational constituents; Bruce E. Mahan, for the Board of Trustees; and Scott Fletcher, for the Finance Committee.

At the meeting of the Eastern States, held in New York, Mr. J. R. Bingham, President of the Educational Film Library Association and member of the FCA Senate served as chairman. Tom Brandon spoke for the commercial constituents; Miss Emily Jones, for the educational constituents; Mrs. Anna Rosenberg, for the Board of Trustees; and Scott Fletcher, for the Finance committee.

The VA DELINEASCOPE

Basic INSTRUMENT FOR VISUAL TEACHING

AUTHORITIES on visual education recommend this combination opaque and lantern slide projector as the fundamental audio-visual instrument.

- Material is readily available from magazines, newspapers, books, actual specimens etc.
 - at low cost or NO COST
 - without special preparation
 - without ordering from outside sources
- Adaptable to large or small groups
- Ideal for student participation and work projects
- Convertible to slidefilm and microslides, with excellent results
- Permits a personal touch in teaching.

The Spencer VA Delineascope has held first place among opaque projectors for many years.

HOW TO GET TEAMWORK

TEAMWORK is the goal of every individual and every society. And "Teamwork" is the new and unique film which shows *how* to reach this goal. Real live situations

illustrate the six levels of achieving cooperation. The film was photographed in a representative high school. Actual students play all characters. The picture is black and white, 20 minutes, with dialogue.

"Teamwork" is a *tested* picture. It is based on a sound-slide film produced by the Metropolitan N. Y. Branch of the D. V. I. of the N. E. A. under a grant-in-aid from the Committee on Scientific Aids to Learning of the National Research Council. Dr. F. Dean McClusky was educational advisor.

Write today for a preview of "Teamwork"

HAVE YOU SEEN THESE OTHER VALUABLE GUIDANCE PICTURES?

DINNER PARTY . . . *Personal yet practical approach to table etiquette instruction. Motivates self-analysis of correct table manners. 23 minutes, study guide.*

JUNIOR PROM . . . *Portrays correct party behavior, dress, conversation and introductions. 20 minutes, study guide.*

LET'S GIVE A TEA . . . *Accepted procedures of dress, invitations, guest lists, serving, entertaining, etc. 22 minutes, study guide.*

ARRANGING THE BUFFET SUPPER . . . *Step by step instruction in problems of giving a buffet supper. 5 minutes, study guide.*

ARRANGING THE TEA TABLE . . . *Comprehensive approach to proper tea-time conduct and table arrangement. 5 minutes, study guide.*

DAVI Executive Committee Plans Three-point Program

A MEETING of the National Executive Committee of DAVI was recently held in Kansas City for the general purpose of reviewing recent departmental developments and affairs and taking action on plans for future activities. Some of the major subjects considered were:

1. Plans and procedures for the affiliation of divisional organizations. Sufficient exploration has been accomplished on this subject to warrant definite action and the formulation of detailed plans and procedures.

2. Plans and procedures for implementing the Three-Point Program. Methods will be evaluated and decisions will be made in regard to detailed procedures for following through on the plans. The "three-point" program involves study, research, and experimentations to determine what constitutes adequacy of (1) audio-visual programs in schools of various sizes and types; (2) architectural facilities for audio-visual programs; (3) audio-visual materials.

3. Atlantic City Conference. It is expected that this Conference, to be held next February, will be planned in considerable detail at this meeting.

4. Provision of more services to members.

5. Extension of liaison between DAVI and other NEA departments.

6. Disposition of former Conference reports, including the advisability of publishing them as the partial contents of a yearbook.

7. Policies in regard to publication channels.

8. Constitutional matters awaiting decisions by the National Executive Committee.

9. Plans and procedures for audio-visual projects recently proposed by four NEA Departments for joint DAVI action: a. Conducting research on methods and techniques in the utilization of audio-visual materials in adult education, with special reference to the field of group dynamics. b. Evaluation of audio-visual materials on the subject of health education, and publication of the results. c. Evaluation of audio-visual materials on the subject of safety education, and publication of the results. d. Publication of an annotated bibliography of literature. e. Joint meetings of DAVI and the American Association of School Administrators at Atlantic City.

Officers

Officers of the Department of Audio-Visual Instruction of the NEA include the following: Stephen M. Corey, University of Chicago, president; F. Dean McClusky, University of California, first vice president; Francis W. Noel, California State Department of Education, second vice president; Vernon G. Dameron, National Education Association, executive secretary. National delegates include Gardner L. Hart, Oakland (California) Public Schools; Thurman White, Film Council of America; Grace Fisher Ramsey, Museum of Natural History, New York; Camilla Best, Orleans Parish School Board, New Orleans, La.; Roger Albright, Motion Picture Association; E. Winifred Crawford, Montclair (New Jersey) Public Schools; Irene F. Cypher, New York University; Helen Rachford, Los Angeles County Schools; C. R. Reagan, Visual Education Inc., Austin, Texas; and Walter A. Wittich, University of Wisconsin.

COVER: The locations of most of the local film councils which are affiliated with the Film Council of America are shown on this map of the United States. The number of councils is increasing rapidly, and it may well be that a year from now this map will be covered with stars and include other countries.

Volume XXVI

Number 9, Whole Number 256

As Viewed From Here

It Is Your Move

WE join this month with other magazines in the audio-visual field in paying special tribute to the Film Council of America. But this is neither our first nor our last recognition of this "most important, most significant development in the audio-visual field." Such a development, which sets as its ultimate goal the community-wide use of audio-visual materials, cannot be treated adequately in a single special issue. That goal is so worthwhile that EDUCATIONAL SCREEN will continue month by month toward its achievement.

On It's Way

As viewed from here, the Film Council of America is in the clear and well on its way. It is no longer the mere vision and dream of the few leaders in the audio-visual field who developed its outline less than two years ago. It is no longer a mere plan on paper lacking the actual structure and personnel to make it reality. Today the Film Council of America is a going organization, with competent direction, with the backing of the audio-visual industry, and with well-defined goals. The FCA is going to achieve its goals with your assistance and cooperation.

THREE HUNDRED FIFTY LOCAL FILM COUNCILS BY JUNE 1948—that is the first and practically the sole immediate goal. All attention is focused upon that goal until it is achieved. And here's why it is so important: The great power of the motion picture, the filmstrip, and other audio-visual materials is realized only when they are used intelligently by group leaders to inform, instruct, and develop understandings. In every community there are leaders who know the power of these media and use it. These leaders are you who read this magazine. There are other group leaders in your community and every community who either do not know of the potentialities of audio-visual media or who have not yet found the way to use them. The local film council is the means for bringing you and these others together so that you can make sure of the widest possible use of audio-visual tools in your community.

Now, if you really are one who believes in the educational power of audio-visual media, it is your move. Your community needs a local film council. You are the one to take the initiative in finding the others in your community who share your belief and in organizing a local film council. If you want help, write to the Film Council of America, 6 West Ontario Street, Chicago 10.

Further detailed written information will be sent you, and you will also get the names of others in your part of the country who can assist you.

But once you get your local film council underway, remember this: A Film Council is a means to an end—it is a means of bringing together those who are using pictures and those who ought to be using them. It is a device for finding out what obstacles and problems are preventing maximum use of pictures in the community and for then using the combined experience of the council members in solving those problems.

Not a Luncheon Club

Remember, too, that a Film Council is not a luncheon club, or a preview club, or a film forum even though it may meet at lunch time, preview films, and discuss them. If it carries on such activities, it does so as a means for informing its members of new materials and ways of using them most effectively. Film Council activities are not limited, however. If distribution of films is a bottleneck, it can bend its efforts toward solving that problem and could even establish a community film library. If lack of know-how in the use of visual media is the problem, demonstrations can be planned, special group meetings organized, or even formal training courses provided. If information is needed by group leaders, the Film Council can get it and give it.

There is no limit to what a Film Council can do for its community, and there is no limit to the success of the Film Council of America if you do your part in your community.

Seventy Per Cent Are Adults

WE are particularly pleased to be able to publish this month the excellent summary report on "Audio-Visual Materials in Adult Education" by Thurman White, the Executive Director of the Film Council of America. This is especially appropriate because local film councils will find themselves considerably concerned about the use of audio-visual materials with adult groups.

"Seventy per cent of the world's population are adults," and most of the organized groups (outside the schools) at the community level that are potential users of audio-visual tools are adult groups. This report contains valuable information and references in an important and expanding area of education.

—Paul C. Reed

THE FILMSTRIP--An Examination Procedure in English Composition

An important use of filmstrips lies in the teaching of precise and accurate technical writing.

THE filmstrip is not yet widely used in English courses, particularly on the college level, although some progress is being made towards adapting this very useful medium to the needs and capacities of college English students. One area in which such adaptation is already quite feasible, without the necessity of producing specially designed materials, is Technical Writing. This paper will describe the use of a filmstrip in such a course required of engineering students at The University of Texas.

Examination for Technical Writers

The grades made on a regularly submitted series of themes or reports will necessarily determine a large part of the final grade in any composition course; yet it is customary and profitable to give some sort of final examination. This most frequently includes a paper written in class; often, such a paper is in itself the entire examination. In Technical Writing, the assignment of subjects without supporting data is not very satisfactory, since much of the training in the course is devoted to the organization and presentation of a specific set of facts. Impromptu papers on assigned subjects are likely to be perfunctory and not too complete a test of the student's actual ability. On the other hand, to prepare an entire set of data for use on a single occasion, especially when the student is often not likely to see his paper again, would seem to be an unnatural burden on the instructor. The filmstrip may be used to help solve this problem.

Technical Filmstrip on a Simple Process

During a final examination in May, 1947, the writer showed to a section of twenty-four students a filmstrip on *Mixing and Using Casein Glue*—one of the Jam Handy series on Aviation Training. The subject-matter had to be relatively simple and general, since the class was made up of young engineers (sophomore level, with a few advanced students) in several different branches. Conditions for showing the strip were fairly good: the room was shallow and wide, but was equipped with fans and venetian blinds. In such surroundings, a beaded screen provided an adequate image with visibility still good enough for note-taking. The strip, forty-six frames in length, took approximately fifty minutes at the beginning of a three-hour examination period. The students were asked to make notes as the strip was shown, each frame remaining on the screen a sufficient time for this to be done. Each student, thus, had exactly the same time available for taking notes, although the notes varied in total length between two and a quarter closely written pages and

JOSEPH JONES
Associate Professor of English
University of Texas

fifteen pages of wide scrawl. The average length of notes was six and a half pages. (One set was in shorthand.) Questions to the class revealed that no student had seen the filmstrip previously and that only five had had experience in the use of casein glue.

After a brief recess for relaxation, the students began composing their reports. They were told simply to make as adequate a report on the process illustrated

Jam Handy Organization

The subject matter had to be simple and unfamiliar in order that the test would not favor a few students. "Mixing and Using Casein Glue" qualified.

as they thought necessary, using whatever pattern of organization seemed desirable. The finished report was to be accompanied by a letter of transmittal and a paragraph of comment on the procedure used for the examination.

The time spent in writing, as well as the length of the completed reports themselves, varied—but not so markedly as in many other final examinations. One student finished in slightly over an hour and a half; the last one to finish wrote forty minutes overtime; the average was two hours almost to the minute. The variation in length of the reports was not so marked as that in the notes; the shortest report was three full pages; the longest, nine and a half. The average length was five and a fourth pages, representing a reduction of one and a fourth pages from the average length of the notes. (Variations in handwriting habits, of course make these figures only very rough approximations.)

Value of Uniformity

The resulting papers were of better quality than the typical set of final examinations; partly because the filmstrip provided some measure of textual assistance, partly because the material was being taken from notes rather than being set down directly. The papers were considerably easier to mark and evaluate, by reason of both their shortness and the uniform material they contained. Without exception, the papers reflected close and willing application to the problem which was set; doubtless the stimulus of a new method provided some of the motivation.

Student Opinion of the Method

Since this was a novelty among final examinations, the students were asked for a short paragraph expressing their opinion of it. Of the twenty-four replies, all but two were favorable. The unfavorable comments both complained that there was not sufficient time to do justice to the exercise. Following are representative comments from the other papers:

Personally, I like this method of presenting a final exam more than any other I have encountered so far. . . . A good test of an engineer's ability to write about general type of work with which he will be concerned. . . . Ideal for this course. . . . It gives a

basis for comparison of two people's writings on the same subject, whereas an open topic list does not have this value . . . No particular engineer should have a complaint on the subject of the filmstrip, as long as some simple process is shown . . . Utilizes the facilities of the course. . . . The theme is specific and the necessary information is available. . . . In my case, I find the many principles studied in report writing constantly applying to work of this type. . . . This examination, although entirely new to me, seems to be the fairest and the most worth-while exam I have taken at the University in four years.

Several of the favorable comments also pointed out that the writer was crowded for time.

A Good Check

This procedure offers, besides the advantage of strict uniformity, a rather good check on three of the principal activities stressed in exposition: note-taking, organization, and the actual process of composition itself. It gives the student the satisfaction of learning something new at the same time he is reorganizing and re-creating a set of facts. Three hours, however, would appear to be the minimum time in which it can be profitably used for an examination. Even then, there is a little crowding. A shorter strip, of course—thirty to thirty-five frames—might ease the pressure sufficiently.

A Test of the Filmstrip

It may be said parenthetically that the examination was a test of the filmstrip as well as of the students. The papers showed quite clearly that the information contained in the strip could be easily absorbed and put into a different form. Although organization varied considerably from paper to paper, not much of the essential information was lost in transit.

Admittedly somewhat mechanical, this exercise is at the same time not too easy a one for the student to work out effectively. It has the obvious merit of keeping the writing within bounds; the merely fluent writer cannot very readily attempt to filibuster. It offers possibilities for further study, not only in examination procedures but in regular classroom work as well. The filmstrip is already a highly flexible and useful medium; this additional use may suggest some of its yet undeveloped potentialities.

Students were allowed to make notes during the showing of the film. Then they were given approximately two hours to write their examination paper, describing the process which they had seen. The course, one on technical writing, was required of engineering students.

Jam Handy Organization

AUDIO-VISUAL MATERIALS

In Adult Education

What is happening in the field of adult education is explained in this condensed version of a report prepared for the Joint Committee to Study Adult Education, April 8, 1947.

THURMAN WHITE
Executive Director
Film Council of America

THREE things are happening to facilitate the new popularity of adult education. Adult education leaders are (1) moving from a "teach-by-the-book" technique to a "teach-by-experience" technique; (2) learning how to manage the "stuff of experience"; and (3) finding increasing abundance of usable materials available for their work. By themselves, these may not seem too important, but in view of the urgency of the adult education movement, they have considerable significance.

Search for a New Technique

Members of adult groups simply insist on understanding what they are learning. Or they quit coming. And that's disaster for the voluntary system. Hence, the search for a new technique by many individual leaders. Not that they want to discard words but it is more that they want to give meaning to words. They do not devalue words; they are simply up against hard-headed adults who have neither time nor patience for meaningless jargon. Leaders must look for ways and means of giving group participants the experiences that fill out the meaning of the words they use. They must search for methods and materials that help them avoid verbalisms—the dreadful educational disease of using words without meaning.

Training Under Pressure

Probably the finest example of this shift in technique is provided by the educational program of the armed forces. When it became necessary to train several million adults in new attitudes and strange skills—under the greatest pressure to get it done quickly—the command staff vitalized the lecture hall curriculum. Trainees were put through a series of concrete experiences that were either real or cleverly simulated reality. The finest engineering ingenuity went into design of materials that contrived to add realism to combat training.

Perhaps the most widely used of any single type of material was the motion picture. Charles Hoban, Jr., reports on the value of this device in his *Movies That Teach* (Dryden: 1946). He writes,

"The fact that motion pictures contribute to learning facts, principles, and skills, and that students learn and remember well from films has long been demonstrated in educational research. It should, therefore, be no surprise that films were used by the Army, the Navy, the U. S. Office of Education, and other war-training agencies for training purposes, and that,

in comparison with other teaching materials and procedures, they resulted in better learning of facts, principles, and skills.

"Exaggerated claims have been made to the amount of time saved in the training program through the use of films . . . What films actually did was to improve the quality of the training provided in the allotted time." Here men have moved far from the technique of "teach-by-the-book".

Perhaps it is only natural that since the war, a number of the training techniques used by the services should be brought into the general adult education field.

The University of Wisconsin, for example, has instituted a packet service. It makes available to groups

Formula for A Successful Film Forum*

1. Assemble a number of topics (many more than you can possibly use) which you know to be of interest to your group and which you know present issues about which there is a lively difference of opinion;
2. Select films suitable for discussion that are relevant to a half dozen or so of the above topics;
3. Arrange for a suitable room (with an informal atmosphere, easy control of lighting, etc.) in which the forums may take place;
4. Work out an exact schedule of dates for the film forums and book the films desired for each of the forums well in advance;
5. Secure a good projector, and a competent projectionist, for each meeting;
6. Arrange for guest experts, panel discussants, or other personnel connected with each topic presentation;
7. Prepare, or arrange to acquire, all needed film forum materials; film discussion guides, follow-up book lists, etc.;
8. Arrange for a suitable discussion leader to take charge of each forum;
9. Give the series adequate publicity;
10. Keep your fingers crossed until it is over.

*Glen Burch, *Film Forum Review*, Summer Issue, 1946.

throughout the state such materials as 16mm sound films, pamphlets, clippings, visual aids and discussion guides. These materials are put up in packets, each containing enough material for a single forum or study group discussion.

There are signs that a growing number of libraries and museums are becoming interested in audio-visual instructional materials as aids to adult education enterprises. Many of them are sponsoring pilot programs in their communities. A very impressive list was published in the *Adult Education Journal*, January 1946 issue.

American Library Association

To assist libraries with the problems of establishing and developing film services, the American Library Association has recently established a film advisory service. Mrs. Patricia Blair, former Director of the Film Bureau, Cleveland Public Library, and for three years a member of the Board of Directors of the Educational Film Library Association, has been appointed advisor on Film Service through Libraries. Mrs. Blair will set up a clearing house of information on films.

Film Council

Another effort to which many adult leaders have attached considerable importance is the nation-wide consumer movement sponsored by the Film Council of America. A relatively new but strong organization, the Film Council of America represents such diverse organizations as the Allied Non-Theatrical Film Association, the American Library Association, the Educational Film Library Association, the Equipment Manufacturers Council, the National Association of Visual Education Dealers, the National Education Association's Department of Audio-Visual Instruction, and the National University Extension Association. Growing out of the wartime National Advisory Film Committee of the Office of War Information, the Council represents a trend toward the establishment of closer relationships among film producers, distributors and users. Under the stimulation of the Council, local film councils have been organized in several score American communities. These serve as centers of information on instructional materials, work toward the solution of general community problems which handicap their use, and provide an opportunity for those who know little or nothing about new materials to meet with those who do. The organization manual *Speaking of Films*, states that the local film council "grows out of inter-club cooperation and functions essentially as an adult education activity."

The Motion Picture as an Instrument

A great deal of effort is going into the examination of the motion picture as a potential instrument of great power in the education of the masses. For more than a year an expanded program of research in film selection, evaluation, and utilization for adult groups has been under way at the Institute of Adult Education of Teachers College, Columbia University. The results of this research are being published from time to time in the *Film Forum Review*, a quarterly publication of the Institute. Beginning with the 1947 Spring

issue, an annotated guide to discussable films will be issued in sections. The first section lists films in the field of international relations; later sections will include films on family-life problems, intergroup problems, and other areas of general interest.

Across the country, experimental programs have also been held in which the film has played a prominent role. In each of them, there has been an effort to find the formula for successful use. One of the early successes was scored by the East and West Association, together with the Town Hall Workshops. Kathryn Linden, Chairman of the Film Committee, reports their film forum series in the *Review*, Fall, 1946 issue.

In San Francisco, a variation of the same pattern was followed in film forums held by the Embarcadero Army and Navy, YMCA. J. R. Bingham, Director of Association Films, wrote in the Summer 1946 issue of the *Review* that such forums had been conducted once each week as a regular program feature since 1944.

Adult Leaders Learn

From experiences of this kind, adult leaders are learning some things about the management of learning materials. Robertson Sillars made some pertinent comments in the *Adult Education Journal* for October 1946. Under the title, "Means Are Not Ends," he wrote, "Instruments do things and that fact holds an uncanny fascination for the specialist. He becomes a technician rather than an educator. Direction and purpose are lost in virtuosity. Communication is regularly and almost universally discussed as a thing in itself, without reference to what is communicated. To prevent our doing something of this sort, it is necessary at the outset to remind ourselves that materials are nothing but aids in the teaching and learning process."

This approach is quite basic for adult leaders who are learning how to manage the "stuff of experience." But after recognizing that the materials are the servants and not the masters, there still remains the question of how best to use them.

William S. Vincent prepared a discussion leader's manual entitled "Forum Series on Citizenship" for Encyclopaedia Britannica Films to be used by the General Federation of Women's Clubs. In it he said, "One of the most powerful levelers in our culture is the film. Far more than the reading of books, a viewing of films can give the viewers a common starting point, a common mind. And from this point, discussion can lead in any direction that logic may indicate."

Two other writers discussed the same point in the *Film Forum Review*, Summer Issue, 1946. Following a film forum experiment in Ottawa, J. Roby Kidd reported, "The leaders stated that the contribution of the films was in highlighting the basic facts related to the topic and in putting the audience in a 'mood for discussion.' One leader felt that the film was more effective than the discussion in motivating the audience to take some action following the forum."

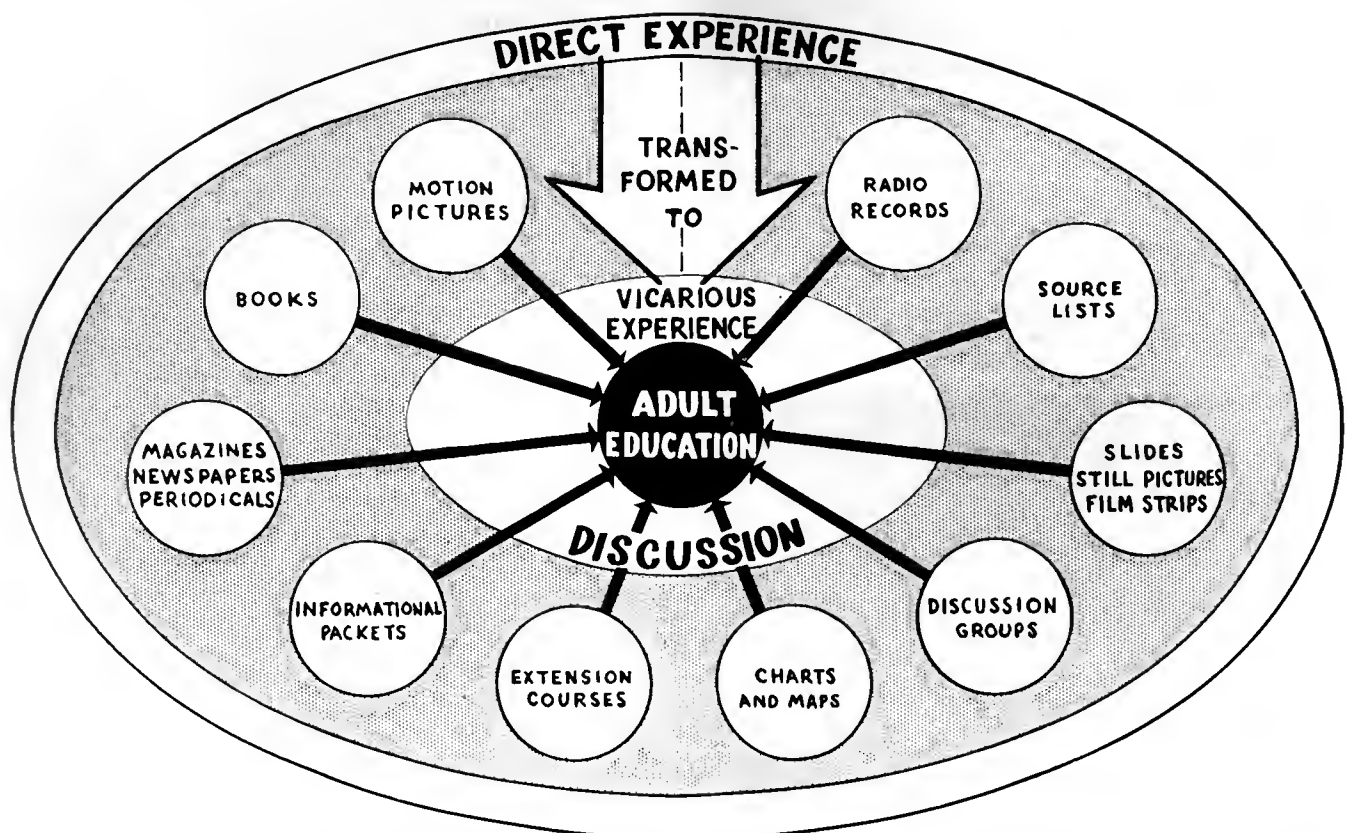

A large number of other practical suggestions for good use have been presented by recognized authorities in the field of educational materials through a publication of the Educational Film Library Associa-

tion, entitled "Making Films Work For Your Community." In it, Edgar Dale tells a little story of simple film use. He says that using an army film on dental health he "merely asked the members of the group the kinds of questions which they would like to see answered in a film. The ten questions raised were written on the blackboard. The film was then shown and we noted that answers to eight of the ten questions were secured. There followed some general discussion of the key points made in the film." Dale's point is, "The film must be tied up with the needs and purposes of the members of the audience. It needs to be followed up where practicable with the reading of articles, or pamphlets, or books."

Adult leaders have learned how to use the variety of materials. They have also become aware of the increasing abundance of usable materials available for their work. The volume of films, filmstrips, and slides has reached staggering proportions. In the current edition of "1000 and One; The Blue Book of Non-Theatrical Films", published by the *Educational Screen*, over 6,500 titles of 16mm films are listed. Any one or all of them can be shown on the standard 16mm sound projectors now in use in the United States. Without attempting to list or comment on the suitability of this vast resource, it is worth mentioning that they include twenty-eight March of Time subjects, one-hundred-fifty U. S. Department of Agriculture Films, five-hundred U. S. Navy films released through the U. S. Department of Education, and six-hundred Hollywood educational subjects released through Teaching Films Custodians.

It is, of course, regrettably true that very few sound movies have been made for discussion purposes. For some, this is a damning weakness, but Mary U. Rothrock included a horizon painting paragraph in the introduction to McDonald's "Educational Motion Pictures and Libraries" (American Library Association; 1942), which says, "Films introduce a world we never saw, a life we never lived, and people we never knew; They show glimpses of beauty to be treasured and of ugliness which men must strive to obliterate. They can speak directly to many who are accustomed to obtaining ideas from the printed page . . . They furnish a speedy method of communication to large groups and provide them with a common experience . . . They can clarify job techniques for the worker, picture the living past for the historian, and extend the range of the eye for the scientist. They have in them the power to open study on vital problems, to plead the case for neglected humanity, to revitalize democracy, and to develop a more responsible citizenship."

Seventy per cent of the world's population are adults. Much of their learning that is ten or more years old is already obsolete; most of what they learn today will be obsolete ten years from now. Popular education throughout life to help adults manage all their experience is definitely in the scheme of things. To contrive learning situations out of reality or simulated reality is the task of adult leaders. For them, the materials of adult education—"the stuff of experience"—have assumed a major importance and their wise and effective management will do much to facilitate the resurgence of adult interest in organized education.

Materials are merely aids in the teaching process. An increasing abundance of usable materials has permitted adult leaders to move from the "teach-by-the-book" technique to better methods of transforming the direct experience of a few to the education of many.

A variety of projection equipment is available for student training in use and maintenance. Bruce E. Mahan is Director of the Extension Division, and Lee W. Cochran is Executive Assistant.

FOR more than a quarter of a century, the Bureau of Visual Instruction of the State University of Iowa Extension Division has made available to the teachers of Iowa some of their most effective classroom teaching aids in the form of lantern slides, film strips, recordings, exhibits, and motion pictures. A training program has been conducted by the Bureau to give teachers instruction in utilization of teaching aids and in the use of projection equipment. The Bureau has also produced a considerable number of films for scientific and teaching purposes.

Staff members of the Bureau of Visual Instruction test camera and sound recording equipment before beginning a production.

Iowa State Audio-Visual Laboratory

Circulation of audio-visual materials, teacher training, and production are the functions of the Bureau of Visual Instruction.

The Bureau has three main functions. It selects, maintains, and circulates audio-visual teaching aids. It trains teachers in the use of audio-visual aids. It produces audio-visual aids that are otherwise unobtainable.

Distribution

The largest single activity of the Bureau of Visual Instruction is the maintenance of the visual aids lending library, through which films are distributed to schools, churches, clubs, and other organizations. A *Catalog of Visual Aids for Classroom Use*, listing and describing all audio-visual materials available from the Bureau, is published annually, and copies are obtainable, without charge, on application to the Bureau. The Bureau furnishes films and equipment for all educational purposes on the University of Iowa campus, nearly 3,000 reels of film being shown during the school year ending June 30, 1946.

The demand for educational films from the Bureau has increased rapidly during the past five years. It is estimated that nearly five million people saw films distributed by the Bureau during the year ending June 30, 1946.

Teacher Training

Well aware of this increasing need for better integration of audio-visual aids into school curricula, the University of Iowa College of Education and the Extension Division Bureau of Visual Instruction established the Iowa Audio-Visual Laboratory in the Summer of 1946. This permanent laboratory was organized to provide the teachers of Iowa a source of reliable information concerning the most effective utilization of audio-visual materials.

For study and reference, the laboratory includes: all types of projection equipment; a complete library of audio-visual publications and other source materials; non-projected aids such as maps, charts, globes, and pictures; exhibits demonstrating a variety of stimulating school-made training aids; and audio equipment including a wire recorder and public address system.

The laboratory provides opportunity for individual study of specific problems by those enrolled in the audio-visual teaching aids courses, and it also made available to staff members of any college, public, or

parochial school in Iowa for research concerning problems related to the procurement, planning, or the use of audio-visual materials.

Motion Picture Production

One of the functions of the Bureau of Visual Instruction is to produce audio-visual aids fitting the needs of Iowa schools. Consequently, the Bureau has produced 16mm sound films for nearly a decade. Silent films also are produced when the purpose of the film warrants omission of sound.

Circumstances favor the production of teaching films on the University of Iowa campus. Specialists in many fields are available for technical guidance, and student actors play many of the parts in Bureau productions. Facilities for constructing special sets have been provided through the cooperation of the University Theatre Workshop.

One Objective

Although the Bureau has three basic functions, it has but one objective—to assist those engaged in teaching to make their work more effective through the thoughtful use of audio-visual aids. To meet the growing demand for its services within the state, the Bureau has launched a program of planned expansion.

In keeping with this plan, the lending library of the Bureau will offer an increasingly large selection of educational sound and silent motion pictures, sound and silent slidefilms, lantern slides, and recordings. Every effort will be made by the Bureau staff to raise the standard of quality and teaching utility of such aids, through contacts with other producers, and through critical evaluation of such aids before they are purchased for inclusion in the lending library.

The Bureau's program for increasing the effectiveness of audio-visual aid utilization in Iowa schools also will be accelerated. Facilities will be provided on the University campus for larger classes in this rapidly-growing branch of education. More teaching methods courses will include work in audio-visual aids utilization, and the number of off-campus conferences and meetings, for discussion of better audio-visual classroom methods, will be increased. Bulletins and circulars bearing on the problems of effective audio-visual aids utilization will be published and circulated among

Teachers learn to operate wire recorders and sound slide-film equipment.

the administrators and teachers of Iowa schools.

Production of new audio-visual aids likewise is expected to increase tremendously in the years immediately ahead. These aids will include sound and silent motion pictures, sound and silent film strips, lantern slides, and recordings. Several University departments

(Concluded on page 517)

City Hall, Atlanta, Georgia in which the Audio-Visual Education Department with its radio studio is located.

IN THE spring of 1922, the Atlanta Board of Education, following the recommendation of Superintendent, Willis A. Sutton, directed him to inaugurate a city-wide visual instruction program. Thus by the fall of 1922, the Department of Visual Instruction had opened its doors to serve the Atlanta Public Schools. The program was under the direction of Mr. Joe Coffman, who came to Atlanta from the Birmingham, Alabama, Public Schools.

A Pioneer in the Field

Even though the Atlanta Department was among the pioneers in visual education, the 1922 date was by no means the beginning of the use of visual aids in the Atlanta Schools. As early as about 1911 one school had purchased a hand-operated 35mm Powers Projector. As the years went by, a few other schools purchased motion picture projectors using them primarily for showing entertainment films.

At the close of World War I, Dr. Sutton, while still principal of the Atlanta Technological High School, purchased a surplus war projector and other types of visual education equipment, thereby inaugurating a visual instruction program within his school. This equipment was used solely for educational purposes. Meanwhile, many other schools acquired lantern-slide

Director Audio-Visual Education Dept.
Atlanta (Georgia) Public Schools

projectors and sets of both slides and stereographs. Thus, by the time Dr. Sutton became Superintendent of Schools in 1921, the Atlanta Schools were ready for a city-wide visual instruction program.

Few Suitable Films

The problems in the early days of the program were many and acute. In the first place very few films suitable for educational use were available. Thus, a major function of the department was to produce visual aids. A complete photographic laboratory for producing and processing motion pictures, lantern slides, and still pictures was set up. Of course, that was in the days before sound motion pictures, and the photographing, developing, titling, editing, and printing were somewhat simpler than today.

Danger of Fire

Another acute problem in the early days was the danger of fire. All the films were 35mm and many of the subjects were available only on nitrate stock. Fortunately no fires occurred, but there must be a number of grey heads still in the Atlanta School System that resulted from worrying over the possibility of a disastrous fire.

Miss Ira Jarrell, Superintendent, Atlanta, Public Schools.

Early in 1924, Mr. Coffman left the department to become a commercial producer of motion pictures, and Dr. E. R. Enlow was appointed director. Dr. Enlow had had considerable experience in the use of teaching aids, including motion pictures, as a teacher of physics in the Atlanta Technological High School and had also organized and taught courses in "wireless." This experience was later to be very valuable to him when the Atlanta School of the Air was started.

Dr. Enlow employed as his assistants Mr. C. D. Beeland, who later became an ace Paramount News Cameraman; Mr. Tom Wilson; and myself.

Up until Dr. Enlow became director, the emphasis of the department had largely been upon production of materials. A secondary objective had been to supply recreational programs to communities which were without community theaters. Because of the lack of materials, little could be done in the way of providing educational programs. However, by 1924 more materials were becoming available, and therefore Dr. Enlow began to shift the emphasis to the distribution and utilization of educational materials.

Nineteen-twenty six was a red letter year for the department. A \$26,000.00 appropriation in addition to regular funds was granted. Most of this money was used for providing sets of lantern slides and stereographs for individual schools. Some equipment, maps, and globes, and other items were also purchased. Twenty-six thousand dollars purchased a great deal in those days.

Early School of the Air

About this time, Dr. Sutton inaugurated one of the first schools of the air in cooperation with radio station *WSB*. This program was made possible by a gift from a patron of the school system of a railway carload of Atwater Kent Radios. Thus the Atlanta Schools became active in both audio and visual education.

Up until this time the department had been housed in a small five-room dwelling adjacent to one of our high schools. During the 1926-27 school year, it moved into an abandoned school which had been converted into an administration building. Adequate quarters were thus available for the first time.

End of Phase I

No one dreamed that the 1926-27 period was to be the early high-water mark of the expansion and service

Mr. Alvin Gaines, Supervisor of Radio Education inspects one of the original "School of the Air" radios used in 1926.

The staff. Left to Right: Ben Davis, technician; Dorothy Underwood, booker; Alvin Gaines, supervisor of radio education; Alva Burks, secretary; George McCurdy, Jr., chief technician; Robert Wolcott, Jr., technician; (seated) Walter Bell, Director.

of the department, but it was. Recession had already started. Some "authorities" were predicting that the motion picture projector and radio would soon replace the teacher. Thus, some teachers were becoming suspicious of radio and visual education. The public heard the cry that education was becoming sugar-coated and that made them suspicious. A new salary schedule for teachers created a shortage in funds. These forces acting together forced on the administration a program of economy. Of course the department was the first to feel the axe, since it was the newest. The staff was reduced from four to three persons. Presently the writer was transferred to the Business Department.

Depression

As the depression deepened Dr. Enlow was assigned —part time—to other duties. Finally the department was abolished and a new department created—"The

Mr. George McCurdy, Jr. demonstrates an early 35mm motion picture projector used by the Department.

Department of Statistics and Special Services," which included visual education activities. Dr. Enlow became head of this new department and the Special Services or Visual Education personnel of the department were reduced to a total of one person, myself. Even this was not the low point of the trend. The writer was later assigned a full-time teaching load and directed to carry on the visual education activities as an extra-curricular activity. By using student help, incidentally without remuneration, the activities were continued. But the cry to do away with the frills and furbelows continued from the press, the radio, the pub-

Sam Linch, former supervisor of radio education, now an educational advisor to AMG in Germany, directs a broadcast from the city hall.

lic and the patrons and was echoed in political circles. This antagonism to audio-visual education was combatted with the most potent weapon available—*service*, service not only to schools but to churches, civic, and service groups of all kinds. No opportunity for service was allowed to pass. This service together with the backing of Superintendent Sutton and the Board of Education made it possible to weather the depression.

Changeover from 35mm to 16mm

During the depression the changeover from 35mm to 16mm and from silent to sound motion pictures occurred almost painlessly because of the low ebb of activities. The depression forced a change from lantern slides to the more economical filmstrip. A WPA visual education project assisted in a production program. Therefore, in effect the depression resulted in a new birth of audio-visual education in Atlanta.

During the prewar years, the department originated and promoted with several other agencies the Southern Conferences on Audio-Visual Education. A large number of recordings were produced for the Committee on Sound Recordings for Georgia Schools. The library of materials was increased from year to year, and a daily service to teachers provided. The radio program was revived, and a radio teacher assigned to coordinate school programs with the various radio stations in Atlanta. Services offered by the department were increased to include classroom recording, loans of photographic, stage and projection booth equipment of various types, conducted educational excursions, and a complete sound system service. By

1940 the staff consisted of a supervisor of Audio-Visual Education, a radio teacher, a secretary, a technician, and a truck driver. Thus the staff had not only regained its former status as far as size was concerned but had even grown a little.

World War II

The national emergency just before the War and the civilian defense program during the early months of the War added new problems to the already busy staff. Atlanta had become convinced of the instructional potentialities of radio and visual education and did not hesitate to call upon the department to assist in preparing the public and industry both emotionally and physically for war. As the War progressed, the problems multiplied with the shortages of transportation, materials, and equipment. Then three of the five members of the staff entered military service, but in spite of such problems, the department carried on under the direction of Mr. George McCurdy, not only its regular service but also a war program as a War Film Service Library. This achievement was accomplished by many hours of free over-time and volunteer workers.

During the two years since the close of the War, the staff has been busy trying to overcome some of the shortages of materials and equipment that developed during the War. The impetus given to audio-visual education by the War has resulted in making the problem of supplying schools with an adequate audio-visual education program with limited funds more acute than ever.

In spite of the fact that the Atlanta Department is an old and established service, the War caused a great increase in the demands for service from the schools. For example, there was a 59 per cent increase in the utilization of materials distributed this past school year, as compared with the last year of the War. There were approximately 17,500 utilizations of items sent out during the school year 1946-47.

The Atlanta School System is fortunate in having a superintendent, Miss Ira Jarrell, who came up through the ranks and who has grown with audio-visual education. Miss Jarrell used audio and visual materials extensively as a classroom teacher. As a principal, she continued her interest even to the extent of studying in this field. She is now using her office to promote and expand the present program to meet the growing audio-visual needs of the Atlanta Schools. She has recently set in motion the machinery for obtaining, installing and operating an FM Radio Station. She plans for the department to be on the air by January 1st with daily educational programs. Mr. Alvin Gaines, of the department's staff, will be the station manager.

The future of Audio-Visual Education in Atlanta is very promising. Just what types of mechanical and electronic devices will be available to speed up and improve learning can not be predicted. But it can be predicted with a reasonable degree of certainty that the Atlanta program will continue to improve and expand.

Filmstrips for Freedom

The 160th anniversary of the signing of the Constitution has been declared a "Year of Rededication."

DAVID J. GOODMAN,
Editor-in-chief, Audio-Visual Division
Popular Science Publishing Company

THE American Heritage Program was inaugurated on May 22, 1947, at a White House conference sponsored by President Truman and Attorney General Tom C. Clark. Participating in the conference were representatives of more than sixty national organizations, the membership of which, comprising many millions of Americans, includes citizens of widely divergent occupations and ways of life, religious and political views and convictions, national and racial origins and backgrounds.

The goal of the Foundation's program, active citizenship, is announced stirringly in its slogan: "Freedom is Everybody's Job."

The Year of Rededication began on September 17, 1947, the 160th anniversary of the signing of the Constitution. The Foundation appeals to mayors, school superintendents, officers of labor, business, fraternal and other groups, in towns and cities throughout the land, to set up a series of Rededication Weeks in their local communities, with the objective of bringing every citizen into participation.

The most spectacular feature of the American Heritage Program in this Year of Rededication will be the Freedom Train. Under the sponsorship of the Department of Justice, a train of three exhibit cars has been

made up, in which will be displayed about one hundred of the most famous original documents in the history of the United States as a nation. Together they will present the most impressive and comprehensive exhibit of its kind ever assembled. Throughout the Year of Rededication the train will move from city to city, reaching in its itinerary most of the major centers of

Scene from a filmstrip in the American Heritage Kit.

TOP: The Freedom Train which is carrying 100 famous documents to the people. BOTTOM: Interior of the train showing the historical display.

population in the nation. Its arrival in each city will be timed as the climatic event of the local Rededication Week, thus serving as the rallying point for patriotic ceremonies throughout the land.

"Freedom is everybody's job." It is especially a teacher's job. The American Heritage Program is a vast national and local program of education. If that program is to be the success that we wish, the schools must play a great part in bringing it before the people. From the lips of teachers the average child first hears the word "freedom." All teachers, especially those of classes in Social Studies and English, are asked to give Freedom and the American Heritage a position of exceptional prominence in instruction.

Special teaching guides in English and in the Social Studies, recommended by the Department of Secondary Teachers of the National Education Association, have been prepared and distributed generally by the American Heritage Foundation.

School activities in the program naturally will center about Rededication Week, and will lead to the climatic visit to the Freedom Train. The work should not end then, for our heritage of freedom should be a recurrent theme in instruction throughout the year of Rededication.

CAROLYN GUSS, Instructor, School of Education
BETTY STOOPS, Film Librarian, Audio-Visual Center
Indiana University, Bloomington

Near Home

(British Information Services, 360 North Michigan Avenue, Chicago 1, Illinois) 25 minutes, 16 mm., sound, black and white. Produced by Basic Films for the British Ministry of Education. \$56.25.

Description of Contents:

NEAR HOME is a film showing the utilization of the community resources in a social studies unit in a school in England. G. Lester Anderson, Associate Professor of Education, University of Minnesota, in a prologue to the film, states that the information shown in the film employing such sound teaching principles as teacher-pupil planning, capitalization on the interests of pupils, effective study

British Information Services

Members of the community are invited to see the map of the local area which the children in "Near Home" make.

of the community, and mastery of subject-matter in functional situations is applicable to teaching in the United States.

The opening scene of the film shows the members of the class and their teacher on a hill near Bishop Auckland. When the pupils ask the teacher questions about their surroundings, he turns the questions back to the pupils and suggests that they investigate the community. The next scene shows the pupils and the teacher, sometime later, in the classroom as the pupils outline information which they want and places that they would like to visit in order to collect this information. The teacher helps them organize into committees.

The following scenes show groups visiting such places as mines, roads, aqueducts, the town hall, a forge, and the university library. Sometimes the pupils are alone, and sometimes they are accompanied by the teacher. In a later summarizing session, feeling the need for a map to relate places and reports, the pupils set about making necessary maps.

Committee Appraisal:

This film should be valuable to student teachers, teachers and supervisors, in showing teacher-pupil planning and execution of a unit of work with emphasis upon utilization of community resources. It might also be used with these same groups to show education in a superior and progressive teaching situation in England. The teacher in the film might well be analyzed for traits characteristic of good teaching.

Dining Together

(Children's Productions, Box 1313, Palo Alto, California) 10 minutes, 16 mm, sound, color. 1946. \$75.00.

Description of Contents:

This film shows the part that good table manners play in the enjoyment of holidays such as Thanksgiving. Two small boys help their mother prepare for a Thanksgiving dinner to which friends have been invited. They obviously enjoy the small tasks and keep in mind the Thanksgiving tradition of using the best of everything they have for their celebration. After admiring the simple yet beautiful centerpiece which their mother has arranged and the turkey in the oven, they change to their good clothes. They welcome their guests politely and cordially, since it is good to have friends who like to come to our homes, especially on holidays.

The fact that good manners make people happy is emphasized throughout the dinner sequence. During the meal the following points are emphasized, always positively: using a napkin, using a soup spoon, posture, using a fork, taking small mouthfuls, eating bread and butter, not talking with food in one's mouth, chewing with one's mouth closed, drinking, eating all of one's food, using a knife, and placing one's knife and fork correctly when finished.

Children's Productions

"Dining Together" suggests, in a positive manner, the desirability of good manners.

Committee Appraisal:

Catching the spirit of Thanksgiving, with all of its preparations and pleasures, this film presents under the most favorable conditions examples of good table manners for primary children. Attitudes of helpfulness in getting the holiday meal and responsibility for making guests feel welcome are also made attractive and worthwhile. A middle-class California home and a simple yet festive table arrangement provide the setting. A slowly paced narration suggests the desirability of the manners practiced by the family and their guests without actually describing what each one does. Piano music, which might well be more subdued at several points, furnishes a background for the action and the narration.

Duties of a Secretary

(National Educational Films, 165 West 46th Street, New York 19, N. Y.) 30 minutes, 16mm, sound, black and white, 1947. \$52.50. Produced for the Underwood Corporation. Study guide available.

Description of Contents:

Barbara Hayes, the new secretary in George Harman's real estate office, finds her work going smoothly after dreaming that she has violated all of the procedures so recently taught her in a secretarial course.

National Educational Films

Barbara finds that the "Duties of a Secretary" go smoothly after dreaming of all the possible mistakes.

After visiting the office to get some last-minute instructions from the previous secretary, she goes home to pour over her class notes. Falling asleep, she dreams that her first day in the office is a series of secretarial *faux pas* which would in actual life cause her to lose her job. She can not find material in the files; she interrupts dictation to ask about details; she forgets an important enclosure; she reveals important information to her employer's competitor; she lacks tact in handling office callers; she forgets important messages; she carelessly opens personal mail; she changes the form of a dictated letter; and she neglects to lock the office safe before leaving.

When she actually arrives at the office the next morning, she makes sure that the desks and all equipment are clean and in proper order to start the day's work without confusion. She is then shown doing correctly all of the things she did incorrectly in the dream. As a result her day goes well, and she is obviously proud of the work she has accomplished and her boss's approval when she leaves the office.

Committee Appraisal:

Using a dramatic technique, this film should impress upon prospective secretaries the wide variety of duties which they will be called upon to perform in the small office. At the same time, it should present vicariously experiences which any commercial instructor would hope his students might avoid in

person. These dream experiences are life-like enough to be used as a basis for class discussion of consequences of carelessness and inefficiency and to instill in the novice a desire to avoid them. The characters themselves present the commentary, with the off-screen voice of Barbara's teacher reminding her of the rule which applies in each situation. The film should be useful with secretarial classes on both the high school and business college levels.

Films of the Nations

"People's Charter" shows that the job of maintaining peace is for the people and stresses the role of the United Nations Organization.

People's Charter

(Films of the Nations, 55 West 45th St., New York City 19) 17 minutes, 16 mm, sound, black and white, 1947. Produced by the United Nations Department of Public Information. \$37.50, less 10%.

Description of Contents:

Beginning with scenes of guerrillas planning for unified action, and scenes showing men from many lands fighting together under one plan, the film proceeds through scenes of the Moscow Conference, the San Francisco Conference, and the General Assembly meeting in London, to show that cooperative effort following the war is extremely important. Scenes of the October, 1943, meeting in Moscow show the organization of the Security Council of the United Nations Organization. Following footage shows refugees emerging from bomb shelters and caves and facing the debris of war, which needs re-building. Scenes of the Spring, 1945, San Francisco Conference in which the Charter of the United Nations was agreed upon and signed are followed by shots showing evacuation of concentration camps, reuniting of families, and people re-building ravaged cities.

Committee Appraisal:

This film, constructed from documentary material in governmental and commercial film libraries throughout the world, should be forceful in depicting the inspiration, founding, and development of the United Nations Organization. Social studies classes and general assembly groups in junior and senior high school, as well as adults in churches, rural organizations, civic groups, and fraternal groups, should find this film useful for showing:

(1) the need for a United Nations Organization, (2) the cooperative effort emerging from the war effort, (3) the meetings and conferences which developed the Charter, and (4) the role of all peoples in the world in implementing the ideals of the organization.

Woman Speaks

A long-felt need for a true presentation of the activities of women is fulfilled in this film-news magazine.

THE achievements of women are presented in the film series, *Woman Speaks*, available in a 16mm and produced by the Film Studios of Chicago with H. A. Spanuth, Production Chief. *Woman Speaks* is literally a woman's magazine on film.

A Newsreel for and About Women

Feeling that there was a need for a woman's newsreel, Mr. Spanuth launched this series of films. He feels that the series has especial value to high schools and women's organizations everywhere. They show what women have accomplished and give inspiration to those seeing the films; they illuminate the intellectual achievements of women, show women at work, aid women to be attractive, add to cultural knowledge, present outstanding women of today, and help, in general, to make the world a little more pleasant place in which to live.

Women Typing Champions

Each release is built on the newsreel principle of diversification. Thus, one film will include shots of the first woman typist in 25 years to hold the World's Professional Championship for speed, future keyboard champions, women in television, women bowlers, and the Chicago water ballet.

University Women

University women of diverse faiths and nationalities express opinions on the importance of unity at a University Religious Conference. Mrs. Thomas Pender, president Junior California Federation of Women's

Clubs, talks on constructive work of 50,000 members in youth conservation, public welfare, and good citizenship.

TOP: Mrs. Nellie Taylor Ross, ex-woman governor of Wyoming, manages the U. S. Mint. **BOTTOM:** Mary C. Dondero, twice elected mayor of historic Portsmouth, New Hampshire is an example of an efficient and pleasant woman in public office.

Used by the War Department

Woman Speaks has been televised regularly and was selected by the Library of Congress for permanent preservation. Selected subjects from the series were chosen by the U. S. War Department for reorientation purposes in Germany, Austria, Japan, and Korea.

LEFT: Suzanne Steinen, leading gemmologist, exhibits a priceless collection of diamonds, rubies, emeralds, and opals. **CENTER:** A player on the Champion Women's baseball team. **RIGHT:** Lois Fisher, comic artist and author of "Chalk Talks on United Nations" illustrates her own works.

**Better
= Informed
Citizens**

**WHY
You Should Organize
A Film Council**

“WELL informed citizens keep democracy alive.” This you recognize as a true statement. Likewise, it is true that the film is a powerful informational and teaching medium. Hence, the film can and should certainly be used to the fullest extent possible at the community level. Unfortunately, few persons not regularly working in the audio-visual field, are familiar with available film materials. It is the function of a film council to keep the community leaders informed as to which films and materials are best for the purposes in mind. Local film councils are, thus, the fastest and most democratic way for adult leaders to become familiar with informational films. School councils give students an opportunity of becoming familiar with visual materials, their sources and uses. They provide a pleasant way of studying present-day life.

**WHAT
Is a Community
Film Council?**

A COMMUNITY film council is primarily a council for organizations, although many individuals participate. The purpose of the local council is to help leaders of community organizations to obtain and use films in their meetings. Such organizations include schools, churches, libraries, service clubs, veterans organizations, women's clubs, Scouts, youth groups, and community forums. Today, according to the latest Gallup poll, more adults than ever before are eager to learn about this complex world. Many of the crucial facts and ideas, confronting us, can best be understood by means of films. The local film council, backed by the Film Council of America, will stimulate and assist people everywhere to obtain and to effectively use film materials of all kinds—informational motion pictures, filmstrips, slides. One of the tasks of a film council will be to inform people as to sources of projectors, films, and other equipment, telling them what is available

(Concluded on page 504)

**WHO
Needs a Film Council**

- local program chairmen
- community leaders
- church educators
- school executives
- industrial management
- audio-visual specialists
- audio-visual dealers
- film enthusiasts
- farm leaders
- adult educators
- labor representatives
- home users
- veterans
- interested students
- industrial sales directors
- public relations directors
- youth leaders

Prospective Members of Local Film Councils

An aerial, black and white photograph of a city street, showing buildings, rooftops, and a large banner that spans across the top of the frame. The banner contains the title of the document.

HOW to Form a Film Council

Step 1

CALL together the local film enthusiasts, the librarian, the audio-visual coordinator for the schools, directors of the local film libraries, the local visual education dealers. Hold a preliminary planning session.

Step 2

DECIDE upon a time to hold a general meeting. **I**SSUE invitations to local users of films, mentioning that the purpose of the meeting is to organize a local film council. **S**ELECT a temporary chairman and assign committee work to persons who will be responsible for preparing and mailing the invitations, for making follow-up calls by phone and in person, for arranging the agenda and selecting films for the meeting.

Step 3

WRITE the Film Council of America, 6 West Ontario Street, Chicago 10, Illinois, telling of your plans. The Council will send promptly organizational helps, lists of other councils, sample constitutions, and the names of nearby experts who can help you.

Step 4

HOLD the organizational meeting. **EXPLAIN** the "What," "When," and "Why" of a film council, indicating clearly the values and functions of such an organization. **ELECT** a chairman, a vice-chairman, and a secretary-treasurer. **SELECT** committee chairman. **PREVIEW** films which may be of use to members. **DISCUSS** council problems and council activities. **CONSIDER** problems of film utilization in your community. **SCHEDULE** regular meetings. **ENCOURAGE** the use of films, helping other organizations solve problems incident to such use.

The March of Time
 "Nobody's Children" shows the dangers in lax adoption procedures and in black market babies.

how little water (The commentary says she filled the jar) the mother poured from her jar but I did not think the children would. They did, wondering why she did not bring more since she had so far to go. Again, I called the source of water for the village a "well," keeping in line with the recorded commentary, only to have one child say that it was no well at all but a "spring just like the one on grandfather's farm."

Proper Vocabulary Level

4. The vocabulary level of the commentary should be kept close to the child's level. How can this be done? Eventually, we may have films with graded commentaries. Until then we can either run sound films as silents and supply a graded commentary, or we can build an understanding of the new words. Both ideas will have their advocates: While every film gives information, the base of church utilization is much broader than instructional teaching, and the commentaries of films for children must be kept pretty well within the range of their understanding for maximum effectiveness.

Time for a "Good Look"

5. While children may tolerate high-velocity entertainment films in the movie houses, I believe that they appreciate the slower pace of educational films. These primary children expressed pleasure at the reduced speed—50% less, in fact. It gave them more time for seeing, and since the principal business of a film is *showing*, it certainly makes sense to slow films down and present the "good look" these children asked for. Children may be keen observers, but they do not like to be hurried.

Meaning Via Pictorial Means

6. The film (*The Home*) presented much (new) information to the children, and they were delighted to learn it. A detailed analysis of the major and minor sequences reveals that they carry the bulk of this information. In this sense, it is an excellent film. When a film is made, the burden of meaning must be gotten into the pictorial sequences. This is the real art of

cinema. A film shows; it does not tell, except incidentally. Films for children must concentrate upon showing. Lectures which have been recorded on soundtracks and illustrated on the screen are not for children. (Adults should not be plagued with them either!) Films for children, to be good films, should concentrate upon *showing*.

The Minds of Children

7. While children are not competent critics, they can, under sympathetic encouragement, reveal to us adults who will take the trouble to find out, just what they do and do not like in motion pictures. We may discover that films ought to be made to fit the child's mind, interests, abilities, and needs and not to fit adult notions of how subject matter ought to be organized. I shall from time to time seek to learn what my juvenile "helpers" have to teach me. May I prove an apt and open-minded pupil!

The Seeing Experience in Worship

By R. L. KREPPS*

A JUNIOR High camp had assembled on the top of a great hill for its vesper service. 'Around them were the hillsides and the valleys, lush and quiet in the mid-July gloaming. The sun was low and brilliant on the western horizon. One camper, catching the real significance of the hill-top sanctuary, quietly exclaimed, "I have never been so near God before in all my life." Seeing the glory of this evening hour, he responded to it as an invitation to worship. He was commanded by it to "Be still and know..."

The seeing experience has always had an important place in the experience of worship. Sunrises, sunsets, hillsides, the blue and restless ocean, great cathedrals, carved and painted symbols, all these and more, have been aids in man's never ending search for God. These aids broaden his experience and deepen his convictions. All the way through his history, man has been helped in worship through seeing. Today we have new "seeing" aids. We understand them and use them in a new light, and we appreciate the importance of the "focus of attention" for both the inner and outer eye in the experience of worship.

Visual aids, whether still or motion pictures, worship centers, objects, dramas, or some spot of beauty in nature, are and must remain *aids to worship*. They are not worship. Through them and beyond them God may be found.

Among the newly developed seeing aids in worship, the 2"x2" and the 3¼"x4" colored slides of the masterpieces of art are among the best. The leader of worship must make the masterpiece live, grip the heart and guide the mind. It must "speak" a message and enkindle the spirit of dedication. In use, the artist's life and intention can be mentioned, and the picture, interpreted in the light of your theme and in relation to the needs of the group.

*Director, Department of Audio-Visual Aids, Judson Press, Philadelphia.

Slides adapt easily to the setting of worship. They do not move rapidly. They are colorful, and hold the attention. They give the worshipper time for study, and they speak a personal message to each one. Rightly used they can be a powerful aid in worship.

The flat picture must not be forgotten. It is less compelling than the projected picture, but it has its uses. Large ones can be used for sizable groups, and small ones can be placed in the hands of each worshipper.

The motion picture is beginning to be used in worship. Good materials in film are very scarce, and the smooth integration of film in services of worship is beyond the skill of all but the experienced.

The secret of the effective use of all the visual aids in worship depends more upon *how* it is used than what is used. The equipment must not stand physically, emotionally, or psychologically in the road of the worshipper. Naturally, he will be aware in most cases that equipment is in operation, but this equipment must be so skillfully handled that the worshipper's attention is not drawn to it. This presupposes the careful preparation of the leader and the operator, and to this should be added at least one rehearsal. The room, or place, must be in readiness before the group arrives. A little "fussing around" will destroy the atmosphere needed for worship.

The use of visual aids does not guarantee the success of your plans. No method or technique can insure worship. It is an elusive experience, but it is the conviction of many that the experience of seeing the beautiful, the true, the good can make one more susceptible to worship.

Filmstrips Previewed

THERE are five filmstrips in "The Home Series," produced by the Long Filmstrip Service, 944 Regal Road, Berkeley, Calif. The titles are: *The Day Begins*, *Father Works For The Family*, *Mother Cares For The Family*, *The Children Have A Busy Day* and *Holiday*. The producers call this series "a picture story of a typical American family for class reading" and recommend it for grades 2, 3, and 4.

A group of directors of religious education, attending the National Workshop for Directors which was

Church Screen Productions

"The Shepherds Watch," a 35-frame filmstrip of help in building a Christmas worship service.

held in August, previewed this series to determine its usefulness in the church and found each one of the series "good." While primarily intended for the school, they are useful in the church school in presenting ideas and situations which could easily lead to a fruitful discussion of moral and religious patterns of living. Those, searching for easy-to-use material for extended sessions, should ask their dealers about this series.

The above group considered *Friends Who Help Us* and *Happy Times At Home*, both filmstrips by Church Screen Productions, satisfactory and useful with small children. These reading-filmstrips have excellent and accompanying utilization suggestions. More of this type of material is needed by church and school alike.

New Christmas Filmstrip

The Shepherd's Watch, a 35-frame filmstrip in full color by Church Screen Production (5622 Enright Ave., St. Louis 3), is based on the shepherd's story from the Gospel of Luke. Twenty-five frames visualize the story, the other ten being related to worship and enrichment material that a school, church, or Sunday School, can use in building a complete Christmas worship service. There is a manual containing additional worship and resource materials such as hymns, poems, scriptures, suggested simple pageantry, and recordings.

LEFT: "Happy Times at Home" is the story of three little sisters. **RIGHT:** "Friends Who Help Us" shows children the persons in the community who help them, such as the school nurse.

Church Screen Productions

The drawings are artistic and reverent, and they achieve considerable emotional appeal. The suggestions are realistic and helpful, because they are made by one familiar with the local church. The price is low enough to permit purchase by low-budget churches.

PFC's First Film— "Beyond Our Own"

THE high point of the Green Lake Workshop was Friday night. On this evening, three hundred leaders of the churches gathered in Morehouse Hall for the dedication and preview of the first film, *Beyond Our Own*, to be produced by the Protestant Film Commission (45 Astor Place, N. Y.). Those present represented 25 denominations and had come from 39 states, three provinces of Canada, and Puerto Rico. Everyone rejoiced that those in charge had decided to dedicate this film to the service of mankind and to the glory of God, and after this brief and impressive program, the film was shown.

The film moved swiftly, getting into the story with the smoothness of the best theatricals. It was obvious at once that this audience was not just paying the respectful attention of cultured persons, but that its interest was compelled and held by a film of superb technical and content qualities. After the benediction, the audience showed its approval in a magnificent way and broke up into scores of informal "seminars" to discuss the film from every possible angle. As one went from group to group and listened, the dominant note was always the same. "It is a great film!"

Beyond Our Own was financed by thirteen major denominations which decided to pool their resources and produce one outstanding film through their official agency, The Protestant Film Association, instead of spending their money individually on several less impressive denominational productions.

Made especially for use in churches, *Beyond Our Own* is keyed to the churches' mission study theme for 1947-'48, "World-Wide Evangelism." It will be available to the churches through denominational boards, local film libraries, and the Religious Film Association, immediately after its World Premiere on November 10th in 100 of the principal cities of the United States, Canada, Australia, and England. It runs for 40 minutes and will rent for ten dollars.

There is every reason to believe that church congregations will find *Beyond Our Own* a good film. Its technical quality equals most, and exceeds many, of the films that they see in the theater. Its story will hold their interest to the end, and the film will compel some needed thinking on the place and function of religion in life which all but the most hard-shelled pagans will be rather glad about as they reexamine their own lives.

The quality of this film should encourage the membership of the Protestant Film Commission to press forward with greater unity and boldness. The major film production of the cooperating denominations should be channeled through the Commission, and other great communions should see the wisdom of acting cooperatively in the field of production.

Beyond Our Own should be seen by every congregation, and every congregation which sees it will give thanks for a film which serves the high purposes of the church.

■ Due to the absence of Dr. Paul H. Vieth from the Yale Divinity School, the sale and rental of 2 x 2 slides will be continued through Miss Elizabeth S. Nettleton and William B. Whiston, under the business name of Educational Slide Service, Clapboard Hill, Guilford, Conn. Write for a complete catalogue and price list.

Religious Film Association

objects
and slides

PRINTED illustrations, text, photographs, drawings, and many other opaque objects, including geological and botanical specimens, *and* conventional slides are projected by the dual-purpose Model LRM Balopticon*.

Large, sharp, brilliant screen images of either slides or opaque objects are projected under illumination adequate for note-taking or sketching. This is made possible by its two fine-quality optical systems which yield

flatness of field, critical definition, and high light transmission.

Balanced illumination permits switching from opaque to slide projection without a distracting change in screen brilliance. Slides and opaque materials are protected from heat damage by a *built-in* blower cooling system. Details available in catalog E-11. Bausch & Lomb Optical Co., 4889 St. Paul St., Rochester 2, New York.

Lights! Action! Camera!

By WILLIAM ALLEN
Supervisor, Audio-Visual Services
San Bernardino County Schools, California

LIGHTS! Action! Camera! Photoflood lamps light up a corner of the school room, two boys begin to dismantle an old radio, and the eleven year-old cameraman starts the film rolling through the 8mm camera.

The sixth grade class of Mission School, in San Bernardino County, is filming a motion picture.

Unit on Communications

This is the final activity of a unit on Communications, which had begun with the study of Radio. As the study of Communications drew to a conclusion, the teacher brought his 8mm movie camera to school to take some informal pictures of the class on the school grounds. The children showed great interest in the camera and expressed a desire to take some pictures.

The discussion was carried into the classroom and led to the decision to make a photographic record of the Study of Radio. Many of the children wished to begin filming immediately, but further discussion showed the need for much planning. This need was strengthened when the teacher obtained books on motion picture production for informational reading and research. The

previous experience with radio-script writing also showed the class the necessity of having a written script to follow.

As the study progressed the class named itself "Mission Films" and organized into departments which corresponded to a regular motion picture studio. They decided that the film would be titled, "On the Air."

Still from the 8mm production, "On the Air," made by the 6th grade class, studying a unit on "Communications."

The Script

The script department began immediately to write the script, evaluating it with the class as they progressed. The Property Department brought together the sets of "props" needed, such as sound effects, pictures, equipment and furnishings. The Location Department charted to scale both the interior and exterior locations, planning with the director and script writers where each scene would be photographed. The cameramen familiarized themselves with both the motion picture and still cameras, learning some of the basic principles of photography.

(Continued on page 512)

Pinhole cameras taught the fundamentals of photography to 6th graders. Photo taken with such a camera by David Collins, Mission School, San Bernardino County.

MAKE FULL USE OF YOUR **KEYSTONE** *Overhead Projector*

IT MEETS **EVERY** NEED OF
GROUP INSTRUCTION

Of course, it gives you the finest obtainable projection of
Standard Lantern Slides

Have you seen the latest additions to Keystone's vast library of educational slides? Some of these new units will make your work more effective—and easier.

Many instructors realize the possibilities of

Handmade Lantern Slides

—not only for the presentation of special subjects, but for obtaining enthusiastic group participation.

You can sometimes make a worthwhile cut in the cost of lantern slides, by using

Quadruple Slides

—with four exposures, which are screened singly by means of a quarter-size mask.

Supplementary Lens

as with two-inch slides and strip film) you can use the five-diopter *supplementary lens*, shown at left, which enlarges the projection two dimensions each way.

Place a Flashmeter on your Overhead Projector, and you have a

Tachistoscope

—of thoroughly proven value for efficient training in spelling, reading, recognition and general visual skills.

By means of an inexpensive adapter, you can show

2-Inch Slides

—with the clear, inexpensive daylight projection made possible only by a 750 or 1000-watt lamp.

You can also buy an attachment for showing

Strip Film

—and here again, have the advantage of the Keystone Overhead Projector's powerful illumination.

An adapter is also available for
Microscopic Slides

--and with the microscopic slides (as well as with two-inch slides and strip film) you can use the five-diopter *supplementary lens*, shown at left, which enlarges the projection two dimensions each way.

SINCE 1892 — PRODUCERS OF SUPERIOR VISUAL AIDS

Shooting Schedule

When the script was completed and approved by the class, the "shooting" of the picture was started. This was to be the story of the class' Study of Radio and began with the arrival of the school bus. They soon realized that a motion picture could not be taken in exactly the order that it would be shown on the screen, but that many consecutive scenes were taken at different times and then pieced together in correct order. So a program schedule was made, showing when each scene would be filmed, the "props" needed, the set location, the actors, the cameraman, and its sequence in the finished production.

Many skills were developed in the course of making the 8 mm film, "On the Air." For example, new word lists were kept on radio, photographic, and other words discovered in supplementary reading.

The children made reflectors for the photoflood lamps and large reflector boards painted with aluminum paint to reflect the light into dark shadows. The assistant cameramen measured the distance of each scene carefully and read the exposure meter to determine the camera setting. The director rehearsed the actors until he was satisfied that it was perfect as possible.

Then the command from the assistant director, "Quiet, Everybody!" followed by the "Lights! Action! Camera!" of the director. The camera clicked steadily, as the class held its breath expectantly until the final "Cut!" Then the eyes turned to the director for his decision whether the scene would stand or whether it would have to be retaken.

Following the "shooting" of each scene, the still cameraman moved his camera and tripod into place, posed the actors, and took a still picture of the scene.

The children filmed the entire picture in this manner, sometimes arriving early in the morning and setting up their cameras in order to get a picture of the school bus arriving and unloading its passengers. After the completion of the picture, titles were typed and filmed on a small pocket titler.

The return of each roll of film from the processing laboratory was awaited with eagerness, at which time it was projected many times and evaluated by the class. Sometimes scenes were cut because of poor lighting or acting and other scenes were retaken if they were important to the continuity of the film.

The children constructed their own control booth for the film, "On the Air."

Costs

In its final form, the film, "On the Air," had a running time of about twelve minutes. The following is the total cost of materials:

2 rolls of Ansco Triple-S Pan film	
at 2.86	\$ 5.72
1 roll Super-X Pan,	
Eastman, film	\$ 2.25
2 G. E. Photofloods at \$1.03	\$ 2.06
	<hr/>
	\$10.03

This \$10.03 did not include the cost of the cameras, tripod, splicer, titler, and exposure meter, but this equipment can usually be obtained from some person interested in the study. The cost of materials amounted to approximately 33c per pupil.

(Continued on page 514)

Pinhole photo by Ernestine Gibson, 6th grade, Mission School.

"PACKAGED" TEACHING TOOLS

McGraw-Hill Correlated Text-Films

These are units of a typical "package"

Textbook—basic teaching tool

7 Sound Motion Pictures—for explanation and demonstration

6 Silent Filmstrips—for class review and discussion

The "teaching potential" peculiar to each can be used to best advantage when motion picture and filmstrip are combined in an integrated presentation. Add to this the advantages of definite correlation with a specific text, and the teacher is provided with a "packaged" program high in teaching efficiency. Text-films are planned for specific subject areas:

College Health and Hygiene
College Engineering Drawing
Pre-Service and In-Service Teacher Education
High School Mechanical Drawing

This is what you will want to know about Text-Films:

1. Present series are based on these texts—Diehl's **TEXT-BOOK OF HEALTHFUL LIVING**; French's **ENGINEERING DRAWING**; Schorling's **STUDENT TEACHING**; French and Svensen's **MECHANICAL DRAWING**.
2. No attempt is made to reproduce the complete text in the motion pictures. Only selected portions of each book

have been supplemented by films—usually those chapters which educators felt presented the greatest difficulty for students. Animated drawings, animated photography, and careful exposition help interpret the text visually. Each film takes approximately fifteen minutes of running time.

3. Filmstrips which accompany each motion picture re-emphasize key points, present questions suitable for student testing and offer additional information. The average filmstrip contains 40 frames.
4. The films have been made in close collaboration with the authors of the books, and with groups of teachers who are specialists in their separate fields. They come to you pre-tested and approved, ready to help you make classroom teaching more meaningful.
5. McGraw-Hill Text-Films are available by direct purchase from the McGraw-Hill Book Company, or they may be rented from your local film library.

If you are interested in these teaching materials and would like more detailed information, fill out the coupon below.

Skills and Attitudes Developed

This study was carried on during the social studies period as a unit of work correlated with the Study of Communications, but it was also integrated with the entire curriculum.

The language arts were developed through reports on such research projects as the animated cartoon, the principles of photography, the history of motion pictures, and the characteristics of a good motion picture. Such reports were meaningful to the children and helped them improve their use of language, enunciation, and selection and organization of material. Examples were selected from the scripts for drill in grammar and punctuation.

Words important in motion picture production and appreciation were selected by the children and the teacher for incorporation in the spelling lists. These spelling words supplemented the basic sixth grade word lists and the personal word lists kept by each child of words he needed to learn to spell.

The measurement of distances needed for accurate camera focusing, the mapping of set locations to scale, and the use of photographic arithmetical problems became a part of the arithmetic work.

Skill in reading was developed by the reading of books and articles about motion pictures, newsreel cameramen, and photography. This reading contributed to the improvement of reading comprehension and the enlargement of the reading vocabulary.

This activity, being very diversified, yet depending upon the cooperative participation of the children to

produce a finished production, helped develop cooperation within the group and self-discipline within the individual children.

Pinhole Camera Constructed

In order to understand better the principles of photography, pinhole cameras were constructed by the children. The pinhole camera kit made by the Eastman Kodak Company was used as a model, and the children cut the parts of the camera out of cardboard and assembled the light-tight cameras.

The first children to complete their cameras formed a dark-room committee which transformed a small wash room into a dark-room for the printing of pictures. This group also studied the instructions for printing pictures and reported the procedure to the remainder of the class.

The cameras were loaded with $3\frac{1}{4} \times 4\frac{1}{4}$ sheet film in total darkness, and the children took pictures of various views of the school grounds. Exposures of from 15 to 45 seconds were made, depending upon the condition of the light. After exposure, the films were removed from the cameras in darkness and taken to a camera shop for development. It was not practical to have the children develop their own film because of the necessity for total darkness and the difficulty of mastering the technique in the time available. However, every child printed his own picture from the negative and had the thrilling experience of seeing his picture materialize on the printing paper under the safe-light of the darkroom.

(Concluded on page 517)

AN ART CLASS FEATURE

Telling how the Incas, having the most advanced known prehistoric culture, lived before the arrival of their Spanish Conquerors, more than 400 years ago. A 2,500 mile long Empire stretching along the west coast of South America, operating under a single political unit—a marvel of All Time. Their architectural achievements have withstood the onslaught of people, storms, earthquakes and Time! Special colored drawings, to emphasize the grandeur of the Inca architecture, are shown to give students an idea of the beauty of their buildings, before the coming of the Spanish people. This art feature, combined with instructions in History, Sociology, Handicrafts, Architecture and Geography makes "THE INCAS" film a most valuable teaching instrument, and invaluable for study by all students.

THE LITERATURE IN

A Monthly Digest

VISUAL INSTRUCTION

ETTA SCHNEIDER RESS, Editor

BOOKS

- **The American Radio**—Llewellyn White—University of Chicago Press. 1947. 260pp.

Another volume in the series prepared by the Commission on Freedom of the Press, this one deals with the broadcasting industry in the U. S. and its relations to the people. The book brings together factual information not readily accessible elsewhere, and does so in an interesting and pointed manner. Lacking adequate documentation through books, the author and committee have based their findings and recommendations chiefly on interviews with key persons and on intensive study of existing radio programs.

Highlights in the development of American radio are summarized at the beginning of the book, and the growth of radio as a powerful industry points to the strength and limitations of programming as it exists today. In one chapter, "The Light That Failed," the author describes the many serious efforts of educators to use radio for education including those that failed, and those that have continued. With commercial stations so strong and wealthy, the only hope for satisfactory educational broadcasting would lie with universities that have wealth and power.

It is obvious from this volume that the radio as a public service has been perverted to a mass medium for advertising. The duly licensed station or network operators have surrendered to the advertising agencies in determining program content and viewpoint. This practice is at the basis of all criticism of the radio as a medium of public information.

The recommendations of the Commission are sound and reasonable to the commercial broadcasters. They strongly urge the separation of program planning from commercial advertising, and the closer cooperation of government agencies concerned with radio in the public interest.

- **The Informational Film Yearbook, 1947**—Film Focus Book, Albyn Press, 42 Frederick St., Edinburgh 2, Scotland. 175pp.

A useful guidebook to film workers abroad. The Yearbook lists a useful directory of British informational film producers, distributors, equipment manufacturers, specialized personnel, "films of the year" (with stills), organizations and societies in the field, etc.

The opening section is devoted to brief articles by outstanding leaders of the British Isles; Paul Rotha, John Grierson, Andrew Buchanan, Basil Wright, and others. A similar source book relating to the American non-theatrical film would certainly be appreciated.

TECHNIQUES

- **Forum Techniques**—*Adult Education Journal*, 6:139. July, 1947.

Report of a section meeting on forums and discussion techniques held during the 22nd Annual Meeting of the American Association for Adult Education. Louis E. Raths of Ohio State University was leader, and described an interesting study of forum discussion techniques started in 1940 in Ohio. Films as materials for discussion were included in the project, and a film forum served to illustrate the general objectives in the use of discussion techniques and methods.

ADMINISTRATION

- **Administering Visual Aids in the Program of the Local Church**—Ray Stewart, Englewood, Colo.—*Int'l. Journal of Religious Ed.*, 23:12 July-Aug., 1947.

A good resume of some of the basic principles to follow in organizing an intelligent program of religious education with visual aids.

TEACHER TRAINING

- **Suggested Plan for a Classroom Motion Picture Clinic**—Center for the Study of Audio-Visual Instructional Materials and Encyclopedia Britannica Films, Inc.—E. B. Films, 20 No. Wacker Drive, Chicago 6, Ill.

A clinic is defined as a one-day meeting designed primarily for teachers interested in classroom motion pictures and who wish to learn more about them.

General topics around which discussion will grow are: the place and role of the classroom film; selecting and evaluating films; organizing the classroom film program; and creative utilization. The pamphlet is brief and contains some good, general principles with a selected bibliography for further implementation.

- **Foundations for Teacher-Education in Audio-Visual Instruction**—Elizabeth Goudy Noel and J. Paul Leonard—American Council in Education, Washington, D. C. 60pp. June, 1947. 75c.

This pamphlet must be read in its entirety, and its contents carefully noted. It is based on the most recent principles and philosophy of curriculum specialists, and represents a synthesis of the author's own findings as well as those of a hand-picked committee of California educators assigned to the task of developing standards of teacher competency in Audio-Visual education.

The pamphlet includes, in outline or condensed form, a summary of information that would be needed in setting up a course for teachers in training: some of the knowledge, skills, abilities, psychological bases for the use of audio visual materials, some research findings, a listing of some materials available in specific areas, sources of equipment, setting up an audio-visual service, some current trends and practices, and a carefully selected bibliography. Send for your copy at once.

SOURCES OF INFORMATION

- **Bibliography on Audio-Visual Instructional Materials for Teachers in the Elementary School**—Constance Weinman—Bureau of Publications, Teachers College, Columbia Univ., N. Y. mimeo. 1947.

An excellent bibliography of books and magazine articles, because the references have been carefully chosen and well classified. Busy classroom teachers will also appreciate the fact that the number of readings has been kept to a basic minimum.

- **Selected Indexes and Sources of Photographic Visual Aids**—Eastman Kodak Co., Sales Service Division, Rochester 4, N. Y. 1947. 12pp. Free.

Lists major sources of motion pictures, slide films, and slides available for educational, industrial training, medical, and other purposes. Punched for insertion in the Kodak Photographic Notebook.

Now Available For Use in Your Community!

Julien Bryan's New Documentaries on **ITALY**

Students of world affairs advise keeping close watch on **ITALY** as a focal point of world attention. **ARE YOU PREPARED** for this **PUBLIC INTEREST IN ITALY TODAY?**

→ ITALY REBUILDS

This is a dynamic documentary, valuable not only in a historical sense as a record of UNRRA's contribution but valuable also for the portrayal it gives of an Italian family and the courage displayed by thousands of Italian families in rebuilding their homes, their communities, their nation. 20 minutes.

→ ARTISANS OF FLORENCE

In this film, the famous Institute of Art furnishes the setting for showing many phases of Italian art and handicraft: ceramics, drawing, sculpture, leather tooling, silver hammering, and jewelry designing. 20 minutes.

→ BREAD AND WINE

Dealing with Italian agriculture and the "mezzadria" system of farming, this film shows the harvesting of grapes, the cultivation of crops, the making of bread, the routine life of the farmers and their proprietor, an evening meal, and closes with scenes from a "Festa dell'uva"—the Feast of the Grapes. 16 minutes.

- **Audio-Visual Aids**—F. Dean McClusky, U. of Calif., Los Angeles—*The Instructor*, monthly.

Each month the author prepares a statement on some aspect of using audio-visual aids, and then answers questions that have come to him. The information is authoritative and up-to-date.

- **Guide to U. S. Government Motion Pictures**—Motion Picture Division, Library of Congress—vol. 1, no. 1, June, 1947. 40c (Through Supt. of Documents, Washington 25, D. C.)

The best single compilation of films produced by the various government agencies, with complete information as to local and regional distributors. It is planned to issue this guide annually.

- **The Small Screen**—Arthur Rosenheimer, Jr.—*Theatre Arts*, monthly feature.

A compilation of titles (May, 1947 issue) on some of the exceptional abstract and experimental films in 16mm. and 35mm., and where they may be obtained.

- **Motion Pictures for Music**—Marion Costable, Morris County Music Helping Teacher—*N. J. Educational Review*, 20:243 April, 1947.

A listing of films on various aspects of music education that were found useful. There are neither annotations nor rental information.

- **Bibliography on Audio-Visual Instructional Materials for Teachers in the Elementary School**—Constance Weinman, Bureau of Publications, Teachers College, Columbia University, New York: 1947. 50c

This brief publication lists a number of general reference books on audio-visual education together with lists of handbooks, manuals, periodicals, special material lists covering radio, records, and still pictures. Suggested readings from the published literature is carefully classified, covering blackboards, bulletin boards, charts, graphs, maps, globes, excursions, exhibits, dioramas, habitat groups, museums, stereographs, opaque projection, filmstrips, slides, motion pictures, radio, and recordings. A further section lists reading material by subject areas and by grades.

- **Films for International Understanding**—Committee on Films in International Understanding, Educational Film Library Assn., Inc., Esther L. Berg chairman, Elizabeth H. Flory, editor.—Published by Curriculum Service Bureau for International Studies, Inc., 433 West 123rd St., N. Y. 27. 134 pp. 1947.

The selected, classified list of films for international understanding which appears in the second portion of this booklet was viewed in a broad setting, as represented by a symposium of articles by leaders in international understanding, and in audio-visual education. There are statements on the part that theatrical films play—and ought to play—in helping people of one nation to understand others abroad; there are brief summaries of the trends and forecasts in the 16mm. field by such leaders as Edgar Dale, Julien Bryan, C. R. Reagan, Esther L. Berg, Grace T. Stevenson, William S. Hockman, Evelyn Oelen and June Blythe. And finally, with a stimulating introduction by Thomas Baird, there appears a list of existing films that have been recommended by a national committee as having merit for use in programs of intercultural education. A useful and significant publication.

School-Made Pictures

(Continued from page 514)

The approximate cost per child for the materials to make the camera, film, printing paper, and chemicals was about 17c.

Culmination of the Study

The class culminated their Study of Communications by a presentation of "On the Air" to the upper grades of Mission School. Tickets were prepared, ushers selected, the film advertised by announcements in the various grades, and a darkened theater made out of the classroom.

Prior to the showing of the film, after the classes were assembled in the theater, the audience was told how the picture was planned and produced. A pupil gave a running commentary of the film as it was projected, and the sound effects were synchronized with the sound effects as they appeared on the screen.

Following the motion picture, the audience was invited to view the exhibit of the pinhole camera pictures, which were mounted and displayed in the room.

At the end of the school year the film was shown again to a P.T.A. and community group and was highly commended. It has been used with teachers preparing to teach a unit on Radio and Communications and will doubtless have many more showings to P.T.A. and community meetings, teachers institutes, and teacher in-service education groups.

Iowa State Audio-Visual Laboratory

(Continued from page 493)

are planning for production of educational films, many of which are graduate student thesis projects. It is anticipated that numerous teaching films eventually will be produced on this basis.

Communications Center

In order to make the expansion program possible, the Bureau of Visual Instruction will be housed in specially planned and adequate quarters in a new Communications Center to be built on the Iowa campus as soon as conditions permit. This building, planned to accommodate the School of Journalism, the Department of Publications, Radio Station WSUI, a new FM Radio Station KSUI, and Television, as well as Visual Instruction, will bring the University's interrelated program in communications together in one properly designed center. The Iowa State Legislature has already made an initial appropriation of \$525,000 for this building, and construction plans are rapidly being completed.

News at

Twelve Opaque Projectors to Be Awarded to Schools

Dr. William Lewin, audio-visual chairman of the N.E.A. Department of Secondary Teachers, has announced that \$3000 worth of the newest and finest opaque projectors will be included in the Audio-Visual Awards to be presented to schools and colleges doing notable work during 1947-48. The twelve projectors have been donated by Herbert H. Myers, sales manager of the Charles Beseler Company of New York, as a contribution to the aims of Lewin's committee.

"This type of projector is one of the most urgently needed aids," said Lewin.

Town Hall Offers Course in Color Films

A mid-winter color motion picture filming course for amateur movie makers will be given at The Town Hall, Inc., 123 West 43rd Street, New York City.

The course will be directed by Canfield Cook, color film producer and consultant and is offered on six consecutive Monday evenings beginning in January. Each session will progressively cover the various phases of color filming from camera handling to preparation of processed film for projection. Good and bad examples of filming technique will be screened with appraisal of success or failure in achieving desired results.

Although membership applications will not be available until November interested amateurs are advised to write to Town Hall for particulars well in advance.

Professional Training in Motion Pictures

Establishment of a new studio offering full-time professional training in motion picture work was announced by Erwin Piscator, Director of the Dramatic Workshop of the New School for Social Research. Sidney Kaufman, film critic and director, will head the new Film Department, whose purpose Mr. Piscator declared is "to provide trained personnel for expanding motion picture production in New York and to create a center for study of the cinema as cultural and social force."

The workshop course, which starts October 6, will include production of complete sound films in a specially designed studio where students will write, direct, act and shoot the productions, with sound, music and other technical aspects of the work under professional guidance. The many film resources of the city, laboratories, sound stages, film libraries, trade unions, independent producers, and other branches of the local film industry will cooperate actively with the project.

"The Film Department is slanted to correspond with the major production work that prevails here," Mr. Piscator observed. "While feature production has expanded, it is not commonly known that all

otes

other types of production are carried on within the city on a scale that already surpasses every other production center in the world, including Hollywood." Further information may be obtained from the Dramatic Workshop, President Theater, 247 West 48th Street, New York.

French Film Society Announces December Program

The Chicago French Film Society will hold its next meeting on Wednesday, December 3, at 4:30 and at 7:30 in the Woodrow Wilson Room, 84 East Randolph Street, Chicago. The following films will be previewed: *En Bretagne* (economic); *Glace Vive* (hockey); *Dans les Alpes* (geologic and sports); *Chants Populaires*; *Canadian Landscape* (art film).

Miss Dorothy Cahill, North Shore Country Day School is now the secretary and Miss Virginia Donham, the treasurer, according to Miss Katherine Slaughter, chairman. Henceforth, programs will be given twice on the first Wednesday of each month. Already such films as the following have been previewed by the organization: *La-haut sur ces Montagnes La Garonne* (geographic film); *Chants Populaires* (singing cartoon); *En Normandie* (economic); *Aubusson Tapestries*; and *Vive le Ski* (sports). It is understood that Mr. Gerald N. Bench, Director, Bureau of Instruction, Chicago Public Schools is considering the purchase of some of these films previewed by the society.

Radio Center at Syracuse University

With the official opening of the newly constructed hundred thousand dollar Radio Center of Syracuse University, the campus radio curriculum has become one of the most progressive in the country. Practical experience is the keynote of instruction. Students man experimental FM station WJIV. They plan, write, produce, direct and act in their own programs, assigned as class projects. Student engineers manipulate the most modern of technical equipment to air the shows.

In addition to broadcasting directly over WJIV, three to four hours a day, the Radio Workshop uses the FM and AM facilities of local NBC station WSYR and CBS affiliate, WFBL. Expanded from a two-studio workshop in seven months time, the present set up at Syracuse now includes Radio house, a prefabricated building designed especially for radio instruction, in addition to its remodelled workshop studios in the main library building.

Columbia Broadcasting System's chief of studio design, Clarence Jacobs, patterned the studios, employing a new acoustical treatment called polycylindrical design, involving the use of pillar effects at various intervals around the walls. The workshop contains master Studio A with an adjoining observation room, studio B for broadcasts involving smaller groups, a master control room, and a recording room containing the FM transmitter for WJIV.

Radio House, instruction half of the Center, is located to the rear of the library. Here is studio C, a

RED WAGON

The dramatic life story of Stave Swift shows how an enterprising Cape Cod farm boy helped build an industry that today serves the entire nation!

Red Wagon pictures authentically reproduced scenes of 19th century Americana. You'll see, in beautiful color, early railroads, great herds of cattle roaming the Western plains, cowboys singing around their campfire, the early telegraph, and the financial panic of '93!

To reserve Red Wagon for your school, church or club, write:

FILM STUDIOS OF CHICAGO—Dept. E—135 S. La Salle—Chicago 3

Most subjects had article or cover in such issues as Reader's Digest—Life—Collier's—The Woman.

Selected for permanent file by Library of Congress. Used by U.S. Army and Navy.

Televised by WNBT—WBKB—WWJ—KSD—PHILCO. (Television rights reserved.)

large production studio where students build and present dramatic and music programs. Two news and announcing booths with control rooms and observation rooms adjoining are available all day and evening for potential newscasters and announcers.

A music room for hearing and selecting numbers to be used on programs, a seminar for discussion by advanced students of program planning and building, a news room with United Press wire service, and offices for five instructors complete Radio House.

The campus signs on with its own wake-up show from 8 to 9 A. M. called "Coffee And," and broadcasts two more hours during week days from 7 to 9 in the evening. Evening shows include "Radio Stage" productions by the dramatic writing classes, "Music to Study By," and "Classroom Classics," record shows, and news and notices features handled by the staff of the campus paper, *The Daily Orange*.

Sunday schedule of FM shows include four hours of afternoon programs of music, drama, and news feature variety. In addition to the regular WJIV airings, students broadcast on the local network station's FM several regular features including a variety show, "Dorsi's Cafe" using local singing talent; "Sorority Serenade" in which campus Greek groups participate; "Poetry Corner," "Radio Opera," and "The Daily Dozen," a news feature program highlighting and sidelighting the top 12 news items of the day.

Launch a Department of Theater Arts at University of California

"To provide a study of the history, esthetic principles, and special techniques of the theater, motion pictures, and radio combined with a broad cultural education . . . to train future members of the theatrical professions and implant in them a sense of the responsibilities of the theater and motion pictures as a molders of public opinion."

Within the framework of these aims, the Los Angeles campus of the University of California

has launched its new department of Theater Arts this fall under the chairmanship of Kenneth Macgowan, former Paramount producer. An enrollment of some 325 theater majors is expected at the outset.

The curriculum will provide for specialization in two fields, stage and motion pictures, to which radio will be added in 1948. In their first two years of study, theater arts majors will take a broad educational program along with some basic courses in the department, including a course in "The Social Aspects of Mass Communication," stressing the widespread impact entertainment media have on society.

Sloan Foundation Reports On Motion Pictures and Radio

Included in the 10th annual report of the Alfred P. Sloan Foundation, Inc., were a section on "Motion Pictures" and one on "Radio." Since its organization the Foundation has shown interest in the creation of educational films. In fact an agency for the distribution of such films was established at New York University with the financial support of the Foundation (1941)—New York University Film Library.

The Sloan Foundation has discovered that the production of satisfactory educational films is difficult: "The problem is not only one of cost which, considering the probable audience for a typical educational film, is usually expensive; there is the further problem, especially important in an educational medium, of maintaining objectivity and freedom from bias. These latter requirements often complicate the efforts of script writer and director to produce a picture which has continuity and the promise of sustained interest on the part of an audience. Most producers of educational pictures have, moreover, failed to give adequate consideration to pedagogical needs and to the peculiar conditions under which films of this nature are to be exploited for instructional purposes.

"The FOUNDATION believes that these difficulties can be surmounted and it continues to regard motion pictures as an educational medium of high promise."

Among the many projects of the Foundation has been the support, since 1938, of the "Round Table of the Air"—University of Chicago. This is the oldest educational program continuously on the air with participants from the faculties of many universities taking

Look Listen and Learn

By L. Harry Strauss
and J. R. Kidd

A manual on the use of audio-visual materials in informal education.

Here's how it's done. In detailed, experience-based chapters, two leaders show how to use audio-visual materials in group education.

Written for both professional and volunteer workers, this manual suggests how to apply these aids to your program, how to make the most effective use of new methods in schools, churches, Ys, social and community organizations, and in adult education.

Sources of material and equipment with criteria for its selection are listed; also, suggestions on administering program, producing films, etc.

part as well as experts from many walks of life. Subjects chosen for discussion may relate to domestic economic questions, international political and economic issues, or to public affairs generally.

In 1946, the Foundation extended its support to the New Jersey State Teachers College located in Montclair, New Jersey to permit the College to experiment with an educational program in radio. Programs developed have been recorded and are sold for a nominal fee to individual broadcasting stations. The purpose of the experiment is to illustrate and dramatize the meaning of basic economic facts and principles. The programs bear the title, "Keeping up with the Wigglesworths."

Filmstrips for Freedom

(Continued from page 497)

At the invitation of the American Heritage Foundation, the Educational Department of *The Reader's Digest* has prepared a series of six filmstrips, specifically designed for use in the heritage program. These filmstrips illuminate the origin and growth of free institutions in this country. This American Heritage Kit, consisting of six Teach-O-Filmstrips and a 40 page Teaching Guide, can be used in Junior and Senior High Schools, in homes, colleges, churches, community organizations, stores, commercial, and manufacturing establishments of all kinds. It is available from the Audio-Visual Division, Popular Science Publishing Co., 353 Fourth Avenue, New York 10, N. Y., and also from the Educational Department, *The Reader's Digest*, 353 Fourth Avenue, New York 10.

Description of the Filmstrips

The Birth Of Our Freedom pictures the first groping toward democracy in the old world, and its development on our Atlantic seaboard in the 17th and 18th centuries.

Freedom's Foundation presents the struggles and compromises that led to the adoption of the Constitution and the Bill of Rights.

Freedom's Progress surveys the advance of democracy and freedom in America through the 19th and 20th centuries.

Freedom Today illustrates not only the significance of our free society for the world but the grave challenges it faces here at home—challenges that must be met if freedom is to survive and grow in the complex world of tomorrow.

The Vocabulary Of Freedom brings to life through vivid historical drawings the significance of such common expressions as freedom of speech, freedom of the press, life, liberty, and the pursuit of happiness. Presents the key words in the vocabulary of freedom and mentions the documents that guarantee them.

The Literature Of Freedom shows decisive moments in the long climb toward freedom as seen through the eyes of great writers and thinkers. The strip contains drawings visualizing the themes of famous literary works.

The American Heritage Kit was developed under the supervision of a distinguished advisory board. The Editor is Marquis James, noted historian.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACTS OF CONGRESS OF AUGUST 24, 1912, AND MARCH 3, 1933

Of The Educational Screen, published monthly except July and August, at Pontiac, Illinois, for October 1, 1947. State of Illinois, County of Cook.

Before me, a notary public in and for the State and county aforesaid, personally appeared Josephine Hoffman, who, having been duly sworn according to law, deposes and says that she is the business manager of The Educational Screen, and that the following is, to the best of her knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, as amended by the Act of March 3, 1933, embodied in section 537, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are: Publisher, Marie C. Greene, 64 East Lake Street, Chicago, Ill.; Editor, Paul C. Reed, 116 Crossman Terrace, Rochester, N. Y.; Managing Editor, Edward T. Myers, 64 East Lake St., Chicago, Ill.; Business Manager, Josephine Hoffman, 64 East Lake St., Chicago, Ill.

2. That the owner is: The Educational Screen, Inc., 64 E. Lake St., Chicago, Ill.; Marie C. Greene, 5836 Stoney Island Ave., Chicago; Marguerite Orndorf, 7022 Warwick Rd., Indianapolis, Ind.; Marie Craik, White Plains, N. Y.; Mrs. J. J. Weber, Bay City, Tex.; Josephine Hoffman, 64 E. Lake St., Chicago; M. F. Sturdy, Swift & Co., Chicago; E. J. Baker, Beech Grove, Ind.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by her.

JOSEPHINE HOFFMAN, Business Manager.

Sworn to and subscribed before me this 1st day of October, 1947.

VIRGINIA DANIELS ALLEN,

Notary Public.

(My commission expires June 3, 1950.)

"Projected Visual Aids in the Church"

by William S. Hockman

An outstanding authority, for twenty years Director of Religious Education in the Lakewood (Ohio) Presbyterian Church, presents the results of his experiments in the use of projected visual aids in worship and preaching services, film forums and curriculum enrichment. It points the way to the more effective use of this vivid new teaching technique.

The scope and value of the book can be gained by glancing through a partial list of subjects treated in its pages, as shown below:

\$3.75

- Uniqueness of the Visual Aid
- Levels of Function
- Role of the Teacher and Principles for the Teacher
- Picture Focused Worship
- The Film Forum Technique
- Films for Discussion
- The Principles of Utilization
- How to Choose Films and Slides
- Physical Factors in Audio-Visual Programs
- Screen Size in Relation to Rooms and Audiences

People

Phelan to Eastin

Martin D. Phelan, formerly an executive of Butler Brothers in Chicago, has been appointed manager of the home office of Eastin Pictures Company at Davenport, Iowa. The Eastin firm, which recently celebrated its twentieth

Martin D. Phelan

anniversary, also has offices and complete film libraries in Colorado Springs, Colo., and Chattanooga, Tenn., and carries on a nation-wide mail-order business in the rental and sale of 16mm. sound motion pictures for educational and recreational purposes.

Norma Barts Moves

The British Information Services announces the appointment of Norma Barts as assistant in the Film and Publications Section of its Chicago office. Miss Barts was formerly Director of the Film Division of the DeVry Corporation.

J. C. Gibson to V. E. Post at G. E.

Appointment of J. C. Gibson as manager, visual education division, is announced by J. S. Smith, manager of the advertising and sales promotion divisions of General Electric's apparatus department at Schenectady. In his new position, Gibson will be responsible for the planning and preparation of all Apparatus Department

motion picture and slide films, the development of special visual presentations, and the preparation of all types of models, displays and exhibits.

Sugarman to United World

The appointment of Harold Sugarman as vice president in charge of export for United World Films, Inc. has been announced by James M. Franey, president of this 16mm subsidiary company of Universal Pictures, Inc.

In 1940 Sugarman joined Universal Pictures Company, Inc., as head of Studio Foreign Department at Universal City. Transferred to New York last year to organize Universal-International 16mm Overseas Department, his promotion to the United World vice presidency reflects the integration of Universal-Rank 16mm activities into United World channels.

Borneman Heads UNESCO Film Section

Ernest Borneman, long-time producer for the National Film Board of Canada, and, during the last two years, head of the Board's International Distribution Section, has been appointed by the United Nations Educational, Scientific and Cultural Or-

Ernest Borneman

ganization to head its Film Section as Director of Information.

Before the war Borneman was with Douglas Fairbanks Junior's Criterion Film Productions in England. During the early war months he was with the British Broadcasting Corporation and the British Ministry of

ROBERT E. SCHREIBER, Editor
Supervisor of Teaching Aids

Information's Film Department. He has been a frequent contributor to British, American and Canadian periodicals. His most recent novel, *Tremolo*, will be published by Harper & Brothers in New York early next year.

Production Activity

Library Films Absorbs Gutlohn

Announcement is made of the organization of Library Films, Inc., 25 W. 45th Street, New York 19, N. Y. for the purpose of serving 16mm film rental libraries, educational and religious institutions. Library Films, Inc. has acquired the extensive library formerly owned by Walter O. Gutlohn, Inc., who pioneered in the 16mm field and had been actively operating for more than fifteen years.

Library Films Inc., has also announced the acquisition of all of the 16mm titles owned and distributed by Certified Film Distributors Inc., New York, N. Y.

Redfield Acquires DeVry Film Library

Robert H. Redfield announces the acquisition of the American Film Registry, 28 E. Jackson Blvd., Chicago 4, Illinois. This lending library was formerly the DeVry Corporation Film Division.

American Film Registry plans to serve the schools, industries, and churches on a nationwide scale as did DeVry Corporation.

Mr. Redfield, formerly vice president of A. J. Nystrom and Company, later field manager of Encyclopaedia Britannica Films, Inc., and recently in the radio production field, is applying his twenty years of school selling experience to the new organization.

Victor Plant Grows

Construction of a new \$1,500,000 modern factory and office building will start as soon as planning is completed and materials are procured according to announcement released recently by Samuel G. Rose, President of the Victor Animatograph Corporation, Davenport, Iowa, pioneer manufacturers of 16mm motion picture equipment.

The new project will be of the most modern type of construction throughout the 150,000 square feet of floor space. All installations and fixtures will be of the latest design and the ample floor space will permit the addition of a large amount of modern machinery to be used in the manufacture of Victor modern precision equipment. A large cafeteria, playground, ample parking lot and trackage facilities will all be important features of the project when completed.

This modern plant will house the entire Victor manufacturing facilities that are now located in several buildings. The factory portion of the building will be one story which will permit the most modern production-line methods. The office section will be two stories.

DeVry Service Bulletin Revised

To indicate the increasing number of good books, periodicals and manuals entering the Audio-Visual field the DeVry Corporation announces the revision of School Service Bulletin No. 1, written by C. R. Crakes, Educational Consultant.

This bulletin entitled "Suggested Bibliography on the Use of Motion Pictures in Education" was first brought out in the early months of 1945 and listed 25 books and periodicals. The revised edition mentions 33 such publications.

Copies of the Revised Bulletin No. 1 are available without cost upon request to the Educational Department, DeVry Corporation, 1111 Armitage Avenue, Chicago 14, Illinois.

Lever Brothers Use New Color Film

A series of minute movies for theatrical distribution to advertise Spry is the new project of Lever Brothers, handled by Ruthrauff and Ryan.

Now being produced by Willard Pictures, Inc., New York, a series of minute movies for Lever Brothers employs the newly developed 35mm Ansco Color motion picture film. This new film enables advertisers to tell their stories in full natural color in the nation's theatres. Previously, Technicolor was the only 35mm motion picture color film providing a full range of color. For some time, Technicolor has been unavailable to commercial producers, and the new Ansco film should fill an urgent need, though few motion pictures have been produced as yet using this new film, and the Lever Brothers minute movies represent one of the first successful uses of it by a film producer.

Equipment

New 16 and 8mm Splicer

A new, larger than average and easier-to-handle film splicer for both 16 and 8mm film has been announced by The Bosley Corporation of America. Utilizing stainless steel throughout the precision-manufactured splicer, Bosley has incorporated a number of unique features designed to make splicing easier and faster. Stainless steel, being corrosion resistant, does not chip and is not attacked by the cement as are most other metals. Therefore the cutting edges remain sharp and the splicer can be kept clean with ease. Patented grooves prevent cement from "creeping" away from the splice.

The cutting edge of the scraper, different from all other splicers, is actually a replica of a machine tool file which, it is claimed, does a better and easier scraping job because a multitude of tiny blades smoothly shave rather than tear the emulsion from the film.

Empire Sound King Projector

The Empire Sound King, a new 16mm sound-silent projector which features professional performance and the low price of \$297.50 complete, is now in full production, it was announced recently by Laurence D. Ely, President of the Empire Projector Corporation, 60 McLean Avenue, Yonkers, New York, manufacturers of the Sound King.

The Sound King embodies many interesting principles: entire projector weighs only 27 pounds and the speaker assembly 11 pounds; by elimination of almost half the moving parts heretofore necessary, achieves a simplicity in design and operation which makes it easy to operate, maintain,

and service; elimination of the many points of contact for the film and streamlining threading procedure makes the Sound King unusually easy on film; with its advanced engineering principles Sound King has been designed for high precision mass production. This reduces the labor necessary for careful production to a point that makes an extremely low cost possible in spite of the use of highest quality components and raw materials.

According to Mr. Ely, President of the Empire Projector Corporation, "We engineered the Sound King to open a great new market that's been eagerly awaiting a high-quality projector at a price to fit their budgets."

Test Films Available in 16mm

Test films in 16mm are available from the Motion Picture Research Council, Inc., 1421 North Western Avenue, Hollywood 27, California and from the Society of Motion Picture Engineers, Hotel Pennsylvania, New York 1. The test films are of use in testing the operation of projection equipment and in checking the over-all sound quality of the auditoriums in which such equipment is used.

Sound-projector Test Film (16mm) Z52.2 is 200 feet long and is used to check the adjustment of the 16mm sound picture projection equipment and to judge the acoustics of the room in which the equipment is operated. The current version of this film contains three dialog samples, a choral-music sample, a vocal (single-voice) music sample, and a sound-effects sample. A title is superimposed over the picture indicating the particular sound difficulty which that sample demonstrates.

The Empire Sound King is a new 16mm sound-silent projector in the low-price, light-weight field.

New Projector Ends Need for Blackout

This unretouched photograph—a short time exposure made without artificial light—illustrates how Kodak's new Master Model Kodaslide Projector ends the need for total darkness when projecting slides or transparencies. Although sufficient light came from the conference room windows to permit the audience to take notes, and to permit making this photograph, the screen image is said to stand out clearly.

Enough light for note taking

The Master Model's ability to produce clear screen images under such conditions is made possible through the use of a 1000-watt projection lamp and extremely "fast" lenses, coated with a microscopically thin layer of magnesium fluoride to increase light transmission.

Bell & Howell International Division

The Bell & Howell Company, Chicago, has announced the establishment of its International Division, which will handle overseas distribution and sales for other manufacturers of photographic equipment, in addition to Bell & Howell Filmo motion picture cameras, projectors, and accessories.

ager, who will head the new division, states that contracts for exclusive export rights have been signed with the Elwood Pattern Manufacturing Co., Indianapolis, manufacturers of photo enlargers and accessories; Busch Precision Camera Corp., Chicago,

manufactures of "press type" still cameras; Webster Industries, Inc., Rochester, manufacturers of 35mm still cameras; and with the Radiant Manufacturing Corp., Chicago, manufacturers of a complete line of motion picture screens.

American Television Society Makes Fifth Annual Awards

Don McClure, President of the American Television Society, at the opening meeting of the 1947-48 Season recently at the Barbizon Plaza Hotel, presented the Society's annual awards, to the Electric Association of Chicago (Mr. Felix Van Cleef, President), to the Dramatists Guild (Mr. Victor Wolfson, Secretary), to Mr. John R. Poppele, President of the Television Broadcasters Association, and to Mr. George Shupert, Eastern Representative of Paramount Television Stations KTLA, Los Angeles and WBKB, Chicago.

In presenting the award to Mr. George Shupert, former President of The American Television Society, McClure stated.

"The purpose of the American Television Society is to advance the development of television as a cultural, educational, entertainment and advertising medium. The success or failure of this goal lies in large part in the hands of the Society's Board of Directors and its President . . . it is impossible to list spirit and leadership in cold tabulated facts. If we must cite one—the Society's yearbook . . . it was his idea; he followed through; he devoted his time to this first and most distinguished compilation of facts and opinions about this young, fast growing industry."

ATS Committees

Don McClure, President of the American Television Society recently appointed ATS Committees and Chairmen who will serve with him for the Society's 1947-1948 period of activities.

In announcing the Committees, the President of the ATS said. "Television has a momentous year ahead. With the upsurge in the number of television homes in the country's largest metropolitan areas, television now

becomes a powerful social force and a medium of entertainment, education, advertising, and cultural understanding such as the American people have never before known.

"The American Television Society is dedicated to the advancement of television. Its strength and six years of steady growth have come from this unswerving policy. To effectively implement this policy during 1947-1948, I have asked key people in television and its kindred fields to serve as committee chairmen."

Educational Committee, Edward Stasheff, Station Manager, WNYE; Public Relations Committee, Halsey Barrett, Television Promotion Manager, Columbia Broadcasting System; Nations Expansion Committee, Fred Kugel, Publisher, Television Magazine, Inc.; Evening Meetings Committee, Ed Sobol, Producer, WNBT; ATS News, Allan H. Kalmus, Television Public Relations, National Broadcasting Company; ATS Directory, Archibald Braunfeld, Braunfeld, Platto & Wolman; Library Committee, Miriam Tulin, Video Associates.

Business Theatre for Documentaries

First "business theatre" in the West was announced recently by Irving M. Levin, district manager of San Francisco Theatres, Inc. It is the Vogue Business Theatre, to be operated on week-days from 8 A. M. to 5 P. M. for the showing of 16mm or 35mm industrial, advertising, promotional, educational, travel, foreign and religious films.

The 375 seat theatre, at Sacramento and Presidio Avenue, is completely equipped for showing of regular and 16mm productions. Regular Hollywood 35mm entertainment product is screened nightly and all day Saturday and Sunday, as in the past.

Slidefilms and Slides

■ **YOUNG AMERICA FILMS, INC.**, 18 East 41st Street, New York 17 has released 12 new titles in its primary grade story series. All are in color: *Chicken Little*, *Little Red Riding Hood*, *Drakestail*, *The Gingerbread Boy*, *Noak and the Ark*, and *Kofi*, *African Boy*, *The Boy and His Goats*, *Jack and the Beanstalk*, *Puss in the Boots*, *The Straw Ox*, *Dee Dee Chou and His Dog*, and *The Rabbits and the Frogs*.

■ **VISUAL SCIENCES**, 599, Suffern, N. Y. has announced the following filmstrip:

Safety in the Laboratory (53 frames)—a portrayal of the tragic results of carelessness and stupidity in the laboratory. Cartoons are employed.

■ **JAM HANDY ORGANIZATION**, 2821 East Grand Blvd., Detroit 11, Michigan has available for sale the following series of slidefilms:

Matter and Molecules (405 frames)—a kit of six discussional slidefilms. Each film is organized into lessons designed to coincide with the accepted science curriculum of secondary schools. A review and quiz follow each lesson.

■ **SOCIETY FOR VISUAL EDUCATION, INC.**, 100 East Ohio Street, Chicago has announced two late releases:

The World's Great Madonnas (7 strips)—based on Cynthia Pearl Maus' book, *The World's Great Madonnas*. Those covered include the Madonnas of Italy, France, Spain, Germany, the Low Countries, Russia, Poland, Scandinavian Countries, England, India, China, Japan,

Central, West and South Africa, Canada, United States, Alaska, Mexico, Argentina, Brazil, Ecuador, Colombia, Peru, and Venezuela.

Nature Study Illustrated (30 strips)—a revised version by Gayle Pickwell,

noted naturalist. Subjects covered include birds, reptiles, mammals, amphibians, insects, plants, weather, and the "little journeys." The series is of value for both elementary and high-school nature study.

Current Film News

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20, and branches are distributing the following films:

Cambridge (2 reels)—portrait of one of the oldest universities in the world. The film explores the lecture halls, libraries, chapels, and dining halls, also presenting views of the River Cam.

Historic St. Paul's (2 reels)—a picture of St. Paul's Cathedral as a rebuilt by Sir Christopher Wren after the Great Fire of London in the 17th Century. Among the historical scenes is that of the dome rising high above the 1940 blitz.

Shrine of a Nation—Westminster Abbey (2 reels)—the burial place of illustrious Englishmen—sovereigns, statesmen, poets, scientists, musicians. Parliament once met in the Abbey. For centuries, the Kings and Queens of England have been crowned there.

A Modern Guide to Health (1 reel)—cartoon film illustrating common

sense health rules. Although the treatment is humorous, the suggestions for combating slovenly posture, unsuitable clothing, and nervous tension are very sound.

Instruments of the Orchestra (2 reels)—a complete introduction to the comprehension of symphonic music. The instruments are first introduced one by one. A fugue was chosen for demonstrating the full orchestra, so that it would be fairly simple for children to note the entrance of each instrument. For further simplification, the various sections of the orchestra are clearly separated. The film presents the London Symphony Orchestra, conducted by Malcolm Sargent, playing *Variations and Fugue* on a theme by Purcell, composed by Benjamin Britten with Muir Mathieson as the permanent conductor. The film is distributed in 35mm by English Films, Inc., 1560 Broadway, New York City, and 16mm sales are handled by Eastin Pictures Co., Davenport, Iowa.

Powerfully impressive and inspiring, Ten Commandments—Visualized are dramatically illustrated in dignified cartoon style for popular appeal. Simple, forceful, effective, these filmstrips are an invaluable aid to every Church, Sunday School and Bible Class in teaching the meaning and function of God's Divine Law in life today.

Ten Commandments—Visualized are furnished in sets of 10 black-and-white filmstrips having approximately 250 individual frames. Total cost \$20 per set.

■ **ENCYCLOPAEDIA BRITANNICA FILMS, INC.**, 20 N. Wacker Drive, Chicago 6 announces two new releases:

The Hare and the Tortoise (1 reel)—the first of a series on Aesop fables. Real animal characters enact the age-old story of how the turtle and the rabbit had a race. The cast includes the wise old owl, a fox, a gossipy goose, a rooster, and a raccoon. Lynwood Chance, noted wild-life photographer, solved the problems of using real, live animals.

Brush Techniques (1 reel, color)—the use of brush, palette, and water colors in painting a landscape. Eliot O'Hara, a leading artist in water colors, demonstrates the process step by step.

■ **CURTIS PUBLISHING COMPANY**, Motion Picture & Speakers Bureau, Independence Square, Philadelphia 6, Penna. is distributing a

Double XX Press

new color film covering magazine publishing.

Magazine Magic (4 reels, color)—the production of a magazine from the making of paper through the editorial work to the printing and distribution.

Staff Conferences

A film such as this is especially valuable in journalism classes, since it shows the workings of a large publishing organization.

■ **UNITED WORLD FILMS, INC.**, Bell & Howell Filmosound Library, Rockefeller Center, New York 20, has announced the following film:

Life Cycle of a Fly (1 reel)—the complete cycle of the blowfly from the laying of the eggs to the emergence of the adult insect. The development of the fly inside the pupa, the emergence of the fly from the pupal case, and its burrowing to the surface of the earth are shown.

Communications and Our Town and **How to Use the Telephone**—two films on telephonic communications.

The Hurdles

The Hurdles (1 reel)—a new film produced in collaboration with the Amateur Athletic Union and the American Olympics Committee.

■ **OFFICIAL SPORTS FILM SERVICE**, 7 South Dearborn Street, Chicago 3 is distributing a new football film sponsored by General Mills, Minneapolis:

Football-by-the-Code (3 reels)—demonstrating play situations and showing fundamentals on which the codes are based. It is a companion film to *Football-up-to-date*.

■ **CORONET INSTRUCTIONAL FILMS**, Coronet Building, Chicago 1 offers the following new productions:

Seaports of the Pacific Coast (1 reel, color or black and white)—tour of the

Entertainment Features

■ **COMMONWEALTH PICTURES CORP.**, 729 Seventh Avenue, New York 19 announces the feature productions:

Stagecoach (10 reels)—a gripping story of pioneer courage, directed by John Ford with John Wayne, Claire Trevor, Thomas Mitchell, John Carridine, Andy Devine, Donald Meek, and George Bancroft in the cast. A strange group of passengers in a stagecoach are drawn ever closer to a waiting band of Apaches.

American Empire (8 reels) a stirring drama of post Civil War days when our western empire was building, starring Richard Dix, Leo Carrillo, and Preston Foster.

■ **UNITED WORLD FILMS, INC.**, Rockefeller Center, New York 20 announces the following new recreational films:

Strange Conquest (64 min.)—drama of a scientist seeking a remedy for a malignant jungle fever and finding love. (Jane Wyatt, Lowell Gilmore)

The Cat Creeps (6 reels)—mystery in which a reporter investigating a forgotten suicide finds himself on a deserted island with an eerie black cat. The cat is important in proving that the "suicide" was murder. (Lois Collier, Fred Brady)

She Wrote the Book (8 reels)—a comedy involving a mathematics instructor who impersonates a noted novelist. (Joan Davis, Jack Oakie, Mischa Auer)

Catalogs

■ **FILMS, INC.** 330 West 42nd St., New York 18 have released their new 1947-1948 guide to full-length 16mm film programs for schools, including Technicolor releases, short subjects, and educational films. Such films as *The House on 92nd Street* are included together with many films from the pages of literature. The films are carefully classified according to study fields such as the "Social Sciences."

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20 has published their 1948 *Films from Britain* catalog. Many new films appear in this list. The general arrangement is alphabetical with a classified index, showing such groups as "Art and Literature," "Child Welfare," "Colonial Development," "Education," "Food and Agriculture," "General Interest," "Geography," "Health and Medicine," "Labor and Industry," "The Pattern of Britain," "Scientific and Technical," "Social Planning," and "World Problems."

■ **IDEAL PICTURES CORP.**, 28 East 8th Street, Chicago 5, Illinois has issued an excellent educational catalog totaling 116 pages with carefully classified sections. Classroom, auditorium, entertainment, and religious films are included in the list. Descriptions of the films are reason-

A NEW FILM RENTAL SERVICE

Best educational results from teaching films are obtained when the teacher prepares the lesson after previewing the film. Also all important film lessons should be shown at least twice with time intervening.

To enable your school to meet these educational objectives, Ideal Pictures Corporation offers a new rental arrangement. Films will be sent from the nearest office having an available print on Monday of the week for use. Shipment will be by parcel post, special delivery. You then have the use of the film until Friday. At this time the film must be returned by parcel post, special delivery.

We give you this new service at the regular catalogue rates.

To facilitate this new service we will enclose our return address label with correct postage affixed.

We Ship on Monday—

You Return by Friday

Schools still preferring our one-day booking plan will be serviced as usual. You have only to state a preference for one-day bookings.

Some **SOUND** Advice for TEACHER or PARENT

YOUR CHILDREN AND YOU

3 reels \$ 3.00 Rental
31 minutes \$60.00 Sale price

Here are practical suggestions for average imperfect parents who could adopt them all without growing wings. The subject concerns the care of young children from the first months to the age of four or five. It offers advice on sound physical training and how to prevent unnecessary fears, boredom and maladjustment by application of sound psychology.

YOUR CHILDREN'S EARS

2 reels \$.75 Rental
15 minutes \$24.00 Sale price

Few people are born deaf and all too frequently loss of hearing in later life is due to carelessness or ignorance. This film explains the structure of the ear, the close relation of the nose and throat, and the danger which illnesses as the common cold as well as childish diseases can bring to the ears.

YOUR CHILDREN'S EYES

2 reels \$.75 Rental
20 minutes \$24.00 Sale price

This film deals with the structure, function and care of the eyes and shows the diseases of the eyes and their cure. It discusses the proper care of the eyes in daily life, the danger of reading in bed, the causes and prevention of eyestrain, the need for good food and rest, the prevention and treatment of crosseyes and the causes of long and short sight.

YOUR CHILDREN'S TEETH

2 reels \$.75 Rental
14 minutes \$24.00 Sale price

Good teeth don't just happen. They need right diet and constant care. This film stresses the importance of training small children to look after their teeth; the dangers to the body brought on by tooth decay; and by animated drawings it explains the structure of the first and second teeth and their position in the jaws.

■ **NATIONAL SOCIETY FOR CRIPPLED CHILDREN AND ADULTS, INC.**, 11 South La Salle Street, Chicago 3, Illinois has available a leaflet listing films describing training programs and treatment of the physically handicapped.

Transcriptions and Recordings

■ **RCA VICTOR**, Camden, N. J. announces a new album (M-1138) of *Debussy Preludes, Book II*, recorded by E. Robert Schmitz, pianist. Debussy, always more interested in impressionistic art and poetic words, created the second book of Preludes as a sort of invocation of mists, of dead leaves, of an ancient funeral urn, a woodland study, a water nymph. In *La Puerta del Vino*, there is the atmosphere and rhythm of the habanera. *General Laxine-ecentric* is a study of a famous puppet of the Folie Bergere. *Homage a S. Pickwick, Esq., P.P.M.P.C.* is a comic fantasy on *God Save the King*. Mr. Schmitz recorded Book I several months ago (album M-1031), and as an associate and fellow countryman of Debussy, he gives an interpretation of beauty and authenticity.

THREE DOLLARS PER YEAR—35c A COPY

New
THE PROJECTOR OF THE YEAR
Now **A 16mm SOUND**
PROJECTOR DESIGNED
SPECIFICALLY FOR
CLASSROOMS

The New **VICTOR "LITE-WEIGHT"**
16mm SOUND MOTION PICTURE PROJECTOR

*Produced by the world's largest
 exclusive manufacturers of
 16mm Motion Picture Equipment*

MATCHING THE INTENSE DEMANDS on teaching today, the new Victor "Lite-Weight" makes possible the unlimited benefits of visual education for *each* classroom. Its more convenient portability (only 33 lbs.)—its new operating simplicity—its price of \$375.00 and its amazing compact design, make the Victor "Lite-Weight" the greatest 16mm teaching advancement of the year. And, remember, Victor projectors are backed by a service organization without parallel the world over. Ask for a demonstration from your local Victor headquarters or write for your copy of the Victor "Lite-Weight" booklet today.

and the Victor "Triumph 60" for auditorium use and larger audiences indoors and outdoors.

Quality-built by Bausch & Lomb for *better and longer service*

... for
brilliant pictures
from opaque
objects
and slides

PRINTED illustrations, text, photographs, drawings, and many other opaque objects, including geological and botanical specimens, *and* conventional slides are projected by the dual-purpose Model LRM Balopticon*.

Large, sharp, brilliant screen images of either slides or opaque objects are projected under illumination adequate for note-taking or sketching. This is made possible by its two fine-quality optical systems which yield

flatness of field, critical definition, and high light transmission.

Balanced illumination permits switching from opaque to slide projection without a distracting change in screen brilliance. Slides and opaque materials are protected from heat damage by a *built-in* blower cooling system. Details available in catalog E-11. Bausch & Lomb Optical Co., T-889 St. Paul St., Rochester 2, New York.

*Trademark registered U.S. Pat. Off.

No language too difficult
to reproduce on SoundScriber
—not even for beginners

SoundScriber electronic disc recording equipment provides the utmost clarity of every spoken sound. No matter how difficult the language, it is as clearly reproduced by SoundScriber as though an instructor were speaking in person.

This SoundScriber advantage is being used in schools, colleges and universities all over America to speed the individual's grasp of the language and to spread instruction over larger student groups. Students can appraise their delivery and progress by recording their own voices during practice periods.

SoundScriber recordings are made on thin, unbreakable plastic discs which can be filed for replaying any time. Any number of duplicates of a given lesson may be made, and students can play them back any time, extending the instruction period to all hours.

Full information and case histories are available upon request. Use the convenient coupon below for a free copy of the new booklet, "Basic as the Blackboard."

SOUNDSCRIBER A basic new tool in:

- Language Instruction
- Speech Correction
- Public Speaking
- Dramatics
- Commercial Instruction
- Administrative Dictation

SOUNDSCRIBER Trade Mark does for the ear

precisely what blackboard and chalk do for the eye.

ANFA Speakers Point to the Responsibilities of 16mm

"A GREAT ethical responsibility rests on all those connected with the 16mm film industry,—a responsibility which creates among them an underlying unity of purpose and a high degree of inspiration which make this industry a privileged occupation" in the opinion of Rev. Benjamin Gregory, secretary of RELIGIOUS FILMS, Ltd., a division of the J. Arthur Rank Organization, England.

Dr. Gregory spoke before a recent membership meeting of the Allied Non-Theatrical Film Association attended by over 60 representatives from 26 organizations. The meeting was chaired by ANFA President William F. Kruse, vice-president of United World Films.

International Responsibilities

The international aspect of the 16mm industry was further considered by Mr. Anthony M.A. VanTetering, president of the Netherlands Substandard Film Association. He proposed strengthening the international connections in this industry as a contribution to the "better understanding of people the world over. The 16mm field would inherit the gratitude of everyone for this important contribution to better understanding and to a more peaceful future for mankind," he said.

Social Responsibilities

In his talk, Dr. Gregory emphasized his interest in education and entertainment films—both 16 and 35mm—as well as religious subjects which are his primary

Left to right: Mr. Van Tetering, William F. Kruse, and Rev. Benjamin Gregory.

concern. He declared there is a strong sense of unity existing among all who work on non-theatrical films, though it is a highly competitive field. He made a plea that a sense of social responsibility never be lost sight of, especially in these times when the film industry is, in a very real sense, the "builder of a better age. Many different kinds of people are engaged in many phases of this great industry, and they all feel themselves to belong to one great, happy family," he said.

Appoint Visual Leaders to Community Council Committee

FIFTY-TWO well known audio-visual leaders have been appointed to the Community Council Committee of the Film Council of America. Representing all sections of the country, they have indicated their availability to assist in the organization of community councils. All of them have received packets of informational material, and most of them have attended regional conferences at which they received special instructions on local council activities.

It is suggested that they be contacted by anyone desiring personal assistance in the formation or functioning of a community film council. It is expected that additional appointments will be made to the Committee in the near future. Acceptances to date are as follows:

National Community Council Committee

ALABAMA—James Caldwell, Dir. Audio-Visual Education, U. of Alabama (University); E. E. Sechrist, Prin. Ensley High School (Birmingham).
 ARIZONA—Venice M. Lindsay, Mgr. Visual Aids Bureau (Tucson).
 ARKANSAS—Garland Beavers, Sup. Audio-Visual Instruction, State Dept. of Ed. (Little Rock).
 CALIFORNIA—Francis Noel, State Dept. of Education (Sacramento); Boyd B. Rakestraw, Assoc. Dir. University Extension, U. of Cal. (Berkeley).
 COLORADO—Miss Margaret E. Hoke, Exec. Sec. Adult Education Council of Denver; Harry M. Kauffman, Dir. Audio-Visual Service, University of Denver; Miss Lelia Trolinger, University of Colorado (Boulder).
 CONNECTICUT—Dwight Grant, Dir. Audio-Visual Ed., Hartford Public Schools (Hartford).
 FLORIDA—B. C. Riley, Dean Extension Div., University of Florida (Gainesville).
 GEORGIA—Walter S. Bell, Dir. Audio-Visual Ed., Board of Education (Atlanta).
 IDAHO—O. D. Cole, Ass't Supt. of Schools (Boise).
 ILLINOIS—Lewis V. Peterson, Dir. Visual Aids Serv., U. of Illinois (Champaign).
 INDIANA—Ernest Tiemann, Audio-Visual Center, U. of Indiana (Bloomington).
 IOWA—Lee W. Cochran, Exec. Ass't, Extension Div., U. of Iowa (Iowa City).
 KANSAS—Fred Montgomery, Dir. Audio-Visual Aids, U. of Kansas (Lawrence); Eric Tebow, Institute of Citizenship, Kansas State College (Manhattan).
 KENTUCKY—Gordon C. Godbey, Ass't. U. Extension, U. of Kentucky (Lexington).
 LOUISIANA—Robert H. Momt, Dir. Dept. Visual Ed., Louisiana Polytechnic Inst. (Ruston).
 MAINE—Joseph I. Hall, School of Education, U. of Maine (Orono).
 MICHIGAN—Ford Lemler, Bureau of Visual Education, U. of Michigan (Ann Arbor).
 MINNESOTA—Paul Wendt, Dir. Audio-Visual Ed., U. of Minnesota (Minneapolis).
 MISSISSIPPI—H. D. Worthy, Prof. of Education, U. of Mississippi (University).
 MISSOURI—L. A. Pinkney, Dir. Dept. of Visual Instruction, Kansas City Schools; Nelle Jenkinson, St. Louis Board of Education (St. Louis).
 MONTANA—Richard P. Mitchell, Eastern State Normal School (Billings).
 NEBRASKA—James Taylor, Bureau of Audio-Visual Aids, U. of Nebraska (Lincoln).
 NEW HAMPSHIRE—Austin L. Olney, Audio Visual Center, U. of N. H. (Durham).
 NEW JERSEY—Miss Marguerite Kirk, Dir. Dept. Libraries, Visual Aids and Radio, Board of Education (Newark).

Next DAVI Conference At Atlantic City

THE next conference of the Department of Audio-Visual Instruction, NEA, will be held in Atlantic City February 23, 24, and 25. The Conference will be held concurrently with the Convention of the American Association of School Administrators. The Chairman of the Atlantic City Conference Committee for DAVI is James W. Brown of Syracuse University.

Kansas City

The National Executive Committee of DAVI met in Kansas City October 26 and 27. The following officers and national delegates were present: Stephen M. Corey, University of Chicago, Chicago, Illinois, president; F. Dean McClusky, University of California, Los Angeles, California, first vice president; Vernon G. Dameron, National Education Association, Washington, D. C., executive secretary; Roger Albright, Motion Picture Association of America, Washington, D. C.; E. Winifred Crawford, Montclair Public Schools, Montclair, New Jersey; Helen Rachford, Los Angeles County Schools, Los Angeles, California; Grace Fisher Ramsey, American Museum of Natural History, New York, N. Y.; C. R. Reagan, Visual Education, Inc., Austin, Texas; Thurman White, Film Council of America, Chicago, Illinois.

NEW MEXICO—J. T. Reid, Dir. Extension Div., U. of New Mexico (Albuquerque).
 NEW YORK—James W. Brown, Assoc. Dir. and Coordinator for Audio-Visual Services, Syracuse University (Syracuse).
 NORTH CAROLINA—Hoyt R. Galvin, Dir. Public Library (Charlotte). Charles F. Milner, Head Bureau of Visual Ed., U. of N. C. (Chapel Hill).
 NORTH DAKOTA—T. W. Thordarson, State Dir., Div. of Supervised Study, North Dakota Agricultural College (Fargo).
 OHIO—R. Russel Munn, Librarian Akron Public Library (Akron); Virginia M. Beard, Head Film Bureau, Cleveland Public Library; William S. Hockman, (Lakewood).
 OKLAHOMA—William R. Fulton, Audio-Visual Aids Specialist, U. of Okla. (Norman).
 OREGON—Amo DeBernardis, Supt. Dept. of Audio-Visual Ed., Portland Public Schools; Curtis Reid, Head Dept. of Visual Instr., Oregon State System of Higher Education (Corvallis).
 PENNSYLVANIA—I. C. Boerlin, Dir. Audio-Visual Aids Library, Pa. State College.
 RHODE ISLAND—Henry E. Childs, Sup. Visual Ed. Dept. of Public Schools (Providence).
 TENNESSEE—James Arnold, University of Tennessee (Knoxville).
 TEXAS—Don W. McCavick, Dir. of Visual Instr. Bureau, U. of Texas (Austin).
 VERMONT—H. B. Eldred, Dir. Robert Hull Fleming Museum, U. of Vermont (Burlington).
 VIRGINIA—Mrs. Aubry Lee Graham (Falls Church); Mrs. Margaret W. Hudson, Sup. Audio-Visual Ed. Dept., Richmond Public Schools; Jess Ogden, Extension Division, U. of Virginia (University).
 WASHINGTON—A. J. Foy Cross, Dir. Visual Education and Extension Service, Central Washington College of Education (Ellensburg); Mrs. Grace Stevenson, Head Adult Education Department, Seattle Public Library.
 WYOMING—Clarence D. Jayne, Head Film Library, U. of Wyoming (Laramie).

8 GREAT DEANNA DURBIN CLASSICS

NOW AVAILABLE IN 16MM

HERE THEY ARE, IN ORDER OF THEIR ORIGINAL RELEASE

1. "THREE SMART GIRLS"

2. "100 MEN AND A GIRL"

3. "MAD ABOUT MUSIC"

4. "THAT CERTAIN AGE"

5. "THREE SMART GIRLS GROW UP"

6. "FIRST LOVE"

7. "IT'S A DATE"

8. "SPRING PARADE"

Nowhere can you find more charming, more entertaining, more suitable film fare for school audiences of all ages and interests than these favorite Deanna Durbin features. They have enjoyed a popularity unequalled by any other group of films.

Termed by a leading Visual Aid publication, "Invariably clean, pleasant, intensely human, and enhanced with fine music. Teen-agers as well as oldsters are captivated by the series." A reprint of this article is available upon request.

These eight great films and an incomparable host of others, educational and religious, as well as recreational, drawn from the world's finest productions, are available to you through your local United World Dealer. Educational film can be obtained on outright purchase - Religious film on long term lease.

3 NEW FILMS..

*carefully produced
for careful selection*

SAILPLANE...exciting film on peace-time gliding, the only picture of its kind. A story about flying's safest, yet most thrilling experience. With camera fastened to the wings... a

250-pound motorless plane takes the spectator soaring high over cliffs and ocean. Other sequences show take-off, piloting, construction, assembly, windcurrents and landings. Color or black and white, 11 minutes. Produced by James H. Love and John W. Love.

PIPEVINE BUTTERFLY...

intimate phases in the development of this exotic butterfly. Detailed studies from the egg through larva and chrysalis to adult Pipevine Swallowtail with its curious habits and activities. Two versions—elementary, (11 minutes) for younger students; scientific, (16 minutes) for advanced study. Color or black and white. A T. Taylor Production.

GLACIER PARK STUDIES

...a field trip on the history, geology and outstanding life forms of the Park. Glaciers, mountain structures, lake formations, mountain sheep, moose, bears, etc.;

unusual flowers and many varieties of mountain species. The film also illustrates basic geologic concepts. Produced by Guy Haselton... 22 minutes... color and sound.

"Salute to 16" Evidences Improved Relations

STRIKING evidence of the improvement of relations between the 16mm and 35mm branches of the motion picture industry and its publics was given when the Association Motion Picture Advertisers, 30-year old professional organization of film advertising and publicity men, launched its 1947 fall program at New York's *Town Hall Club* in the form of a "Salute to 16mm." A packed house heard guest-speaker William F. Kruse, president of the Allied Non-Theatrical Film Association and vice president of United World Films, discuss the relationship of the two "widths" in the widely varied film-use fields as enumerated by Eric Johnston in his initial annual report to the industry: "Theatres, schools, factories, churches, labor unions, community forums, public agencies . . . All these are within the area of our attention." "It so happens that 'all these' fields, so well enumerated by Mr. Johnston, also form the 'area of attention' of the 16mm field, and with one exception they are served primarily by the 16mm film," Mr. Kruse pointed out.

16mm Reaches a New Group of Potential Movie-Goers

"Today the 16mm film enables us to carry 'the motion picture,' in the sense that Mr. Johnston used the word, to millions of people daily who have heretofore been apathetic or even hostile to the film. Somebody has figured out that there are only about 50 million more or less regular movie theatre goers in this country. We should be drawing in at least twice that many, but there are a lot of people who have never been sold on the idea that movies are important in their lives. You will find those potential audiences in clubs and churches, in trade union and political gatherings, or perhaps just staying home. The 16mm film goes right to those groups, winning new friends daily because of the new services our industry is now able to render.

35mm and 16mm Work Together

"In the broad public movements in which the motion picture has been playing a constantly growing part, you will find that the 35mm and the 16mm forces have been working together without even the slightest sign of friction or conflict. Each has been doing its own job in its own way, always toward a common end that was good for our whole industry and good for the widely varied audience we both serve.

"Actually the 16:35 division is not even one that separates the theatrical from the non-theatrical field. Before the war that may have been largely true—but not today. Without exception, all of the majors are turning to the 16mm film at least for purposes of quasi-theatrical exploitation of hitherto undeveloped foreign markets. Many newsreel houses and some regular theatres, too, have 16mm projectors for running local news beats, and not a few 16mm color productions have been blown up for theatrical use in 35. Conversely, the non-theatrical field uses lots of 35mm film, in the form of negative in production, and in the form of acetate positive for filmstrips.

(Concluded on page 558)

The "Inside Story" of a remarkable 16 mm. Sound Projector...

This amazing cut-away view of the interior of the Ampro "Premier-20" 16mm. Sound Projector reveals the complex precision mechanism and advanced design of this unusual unit. It presents graphically the many functional parts which assure Ampro's crisp, brilliant pictures and high-fidelity sound reproduction.

Both sound and silent films can be shown on this Ampro 16mm. projector. Compact, easy to operate, it is ideally adapted for use

in homes, clubs, churches, schools, sales-rooms and for exhibits. Has ample volume and illumination for ordinary auditoriums. Thousands of Ampro 16mm. sound projectors have made remarkable performance records in many branches of the U. S. Government—in leading school systems, libraries, universities, churches—in top industrial concerns.

Send for circular—Write in today for fully illustrated circular giving details, specifications and prices on the Ampro "Premier-20" 16mm. Sound-on-Film Projector.

Amproslide Model "30-D"

Two Projectors in One . . . for Filmstrips and 2" x 2" slides

This remarkable unit offers—extra brilliant illumination—spit-second interchangeability from slides to filmstrips and back—simplified, quick threading for filmstrips—and simpler focusing, operating and cleaning.

A new equation in modern teaching...

+

TEXTBOOK + CORRELATED FILMSTRIP

= AN IDEAL TEACHING COMBINATION

The new S.V.E. correlated textbook-filmstrip program is an ideal combination of teaching tools, a co-ordination of the printed page and the projected picture. These filmstrips are correlated with specific textbook series, the merits of each medium being utilized to the maximum. Through the combination of the printed page and projected pictures, the student assimilates and retains a substantially greater amount of the textbook information.

Several series of the new correlated filmstrips are ready for immediate delivery. Others are in production. Be sure to check the list of filmstrips and the books with which they have been correlated. Write today. Address Dept. C-238

Myers Resigns from Staff

Edward T. Myers announces his resignation as Managing Editor of EDUCATIONAL SCREEN. His resignation becomes effective following the December issue. He has carried out the duties of managing editor since the death of Nelson L. Greene, founder of the magazine.

Mr. Myers came to EDUCATIONAL SCREEN at the end of 1946 from Automatic Electric Company where he served as Technical Editor of Instructional Materials. Since his association with the SCREEN, he has taken an active part in the Film Council movement. Recently, he directed the documentary film, *Housing America's Students*, which was selected by a jury of experts for showing at the "Films of the World Festival."

SEFPS Makes a Community Health Film

Alarmed over health conditions in its home state, the North Carolina State Board of Health determined that a film should be made showing citizens how they can do their part in helping the community to stay well.

Working together with the Southern Educational Film Production Service, Athens, Ga., the North Carolina public health specialists worked out a film showing what community health work has done, what it is doing now, how it cooperates with private physicians, and what kind of citizen participation it needs to be more effective. The film, entitled *Mr. Williams Wakes up*, is available from the Film Section, North Carolina State Board of Health, Raleigh, N. C. in both 16 and 35mm.

Best Materials Are Utilization-Centered

This is a history making issue of the SCREEN. Most of its pages are devoted to a single subject—the interests of textbook publishers in producing audio-visual materials directly correlated with the textbooks they publish. Here is recorded new evidence that points up important generalizations about the concept, production, and use of audio-visual teaching materials.

Exactly two years ago, in the December 1945 issue of the SCREEN, Charles F. Hoban, Jr. foresaw the coming of this day. Writing about "Films and Textbooks" he said, "Investigations currently being made by textbook publishers, both individually and collectively, indicate that the correlation of textbook and film is approaching the stage where something will be done about it." And something has been done about it—in an important way.

No Longer a Notion

No longer is it merely a notion that audio-visual materials could be produced to correlate directly with specific textbooks. They have been produced and by some of the best known and most respected textbook publishers, and more are in the making. Although each company has attacked this problem from a slightly different point of view, their solutions add up to solid conviction that textbooks correlated with films are many times more powerful as a teaching medium than either one alone.

To get the most authoritative statements of what is being done in the production of text-correlated visual materials we have gone to the publishers themselves. The articles have been written by the publishers' own "visual specialists"—four of them employed directly by publishers, and one the author of a series of texts. They have expressed the points of view that underlie their planning and production and report the progress of their companies to date.

The first text-film productions show that creative, constructive, and original thinking has been done, and a surprisingly wide range of subject matter has been touched upon in these exploratory productions. Already there has been text-film correlation as widely varied as primary grade pre-reading and advanced college biology levels—as geography and engineering drawing. There are materials here to give supplementary information, to motivate interests, and to aid in the training of skills. There are valuable new materials here to be used in a great variety of classroom learning situations.

In deciding upon the special emphasis of this issue of the SCREEN we were not unmindful of the fact that the established producers of audio-visual

materials for the classroom have always been concerned with the content of textbooks. We know, too, that in recent months there has been a closer cooperation and a freer exchange of information among film producers and book publishers. This kind of coordinated planning is all a part of the same trend toward the advent of more useful classroom teaching materials. They will be more useful because they are "utilization-centered."

"Utilization-Centered"

When materials of instruction are "utilization-centered" they are planned and produced without ever losing sight of the specific ways in which they will be used. Too many motion pictures and filmstrips have been planned in the past as productions complete in themselves—as "movies," or as merely a sequence of pictures ON a subject, rather than as concrete materials related TO a subject that could be used for better understanding.

Now there is evidence in the recent releases of motion picture and filmstrip producers that more realistic attention is being given to the use that will be made of them. More of their productions appear to be "utilization-centered." They are not expecting that the picture will do the whole job, but that it will be used along with other materials—even textbooks (!)—to provide learning experiences. And the textbook publishers are recognizing more frankly and boldly than ever before that textbooks cannot provide all the learning experiences that are needed in classroom instruction. Those publishers who are producing correlated visual materials are proceeding obviously from the basic assumption that films and textbooks will be used together. Necessarily their visual productions are utilization-centered.

Each of the articles in this issue recording the interest of a specific textbook publisher in the production of audio-visual materials is an important contribution by itself. But the combination of all presented together brings their activities into new perspective. Added up, these articles re-emphasize some important generalizations about the production and use of audio-visual materials:

1. Instructional motion pictures and filmstrips are materials for providing learning experiences.
2. Good teaching involves the use of a wide variety of experiences, both visual and verbal.
3. Best instructional materials result when they are produced with constant regard for the way in which they will be used—when they are utilization-centered. —Paul C. Reed.

A SYMPOSIUM:

The Correlation of Films With Textbooks

WHILE THE integration of films with the curriculum has been discussed in educational circles since the early 1920's, the actual correlation of films with given textbooks by the publishers is a comparatively recent event. That this is a natural step in the visualizing of the curriculum is obvious when it is remembered that illustrations in textbooks have increased rapidly since their introduction by Comenius in the 17th Century. In fact many recent books have gone so far as to subordinate the printed word to the illustrations. If any further pictorialization were to occur, projected pictures would seem the logical step.

Historically, it would appear that the first step in the correlation of films and texts was the listing of materials which could be used together. The Society for Visual Education, Inc. did just this in the 1930's. Early in this same period, the University of Chicago, in conjunction with Erpi (now Encyclopaedia Britannica Films), produced a group of films correlated with courses of study. Audio materials, namely records, were correlated with *The Sounds of French* by Otto F. Bond, published jointly as the Heath-Chicago French series. In 1943, the Society for Visual Education began issuing a filmstrip each month in conjunction with *Coronet Magazine*.

This year at least five publishers have entered the field with films directly correlated with their texts. All five are using the filmstrip, and one employs both the filmstrip and the motion picture.

—Edward T. Myers.

Text-Films---New Teaching Tools

AS OTHER publishers are doing, McGraw-Hill has entered the field of educational motion pictures. This trend in the production of audio-visual materials is not an unconsidered move on the part of textbook publishers; it has come about largely as the result of an increasingly heavy accent on audio-visual programs in school curricula all over the country. Naturally, with its already considerable interest in the school field, McGraw-Hill was among the first to investigate the potential of a motion picture program. The flood of training films released during the war tipped the balance of opinion so heavily in favor of the effectiveness of visual education that we could not discount it, even if we would.

ALBERT J. ROSENBERG, Manager
Text-Film Department,
McGraw-Hill Book Company

Before we started to make definite plans, we investigated the progress of those who had already produced films, balancing their successes against their failures, so that we might know where to place the weight of our own efforts. Among the many things we wanted to know were: the actual and potential use of educational motion pictures, production costs and film selling prices, the relative value of black and white versus color—to name only a few. Only with answers to such questions could we know in what direction our own plans would go.

Preliminary spadework turned up some rather surprising information. First we discovered that the weight of opinion indicated that motion pictures of themselves were not capable of carrying the entire teaching burden, although this had been the contention of some of the more over-enthusiastic backers of the training film during the war period. We felt that some other medium was needed if a thorough job of education with adequate carryover was to be accomplished. In our investigations into the films made by the government and the Office of Education, we discovered that better learning resulted when a pocket manual was supplied to accompany the motion picture and reproduce the subject matter of the film for further study. This was one way of securing retention of material, but again, we felt that something more than mere repetition of the film script in booklet form was needed for effective learning.

Another interesting item to come to light showed teachers to be overwhelmingly in favor of motion pictures developed in series form, as opposed to isolated films which touched one aspect of a subject only. Educators naturally favored those motion pictures which could be adapted to their programs over the entire semester thus sparing them the necessity for searching among dissociated films for those which they could only hope would supplement the various aspects of the term's work.

In another direction we ran into a problem that had been only partially solved—and that none too successfully. When other producers had turned to textbooks for authori-

tative information on which to base their films, they met with contradictory statements on almost any given subject. Seldom did even two texts in a field agree on procedure or terminology. When individual authors were consulted, the story was much the same. The compromises necessary to meet the claims of a variety of textbooks invariably resulted in weakening the effectiveness of the motion pictures.

With these findings placed squarely before us, we began to draw up our plan of action. Our investigations had convinced us that some kind of film program would have to be included in our future plans, but just what form it was to take was still not evident. Many ideas were suggested, and almost as many rejected, before the Text-Film program as we now know it was evolved.

Finally our plans crystallized. In essence, this was to be our procedure: a series of motion pictures which would follow the general scope of certain selected McGraw-Hill textbooks and adhere closely to the terminology and general plan employed in them. In this way, we hoped to avoid the pitfall of a muddled presentation, unavoidable if we continued the general practice of trying to resolve opposing approaches of several textbooks in one series of films. These motion pictures would dramatize

situations and present factual information in terms of realistic, lasting visual images. The average film would run about 15 minutes, and contain only as much material as could be readily absorbed in the ordinary class period. Follow-up filmstrips would then take over the instruction begun in the films and encourage group participation. Each frame of the filmstrip would contain a question designed to get the student to describe, discuss or evaluate what he had seen in the motion picture, thereby clarifying the material and fixing it more firmly in his mind.

This combination of series of motion pictures and filmstrips as teaching units had been decided on after long deliberation. Our investigations of the performance records of both media had confirmed our belief that neither one by itself could do as good a teaching job as when coordinated for use together. We felt that only by using the peculiar "teaching potential" exclusive with each, and correlating both with a specific textbook could we give the teacher the best possible package of teaching tools for the job he must do. We planned a teacher's manual, containing specific recommendations on film use. In this way, we hoped

Thinking in three dimensions is facilitated by the film, "Orthographic Projection."

Filmstrips in a Geography Program

CLARENCE WOODROW SORENSEN
Traveler and Geography Lecturer
Silver Burdett Company

CURRENTLY a filmstrip program in geography is being planned cooperatively by Silver Burdett Company and the Society for Visual Education. Silver Burdett Company is the publisher of *Man in His World*, a new series of geography textbooks; of which series, the writer is one of the authors as well as the author of the filmstrips which are designed to accompany the basic texts. The filmstrips will be offered for sale both by the publishers and by the Society for Visual Education.

Pictures are basic materials in geography. The field of study is the world—its vast and varied lands—its two billion people. No one can visit every part of this world and learn about it all first-hand. But pictures can bring the world's landscapes into the classroom. Pupils need to learn to read pictures as well as maps and text.

The picture reading program may be much extended, and the geography program greatly enriched, by the use of filmstrips correlated with the basic texts. The additional pictures help to widen a pupil's experience in any given area. Filmstrips provide an opportunity for pupils to apply previously acquired knowledge and skills in new but comparable situations. There may be a genuine thrill of discovery as a class explores for itself the new landscapes on the screen, reading significant ideas out of the various pictures. In many instances the use of filmstrips has been an important step in leading pupils to think independently about the problems of real people, living in real places—a worthy goal in any social studies program.

Every teacher knows, of course, that the filmstrip does not accomplish these things alone. It is only one of many educational tools. And its effectiveness depends in large measure upon the successful use of some of the other tools, including the textbook. Some ideas demand the kind of basic, explanatory treatment which only the textbook provides. Other ideas are peculiarly appropriate for emphasis in a filmstrip. The two together, filmstrip and textbook, make an excellent team.

The very need of teamwork and of integration suggests that filmstrips should be planned in conjunction with the basic texts. After pupils in the fourth grade, for example, have completed a chapter on Norway, they need more than simply some additional pictures of Norway. A miscellany of such pictures may dull instead of sharpen the concepts already developed in the text, even though the pictures individually are of high geographic quality. The critical need is for pictures so selected and arranged that they

reinforce and extend the basic ideas already established. The additional visual material should provide an opportunity for geographic thinking. But the steps which the child takes in this direction must be measured in advance. They could be too short as well as impossibly long. Thus the filmstrip must be designed after careful consideration of the material in the textbook. Correlation is not achieved by accident.

The planning of filmstrips in connection with particular textbooks assures the user of correct grade placement of the visual material. It is true that pictures are a kind of universal language. An individual photograph may appear both in a fourth grade book and in a college text. There is nothing of universal value, however, in a particular selection and arrangement of the pictures covering a specific region. Each grade level demands its own organization of picture material considering the fundamental purposes of that year's work.

No single group of pictures of the Congo, for example, would be adequate for both the fourth grade and the sixth grade. Commonly, in geography, the fourth grader

used with Mavor: GENERAL
BIOLOGY

THE PRIMARY function of a college publisher is the production of textbooks and reference works. In many subjects an important aspect of such books is the character of the illustrations which are actually the oldest form of visual aids. The intelligent use of photographs, drawings, maps and charts, and their integration with the text matter are "musts" for a textbook which is to be educationally useful and capable of forming the basis of a course in the college curriculum.

An illustration is far more than a mere picture. An illustration is a functional drawing or photograph, possessing a specific teaching purpose. It thus is an educational tool, added to the printed word in order to further comprehension of the subject. To fulfill this function of being a teaching tool, the illustration should be geared directly to the content of the text; it should be designed for a particular learning level; and above all it should be simple and clear. As much attention should be given to these visual aids in textbooks as to the editing of the text matter. Particularly in these days of overcrowded classrooms and overworked professors, better visual aids in the texts will accelerate both the learning and the teaching processes.

There are, however, obvious limits to the inclusion of visual materials in textbooks, governed as they are by physical restrictions. Thus the visual potentialities of some texts can not be realized entirely within the two covers of the book; they extend into the realm of classroom presentation. It is therefore logical to incorporate this additional teaching material, which has its inception in the text, into such screen form as is educationally advisable and economically feasible.

A visual aid may be defined as a teaching tool which conveys information and stimulates thinking more effectively than the printed or spoken word. Many kinds of visual aids are no strangers to the college classroom: the blackboard, the wall map or chart, photographs, and models. The demonstration experiment and the laboratory exercise are forms of visual aids which give the student a realistic experience. It is often difficult or impractical to bring students to the actual material or to bring the material into the classroom for group examination and discussion. To meet this situation, lantern slides and opaque projection came into being—precursors of a flood of many types of screen visual aids. A recent arrival on the scene is the slidefilm, which combines the physical basis of the motion picture film with the teaching advantages of still photography and projection.

At the outset it should be realized that screen visual aids are not a panacea for all teaching ills. They are not a substitute for the textbook, they do not replace the instructor, nor do they lessen the responsibility of the student in the learning process. They are not an amusing digression wherewith the class is diverted from

(Concluded on page 563)

The Correlating of Projected Picture Aids With Textbooks

By MADELINE BITTMANN
Educational Aids Editor
D. C. Heath and Company

IN CONSIDERING the correlation of projected aids with textbooks, the viewpoint of D. C. Heath and Company is one primarily concerned with the principles of teaching procedure and educational practice that have created the need for these teaching materials. When the effectiveness of pictures as teaching tools was first realized, maps, graphs, diagrams, picture illustrations were adapted to the instructional materials then in use.

Student workbooks and practice sheets and large-sized wall displays for the classroom have since been widely employed as teaching tools or aids. Teaching with these aids in the classroom was based on a planned relationship with textbooks by which the aids were geared to the text and used interchangeably with it. The materials which have been found to be least effective and least educationally sound have been weeded out.

The adaptation of projected pictures for educational use has increased the potential values of using illustrative materials for instructional purposes. The diversity among the kinds of projected aids—motion pictures, filmstrips, slides, and so on—offers a wide range of possibilities for expanding the teaching program. With these teaching aids, teachers can provide means for enriching learning experiences in the classroom and can develop a variety of teaching procedures. The planning of these procedures and the placement of projected aids in the teaching program with relation to other instructional materials is important to successful and efficient utilization of the aids. The particular teaching qualities of the different projected aids makes selection of kind an important factor in utilization. These qualities or characteristics that are unique to each kind help to determine the application of the aids to given teaching purposes. Teaching experience is indicating that there is a growing demand for adapting aids to use for these various teaching purposes or needs. In practice there is an overlapping in the application of the different kinds of aids to various teaching needs. These can be isolated only in generalization. However, by means of the generalization, we can view the needs within the teaching pattern as a whole. One of the teaching needs is for projected aids that are specifically tied into, or correlated with, the subject matter in the teaching program.

In devising a plan to fulfill this need, the textbook has proved to be adaptable for this type of correlative agent. Text-correlated aids are based on the continuity and organization of subject matter in the text which makes it possible to adapt the aids for use with specific subject matter in relation to a given or organized teaching procedure. Also, the different kinds of projected aids can be correlated with the text. Thus there is a basis for selecting the kind or kinds for correlation according to the teaching purposes to which each is best suited. Although the correlation of projected aids does not enter into the making of the textbooks and are not essential to using the text, publishers of the books are considered to be the most logical suppliers of this type of correlated aids.

D. C. Heath and Company in complying with this need plans to cooperate in supplying text-correlated aids. Since the number of possibilities for developing the aids is as great as the number of kinds of aids, several factors are to be considered in selecting the one or more media that are most suitable for this purpose. Admittedly the economics of producing and marketing the aids, along with the expressed educational needs for them, influence the choice of kind. However, it is not without the initial recommendations of educators—recognition that there is a particular need and place for text-correlated aids in the teaching program—that the selection is made. To this publisher, these requisites are found to be most completely fulfilled in the filmstrip which has been chosen for the first

of the Heath-Film Correlations now in the making. The present plan for filmstrip production is a modest program of correlated text-aids based on the most widely felt needs as determined by current educational studies. These filmstrips are being designed in accordance with the educational principles that are developed in the textbooks. Much attention is given to analyzing the purpose and technique for using filmstrips in the classroom so that these aids will provide the satisfying correlated or extended learning experiences for which they are intended. In relation to the expressed needs for text-correlations in the various fields of subject matter in which Heath publishes textbooks, the program for filmstrip production will be extended.

The needs for projected pictures other than text-correlated aids are delegated to technical specialists and the makers of projected teaching materials. To these specialists is designated the task of research and experiment in further developing the possibilities offered in projected aids as effective instructional tools. In connection with these types of aids, means are provided for correlating them with Heath textbooks and the suggested teaching procedures and activities connected with them. The suggestions given in Teachers Guides that accompany our textbooks are intended to be adaptable to the wide variety of teaching situations that range from the requirements of comprehensive teaching programs to the limitations of lesser extensive programs. Therefore it is necessary to provide for selections from many kinds of teaching materials that are applicable to the subject matter and the kind of teaching situation involved. The correlation of these aids in relation to a planned procedure with a given text helps the teacher select the

needed teaching aids and to use them effectively. Insofar as these suggestions are of value to teachers, Heath as well as other publishers cooperates in providing such correlations and making them practical for use in the classroom.

Thus, from several approaches it is apparent that the current trend toward combining a variety of instructional materials in the teaching program is considered good educational procedure. This trend seems to indicate generally that the principle of correlation is fundamental to current practice in the utilization of teaching aids. A continuing trend in this direction will require corresponding degrees of emphasis on the supplying of correlated teaching aids. Likewise, in proportion to the particular needs for text-correlated aids, publishers will provide them according to the specifications of educators and the rate of utilization in the educational program.

Whoa, Dern Ye!

ERIC BENDER
Visual Aids Editor
Row, Peterson & Co.

THEY USED to tell a story about a farmer who bought his first automobile, was given a few driving lessons, and then took the car out alone. When he failed to take the first curve properly, and headed for the ditch, all he could think to do was to haul back on the steering wheel and howl, "Whoa, dern ye! Whoa!"

Well, that's what a lifetime of reflex-conditioning will do for you! What happened was that the farmer had changed his methods without changing his thinking to match.

People who make a good and profitable adjustment to new things always stop dead still, study and absorb fundamentals rather than externals, then go ahead in the new direction, or at the new speed. Has this always been done by people called upon to deal with visual education? Hardly! Too many have continued with their old thinking, adding projectors and films "on the fly" much as they would order janitor supplies or lubricating oil for the school bus—just new parts for a going business.

What happens is that the new visual tools are used without full understanding. If there were an all-wise dictator, governing these matters, he would probably require that every school person and every producer of teaching materials read, study, and digest Edgar Dale's book, *Audio-Visual Methods in Teaching*. That would be getting down to fundamentals and would provide the kind of thinking necessary for the purchase of equipment and the operation of an audio-visual program.

As things stand now, old thinking is interfering with development and wise use of materials. There's a good deal of "Whoa, dern ye!" in visual education. As a producer of a new type of visual instructional material, we would be much happier if certain attitudes and understandings were firmly implanted among users of film. For example:

1. Ownership of audio-visual equipment does not imply possession of an audio-visual program. One does not become a surgeon by owning a case of surgical instruments.

2. What the director of visual education says and does about visual education is not so important as what the classroom teacher says and does when she is on her own. Success of the program depends upon whether she is trained to handle it properly, and is willing to do so.

3. Audio-visual tools are specific tools. Motion pictures are not the universal answer to every teaching problem, nor are filmstrips, or slides, or records, or trips to the zoo.

4. Audio-visual methods will not supplant the teacher and the book, nor are they so intended.

5. A filmstrip is not a boiled-down motion picture; a motion picture is not an expanded filmstrip.

6. A visual tool is neither a time-saver nor a time-waster. If better understanding is the end-result desired, the use of film will sometimes take more time and sometimes less than at present.

And now, with the advent of the textbook-correlated film, we should very much like to have these two things understood:

7. A non-correlated film cannot be compared with a book-correlated film covering the same subject matter. That would be like comparing a Chevrolet coupe with one of the engines from a four-engined airplane. One is complete in itself, the other isn't.

8. A correlated film cannot be judged by previewing the film alone. It can be evaluated only as a part of a larger program.

A number of textbook publishers have announced their intentions of producing films correlated with their own textbook programs. Reluctance on the part of the user to apply new thinking may be one obstacle to the use of such films.

Let's examine the kind of thinking that goes into the production of a coordinated film—at least the type we are publishing. A textbook publisher knows quite well what the limitations of the word and the book can be. When we publish a book we know what parts of it the teacher and the children will find easy, less easy, least easy. But we have done, in the book, as much as *can* be done in a book. No schoolbook is uniform in difficulty—not even a little preprimer with a total of perhaps twenty words—the simplest of all textbooks.

(Concluded on page 565)

Indiana University, Bloomington

Behind the Scenes at the Airport

(Teaching Films, Inc., 2 W. 20th Street, New York City 11, N. Y.) 9 min. 16mm. sound, black and white. 1947. \$50.00.

Description of Contents:

The film shows a small boy looking down from an airplane to the field below, where he lands for a short stop before boarding another plane for Boston. The friendly pilot of the plane which Ray has just left greets him with the salutation, "Hi there, young fellow." Ray tells the pilot that he is waiting for a plane to Boston and that travelling by air is simply a problem of landing in one plane and taking off in another.

The pilot suggests to Ray that there is much more to flying than that and invites him to follow him on a tour of inspection as they visit the scenes behind the airport. The film then shows mechanics at work in the overhaul of engines, the reservation force, the pilot and chief pilot checking weather maps and routing a plane, the dispatcher, the radio operator, the food crew, and the gas and oil attendants. As the 4:30 plane for Boston is called at Gate 4 and Ray boards the plane, the commentary concludes by indicating that the services of about sixty people are required to assure the flight of the plane.

Committee Appraisal:

In units of work on the primary and intermediate levels dealing with air transportation, this film should be useful in showing the contribution of those crew members and employees of the air line, other than the pilot and stewardess, who make possible the flight. The committee felt that the film was well-organized and pitched at the children's interest level. The report is factual and sincere. It contains little of the false glamour and drama usually found in a film on air transportation.

What Is Money?

(Coronet Productions, 64 East South Water Street, Chicago 1, Illinois) 10 minutes, 16 mm, sound, color. 1947. \$75.00. Also available in black and white. \$45.00.

Description of Contents:

The travels of a five-dollar bill illustrate the various purposes of money, the advantages of money as a medium of exchange, and the requirements for satisfactory money.

Tom takes a five-dollar bill to the hardware store to buy a gallon of paint, which is an example of the exchange of money for goods. The store owner then pays an electrician, which is an exchange of money for services.

The primitive system of barter and its many disadvantages, especially for modern civilization, are illustrated at this point. The characteristics of satisfactory money—obvious and uniform value, portability, divisibility, durability, and difficulty of counterfeiting—and the work of the U. S. government in regulating its monetary system are discussed and shown.

The use of a bank check as a substitute for money is illustrated when a woman cashes a check at a service station and then buys a pair of book-ends in a gift shop. The clerk there, after receiving the five-dollar bill in her

"What Is Money." describes the historical phase and the requirements for money from Tom's point of view. Primitive barter is contrasted with money as a medium of exchange.

Coronet Productions

pay envelope, takes it to a radio shop as a payment on her new radio, which illustrates the use of money as a measure of future value. Tom, in turn, is paid by the radio shop owner for his work there. When he deposits the five-dollar bill in the bank, he uses it as a storehouse of future value.

Following a review of the purposes which the five-dollar bill has served, the role of money in international business, trade, and travel is mentioned briefly.

Committee Appraisal:

This film is usually well organized, with everyday incidents illustrating important facts about the use of money. Moreover, the historical phase, describing the development of money and the requirements which money must meet, is presented from Tom's point of view, thus tying the whole subject together. Good photography and sound contribute also to make this a very useful film for elementary and junior high school social studies.

Artisans of Florence

(International Film Foundation Inc., Suite 1000, 1600 Broadway, New York 19, N. Y.) 20 minutes, 16mm. sound, black and white. 1947. \$100.00 less 10% educational discount.

Description of Contents:

This is a picture of the activities of Florentine artisans at work, at home, and with their friends.

Opening scenes show the beauty of Florence which survived the Nazi destruction. Artistry is in the very air of Florence, and talented Florentines begin training at an early age in schools such as the Institute of Art, founded by Benvenuto Cellini. Students in ceramics, life drawing, and sculpturing classes typify artisans who study as they work—one as a leather worker, another as a dirt farmer, belying the idea that artists must live apart from the world.

At noon the students go home by street car or bicycle. The film follows Graziella, an art instructor, to her home, where her father, a highly skilled artisan and his apprentices make silver boxes decorated with intricate enamelled designs. The traditions of the artisan are discussed and some of the work is shown.

When an order of compacts is completed, Graziella and her mother take them to a jewelry shop on the famed Ponte Vecchio, a very old bridge crowded with shops. She also visits a watch maker, a ring maker, and Torchio's leather shop, where the workers are tooling leather objects and applying gold leaf.

The scene next shifts to a farm where one of the art students lives and works. The system of land owners and peasant workers is described briefly as members of the family are shown cultivating olive trees and harvesting grapes by primitive methods. After work, the young artist becomes absorbed in his current sculpturing project until Graziella and Torchio, chaperoned by her parents, arrive for the grape festival, which is the outstanding event of the harvest season.

Committee Appraisal:

Emphasizing the vital role of beauty in the everyday life of the average Florentine, whether he is an artisan or a mere sun-basker at the foot of a famed statue, this film pictures the untroubled absorption of a recently war-ravaged city in a creative art. The spirit of Florence is vividly portrayed by means of excellent photography and natural characters. Appropriate background music and simple narration round out the impression of an unaffected and authentic picturization of a way of life. The emphasis on the importance of beauty and widespread participation in artistic endeavor should be of interest to art classes, hobby groups, and general interest groups from junior high school through the adult level.

Sitting Right

(Grant, Florey, and Williams, 441 Lexington Avenue, New York 17, N. Y.) 9 minutes, 16 mm, sound, color. 1946. \$90.00. Also available in black and white. \$50.00.

Description of Contents:

A group of girls demonstrate the importance of good posture for good looks. Opening with a series of brief incidents in which girls are rebuked by their elders for poor posture, the film goes ahead to point out that one's mental attitude is very important and that good posture is fun. It suggests observing movie stars and local girls who seem to be well poised.

In a committee meeting, various girls illustrate right and wrong positions for each part of the body while sitting,

Grant, Florey and Williams

Good posture, in sitting as well as in standing, is important for appearance and health.

according to the girl's build and the style of chair. One girl also shows how to sit down and stand up smoothly and how to cross one's legs gracefully.

Again the commentator emphasizes the importance of a good mental approach. Each girl must be willing to work on herself day after day, exercising and practicing not only at school but also at home in her room before a mirror. After her good posture has become automatic, a girl can forget about it and concentrate on having a good time.

Committee Appraisal:

A completely non-academic approach to the subject of posture which should nevertheless be welcomed by teachers of physical education, guidance, dramatics, and home economics, as well as by sponsors of girls' clubs, is the chief value of this film. Taking advantage of the average girl's desire for something at least approaching Hollywood glamour, it presents effectively a few rules for good posture which are generally shrugged off as just more adult nonsense. Good photography, a sufficient variety of girl models for at least some self-identification, and a pleasantly presented commentary add their appeal for girls from junior high school to college age.

Instruments of the Orchestra

(British Information Services, Suite 5124, 30 Rockefeller Plaza, New York 20, N. Y.) 20 minutes, 16mm, sound, black and white, \$37.50. Produced by the Crown Film Unit, Great Britain.

Description of Contents:

After a brief musical introduction, Dr. Malcolm Sargent explains the characteristics of the various instruments of a symphony orchestra as they are played by members of the London Symphony Orchestra. Speaking from the podium, he

British Information Services

"Instruments of the Orchestra" treats the four sections of the Orchestra as well as the individual instruments.

points out that all of the instruments are scraped, blown, or banged. Using themes from *The Variations and Fugue on a Theme of Purcell*, by Benjamin Britten, members of the woodwind section, the brass section, the string section, and the percussion section demonstrate in turn each instrument as its characteristic tones become prominent in the number.

Before combining the instruments again, Dr. Sargent explains the structure of the fugue in simple terms. He then conducts the entire orchestra with vigor and authority as they complete the Purcell "Variation and Fugue."

Committee Appraisal:

An informal atmosphere, outstanding musicianship, engaging music, and excellent sound recording combine to make this a very useful addition to music appreciation materials now available. Dr. Sargent's approach to the demonstration should inspire interest and self-confidence in the uninitiated and a sense of renewing a pleasant acquaintance in those more familiar with the orchestra. The unorthodox arrangement of the instruments for easier identification by the audience would need to be explained by the teacher, since it is not mentioned in the film, but, in general, fairly accurate basic information is skillfully presented for all age levels from the intermediate grades to adult, with emphasis on the school situation.

THE LITERATURE IN

VISUAL INSTRUCTION

ETTA SCHNEIDER RESS, Editor

BOOK REVIEW

- **Grierson on Documentary**—Forsyth Hardy, editor with American notes by Richard Griffith and Mary Losey. Harcourt, Brace and Company, 383 Madison Ave. New York. 1947. 324pp. \$3.75.

Forsyth Hardy has compiled a collection of the film writings of John Grierson, the noted British producer of documentary motion pictures for mass educational purposes. The word, "documentary," was derived from *documentaire*, a term applied by the French to their travel films but later associated with films of social analysis—with films dramatizing the complex issues of modern living. Grierson developed this form of the nonfiction film in England and created a large body of experts who have carried on the leadership in this field. The development of the documentary was especially favored in England where government support was readily forthcoming, especially through the Empire Marketing Board.

Grierson felt, after producing *Drifters* (1929), a trial film, that "in film he had found the most useful medium of his purposes as a sociologist." He wrote:

"The documentary film movement was from the beginning an adventure in public observation . . . The basic force behind it was social, not aesthetic. It was a desire to make drama from the ordinary to set against the prevailing drama of the extraordinary; a desire to bring the citizen's mind in from the ends of the earth to the story, his own story, of what was happening under his nose. From this came our insistence on the drama of the doorstep . . ."

Chapters included in the book bear such titles as "Propaganda and Education," "The Library in an International World," "The Challenge of Peace," "The Cinema of Ideas," "First Principles of Documentary," "Films and the Community," and "The Course of Realism."

- **ANFA Year Book and Audio-Visual Directory—1947-48 Edition**—Allied Non-Theatrical Film Association, 303 Lexington Avenue, New York 16. \$2.

The new edition of this annual directory includes the names, addresses, and connections of over 2,000 leaders in the production and use of non-theatrical motion pictures. Besides the "Audio-Visual Who's Who" section, there are lists of 16mm producers, film libraries, manufacturers, film sponsors, and photographic publications. It is interesting to note that listings of non-theatrical film producers have increased from 55 to 200 in the past year. Articles by prominent individuals in the field have been chosen by the editor, Dr. William Lewin, to clarify the current status of 16mm.

- **Composing for the Films**—Hanns Eisler—Oxford University Press, New York. 1947. 165p.

An excellent book, providing authoritative information on the relationship between the musical score and the visual portion of motion pictures. The author bases his statements on his experiences as director of the Film Music Project of the New School for Social Research in New York and on his later experience as composer of film music for Hollywood films. "The guiding point of view," he writes in the Preface, "is that of the composer who

tries to become conscious of the requirements, conditions, and intrinsic obstacles of his work."

Hanns Eisler is well-known to users of documentary films for his interesting score in *A Child Went Forth* and *The New Earth*, among others. It is his strong belief, with which other creative film workers would not differ, that the musical portion of a film must be planned together with the visual, in order that a coordinated whole will emerge. This is far from the practice in Hollywood.

Music In Films

The book is amply documented by examples of good and bad uses of music, as depicted in Hollywood and foreign film productions. The criticism of current practice is extremely constructive, since most of the book is devoted to specific principles and suggestions regarding the part that music should play in the films. From his work in Hollywood, Mr. Eisler has tried to distinguish why the system is so steeped in cliché's, and why originality is discouraged even among those composers who have been engaged because of their talent.

The attitude of Hollywood producers is startlingly illustrated in this quotation from a typical Hollywood contract:

All material composed, submitted, added, or in-shall automatically become the property of the interpolated by the Writer pursuant to this agreement Corporation, which, for this purpose, shall be deemed the author thereof, the Writer acting entirely as the Corporation's employee . . . the Writer grants to the Corporation the right to use, adapt and change the same or any part thereof and to combine the same with other works of the writer or of any other person to the extent that the Corporation may see fit, including the right to add to, subtract from, arrange, rearrange, verser and adapt such material in any picture in any manner . . .

Although the special ability of its author would make this a required reference book for those who are engaged in film music, it is also recommended for those who are interested in the art of the motion picture for the unique and invaluable information it contains.

ADMINISTRATION

- **Planning School Buildings for Tomorrow's Educational Program: Proceedings**—*Bulletin of the School of Education*, Indiana University, Bloomington, vol. 23, no. 5, September, 1947. \$1.

A topic of great importance today is the planning of school buildings for tomorrow's education. This bulletin reports the proceedings of a conference held last summer for school administrators, school board members, architects, and others interested in the construction, maintenance, and operation of school buildings. Speakers included prominent educators, architects, and engineers. Range of the talks may be better understood by a glance at a few of the chapter headings: "The Current School Building Problem," "A Guide for Planning School Plants," "Modern School Lighting," "The Relation of the Architect to the Educational Authorities," "School Building Planning in England," and a summary.

WILLIAM S. HOCKMAN, Editor, 1616 Marlowe Avenue, Lakewood 7, Ohio

South India Holds First Visual Aids Institute

By BLAISE LEVAI, M.A. B.D.*

I WRITE this on the eve of India's Independence. There is excitement all about us. It can be felt among every class of people; beggars, sweepers, shopkeepers, teachers, and students. Through trial and pain the long-sought day appears, bringing to the peoples of India reassurance and hope. Many see the vital significance of the day in the light of vision and perspective. They discern the kind of character that the future of the new India demands. Many students recognize the seriousness of the day. The largest work is just beginning.

In May we held a Photographic and Audio-Visual Aids Institute. It was the first of this type ever held in South India, and was under the auspices of the National Christian Council. We met at Kodaikanal. The Rev. H. R. Feger of Fatehgarh, United Provinces, and the Rev. R. G. Korteling of Punganur, South India, were in charge.

Altogether seven sessions were held during this three-day institute, and both sound and silent films were shown. Mr. Feger lectured on the selection and use of equipment, the elements of good composition, the care of equipment in the tropics, and on the use of educational films.

Utilization of Materials

Mr. Korteling, acting as convener, had general charge of all sessions and gave talks on the principles of photography, picture types, types of lens and their use, and on the educational use of slides and filmstrips. Mr. C. Heins gave talks on flat pictures, and on the use of kodachrome slides in devotional services. Several films on how to take good movies were shown. It fell to my lot to conduct the opening devotional service, and I used some of the Elsie Anna Wood slides on the Life of Christ.

The Available Material

One of the most interesting of the sessions was that in which we discussed the actual use of visual materials in our program. Most of those present were encouraged, if not enthused, at the evidence of ground-work in the building up of film and filmstrip libraries in both North and South India. A brief survey of equipment in use by the 38 persons present at this session showed 16 projectors for slides and filmstrips, 10 projectors

* Teacher, Voorhees College, Vellore, North Arcot, India.

for silent film, 2 for sound film, while 7 persons reported complete touring outfits with electric power units for village work. This represents, of course, only a small part of the total of such equipment available in South India among mission and church groups.

Findings of the Institute

What were the "findings" of the Institute? I shall give them in the original terms of their formulation:

1. We are impressed by the increasing possibilities of audio-visual education in all fields of work: evangelism, education, village health service, etc. and of the rapid increase of individual interest in this type of service.

2. We are impressed with the need for more training in the wider use of equipment, not only for missionary personnel alert to the power of visual aids, but for the Indian worker. There is need, also, to develop film and filmstrip libraries. We need depots where equipment and replacement parts can be secured.

3. The great essential is the sharing and the pooling of experience. We propose, therefore, that there be

Children's Productions
The motion picture, "A Little Child," was adapted from the book, written by Jessie and Elizabeth Orton Jones by special permission of the authors and the Viking Press.

formed among us an Audio-Visual Education Club for South India with Mr. Korteling acting as chairman.

4. We request the Y.M.C.A. of Calcutta to enlarge its sphere of service in the audio-visual field to the extent of stocking equipment and supplies, and in the building up of a rental film library.

5. We suggest that a center be developed where filmstrips can be made to order from pictures and charts, which will be supplied by individual customers.

6. We recommend to the National Christian Council in our area that it make further representations to the Government on the need for special consideration being shown by Customs in the matter of importing, for non-profit purposes, 16mm films for school and village use.

7. We suggest that the four Christian Councils in our area (Madras, Andhras, Hyderabad State, and Karnatic) form committees on visual education and plan visual aid institutes for their separate areas.

8. We wish to impress, also, upon church bodies the importance of keeping pictorial records of important historical events such as the coming union of the churches of South India.

Slide Project

Here at Voorhees we are doing a good deal of work with slide projectors in our classroom work. My special project right now is the making of a series of kodachromes in a series I call *Life at Voorhees College*. It is great fun. Incidentally, the week that I spent at Lake Geneva (Second International Workshop in Visual Education, summer of 1945) was very profitable for me, and the copies of EDUCATIONAL SCREEN, which were later sent me, were greatly appreciated. They were read and re-read and even now are still in circulation.

New Stewardship Materials

Two Dollars

Two Dollars is a filmstrip in color with both printed and recorded (78 rpm) script on the basic problem of how to handle money. It is based on the experiences of the famous Brown and Gay families, and its lively cartoons, music, and sound effects will compel the attention and nudge the mind into doing some thinking in the area of stewardship. It deserves to be widely known. It will be useful in the local church, in the conference program, in the official board meeting, and in the youth conference. It was produced by Alexander C. Ferguson and Everett C. Parker and is distributed by Pilgrim Press, Boston 8, and ought to be stocked by all alert dealers.

A Christian and His Money

Another filmstrip, *A Christian and His Money*, has been released by Church Screen Productions (St. Louis 12). Pictorially, it is a sequence of 39 frames of photography and cartoons. It is accompanied by a printed script. The ratio of words to pictures is low, averaging not more than twenty. Since there are titles on the frames, leaders who do not want to be confined to the script may use them as an outline for their own remarks. The discussion questions, nine of them, are provocative. Here is one: "If a Christian spends and shares his money in a Christian manner, is it all right if he is not

Church Screen Productions

Joe Smith rushes into his Sunday school class with a filmstrip which he has failed to preview. This frame is from "Using Filmstrips in the Church."

Christian about the way he earns it?" While *Two Dollars* is beamed at adults primarily, this filmstrip would be useful with the Juniors and up.

And Now I See

Those desiring a film on stewardship ought to investigate *And Now I See* (United Lutheran) which should soon be available for all churches. It was made by Cathedral and runs approximately 40 minutes.

The Ten Commandments Visualized

Several years ago a project for the visualizing of Luther's Catechism originated in the American Lutheran Church. The Wartburg Film Service (Waverly, Iowa) joined in the undertaking. Other Lutheran groups were invited and became enthusiastic partners. The first phase of this work, the visualization of the Ten Commandments, has been completed, and the ten filmstrips of the series will be known as *The Ten Commandments Visualized*.

The series is keyed to the eleven-to-fourteen age bracket. Dramatic illustration, in black and white, apply the Commandments to actual life. The ten filmstrips approximate 250 frames, or about 25 to the filmstrip. Each frame carries a caption, and there is no script nor utilization suggestions with the series (as yet).

A dignified cartoon-style (by Owen Fitzgerald) is maintained throughout, and in many places, the visualization of some idea is very neat and forceful. Not so in other places. In the First Commandment, a neat little teen-ager is primping up a bit, and this frame (No. 22) is supposed to visualize the worship of self. However, presenting the First Commandment as the key-stone of an arch (frame 26) is excellent. In many spots the scenario for the Fifth (Shall Not Kill) wanders pretty far afield. Boys helping the aged across the street, and the benevolence of a Sunday school class, do not sharply visualize the central meaning of this Commandment. Showing a school girl getting off a bus without paying her fare (No. 16 of the Seventh) does fit. Thus, weak and far-fetched visualizations are mixed with strong ones.

On the technical side, the prayers and the scripture quotations on certain frames are in type too small for easy legibility, an inexcusable fault. The rectangles of black, which carry captions in certain frames, (as in No. 23 of the Seventh) occupy too large a proportion of the frame and spoil the artistic balance. Other frames, such as No. 23 of the Second and No. 22 of the First, unburdened by this clumsy device, are neat and artistic.

Many users and prospective users outside the Lutheran communions, and perhaps some within, will be troubled by the accent which falls, time and time again, on fear as a motive in religious living. The visualizations do not amply qualify the meaning of fear. Those in other communions will be bothered by the adherence to Luther's arbitrary numbering of the Commandments.

The church, taken as a whole, eagerly awaits the visualization of biblical materials. It will use this present series while a more adequate, universal, and technically excellent visualization of the Commandments is developed. In the meantime, our thanks, to the Lutherans for pioneering.

Filmstrips on Visual Methods

THE newest materials on visual materials and methodology are two filmstrips: *Using Filmstrips In The Church*, produced by Church Screen Productions (5622 Enright Ave., St. Louis 12), and *The Use of the Visual Method In the Church*, a production of Congregational Missions Council (287 Fourth Ave., N.Y.).

Basic Material for Better Utilization

The script and the photography in *Using Filmstrips In The Church* was done by Paul R. Kidd, and the cartoon sequences by Bill Jackson. There are 60 frames, with a title on each frame to guide and assist those who wish to develop their own commentary for this material. The first 11 frames tell what a filmstrip is, and the next 12, the untrained teacher's clumsy and unhappy results in "showing" a filmstrip to his class. The following 24 frames show the general principles of filmstrip use, and the last ten call attention to present useful materials in this media. The word-picture ratio is good, being approximately 28 per picture. Several makes of projectors are shown, and all the basic points are touched upon. There are no suggested questions

for discussion but the average audience will be ready to talk about filmstrips and their use after seeing this filmstrip. Here is basic material for all who are interested in prompting a better utilization of filmstrip materials, and it should be found in the kit of all who conduct courses, speak in institutes, and meet with the leaders of local churches.

What Visual Aids Can Do

The Use of the Visual Method In The Church was produced by E. C. Parker and A. B. Ferguson for the Missions Council of the Congregational Missions Council. It has both printed and recorded (78 rpm) script. The narration is by Edgar Stehli and Alexander Scourby, the cartoons by John Sewell and the background music by William Meeder. The entire 91 frames were photographed in "Americolor."

Missions Council of the Congregational Christian Churches Johnny Visual says, "Here is my platform." A still from the filmstrip "The Use of Visual Method in the Church."

The narrator and Johnny Visual Materials divide the script, with JVM doing most of the talking. He is set going by overhearing certain church school teachers misrepresenting the effectiveness of visual aids. After a few sprightly comments on what visual aids can and cannot do, he settles down to tell a group of church school teachers what the various aids are, what each is good for, and to give the general principles for their use. JVM does a pretty good job of it, too. The picture sequence carries a lot of the burden of teaching,

Johnny Visual asks, "would you take your class back in time or forward in space?"

Johnny Visual points to the various forms of audio-visual education. "Choose the best . . . (for) the problem at hand."

Missions Council of the Congregational Christian Churches Train a group as projectionists so that there will always be somebody to operate the machines.

but not enough. More time was put on the script, very likely, than on the development of the picture sequence. The excellent quality of the script can be suggested by several quotations: (JVM talking)

Would you take your class back in time or forward in space from here and now to there and then?

And don't forget. I have many sides—a lot of capacities. Don't use me in one form all the time. My personality is split a dozen ways—records, slides, films, filmstrips. Each is a teaching tool with a special talent.

(JVM telling about a good teacher) Then she briefly recalled Billy's questions and told the children to watch for the answers as they saw the pictures.

Approximately the last half of the filmstrip gives a case history of a school making effective use of visual materials, documenting it by giving a half dozen illustrations of the way certain teachers utilized materials.

Cartoons are used throughout. Several frames are repeated, not too good a practice. The word ratio is held down to approximately 19½ per frame. In the recorded script, the word velocity is, roundly, 106 words per minute. There are some pauses, but not enough. The music comes up too quickly in many places, tending to attract attention to itself. The mind should be given more time to accomplish comprehension and integration, activities basic to learning.

Here is a filmstrip for the workers' conference, for the visual aids institute and seminar, the summer school, and the college course. Wherever visual materials need to be better understood, and their sound utilization more keenly appreciated, this filmstrip will be useful.

A slightly older filmstrip (1946), *The Slidefilm In Teaching*, produced by Young America Films (18 E. 41st St., N.Y. 17) should be bracketed with the above. It is a sequence of 48 frames of cartoons showing what a filmstrip is, what it can be used for in the teaching process, and showing the proper use of this media. Each frame carries carefully worded captions. There is no script. It should have great value in teaching visual methodology.

Correspondence

After reading the article on *The Home* last month, Mrs. Dorothy Carl of Lincoln, Nebraska, writes that she, too, has been wondering about running some sound films as silents. By accident, the operator could

Church-Craft Pictures

"Christmas Blessings" is a full-length service on the meaning of Christmas, 37 slides, 3 hymn-slides.

not get the sound going. Thus of necessity, she found that films could be used silent. Her children helped her ad lib a commentary as they used the film, *Care of Pets*, twice in a vacation school unit. Have others had similar experiences?

Professor Paul E. Garber of the Department of Bible of Agnes Scott College (Decatur, Ga.) wants us to suggest some good films, both sound and silent, and some good slides and filmstrips "which would be authoritative, pictorially qualitative, and usable at the college level for the teaching of the Bible." Does anything qualify? He might look over the two new Cathedral films, *Amos* and *Queen Esther*. The five films of the "2000 Years Ago Series" (United World Films) might prove helpful. Such films as *The Kindled Flame* and *The First Easter*, both British-made, should be useful. However, his inquiry calls attention to the critical lack of quality films on the Bible and closely related subjects. This is the core of the church's need.

Since it really is one world that we have, some of the visual equipment concerns and the producers of materials will be interested in the article by Mr. Levai of India. Indians leaders will need a lot of projectors and materials when the literacy movement gathers a little more momentum. The village will be the center for education, and there are no less than 700,000 of them.

City Zone State

Let's Utilize United Nations

ALL of us hope that the nations of the world will use the United Nations to settle their differences instead of resorting to war. But how many of us realize that we also have a responsibility to use the resources of the United Nations to help achieve that purpose?

Visual educators are challenged by the United Nations to take part in one of the most unique educational programs of all time. A world-wide program of education for peace is being sponsored and brought into being by this world organization of nations. This is the first time in political and educational history that such a thing has happened.

UN Using Visual Education

It also is modern because it is using visual education as an integral part of its program. This visual program is a well-rounded one, not limited to one device but using the coordinated power of various devices, such as posters, charts, filmstrips, and motion pictures.

These resources are not just in the planning stage. A number of them already are available. It is our responsibility to use them.

The most effective visual education program usually is one that utilizes various coordinated resources. It also is one which requires planning to decide what objectives of information or attitude are most desirable at a particular point and which particular device or devices will best serve the purposes at hand.

Visual materials being issued by the United Nations already are varied enough in type and objective to fit into such a program. Additional materials will make the possibilities even broader.

Posters

A number of posters are available from the Department of Public Information of the United Nations, Lake Success, N. Y. Some of these posters are very well organized information charts. Others definitely seek to create certain attitudes. Some combine the two purposes. Teachers must choose wisely with definite objectives in mind. Sometimes a sequence of objectives will be served by a well chosen sequence of posters.

Art Competition

In order to encourage the artists of the world to contribute their talents toward helping to express the aims and purposes of the world organization, the United Nations conducts a "Poster of the Year" Competition. The 1947 contest was won by a Canadian, Henry Eveleigh, whose design shows a pair of hands planting a

JOHN E. DUGAN, Editor
Head, Department of Education
Beaver College, Jenkintown, Pa.

young tree whose leaves are the flags of the member nations. This poster will be produced in a number of languages this fall and given world-wide distribution.

Posters can be used to set the stage for slide films and motion pictures or as "follow-ups" subsequent to the showing of such films.

Slidefilms

Two slidefilms currently are available from the Films and Visual Information Division, Department of Public Information, United Nations, Lake Success, N. Y. Both of the slidefilms are 35mm single frame in type.

The United Nations at Work—The Secretariat is a slidefilm which describes the organization of the United Nations. It is 90 frames in length and uses photographs, illustrations and charts to show how the organization works. It deals primarily with the eight departments of the Secretariat and their relationship to the major organs. Commentator's notes accompany the film. The film is available in English, French, Spanish, or Russian.

The Economic and Social Council (Foundation for Peace) is another slidefilm which now is available from the same source. It describes the organization of the

Films of the Nations

"People's Charter" shows that the job of maintaining peace is for the people and stresses the role of the United Nations Organization.

Economic and Social Council and its role in building the peace. It deals with the commissions, sub-commissions and specialized agencies and their relationship to the Economic and Social Council. Commentator's notes and a discussion guide are available for use with the film. English, French, Spanish, and Russian versions are available.

Both of these slidefilms may be obtained free of charge by schools, clubs, churches, community organizations, etc., on application to the above source.

Motion Picture

The first educational motion picture to be produced by the United Nations Film Board is called *The People's Charter*. It was released in September of this year, and it is being distributed in the United States by Films of the Nations, Inc., 55 West 45th Street, New York 19, N. Y. The film is two reels in length, with a running time of 17 minutes. It may be obtained from the above distributor for a loan service charge or by outright purchase.

The Peoples' Charter is made entirely of authentic documentary material which shows how, in the midst of war, the idea of the United Nations was born and later brought to actual realization. Over a quarter of a million feet of authentic film from seventeen nations was screened by the United Nations film unit in selecting shots for the picture. Both the photography and the sound track are good. They are coordinated very well so that each reinforces the effectiveness of the other.

Development of the United Nations

This film first shows the need which existed for a world organization for peace. It shows how step by

"Salute to 16"

(Concluded from page 538)

"(The great social contribution of the 16mm film has been that it has *liberated* the motion picture from the dread menace of fire hazard. It may not have seemed such a big thing when, by manufacturers' convention, it was established once and for all that no nitrate stock would ever be made less than 35mm wide, but that one enlightened step of self-restraint and common purpose enabled the motion picture to merge from the fire-proof booth and go forth as the emissary—the missionary—of our industry into every school, church, hospital, institution, club, factory, and home throughout the whole world. Starting out as a means of amusement, it has grown into a most potent and indispensable medium of mass communication.)

Expansion of the Medium Is Good

"There are those in our theatrical industry who view these vastly expanded channels of their medium with some misgiving. (It is so pleasant to sit in mellow and nostalgic worship of the great god of things as they used to be.) Terry Ramsaye tells us that even the great Edison held back a long time from the very idea of building a screen-image movie projector, for fear that such a mass audience device might cut down his take from existing coin-operated peepshows. Fifty years ago the theatre screen was crying to be born. It WAS born, and with it a great industry, our industry. . ."

Films of the Nations, Inc.

The effectiveness of the United Nations depends upon the people.

step the idea and the practical plan for such an organization came through the stages of development and fruition. The importance of the role of the peoples of the world in the effectiveness of the United Nations is strongly stressed. As the title implies, the United Nations is presented throughout the film as an organization of the peoples of the world for the peoples' peace of the world.

The film is not recommended for elementary grades; but it can be used very effectively in junior and senior high school and in college and adult groups. It can be used to convey information, to create an attitude, or to initiate a discussion about the United Nations. It is a film made in such a way that it will lend itself to any one of these purposes or to any combination of them. Much, of course, depends upon the resourcefulness of the teacher or group leader.

The Peoples' Charter is the first of fourteen United Nations short films to be produced for the United Nations Film Board in eleven different countries. The second film, *Maps We Live By*, dealing with the international job of mapping the world, is being produced by the National Film Board of Canada and is expected to be released very shortly.

ANFA Speakers Point to the Responsibilities of 16mm.

(Concluded from page 534)

The Netherlands Sub-Standard Film Association, as described by Mr. Van Tetering, has 400 members, including 27 film importers and libraries, 15 producers and laboratories, 200 exhibitors, and 100 member organizations not concerned with the business aspects of the industry. This latter group, it was pointed out, corresponds more closely to the Film Councils in this country, with which ANFA is cooperating closely.

ANFA members Harry Post and Tom Brandon contributed to the discussion from their observations on trips to Europe. Both agreed there was an enormous potential market there for American film products, Mr. Brandon adding that he wasn't sure but what we may have "missed the boat" with respect to this opportunity.

of
ELEVEN**

Of the eleven subjects (in the classification of Peoples and Lands of the World) recognized at the 1947 Chicago Films of the World Festival as 'the best documentary, informational, and factual films produced throughout the world', **FOUR WERE FILMS PRODUCED BY THE INTERNATIONAL FILM FOUNDATION.**

The titles, **BREAD AND WINE** and **CHILDREN OF RUSSIA** were selected as **TWO** of the **SIX** subjects chosen for the public showing October 25. Two other subjects, **MARY VISITS POLAND** and **ARTISANS OF FLORENCE** were among the five titles designated by the judges for honorable mention.

Another International Film Foundation production, **BOUNDARY LINES**, was one of the six films selected by the Chicago judges in the international interdependence classification.

Julien Bryan and his International Film Foundation staff have accepted this tribute from Chicago as a **CHALLENGE TO CONTINUE TO PRODUCE HIGH QUALITY FILMS** "to promote better understanding between peoples of different nations, races, and religions".

ARE THESE FIVE "BEST" FILMS IN YOUR LIBRARY? IF NOT, WHY NOT ORDER THEM TODAY FROM YOUR VISUAL EDUCATION DEALER?

Film Strips in a Geography Program

(Concluded from page 545)

learns about the Congo as a certain kind of place, a hot, rainy, forest-covered land near the equator. The appropriate pictures in this study should emphasize ways of living which reflect this habitat. The sixth grader, on the other hand, sees the same region as the *Belgian Congo*. It is a political unit, an extension of European influences into an undeveloped tropical land, peopled by members of a different race. Appropriate pictures at this level include the kind which were important to the fourth grader, *plus* pictures which illustrate political and social problems much beyond the understanding of the younger pupils.

Enthusiasm for the filmstrip is entirely justifiable, but it must not blind us to the fact that even the best filmstrip is not used in a vacuum. It is used with other educational tools. If, therefore, the filmstrip is planned without regard to other important instruments such as the textbook, there is likely to be contradiction, duplication, or confusion. Conversely, the building of the two together is an assurance of a well-balanced, thoroughly-integrated learning program in geography.

Michigan A-V Conference—Jan. 28-30

The third annual Michigan Audio-Visual Conference will be held January 28, 29, and 30 at the Horace Rackham Educational Memorial, Detroit, Michigan. The 1948 Conference is again planned for representatives of education, industry, film and equipment producers, governmental agencies, and public groups to consider problems of audio-visual education.

Sessions especially planned for directors of industrial training programs, public librarians, directors of state visual education programs, and public relations specialists will be added to the varied program of the past.

Some of the issues to be considered will be the following: Who is responsible for energizing a state's audio-visual program? What is the place of sponsored films in the schools? Who should direct the school's audio-visual program? To whom should the community look for films and stimulations for their use?

E. A. Lowe Becomes Director

The Board of Regents of the University System of Georgia announces the appointment of E. A. Lowe as director of the Division of General Extension of the University of Georgia. A native Georgian, Mr. Lowe comes to the Division from the University of Alabama Medical Center.

Film Forums at Cleveland Library

A series of five film forums has been presented recently at the Cleveland Public Library in cooperation with the Cleveland Council on World Affairs. Topics and films were as follows: (1) "Stricken Children" with the film *Seeds of Destiny*; (2) "Between Two Worlds" with the films, *Spotlight on the Balkans* and *Greece* (March of Time); (3) "Problem and Promise" with *Palestine* (March of Time); (4) "India Today" with *India* (March of Time); and (5) "China Looks Forward" with *China* (March of Time). A discussion leader was selected for each meeting, and related reading materials were brought to the forum's attention.

Indiana Directors of A-V Education Organize

The organization of a state association of directors of audio-visual education has been proposed by the officers of the Indianapolis Visual Education Section of the Indiana State Teacher's Association. AVID (Audio-Visual Instruction Directors' Association) has been proposed as the name.

The purposes of AVID will be (1) to develop and coordinate programs at the five State Teachers' Association sectional meetings; (2) to provide an opportunity for state leaders to meet periodically for a discussion of mutual problems; (3) to develop needed projects; (4) to coordinate and extend the state program for audio-visual education; and (5) to increase the effectiveness of audio-visual programs in the schools of the state.

Notes

"Florida, Wealth or Waste?"

With this provocative title, the Southern Educational Film Production Service filmed a 22 minute sound motion picture in color for the purpose of telling the dramatic story of Florida's fight for permanent prosperity despite such odds as winds, freezes, fires, unstable markets, and its dependence upon the tourist business. Ninth graders in Florida schools, who study a text with this same provocative title are the film's immediate audience.

Hold Fourth Annual Institute at Museum

The American Museum of Natural History will hold its Fourth Annual Audio-Visual Aids Institute in the main auditorium on January 9th and 10th, 1948. On Friday afternoon, January 9th, the program will consist of previews of several new, short teaching films, and the evening will be devoted to the previewing of a special feature film. The Saturday morning session will be divided into two sections, the underlying theme being "AUDIO-VISUAL AIDS IN ACTION." The first part of the program will include demonstration classes beginning with the lower primary and ending with the senior high school levels. In the second half of the program the five films selected for receiving the Museum "Oscar" will be projected and the "Oscar", second and third prizes and two honorable mentions will be presented to the winning schools.

Following a special luncheon served in the Museum Cafeteria, the General Session in the afternoon Saturday will be concerned with a presentation of "The Radio And Mass Media of Communication In Education" by Professor Charles Siepmann, Department of Communications, New York University and a discussion of the present problems in Visual Education, by Dr. Byron D. Stuart, Chairman of Visual Education Committee of the New Jersey State Museum, Trenton, N. J.

First International Festival of Documentaries

The first international festival of documentary films opened in Edinburgh late last summer. John Grierson, director of Mass Communication and Public Information Sections of UNESCO spoke at the opening meeting. A booklet containing his address and a review of all films shown has been published by the Albyn Press, Edinburgh.

Corey Speaks at Calif. Conference

The State Conference of the Audio-Visual Education Association of California and the Curriculum-Audio-Visual Education Workshop of the California State Department of Education met at Sacramento College last month.

Dr. Stephen M. Corey, Professor of Educational Psychology and Director of the Audio-Visual Instructional Materials Center at the University of Chicago spoke on "The Unique Contribution of Audio-Visual Education to the Curriculum."

MARIE LOUISE

"An absorbing story . . . a picture that reaches the heart with uncommon skill and finesse . . . made in the great tradition of French films about children." Critics are warm in their praise of this appealing story of a French girl who found refuge in Switzerland.

**IMPORTANT — HEART-WARMING
BEAUTIFUL**

Its humanity, its simplicity make this picture unusual. Dialogue is in French and German, with ample English titles. Breathtaking photography. This film won an Academy award for the best original screen play of 1945.

Section meetings at the Conference emphasized four topics: perceptual learning, development of attitudes, rethinking the curriculum in the light of audio-visual materials available, and the evaluation of results. Mr. Jamison Handy, president of the Jam Handy Organization talked about "Communication's Challenge to Education."

Other sessions of the Conference included material on specific grade levels, subject matter areas, developing teaching competency, field trips, democratic living, using the camera and recorder in developing a sequence of learning, and administrative programs. The spring conference will be held in San Diego, April 24-25.

American Museum Previews Science Films

Science teachers and visual instruction specialists witnessed a preview of four science pictures at the American Museum of Natural History in New York recently. Headliner was a Technicolor subject entitled, *Latitude and Longitude*, produced in England by G. B. Instructional Films in collaboration with the Royal Geographic Society. At the Society's London premises, this film was the subject of an extensive exhibit; it was also chosen for showing by the jury of the "Films of the World Festival," held in Chicago last month. At the Brussels "World Films Festival," it was declared the best educational film of the year.

Other films on the program were in the field of biology and included, *The Development of the Chick*, *Earthworms*; and *Life Cycle of a Fly*. American distribution is being handled by United World Films, Inc.

Navy Research A-V Project at Pennsylvania

Principles which should govern the scientific development and effective use of sound motion pictures will be sought under a research project started for the Navy Department at the Pennsylvania State College at State College, Pa.

Types and characteristics of instructional films which have already been produced will be analyzed and evaluated. The appropriateness of various types and characteristics of sound films in relation to subject matters will be investigated in the hope of determining what subject matters and themes can be most effectively presented to trainees by means of sound films. Both perceptual and attentional processes involved in observing and learning from sound films also will be investigated. Chairman of the advisory board is Dr. M. R. Trabue, dean of the School of Education at Penn State.

After the research program has progressed sufficiently, researchers will attempt to establish the requirements for producing "ideal" sound films which would be adequate for "complete" instruction in the shortest possible time. Work will be done in close cooperation with that at the Human Engineering Section of the Special Devices Center, Port Washington, L.I., N. Y. and the Communications Laboratories of the University of North Carolina, Chapel Hill, N. C. Dr. C. R. Carpenter, professor of psychology at Penn State, is secretary of the board and project-director.

Visualizing the College Curriculum

(Concluded from page 546)

the more serious business of education. They do, however, bring the realism of pictorial reproduction to group discussion in the classroom.

A screen visual aid should be judged by the same standards as those used in judging visual aids in textbooks: technical accuracy, pedagogic technique, correlation with course material, and physical appearance. The accuracy of the illustration content of a textbook is vouched for by the known authorship; slidefilms and motion pictures should be evaluated on the same basis for accuracy of content. The pedagogic technique used in "putting across" the visual idea is as important in a film as in a text. Therefore, it is not sufficient to have a subject area specialist vouch for the illustrative content; the relation of the kind of illustrations used to the intellectual level of the audience can best be determined by one who has taught the subject. The most successful texts are usually written by competent subject area specialists who have also had the practical experience of teaching the subject. It follows that slidefilms and motion pictures should be produced under the direction of a competent teacher of the subject involved.

The value of illustrations in a textbook depends not only upon their accuracy and pedagogic approach, but also upon the degree with which they are integrated with prevailing course curricula. It is awkward for the teacher, and confusing to the student, to use a visual aid which does not fit into the established course framework. Screen visual aids should therefore be geared to

the classroom procedure so that they can be utilized without disrupting the program.

The physical appearance of a textbook includes both text matter and illustrations, which contribute considerably to the success of its use. For this the publisher is mainly responsible. In the production of screen visual aids, the producer should know all of the rules of screen presentation: the size of the lettering in the legends, the amount of material that can be included in a single frame, the choice of photographs and drawings for educational content. All contribute to the success of the film as a teaching instrument.

Perhaps the goal should be a combination of text and slidefilm which will ensure smooth transition from the one form to another. With such a film geared to the terminology and difficulty-level of the text, and continuing the philosophy of presentation which the author had in mind while writing it, the teacher can shift from one medium of instruction to the other without confusion or loss of time.

The College Department of the Macmillan Company has been interested in visual aids capable of inclusion within the covers of their texts for many years. It, therefore, follows that we should be among the first to experiment with the correlation of a screen visual aid with a textbook. Our first experiment in this area will result this fall in the production of a set of three slidefilms (*Alternation of Generations*, *Plant Physiology*, and *Life Through the Ages*), under the supervision of the author, to accompany the third edition of Mavor: *General Biology*.

Text-Films—New Teaching Tools

(Concluded from page 544)

to save the teacher's time, increase his teaching efficiency, and help the comprehension of the student.

With the philosophy behind the program established, the next step was the choice of textbooks to be complemented with a film program. Our final choice fell on four leading McGraw-Hill textbooks—pedagogically sound and widely circulated. These are the texts which formed the core of the initial McGraw-Hill Text-Film program: Schorling's *Student Teaching* for pre-service and in-service teacher education; French's *Engineering Drawing* for college engineering courses, technical institutes, and trade schools; French and Svensen's *Mechanical Drawing* for high schools, trade schools, and vocational schools; and Diehl's *Textbook of Healthful Living* for college health, hygiene, and physical education classes.

To discover which parts of these books most needed visual reinforcement, we polled the teachers who were using these texts in their classrooms. We felt that they better than anyone else could give the answers we needed. Among our questions we asked them to tell which parts of the texts were most extensively used, which parts were seldom used, which sections their students found most difficult to understand, and for which parts of the courses, the instructors desired long-term retention of material. We were amazed at the promptness with which teachers came through and gave the answers. When they were tabulated, these findings showed a surprising unanimity—so much so that we accepted these recommendations as final and proceeded with the business of film making.

In the preparation of all our motion picture series, we have worked closely with the authors of the books selected. They have acted as technical specialists all the way from rough script to finished film. In all cases, they were teachers themselves, and with their help we could be more certain that our pictures would reflect teaching techniques calculated to secure a maximum in teaching efficiency when correlated with the textbooks.

With all the preliminaries over, we were ready to go into production. For this first venture in film production we chose three competent producers from the New York area. We had no desire to become involved with the intricacies of film production.

With these productions completed, our efforts will now be directed primarily to distribution. For this, we have a singularly advantageous setup. Our numerous outlets for textbooks all become potential outlets for films. Contrary to the predictions of those who hold that educational films will deprive us of a portion of our market for textbooks, we feel certain that with the addition of two valuable teaching tools designed to make the textbook more usable, we can confidently expect to increase the demand for both books and films.

Our Text-Film program is not to be limited to these four series. We have already earmarked several additional curriculum areas for visual enrichment as the next steps in our program. For the moment, however, we shall concentrate on launching our present series; their reception will tell us whether we have been moving in the right direction—and where our next move will take us.

Whoa, Dern Ye!

(Concluded from page 549)

Parts of the preprimer will present a challenge to the class as a whole. Such parts would be those which require a child to remember something he has learned earlier and apply that remembered knowledge to a new situation. But the book will vary in difficulty from one individual to another. Aside from differences in IQ and maturity, individuals will have more difficulty, or less difficulty, with a certain page depending upon the amount and kind of personal life-experience they bring to bear on the words on that page. This is just saying that a word is meaningful in proportion to the reader's understanding of the reality for which the word is a symbol.

Again, individuals will find difficulties according to their emotional and mental makeup. Children of preprimer age vary quite widely in such elements as ability to draw a generalized conclusion from a mass of facts; ability to apply a learned conclusion to new facts; visual acuity and discrimination; oral acuity and discrimination; concept of what reading consists of; liking for reading.

Just a few concrete examples: one child may recognize that a dog chasing a thrown stick in one picture is the same dog shown chewing a bone on the preceding page; other children may not recognize that sameness so readily. Or one child may realize that a word and a picture are meant to tell the same story; others may not. Or, children may vary widely in ability to recognize that "fish" and "farm" begin with the same sound.

If these things are true at the preprimer level they are true in more aggravated form later in school years, when subject matter becomes more abstract and when teaching is increasingly verbal.

Where is the area in which film can help to do the job impossible to the book alone? What constitutes correlation? Book-film correlation is more a principle than it is a process. Correlation techniques and methods are by no means the same for all films or for all books. The book is primarily a verbal teaching tool, with a limited amount of verbal help. When used together, the combined tool gives maximum effectiveness to both the verbal and visual content. But the visual function is not necessarily the same for all films.

Take history, for instance. By and large history is taught verbally. Because of the vast bulk of the raw material of history, it is necessary to "boil down." This involves doing away with most of the humanness and reducing a rich pageantry to something like a statistical table. The primary function of the visual tool here is to recreate and vitalize what would otherwise be mere wordage. The motion picture particularly can serve well here. Only the visual tool can recreate something that no longer exists.

What about science? Here the classroom job is explanation, demonstration, proof, application. Now the visual tool's function is different. It's job is not so much to recapture the past as it is to bring the living present into the classroom.

What about reading? Here we are dealing with the basic skill. We are teaching children to recognize and use words. But we sometimes forget that words are only

 SAINT LOUIS 5, MO.

a sort of shorthand, substituting for reality. It is not enough to teach children to *recognize* words. The function of the visual tool here is, for one thing, to provide vicarious experience with those realities for which words are symbols.

Let's take a concrete example of a possible approach to preparation of a coordinated film. Suppose we wish to make a film on magnetism, in the field of science. We would try to estimate how magnetism is taught in the average or below-average grade classroom: "Is the average or below-average classroom teacher herself well-trained in science?" No. "Is magnetism a subject that will profit by actual three-dimension demonstration?" Yes. "Is the average or below-average classroom likely to have the necessary equipment?" No. "What is likely to be the extent of available equipment?" A U-shaped magnet and a box of tacks. "Under these conditions, can our science text—or any science text—do the full teaching job?" No.

Now the purpose of the film becomes clearer. We must do on film what the book, under these classroom conditions, cannot do. The film must: 1. Perform demonstrations. 2. "Widen out" the facts presented in the book. This would be done by giving multiple examples, saying a thing two or three different ways, from different angles. 3. Assume that the book by itself has taught certain things adequately, and use the film to concentrate on those areas in which the book needs help. 4. Do some of the things that a well-trained teacher would do on her own account: lead thinking out into new directions; show actual applications of learned facts and principles; test children's understanding. 5. Secure class participation. The film should not "lecture" any more than the teacher should.

Here's another factor to be thought of: where, in the course of instruction, will this film be used? Before beginning the book, as a preview? While book instruction is going on? After book work has been finished, as a review? So far as we are concerned, that will be decided film by film; it will depend upon what seems best for the particular problem in hand.

What about reading? The film's function here will change from book to book as children progress in reading experience and in maturity. Certainly at the readiness level, the vicarious experience, leading to word-learning, is highly important as a film function. But there are other factors of reading readiness. Through film, children will also be given training in such things as carrying a sequence of ideas in mind in logical order; the use of original language; ear training as well as eye training.

This is a new departure in the use of film. It is meant to take visual methods out of the auditorium and into the classroom, where they belong. It is meant to be used side by side with the teacher's basic materials and basic teaching purposes. It is *not* intended primarily as an entertaining experience, and no such purpose should be read into it or looked for when evaluating the film. It is a new teaching tool, and because it is new, it demands a new kind of thinking from its users as well as from its producers.

Please don't shout. "Whoa, dern ye!"

AUDIO - VISUAL TRADE REVIEW

People

Warner Award to Maurer

Selection of John A. Maurer, pioneer in the development of 16-mm sound recording equipment and techniques, to receive the first Samuel L. Warner Memorial Award was announced recently by Loren L. Ryder, President of the Society of Motion Picture Engineers. The gold medal award, established by Warner Brothers and to be presented annually by SMPE for outstanding work in sound motion picture engineering, was presented to Mr. Maurer at the Society's semi-annual banquet at the Hotel Pennsylvania.

The "Webb"

Carl F. Mahnke, of Des Moines, Iowa has announced that H. Lew Webb of Chicago has recently joined the staff of Carl F. Mahnke Productions, international distributors of "Your Life Work" films produced by Vocational Guidance Films Inc., in a sales promotion capacity.

His experience in the distribution of the Guidance materials of the Institute of Research of Chicago, and in the visual aid field with the Bell and Howell Company, and Ideal Pictures Corporation of Chicago, and more recently with the vocational training materials of the American Technical Society, qualifies him to be of real service to schools in developing the use of occupational materials in sound motion picture form.

Mr. Webb will be a special representative calling on educational institutions and visual materials dealers in the central western states.

Kirkpatrick, Inc. Appointed RCA Educational Distributor

Kirkpatrick, Inc. has been appointed RCA Educational Distributor for Oklahoma, Arkansas and West Tennessee, according to an announcement by William H. Knowles, General Manager of the Educational Sales Department of RCA Victor. The distributing company will have regional offices in Oklahoma City, Tulsa, Little Rock, and Memphis.

Clay F. Kirkpatrick, who formerly operated the Movie Shop in Tulsa, heads the distributorship, with Max N. Heidenreich, former 16mm District Manager for RCA in the Southwest, named Sales Manager. Gaylor Giles has been named Manager of the Oklahoma City office. Weston Strauch will manage the Memphis Office. The Tulsa operation will be managed by Don Thompson. A manager of the Little Rock office will be named later.

Harry L. Barr, Pioneer Dealer, Passes

Harry L. Barr, well-known Morgantown, West Virginia dealer passed away recently. Much of his life was devoted to the advancement of audio-visual education. His business will be carried on by his widow.

Church-Craft Appointments

Victor B. Growcock has been appointed Sales Manager of Church-Craft Pictures, St. Louis, by Paul Kiehl, Executive Vice-president. Mr. Growcock received his B. A. degree from Concordia Seminary in 1943. He will continue to maintain his office in St. Louis.

Mr. Kiehl also announces the appointment of Mr. H. A. Wolf as Manager of the Service Department. Mr. Wolf was formerly with Sears-Roebuck, J. C. Penny, and his own company as president for 8 years.

Burrows & Imhoff Upped at Victor

Lincoln V. Burrows, general manager of the Victor Animatograph Corporation, Davenport, Iowa, was named a vice-president of the Corporation according to an announcement released by Samuel G. Rose, president.

Burrows, former Chief of the Photographic Section of the War Production Board, joined the Victor organization in January, 1946, as Director of Distribution.

Another promotion in the Victor organization announced recently was that of Eldon Imhoff to the position of Domestic Sales Manager. Imhoff has been a member of the Victor Corporation since July, 1944. He has been in the 16mm motion picture industry since 1932 and set up a utilization system for the 8th Service Command, Camp Hood, Texas prior to joining Victor.

Supervisor of Teaching Aids
Mishawaka (Indiana) Public Schools

Production Activity

Brandon's Frisco Outlet

James A. Wallace, head of Wallace Films, San Francisco, will represent Brandon Films, Inc. in 11 western states, according to an announcement by Thomas J. Brandon, President of Brandon Films, Inc. Mr. Wallace will direct the Brandon Film library operations in the territory and will carry a full library of features and shorts.

Formerly active in West Coast film circles as owner of Audio Pictures and later western representative for the Walter O. Gutlohn Company out of Oakland, Mr. Wallace is now established at 290 Seventh Avenue, San Francisco, Calif. under the firm name of Wallace Films.

Study in Bronze

Two bronze medallions inscribed in French were received recently by Dr. Theodore M. Switz, vice-president of Encyclopaedia Britannica Films, in recognition of the firm's entry of two

educational films in the World Film Festival at Brussels, Belgium, last summer.

En Temoignage de Reconnaissance a Utilisations du Film en Classe was the wording on the back of one of the modernistic little plaques. Dr. Switz informed monoglots in the Chicago offices of EB Films that this would mean in English something like "In witness of recognition given to *Using the Classroom Film*, one of the two EBF motion pictures shown at the festival. The other entry of EBF was its new one-reel sound film entitled, *Atomic Energy*, for which the second plaque was awarded.

Technicolor Celebrates 30th Year

Thirty years ago, Dr. Herbert T. Kalmus established the first Technicolor laboratory in a railway car at Boston. His first color process required special color filters attached to the projector, being of the additive type. First production was *The Toll of the Sea* with Anna May Wong (1922).

Douglas Fairbanks' *The Black Pirate* (1925) introduced the two-color Technicolor. In 1932, the modern three-component Technicolor was presented in Walt Disney's *Silly Symphony, Flowers and Trees*.

Since 1939, a process for making 16mm Technicolor prints by a means similar to Kodachrome has been in use. Since 1944, Technicolor's imbibition process has been available to 16mm producers, though laboratory facilities at the Technicolor plant have been at capacity. A considerable list of educational films has been made by one or the other of these processes. Thus, the Walt Disney war-time productions for the government were in Technicolor.

Coronet Color Prices Rise

Announcement has come from CORONET Instructional Films that, effective January 1, 1948, the price of their color prints will be \$90 a reel. The present price of \$75 a reel was based upon an expected drop in the post-war costs of color film and processing. However, this expected drop in costs has failed to materialize; instead, the cost of color materials and processing has continued to rise until CORONET Instructional Films have been forced to increase their color price.

New EBF Rental and Preview Libraries

New headquarters for the Middle Western regional warehouse of Encyclopaedia Britannica Films has been moved to 207 South Green Street, Chicago 7, Illinois, it has been announced by H. R. Lissack, vice-president in charge of sales.

The Green street address is now the office of the Chicago preview and rental library of Encyclopaedia Britannica Films. All EBF prints sent in

for repairs and replacement should be shipped there from now on, Lissack said.

Encyclopaedia Britannica Films has established four other rental and preview libraries covering different sections of the country, and they are located in New York, Boston, Pasadena, California, and Dallas, Texas. Films rented from those libraries, Lissack emphasized, should continue to be returned to the libraries in those cities.

The Chicago preview and rental library with its new address, services rental and preview prints only in the Middle Western States of North Dakota, South Dakota, Nebraska, Minnesota, Iowa, Wisconsin, Illinois, Indiana, Michigan and Ohio.

United World Establishes a Religious Films Division

In recognition of the rapidly increasing use of religious motion pictures, United World Films, Inc., announced the establishment of a special Religious Films Division.

The new Division is under the general direction of Edward T. Dickinson, Jr., vice president, who also supervises educational films for United World. Wm. Sherman Greene, Jr., has been appointed manager of the division and will specialize in working with Protestant church groups. Mr. Greene is Sunday School Superintendent at Christ Church, Short Hills, New Jersey, and Vice Chairman

of the Essex County, New Jersey, Committee on Religious Education. As director of the United States Government Teaching Films Division of Castle Films, Mr. Greene has had many years of experience in the distribution and use of motion pictures for teaching purposes. Leo B. Guelpa, Jr., author and teacher with a long experience in the Catholic educational field, will handle distribution to Catholic groups. Announcement will be made in the near future of the appointment of a manager to work in the Jewish religious film field.

Establishment of the Religious Films Division grows out of United World's experience as exclusive United States distributor for the religious films produced by the J. Arthur Rank Organization and as successor to the Bell & Howell Filmosound Library, which for many years has been distributing religious motion pictures.

The new Division will begin shortly the issuance of periodic news letters containing information of interest to users of religious films. These will be mailed free to the clergy, educators, and active church workers directly interested in religious motion pictures.

The Division is also glad to announce the inauguration of a free religious film-finding service. Whether or not the film in question is handled by United World, the Religious Films Division will assist, wherever possible, any inquirer in locating the source of any religious film.

Equipment

Kodaslide Projector Model 1A Announced

Restyled and redesigned to achieve a more streamlined appearance and more efficient operation, the new Kodal slide Model 1A projector is equipped with a 150-watt lamp, which is more powerful than that previously supplied with earlier projectors, a new type of aluminum slide carrier which operates

Kodaslide Model 1-A.

with ease and precision. Lumenized condenser lenses, and a 4-inch Kodak Projection Ektanon 1/3.5 Lens which

is Lumenized with Kodak's new hard-surface magnesium fluoride coating on all air-glass surfaces to increase light transmission and give sharper, brighter images on the screen.

The Kodal slide Projector, Model 1A, will be available either with or without a carrying case. The case, offered as an accessory, has a removable base which, placed atop the case, serves as a support for the projector in use.

New RCA Wire Recorder

A lightweight, portable wire recorder that incorporates for the first time a simple "plug-in" loading cartridge, that completely eliminates the complicated handling of wire, has been announced by the RCA Victor Division of the Radio Corporation of America.

Unique advantages in the field of education are offered by the simplified loading procedure, use of only three simple controls which permit operation of the radically designed wire recorder by students or non-technical personnel, and provisions for immediate playback and automatic erasure.

Compact housed in a streamlined black and silver plastic cabinet with a disappearing carrying handle, the recorder operates from any ordinary

light socket. A feature unique in low-cost recording equipment is an indicator light to show correct recording volume, making possible recordings of professional quality regardless of the skill of the user.

Revere Rides into 16mm with Light-weight Sound Projector

Given its premier showing at the Grand Ballroom of the Stevens Hotel last month, the new low-cost Revere 16mm sound projector is expected to fill a long felt need in the church, school, home, club, and industrial fields. The announcement of this projector marks the entry of Revere into the 16mm field. Previous Revere equipment has been in the 8mm field.

Revere 16mm Sound Projector.

The sound projector is so constructed that projector, speaker, and carrying case are combined in a single unit, weighing about 31 pounds. The projector operates on ac-dc current, has a 750-watt lamp, a 2-inch f/1.6 coated lens, and a connection for microphone or phonograph pick-up. Film capacity is 1,600-foot capacity. Threading is simple, being similar to that on the Revere 8 but with the addition of a sound drum.

Other innovations include an exclusively designed speaker chamber, full-tone range adjustment, positive automatic rewind, and both sound and silent projection speeds. Output is approximately 5 watts. Where greater volume is needed, as for example in an auditorium, a booster amplifier may be obtained.

Polyphonic Wire Recorder

Electronic Sound Engineering Co. has introduced a new high-fidelity wire recorder which is being sold under the trade-name "Polyphonic Sound". "Wire recording can now compete on a quality basis with other method of recording sound," says Bernard Sullivan, general manager of Electronic Sound. The "POLYPHONIC SOUND" recorder has been distributed through jobbers since November 1.

High fidelity in "POLYPHONIC SOUND" is made possible by the use of a special amplifier circuit which is said to reduce distortion. The built-in six-inch speaker, with a range up to

10,000 cycles, has a special diaphragm to insure smooth reproduction of high frequencies. For those who want the very ultimate in sound performance there is available a fifteen-inch, dual channel auxiliary speaker. This speaker connects with a jack on the front panel and carries the lower range down to fifty cycles.

Input facilities consist of a low-level input for a microphone and a front-panel input arrangement for high level sound via direct connection with a radio or record player. The microphone has a response of 60 to 10,000 cycles. Standard equipment includes a fifteen-minute spool.

The unit is being manufactured in an optional cabinet of walnut or natural finish birch. While designed for table top operation, it comes with a portable carrying case.

New Low Cost Sound Projector Is Announced by Universal

The Universal Tonemaster, a new 16mm. sound projector will soon be released by Universal Camera Corporation. The Tonemaster is said to embody 24 features found in higher-priced projectors but will cost much less than other projectors of similar construction.

The Tonemaster is complete in a single unit weighing 45 pounds, has an 8-inch dynamic speaker with a range of 50 to 6,000 cycles, a heavy-duty five-tube amplifier, and a built-in microphone and record player connection.

Universal Sound Projector

A special tri-blade shutter assures flicker-free projection and increased light efficiency. The advanced design eliminates protruding reel arms and allows for 2,000 foot reels. Controls are simplified and centrally located for quick adjustments. A reverse draft cooling system keeps gate, motor, and amplifier under constant fresh air draft. Among the other Tonemaster features are a brushless, spark-free capacitor motor; quiet operation, single lever rewind, and 50-foot speaker cord for maneuverability.

DeVry Announces New 31-lb. Projector

Appropriately named the "Bantam," the new DeVry projector is actually a "theatre in-a-suitcase," as it incorporates projection mechanism, sound-head, amplifier, speaker, and screen in one compact case that weighs less than 31 lbs.

New DeVry Model

In making the official announcement of the new projector, W. C. DeVry, president, stated . . . "This all new postwar 'theatre in-a-suitcase' model is part of the DeVry

The most complete catalog ever published by the manufacturers of the famous SOLAR Enlargers, B&J Speed Press Cameras, GROVER and B&J View Cameras. Fully illustrates and describes hundreds of items every photographer needs. Nineteen full pages of lenses of every make and description from one-half inch to 80-inch focal lengths. Cine, commercial, portrait and process. The most complete lens stock available! Everything photographic from America's leading photographic manufacturer and supply house. Write today for this valuable Free Book. **BURKE & JAMES, Inc.** Manufacturers for Fifty Years Dent. ES-12, 321 S. Wabash Ave., Chicago 4, U.S.A.

THE NEW DeVry "Bantam"

"Theatre in a Suitcase"

16mm. SOUND PROJECTOR, AMPLIFIER, SPEAKER AND SCREEN—ALL-IN-ONE—SMALL, COMPACT CASE WEIGHING LESS THAN **31 LBS.**

See it in action . . . Convince yourself that the new DeVRY "BANTAM" 16mm. sound-silent projector is today's greatest equipment buy! Witness its perfect screening of brilliant, flickerless pictures. Note the fine blending of true-to-life sound. Then check the new DeVRY "BANTAM" for its precision construction . . . its ultimate of mechanical, audio and optical developments . . . its compact, single carrying case . . . its 2,000 ft. reel capacity . . . motor-driven rewind . . . forced air cooling. Ideal for the classroom . . . adequate illumination (750-1000 Watts) for auditorium showings . . . and priced to practically double the range of your audio-visual equipment budget. There's a dual case DeVRY "BANTAM" also, with separate 8" ALNICO 5 permanent magnet speaker. Write for colorful literature. Wait for a demonstration.

DEVRY CORPORATION 1111 Armitage Avenue Chicago 14, Illinois	ES-D12
Please send literature on the DeVRY "Bantam."	
Name.....
Address.....
City.....	State.....

Corporation's extensive program for making our 35th year one of maximum contribution to the progress of audio-visual education in the classroom.

"We determined to make the best use of the most modern electronic, optical, and mechanical advancements, and to incorporate into the new projector every worthwhile feature which our 35 years experience had shown to be advantageous, plus many new patentable refinements recently developed by DeVry engineers. And so, we set out to produce the most modern, inexpensive, simple to use, 16mm sound projector, complete in one lightweight case, that had ever been made available to the schools of America. The new DeVry "Bantam" is the result.

"Our engineering and design departments created this immeasurably simpler sound projector. Our objective then was to sharply cut the costs of manufacturing, without sacrifice to the high quality standards synonymous with the DeVry name. To this end, a \$300,000.00 building expansion and new equipment program was inaugurated. We added an entire new floor to our main plant, enabling us to practically double our productive capacities. In addition, we installed the most modern precision mass production machinery . . ."

Although primarily designed to end the long awaited need for a classroom projector, the "Bantam" has adequate illumination (750-1000 watts) for large size pictures in auditoriums. The light optical system is engineered for maximum brilliance, tests showing well over 200 lumens of light.

Condenser and fast projection lens are coated with a microscopically thin layer of magnesium fluoride to reduce internal reflection and increase light transmission. As a result, pictures projected with the new "Bantam" have added brilliance, clarity and contrast.

Another outstanding feature of the new DeVry "Bantam" is the efficient sound filtering system, a system that eliminates perceptible flutter and wows and makes for remarkably lifelike sound reproduction. Spring dampened sound filtering rollers acting in perfect conjunction with a statically and dynamically balanced flywheel, assures constant speed of the film at the sound scanning point by filtering out the intermittent action imparted to the film at the film gate, the flutter caused by the action of the sprocket teeth, and other annoying disturbances caused by bad splices, curled or mutilated film.

One of the many DeVry advantages retained in the new "Bantam" is the Automatic Loop Setter. This device makes possible the resetting of the lower loop without damage to the film when the loop is lost due to faulty film or incorrect threading. A flip of a lever automatically resets

the correct loop and the show goes right on—uninterrupted.

Other operational features include: sound and silent projection, 2000 ft. film capacity, all controls on one illuminated panel, fast, safe motor rewinding of film without changing reels, cool operation through a ventilating system coupled with a motor driven fan, one point lubrication, sure acting tilting device, dependable drive motor, positive take-up of all size reels, side tension control at aperture, and quiet operation.

The speaker provided as part of the new single case DeVry "Bantam" is a 6-inch Alnico 5 permanent magnet type. It is usable in any one of three ways with ideal results: attached to projector in carrying position, open with speaker grill facing audience, or at the screen, for which a 25 ft. cable is furnished.

Light Valve Tester

A new light valve projector and testing console designed by the Electrical Research Products Division of the Western Electric Company at the request of the Paramount Sound Department, has now been installed at the Paramount West Coast Studios.

This equipment, which provides facilities for either visual or electric testing of light valves, projects a greatly enlarged image of a two or four ribbon valve on a screen, reducing the testing time to permit thorough inspection of 8 to 10 valves in an hour. The degree of skill required of the operator is considerably reduced.

The accuracy, convenience, and increased speed of testing have already proved of considerable value to the studios.

Pat Powers Consultants

Pat Powers, Inc., consultants in film production and distribution, announces opening of its main office at 6 East 46th Street in New York City, and branch offices at 1317 New York Avenue, N.W., Washington and 804 Plaza Building, Pittsburgh. Powers will distribute films domestically and overseas, serving to home movie market here and releasing industrials and other non-theatrical subjects abroad. The company is headed by Pat Powers, formerly of 20th Century Fox and Jerry Fairbanks. Production will be supervised by Sidney Kaufman, who created many of the films shown on the "smokestack circuit" of the Navy warplank program. A. Bertrand Chanon, Vice President of Pat Powers, Inc., was formerly Supervisor of the Audio Visual Aids Department for the School of Business Administration at the College of the City of New York where he also organized and directed the Business Film Library.

Television Recording Camera Developed by Kodak

Eastman Kodak Company announced recently a 16mm. motion picture camera for recording television programs on film. The new camera, first of its kind, produces movies directly from the face of the monitoring "picture tube" in a television broadcasting station. The camera takes pictures at the rate of 24 frames a second. Sound is recorded separately by standard methods.

The company said the camera was developed in cooperation with the National Broadcasting Company studio at station WNBT and the Allen B. DuMont studio at station WABD. Its main uses in television broadcasting will be: (1.) To enable the recorded programs to be reused by the sponsor for institutional public relations and advertising; (2.) To record transmitted shows for billing requirements; (3.) To record all "live" programs that go out on the air. This use, for example, will be important for legal purposes.

Another possible major use, still in the experimental stage, is in a television "film network." If a film network proves feasible, the camera would photograph television programs by recording them as shown on the monitor tube. These film records of "live" programs then could be rebroadcast by stations in other cities. This would supplement the present limited and expensive television networks using coaxial cables and radio relays.

Theater Television Discussed At SMPE Meet

Plans for the daily operation of a "sample" theater television system in London and its suburbs during 1948 were revealed by Captain A. G. D. West, director of Cinema-Television, Ltd., at the recent 62nd Semi-Annual banquet of the Society of Motion Picture Engineers at the Hotel Pennsylvania.

Captain West said his organization will recommend the establishment of such a system for invited and paying audiences, with programs originating in three production centers—the BBC Studios at Alexandra Palace, north of London; the Pinewood Film Production Studios of the Rank Organization, west of London; and studios to be erected on the site of the old Crystal Palace at Sydenham, on the south side overlooking London. Leading theaters of which studies have been made, looking toward installations next year,

include the Leicester Square and Marble Arch theaters of the Odeon Circuit, and the Haymarket and New Victoria theaters of Gaumont, all in London's West End, and Odeon's Swiss Cottage and Gaumont's Lewisham in the suburbs.

After experimenting with various methods of theater television projection, Cinema-Television, Ltd., has settled on direct, instantaneous projection employing an adaptation of Schmidt optics. Equipment has been developed providing a 16 ft. x 12 ft. screen image with a projection throw of 40 feet.

The front of the balcony would be considered the ideal location for the television projector, Captain West said, if enough theaters had balcony fronts within 50 feet of the screen. The projector could be located in the regular projection booth if a 40-inch spherical mirror were used in the reflective optical system of the projector, he said, but the cost of such large mirrors is considered excessive, running to about 4000 pounds, and the time required to produce such mirrors would offer another disadvantage.

Transcriptions and Recordings

Decca and American Book Distribute Texts-Records

Jack Kapp, President of Decca Records, Inc., and R. D. Marriner, President of American Book Company, announce that the American Book Company, one of the nation's largest publishers of textbooks, will distribute Decca albums in schools, colleges, and universities.

These albums include dramatized stories, legends, great speeches, poems, ballads, folk songs, and other recordings of educational merit, featuring the great artists, actors, and interpreters of our times. These include such outstanding personalities as Bing Crosby, Charles Laughton, Orson Welles, Ingrid Bergman, Walter Huston, Ronald Coleman, Frederic March, Charles Boyer, Agnes Moorehead, and such folk-lorists as Carl Sandburg and Burl Ives.

The recordings are not intended to supplant the textbook but to supplement it. This scientific, auditory approach offers a modern, successful way of instructing and puts new meaning into teaching.

There will be 88 albums on the first list which is available for immediate distribution. They will be enhanced by booklets and teachers' aids for integration in the curriculum.

The first list includes the music from *Pinnocchio*; a dramatization of *Alice in Wonderland* with a large cast headed by Ginger Rogers; a re-enactment of the Rip Van Winkle legend by Walter Huston, a narration of Carl Sandburg's great poems by Sandburg himself; *Our Common Heritage*, an album of records of great American poems by Longfellow, Emerson, Whittier, Whitman and others—featuring Bing Crosby, Brian Donlevy, Walter Huston, Frederic March, Agnes Moorehead, and others; and a Bing Crosby narration with a dramatic cast of "The Man Without A Country."

■ **RCA VICTOR**, Camden, N. J. continues to release new albums in its children's series, including an album by Alex Templeton and one narrated by Dame May Whitty, entitled, *The Prettiest Song in the World*. The children's sets are pressed on non-breakable record stock in automatic sequence. Other sets include: *Pan the Piper*, *The Little Engine That Could*, *Peter and the Wolf*, *Pinocchio*, *Dumbo*, *The 500 Hats of Bartholomew Cubbins*, *The Unsuccessful Elf*, *Pee-Wee the Piccolo*, *Let's Play*, *The House at Pooh Corner*, *Robin Hood*, *Hansel and Gretel*, and others.

Alec Templeton's new children's album brings *The Pied Piper of Hamelin* to records. Alec's keyboard artistry and his character impersonations have made him an international favorite.

Music appreciation in the schools has been stimulated recently by the release of the Victor Record Library for Elementary Schools, a 21 volume set including 83 records and 370 compositions. Complete teaching suggestions are included with each volume of the library.

Since 1911, the Victor organization has encouraged music appreciation as a classroom activity. In this connection, a number of books have been published by the company, including *The Victor Book of the Symphony* and *What We Hear in Music*. A new list of these is available.

Kidisks Enters Record Field

WHEW's (Uncle) Henry Walden, Director of the Children's Playhouse, and Abram S. Jaffe (formerly with Majestic Brands, New York distributor for Majestic Records) have formed KIDISKS, 1600 Broadway, N. Y. 19, for the specific purpose of making educationally correct children's unbreakable records.

Initial release on the new company's list is P. K. Thomajan's popular classic *The White Lie* which has been twice-produced on Bob Emery's *Rainbow House*. Another Thomajan opus to be recorded will be *The Mischievous Angel*, the charming story of an impish youngster's probation in Heaven, and how he made good.

Current Film News

■ **FILMS OF THE NATIONS**, 55 West 45th Street, New York 19 announces that three more nations have applied for membership in the organization and have been accepted. These include: British Information Services, Polish Research and Information Service, and the Belgian Information Center. Latest productions of these organizations will be available through this source. However, as far as British Information Services are concerned, this arrangement will not alter present distribution policies. A total of 26 countries issue films through this organization.

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20 and branches have announced the following new films:

Heir to the Throne (2 reels)—the story of Princess Elizabeth's life up to her wedding to Lt. Philip Mountbatten. Shots of the Jubilee, the Coronation, and the Royal Tour to Africa as well as scenes of her childhood and girlhood are included.

"Heir to the Throne"

English Criminal Justice (2 reels)—criminal court procedure as it is found in England. Stress is placed on the fact that the defendant is innocent until he is proved guilty and that he is not responsible for proving his innocence. The procedure following "Guilty" and "Not Guilty" verdicts is also shown.

The Way We Live (8 reels)—adventures of a bombed-out family, awaiting reconstruction of their home city—Plymouth. This feature documentary was produced by the J. Arthur Rank Organization and shows the tribulations of billeting and temporary housing. The parts played by educative lectures, political meetings, Council debates, and public opinion are shown.

■ **WILLOW CORPORATION**, 64 East Lake Street, Chicago 1, Illinois announces the availability for rental to schools of the following film:

Macbeth (73 minutes)—a careful rendition of William Shakespeare's great tragedy. Production of this ambitious film was undertaken by a group

"Macbeth"

of veterans, directed by David Bradley. This motion picture was selected for showing at the "Films of the World Festival" and was voted the best amateur production submitted.

■ **OFFICIAL FILMS, INC.**, 25 W. 45th St., New York 19, have prepared a holiday film entitled:

A Present for Santa Claus—a story which deals with two little kiddies who are tucked into bed by Mommy . . . and while the tree is being trimmed, the kids cook up a special secret to give Santa Claus a present. There's a surprise for all ages . . . as Santa arrives from the North Pole to find his present . . . and an excellent moral as he makes a last minute revision in his gift list for the kids. The film is available at camera shops and film libraries in 16mm sound or silent, and 8mm silent.

■ **CORONET INSTRUCTIONAL FILMS**, Coronet Building, Chicago 1 has increased the scope of its educational films by the following additions:

Butterfly Botanists (1 reel, color or black and white)—the life processes of a typical butterfly—the Monarch, stressing the dependence of larvae on plant food.

Rivers of the Pacific Slope (1 reel, color or black and white)—the story of three great river systems: the Columbia, the Sacramento, and the San Joaquin. Both geographical and economic aspects of the rivers are pointed out.

Jack's Visit to Costa Rica (1 reel, color or black and white)—the visit of a typical American boy with friends in Costa Rica. The similarities and differences between life in this little republic and in our own country are brought out.

■ **RELIGIOUS FILM ASSOCIATION, INC.**, 45 Astor Place, New York 3 is distributing the color film:

Heart of India (3 reels, color)—the story of a boy driven out of his village because his outcaste family had the audacity to become Christian. The sacrifices of the boy's family and of their fellow Christians to send him through college prepare the way to his decision as to what he should do with his life.

■ **POST PICTURES CORPORATION**, 115 West 45th Street, New York 19, have acquired the exclusive 16mm distribution rights to 36 new Monogram Pictures.

The program covers a variety of productions, including: Musicals and Comedies, Dramas and Mysteries, East Side Kids, U. S. Marshall Westerns, Range Buster Westerns, Trail Blazers, James Oliver Curwood Story ("Dawn on the Great Divide").

Feature stars in the Western Group are: Buck Jones, Rex Bell, Johnny Mack Brown, John (Dusty) King, Ken Maynard, Hoot Gibson and others.

This new series of films will be available for rental through the usual dealers and film libraries.

■ **SIMMEL-MESERVEY, INC.**, 321 South Beverly Drive, Beverly Hills, Cal., have completed the following subject in their Science series:

Sailplane (1 reel, in color or B & W)—the instructive story of place-time gliding, demonstrating the thrills, safety and beauty of motorless flying. Scenes and narration take the spectator through complete take-off, soaring and landings. Other step-by-step sequences touch upon construction, assembly, safety features and wind currents.

■ **TEACHING FILM CUSTODIANS, INC.**, 25 West 43rd St., New York 18, have released four more 16mm excerpted versions of feature photoplays selected and prepared in cooperation with the Audio-Visual Committee of National Council for the Social Studies for use in secondary school world history courses:

The Roman Consuls—adapted from the film "Cleopatra"—traces the history of Caesar's assassination and the subsequent enmity between Antony and Octavian, which culminated in the Battle of Actium.

The Crusades depicts the background of the first two attempts to recover the Holy Land from the Saracens and the outstanding historic figures and events of the Third Crusade.

Conquest follows the course of Napoleon's invasion of Russia, his disastrous retreat from Moscow and his ensuing downfall and exile.

The House of Rothschild—tells the story of the part played by the famous

**A beautiful, new

5622 ENRIGHT AVE., ST. LOUIS 12, MO.

banking house in financing the campaigns of the Allied Powers against Napoleon and emphasizes the economic and social background of the period.

Present plans of the committee include the preparation of two or three more units in world history and a series of films to meet specific objectives in the American History curriculum.

Entertainment

■ **COMMONWEALTH PICTURES CORP.**, 729 Seventh Avenue, New York 19 has announced the distribution of the following:

Sundown (10 reels)—a story based on white man's rule of African colonies. A thrilling adventure picture with Gene Tierney, Bruce Cabot, George Sanders, Harry Carey, Joseph Calleia, and Sir Cedric Hardwicke. Direction was by Henry Hathaway.

Long Voyage Home—a 12-reel production based on Eugene O'Neill's famous four one act plays, featuring John Wayne, Thomas Mitchell, Barry Fitzgerald, Ian Hunter. A lusty drama-filled sea tale of stout hearted men whose heroism and bravery often remains unsung but is nevertheless startling and sensational. Most of the thrilling action unwinds upon the SS Glencairn, a British tramp steamer en route to England after a long voyage with calls in the Caribbean and at various American ports.

NEW!

**Ten Commandments
VISUALIZED**

Powerfully impressive and inspiring, Ten Commandments — Visualized are dramatically illustrated in dignified cartoon style for popular appeal. Simple, forceful, effective, these filmstrips are an invaluable aid to every Church, Sunday School and Bible Class in teaching the meaning and function of God's Divine Law in life today.

Ten Commandments — Visualized are furnished in sets of 10 black-and-white filmstrips having approximately 250 individual frames. Total cost \$20 per set.

STONE FLOWER

Winner
At The
International
Film Festival
in Connes

Widely acclaimed Fairy Tale based on Russian folk legends, in beautiful color. "One of the best films . . . in excellent color"—LIFE. "A beauty . . . inspired . . . recommended for young and old"—TIME Magazine. 85 min.

BARBER OF SEVILLE

A fine film condensation of the two popular comic operas, made in France. Based on immortal plays of Beaumarchais; music from the operas "The Barber of Seville" by Rossini and "The Marriage of Figaro" by Mozart. Played by the Orchestre Symphonique de Paris under direction of Louis Masson. With Andre Bauge as the barber. "Gay . . . witty . . . exquisite!"—N. Y. Times. 85 min.

THE LAST MILLIONAIRE

Rene Clair's hilarious comedy of bankrupt royalty, director's romantic love, orchestra conductors, and cheer leaders. Written and directed by Rene Clair, camera by Rudy Mate, music by Maurice Jaubert. With Paul Olivier, Max Dearly, Raymond Cordy. 85 min.

MYSTERIES OF PARIS

Eugene Sue's celebrated novel, filmed in France with music by Georges Auric; an array of brilliant actors including Madeleine Ozeray, Constance Remy, Lucien Baroux, Henri Rollan, Raymond Cordy and others.

IVAN THE TERRIBLE

Famous film biography of Ivan IV written and directed by Sergei Eisenstein; original score by Sergei Prokofieff, camera by Edward Tisse. 85 min.

RUSSIAN BALLERINA

Delightful story of the rise of a new ballet star with Galina Ulanova, foremost ballerina, the Corps de Ballet, and Maria Redina. 75 min.

FRENCH OR RUSSIAN DIALOG—ENGLISH TITLES

■ **UNITED WORLD FILMS, INC.**, 445 Park Avenue, New York 22 announces the release of the following:

Inside Job (6 reels)—drama in which the influence of a small boy and his dog causes a crime-bent young couple to give up their chance of escape, in order to rescue the boy's father, a policeman. (Preston Foster, Ann Rutherford).

The Runaround (10 reels)—a comedy involving a runaway heiress and two rival detectives, complete with an exciting chase. (Ella Raines, Rod Cameron).

"The Runaround"

■ **BRANDON FILMS, INC.**, 1600 Broadway, New York 19 releases the following feature films:

The Stone Flower (85 minutes)—World First Prize Winning color film at the Cannes International Festival in 1946. An old Russian legend forms the story basis of this film about a boy and a girl. Prints released in the United States are made in Kodachrome.

Ivan the Terrible (85 minutes)—film biography of Czar Ivan IV, directed by Sergei Eisenstein with an original score by Prokofieff.

The Last Millionaire (85 minutes)—a brilliant Rene Clair film at last available in 16mm. This comedy of French and universal manners has a special score by Maurice Jaubert. (French)

The Barber of Seville (85 minutes)—comic opera based on the immortal plays of Beaumarchais and the operas by Rossini and Mozart. (French)

Russian Ballerina (75 minutes)—rise of a new ballet star, featuring Maria Redina and Galina Ulanova, Russia's foremost Ballerina, the Corps de Ballet of the State Theatre.

Miracle of Dr. Petrov (99 minutes)—drama of three men of science in their attempts to rid mankind of infantile paralysis.

The Mysteries of Paris (90 minutes)—Eugene Sue's novel, filmed in France with music by Georges Auric, with Madeleine Ozeray, Raymond Cordy, Constance Remy.

Kolosowski (85 minutes)—first post-war Polish film. Story of a legendary Polish patriot, a leader of the underground during the Nazi occupation.

Glinka (90 minutes)—his music, life, and times with Boris Chirkov.
